We are a family farm that uses water from the Equus beds. We have spent many years developing our farm around efficient use of irrigation from this aquifer. Our wells are on the outer edge of the Equus bed area. We are concerned that if Wichita is allowed to take extra water in dry periods when irrigation is critical, it could have a major negative impact on our farm. If the water table drops just a few feet, our wells output is reduced significantly when we need the water the most. This would have a major impact on our farm and others in the area. As we all know, the agricultural success of central Kansas is very important for our community right here. Please keep this in mind before allowing more water resources to be piped out of our community when we need it the most.

Thank you,
Sam Goering
