KANSAS AGRICULTURAL STATISTICS PROCEDURES AND STAFF

This report, called the Kansas Farm Facts, is published each year possible to meet the diverse needs for a reliable reference book on agricultural production, prices, farm income and various other economic data within the state. Again this year there are changes due to budget constraints and strengthened publication rules. Beginning in the 2011 edition, where it was possible, 2007 Census of Agriculture statistics replaced data that is no longer collected. The number of farms by selected crop on page 11 was replaced with the number of farms from the census. The information on pages six and seven were also replaced with Census of Agriculture data. The value of production of all crops and livestock has been discontinued, along with livestock inventory values by county. These changes are also reflected in the 2012 Farm Facts, along with the discontinuation of sheep and lamb production, disposition, and income estimates on page 49. The data in this publication were made possible by the voluntary cooperation of the Kansas farmers and agribusinesses who responded to our surveys. A special thanks to each producer and agribusiness who provided data on one of our surveys. We believe that the best source of agricultural data is from producers and agribusinesses. The survey data were collected by mail, by a secure website, telephone interviews, personal interviews using paper questionnaires and iPads, and in-the-field observations. Most estimates are based on probability sample surveys. That is, information collected from a scientifically selected sample of all producers is used to estimate the activities of the entire group. Sampling is not only less costly in time and money than a complete count, but can be more accurate because reporting errors and data-handling errors are minimal compared to those in a complete count or census. The USDA NASS Kansas Agricultural Statistics staff includes highly trained agricultural statisticians with farm backgrounds and extensive experience in Kansas and other states, a support staff of statistical assistants and computer personnel. Lead statisticians are Bob White and Arcus Pierce. Agricultural and Survey Statisticians include Quentin Wearne, Dan Kolterman, Sherri Hand, Darin Twete, Dona Ratliff, and John Richards. Monica Young, Dustie Nitcher and Diane Nicholson provide survey management assistance, research and editorial assistance and design and publishing experience. In addition to the federal staff, a field and telephone staff of part-time National Association of State Department of Agriculture (NASDA) interviewers, working under the direction of NASDA supervisors, collects data by personal and telephone interview. The office staff and crew of enumerators join me in thanking the many farmers, ranchers, and agribusiness firms who provide the data and assist in planning our program of statistics. A special thank you to Millissia Tomlinson, our Kansas Ag Statistics student intern, and Logan Britton and Greg Regier, the student interns with the Kansas Department of Agriculture, all from Kansas State University, for their huge contributions to the Farm Facts project. We would also like to remind everyone that the 2012 Census of Agriculture will be mailed out to all Kansas farmers and ranchers in November and December 2012. Please complete the form when it arrives in the mail and return it in the postage paid envelope or complete it on the Internet as soon as possible. Your answers to the Census help grow your farm future; shape your farm programs; and boost services for you, your community and your industry, and are an integral part of the Kansas Farm Facts. After all, the Census of Agriculture is your voice, your future and your responsibility. ¹ Beginning with 1975, a farm is defined as any place with at least \$1,000 in annual sales of agricultural products. Between 1959 and 1975, a farm was defined as a place of 10 or more acres that had \$50 or more in annual sales of agricultural products or a place with fewer than 10 acres and annual sales of \$250 or more. Prior to 1959, a farm was defined as three acres or more with a value of farm products amounting to \$150 or more or fewer than three acres with sales of at least \$250. ² Land in farms estimates not available on an annual basis until 1950.
