INDEX ..................................................................................................................................Index 1
Preface

The Kansas Department of Agriculture (KDA) announces the publication of the 2012 Kansas Food Code. The Kansas Food Code is based largely upon the United States Public Health Service’s (PHS) 2009 Model Food Code.

These food safety regulations govern licensed food establishments. The provisions of the Kansas Food Code provide a system of pro-active preventive safeguards designed to minimize the hazards that lead to foodborne illness, thus ensuring safe food and acceptable levels of sanitation in food establishments.

The Food Code presents requirements by principle rather than by subject. For example, equipment requirements are presented under headings such as Materials, Design and Construction, Numbers and Capacities, Location and Installation, and Maintenance and Operation rather than by refrigerators, sinks, and thermometers. Where there are special requirements for certain equipment, the requirement is delineated under the appropriate principle (e.g., Design and Construction) and listed separately in the index.

Requirements contained in the Food Code are presented as being in one of three categories of importance:

- **Priority item** (i.e., a provision in this Code whose application contributes directly to the elimination, prevention or reduction to an acceptable level, hazards associated with foodborne illness or injury and there is no other provision that more directly controls the hazard);
- **Priority foundation item** (i.e., a provision in this Code whose application supports, facilitates or enables one or more priority items); and,
- **Core item** (i.e., a provision in this Code that is not designated as a Priority item or a Priority foundation item and that usually relates to general sanitation, operational controls, sanitation standard operating procedures (SSOPs), facilities or structures, equipment design, or general maintenance.

A "P" or "Pf" designation after a paragraph or subparagraph indicates that the provision within that section is a Priority item or Priority foundation item, respectively. Any unmarked provisions within a section are Core items.

Portions of some sections are written in italics. These provisions are not requirements, but are provided to convey relevant information about specific exceptions and alternative means for compliance. Italics are pursuant to a preceding provision that states a requirement, to which the italics offer an exception or another possibility. Italicized sections usually involve the words “except for,” “may,” “need not” or “does not apply.”
Defined words and terms are in "small caps" in the text of the Food Code chapters to alert the reader to the fact that there is a specific meaning assigned to those words and terms and that the meaning of a provision is to be interpreted in the defined context. A concerted effort was also made to place in "small caps" all forms and combinations of those defined words and terms that were intended to carry the weight of the definition.

Food Code provisions address essentially four areas: personnel (Chapter 2), food (Chapter 3), equipment/facilities/supplies (Chapters 4, 5, 6, 7), and compliance and enforcement (Chapter 8). The structural nomenclature of the document is as follows:

Code provisions are either appropriate for citing on an inspection report or they are not. Those not intended for citing are identified by the digits following the decimal point in the numbering system. These "non-citable" provisions fall into two categories, those that end with two digits after the decimal point and the last digit is a zero, e.g., § 1-201.10; and those that end with three digits after the decimal point and the last 2 digits are zeros, e.g., § 8-805.100.

Two types of internal cross referencing are widely used throughout the Code to eliminate the need for restating provisions.

A. The first type of cross reference uses phrases that contain the word "under", e.g., "as specified under … (followed by the relevant portion of the Code)."

The purpose of this type of cross reference is to:

1) Alert the reader to relevant information, and

2) Provide a system by which each violation is recorded under the one most appropriate provision. This type of cross reference signals to the reader the provision of the Code under which a certain violation is properly cited.

B. The second type of cross reference uses phrases that contain the word "in," e.g., "as specified in... (followed by the relevant portion of the Code)."

The purpose of this type of cross reference is to:
1) Indicate the specific provisions of a separate document such as a federal regulation that are being incorporated by reference in the requirement of the Code, e.g., ¶ 3-201.11(C); or

2) Refer the reader to a non-citable provision of the Code which provides further information for consideration, such as a provision for an exception or for an allowance to comply via an alternative method.

For example, ¶ 3-201.16 (A) begins with "Except as specified in ¶ (B)…” and ¶ (B) states the relevant exceptions to ¶ (A). Paragraph 3-201.11(E) states in part, "… as specified in ¶ 3-401.11(C)” and ¶ 3-401.11(C) provides for an allowance to serve or sell raw or undercooked, whole-meat, intact beef steaks in a ready-to-eat form.

If you review the exception in ¶ 3-201.16(B) and the allowance in ¶ 3-401.11(C), you will see that exceptions and allowances often contain conditions of compliance, i.e., conditions that must be met in order for the exception or allowance to convey.

Based on the violation being cited, the substance of the text being referred to, and the context in which the reference is made, users of the Code must infer the intent of the cross reference. That is, the user must determine if the cross reference simply alerts the user to additional information about the requirement or if the cross reference:

- refers the user (via the word "under") to another Code provision; or
- incorporates (via the word "in") the referenced requirements into the Code provision.

Many individuals devoted considerable time and effort in addressing concerns and developing recommendations that are now reflected in this newly adopted food code. It is only through the dedicated efforts and contributions of these experienced professionals that a scientifically sound, well-focused, and up to date code is possible. The results of their combined efforts are food safety regulations that are based upon the most current science and the best strategies to ensure a continued safe food supply for Kansas citizens.
