 19 implementation of the City's proposal -- or the  
 20 City's use, I think, of the -- of their  
 21 integrated local water supply plan, and I'm  
 22 unsure exactly what the date was, but it says on  
 23 that next page that the Equus Beds Aquifer  
 24 supplied 60 to 70 percent of the City's annual  
 25 municipal water supply. Do you see where I was

1 reading on the next page?

2 **A. I see that.**

3 Q. So at least prior to the implementation of this  
4 integrated local water supply plan, 60 to  
5 70 percent of the City's water was coming from  
6 the Equus Beds well field, is that what the  
7 proposal states?

8 **A. Yes.**

9 Q. So in other words, prior to 1993, was the fact  
10 that the City was using more water from the  
11 Equus Beds well field, is that part of what was  
12 causing depletion in the aquifer?

13 **A. Yes.**

14 Q. Now I'd like to turn to the concept of aquifer  
15 maintenance credits. Yesterday Mr. McLeod asked  
16 about the City being with -- forced to withdraw  
17 credits sooner if minimum index levels were left  
18 the same as they are now. Do you recall that  
19 discussion that was asked of you?

20 **A. I do.**

21 Q. Can you explain for me again why the City would  
22 be forced to withdraw their credits sooner if  
23 the minimum index level was left the same? It's  
24 a complex concept, and I want to make sure I  
25 understood exactly what you said in that regard.

1 after the levels have dropped below the 1993  
2 levels, is there any other restriction in the  
3 existing ASR Phase I or ASR Phase II documents  
4 that would otherwise require the City to  
5 withdraw their credits sooner rather than later  
6 as it approaches that current minimum index  
7 level?

8 **A. Not that I'm aware of.**

9 Q. So in other words, this hypothetical we're  
10 talking about where the City may be forced to  
11 withdraw their credits sooner, that's merely a  
12 hypothetical in the sense that there's no  
13 requirement that would dictate when the City  
14 would withdraw those credits other than the  
15 minimum established by that minimum index level?

16 **A. That's my understanding.**

17 Q. Would it be good and responsible -- well,  
18 yesterday we talked about responsible resource  
19 management, that was a term, I believe, you used  
20 yesterday; is that correct?

21 **A. Correct.**

22 Q. Would it be good or responsible resource  
23 management if the City withdrew their credits  
24 sooner than they would have otherwise had to?

25 **A. No, because it's better for the City to leave**

1 **A. If the water level is drawn below the minimum**  
2 **index cell level, the City cannot recover their**  
3 **recharge credits. So if the aquifer is getting**  
4 **close to that level, the City would not -- if**  
5 **they needed those recharge credits, they would**  
6 **have to divert those recharge credits before the**  
7 **water level got below that index cell level.**

8 **And so in 2011 and 2012, we were getting**  
9 **extremely close to that level and the City felt**  
10 **that they would -- they would strand those**  
11 **recharge credits. So now their planning horizon**  
12 **changes, they have to make a decision whether to**  
13 **divert those recharge credits before it gets to**  
14 **that lower level, and then below the lower**  
15 **level, then, they would start using their native**  
16 **water rights.**

17 Q. So in other words, if it was getting closer to  
18 that level, it would cause the City to choose to  
19 withdraw their credits sooner is what you're  
20 saying?

21 **A. They would have to make a decision on whether to**  
22 **draw the credits or leave them stranded in the**  
23 **aquifer.**

24 Q. Let me ask you this: Is there any rule other  
25 than the fact that they can't recover credits

1 **the credits in the aquifer because those credits**  
2 **don't renew. So it -- but if it was getting --**  
3 **if they were -- the City's planning required**  
4 **them to use recharge credits or go over their**  
5 **40,000 acre-feet, that minimum index level may**  
6 **require them to draw recharge credits until it**  
7 **gets below that and then they would utilize the**  
8 **40,000 acre-feet.**

9 Q. Yesterday you indicated that if the minimum  
10 index level was dropped, the City would then  
11 conceivably wait longer to withdraw those  
12 credits. Do you recall that testimony?

13 **A. Yes, that gives them a little bit more window to**  
14 **operate with.**

15 Q. My question is this: Where in the existing  
16 proposal does it explain or dictate that the  
17 City would actually be required to wait longer  
18 to withdraw those credits?

19 **A. I'd have to review the proposal, I'm not -- I**  
20 **don't know off the top of my head.**

21 Q. Well, in other words, would you agree with me  
22 that as the proposal is currently written, there  
23 is no strict requirement that would force the  
24 City to wait to a certain period of time or wait  
25 until the water level has dropped a certain

Page 1433

1 amount to withdraw those credits, would you  
 2 agree with me on that?  
 3 **A. Yes, and -- but that's why in our testimony we**  
 4 **came up with the draft conditions on the order**  
 5 **on which the rights and the recharge credits**  
 6 **would be pumped.**  
 7 Q. And certainly I'll ask you about the proposed  
 8 conditions that DWR has made in great detail  
 9 here in a minute, but would you at least just  
 10 agree with me for our initial purposes that as  
 11 the proposal's written, there is no condition  
 12 that would dictate how and when the City would  
 13 withdraw those credits? In fact, there's  
 14 nothing that would require them to get them  
 15 sooner or wait longer, would you agree with  
 16 that?  
 17 **A. Just a second, I think -- I thought there was**  
 18 **something in here that talked about the order in**  
 19 **which they would take them in. Just a second.**  
 20 **Okay. On -- on page 2-5, at the top, let me**  
 21 **know -- are you there?**  
 22 Q. I am there.  
 23 **A. You'll see that bullet point that talks about**  
 24 **updated outcome-based goals, and the third**  
 25 **bullet there talks about utilizing the 40,000**

Page 1434

1 **acre-feet from the Equus Beds well field prior**  
 2 **to use -- prior to use of the ASR recharge**  
 3 **credits. So it -- this was discussed.**  
 4 Q. Mr. Letourneau, when one -- well, just keep your  
 5 finger on that page --  
 6 **A. Okay.**  
 7 Q. -- on page 2-5. I would ask that you also,  
 8 then, flip to page -- page 3-6 of the City's  
 9 proposal. Sorry it took me a moment, I had it  
 10 covered up with sticky notes.  
 11 **A. It's tricky, I mean -- okay, I'm there.**  
 12 Q. Would you agree that on page 3-6 of the  
 13 proposal, and it starts on the prior page, 3-5,  
 14 it says, proposed AMC permit conditions? Would  
 15 you agree with me?  
 16 **A. What -- what number are you at?**  
 17 Q. Well, on page 3-5, the section that's --  
 18 **A. Oh, yep, I'm there.**  
 19 Q. -- 3.4, it says proposed AMC permit conditions,  
 20 would you agree with me that's what it says?  
 21 **A. Yes.**  
 22 Q. And would you agree that there's numerical -- a  
 23 numerical order of conditions on the very next  
 24 page that are listed as 1 through 7, would you  
 25 agree with me?

Page 1435

1 **A. Yes.**  
 2 Q. And just take a moment to scan those conditions  
 3 over just for a moment.  
 4 **A. Okay.**  
 5 Q. Would you at least agree that there's no  
 6 requirement listed in these conditions that  
 7 would force the City to withdraw water from  
 8 Cheney --  
 9 **MR. MCLEOD:** I'm going to object at  
 10 this point, I think we crossed lines of  
 11 questioning. We've transitioned from  
 12 talking about the 1993 bottoms and the  
 13 order in which credits would be used as  
 14 compared to native rights, then come over  
 15 to the AMC suddenly, permit conditions, and  
 16 it's apples and oranges.  
 17 **MR. STUCKY:** That's fair. I'll  
 18 change my line of questioning, that's a  
 19 fair objection.  
 20 **BY MR. STUCKY:**  
 21 Q. The -- would you agree, though, on 3-5, what we  
 22 see on 3-5 of the City's proposal are  
 23 conditions, those are actual conditions that the  
 24 City is asking that they have to abide by; is  
 25 that correct?

Page 1436

1 **A. Well, they're proposed conditions.**  
 2 Q. But they're conditions the City is saying that  
 3 if our proposal is adopted, we're asking that  
 4 these conditions be imposed on us. Is that a  
 5 true statement?  
 6 **A. That's -- I would think that's true, yes.**  
 7 Q. Now, if you kept your finger on the page you  
 8 identified before, which was page 2-5.  
 9 **A. Yes.**  
 10 Q. At the top of that page, it says outcome-based  
 11 goals; is that right?  
 12 **A. Yes.**  
 13 Q. Would you agree with me, at least for the  
 14 record, that there's a big difference between a  
 15 goal and a condition, from your perspective in  
 16 your job?  
 17 **A. Yes. But then in our proposed conditions, we**  
 18 **actually put this particular goal of the City in**  
 19 **as a condition.**  
 20 Q. So that's a condition you're asking for, but at  
 21 least in the City's proposal, it's not made a  
 22 condition in the City's proposal. Is that a  
 23 true statement?  
 24 **A. Not on that particular page, but at the end of**  
 25 **the day, it'll be a condition.**

1 Q. I would ask that you now flip to page 3-10 of  
2 the City's proposal. Under section 3.6, there  
3 is a sentence that starts, the added  
4 flexibility. Do you see --

5 **A. Yes.**

6 Q. Could you read for the record, starting with  
7 that sentence and those four bullet points that  
8 are listed in that section?

9 **A. The added flexibility granted by AMCs would**  
10 **City (sic) would reinforce the City's**  
11 **commitments outcome-based management of the**  
12 **water resources: The City of Wichita remains**  
13 **committed to optimizing the use of all available**  
14 **water supply resources, both in times of**  
15 **abundance and times of drought; the City remains**  
16 **committed to making water resource management**  
17 **practices that are governed by outcome-based**  
18 **results focused on long-term sustainability of**  
19 **all water supplies; the City will continue to**  
20 **maintain an ASR operational priority focused on**  
21 **generation of physical recharge credits where**  
22 **and when possible; the ability to develop and**  
23 **recover AMCs results in an aquifer management**  
24 **strategy focused on maintaining the maximum**  
25 **quantity of water possible in aquifer storage**

1 could be crafted into actual commitments of the  
2 City or conditions of the City, would you agree  
3 that these are items that would be best crafted  
4 into conditions that the City would have to  
5 abide by?

6 **A. Yes, I think it's good. I mean, they've**  
7 **committed to them.**

8 Q. I'd ask that you turn to page 3-10 of the City's  
9 proposal. Or, I'm sorry, 3-1 of the City's  
10 proposal. In that bottom paragraph, could you  
11 read to me the second sentence of that bottom  
12 paragraph?

13 **A. The water left in storage because of utilizing**  
14 **Little Ark River flows rather than groundwater**  
15 **from the Equus Beds well field would be**  
16 **considered an ASR aquifer maintenance credit,**  
17 **AMC, with similar characteristics to the current**  
18 **ASR recharge credits.**

19 Q. So the idea as identified in that sentence is  
20 that an aquifer maintenance credit would be  
21 accumulated based on the act of the water being  
22 left in storage, is that what this sentence is  
23 saying?

24 **A. Correct.**

25 Q. And the water that is left in storage, this

1 **within the Equus Beds well field.**

2 Q. With respect to the first bullet point, one of  
3 the goals or outcomes of the City's proposal  
4 that they identify is that it would optimize the  
5 use of all available water supply resources. Is  
6 that a true or accurate statement?

7 **A. That is true, yep.**

8 Q. And, in fact, they also indicate in the next  
9 goal that they would want to ensure a long-term  
10 sustainability of all available water supplies,  
11 is that a -- what the next goal states?

12 **A. Yes.**

13 Q. And the third goal also indicates the physical  
14 recharge credits would be utilized where and  
15 when possible, is that also what's stated?

16 **A. That's correct.**

17 Q. But would you also agree with me that while  
18 although these are perceived benefits or goals  
19 of this outcome-based approach of the City's  
20 proposal, these aren't conditions; is that  
21 right?

22 **A. That's correct.**

23 Q. Now, I know that each of these goals is -- is  
24 amorphous in nature and would be difficult to  
25 enforce in the abstract, but to the extent they

1 would be native groundwater; is that correct?

2 **A. Not if it was an aquifer maintenance credit.**

3 Q. Well, explain what you mean by that.

4 **A. Well, the City has the ability to pump the hole,**  
5 **let's say in the basin storage area, and so like**  
6 **the City has committed, they want to do physical**  
7 **recharge credits first. So if the water level**  
8 **is too high to put a physical recharge credit**  
9 **in, then they gain an aquifer maintenance**  
10 **credit. And so by not pumping the aquifer,**  
11 **then, is why they get that credit. So the**  
12 **water, though, is in the basin storage area,**  
13 **physically there, but when they get the water**  
14 **maintenance credit, we flip what that water is**  
15 **to a credit, if that makes sense.**

16 Q. Let me just ask you this so I understand it  
17 clearly, let's use the example of when the City  
18 pumps the hole in the aquifer.

19 **A. Okay.**

20 Q. If they pump the hole in the aquifer, would they  
21 be pumping native water that already exists in  
22 the aquifer?

23 **A. That or a recharge credit that they've already**  
24 **accumulated.**

25 Q. So in other words, if they pump down the

Page 1441

1 aquifer, create a hole in the aquifer, they're  
 2 either pumping out water they physically  
 3 injected into the aquifer or they're actually  
 4 pumping out native water that already exists in  
 5 the aquifer. Is that a true statement?  
 6 **A. That's true.**  
 7 Q. And yesterday we heard an accounting by  
 8 Mr. McCormick with respect to water that's been  
 9 injected in the aquifer from, I believe it was  
 10 2006 to 2015, and we heard a difference between  
 11 9,000 and some change of water that was injected  
 12 into the aquifer during that time period and  
 13 approximately 6,000 acre-feet of water that was  
 14 maintained as a credit. Do you recall that  
 15 discussion yesterday?  
 16 **A. I do.**  
 17 Q. So if we were to set aside, let's assume for a  
 18 moment that this 6,000 plus acre-feet of water  
 19 that was set aside as a credit, we set that  
 20 aside for a moment, if we exclude that, would  
 21 you agree that if the City were to pump a hole  
 22 in the aquifer, the water they're pumping down  
 23 would be native water that already exists in the  
 24 aquifer?  
 25 **A. Yes.**

Page 1442

1 Q. So in other words, to back up to my prior  
 2 question, and I'm asking you before this flip  
 3 analysis occurs --  
 4 **A. Okay.**  
 5 Q. -- I'll just call it that --  
 6 **A. Sure.**  
 7 Q. -- if there is water left in storage prior to it  
 8 qualifying as an aquifer maintenance credit,  
 9 would you at least agree with me, if we're not  
 10 pumping that water out and it was native water  
 11 as we're pumping it out, if it's left in the  
 12 aquifer, would you also agree that it's the same  
 13 water, it would be native water that's left in  
 14 the aquifer?  
 15 **A. Yes, I would agree with that. We -- we look at**  
 16 **the basin storage area as a leaky 120,000**  
 17 **acre-foot tank in the aquifer.**  
 18 Q. And in other words, excluding this 6,000  
 19 acre-feet of water and if we're in the year,  
 20 let's say, 2016, excluding this 6,000 acre-feet  
 21 of recharge credits that the City had  
 22 accumulated from -- during that time period up  
 23 until that time period, you would agree that the  
 24 rest of the water in the aquifer would not be  
 25 water that the City actually put in the aquifer,

Page 1443

1 would you agree with that statement?  
 2 **A. That's correct, it would be -- but they didn't**  
 3 **take it out either.**  
 4 Q. Okay.  
 5 **A. It naturally recharged.**  
 6 Q. I'd ask that you turn to page 4-1 of the City's  
 7 proposal. I would ask that you read the last  
 8 two sentences or full sentences on that page  
 9 with the start of that last paragraph where it  
 10 says DWR, GMD2, could you read to me those two  
 11 sentences for the record?  
 12 **A. You want me to start with that one?**  
 13 Q. Yes, please.  
 14 **A. Okay. DWR, GMD2 staff, and the City have each**  
 15 **conveyed interest in developing a simplified**  
 16 **accounting method for AMCs. In addition, using**  
 17 **the current accounting process for AMCs would be**  
 18 **impractical as the physical recharge accounting**  
 19 **relies on a comparison of groundwater modeling**  
 20 **results that utilize actual metered physical**  
 21 **recharge values compared to actual water levels.**  
 22 Q. And, in fact, could you read one more sentence?  
 23 **A. There would be no observed water levels to**  
 24 **compare the AMC results against since the**  
 25 **location of the AMC recharge would be**

Page 1444

1 **theoretical.**  
 2 Q. So breaking down these two sentences just a  
 3 little bit, which I'll do in greater detail in a  
 4 moment, but breaking down these two sentences  
 5 just a little bit for our purposes for now, what  
 6 these two sentences, these last two sentences  
 7 you read state is that with respect to an actual  
 8 physical recharge, one is able to meter it as  
 9 it's injected into the aquifer. Is that a true  
 10 statement?  
 11 **A. That's true.**  
 12 Q. And, in fact, the City draws a distinction with  
 13 respect to an aquifer maintenance credit and  
 14 states that there's no ability to meter the  
 15 water as it's injected into the aquifer,  
 16 correct?  
 17 **A. It's not injected to the -- into the aquifer.**  
 18 Q. And so because it's not injected into the  
 19 aquifer, there's no way to meter it during that  
 20 process; is that right?  
 21 **A. Well, meter it when it comes out of the**  
 22 **treatment facility and taking it to town, that's**  
 23 **where we would get that value.**  
 24 Q. I understand that but at least there's no way to  
 25 meter the water as it's put into the aquifer

1 because it's not put into the aquifer, correct?  
2 **A. That's correct.**  
3 Q. In fact, as it states in this sentence, the  
4 location of the AMC recharge would be  
5 theoretical, is that what it states?  
6 **A. That's what it states.**  
7 Q. So in other words, it's theoretical in the sense  
8 that there is no actual physical recharge of the  
9 aquifer with respect to an AMC; is that correct?  
10 **A. That's correct.**  
11 Q. In that prior sentence, it indicates that with  
12 respect to the ASR recharge process, the actual  
13 metered physical recharge values are compared to  
14 actual water levels. So let me ask you this: I  
15 asked you about metering as the water is  
16 injected into the aquifer, and we agreed that  
17 that can't occur with respect to an aquifer  
18 maintenance credit. But also to the extent that  
19 a physical recharge credit analyzes the change  
20 in the aquifer levels as it's injected, would we  
21 also agree that with respect to an aquifer  
22 maintenance credit, what this sentence is saying  
23 is that one can't analyze the change in aquifer  
24 levels in the aquifer itself because no water is  
25 injected?

1 with me that when this water is taken out of the  
2 Little Arkansas River, the water in the Little  
3 Arkansas River, would that be the source water  
4 with respect to the AMC?  
5 **A. Yes.**  
6 Q. And would you also agree with me that after that  
7 source water is treated in the ASR treatment  
8 facility, that source water is sent directly to  
9 the City for municipal use?  
10 **A. If -- if there's no room in the aquifer, I would  
11 agree with that.**  
12 Q. And let me just for the record, Mr. Letourneau,  
13 draw a distinction here for a moment. I  
14 understand from the City's answers to our  
15 discovery and, indeed, from the Division of  
16 Water Resources' answers to our discovery that,  
17 and it's been already identified in this hearing  
18 process, that just because we adopt this AMC  
19 proposal doesn't mean that physical recharge  
20 can't also occur at some point. I recall that  
21 discovery and those answers. So for the  
22 purposes of this hearing, can we just for  
23 simplicity purposes draw a distinction between  
24 when I say an AMC and a physical recharge and  
25 just assume for a moment that if we're

1 **A. No water is injected, no water is removed, so  
2 that's correct.**  
3 Q. A moment ago, you indicated for me that when the  
4 metering occurs is when the source water is  
5 sent -- and I should clarify. With the aquifer  
6 maintenance credit proposal, what you told me a  
7 moment ago is the metering actually occurs when  
8 the water is taken out of the Little Arkansas  
9 River and sent directly to the City, is that  
10 what you just stated?  
11 **A. It's metered there but then it also is metered  
12 coming out of the plant, I believe, and that's  
13 the amount -- the meter coming out of the  
14 treatment facility is the number that we would  
15 use for the AMC, the aquifer maintenance credit.**  
16 Q. Thanks for that clarification and I might have  
17 misspoke. So the metered number we're concerned  
18 with is after the water is taken out of the  
19 Little Arkansas River during an overflow and  
20 then it's treated, then that amount is metered  
21 as it's sent directly to the City for municipal  
22 use, is that what you're saying?  
23 **A. Yes.**  
24 Q. Would you agree that when this over -- with  
25 respect to the AMC proposal, would you agree

1 accumulating an AMC that it's not -- that we're  
2 not capable of physically injecting into the  
3 aquifer at that point?  
4 **A. Yes.**  
5 Q. So to back up and just make sure I understand,  
6 when an AMC, an aquifer maintenance credit is  
7 accumulated, the source water from the Little  
8 Arkansas River, after treatment, is sent  
9 directly to the City for municipal use?  
10 **A. Yes.**  
11 Q. Is the Little -- is overflow water from the  
12 Little Arkansas River the only source of -- the  
13 only type of source water that would be used  
14 under the City's AMC proposal?  
15 **A. Yes, that's what's in the proposal.**  
16 Q. Is there more than one manner in which that  
17 source water can be captured from the Little  
18 Arkansas River?  
19 **A. Little Ark surface water and bank storage wells.**  
20 Q. Can you explain for the record the difference  
21 between bank storage wells and the other  
22 storage, the overflow from the Little Arkansas  
23 River, can you explain, I guess, in precise  
24 terminology for the record the difference  
25 between the two?

Page 1449

1 **A. I'll try. The surface water diversion is just**  
 2 **that, it's surface water from the Little Ark**  
 3 **River. The bank storage wells are wells that**  
 4 **are completed in the alluvium that capture flow**  
 5 **and then delay the flow moving downstream. It's**  
 6 **still considered surface water, and it's stored**  
 7 **in those bank storage wells.**  
 8 Q. Thank you for the explanation, Mr. Letourneau.  
 9 If you could flip to page 3-6 of the City's  
 10 proposal. On page 3-6 of the City's proposal,  
 11 if we were to look at number 6, what it states  
 12 is that AMCs would be accumulated based on the  
 13 metered quantity of water diverted from the  
 14 Little Arkansas River via direct surface water  
 15 diversions or water captured via bank storage  
 16 wells and sent directly to the City?  
 17 **A. Yeah, that's -- that's correct, David, that was**  
 18 **in the proposal, and I overlooked that.**  
 19 Q. So in other words, there is a distinction in the  
 20 proposal itself between the bank storage wells  
 21 and the direct surface water diversions from the  
 22 Little Arkansas River; is that right?  
 23 **A. That's right, and they -- both of those, the**  
 24 **surface water diversion and the bank storage**  
 25 **wells, are still part of the initial diversion**

Page 1450

1 **of the ASR project, that that's -- that's where**  
 2 **it starts, from both of those.**  
 3 Q. Do you know if the City plans to construct  
 4 future bank storage wells?  
 5 **A. I don't know.**  
 6 Q. Would you agree with me, though, that the  
 7 proposal allows the City to construct future  
 8 bank storage wells?  
 9 **A. It -- up in number 2, it does talk about future**  
 10 **bank storage wells.**  
 11 Q. And, in fact, it says in number 2 specifically,  
 12 quote, future bank storage wells, end quote; is  
 13 that right?  
 14 **A. That's -- that's correct. Bank storage wells**  
 15 **are a good -- are a good way to slow the flow**  
 16 **and to basically get that water before it goes**  
 17 **on to Oklahoma.**  
 18 Q. So in other words, as contemplated in section 2  
 19 on page 3-6 of the City's proposal, would you  
 20 agree that it at least contemplates the  
 21 possibility that the City could build or  
 22 construct future bank storage wells?  
 23 **A. Yes, it does.**  
 24 Q. And would you also agree with me that if the  
 25 City were to construct or build bank storage

Page 1451

1 wells, it would increase their capacity to  
 2 capture overflow water from the Little Arkansas  
 3 River?  
 4 **A. Yes, it could.**  
 5 Q. Going back to number 6, and I think you also  
 6 already testified to this, but indeed in the  
 7 City's proposal, it also indicates there that  
 8 AMCs would be accumulated based on the metered  
 9 quantity of water diverted to the City from the  
 10 Little Arkansas River, is that what it states in  
 11 number 6?  
 12 **A. Yes, number 6 says that.**  
 13 Q. So with respect to both bank storage wells and  
 14 this overflow water directly diverted from the  
 15 Little Arkansas River, would the water from both  
 16 the bank storage wells and this overflow water  
 17 diverted from the Little Arkansas River, would  
 18 that all be first treated in the ASR treatment  
 19 facility?  
 20 **A. To get an AMC, yes.**  
 21 Q. And so the metering with respect -- and I am  
 22 saying these two different forms of getting the  
 23 water from the Little Arkansas River, if I say  
 24 two different forms, you know what I'm talking  
 25 about, correct?

Page 1452

1 **A. Yes, yes.**  
 2 Q. With respect to those two different forms, they  
 3 would both be treated and then they would be  
 4 metered as they're sent directly to the City; is  
 5 that correct?  
 6 **A. I believe so, yes. The metering and the**  
 7 **measuring points can all be worked out,**  
 8 **definitely.**  
 9 Q. Let me ask you this: With respect to bank  
 10 storage wells under the existing ASR Phase II  
 11 process or existing infrastructure, would you  
 12 agree with me that with respect to bank storage  
 13 wells, they generally do not require treatment?  
 14 **A. You know, that part I don't know of how the City**  
 15 **operates the bank storage wells.**  
 16 Q. So in other words --  
 17 **A. That's one thing I've not looked into. I mean,**  
 18 **I know -- I know the bank storage wells are**  
 19 **there, I know that they capture surface water,**  
 20 **and the surface water then, I believe, would be**  
 21 **treated. If it was going to be injected, it**  
 22 **would have to be treated to put into the ground.**  
 23 **Unless I'm missing something.**  
 24 Q. So are you fully aware of the extent to which  
 25 both the intake directly from the Little

1 Arkansas River and the bank storage wells are  
2 treated?  
3 **A. I -- no, I'm not fully aware. I mean, I know**  
4 **they would have to be treated to meet drinking**  
5 **water standards to be injected into the ground,**  
6 **I believe. But as far as the -- the extreme**  
7 **technical operations of the ASR treatment,**  
8 **I'm -- I'm not an expert on that.**  
9 Q. We indicated that when the aquifer is at  
10 capacity that no physical recharge can occur in  
11 the aquifer; is that correct?  
12 **A. That's correct.**  
13 Q. Would you also agree with me that strictly as an  
14 AMC, aquifer maintenance credit, is accumulated,  
15 no physical recharge is occurring during that  
16 act either?  
17 **A. That's correct.**  
18 Q. Would you also agree with me that a moment ago  
19 we talked about source water, and you indicated  
20 that with respect to an AMC the source water is  
21 the Little Arkansas River, is that what you  
22 testified to?  
23 **A. Yes.**  
24 Q. Would you also agree with me that as an AMC  
25 credit is accumulated, no source water actually

1 **come up with what would be considered**  
2 **reasonable. And so we accepted the 5 percent**  
3 **initial loss and then the 5 percent close to the**  
4 **river, 3 percent in the middle, and 1 percent to**  
5 **the outside.**  
6 Q. And certainly, Mr. Letourneau, if you want to  
7 flip to page 4-3 of the City's proposal, and if  
8 looking at that page helps to refresh your  
9 memory as you're providing your explanation or  
10 if you want to supplement your explanation,  
11 you're welcome to.  
12 **A. Yeah, that last paragraph, I remember -- I**  
13 **remember the City, the consultants, and us**  
14 **visiting about the loss rates, and I remember**  
15 **Scott Macey bringing this information talking**  
16 **about the historic accounting process and**  
17 **drought modeling efforts and then the**  
18 **hydrogeological characteristics of the aquifer.**  
19 **And to the team, the numbers seemed reasonable.**  
20 Q. When you refer to loss rates, what do you mean  
21 by the term loss rates?  
22 **A. That -- when I talk about -- these, the index**  
23 **cells, my terminology is they leak, and so you**  
24 **put water in and each year that water migrates**  
25 **out of the index cells. A little bit -- a**

1 enters into the aquifer?  
2 **A. That's correct.**  
3 Q. And, in fact, you testified to the same thing  
4 during your deposition, and, indeed, your  
5 testimony today is still the same; is that  
6 correct?  
7 **A. Yes, I try to keep a very consistent message.**  
8 Q. There was a discussion yesterday about the 5  
9 percent initial loss with respect to my  
10 questions of Mr. McCormick. You indicated in  
11 your prior responses to interrogatories and I  
12 believe, indeed, in your deposition testimony  
13 that the 5 percent initial loss, quote, seemed  
14 reasonable, end quote. Do you recall making  
15 that statement?  
16 **A. Yes.**  
17 Q. How did you determine or decide that that 5  
18 percent initial loss seemed reasonable?  
19 **A. By just discussions with the team.**  
20 Q. I would ask -- well, let me ask you this: In a  
21 general, higher level sense, what is your  
22 understanding of how this 5 percent initial loss  
23 is determined?  
24 **A. You know, it was a discussion of the team. I**  
25 **remember the consultants, Wichita just trying to**

1 **little bit of the water leaks out.**  
2 Q. I would ask that you flip to the prior page of  
3 the City's proposal, and the last full paragraph  
4 on that page, could you read for me the last  
5 sentence of that last full paragraph?  
6 **A. Under these conditions, 95 percent of the water**  
7 **recharged is retained as a recharge credit,**  
8 **attachment J.**  
9 Q. So in other words, the proposal, when  
10 calculating this 5 percent initial loss, is  
11 drawing a correlation between the water that  
12 would actually be retained in the form of a  
13 recharge credit, and that's where this 95  
14 percent is coming from; is that correct?  
15 **A. That's correct.**  
16 Q. So, conversely, if we look at the -- how this  
17 5 percent number was determined, the 5 percent  
18 refers to the percent of water that would be  
19 lost as these recharge credits are accumulated;  
20 is that correct?  
21 **A. That's correct.**  
22 Q. Would you also agree that if one analyzes actual  
23 numbers with respect to the ASR project and the  
24 data that we already know with respect to the  
25 ASR project, would you agree that those numbers

Page 1457

1 as far as the amount of aquifer -- of recharge  
 2 credits or water injected into the aquifer  
 3 versus the amount of recharge credits retained,  
 4 would you agree that that past data would have  
 5 some significance?  
 6 **A. Yes, and it did have significance on how these**  
 7 **particular numbers were picked.**  
 8 Q. So yesterday Mr. McCormick indicated that  
 9 although we put 85 percent, at the top of the  
 10 second full paragraph on page 4-2 of our  
 11 proposal, you know, that was a mistake, it  
 12 should have been closer to 73 percent; and if  
 13 we're to use the new accounting report that came  
 14 in and that he just pulled up on Mr. Boese's  
 15 phone, or perhaps I should say Mrs. Boese's  
 16 phone, it was actually closer to 64 percent; is  
 17 that correct?  
 18 **A. That's correct.**  
 19 Q. So as we hear this live data and we realize that  
 20 the 85 percent number in the City's proposal was  
 21 an error and it's actually much closer to 64  
 22 percent, to the extent we're trying to correlate  
 23 what the actual loss has historically been to  
 24 the number picked within the City's proposal,  
 25 would you agree with me, at least for our

Page 1458

1 purposes, that a 5 percent initial loss may be  
 2 too low?  
 3 **MR. MCLEOD:** I'm going to object  
 4 again because the 73 percent and 64 percent  
 5 numbers were over the course of the project  
 6 and had no relationship to initial loss.  
 7 **MR. STUCKY:** I think he can --  
 8 **PRESIDING OFFICER:** Response?  
 9 **MR. STUCKY:** My response is he can  
 10 testify if he knows the answer to the  
 11 question.  
 12 **PRESIDING OFFICER:** You can answer  
 13 if you know, and you're, Mr. McLeod, you're  
 14 free to address that on cross.  
 15 **A. You know, what I'll -- I'm going to answer this**  
 16 **question, and we are picking up some errors.**  
 17 **And this hearing process was to gather more**  
 18 **information, and we are gathering more**  
 19 **information, and we will commit to, once these**  
 20 **things are corrected, to take another review of**  
 21 **all of this, definitely. But it does -- yes, it**  
 22 **raises a question and we will review.**  
 23 **BY MR. STUCKY:**  
 24 Q. And, indeed, the numbers we looked at yesterday  
 25 include 1, 3 and -- well, I'm sorry, the City's

Page 1459

1 proposal also includes 1, 3, and 5 percent  
 2 annual losses as well, depending on the area  
 3 where the cell is in?  
 4 **A. Yes, in addition to the initial loss.**  
 5 Q. So in other words, would you at least agree with  
 6 me that as we consider the City's existing water  
 7 they've injected in versus the actual credits  
 8 they've retained over the course of a number of  
 9 years and we discover that now we're down to  
 10 64 percent and we discovered that the prior  
 11 year, it was at something close to 73 percent,  
 12 would you agree with me that the drop from year  
 13 2015 to year 2016, the drop of -- from  
 14 73 percent to 64 percent was more than a  
 15 1 percent drop?  
 16 **A. Yes, but that is based on where they had to --**  
 17 **where Wichita injected the water, I mean, in**  
 18 **what index cell and the percentage of that index**  
 19 **cell.**  
 20 Q. And certainly you're free to explain your answer  
 21 in greater detail in a moment or --  
 22 **A. Okay.**  
 23 Q. -- through later questioning, but would you  
 24 agree for my purposes that the drop from  
 25 73 percent to 64 percent that occurred in one

Page 1460

1 year was greater than 1 percent?  
 2 **A. Yes.**  
 3 Q. Would you agree it was greater than 3 percent?  
 4 **A. Yes, I'd have -- now I'm going to have to put a**  
 5 **calculator to it if you get into much higher**  
 6 **percentages.**  
 7 Q. And I'm certainly just looking at the numbers  
 8 yesterday that were identified and agreed to by  
 9 Mr. McCormick. Would you also agree that that  
 10 drop is greater than 5 percent?  
 11 **A. Well, I'd have to put a pencil to it, but it**  
 12 **probably is.**  
 13 Q. The difference between 73 percent and  
 14 64 percent, would you agree that that  
 15 difference --  
 16 **A. Yes.**  
 17 Q. -- is greater than 5 percent?  
 18 **A. Yes.**  
 19 Q. So in other words, regardless of whether we  
 20 consider the annual loss of 1 percent, 3  
 21 percent, or 5 percent, the drop with these live  
 22 numbers that we have from 2015 to 2016, you  
 23 would agree that the drop was greater than any  
 24 of the annual losses -- losses perceived by the  
 25 City in their proposal?

1 **A. Yes, but I have to qualify that with most of the**  
2 **water in the last few years was put into the**  
3 **recharge basin, and that recharge basin has a**  
4 **very high loss rate. And so if you were to**  
5 **distribute those recharge credits over the**  
6 **entire well field, if -- I think if the City had**  
7 **the ability to do that, based on our**  
8 **discussions, it would have been closer to the 5,**  
9 **3, and 1.**  
10 Q. Well, let's back up just a moment. If we assume  
11 just for a moment that this 95 percent number  
12 that the City identifies at the bottom of  
13 page 4-2, if we assume for a moment that that  
14 had a correlation to the 85 percent number that  
15 the City identifies toward the top of that page,  
16 would you agree with me that if the 85 percent  
17 number was, in fact, much less that it would at  
18 least cause some concern for this 95 percent  
19 number that is identified at the bottom of that  
20 page?  
21 **A. Yes, we would -- we would definitely review it.**  
22 Q. So in other words, I understand that in your  
23 deposition testimony and previously you said  
24 that this 5 percent initial loss and the 1, 3,  
25 and 5 percent losses seemed reasonable. As

1 **the modelers may have done on that.**  
2 Q. I would ask that you turn to Exhibit 20. Can  
3 you turn with me to page 69 of Exhibit 20, if  
4 you have that in front of you?  
5 **A. I have -- I'm there.**  
6 Q. And once again, for today's record and to  
7 refresh, this is a true and accurate copy of  
8 your deposition testimony; is that correct?  
9 **A. Yes, it is.**  
10 Q. With respect to page 69 of your deposition  
11 testimony, there were some questions asked about  
12 whether or not there was any kind of independent  
13 calculations done regarding that 5 percent  
14 initial loss. As you read your answer there,  
15 would you agree that, at least to your  
16 knowledge, there was not any independent  
17 calculations or modeling that was performed?  
18 **A. Well, on the model, is that what the part -- on**  
19 **line 7?**  
20 Q. On the 5 percent initial loss concept, would you  
21 agree --  
22 **A. Okay.**  
23 Q. -- that at least to your knowledge, as you were  
24 sitting at that deposition, you weren't aware of  
25 any specific independent calculations or

1 you're sitting here today, at least, would you  
2 agree that you have some more doubt with respect  
3 to those numbers and how they're calculated?  
4 **A. I don't know about doubt, I mean, it's -- it's**  
5 **worth another review based on those numbers, but**  
6 **I do know that those were derived based on an**  
7 **even distribution of the recharge credits. But**  
8 **I do have to say it's worth reviewing.**  
9 Q. And so if you were to make an official  
10 recommendation, would you, as you're sitting  
11 here today, would your recommendation be that  
12 this, at least this part of the proposal,  
13 requires some additional review?  
14 **A. Yes.**  
15 Q. Let me ask this, I just want to clarify one  
16 thing and just so I'm also clear, would you  
17 agree that at least as this proposal was being  
18 analyzed, the City didn't -- I mean, strike that  
19 question. As this proposal was being analyzed,  
20 would you agree that the Division of Water  
21 Resources didn't perform any independent  
22 calculations or any independent modeling as it  
23 related to this 5 percent and this 1, 3, and 5  
24 percent annual loss numbers?  
25 **A. I can't answer, I don't know what -- what work**

1 modeling that was performed to analyze that  
2 5 percent loss?  
3 **A. That's --**  
4 **MR. OLEEN:** I object, if we're  
5 referring to lines of deposition  
6 questioning, then we can read lines of  
7 deposition questioning. I don't see the  
8 question in the deposition transcript that  
9 Mr. Stucky claims exists here. He's  
10 referred to a vague concept, but we have  
11 clear questions here and we have clear  
12 answers here, so that can refresh the  
13 witness's memory or not, but I don't see  
14 the question that Mr. Stucky claims is in  
15 this page 69.  
16 **MR. STUCKY:** He was answering my  
17 question, I think he can answer it.  
18 **BY MR. STUCKY:**  
19 Q. I'll just rephrase. As you're sitting here  
20 today, you're not aware whether or not the  
21 Division of Water Resources did independent  
22 calculations or modeling as it related to this  
23 5 percent initial loss, is that your testimony?  
24 **A. I -- I don't know what they did. I know that**  
25 **our modeling team looked at it and felt it was**

Page 1465

1 **appropriate.**  
 2 Q. And with respect to the 1, 3, and 5 percent  
 3 annual loss, as you're sitting here today, you  
 4 don't have specific knowledge or information to  
 5 tell you whether or not the Division of Water  
 6 Resources did independent calculations or  
 7 modeling to test that theory; is that -- is that  
 8 right?  
 9 **A. I can't -- I don't know what -- I don't know**  
 10 **what they did. It was -- like this reminded me,**  
 11 **it's an approved model for the accounting. Our**  
 12 **team, you know, they -- our team felt that that**  
 13 **model is appropriate, and so I know our team --**  
 14 **our team reviewed the work and felt it was**  
 15 **appropriate.**  
 16 Q. And you already made a recommendation in this  
 17 regard and already stated it for the record, but  
 18 if you're to go back to your modeling team with  
 19 Division of Water Resources and we were to  
 20 assume for a moment that this Chinese wall was  
 21 broken and you could talk with the modelers at  
 22 the Division of Water Resources again, would  
 23 your recommendation to them be that, hey, maybe  
 24 you should check this 5 percent initial loss  
 25 number again?

Page 1466

1 **A. Yeah, I would say we -- that we found some**  
 2 **percentage errors in the report, let's see if**  
 3 **those percentage errors had any basis on this**  
 4 **particular part of the proposal. I think that's**  
 5 **more than reasonable, and I think the City would**  
 6 **agree to that, and consultants would agree to**  
 7 **that.**  
 8 Q. With respect to the gradational annual loss,  
 9 yesterday you testified that there's -- losses  
 10 are higher closer to the river. Again, you're  
 11 the -- you're the one who has worked for the  
 12 Division of Water Resources in a technical  
 13 standpoint for 33 plus years, explain to me why  
 14 those gradational losses are higher closer to  
 15 the river.  
 16 **A. It's an alluvial valley, and the -- the alluvium**  
 17 **closer to the river is going to have higher**  
 18 **losses to the river.**  
 19 Q. Do you know what those percentage differences  
 20 are?  
 21 **A. No. I mean, I -- I can find them, I don't know**  
 22 **them off the top of my head.**  
 23 Q. And, in fact, although we don't have percentages  
 24 or numbers in the City's proposal, the City also  
 25 acknowledges in their proposal that the

Page 1467

1 gradational losses are higher closer to the  
 2 river. Is that a true statement?  
 3 **A. That's true.**  
 4 Q. What numbers -- you mentioned that if you could  
 5 look at the numbers or at the data you would be  
 6 able to answer that question. If you were  
 7 trying to answer that question, what data or  
 8 numbers would you look at?  
 9 **A. We would go to the, probably the accounting**  
 10 **report. I would think the accounting report**  
 11 **would have the losses in the index cells. And,**  
 12 **actually, I would ask our modeling team to do it**  
 13 **is what I would do.**  
 14 Q. I would ask that you turn to table 2-10 in the  
 15 City's proposal.  
 16 **A. I'm there.**  
 17 Q. Yesterday there was a discussion, and in the  
 18 prior days of the hearing there was a discussion  
 19 about the concept of a contingency; is that  
 20 correct?  
 21 **A. That's correct.**  
 22 Q. And would you agree with me that although errors  
 23 were noted in this table, for the most part it  
 24 indicates the range of potential contingencies  
 25 that would be proposed by the City; is that

Page 1468

1 right?  
 2 **A. That's correct.**  
 3 Q. From the Division of Water Resources'  
 4 standpoint, with you being the expert designated  
 5 by the Division of Water Resources, tell me in  
 6 your words what this concept of a contingency  
 7 is.  
 8 **A. Models aren't absolutely perfect, and so you**  
 9 **want to add a contingency to give yourself a**  
 10 **little window to operate in. And so adding an**  
 11 **additional 10 feet to the bottom is -- was a**  
 12 **reasonable contingency in our mind because when**  
 13 **you go back to figure 11, I believe, another**  
 14 **10 feet out of 131 feet is less than 10 percent.**  
 15 **And I think that contingency, if I recall**  
 16 **appropriately, it was a team of people that**  
 17 **worked together to determine what that**  
 18 **contingency was -- was or should be.**  
 19 Q. Just so I understand a contingency from your  
 20 standpoint, can a contingency be whatever  
 21 number one wants to pick? For example, let's  
 22 say I look at well number 2 and it currently  
 23 says a 10-foot contingency, I understand the  
 24 correct number was supposed to be 20.52 feet for  
 25 the contingency; but let's say for well 2 I said

1 the contingency should be 40 feet, you know  
2 what, I want a big safety net here, this should  
3 be 40 or 50 feet, is that appropriate from a  
4 proposal or modeling standpoint?  
5 **A. It could be but it wouldn't be in my mind for**  
6 **this particular proposal, that's a pretty high**  
7 **percentage of the saturated thickness.**  
8 Q. And why would that not be appropriate for this  
9 proposal?  
10 **A. I just think that that's too much for the**  
11 **saturated thickness that we have. And that's**  
12 **just my opinion.**  
13 Q. And what factors, in your mind, go into helping  
14 to determine what a reasonable contingency, in  
15 fact, is?  
16 **A. Well, that's a modeler's question, based on**  
17 **how -- how the modelers feel about the data**  
18 **going in and the outputs coming out of the**  
19 **model.**  
20 Q. Do you believe that there should be at least  
21 some correlation between the actual modeled  
22 results and the proposed contingencies that were  
23 put into this table?  
24 **A. Well, there's both, isn't there, existing and**  
25 **modeled, in that basis for the proposed level?**

1 would you agree that perhaps that contingency is  
2 a little too aggressive?  
3 **A. You know, maybe but I think also, it's my**  
4 **understanding there is no infrastructure there,**  
5 **so I don't know how significant these wells are.**  
6 Q. So once again -- well, let me ask you this  
7 first: Also in attachment I, Mr. McCormick  
8 testified that the average drop in attachment I  
9 in those wells, the average, was just north of  
10 8 feet. Do you recall that?  
11 **A. Yes.**  
12 Q. And, in fact, the average contingency shown in  
13 this table is actually 10 feet; is that right?  
14 **A. That's correct.**  
15 Q. And once again, a 10-foot contingency is higher  
16 than this average drop that was shown in the  
17 modeled results; is that right?  
18 **A. That's correct.**  
19 Q. So at least as it relates to IW01C and IW02C, if  
20 you were to go back and have a chance to talk  
21 with your modeling team, would you agree with me  
22 that as we're trying to determine what a  
23 reasonable contingency is that it would be your  
24 recommendation that they at least look at those  
25 numbers again?

1 **I think there's both in here, David.**  
2 Q. So is your answer, yes, that you believe there  
3 should be a correlation between the modeled  
4 results and the contingency that's identified  
5 here?  
6 **A. Yes.**  
7 Q. Do you recall our discussion yesterday where I  
8 asked Mr. McCormick to turn to attachment I, and  
9 certainly we can go to attachment I again if you  
10 want to, but just for simplicity purposes and to  
11 speed up this process, Mr. McCormick identified  
12 the fact that there -- with respect to IW01C and  
13 IW02C that the actual drop shown in the well  
14 during the City's modeling was less than the  
15 contingency that was added? Would you -- do you  
16 recall that?  
17 **A. I do, uh-huh.**  
18 Q. And, in fact, certainly we can define what's  
19 meant by significant, but would you agree that  
20 it was significantly less than the proposed  
21 contingency?  
22 **A. Yes.**  
23 Q. So at least with respect to IW01C and IW02C,  
24 would you perhaps agree that this contingency,  
25 proposed contingency of 23 feet and 20.52 feet,

1 **A. Yeah, based on the outcome of this hearing,**  
2 **definitely.**  
3 Q. And with respect to the contingencies on this  
4 entire table, when we talk about a difference  
5 between 10 feet and 8 feet, with respect to the  
6 collective contingencies on this table, would  
7 you also ask your modelers to look at that again  
8 and ensure that it was reasonable?  
9 **A. Yes, uh-huh.**  
10 Q. Yesterday there was a discussion about the use  
11 of the 1998 levels and this concept of 5 MGD.  
12 Do you recall that discussion?  
13 **A. I do.**  
14 Q. From your standpoint -- first of all, do you  
15 understand -- prior to coming into this hearing,  
16 did you understand that these numbers were based  
17 on Cheney being 100 percent full or 110 percent  
18 full, what was your understanding prior to  
19 coming into this hearing?  
20 **A. Prior to the hearing, 110, but now it's at 100,**  
21 **as I understand.**  
22 Q. If the modeling was -- did this error of the  
23 difference between 110 versus 100, are you  
24 willing to accept that that was just a clerical  
25 error?

Page 1473

1 **A. Yes.**  
 2 Q. Do you know why, and I'm going to go ahead and  
 3 say 100 percent full for Cheney, do you know why  
 4 Cheney was started at 100 percent full versus  
 5 the aquifer starting at 91 percent full with the  
 6 1998 levels?  
 7 **A. It was probably based on actual.**  
 8 Q. The actual for what?  
 9 **A. The -- I imagine it was the actual data for**  
 10 **Cheney being full in '98 and the aquifer being**  
 11 **at 91 percent in '98. That's -- that's what I**  
 12 **would have assumed.**  
 13 Q. Do you -- and would you also agree with the  
 14 testimony yesterday that if it's rained a lot  
 15 and we assume that the aquifer is 100 percent  
 16 full, it would take a lot longer to deplete down  
 17 to the minimum index levels?  
 18 **A. Absolutely.**  
 19 Q. And so would you agree that there's a  
 20 significant difference between starting the  
 21 aquifer at 100 percent full in our projections  
 22 versus only 91 percent full in our projections?  
 23 **A. Yes.**  
 24 Q. And, in fact, it would take much longer to  
 25 deplete down to the current minimum index levels

Page 1474

1 if we assume the aquifer started at 100 percent  
 2 full?  
 3 **A. That's right, that's why we're trying to manage**  
 4 **the aquifer full, that's what this proposal is**  
 5 **about.**  
 6 Q. Do you think that it would be useful data or  
 7 useful information to have to at least have some  
 8 modeling and have an understanding of at what  
 9 juncture or at what point we would hit the  
 10 minimum index levels if we were to assume the  
 11 aquifer started at 100 percent full?  
 12 **A. Well, we like data, I mean, it can't -- it can't**  
 13 **hurt, but it's not part of this proposal, I**  
 14 **mean ...**  
 15 Q. But as we're evaluating this proposal and we're  
 16 attempting to evaluate the effects that the  
 17 City's proposal would have on the aquifer, do  
 18 you believe that it would at least -- if we had  
 19 it, that it would be a useful data set to know  
 20 what the City's proposal would do if we started  
 21 the aquifer at 100 percent full?  
 22 **A. Yes, I like data.**  
 23 Q. Why was the 5 MGD, why was that based on the  
 24 1998 water levels? Oh, I'm sorry, strike that  
 25 question. The 30 MGD was based on the 1998

Page 1475

1 water levels; is that correct?  
 2 **A. Yes, I believe so.**  
 3 Q. Do you know as you're sitting here, and if you  
 4 don't know the answer to this, it's completely  
 5 fair to say I don't know, do you know how this  
 6 30 MGD concept was derived as it related to the  
 7 1998 levels?  
 8 **A. Well, the 30 MGD is the plant capacity, but I**  
 9 **don't know how it was associated with the '98**  
 10 **level.**  
 11 Q. Do you know why 5 MGD is the minimum for  
 12 recharge?  
 13 **A. I don't know.**  
 14 Q. And so if I'm to ask you if this 5 MGD is based  
 15 on hard data or if it's just an arbitrary  
 16 number, you wouldn't know the difference?  
 17 **A. I don't know, David, no.**  
 18 Q. And if I were to ask you if it's possible for  
 19 the City to recharge, do physical recharge of  
 20 the aquifer when we drop below that 5 MGD, you  
 21 don't know the answer to that?  
 22 **A. I don't know.**  
 23 Q. But you at least did indicate that you had a  
 24 knowledge of where this 30 MGD came from with  
 25 respect to the 1998 levels; is that correct?

Page 1476

1 **A. I know where the 30 MGD came from, but I don't**  
 2 **know how it's associated with the '98 levels. I**  
 3 **know it's -- I know it's the plant capacity.**  
 4 Q. Do you know at what percent full, and we talked  
 5 1998 levels, Mr. McCormick said that means the  
 6 aquifer is 91 percent full, do you know at what  
 7 percent full the aquifer has to be before the  
 8 City can operate at 30 MGD?  
 9 **A. I don't know.**  
 10 Q. I would ask that you turn to page 2-11 of your  
 11 proposal. In that first full paragraph, in the  
 12 third sentence, it states, this comparison  
 13 indicated that the simulated groundwater levels  
 14 representing the end of the 1998 period were the  
 15 best match for representing the minimum  
 16 groundwater levels required to maintain 30 MGD  
 17 of physical ASR recharge capacity. Would you  
 18 agree with me that that's what that sentence  
 19 states?  
 20 **A. Yes.**  
 21 Q. And I think your testimony is you're not sure  
 22 what is meant by the terminology best match, end  
 23 quote, in that sentence; is that right?  
 24 **A. You know, what modelers do is they look for**  
 25 **comparison periods, and so I'm sure that's**

1 **probably what the modelers did at that time.**  
2 **But that -- that's a modeler's question.**  
3 Q. And you don't know why the modelers from the  
4 City felt that that 1998 level was the best  
5 match, you're not sure why?  
6 **A. Well, I'm sure because it matched up on data. I**  
7 **mean, when I talk to our modelers, that's what**  
8 **they do. I mean, they -- they look at what the**  
9 **model does and then they compare it to past**  
10 **periods and they find a past period that's --**  
11 **that's appropriate, that matches up pretty well.**  
12 Q. Yesterday we discussed the fact that the City is  
13 now wanting to put 120,000 acre-foot cap on the  
14 recharge credits that they can accumulate; is  
15 that correct?  
16 **A. That's correct.**  
17 Q. And, in fact, what the City is proposing is to  
18 apply that recharge cap not just to AMC credits  
19 but also to ASR Phase II physical recharge  
20 credits; is that correct?  
21 **A. That's correct.**  
22 Q. In your deposition, did you testify that this  
23 120,000 acre-foot cap was based on what the City  
24 says is the recharge capacity of the aquifer?  
25 **A. Well, it's actually the USGS report. The United**

1 that what you previously indicated?  
2 **A. Yes.**  
3 Q. And, in fact, in your deposition, if we were to  
4 turn to Exhibit 20 of your deposition.  
5 **A. I'm there.**  
6 Q. If you turn to page 70 of your deposition.  
7 **A. Okay.**  
8 Q. You indicate in your answer that the City came  
9 up with the 120,000 acre-foot cap strictly based  
10 on the USGS report indicating that that was the  
11 physical recharge capacity of the aquifer. Is  
12 that what you state in your deposition?  
13 **A. Close, yep, very close.**  
14 Q. All right. I would ask that you turn to page  
15 3-7 of the City's proposal in that black  
16 notebook now. With respect to page 3-7, could  
17 you read that first sentence of the very last  
18 paragraph, and it's not a full paragraph on that  
19 page, but the first sentence of that paragraph?  
20 **A. To determine the physical recharge capacity of**  
21 **the ASR recharge well network, the City**  
22 **proposing the implementation of an annual water**  
23 **level monitoring program in conjunction with a**  
24 **recharge capacity calculation table.**  
25 Q. And so to understand this sentence, and I --

1 **States Geological Survey report, it's in a table**  
2 **in that report somewhere that that's the**  
3 **capacity of the basin storage area.**  
4 Q. I would ask that you flip to Exhibit 13 in the  
5 notebooks before you. Well, let me just back up  
6 and ask this question before I ask you to flip  
7 to a given interrogatory. Did you testify  
8 previously or at least indicate previously that  
9 the Division of Water Resources, at least, did  
10 not independently verify where this 120,000-foot  
11 number came from?  
12 **A. Well, we knew it came from the USGS report.**  
13 Q. My question is did you do any kind of  
14 independent calculations or independent modeling  
15 to determine if this 120,000-foot number was  
16 accurate?  
17 **A. No, because we agree with the model.**  
18 Q. I'll save you sometime in flipping through --  
19 **A. Okay.**  
20 Q. -- Exhibit 13.  
21 **A. I don't need it now; is that right? Okay.**  
22 Q. But you would agree with me that you have  
23 previously indicated that this 120,000-foot  
24 number comes from the actual physical recharge  
25 capacity space, if you will, in the aquifer, is

1 when you were reading into the record a prior  
2 page, I think you paused when you arrived at the  
3 typo, but in this one, it should say the City is  
4 proposing the implementation of an annual water  
5 level monitoring program. Is that what it  
6 should say?  
7 **A. That's what it should say.**  
8 Q. Okay. What, in your mind, is this annual water  
9 level monitoring program that the City would put  
10 in place in conjunction with a recharge  
11 calculation or a recharge capacity calculation  
12 table?  
13 **A. Well, we have to understand the water level in**  
14 **the basin storage area so we understand if it**  
15 **can take physical recharge credits or not. So**  
16 **it's my understanding that this -- there would**  
17 **be an annual water level monitoring program, and**  
18 **then along with that, there would be a recharge**  
19 **capacity calculation table.**  
20 Q. And I'm going to back up, the preparatory clause  
21 of this sentence states, quote, to determine the  
22 physical recharge capacity of the ASR recharge  
23 well network, end quote, would you agree that  
24 that's the preparatory clause of this sentence?  
25 **A. Yes, yes, absolutely.**

Page 1481

1 Q. And so what it's referring to here is monitoring  
 2 the physical recharge capacity of the ASR  
 3 recharge well network; is that right?  
 4 **A. That's correct.**  
 5 Q. So this monitoring program of sorts would be  
 6 designed to help monitor and determine what the  
 7 recharge capacity is of this well network?  
 8 **A. Correct.**  
 9 Q. And so I guess my question is, if we're going to  
 10 put a monitoring program in place to try and  
 11 determine what the capacity is as events unfold  
 12 and as time changes, is this capacity of 120,000  
 13 acre-feet, is that not a definitive number, is  
 14 that something that requires more study and more  
 15 monitoring in the future?  
 16 **A. Oh, I -- I don't know how it -- how the 120,000**  
 17 **relates to this. I see this as if we're at a**  
 18 **certain level in the aquifer, then we can**  
 19 **recharge this amount, with the 120,000 being the**  
 20 **cap, the overall cap, so ...**  
 21 Q. But at least -- I understand that that's your  
 22 understanding, but as this sentence is worded,  
 23 it implies, at least, that the City will be  
 24 monitoring what the actual recharge capacity is  
 25 over the course of time. Is that at least how

Page 1482

1 the sentence reads?  
 2 **A. Yes, uh-huh. Yes.**  
 3 Q. And so from, again, my simple mind where I'm  
 4 trying to understand all this, can you at least  
 5 understand how it invites the question that the  
 6 City perceives that this recharge capacity needs  
 7 to be monitored and evaluated further in the  
 8 future?  
 9 **A. Well, I think it's -- they're doing it -- I**  
 10 **mean, they're monitoring it now. I -- I just**  
 11 **see this as now -- now they're going to lay out**  
 12 **what the physical recharge capacity is of the**  
 13 **aquifer. Now they do the monitoring to see if**  
 14 **they can recharge, but then this adds to it the**  
 15 **recharge capacity component.**  
 16 Q. So despite what this sentence states, you don't  
 17 believe that it means that the City intends to  
 18 try and further evaluate what the actual  
 19 recharge capacity is of the aquifer?  
 20 **A. Well, they -- they're going to use a water level**  
 21 **monitoring program to determine the recharge**  
 22 **capacity. I think the table -- I think the**  
 23 **table will just be there for transparency for**  
 24 **people to see. I mean, that's how I see this.**  
 25 Q. And I just want to back up a little bit here

Page 1483

1 just to make this, perhaps, conceptually easier  
 2 to understand for the audience and for our  
 3 hearing officer, there's a difference between  
 4 120,000 acre-foot capacity in the aquifer versus  
 5 the physical recharge capacity of the aquifer,  
 6 is there a difference between those two numbers?  
 7 **A. I don't think so. I don't -- if we were back**  
 8 **down to the '93 level at the start and we**  
 9 **maintained it at that level, there would be**  
 10 **120,000 acre-feet of storage area. It -- we**  
 11 **look at this as 120,000 acre-foot tank in the**  
 12 **aquifer, a leaky tank. That's the box, that's**  
 13 **the basin storage area is 120,000 acre-feet in**  
 14 **the aquifer.**  
 15 Q. So do you believe that there should be  
 16 further -- I mean, if this is something the City  
 17 is already proposing to do, do you agree with  
 18 the City that these numbers should be better and  
 19 further evaluated in the future?  
 20 **A. I think -- I think all the monitoring is**  
 21 **available. I don't -- I don't know what -- what**  
 22 **additional evaluation should be done. If you**  
 23 **could help me -- if you could help me understand**  
 24 **that.**  
 25 Q. My question is this: To the extent that the

Page 1484

1 City says we're proposing implementation of  
 2 additional monitoring, would you agree that if  
 3 the City is already proposing that, that's  
 4 something that should occur?  
 5 **A. Yes, I can -- I can answer yes to that.**  
 6 **PRESIDING OFFICER:** And I have a  
 7 question. If I'm following you correctly,  
 8 it appears to me that the 120,000 acre-feet  
 9 cap is not dependent on actual capacity as  
 10 monitored?  
 11 **A. Correct.**  
 12 **BY MR. STUCKY:**  
 13 Q. Yesterday Mr. McLeod asked that if the City's  
 14 drought projections were overblown, did you  
 15 agree with the fact that it would mean that the  
 16 City would use less water?  
 17 **MR. MCLEOD:** I'm going to object  
 18 because I think the question was about the  
 19 City's demand projections and Counsel has  
 20 misstated it.  
 21 **MR. STUCKY:** I'll rephrase.  
 22 **BY MR. STUCKY:**  
 23 Q. Would you agree that yesterday Mr. McLeod asked  
 24 you that if the City's drought projections were  
 25 overblown it would mean that the City would

1 actually need less water in the future?  
 2 **A. Yes.**  
 3 Q. And he asked you a further question that if  
 4 these projections, these demand projections were  
 5 overblown, he said the City would need less  
 6 water; is that right?  
 7 **A. Yes.**  
 8 Q. So let me ask you this: If we were to assume,  
 9 based on Mr. McLeod's line of questioning, that  
 10 these demand projections are overblown and we  
 11 learn that the City is actually going to need  
 12 less water in the future, do you believe that  
 13 the cap on the City's physical recharge credits  
 14 and on their AMC credits should be less than  
 15 120,000 acre-feet?  
 16 **A. No, I'm -- that's the space in the aquifer right**  
 17 **now, so I don't -- I don't see -- see why that**  
 18 **should be any less than 120.**  
 19 Q. So let me rephrase my question. Let's say --  
 20 let's just use some strict hypotheticals here.  
 21 **A. Okay.**  
 22 Q. Let's say on one hand we understand that the  
 23 City's annual demand is going to be 70,000  
 24 acre-feet of water, and, indeed, that number, I  
 25 think, shows up at least in one table; is that

1 correct?  
 2 **A. 59 -- in one year, I think 59, 9 was the largest**  
 3 **number.**  
 4 Q. My question is combined from all sources?  
 5 **A. Oh, okay, yes, you're right.**  
 6 Q. So let's say that we're looking at a large city  
 7 like the City of Wichita and they say, we could  
 8 use up to 70,000 acre-feet of water in a year  
 9 from all sources, but on the other hand we look  
 10 to, let's say, the City of Bentley, and the City  
 11 of Bentley says, you know, we're probably only  
 12 going to need 1,000 acre-feet of water a year -  
 13 I'm sure they're going to need more than that,  
 14 but I'm just using easy numbers - the City of  
 15 Bentley says, we're only going to use 1,000  
 16 acre-feet of water a year and that's the most  
 17 we'll ever use. And let's say the City of  
 18 Bentley implements this exact same proposal, or  
 19 tries to implement this exact same proposal that  
 20 the City has brought before us, and let's say  
 21 that the City of Bentley says, we want to start  
 22 accumulating recharge credits. If the City of  
 23 Bentley said, we want to be able to accumulate  
 24 up to 120,000 acre-feet of credits, and we  
 25 assume that the most they could ever use in a

1 year was 1,000, at least for the purposes of  
 2 this hypothetical, would you agree that it would  
 3 take the City of Bentley 120 years to utilize  
 4 those accumulated recharge credits?  
 5 **A. Yes.**  
 6 Q. In the example of the City of Bentley, would you  
 7 believe that 120,000 acre-foot cap would be a  
 8 reasonable number?  
 9 **A. Not for the -- for a city the size of Bentley.**  
 10 Q. Okay. So let me ask you this: Let's say the  
 11 City of Wichita is successful with their  
 12 proposal just for a moment, and then the City of  
 13 Sedgwick jumps in and says, we want to build a  
 14 recharge capacity, the City of Bentley says, we  
 15 want to build a recharge facility, the City of  
 16 Halstead says, we want to build a recharge  
 17 facility, and suddenly we have all these other  
 18 cities that are saying they want to build  
 19 recharge facilities. If we put the cap of  
 20 120,000 acre-feet on the City and that cap  
 21 represents all the available water in the  
 22 aquifer, what cap would you put on these other  
 23 cities if -- if all this water is already  
 24 designated in a cap to the City of Wichita?  
 25 **A. Well, we'd have --**

1 **MR. OLEEN:** I object, I -- we're  
 2 here to talk about one proposal for one  
 3 City, and we have no other ASR project in  
 4 the State of Kansas like this one. So  
 5 maybe Mr. Stucky wants the universe when  
 6 that will happen, but that's not the  
 7 current state of the state, and I think --  
 8 I think the hypothetical is a little too  
 9 attenuated.  
 10 **MR. STUCKY:** And I'll get to a point  
 11 very quickly, Ms. Owen, but I think it's a  
 12 fair line of questioning as we're trying to  
 13 conceptualize the nature of this cap.  
 14 **PRESIDING OFFICER:** I think you're  
 15 getting to the reasonableness of the cap  
 16 so let's get there.  
 17 **BY MR. STUCKY:**  
 18 Q. So if this 120,000 acre-foot cap is put on the  
 19 City and these other -- on the City of Wichita  
 20 and other cities are now trying to implement  
 21 similar aquifer storage and recovery systems,  
 22 would there be any acre-feet left in the form of  
 23 a cap to put on these other cities?  
 24 **A. It'd be based on their particular aquifer and**  
 25 **their aquifer parameters. But then we -- not**

Page 1489

1 **only is this 120,000 acre-foot space in the cap,**  
 2 **there was further justification for this because**  
 3 **if you look at the one table that shows their**  
 4 **needs, it was about 60,000 acre-feet. And**  
 5 **60,000 acre-feet in that eight-year period for**  
 6 **that 1 percent drought, what if we go into**  
 7 **another 1 percent drought in that next eight**  
 8 **years? So this was about 50,000 acre-feet for**  
 9 **back-to-back droughts. That's how we justified**  
 10 **the 120,000 acre-feet.**  
 11 **Now, though, we've not fully negotiated a**  
 12 **cap with the City. We wanted to go through this**  
 13 **hearing process to see what the most appropriate**  
 14 **cap was for the City. But to move this forward,**  
 15 **I wanted to tell you there was more than just**  
 16 **space in the aquifer that we looked at to**  
 17 **justify that quantity, it was two back-to-back**  
 18 **droughts.**  
 19 **PRESIDING OFFICER:** That was going  
 20 to be my next question so thank you.  
 21 **BY MR. STUCKY:**  
 22 Q. Mr. Letourneau, part of what an agency like the  
 23 Division of Water Resources does is help to make  
 24 policy; is that right?  
 25 **A. That's correct.**

Page 1490

1 Q. And as you help to make policy, you have to  
 2 consider what's in the public interest; is that  
 3 right?  
 4 **A. That's correct.**  
 5 Q. And, indeed, agencies are given a level of  
 6 deference as they're made policies; is that  
 7 correct?  
 8 **A. Correct, uh-huh.**  
 9 Q. And as policies are made, one thing an agency  
 10 must think about is what is the parade of evils  
 11 that can maybe occur if we implement a given  
 12 policy, is that right, is that something you  
 13 think about?  
 14 **A. Yeah, absolutely, especially when an unintended**  
 15 **consequence happens, you know, so ...**  
 16 Q. So my question is this: As we set the cap at  
 17 120,000 acre-feet, have you accounted for or  
 18 thought of what would happen if other  
 19 municipalities also implement recharge projects  
 20 within the Equus Beds well field?  
 21 **A. Yes, I mean, we -- that's always in the back of**  
 22 **our mind. And there's another one in Garden**  
 23 **City that's in the back of our mind.**  
 24 Q. So as we think about that and we think about  
 25 this 120,000 acre-foot cap, do you believe that

Page 1491

1 that number should be looked at again and  
 2 perhaps that number should be less?  
 3 **A. Well, I mean, we did -- we do want to talk to**  
 4 **the City about an appropriate cap, but then**  
 5 **right now with the physical recharge credits,**  
 6 **they don't have a cap at all. Their only cap is**  
 7 **the physical limitation of the aquifer right**  
 8 **now.**  
 9 Q. But, again, the fact that they don't have any  
 10 cap now is based on the fact that for each  
 11 gallon they take out, minus any kind of annual  
 12 or gradational losses, is a gallon of water  
 13 they've actually physically put into the  
 14 aquifer; is that right?  
 15 **A. That's correct.**  
 16 Q. And so in other words, under ASR Phase II,  
 17 there's no cap in place, but this is water that  
 18 the City actually has put in the aquifer; is  
 19 that right?  
 20 **A. That's right.**  
 21 Q. So my question is this: With respect to the  
 22 120,000 acre-foot cap, when we're considering  
 23 water that the City actually now in the new  
 24 proposal has not physically injected into the  
 25 aquifer, my question is is 120,000 acre-feet too

Page 1492

1 high of a number for the cap?  
 2 **A. My -- my first response is no based on my**  
 3 **answers before, but it is -- it is something to**  
 4 **look at to see what -- to work with the City to**  
 5 **see what's the most reasonable number. But we**  
 6 **want to take into account two droughts back to**  
 7 **back because you never know when they're going**  
 8 **to start or finish.**  
 9 Q. So if we were to determine this cap based on  
 10 this 120,000 acre-feet, and that represents  
 11 what's theoretically available in the aquifer,  
 12 what we're saying is if the City were to  
 13 accumulate 120,000 acre-feet of credits both  
 14 from ASR Phase II and with the aquifer  
 15 maintenance credit proposal that in the future  
 16 they could divert up to 120,000 acre-feet out of  
 17 the aquifer. Is that what we're saying?  
 18 **A. At 19,000 acre-foot per year.**  
 19 Q. But based on the 19,000 acre-foot per year  
 20 limitation, they could, then, divert up to  
 21 120,000 acre-feet of water out of the aquifer in  
 22 the future; is that right?  
 23 **A. Correct.**  
 24 Q. And I know that we've drawn a distinction  
 25 between ASR Phase II and the aquifer maintenance

1 credit proposal, but would you agree that if  
2 both were in effect, both ASR Phase II and the  
3 AMC proposal, that at least a portion of that  
4 120,000 acre-feet would not be water injected  
5 into the aquifer by the City?

6 **A. That's correct.**

7 Q. So by putting this cap at 120,000 acre-feet and  
8 defining that cap based on what's physically  
9 available as far as recharge capacity in the  
10 aquifer, is that essentially saying or  
11 suggesting that the City has rights or ownership  
12 rights to that 120,000 acre-feet of available  
13 aquifer space?

14 **A. Well, I mean, they -- they've got the right to  
15 put 120,000 acre-feet of recharge credits into  
16 that space based on that's the basin storage  
17 area, they've got the right to do that. You  
18 know, I don't know who owns that space, or  
19 whatever, they've got the right to put the water  
20 there.**

21 Q. But at least with the AMC proposal, they're not  
22 physically injecting any water in the aquifer;  
23 is that right?

24 **A. That's correct.**

25 Q. And so here today I believe we have some farmers

1 in the room, we have farmers in the room and,  
2 you know, the City starts to divert 120,000  
3 acre-feet of water out of the aquifer in the  
4 future and one of the farmers in the room says,  
5 hey, my water right number is water right  
6 number 13, I have one of the most senior water  
7 right numbers in the State of Kansas and they  
8 say, wait a minute, this is my -- this is water  
9 dedicated to me, this is water dedicated to the  
10 people of the State of Kansas, and yet the City  
11 is claiming that they have rights to this whole  
12 120,000 acre-feet, can you at least see how  
13 this -- perhaps a farmer or another user of the  
14 aquifer would have some concern with this  
15 concept?

16 **MR. OLEEN:** I object and I'm not  
17 trying to unduly disrupt counsel's  
18 cross-examination, but previously the  
19 witness testified that only 19,000  
20 acre-feet can be withdrawn currently  
21 recharge credits per year, and so I believe  
22 counsel's statement suggested or implied  
23 that 120,000 was going -- that some farmer  
24 was going to hear that 120,000 had started  
25 to be withdrawn. And I think it's

1 important that we have that qualification  
2 that only 19,000 recharge credits per year  
3 currently can be withdrawn. So I object to  
4 the form of the question.

5 **PRESIDING OFFICER:** And I think  
6 you're asking more about the space --

7 **MR. STUCKY:** That's right.

8 **PRESIDING OFFICER:** -- than the  
9 quantity so if you could clarify.

10 **BY MR. STUCKY:**

11 Q. He's already clarified but 19,000 a year is what  
12 we're limited to, I think that was made clear a  
13 moment ago. What I'm saying is over the course  
14 of time, if the City has the right to pull out  
15 120,000 acre-feet of water over the course of  
16 time, can you at least understand or perceive  
17 why other water users who say this water is  
18 dedicated to us would have concern?

19 **A. Yeah, and it's an educational process. What  
20 people need to understand, this is a different  
21 source of water, it's just stored in the Equus  
22 Beds well field. And like I explained before,  
23 it -- this is like -- the basin storage area is  
24 like a leaky tank that is just located into the  
25 Equus Beds well field. So I do understand how**

1 **people can be very confused by that, but it is a  
2 different source of water.**  
3 Q. Let me ask you this: In the Water Appropriation  
4 Act, with which you're very familiar, and if we  
5 need to, I can have you turn to the Water  
6 Appropriation Act, would you at least agree with  
7 me that one of the basic premises in the  
8 beginning of the Water Appropriation Act and,  
9 indeed, in the seminal case in Kansas with  
10 respect to water law in Kansas, which  
11 incidentally was Williams versus the City of  
12 Wichita that was decided in 1953, both in the  
13 Water Appropriation Act that was passed in 1945  
14 versus this case that was decided in 1953, would  
15 you agree that a basic principle in Kansas is  
16 that all water is dedicated to the people of the  
17 State of Kansas, would you agree with that  
18 premise?

19 **A. Yes, absolutely.**  
20 Q. But with the City's proposal, are we saying now  
21 that this 120,000 acre-feet of water is, in  
22 fact, at least by virtue of their proposal,  
23 being dedicated to the City of Wichita?  
24 **A. The City of Wichita -- those are recharge  
25 credits for the City of Wichita, that's a**

Page 1497

1 **different source of water.**  
 2 Q. So in other words, at least with respect to the  
 3 City's proposal, up to 120,000 acre-feet of  
 4 water would be dedicated to the City of Wichita;  
 5 is that correct?  
 6 **A. Only if the City actually had a recharge credit.**  
 7 **That's the space that's there.**  
 8 Q. To the extent the City has accumulated 120,000  
 9 acre-feet of recharge credits, would 120,000  
 10 acre-feet of water then be dedicated to the City  
 11 of Wichita?  
 12 **A. Yes. And they can do that today with the**  
 13 **physical recharge credit capacity that they**  
 14 **have.**  
 15 Q. Let's move on to how water could enter into the  
 16 aquifer strictly speaking when the City is  
 17 utilizing its -- when the City is accumulating  
 18 an AMC credit. I believe that previously you  
 19 have indicated that as the City is accumulating  
 20 an aquifer maintenance credit, there's a  
 21 potential, at least, for water to enter into the  
 22 aquifer through gravity flow. Is that  
 23 something --  
 24 **A. Rainfall --**  
 25 Q. -- you said previously?

Page 1498

1 **A. I'm sorry, David, I didn't let you finish. Yes,**  
 2 **I mean, there's natural recharge.**  
 3 Q. And when you say natural recharge, what do you  
 4 mean by natural recharge?  
 5 **A. Rainfall. From rainfall.**  
 6 Q. So in other words, you indicate that strictly  
 7 speaking when an AMC is accumulated, an AMC  
 8 credit is accumulated, the only water that would  
 9 enter into the aquifer at that time would be  
 10 through natural recharge or rain flow, assuming  
 11 no physical injection occurs?  
 12 **A. Correct.**  
 13 Q. Could you turn in your notebook to Exhibit 12?  
 14 And we don't have to worry about an objection  
 15 here because there is no objection to  
 16 interrog -- to request for admission number 2,  
 17 but could you read for me request for admission  
 18 number 2 and your answer?  
 19 **A. Admit or deny that no source water will enter**  
 20 **into the aquifer through gravity flow due to the**  
 21 **AMC proposal.**  
 22 Q. And what was the answer?  
 23 **A. Partially admitted and partial -- partially**  
 24 **denied. It is DWR's current understanding that**  
 25 **under the AMC proposal, some source water may,**

Page 1499

1 **through gravity flow, enter into the basin**  
 2 **storage area that resides in the aquifer,**  
 3 **depending on how the City manages the recharge**  
 4 **basin. Earlier -- earlier, David, I didn't**  
 5 **think of the recharge basin.**  
 6 Q. So my question is what is meant in this answer  
 7 by how the City manages the recharge basin?  
 8 **A. If -- if the City is still going to put water**  
 9 **into the recharge basin and then that -- there's**  
 10 **no injection there, the water goes into the**  
 11 **recharge basin and it gravity flows into the**  
 12 **aquifer.**  
 13 Q. So that brings us back to our discussion  
 14 yesterday that even when the aquifer is full,  
 15 the City could still theoretically attempt to  
 16 inject water into the aquifer through these  
 17 recharge basins. Is that a true statement?  
 18 **A. Well, they don't inject it into the aquifer;**  
 19 **they put it into the recharge basin and they let**  
 20 **it gravity flow into the basin.**  
 21 Q. I'll rephrase. So when the aquifer is full,  
 22 they can put water into these recharge basins  
 23 and over the course of time, through gravity  
 24 flow, it could enter into the aquifer. Is that  
 25 a true statement?

Page 1500

1 **A. That's a true statement.**  
 2 Q. And so when you said depending on how the City  
 3 manages, that's what's meant by that statement?  
 4 **A. Correct.**  
 5 Q. Previously, we have had a discussion about the  
 6 concept of safe yield; is that right?  
 7 **A. That's correct.**  
 8 Q. And yesterday we talked about how artificial  
 9 recharge, at least, is exempt from safe yield;  
 10 is that right?  
 11 **A. That's correct, it's a different source of**  
 12 **water.**  
 13 Q. And, in fact, you indicated that at least when  
 14 K.A.R. 5-22-7 was enacted, it only contemplated  
 15 artificial recharge, to the best of your  
 16 knowledge --  
 17 **A. That's --**  
 18 Q. -- is that right?  
 19 **A. That's what was available at the time, correct.**  
 20 Q. And I didn't ask you this question yesterday,  
 21 but at least to the best of your knowledge, has  
 22 that statute -- strike that. Has that  
 23 regulation been modified to account for aquifer  
 24 maintenance credits?  
 25 **A. No, they're not approved yet.**

1 Q. My question is this, though, if that regulation  
2 was put into place to deal with physical  
3 recharge, my question is has there been a  
4 regulation change that has been made, to the  
5 best of your knowledge, since it was  
6 implemented?

7 **A. No, no regulation change.**

8 Q. And, in fact, that particular regulation does  
9 not mention the concept of aquifer maintenance  
10 credits; is that right?

11 **A. No, nothing -- nothing does because an aquifer  
12 maintenance credit is just a recharge credit.**

13 Q. And let me ask you this: If you were to review  
14 current regulations and current statutes, and I  
15 assume you've done that, you haven't found a  
16 definition of aquifer maintenance credits; is  
17 that correct?

18 **A. No, we have a definition of recharge credit, and  
19 an aquifer maintenance credit is a recharge  
20 credit.**

21 Q. But in other words, let me just ask this, and I  
22 understand, Mr. Letourneau, what your opinion is  
23 with regard to an aquifer maintenance credit and  
24 whether it's a recharge credit, my question is  
25 simply this: Is the term aquifer maintenance

1 **A. You know, David, that I don't know. I -- that  
2 was turned over to our legal team. We just  
3 asked -- we had -- we asked the question of our  
4 legal team.**

5 Q. So you know that there was input that was  
6 received from the City, but you're not sure  
7 whether or not input was heard from the  
8 District. Is that -- is that your statement?

9 **A. Correct, I don't recall any from the District.**

10 Q. In the event that Ms. Owen finds that, in fact,  
11 an aquifer maintenance credit is not just merely  
12 a form of a physical recharge credit, would you  
13 agree, then, under that scenario, that an  
14 aquifer maintenance credit would be subject to  
15 the District's safe yield regulation as defined  
16 in 5-22-7?

17 **MR. OLEEN:** I object, it calls for a  
18 legal conclusion.

19 **MR. STUCKY:** If I --

20 **PRESIDING OFFICER:** Could you  
21 rephrase based on what he would do in the  
22 scope of his job?

23 **MR. STUCKY:** Absolutely.

24 **BY MR. STUCKY:**

25 Q. And I'll revisit this for a moment. In your

1 credit mentioned anywhere in statute or  
2 regulation?

3 **A. No. We did, though, David, we -- we had our  
4 legal team and the City's legal team make a  
5 determination if we needed to change a  
6 regulation. We don't hesitate to change a  
7 regulation if we need to. And a determination  
8 was made by our chief legal counsel that we did  
9 not have to. But it was not like we didn't look  
10 at it. We sincerely looked at that question.**

11 Q. Was this based on, the legal team that looked at  
12 this, was this based on input from the City's  
13 legal team?

14 **A. Both, both. It's my understanding that both of  
15 our teams looked at it to see if we needed to  
16 make a regulation change.**

17 Q. Would you agree with me that Mr. Adrian heads up  
18 the legal team for the Equus Beds Groundwater  
19 Management District?

20 **A. Absolutely.**

21 Q. When this decision was made regarding whether an  
22 aquifer maintenance credit was a physical  
23 recharge credit from a legal standpoint, did you  
24 consider any input from the District's legal  
25 team as headed up by Mr. Adrian?

1 job, in the 33 years of your job, you have the  
2 occasion to apply statutes and regulations in  
3 your job to make a decision to decide whether or  
4 not a given statute or regulation applies to a  
5 water right application or a permit or things of  
6 that nature; is that correct?

7 **A. That's correct.**

8 Q. And so, in fact, when a regulation is -- is  
9 promulgated, you would look at that regulation  
10 and determine whether or not it would apply to a  
11 given water right; is that correct?

12 **A. That's correct.**

13 Q. And if an application comes before you, is one  
14 of the determinations that you would make to  
15 define whether or not safe yield would apply to  
16 that application?

17 **A. When does safe yield apply, is that --**

18 Q. Yeah, would you help -- if there was a new water  
19 right application --

20 **A. Yes.**

21 Q. -- you would try and determine if safe yield  
22 applied to that water right application; is that  
23 right?

24 **A. Well, safe yield applies to every new  
25 appropriation. It doesn't apply to term permits**

Page 1505

1 or things like that, but it does apply to a new  
 2 appropriation under K.S.A. 82a-711.  
 3 Q. And so, in other words, if you were unsure  
 4 regarding whether or not safe yield applied,  
 5 would you pull up the applicable regulations or  
 6 statutes to try and help you to understand if a  
 7 given application was exempt from safe yield or  
 8 not?  
 9 **A. Yes.**  
 10 Q. And you would do your best to apply those  
 11 statutes and regulations to the application  
 12 itself; is that right?  
 13 **A. That's right.**  
 14 Q. So going back to our discussion a few moments  
 15 ago before the objection, I asked you that if we  
 16 were to assume for just a moment that Ms. Owen  
 17 says that an aquifer maintenance credit is not,  
 18 in fact, a physical recharge credit, would it be  
 19 your opinion --  
 20 **MR. MCLEOD:** I'm going to object  
 21 because I think that the issue is whether  
 22 it is a recharge credit, not a physical  
 23 recharge credit, which I think the witness  
 24 has established it's not a physical  
 25 recharge credit.

Page 1506

1 **MR. OLEEN:** I join in that, and I  
 2 don't know if the GMD's counsel,  
 3 Mr. Stucky, I don't know if his terminology  
 4 is necessarily intentional, but I do want  
 5 to point out that the current regulations  
 6 do not define physical recharge credit  
 7 either; they just define recharge credit.  
 8 **MR. STUCKY:** I'll rephrase.  
 9 **BY MR. STUCKY:**  
 10 Q. If Ms. Owen were to determine that an aquifer  
 11 maintenance credit is not a recharge credit,  
 12 would you believe, then, under that scenario  
 13 that safe yield would apply to the City's  
 14 proposal that's before us today?  
 15 **A. They don't exist. AMCs -- if -- if Ms. Owen**  
 16 **makes recommendation to the chief engineer and**  
 17 **the chief engineer says AMCs are not a recharge**  
 18 **credit, then the recharge -- AMCs don't exist.**  
 19 Q. Okay. And if Ms. Owen made that determination,  
 20 it's your testimony that if she determines that  
 21 an aquifer maintenance credit does not fall  
 22 under the category of a recharge credit, you're  
 23 saying that the entire concept of an aquifer  
 24 maintenance credit would not exist?  
 25 **A. That's correct.**

Page 1507

1 Q. To the extent that an aquifer maintenance credit  
 2 would at least still exist in theory, the  
 3 concept, we have a concept here we're talking  
 4 about that at least could still exist in theory,  
 5 to the extent that concept still existed, would  
 6 it -- would it be your opinion that safe yield  
 7 would apply to it?  
 8 **A. Not under the GMD's exemption because it**  
 9 **still -- I think, I don't have it in front of**  
 10 **me, but it says any application related to ASR,**  
 11 **and so an AMC is related to ASR so it's not**  
 12 **exempt from safe yield. But if Mr. Boese can**  
 13 **find that and put it in front of me.**  
 14 Q. I would ask --  
 15 **A. I don't think -- I don't -- I'm sorry if I**  
 16 **interrupted, I keep interrupting you, but I**  
 17 **don't believe their rule -- your rule relates to**  
 18 **a recharge credit. I think it says applications**  
 19 **related to aquifer storage and recovery. But**  
 20 **I -- but I can stand corrected.**  
 21 **MR. STUCKY:** May I approach the  
 22 witness?  
 23 **PRESIDING OFFICER:** Yes.  
 24 **A. Yeah, thank you. Thank you.**  
 25 **BY MR. STUCKY:**

Page 1508

1 Q. Mr. Letourneau, if you would, could you read the  
 2 exemption that is listed in number 7 of this  
 3 regulation?  
 4 **A. Absolutely. It's an application for an aquifer**  
 5 **storage and recovery well.**  
 6 Q. And so in other words, it says an application  
 7 for an aquifer storage and recovery well, it  
 8 doesn't use the terminology related to. Is that  
 9 true, a true statement?  
 10 **A. Correct. Thank you.**  
 11 Q. Now, if we were to read the term related to back  
 12 out of the definition and we were to say that  
 13 this AMC concept, at least, exists in theory but  
 14 Ms. Owen has found that it's not a recharge  
 15 credit, would it be your belief, then, that safe  
 16 yield would apply?  
 17 **MR. MCLEOD:** I'm going to object  
 18 because I think what the witness's actual  
 19 testimony was was that in such an event it  
 20 would not exist as a concept, it would not  
 21 exist. If it's not a recharge credit, it  
 22 would not exist, that's what the witness  
 23 testified.  
 24 **MR. STUCKY:** And I guess my response  
 25 is I guess I'm having trouble understanding

1 how we have an entire proposal regarding a  
2 given concept, and I understand that if it  
3 doesn't fall under the definition of a  
4 recharge credit that it's illegal, per se,  
5 under that definition. But the concept  
6 itself would still exist in theory because  
7 we have an entire proposal that deals with  
8 that concept. And I'm drawing a  
9 distinction between it being illegal under  
10 that one definition versus the concept in  
11 theory still theoretically existing as a  
12 concept.

13 **PRESIDING OFFICER:** I think  
14 Mr. Letourneau has said, and the question  
15 was all phrased within the scope of his  
16 job, I think he has said what he would do  
17 in the event that I was to rule as you  
18 suggested -- or put forth in your  
19 hypothetical, so I think we can leave it at  
20 that.

21 It's 11:20, I don't want to interrupt if  
22 you're still in a line of questioning, but  
23 I'm wondering do we want to take a break,  
24 at least a ten-minute break, and decide how  
25 much longer to go today? Or do you have --

1 do you want to -- am I -- am I interrupting  
2 you topically, which I don't want to do?

3 **MR. STUCKY:** Maybe just a couple  
4 more questions on that point.

5 **PRESIDING OFFICER:** Okay. Go ahead.

6 **BY MR. STUCKY:**

7 Q. But if the City were to file a new application  
8 asking for additional water and it didn't fall  
9 within one of those exemptions, the City's new  
10 application would be subject to safe yield; is  
11 that right?

12 **A. Correct.**

13 Q. And I think what you were saying before is if an  
14 aquifer maintenance credit is not found to be a  
15 recharge credit, because it would be, per se,  
16 illegal, I wouldn't even analyze the safe yield  
17 statute because we wouldn't need to get that  
18 far. Is that your testimony?

19 **A. Yeah, and an AMC, an aquifer maintenance credit  
20 is just merely a change in accounting. It -- it  
21 would be part of the current 19,000 acre-feet  
22 that's approved, but if AMCs are allowed and the  
23 City would ask for AMC recovery from a ASR well,  
24 currently under the rules, those would not be  
25 subject to safe yield.**

1 **MR. STUCKY:** I'm ready to switch to  
2 a different line of questioning.

3 **PRESIDING OFFICER:** Okay. Let's  
4 take a quick ten-minute break, it's 11:20.

5 (Thereupon, a recess was taken;  
6 whereupon, the following was had.)

7 **PRESIDING OFFICER:** Okay. It's  
8 11:35, we're back on the record.

9 **BY MR. STUCKY:**

10 Q. Mr. Letourneau, you indicated to me that there  
11 is a GMD2 safe yield regulation. Would you at  
12 least agree that the initial determination with  
13 respect to whether or not an application or any  
14 kind of water right that is within the GMD2,  
15 would you agree that that initial determination  
16 would be made by the District?

17 **A. Well, yes. What happens in processing an  
18 application, the Division of Water Resources  
19 makes sure that that application is in proper  
20 form, does all of the nearby well notices. Then  
21 we send it to the Groundwater Management  
22 District, and they make a safe yield  
23 determination and other -- then look at their  
24 rules and regs to make a recommendation. I  
25 believe that's how it happens.**

1 Q. So would you agree that it would be part of the  
2 purview of Mr. Boese with the District to make  
3 an initial determination about whether or not  
4 safe yield applies?

5 **A. Yes.**

6 Q. Explain to me again the concept of basin -- of  
7 how water would be stored in the basin. Well,  
8 let me ask you this: Can you turn with me to  
9 Exhibit 20 of the deposition? I'd ask that you  
10 turn to page 63.

11 **A. Okay, I'm there.**

12 Q. Actually, turn to page 68.

13 **A. Okay.**

14 Q. On page 68, there's a answer that you gave to a  
15 question by Mr. Rolfs, he asked the question  
16 about the recharge basin, and at some point,  
17 your answer was, because like I said, I don't  
18 know how the City wants to manage that -- that  
19 recharge basin if AMCs are available, just  
20 because of the environment out there.

21 **A. Correct.**

22 Q. What did you mean by that statement?

23 **A. Well, we haven't fully vetted with the City how  
24 they're going to manage the recharge basin if  
25 AMCs are available, if -- because they could --**

Page 1513

1 **if AMCs become available, the proposal is to**  
 2 **spread the aquifer maintenance credits across**  
 3 **the entire well field and then apply the 5**  
 4 **percent loss and the 5, 3, and 1 percent loss.**  
 5 **If they put all of their water into the basin**  
 6 **storage -- that recharge basin, they lose over**  
 7 **50 percent of that water to the river.**  
 8 Q. So is that a part of the City's proposal that's  
 9 still in the works and still needs to be  
 10 determined or decided in the future?  
 11 **A. Absolutely, we have not talked about how the**  
 12 **City wants to move forward with that recharge**  
 13 **basin.**  
 14 Q. So in other words, at least as we're sitting  
 15 here in this hearing process, you're not  
 16 propose -- you're not prepared to make a  
 17 recommendation in that regard because we don't  
 18 have enough discussion or analysis at this  
 19 point; is that right?  
 20 **A. That's right.**  
 21 Q. Yesterday and in the previous days of this  
 22 hearing, I had asked some questions about this  
 23 1 percent drought concept. Is that a part of  
 24 the City's proposal that you would consider  
 25 yourself qualified to answer questions on?

Page 1514

1 **A. No. I mean, I know that the City's proposed the**  
 2 **1 percent drought, but I'm not a drought modeler**  
 3 **or anything like that.**  
 4 Q. I'll move on --  
 5 **A. Okay.**  
 6 Q. -- and strike that line of questioning. There's  
 7 been a discussion about the difference between,  
 8 on the one hand, accumulating an aquifer  
 9 maintenance credit on the one hand and on the  
 10 other hand, the concept of actually withdrawing  
 11 that water, that credit at a later time, there's  
 12 a distinction between the two, would you agree  
 13 with me?  
 14 **A. Absolutely.**  
 15 Q. And I believe that we've talked about the  
 16 benefits to the aquifer when an aquifer  
 17 maintenance credit is accumulated in the sense  
 18 that it leaves water in the aquifer, has that  
 19 been the testimony?  
 20 **A. Correct.**  
 21 Q. On the other hand, although the water, based on  
 22 the terminology of the City and based on your  
 23 terminology, has been left in the aquifer during  
 24 the accumulation of the aquifer maintenance  
 25 credit, would you at least agree with me at the

Page 1515

1 point that the aquifer maintenance credit is  
 2 withdrawn, that water then could be withdrawn at  
 3 that point. Is that a true statement?  
 4 **A. Yes, the question can a recharge credit be**  
 5 **pumped, is that --**  
 6 Q. The question is if an aquifer maintenance credit  
 7 represents water left in storage --  
 8 **A. Correct.**  
 9 Q. -- when the aquifer maintenance credit is cashed  
 10 in, if you will --  
 11 **A. Okay.**  
 12 Q. -- we cash in the credits, at that point, the  
 13 water would be withdrawn; is that right?  
 14 **A. That's correct.**  
 15 Q. Is it true that the City could only withdraw  
 16 water accumulated under an aquifer maintenance  
 17 credit during a time of drought?  
 18 **A. That has not been worked out yet, that is one**  
 19 **thing that we do want to talk about. But then**  
 20 **again, when does the drought start?**  
 21 Q. Well, let me ask you this: In the City's  
 22 proposal as it -- as it exists now, does the  
 23 City say that we can only withdraw aquifer  
 24 maintenance credits during the time of a  
 25 drought?

Page 1516

1 **A. No.**  
 2 Q. And, in fact, if you turn in your exhibit  
 3 notebook before you to Exhibit 11 --  
 4 **A. Oh, okay, I'm there.**  
 5 Q. -- and you turn with me to interrogatory  
 6 number 27 -- actually, I must be in the wrong  
 7 exhibit. That's a trick question, there is no  
 8 interrogatory 27. I'd ask that you turn to  
 9 Exhibit 12. I'm guessing that Mrs. Boese must  
 10 have put the exhibit number on that particular  
 11 one. If you go to Exhibit 12 and you look at  
 12 request for admission number 27, it states,  
 13 admit or deny that the proposed AMCs can only be  
 14 withdrawn by the City during a 1 percent  
 15 drought. Can you read for the record your  
 16 answer?  
 17 **A. Denied. Upon the AMC proposal, the withdrawal**  
 18 **of AMCs would not specifically be limited to a**  
 19 **1 percent drought -- to 1 percent drought**  
 20 **situations.**  
 21 Q. So in other words, under the AMC proposal, from  
 22 a conceptual standpoint, the City could withdraw  
 23 the AMC credits at any time in the sense that it  
 24 wouldn't have to be during a drought situation;  
 25 is that right?

1 **A. Correct, under this current proposal.**  
2 Q. And I believe to distinguish between what's in  
3 the current proposal and what you're saying on  
4 the other hand is maybe we should have more  
5 discussion about when these AMC credits can be  
6 withdrawn, whether it's during a drought,  
7 under -- under what situations they can be  
8 withdrawn, is that what you're testifying to  
9 today?  
10 **A. Yeah, I mean, it's sure worth a discussion with**  
11 **the City, definitely.**  
12 Q. Should the District be involved in that  
13 discussion?  
14 **A. Yeah, maybe.**  
15 Q. And I think you already testified to this, it's  
16 your belief that restrictions should be put on  
17 when water can be withdrawn under the AMC  
18 proposal; is that correct?  
19 **A. Can you remind me of the restrictions? We've**  
20 **talked a lot -- we've talked a lot, what were --**  
21 **can you remind me?**  
22 Q. Well, for example, it's your belief that the  
23 water can only be withdrawn after the City pumps  
24 their native credits; is that right?  
25 **A. Well, yes, I mean, that's not firmed up in**

1 part of the same process in your mind?  
2 **A. I don't think that that would require another**  
3 **hearing. I think we take the information from**  
4 **this hearing, work it out with the applicant and**  
5 **the Groundwater Management District to firm up**  
6 **how this should be operated, and I think those**  
7 **things could be worked out without a hearing,**  
8 **unless there's a big disagreement.**  
9 Q. I'll come back to that point later, but for now,  
10 I'd like to shift gears and talk about the  
11 concept of minimum index levels. If you could  
12 turn to page 2-23 of the City's proposal.  
13 **A. I'm there.**  
14 Q. There's a paragraph that is shown on page 2-23  
15 right above the summary, could you read for me  
16 the last two sentences of that paragraph?  
17 **A. The City is requesting that the last -- I'm**  
18 **sorry, the City is requesting that the proposed**  
19 **minimum index levels be applied to all existing**  
20 **ASR Phase II infrastructure, currently**  
21 **pending -- currently pending ASR applications,**  
22 **and potentially future ASR infrastructure.**  
23 **Modifications to the minimum index level on the**  
24 **permits covering ASR Phase I infrastructure are**  
25 **not being requested at this time.**

1 **conditions yet. I think it would behoove the**  
2 **City to do that because the recharge credits do**  
3 **not renew, where their native water rights do.**  
4 Q. So that's --  
5 **A. But that's not a firm permit condition yet.**  
6 Q. That's one example and you testified to that  
7 yesterday, so I'm just asking in a general  
8 sense, do you believe that there at least should  
9 be some conditions placed on when the water can  
10 be withdrawn in the form of an AMC credit?  
11 **A. I think so but then again too we don't want to**  
12 **tie any water users' hands too much.**  
13 Q. Is it true that the current position of the  
14 Division of Water Resources is that the  
15 determination of when and how the recharge  
16 credits can be withdrawn at a later time, is it  
17 your position that that's the subject of another  
18 hearing?  
19 **A. Can you ask me that again, David, I'm sorry?**  
20 Q. In this hearing, we've talked about the  
21 accumulation of aquifer maintenance credits an  
22 awful lot. My question is is it your belief  
23 that how and when these aquifer maintenance  
24 credits can be withdrawn, is that the subject  
25 for a separate hearing process, or is that all

1 Q. I want to break down that sentence just a little  
2 bit. What is existing ASR Phase II  
3 infrastructure, what's that referring to?  
4 **A. The current Phase II project.**  
5 Q. What is currently pending ASR applications,  
6 what's that referring to?  
7 **A. That was a group of applications that the City**  
8 **requested to be withdrawn. So there are no**  
9 **currently pending ASR applications.**  
10 Q. So -- so in other words, as it relates to the  
11 City's proposal, at least at this point, there's  
12 no pending ASR applications; is that right?  
13 **A. That's correct.**  
14 Q. So to the extent the City is asking that this  
15 proposed minimum index level be applied to any  
16 currently pending ASR applications, you would  
17 agree with me that there are none pending at  
18 this point, right?  
19 **A. That's correct.**  
20 Q. Okay. And, in fact, the language used by the  
21 City doesn't ask that this proposed minimum  
22 index level be applied to future ASR  
23 applications, would you agree at least the  
24 language in this sentence doesn't ask for that?  
25 **A. It does. The City's requesting be applied to**

Page 1521

1 **existing, currently, and potentially future.**  
 2 Q. Well, let's reread that sentence. It says,  
 3 currently pending ASR applications, and then it  
 4 says, and potentially future ASR --  
 5 **A. Oh.**  
 6 Q. -- infrastructure. Is that the terminology  
 7 used?  
 8 **A. That's correct.**  
 9 Q. So at least as that sentence reads, the City  
 10 isn't asking that these minimum index levels be  
 11 applied to future ASR applications; is that  
 12 correct?  
 13 **A. That's correct.**  
 14 Q. So let me ask you this: What do you think is  
 15 intended by ASR infrastructure?  
 16 **A. I don't -- I don't know.**  
 17 Q. Mr. Letourneau, have you ever heard the idea of  
 18 ASR Phase III?  
 19 **A. It was talked about, but then the City really**  
 20 **said it's not Phase III, it was ...**  
 21 Q. Are you aware of any type of grant the City may  
 22 have applied for with the Bureau of Reclamation  
 23 in that regard?  
 24 **A. Vaguely. I mean, we -- we had just heard about**  
 25 **it in a meeting, but I don't know any other**

Page 1522

1 **detail other than that.**  
 2 Q. So if I were to say ASR Phase III, do you  
 3 believe that that's what we're referring to?  
 4 **A. No, I -- I don't know what we're referring to**  
 5 **when you say Phase III.**  
 6 Q. Do you know what the subject of that grant  
 7 proposal was?  
 8 **A. I -- I don't know the subject -- I do know that**  
 9 **the City applied for a grant, but that's as much**  
 10 **as I know.**  
 11 Q. Yesterday there was a discussion about, I think  
 12 the terminology you used was a suite of water  
 13 rights. I'm going to call it a portfolio of  
 14 water rights the City has. If I were to refer  
 15 to a portfolio of water rights, do you know what  
 16 I'm referring to?  
 17 **A. Absolutely.**  
 18 Q. In other words, the City's portfolio of water  
 19 rights would apply to water from Cheney, water  
 20 from the Equus Beds Aquifer, water from the  
 21 Bentley reserve well field, other sources as  
 22 well, is that what the portfolio refers to?  
 23 **A. Yes.**  
 24 Q. You testified yesterday to a limitation or a  
 25 condition that the Division of Water Resources

Page 1523

1 is going to recommend be applied to the City of  
 2 Wichita's portfolio of water rights. Do you  
 3 recall testifying to that yesterday?  
 4 **A. Absolutely.**  
 5 Q. And I think I missed that point, explain to me  
 6 what that condition is as it's applied to this  
 7 portfolio of water rights.  
 8 **A. Well, what we heard concern was that Wichita**  
 9 **ASR -- they -- Wichita wants to use ASR to build**  
 10 **additional water so they can add on customers**  
 11 **and bring in more industries and things. Well,**  
 12 **that really wouldn't, at its face value,**  
 13 **wouldn't be appropriate because recharge credits**  
 14 **are not annually renewed, they -- once a**  
 15 **recharge credit goes away.**  
 16 **But to try to sway folks from that fear, we**  
 17 **wanted to limit the recharge credit amount to**  
 18 **the overall portfolio of the City's water**  
 19 **rights. So it's not additional water, it's**  
 20 **just -- allows the flexibility when Cheney's not**  
 21 **available to get water from the Equus Beds well**  
 22 **field.**  
 23 Q. So in other words, do you believe that it would  
 24 be a good requirement of the City to essentially  
 25 force the City to withdraw from other available

Page 1524

1 sources before the City was able to withdraw its  
 2 recharge credits?  
 3 **A. Well, I don't think we can force an owner of a**  
 4 **water right where they can take their water**  
 5 **from, I don't think that's -- we can't force**  
 6 **somebody to do that. But if you just look at it**  
 7 **with common sense, the City would take their**  
 8 **water rights first because those are renewable**  
 9 **every year. They would only want to take their**  
 10 **recharge credits when they absolutely had to**  
 11 **because those recharge credits are not**  
 12 **renewable.**  
 13 Q. Well, I want to back up for a moment, I may have  
 14 misunderstood what you said yesterday. I  
 15 thought you said it would be a permit condition  
 16 that the City would have to pump their 40,000  
 17 acre-feet of native water rights before they  
 18 would be able to pump --  
 19 **A. Okay.**  
 20 Q. -- their physical recharge credits?  
 21 **A. And that's a little bit different than what I**  
 22 **was just talking about. I thought you were**  
 23 **wanting us to say, well, you've got to use**  
 24 **Bentley and you've got to use Cheney before you**  
 25 **have to use your recharge credits. Now, from**

1 **the Equus Beds well field, if we get the bottom**  
2 **moved, then I think it is appropriate that we**  
3 **lay out the priority of pumping for the City.**

4 Q. And my -- yes, and there is a distinction  
5 between the two. So you're saying that when it  
6 comes to taking water out of the Equus Beds  
7 Aquifer, you can dictate that the City withdraw  
8 native credits first before they withdraw  
9 recharge credits, is that what you're saying?

10 **A. I don't know if we can dictate -- dictate that**  
11 **or not. I mean, I think a property right owner**  
12 **could challenge us on that, but I think it could**  
13 **be a permit condition that we agree to.**

14 Q. And so my question is if that's a permit  
15 condition that we can agree to as a threshold  
16 for this proposal to be adopted, what's the  
17 distinction here, why could it not be a permit  
18 condition that the City would also commit to  
19 utilizing other available sources, such as  
20 Cheney Reservoir, before they could withdraw an  
21 aquifer maintenance credit?

22 **A. We have just never done that to anybody before.**  
23 **We've never -- say a -- say a city -- well,**  
24 **city, feedlot, irrigator, if an irrigator's got**  
25 **two sources, we don't say you have to use that**

1 **in front of us.**

2 Q. So in other words, to the extent that that can  
3 be agreed to and to the extent that that can be  
4 made a permit condition, do you believe that  
5 that would be a good permit condition?

6 **A. Yeah, I think it would benefit the people in the**  
7 **aquifer, and it would benefit the City. But I**  
8 **don't know if we'd want to -- I don't know how**  
9 **tight we want to make this.**

10 Q. With respect to minimum index levels, would you  
11 agree with me that the Division of Water  
12 Resources did not perform any independent  
13 calculations or modeling with respect to the  
14 impact of lowering the minimum index levels?

15 **A. You know, again, I can't add -- I can't say what**  
16 **our modelers did; I can say they are a good**  
17 **group of modelers, and I'm confident in their**  
18 **work.**

19 Q. Mr. Letourneau, if you would, please turn to  
20 Exhibit 13 in the District's notebook. Could  
21 you turn with me to interrogatory number 13?  
22 And I'll read the interrogatory out loud for the  
23 record, and I'd ask that you read the first two  
24 sentences of the answer. This interrogatory  
25 states, please explain in detail what

1 **one first before that one, you know. So what**  
2 **the deal is there, we've just never done it**  
3 **before.**

4 Q. You said you've never done this before, let me  
5 ask you this: Has anybody else in your  
6 experience, in all the 33 years and the  
7 thousands of applications you've looked at, has  
8 anybody else besides the City of Wichita ever  
9 asked for an aquifer maintenance credit before?

10 **A. No, no, this is new.**

11 Q. So this is the first time for all of us; is that  
12 right?

13 **A. Correct.**

14 Q. Given the fact that this is a new concept, this  
15 is a first time and it doesn't matter what we've  
16 done previously because -- with respect to an  
17 aquifer maintenance credit because it's never  
18 been done before, is it possible then that we  
19 could, as a permit condition for the City of  
20 Wichita, could we add a permit condition that  
21 requires them to withdraw water from other  
22 available sources, such as Cheney Reservoir,  
23 prior to withdrawing an aquifer maintenance  
24 credit?

25 **A. We could, and that's even part of the proposal**

1 independent calculations or modeling was  
2 performed, if any, regarding the proposed  
3 lowering of the minimum index levels. Please  
4 read the two -- the first two sentences of the  
5 response.

6 **A. DWR can only speak for itself. DWR did not**  
7 **perform any such independent calculations or**  
8 **modeling.**

9 Q. So in other words, as you have refreshed your  
10 memory, would you at least agree with me that  
11 the Division of Water Resources, as stated in  
12 your -- in your sworn and verified answers,  
13 would you agree the Division of Water Resources  
14 did not do independent modeling or calculations  
15 with regard to lowering the minimum index  
16 levels?

17 **A. That's correct, but I have to qualify that**  
18 **because this is coming from a model that's**  
19 **already approved for the reporting of the**  
20 **accounting and operation of the ASR project. So**  
21 **an approved model, we're not going to do**  
22 **anything independent of something that's already**  
23 **approved.**

24 Q. Well, let me state this: Some of the -- we had  
25 a discussion about contingencies and we had a

Page 1529

1 discussion of what the effects would be as we  
 2 lower water levels. I mean, there's  
 3 calculations that the City is relying on, and  
 4 there's modeling the City is relying on. Would  
 5 you agree with me?  
 6 **A. Yes.**  
 7 Q. And would you also agree with me that at least  
 8 we have encountered some discrepancies or errors  
 9 in some of those calculations and in that  
 10 modeling? Would you agree with me on that?  
 11 **A. I don't know if any errors in the modeling; I**  
 12 **know there's some errors in the numbers in the**  
 13 **report.**  
 14 Q. At least some of the calculations as they're  
 15 reported, would you agree there are some  
 16 discrepancies?  
 17 **A. Yes.**  
 18 Q. So in other words, do you think that there could  
 19 be some benefit now if the Division of Water  
 20 Resources were to go back and do some  
 21 independent calculations and some independent  
 22 modeling with respect to the impacts of lowering  
 23 the minimum index levels?  
 24 **A. I don't think we need to do any modeling, I**  
 25 **think we need -- because the modeling is -- that**

Page 1530

1 **model's been approved for this. But I do --**  
 2 **again, we're willing to review those errors to**  
 3 **see how they im -- how those errors may have**  
 4 **impacted some outputs.**  
 5 Q. So in that sense, at this point, at least, are  
 6 you saying that perhaps some independent  
 7 calculations and some independent verification  
 8 should occur with respect to the effect of  
 9 lowering the minimum index levels?  
 10 **A. Yeah, we will review based on the errors that we**  
 11 **found, definitely.**  
 12 Q. Previously, I believe that you've stated that  
 13 lowering the minimum index levels, I think  
 14 you -- your terminology was, quote, not a large  
 15 change, end quote. Is that something that you  
 16 would have said in your deposition transcript?  
 17 **A. I don't recall, but ...**  
 18 Q. I would ask that you turn to Exhibit 20, your  
 19 deposition transcript.  
 20 **A. What page, David?**  
 21 Q. Let's go to page 59.  
 22 **A. Okay, I'm there.**  
 23 Q. I'll come back to that in just a moment.  
 24 Originally, we had a different version of this  
 25 transcript and we looked at it, and then

Page 1531

1 sometime right before the -- shortly before the  
 2 hearing we got the verified version of this  
 3 transcript and all the lines and page numbers  
 4 were different. So we've done our best to try  
 5 and match up those lines and page numbers, but  
 6 I'll come back to that in just a second. I'm  
 7 not going to make others wait.  
 8 Can you turn to the Division of Water  
 9 Resources' responses to our second  
 10 interrogatories which are found in Exhibit 13?  
 11 **A. I'm there, yes.**  
 12 Q. With respect to the question on interrogatory  
 13 number 17, it's a long question, and there's  
 14 several subparts, and subpart 3 talks about  
 15 whether it will prejudicially and unreasonably  
 16 affect the public interest if one allows an  
 17 unreasonable raising or lowering of the water  
 18 level. With respect to your answer on  
 19 subsection 3, at the very bottom of that page,  
 20 could you read the answer, that first sentence?  
 21 **A. The first sentence? Although Wichita proposes**  
 22 **to lower the minimum index levels to levels**  
 23 **lower than they were in 1993, the proposed new**  
 24 **levels are not a -- not that significant**  
 25 **compared to the practical saturated thickness of**

Page 1532

1 **the aquifer.**  
 2 Q. So in other words, the drop in the -- from the  
 3 existing minimum index levels to the proposed  
 4 minimum index levels as stated, at least in this  
 5 interrogatory answer, the position of the  
 6 Division of Water Resources was that it's,  
 7 quote, not that significant, end quote. Is that  
 8 what was stated there?  
 9 **A. That's correct.**  
 10 Q. And if I were to tell you that in your  
 11 deposition testimony, and I believe I can find  
 12 it here in just a few seconds, if I were to tell  
 13 you -- well, actually, I'll ask you to go to  
 14 page 60 of your deposition testimony, let's just  
 15 go ahead and create a record.  
 16 **MR. OLEEN:** I kind of object here,  
 17 are we -- why aren't we asking the witness  
 18 a question orally? We're reading in all  
 19 his previously given answers without  
 20 suggesting that he has given a different  
 21 answer here today?  
 22 **MR. STUCKY:** I'll ask the question  
 23 in a different way to satisfy Mr. Oleen.  
 24 **BY MR. STUCKY:**  
 25 Q. Would you agree that you previously said that

1 the drop in the minimum index level from the  
2 existing minimum index level to the proposed  
3 minimum index level, would you agree that you  
4 have said, quote, we didn't see a large change,  
5 end quote?  
6 **A. Yeah, there's not -- there's not a lot of change**  
7 **to that aquifer.**  
8 Q. So my question is this --  
9 **MR. MCLEOD:** Madam Hearing Officer,  
10 I'm -- I'm going to call this a soft  
11 objection, but it's in line with  
12 Mr. Oleen's objection, it seems like we're  
13 spending an awful lot of time taking  
14 discovery material that's already been  
15 admitted and having the witness orally  
16 repeat that same material very  
17 cumulatively; and we're spending a lot, a  
18 lot of time doing this, and I don't see the  
19 productive use here.  
20 **MR. STUCKY:** I'll focus in.  
21 **BY MR. STUCKY:**  
22 Q. So previously you had indicated that this drop  
23 in the minimum index level was not that  
24 significant, it wasn't that large. However, is  
25 your testimony still today that a drop in the

1 minimum index levels, which are anywhere from 9  
2 to 23 feet in their drop, that's what the  
3 testimony says, right?  
4 **A. Correct.**  
5 Q. Is your testimony, as you're sitting here still  
6 today, that the drop in the minimum index level  
7 from 9 to 20 -- anywhere from 9 to 23 feet is  
8 not that significant?  
9 **A. I -- with how much aquifer is there, a 20-foot**  
10 **drop in the aquifer is not that significant.**  
11 **Wichita County has 19 feet of saturated**  
12 **thickness, for example, and --**  
13 Q. Wichita County?  
14 **A. Wichita County. I mean, I'm just saying there's**  
15 **people that operate with a lot less saturated**  
16 **thickness than what we have here. We're --**  
17 **we're very, very blessed -- we're very, very**  
18 **blessed in this part of the state to have this**  
19 **much saturated thickness, and it recharges.**  
20 Q. So at least for today's purposes, you've read  
21 some of the expert opinions or -- and heard some  
22 of the testimony of some of the District's  
23 experts, that hasn't changed your opinion as far  
24 as whether the drop in the minimum index level  
25 is significant or impactful, if you will?

1 **A. No, not yet it hasn't. But we still -- but I**  
2 **think there's going to be more GMD2 experts that**  
3 **testify.**  
4 Q. Mr. Letourneau, prior in your career, you would  
5 have -- you worked for an oil company at one  
6 point; is that right?  
7 **A. Well, it was an oil -- it was an oil well**  
8 **logging company. I logged oil wells.**  
9 Q. So in other words, when you log oil wells, you  
10 would have looked at well log data; is that  
11 right?  
12 **A. Absolutely.**  
13 Q. And you looked at well log -- would you have  
14 looked at well log data both for the purposes of  
15 drilling an oil well and for the purposes of  
16 determining what water existed in that well log?  
17 **A. You look -- correct, you look to see the**  
18 **difference in water and oil in the well.**  
19 Q. So you would have an understanding of how to  
20 interpret a well log and what the numbers in a  
21 well log would mean; is that right?  
22 **A. Yes.**  
23 Q. And, in fact, based on your experience working  
24 with oil companies and also based on your years  
25 of experience with the Division of Water

1 Resources, you've probably looked at a lot of  
2 water well logs; is that right?  
3 **A. I -- yes, I mean -- yes.**  
4 Q. Would you be able to look at a water well log,  
5 for example, and tell me where bedrock is in the  
6 water well log?  
7 **A. If marked appropriately, yes.**  
8 Q. Would you be able to tell me, for example, by  
9 looking at a well log where the water starts, if  
10 you will, in the given well?  
11 **A. Yes, if marked appropriately.**  
12 Q. Yesterday there was a discussion about saturated  
13 thickness; is that correct?  
14 **A. Correct.**  
15 Q. There was also a distinction drawn between -- by  
16 two of the City's witnesses, a distinction drawn  
17 between saturated thickness on one hand and  
18 practical saturated thickness on the other hand.  
19 Would you also agree with that distinction?  
20 **A. Yes.**  
21 Q. So in other words, just because on paper we see  
22 that we have 100 feet of available water in a  
23 given well, when we factor in practical  
24 saturated thickness and clay layers, for  
25 example, all that water may not be available; is

Page 1537

1 that right?

2 **A. That's correct.**

3 Q. So when you're trying to -- from all your years

4 of experience working with oil companies,

5 working for the City of Wichita, when you were

6 trying to determine practical saturated

7 thickness, would you exclude the clay layers,

8 for example?

9 **A. Well, in the oil -- in the oil field, you don't**

10 **look at saturated thickness, in the oil field.**

11 **You look at -- you look for zones that produce**

12 **oil. In -- but water wells, yes, you do look at**

13 **the practical saturated thickness.**

14 Q. And so if you're looking at a water well log and

15 you're trying to determine practical saturated

16 thickness, would you exclude the clay layers?

17 **A. Yes, for practical -- a perfect example, it's**

18 **100 feet of saturated thickness, you find**

19 **50 feet of clay, you have 50 feet of practical**

20 **saturated thickness.**

21 Q. Are there, other than the clay layers, are there

22 other layers that you would exclude?

23 **A. You could, yeah, shale, clay, anything -- any**

24 **non-water-bearing formation.**

25 Q. So if someone was attempting to drill a well and

Page 1538

1 we had a well log, for example, and bedrock was

2 at 100 feet and the clay layers started at

3 50 feet, would you recommend for that individual

4 to drill 75 feet down?

5 **A. Where is the clay layer?**

6 Q. The clay layer starts at 50 feet, would you

7 recommend they drill all the way down to

8 75 feet?

9 **A. Well, it depends on what's below -- and I'm not**

10 **trying to be difficult here, it's just what is**

11 **below the clay layer? I mean, we would look at**

12 **other well logs to see if there is a water**

13 **bearing formation below that clay layer.**

14 Q. Let's clarify the question. Let's assume for a

15 moment bedrock is at 100 feet --

16 **A. Okay.**

17 Q. -- clay starts at 50 feet, and a clay layer

18 continues all the way to bedrock.

19 **A. Oh, okay.**

20 Q. Under that scenario, if you're recommending that

21 someone -- how deep someone should spend the

22 money to drill a well, would you recommend that

23 they drill all the way down to 75 feet?

24 **A. No, about 52 feet.**

25 Q. And the reason why you wouldn't recommend that

Page 1539

1 they drill all the way down to 75 feet is

2 because there's clay down there; is that

3 correct?

4 **A. That's correct.**

5 Q. Now let's turn to table 2-9.

6 **PRESIDING OFFICER:** If this is a

7 little bit different line of questioning,

8 could this be our lunch break?

9 **MR. STUCKY:** Sure.

10 **PRESIDING OFFICER:** It's about

11 12:15, let's be back by 1:00 o'clock. And

12 if we're ready before that, we'll start

13 before that. Thank you.

14 (Thereupon, a lunch recess was

15 taken; whereupon the following was

16 had.)

17 **PRESIDING OFFICER:** Okay. It is now

18 1:00 o'clock, and we are back on the

19 record. Mr. Stucky.

20 **BY MR. STUCKY:**

21 Q. Mr. Letourneau, just before we took a break, I

22 was asking you some questions about saturated

23 thickness versus practical saturated thickness,

24 do you recall those -- those questions?

25 **A. Yes.**

Page 1540

1 Q. Yesterday I asked the City's witness,

2 Mr. McCormick, some questions about table 2-9,

3 table 2-11, figure 10, and figure 11 with regard

4 to practical saturated thickness. The question

5 I asked with respect to each of those tables and

6 figures that I mentioned was do those tables and

7 figures take into account modeled results, and

8 the answer was yes. Do you remember that line

9 of questioning?

10 **A. Yes.**

11 Q. And with respect to each of those figures and

12 with respect to each of those tables, I asked if

13 those tables and figures took into account

14 actual well data that was looked at by the City

15 of Wichita, and the answer was no. Do you

16 recall that question as well?

17 **A. Yes.**

18 Q. And I also asked the question about whether or

19 not those figures and tables took into account

20 practical saturated thickness, and the answer

21 was also no. Do you recall that line of

22 questioning?

23 **A. Yes.**

24 Q. As you're sitting here today, do you also agree

25 that those tables and figures deal with modeled

1 results and not actual well log data?  
2 **A. If -- if it was a MODFLOW model, the MODFLOW**  
3 **model takes into account well logs.**  
4 Q. Would you agree, though, that there could be a  
5 difference between modeled results and actual  
6 well log data?  
7 **A. Yes.**  
8 Q. And just for clarity, table 2-9 applies to the  
9 entire basin storage area, and figure 10 applies  
10 to individual index cells. Is that one of the  
11 differences between the two?  
12 **A. Yes.**  
13 Q. And table 2-11 deals with the proposed saturated  
14 thickness; whereas, figure 11 deals with the  
15 model -- modeled results for each index cell.  
16 Would that be an accurate statement?  
17 **A. I'm sorry, David, can you ask that again?**  
18 Q. Just a quick refresher, table 2-11 deals with  
19 the proposed minimum index level and the  
20 corresponding saturated thickness, and figure 11  
21 deals with the modeled results for each index  
22 cell; is that correct?  
23 **A. Correct.**  
24 Q. In the District's notebooks, I would ask that  
25 you flip to Exhibit 60. It's in Volume IV for

1 the record. And then also just for simplicity,  
2 can you open Volume Number VI and flip to  
3 Exhibit 80? Keep both of those exhibits open  
4 before you.  
5 **A. Well -- oh.**  
6 Q. Do you have both of those exhibits before you?  
7 **A. I do.**  
8 Q. And then I think you were already in the  
9 proposal on table 2-10, hopefully. Those are  
10 the three that I would like you to have open  
11 before you.  
12 **A. Okay.**  
13 Q. In Exhibit 80 -- or, I'm sorry, it's Exhibit 60,  
14 on the first page of Exhibit 60, would you agree  
15 that what we merely see is a map listing all the  
16 index cells that are being considered here  
17 today, would you agree with that?  
18 **A. I agree.**  
19 Q. And on the next page of Exhibit 60, there's a  
20 hydrograph; is that correct?  
21 **A. That's correct.**  
22 Q. And would you agree that, at least as it's  
23 stated, this hydrograph is for index well 1C?  
24 **A. Yes.**  
25 **MR. MCLEOD:** Sorry, can we have some

1 foundation for the exhibit, where it came  
2 from and who created it? And if this is  
3 the exhibit that was replaced Monday, can  
4 we have some discussion of the differences  
5 between the original exhibit and the  
6 correction?  
7 **MR. STUCKY:** There was one -- it's  
8 something that nobody ever would have  
9 caught, there was one data point, I believe  
10 in one of the hydrographs, it was actual --  
11 it includes actual measured well data  
12 for -- that the Equus Beds Groundwater  
13 Management District would have accumulated  
14 over time, and we're going to have later  
15 foundation for this particular exhibit.  
16 So if -- my suggestion is certainly this  
17 exhibit, we're going to have great  
18 foundation laid out when the District's  
19 experts testify here in the future, and  
20 they can testify in greater detail to the  
21 foundation that went into generating this  
22 exhibit, but my suggestion is that we be  
23 allowed to use it and let this witness look  
24 at it subject to later foundation.  
25 **PRESIDING OFFICER:** So you won't be

1 requesting to admit it at this point?  
2 **MR. STUCKY:** I will only request to  
3 admit it subject to later foundation  
4 established.  
5 **PRESIDING OFFICER:** That's fine.  
6 **MR. MCLEOD:** Can we at least have an  
7 indication of who originated it?  
8 **MR. STUCKY:** The Groundwater  
9 Management District No. 2, it's identified  
10 at the bottom of that hydrograph. May I  
11 proceed?  
12 **PRESIDING OFFICER:** Yes, sorry.  
13 **BY MR. STUCKY:**  
14 Q. With respect to this hydrograph for well IW1C,  
15 on that hydrograph, we see the minimum drought  
16 model elevations. If I were to say that the  
17 minimum drought model elevations for this index  
18 cell is 1,429.14 feet and I were to point you to  
19 the corresponding portion of the City's table in  
20 their proposal that has that number, would you  
21 have reason to disagree with this?  
22 **A. No.**  
23 Q. And if I were to tell you also that with respect  
24 to index well 1C the existing minimum index  
25 level, as shown in red, is 1,413.42 feet, would

Page 1545

1 you have reason to disagree with that number?  
 2 **A. No.**  
 3 Q. And if I were to tell you that with respect to  
 4 the proposed minimum index level, the proposed  
 5 minimum index level would drop it down to  
 6 1,390 feet, would you have reason to disagree  
 7 with that number?  
 8 **A. No.**  
 9 Q. And, in fact, the difference between the red and  
 10 the green line, if we subtract 1,390 from  
 11 1,413.42 feet, indeed, we get the 23 feet and  
 12 some change that is shown in the first row of  
 13 table 2-10; is that right?  
 14 **A. That's correct.**  
 15 Q. So if I were to tell you that the numbers used  
 16 in this hydrograph, at least with respect to  
 17 line -- the blue, red, and green line, if I were  
 18 to tell you that those were numbers that were  
 19 derived from the City's proposal and model,  
 20 would you agree with that statement?  
 21 **A. Yes.**  
 22 Q. Now, the black line, we'll have further  
 23 testimony on that in the future, the black line  
 24 is actual measured levels in the City's  
 25 monitoring well in that index cell, and we'll

Page 1546

1 have testimony on that later, but at least with  
 2 respect to the three lines in question, those  
 3 come out of the City's proposal, true?  
 4 **A. Yes.**  
 5 Q. Now I would ask that you turn to Exhibit 80.  
 6 **A. Okay.**  
 7 **MR. STUCKY:** And I would ask that we  
 8 be allowed, just for the simplicity of this  
 9 record, be allowed to admit Exhibit 60  
 10 subject to laying a further foundation?  
 11 **PRESIDING OFFICER:** Well, let's just  
 12 do that at that time.  
 13 **MR. STUCKY:** Okay.  
 14 **BY MR. STUCKY:**  
 15 Q. With respect to -- if we could turn to  
 16 Exhibit 80. Do you recognize Exhibit 80? And  
 17 first of all, look at the top right-hand portion  
 18 of that document, are you able to identify  
 19 what -- and specifically the first nine pages of  
 20 Exhibit 80, 1 through 9 and --  
 21 **MR. STUCKY:** May I approach the  
 22 witness?  
 23 **PRESIDING OFFICER:** Yes.  
 24 **BY MR. STUCKY:**  
 25 Q. Mr. Letourneau, I would ask that you flip

Page 1547

1 through the first nine pages of Exhibit 80.  
 2 **A. Okay.**  
 3 Q. Do you recognize what this document is?  
 4 **A. Yes.**  
 5 Q. What is this document?  
 6 **A. It is a, what's called a WWC-5 form, it's a**  
 7 **drilling log, a driller's log.**  
 8 Q. And does this appear to be a drilling log for  
 9 IW1C, which would be located -- would be the  
 10 monitoring well of the City in index cell 1?  
 11 **A. Actually, at the top of this it says IW21C.**  
 12 **MR. STUCKY:** May I approach the  
 13 witness?  
 14 **PRESIDING OFFICER:** Yes.  
 15 **A. But after those nine, David, I just saw it, IW1C**  
 16 **is behind these first group of pages. If you**  
 17 **want to look at this.**  
 18 **BY MR. STUCKY:**  
 19 Q. Mr. Letourneau, I'm going to trade books with  
 20 you just --  
 21 **A. Okay.**  
 22 Q. -- for a moment, and I'm going to have the well  
 23 logs put in the correct order in the official  
 24 notebook for this -- for this hearing, if I may.  
 25 **MR. STUCKY:** May I do that,

Page 1548

1 Ms. Owen?  
 2 **PRESIDING OFFICER:** What would the  
 3 correct order be?  
 4 **MR. STUCKY:** We would have IW1C  
 5 first, IW2C second, IW10C third, and IW21C  
 6 last. Is that the order in others'  
 7 notebooks? My thinking -- the reason why  
 8 they're not ordered correctly in that  
 9 particular notebook is that they were taken  
 10 out and scanned, and so I'm thinking that's  
 11 the only reason they were reordered in that  
 12 notebook. And so what I'm trying to  
 13 determine is if everybody else's is in the  
 14 correct order?  
 15 **PRESIDING OFFICER:** I have 1, 2, and  
 16 10, but 21 was in front. So now 21 goes  
 17 behind those?  
 18 **MR. STUCKY:** Yes.  
 19 **A. Okay. I can -- I can fix that.**  
 20 **BY MR. STUCKY:**  
 21 Q. Okay. I would ask to start out, Mr. Letourneau,  
 22 it looks like you have found nine pages that  
 23 correspond with IW1C; is that right?  
 24 **A. Yes.**  
 25 Q. Can you tell me what that document is as it

1 relates to IW1C?  
2 **A. IW1C, it's a WWC-5 form, which is a drilling**  
3 **log.**  
4 Q. Would that be a drilling log for the monitoring  
5 well that the City has in index cell 1?  
6 **A. If IW1C is -- yes.**  
7 Q. And, in fact, if we were to flip through this --  
8 this drilling log, you would be able to see that  
9 this was a drilling log that was requested by  
10 the City of Wichita; is that right?  
11 **A. Yes.**  
12 Q. Would you agree that this is the official  
13 drilling log for IW1C, which was the City's  
14 monitoring well in index cell 1?  
15 **A. Yes.**  
16 **MR. STUCKY:** I would ask that at  
17 least this portion of Exhibit 80 be  
18 admitted into evidence.  
19 **PRESIDING OFFICER:** Any objection?  
20 **MR. MCLEOD:** Does Counsel want to  
21 mark it separately? I'm not sure how else  
22 we would go about admitting a portion of an  
23 exhibit.  
24 **MR. STUCKY:** Well, I would ask, to  
25 just speed this up, if I were to proffer

1 well data, as you flip through them, do those  
2 appear to be the official well logs and official  
3 well records for the corresponding monitoring  
4 wells in the given index cells that are  
5 represented?  
6 **A. Yes.**  
7 **MR. STUCKY:** I would ask that  
8 Exhibit 80 be admitted into evidence.  
9 **MR. OLEEN:** And then my only  
10 remaining request is someone mentioned  
11 index well 21, Madam Hearing Officer. I  
12 have documents for well 1, 2, 10. Unless  
13 I'm missing it, I don't see a 21, a 21  
14 report.  
15 **MR. STUCKY:** Is it okay if Mr. Boese  
16 approaches Mr. Oleen?  
17 **PRESIDING OFFICER:** Yes, let's try  
18 and help clear this up.  
19 **MR. STUCKY:** Just to speed this up.  
20 Can I --  
21 **MR. OLEEN:** Subject to me getting  
22 number 21, and I presume that the witness  
23 has a copy of 21, then I don't have an  
24 objection.  
25 **MR. STUCKY:** Thank you.

1 that we have four different drilling logs  
2 and they'll correspond to a different  
3 monitoring well of the City and four  
4 different index cells and Mr. Letourneau  
5 can testify to the same thing with respect  
6 to each one, with that proffer in mind, I  
7 would ask to just admit Exhibit 80.  
8 **PRESIDING OFFICER:** Any objections  
9 to that?  
10 **MR. MCLEOD:** No objection here.  
11 **MR. OLEEN:** I'm sorry, I don't  
12 understand Mr. Stucky's proffer. We are  
13 admitting all of 80's documents or not?  
14 **MR. STUCKY:** Yes.  
15 **MR. OLEEN:** Based on what proffer or  
16 what --  
17 **MR. STUCKY:** Based on the fact that  
18 Mr. Letourneau could testify with respect  
19 to each one of those index wells, that they  
20 are the official well logs and the official  
21 well data.  
22 **MR. OLEEN:** If he thinks that's the  
23 case, then -- has he said that's the case?  
24 **BY MR. STUCKY:**  
25 Q. As you flip through those well logs and that

1 **PRESIDING OFFICER:** Okay. 80 will  
2 be admitted.  
3 **BY MR. STUCKY:**  
4 Q. I would ask that you look -- you look at this  
5 well log that exists for the official monitoring  
6 well of the City in index cell 1. Toward the  
7 bottom of this document, there's some data that  
8 was found by the well driller; is that correct?  
9 With -- with regard to what was in the different  
10 layers of the soil, if you will?  
11 **A. Are you talking about the lithologic log?**  
12 Q. Yes.  
13 **A. Yes.**  
14 Q. And what exactly is a lithologic log?  
15 **A. It -- it describes the lithology in the well**  
16 **based on the drilling of it, what you drill**  
17 **through.**  
18 Q. And based on your degree in geology, a  
19 lithologic log is right in your wheelhouse; is  
20 that correct, Mr. Letourneau?  
21 **A. Well, I mean, I know about them. I don't know**  
22 **about my wheelhouse.**  
23 Q. Previously, you indicated that clay layers  
24 should be excluded from saturated thickness.  
25 When we're trying to determine practical

Page 1553

1 saturated thickness, we should exclude clay  
 2 layers; is that correct?  
 3 **A. Maybe not all of them, I mean, some clays can**  
 4 **give up water, but if it's a clay that says here**  
 5 **hard, it's probably not going to give up much**  
 6 **water. But some clays can give out a little bit**  
 7 **of water.**  
 8 Q. Okay. As we look at this well log, from 2 to  
 9 13 feet in this well log, we see that it was a  
 10 clay, tan and white, sandy layer; is that right?  
 11 **A. That's correct.**  
 12 Q. From 13 to 45 feet in this log, we see that it  
 13 was sand, fine, very fine sand, so that sand  
 14 probably would have yielded water; is that  
 15 correct?  
 16 **A. Maybe. I mean, it's very fine sand so it --**  
 17 **it's just based -- it's based on as you go**  
 18 **through those layers, depending on what those**  
 19 **may give up.**  
 20 Q. And the next layer -- well, let me just say  
 21 this, in at least 45 to 56 feet, we're seeing  
 22 the start of a clay layer; is that correct?  
 23 **A. Yes.**  
 24 Q. And in 56 to 72 feet, it identifies the feared  
 25 clay, white, hard clay layer that you indicate

Page 1554

1 would generate no water; is that correct?  
 2 **A. That could generate no water but ...**  
 3 Q. And then from 72 to 82 feet, we also see clay  
 4 mentioned that's hard; is that correct?  
 5 **A. That's correct.**  
 6 Q. But then when we go from 82 to 103 feet, once  
 7 again, we see sand and gravel that's medium,  
 8 fine, very fine; is that right?  
 9 **A. That's correct.**  
 10 Q. And so would we expect that at least from 82 to  
 11 103 feet, there's a potential to yield water?  
 12 **A. Yes.**  
 13 Q. And then at 103 to 105 feet, it indicates that  
 14 we hit the shale, the bedrock layer; is that  
 15 right?  
 16 **A. That's correct.**  
 17 Q. So in other words, if you were looking at this  
 18 particular well log that's located in index cell  
 19 1, what would you say the practical saturated  
 20 thickness is based on looking at this well log?  
 21 **A. Probably 30 feet.**  
 22 Q. Okay. Now, I would ask with that number in  
 23 mind, we go back to Exhibit 60. Comparing index  
 24 well 1C, the City's official monitoring well in  
 25 index well -- in index cell 1 with what's found

Page 1555

1 with the corresponding hydrograph for IW1C, if  
 2 we look at where the existing minimum drought  
 3 model elevation as shown in blue, would you  
 4 agree that that is already below what is shown  
 5 as the first sand layer in this well log?  
 6 **A. Yes.**  
 7 Q. In other words, where the water level already is  
 8 is below where that first sand layer is with  
 9 respect to index cell 1; is that right?  
 10 **A. Yes.**  
 11 Q. Now, we look at the -- where on this  
 12 hydrograph -- now let's look at this yellow  
 13 line, there is a yellow line on this hydrograph,  
 14 or an orange line for the record that's shown at  
 15 the very bottom of this hydrograph. That shows  
 16 an approximate bedrock elevation of  
 17 1,371.05 feet for IW1C. Would you agree that  
 18 that drop of 102 feet was pulled directly from  
 19 this well log that we just looked at?  
 20 **A. Yes.**  
 21 Q. So as we're looking at what that practical  
 22 saturated thickness is, would it be your belief  
 23 that at least with respect to this monitoring  
 24 well and the location of this monitoring well,  
 25 we only have a practical saturated thickness of

Page 1556

1 30 feet; is that right?  
 2 **A. Yes, I think that's -- yes.**  
 3 Q. And in other words, if we were to look at the  
 4 well log and let's say for -- just for example  
 5 what you said earlier was true that all clay  
 6 layers can be excluded and we assume that the  
 7 only place in this particular well log where we  
 8 can monitor -- I'm sorry, where we can yield  
 9 water is between 82 feet and 103 feet where sand  
 10 and gravel is found, would that create a  
 11 practical saturated thickness of only 19 feet in  
 12 this monitoring -- or 21 feet, I'm sorry,  
 13 21 feet?  
 14 **A. Well, 21 if that's the only zone that you have**  
 15 **picked. I don't know if that's appropriate**  
 16 **without -- without drilling it and knowing what**  
 17 **those other layers may give out. That is,**  
 18 **though, without a doubt, according to this log,**  
 19 **the best zone in this well.**  
 20 Q. So based on your professional opinion and your  
 21 experience as -- in having looked at water well  
 22 logs, your best guess is there's maybe 30 feet  
 23 of practical saturated thickness?  
 24 **A. At a maximum.**  
 25 Q. If we then compare this information to figure 10

1 of the City's proposal -- I'm sorry, let's go to  
2 figure -- yes, figure 10 of the City's proposal,  
3 let's start there. In figure 10, let's look at  
4 index well -- or index cell 1 shown in the upper  
5 left-hand portion. The saturated thickness  
6 shown there, which is the average saturated  
7 thickness for the entire index cell, what's  
8 shown there is 163 feet as the average saturated  
9 aquifer thickness in that cell; is that right?

10 **A. That's correct.**

11 Q. And I understand that that's an average for the  
12 whole cell, but at least as we compare it to the  
13 City's monitoring well that's located -- the  
14 official monitoring well located in that index  
15 cell, would you agree that there's a big  
16 difference between 30 feet of practical  
17 saturated thickness and the purported average  
18 saturated thickness from the model data, which  
19 shows 163 feet, would you agree there's at least  
20 a difference in those numbers?

21 **A. Yes. But the location of that particular index  
22 well, that monitoring well is to the extreme  
23 north of that, so it looks like it's probably at  
24 the very edge of the aquifer. I wouldn't expect  
25 that well to be very good.**

1 Q. But at least even -- well, how big is an index  
2 cell, tell me that again.

3 **A. You can see, I don't -- I don't know exactly.  
4 They're large.**

5 Q. Is it roughly a two -- look at the bottom of  
6 this figure 10, it shows miles and it shows  
7 two miles at the bottom.

8 **A. Roughly two by two, yes.**

9 Q. Yes. Is it a, basically a four-square-mile  
10 area?

11 **A. That looks like it, yes.**

12 Q. So we're not talking, you know, dozens of miles  
13 apart, we're talking within a mile potentially  
14 of -- within a couple miles of any given spot in  
15 an index cell; is that right?

16 **A. Yeah, it looks like the next monitoring well,  
17 though, is four miles away, right? At least  
18 two miles away. So the model is probably  
19 looking at wells two miles apart and then trying  
20 to draw data from both of those and data points  
21 and establishing levels between --**

22 Q. Let me ask you this: When we have a difference  
23 between what's been identified as 163 feet of  
24 saturated thickness left in the aquifer and we  
25 look at the one monitoring well that the City

1 has in place and we find that it's only 31 -- or  
2 maybe 30 feet of saturated thickness, does that  
3 at least give you some cause for concern?

4 **A. Sure, yes.**

5 Q. And, in fact, does it give you enough cause for  
6 concern that if you were to go back to your  
7 modeling team that you might ask them to say,  
8 you know what, you guys might want to look at a  
9 few actual well logs in this cell to make sure  
10 that the City's numbers are correct?

11 **A. I would ask -- ask the modelers if the MODFLOW  
12 model took into account well logs already.**

13 Q. And that question's already been answered,  
14 correct? In fact, you answered it for me  
15 earlier, which was the modelers did not -- all  
16 the modelers that testified indicated that they  
17 did not personally look at well logs. Do you  
18 recall that testimony?

19 **A. Yes.**

20 Q. So now if you're making a recommendation, you  
21 have a large agency here, you have the Division  
22 of Water Resources that's charged with making  
23 policy for all constituents and water users, as  
24 you're going back to your agency, would you say,  
25 you know what, there's a big difference between

1 30 feet of practical saturated thickness shown  
2 in a monitoring well within that index cell and  
3 the touted 131 feet showed by modeled results,  
4 would you say perhaps we should go back and look  
5 at some well logs at this point?

6 **A. I would definitely take back the concern. I  
7 would have added one thing to your description  
8 saying the one well log to the very north edge,  
9 because in this -- I just thumbed through  
10 this -- your hydrographs, this is a pretty  
11 bad -- I mean, this well is not a very good  
12 well; but when I looked at the other ones as  
13 we're going through there, the lines are a lot  
14 closer as we get into the middle of this. And  
15 so I'm looking at this, the remaining wells  
16 don't cause me near as much concern as this one.**

17 Q. Okay.

18 **A. I will say that.**

19 Q. And we'll talk about a few more examples here in  
20 just a moment --

21 **A. Okay.**

22 Q. -- Mr. Letourneau.

23 **A. Oh, and I don't -- I don't mean to speak out of  
24 turn.**

25 Q. No, that's just fine, you can always clarify --

Page 1561

1 **A. Okay.**  
 2 Q. -- any of my questions. So figure 10 looks at  
 3 the individual index cells, and figure -- figure  
 4 10 is looking at the drought modeled results and  
 5 how that affects each index cell, and figure 11  
 6 is looking at the effect -- the effect of  
 7 lowering the minimum index level; is that right?  
 8 **A. Yes.**  
 9 Q. Okay. So if we flip, then, to figure 11, which  
 10 is the impact of lowering the minimum index  
 11 level, there's 131 feet of saturated thickness  
 12 shown; is that correct?  
 13 **A. That's correct.**  
 14 Q. And if we flip back to figure 10, in index cell  
 15 1, there's 163 feet of saturated thickness  
 16 shown; is that right?  
 17 **A. That's correct.**  
 18 Q. Either way, whether we're talking about 163 feet  
 19 versus 131 feet, we're talking over a 100-foot  
 20 difference between what you identified as the  
 21 practical saturated thickness shown in that  
 22 monitoring well versus the saturated thickness  
 23 identified by the City; is that correct?  
 24 **A. That's correct.**  
 25 Q. I would ask that you flip to, in Exhibit 80, to

Page 1562

1 index well 2C.  
 2 **A. Okay.**  
 3 Q. Now we look at index well 2C, and I'm going to  
 4 ask you some of the same questions. And first  
 5 of all, to remove any surprise or any doubt, the  
 6 monitoring well with respect to index well 2C,  
 7 it's smack dab in the middle of that index cell;  
 8 is that right?  
 9 **A. That's correct.**  
 10 Q. And so if there's a concern that it's in the  
 11 upper northern portion or anything of that  
 12 nature, that one's smack dab in the middle; is  
 13 that right?  
 14 **A. That's correct.**  
 15 Q. So let's look at the official well log for the  
 16 City of Wichita with respect to index well 2C  
 17 and that well log. I'm going to ask you to look  
 18 at that lithologic log and tell me, you know, at  
 19 the very beginning, and, frankly, the water  
 20 table is probably below some of this anyway, but  
 21 the very beginning we see clay, clay, clay, all  
 22 the way down to 74 feet. Would you agree with  
 23 that?  
 24 **A. To 75 -- oh, yeah, it's clay to 74. Well, clay**  
 25 **to 75.**

Page 1563

1 Q. I'm sorry, clay to 75 feet, that's shown in the  
 2 next layer. And then after that, from 75 to  
 3 115 feet, we see sand and gravel, medium, fine;  
 4 is that right?  
 5 **A. That's correct.**  
 6 Q. And then from 115 feet all the way down to the  
 7 shale at 149 feet, once again, we hit a clay  
 8 layer; is that right?  
 9 **A. That's correct.**  
 10 Q. As you look at the official well log for the  
 11 City's monitoring well in index cell 2, what  
 12 would you tell me is the practical saturated  
 13 thickness?  
 14 **A. 40 feet.**  
 15 Q. And is that 40 feet calculated by looking at the  
 16 difference between 115 feet and 75 feet?  
 17 **A. Yes.**  
 18 Q. Now I'd ask that you turn to -- and this is just  
 19 purely for graphical purposes at this point to  
 20 help everybody visualize this, I ask that you  
 21 turn to the District's Exhibit 60 and turn to  
 22 the corresponding hydrograph on IW2C. If I were  
 23 to tell you that the red line, which shows the  
 24 existing minimum index level, the blue line,  
 25 which shows the minimum -- the level after the

Page 1564

1 City's drought modeling, and the green line  
 2 shows the proposed minimum index level and I  
 3 were to tell you that comes from the City's  
 4 charts and data, would you have reason to  
 5 disagree with me?  
 6 **A. No, you're correct.**  
 7 Q. And, in fact, we see for the current minimum  
 8 index level, it shows 100 -- 1,410.52 feet, for  
 9 the blue line, which is the minimum -- the  
 10 drought modeling, we see 1,407.96 feet, and for  
 11 the proposed minimum index level, it would drop  
 12 it down to 1,390 feet; is that right?  
 13 **A. That's correct.**  
 14 Q. And based on, at least, this well log, which is  
 15 the only official well data we have in this  
 16 index cell related to the City, we find bedrock  
 17 down at 1,200 -- 299.4 feet; is that right?  
 18 **A. Well, that's the elevation. The bedrock is down**  
 19 **150 feet.**  
 20 Q. I'm -- I'm sorry, it's -- the bedrock starts at  
 21 149 feet, is that right, on that well log?  
 22 **A. Correct.**  
 23 Q. But we're showing elevations here, so if we drop  
 24 down from zero feet down 149 feet, that's how we  
 25 get to that 1,299.4 feet, which is the bedrock

1 elevation; is that right?  
2 **A. That's correct.**  
3 Q. Just a moment ago you told me that with respect  
4 to index well -- the monitoring well in index  
5 cell 2, the practical saturated thickness was  
6 40 feet; is that right?  
7 **A. Yes.**  
8 Q. Now I'd ask that you look at figure 10 once  
9 again. Figure 10 demonstrates from the City's  
10 modeling what would be the average remaining  
11 saturated thickness after the City has -- has  
12 pumped for eight years; is that right?  
13 **A. Yes.**  
14 Q. And what they've demonstrated or what they've  
15 shown from their modeling is there would be 187  
16 feet of saturated thickness in that index cell;  
17 is that right?  
18 **A. That's correct.**  
19 Q. But with respect to the monitoring well, which  
20 is smack dab in the middle of that index cell,  
21 we find that there's only a practical saturated  
22 thickness of 40 feet, correct?  
23 **A. Correct.**  
24 Q. Now I'd ask that you turn to figure 11. Figure  
25 11 purports to show what the saturated thickness

1 **the heart of the aquifer. Will we get to that?**  
2 Q. Let me zero in on my question here,  
3 Mr. Letourneau, and focus you in for a moment.  
4 What this data in figure 11 and figure 10 shows  
5 for index cell 2 is the average saturated  
6 thickness for that two-by-two-mile-square area,  
7 right?  
8 **A. Yes.**  
9 Q. So all we're talking about now is the saturated  
10 thickness in this 2-foot-by-2-foot area; is that  
11 right?  
12 **A. Two mile.**  
13 Q. Two-mile-by-two-mile area; is that right?  
14 **A. Correct.**  
15 Q. So we're not talking about anywhere else in this  
16 aquifer?  
17 **A. Okay.**  
18 Q. We're talking about that two-by-two-mile area,  
19 so at least as it relates to index cell 2, does  
20 the difference of over 100 feet in that one  
21 index cell, at least, give you some concern with  
22 the City's modeling?  
23 **A. No, because it's a model. I mean, I'd want to**  
24 **look at the heart of the well field. And then**  
25 **if there -- in the heart of the well field, if**

1 would be after we drop the minimum index level;  
2 is that right?  
3 **A. That's correct.**  
4 Q. And it shows on figure 11 that the saturated  
5 thickness, after dropping the minimum index  
6 level, under the City's modeling would be  
7 171 feet; is that right?  
8 **A. That's correct.**  
9 Q. Would you also agree that there's a big  
10 difference between 171 feet and 40 feet?  
11 **A. Yes.**  
12 Q. In fact, in both instances, on both figure 10  
13 and figure 11, we're talking a difference of  
14 well over 100 feet once again, correct?  
15 **A. Correct.**  
16 Q. Given the fact that the City's monitoring well  
17 is smack dab in the middle of index cell 2 and  
18 it shows a practical saturated thickness of only  
19 40 feet, does that give you cause for concern  
20 with the City's data?  
21 **A. No. I mean, no, because it's on the edge of**  
22 **the -- it's on the upper edge of the aquifer.**  
23 **Yeah, there is a big difference, but -- and it**  
24 **does raise a question, but we're at the edge of**  
25 **the aquifer. We might want to look at one in**

1 **we're that far off and at the edge we're that**  
2 **far off, then, yes, I would be concerned. But,**  
3 **yes, I mean, there is a big difference, but the**  
4 **modeling puts together water level -- water**  
5 **levels from a bunch of different well logs, not**  
6 **just one. But there -- I agree, there is a big**  
7 **difference.**  
8 Q. Let me focus in, Mr. Letourneau. If our  
9 discussion was only with respect to index cell  
10 2, and I'm only asking you about index cell 2  
11 and I don't -- I'm not asking about the rest of  
12 the aquifer at this juncture --  
13 **A. Oh, okay.**  
14 Q. -- if our discussion only had to do with index  
15 cell 2 and the decision with regard to index  
16 cell 2 and there was a difference of over  
17 100 feet from the practical saturated thickness  
18 to the reported saturated thickness, if we're  
19 only focusing in on that one area, would that  
20 give you cause for concern?  
21 **A. Yes. If -- if we only modeled that index cell**  
22 **and we had that -- this type of data from the**  
23 **well log and there was that much difference,**  
24 **then, yes, I would be concerned.**  
25 Q. So if we were only narrowing in on index cell 1

Page 1569

1 and index cell 2 together, at least as it  
 2 relates now to that eight-square-mile area and  
 3 you saw that there was a vast difference between  
 4 the modeled results on one hand and the actual  
 5 well log data on the other hand, would you have  
 6 some concern?  
 7 **A. If it was only on those two cells, yes.**  
 8 Q. I would ask that you now turn to Exhibit 80 and  
 9 flip through to index well 10C.  
 10 **A. Okay, I'm there.**  
 11 Q. Now, just to give us a knowledge of where this  
 12 is, if we were to turn to figure 10 in the  
 13 City's proposal, would you agree that this  
 14 monitoring well of the City would be in what's  
 15 shown as IW10, which would be right within the  
 16 heart of that red area shown on that map?  
 17 **A. In the upper -- in the upper third of that red**  
 18 **area, yes.**  
 19 Q. Okay. So let's turn now to that well log. And  
 20 would you just also agree, again, I'm not trying  
 21 to trick you here --  
 22 **A. Sure.**  
 23 Q. -- but would you agree that this well log and  
 24 this well data that we're going to look at is in  
 25 the middle of index cell 10, it comes from the

Page 1570

1 middle of index cell 10 roughly?  
 2 **A. Yes.**  
 3 Q. So if we turn to that well log shown as index  
 4 well 10C and this monitoring well that's the  
 5 City's official monitoring well, let's see what  
 6 the -- what their official drillers found in  
 7 that case. Let's start with -- let's look at  
 8 the lithologic log again, are you on that?  
 9 **A. I'm on it, yes.**  
 10 Q. And we're probably not real concerned with  
 11 what's found in the first 16 feet because the  
 12 water level is below the first 16 feet; is that  
 13 right?  
 14 **A. That's right.**  
 15 Q. And, in fact, would you agree that the -- yeah,  
 16 in fact, we can have testimony in this later in  
 17 the hearing as far as where the actual measured  
 18 water level is, but if I were to tell you that  
 19 it fluctuates, but it starts somewhere in the  
 20 range of 20 to 30 feet, would you have reason to  
 21 disagree with that measured data?  
 22 **A. No.**  
 23 Q. Okay. So either way, after we get past this  
 24 27 feet on this lithologic log, as a geologist,  
 25 you would start to look at the different layers

Page 1571

1 in this well log, is that right, to determine  
 2 the saturated thickness; is that true?  
 3 **A. That's true.**  
 4 Q. And we can walk through the same exercise where  
 5 we look at sand and gravel and we look at where  
 6 clay starts and -- but if we were to add up  
 7 where the sand and gravel layers are, do you  
 8 have a number in mind as far as what that  
 9 practical saturated thickness would be?  
 10 **A. Really quickly, I get 70 to 75 feet probably.**  
 11 Q. If I were to tell you just for ease of your  
 12 reference that there's 49 feet of clay and  
 13 76 feet of sand and gravel, would that sound  
 14 about right to you?  
 15 **A. It sounded right.**  
 16 Q. Now, let's turn again to Exhibit 80. I --  
 17 **A. Or 60?**  
 18 Q. -- I misspoke, Exhibit 60. Let's turn again to  
 19 Exhibit 60, and if you flip 11 pages in to  
 20 Exhibit 60, you're going to come to the  
 21 hydrograph for well IW10C; is that right?  
 22 **A. Yes.**  
 23 Q. And if I tell you that the existing minimum  
 24 index level is at an elevation of 1,375.09 feet,  
 25 the minimum drought model elevation is at

Page 1572

1 1,368.08 feet, and the proposed minimum index  
 2 level is at 1,358 feet and that's pulled from  
 3 the City's data, would you have reason to  
 4 disagree with those numbers?  
 5 **A. No.**  
 6 Q. In fact, do those numbers appear correct to you?  
 7 **A. Yes.**  
 8 Q. And then comparing to the actual well log of the  
 9 City, would you agree that if we drop down  
 10 189 feet, we come to that approximate bedrock  
 11 elevation of 1,243 feet? Does that sound right  
 12 to you?  
 13 **A. Yes.**  
 14 Q. Now let's turn to figure 10. In figure 10, you  
 15 indicated that -- it's indicated in figure 10  
 16 that after their simulation, their drought  
 17 simulation, there's going to be 175 feet of  
 18 saturated thickness in index cell 10, is that  
 19 what it purports to show?  
 20 **A. Yes, that's correct.**  
 21 Q. However, what you just told me from this well  
 22 log, which is smack dab in the middle of this  
 23 index cell, the actual practical saturated  
 24 thickness is only 76 feet; is that right?  
 25 **A. That's correct.**

1 Q. So I know we're 1 foot shy, but we're  
2 approximately -- that's approximately a 100-foot  
3 difference between the two; is that right?  
4 **A. That's correct.**  
5 Q. Now I'd ask that you flip to figure 11, which  
6 shows what the drop would be between -- if we  
7 lowered the minimum index level, right, is that  
8 what figure 11 shows?  
9 **A. Yes.**  
10 Q. And the difference between 76 feet and 165 feet  
11 shown in -- shown in that figure, would you  
12 agree, is 66 -- or, I'm sorry, let me back up  
13 just a moment. Let's go back to this  
14 hydrograph. If we go back to this hydrograph,  
15 would you agree that in this hydrograph that's  
16 shown with respect to index well 10C, the blue  
17 line is above the green line on that hydrograph,  
18 would you agree with that?  
19 **A. Yes.**  
20 Q. And so in other words, when we drop the proposed  
21 minimum index level further, the available  
22 saturated thickness is going to be less than the  
23 available saturated thickness when we're just  
24 considering the modeled results shown in that  
25 blue line; is that right?

1 approximately 100 feet, when you see that  
2 difference of 100 feet, at least if you were  
3 only looking at that index cell, would that give  
4 you cause for concern?  
5 **A. Yes.**  
6 Q. And, in fact, would you want the, at least your  
7 modelers, your team of modelers with the  
8 Division of Water Resources to go back and  
9 analyze that data in greater detail?  
10 **A. We will -- we will give it some consideration.**  
11 Q. And if you're to go back to your team of  
12 modelers, assuming this Chinese wall wasn't in  
13 place, would your recommendation, if you were  
14 giving an official recommendation to them, would  
15 your official recommendation be that it should  
16 be given some more consideration?  
17 **A. Yes.**  
18 Q. I didn't catch the answer?  
19 **A. Yes, I'm sorry.**  
20 Q. Now I'd ask that we turn to the last well log  
21 that is shown, which is in index well 21C. And,  
22 I'm sorry, I -- I minced words there, it's in  
23 index well 10, it's the monitoring well shown as  
24 index well 21C. My -- my learned colleague told  
25 me that I failed to clarify that it's in index

1 **A. Yes.**  
2 Q. Okay. And if we look at the difference between  
3 the two of those, you can see 1,358 subtracted  
4 from 1,368 is 10 feet; is that right?  
5 **A. Correct.**  
6 Q. So if our practical saturated thickness with  
7 respect to the modeled results was 76 feet,  
8 would you agree with me that the practical  
9 saturated thickness with respect to lowering the  
10 minimum index level would only be 66 feet? As  
11 shown on that well log data?  
12 **A. Yes.**  
13 Q. So then if we take that 66 feet and we compare  
14 it to figure 11 and we look at the 165 feet  
15 shown on figure 11, once again, we find  
16 basically a 100-foot difference between the two;  
17 is that right?  
18 **A. That's correct.**  
19 Q. So as we consider that 100-foot difference  
20 between the two, once again, I'm not asking you  
21 for the whole aquifer, consideration of the  
22 whole aquifer, I'm asking you to only narrow in  
23 on index cell 10, when you see a difference  
24 between what's reported as a saturated thickness  
25 and what the well log shows of over

1 cell 21. Does that sound --  
2 **A. Yes.**  
3 Q. -- correct where this monitoring well is?  
4 **A. Yes.**  
5 Q. I'd ask that you go to figure 10, tell me where  
6 on figure 10 index cell 21 is.  
7 **A. From north to south, it's in the middle, but**  
8 **from east to west, it's on the eastern edge.**  
9 Q. If we're trying to determine an index cell close  
10 to the middle of the area, the heart of the  
11 City's area, as you stated before, would you  
12 agree that this one's close to the middle of the  
13 heart of the area, as you perceive this?  
14 **A. Of the whole area on the map, yes; on the**  
15 **eastern edge of the central well field study**  
16 **area. But it is, yes, in this whole area, it's**  
17 **in the heart of it.**  
18 Q. Well, Mr. Letourneau, do you have an  
19 understanding of where the City's injection  
20 wells and recovery wells are?  
21 **A. Yes.**  
22 Q. Would you agree with me that there's a number of  
23 them situated right -- right in or around index  
24 cell 21?  
25 **A. Yes.**

Page 1577

1 Q. So at least from that standpoint, would you  
2 agree that that index cell is in the heart or  
3 the middle of what we're talking about here  
4 today?  
5 **A. Yes.**  
6 Q. Now let's turn to the well log, the well log  
7 shown on -- for index cell 21, IW21C, which is  
8 the City's official well log. We see again that  
9 topsoil starts at zero feet, we go all the way  
10 down to shale at 164 feet, and I could ask you  
11 to engage in a consideration of how many feet of  
12 sand and gravel there are, but if I were to tell  
13 you that we've calculated that number, and you  
14 can look at it, you can see if my number looks  
15 roughly correct, if I were to tell you there's a  
16 practical saturated thickness of roughly  
17 46 feet, would you agree, have reason to  
18 disagree with that number?  
19 **A. Let's see, 95 minus 40 is -- seems like there's**  
20 **a hair bit more than that there.**  
21 Q. Let me --  
22 **A. I think there's more.**  
23 Q. Just for graphical purposes, let's back up.  
24 Let's flip to page 22 of Exhibit 60 with the  
25 hydrographs, let's back up for a moment.

Page 1578

1 **A. Okay.**  
2 Q. As we look at the hydrographs, once again on  
3 this hydrograph, would you believe -- would you  
4 agree with me that the orange line corresponds  
5 with the approximate bedrock elevation where  
6 we're shown to hit bedrock on that well log  
7 shown in Exhibit 80?  
8 **A. Yes.**  
9 Q. And would you also agree with me that the number  
10 shown there, the red line, existing minimum  
11 index level is 1,363.04 feet, the minimum  
12 drought model elevation is 1,352.12 feet, and  
13 the proposed minimum index level would take it  
14 down to 1,342 feet, would you also agree that  
15 those are numbers taken from the City's  
16 modeling?  
17 **A. Yes.**  
18 Q. And so as we're trying to consider what is the  
19 available saturated thickness, what we're  
20 concerned with, and just so it's clear  
21 graphically and from a visual standpoint for  
22 everybody, all we're concerned about is the  
23 available saturated thickness below the blue  
24 line and below the green line; is that right?  
25 Because what we're considering here is the

Page 1579

1 available saturated thickness after we either  
2 model -- do this eight-year drought shown in the  
3 blue line or after we drop to the new proposed  
4 minimum index level, that's the saturated  
5 thickness we're concerned with, correct?  
6 **A. Well, I think wherever it's screened -- the**  
7 **saturated thickness where it's screened.**  
8 Q. Let me ask you this: If we were to look at  
9 figure 10 for index cell 21, the 154 feet of  
10 saturated thickness identified by the City in  
11 their modeling, that's the saturated thickness  
12 demon -- that they have demonstrated for that  
13 entire index cell after eight years of drought;  
14 is that right?  
15 **A. That's correct.**  
16 Q. So if we go back to the hydrograph and we look  
17 at that blue line, which is their modeled  
18 eight-year drought, the number, that 161 feet,  
19 we're considering the area that would be below  
20 that blue line, right, the --  
21 **A. Oh.**  
22 Q. -- remaining saturated thickness, that's my  
23 question?  
24 **A. Yes.**  
25 Q. And so for purposes of determining an actual

Page 1580

1 saturated thickness as it relates to this well  
2 log, we'd only be concerned of what the  
3 available -- or the practical saturated  
4 thickness would be below that blue line, if you  
5 will; is that correct?  
6 **A. I don't know why we'd only be concerned with**  
7 **that. I think we would be concerned with all of**  
8 **the saturated thickness.**  
9 Q. But if we're trying to compare apples to apples  
10 and we're trying to -- and we're analyzing in  
11 figure 10 the saturated thickness after we --  
12 after eight years of modeling and we're trying  
13 to compare it directly to the well log, wouldn't  
14 we be looking at a practical saturated thickness  
15 below the area that would be depicted by that  
16 blue line, which is the eight years of drought  
17 modeling?  
18 **A. Well, I pause there, David, because this -- this**  
19 **is an area that recharges, and so I think all of**  
20 **the saturated thickness is important, is my --**  
21 **is my reaction to that, not just what is below**  
22 **that particular line.**  
23 Q. Well, let me ask you --  
24 **A. I'm not -- I'm not trying to be difficult, I**  
25 **just --**

1 Q. If we were --  
2 **A. I just think all --**  
3 Q. I'll just ask it this way: If we're to apply --  
4 if I'm to ask you what is -- with respect to  
5 that well log for 21 -- for IW21C, if I ask you  
6 what is the practical saturated thickness  
7 below -- remaining after we model for an  
8 eight-year drought, and, again, to make it easy  
9 for you, the amount below that blue line, what  
10 is that practical saturated thickness?  
11 **A. Below the -- well, from 37 to 95 -- 37 feet to**  
12 **95 feet, it's some really good aquifer, it looks**  
13 **like. And then another 5 feet below that -- so**  
14 **it's about 60 feet is what I'm thinking. But --**  
15 **but the 60 feet starts at 37 feet.**  
16 Q. So you said about 50 feet of practical saturated  
17 thickness if we're looking at --  
18 **A. About 60. I think about 60. Okay. To be -- to**  
19 **be clear, from 37 to 95 is about 50 feet, okay,**  
20 **and then there's another --**  
21 Q. Let me -- let me pause you there,  
22 Mr. Letourneau.  
23 **A. Okay.**  
24 Q. At least where this blue line starts, that -- if  
25 we look at the difference of -- from zero feet

1 100 feet; is that right?  
2 **A. That's correct.**  
3 Q. The same question with respect to lowering the  
4 minimum index level, if we're to lower the  
5 minimum index level, would you have -- and we  
6 look at figure 11, based on the same exercise we  
7 did before, would you agree that the practical  
8 saturated thickness below the min -- the lowered  
9 minimum index level would be closer to 35 feet?  
10 **A. Correct.**  
11 Q. And so if we compare that 35 feet to what's  
12 shown on figure 11, which is 146 feet, there's a  
13 big difference, once again, between 146 feet and  
14 35 feet; is that right?  
15 **A. That's correct.**  
16 Q. So if we were to zero in only on index cell 21,  
17 a little 2-by-2-foot area, index cell 21 that's  
18 all we're focused on, we're not concerned with  
19 the rest of the aquifer, we're focused in on  
20 index cell 21, and you saw this difference of  
21 over 100 feet between the only monitoring well  
22 of the City and the modeled results of the City,  
23 would you have cause for concern?  
24 **A. Yes, yes, it raises a question, definitely.**  
25 Q. And, in fact, if we were only focused on index

1 to where that blue line is shown, that's a  
2 difference of 54 feet. Would you agree with me  
3 there?  
4 **A. I'd agree.**  
5 Q. So if we're considering the practical saturated  
6 thickness below that 54 feet, if you will, we're  
7 going to have to subtract out some of that area  
8 that you said was between that 37 and 95 feet,  
9 and the amount that you would have to subtract  
10 out would be the difference between 37 feet and  
11 54 feet; is that right?  
12 **A. Under your example, yes.**  
13 Q. And so my question is once we drop down to  
14 54 feet, which would be the City's modeled  
15 result, below that, would you agree with me that  
16 a reasonable number for the practical saturated  
17 thickness would be 46 feet at that point?  
18 **A. Yes.**  
19 Q. And would you also agree with me that there's a  
20 big difference between 46 feet of practical  
21 saturated thickness and the 154 feet of  
22 practical saturated thickness that's shown in  
23 the City's modeling for that entire index cell?  
24 **A. Yes.**  
25 Q. And once again, we have a difference of over

1 cell 21, would you have reason to go back to  
2 your modelers with the Division of Water  
3 Resources and ask that they look at this again?  
4 **A. Yes.**  
5 Q. And certainly we can continue with this exercise  
6 for a while, but for everyone's benefit I'll  
7 move on. But let me just ask you this now,  
8 we've looked at four index cells, we've looked  
9 at four index cells, two of them are right in  
10 the middle of the target area, if you will, and  
11 I will concede that two of them were also on the  
12 northern portion of the area that we've  
13 considered. But we've -- for our purposes  
14 today, we've looked at four out of the 38 index  
15 cells and we've looked at two of them shown  
16 within the central well field study area; is  
17 that right?  
18 **A. That's correct.**  
19 Q. And at least for the two within the central well  
20 field study area and the four in that -- in the  
21 entire area we've looked at, you had cause for  
22 concern with those four index cells; is that  
23 right?  
24 **A. It raises a question, yes.**  
25 Q. And if we're strictly looking at the fact that

Page 1585

1 this has 38 index cells, we've looked at over  
 2 10 percent of the index cells already, haven't  
 3 we?  
 4 **A. Yes.**  
 5 Q. And have we looked at enough of them at this  
 6 point, having looked at four of them and we see  
 7 such vast difference between the practical  
 8 saturated thickness and the reported or modeled  
 9 saturated thickness, does it at least give you  
 10 some cause for concern?  
 11 **A. Yes, it raises a question.**  
 12 Q. And at least at this juncture, does it cause you  
 13 to want to go back to the Division of Water  
 14 Resources' modelers and ask if they look at this  
 15 all again?  
 16 **MR. OLEEN:** Object to the form of  
 17 the question, what do you mean by all?  
 18 **BY MR. STUCKY:**  
 19 Q. Does it cause you to want to go back to the  
 20 modeling team that you identified earlier that  
 21 exists within the Division of Water Resources  
 22 and ask that they look at this particular issue  
 23 again?  
 24 **A. Yes.**  
 25 **MR. OLEEN:** Object to form of the

Page 1586

1 question, what do you mean by issue? Are  
 2 you limiting this to the four index cells  
 3 that you have specifically cherry-picked  
 4 and had the witness look at or the  
 5 entire -- all 38 index cells?  
 6 **BY MR. STUCKY:**  
 7 Q. I'm asking for all 38 index cells,  
 8 Mr. Letourneau. We've talked about four that  
 9 had drastic differences, are those four already,  
 10 in your mind, have they caused enough concern  
 11 that you would ask your modelers that work for  
 12 the Division of Water Resources to study again  
 13 whether or not these modeled saturated  
 14 thicknesses are accurate?  
 15 **A. I would go back and ask why the difference, yes.**  
 16 Q. For everybody's benefit, I'll move on to a  
 17 different line of questioning. Actually, I'll  
 18 just ask you a similar -- a similar question.  
 19 Earlier we talked about how we're talking --  
 20 that we're going to drop the minimum index  
 21 levels from anywhere from 9 -- from 9 feet to  
 22 23 feet; is that right?  
 23 **A. Correct.**  
 24 Q. I just bopped my colleague in the head, if you  
 25 noticed.

Page 1587

1 **A. I didn't.**  
 2 Q. Earlier we talked about how we're going to drop  
 3 from anywhere from 9 to 23 feet. When we're  
 4 talking about a practical saturated thickness  
 5 that is varied from anywhere from 21 -- from  
 6 30 feet, as you said, for index cell 1 up to  
 7 76 feet for index cell 10, does a drop of 9 to  
 8 23 feet now give you more concern?  
 9 **A. It -- well, that would be based on -- that drop**  
 10 **would be based on the total in that particular**  
 11 **index cell. If we were to lower it, we would do**  
 12 **it on a prorated basis of the practical**  
 13 **saturated thickness that we determined.**  
 14 Q. But at least based on these well logs, would  
 15 it -- would it make you want to at least  
 16 reevaluate the impacts of lowering the aquifer  
 17 minimum index level from 9 to 23 feet depending  
 18 on what index cell we're in?  
 19 **A. Yes.**  
 20 Q. And, in fact, if we look at table 2-11, for  
 21 example, and we look at index cell 1 at least,  
 22 you told me that the practical saturated  
 23 thickness was 30 feet, at least for that well  
 24 log in index cell 1; is that right?  
 25 **A. Correct.**

Page 1588

1 Q. Yet in index cell 1, they're proposing to lower  
 2 the minimum index level by over 23 feet; is that  
 3 true?  
 4 **A. That's true, but based on 131 feet of saturated**  
 5 **thickness.**  
 6 Q. Which is what -- and I acknowledge that's what  
 7 the City is modeling. But at least if we're  
 8 comparing the difference between what the actual  
 9 well log showed, which was you said a practical  
 10 saturated thickness of 30 feet, and dropping it  
 11 23 feet, if we at least compare that drop of  
 12 23 feet to the 30 feet per the actual well log,  
 13 would you agree that dropping that far could  
 14 cause a significant effect --  
 15 **A. Yes.**  
 16 Q. -- in that regard?  
 17 **A. Yes, based on those -- those amounts, yes.**  
 18 Q. And, in fact, we can continue with this exercise  
 19 for the index cells we've already talked about,  
 20 but at least with respect to the index cells  
 21 that we've talked about where the practical  
 22 saturated thickness was actually much, much less  
 23 than the modeled results, does dropping anywhere  
 24 from 9 to 23 feet give you some cause for  
 25 concern, at least, in those index cells?

1 **A. Yes.**

2 Q. And at least with respect to those index cells,  
3 would you like to revise your testimony that the  
4 drop in the minimum index level, at least with  
5 respect to those index cells, is not  
6 significant? In other words, let me ask you  
7 this: With respect to those four index cells,  
8 at least, would you agree that dropping the  
9 index level may be significant, at least with  
10 respect to those index cells and the effects  
11 that could have?

12 **A. It may be, it -- it's worth reviewing, yes.**

13 Q. And so before when you said dropping the index  
14 cells in the grand scheme of the saturated  
15 thickness of the aquifer doesn't seem that  
16 large, it doesn't seem that significant, at  
17 least for those four index cells, there is some  
18 significance; is that right?

19 **A. Yeah, there's additional data that we just  
20 brought forth, so yes.**

21 Q. So if you were only making a recommendation with  
22 respect to those four index cells, would the  
23 testimony that you provided in your deposition  
24 and also in your answers to our discovery  
25 requests, at least for those four index cells,

1 or not someone's going to complain about  
2 impairment if we drop below those 1993 levels,  
3 that's really not a good predictor, would you  
4 agree with me?

5 **A. I don't -- I don't know, I -- I don't know if I  
6 could say that's not a good predictor.**

7 Q. Well, in other words, if we drop below the 19 --  
8 if we drop the minimum index level below the  
9 1993 levels, it's very possible that individuals  
10 could complain about impairment; is that right?

11 **A. Yes, someone could.**

12 Q. With respect to the City's proposal, is the only  
13 way that impairment was addressed based on the  
14 conditions that would be imposed on the City?

15 **A. I don't -- can you help me with that?**

16 Q. Well, let me ask you this: Yesterday you heard  
17 Mr. Clement testify to one of the ways in which  
18 the City would deal with an impairment would be  
19 to help dig new wells if there are wells that  
20 were impaired; is that right?

21 **A. That's correct.**

22 Q. Do you believe, first of all, that it should be  
23 a permit condition for the City to be required  
24 to dig new wells in the event impairment occurs?

25 **A. Well, it depends on the type of impairment. If**

1 would your opinion change?

2 **A. It could, yes.**

3 Q. And if you were to engage in that same exercise  
4 as it related to all 38 index cells and you were  
5 to discover a vast difference between the  
6 practical saturated thickness shown in the  
7 actual well logs, the actual measured data,  
8 versus the modeled data, and you were to find a  
9 vast difference for all those index cells, would  
10 it give you more concern with the impacts of  
11 dropping the minimum index level?

12 **A. If there was the same type of effect, yes.**

13 Q. Earlier today, or maybe it was even yesterday, I  
14 guess I've been asking you questions for a  
15 while, you indicated that back in 1993 there  
16 were no complaints when that minimum index  
17 level -- when the water levels dropped to the  
18 current minimum index level; is that right?

19 **A. That's correct.**

20 Q. But just to clarify your answer in that regard,  
21 just because there were no complaints back in  
22 1993 doesn't mean there won't be complaints  
23 today; is that right?

24 **A. That's correct.**

25 Q. And so as far as a basis for determining whether

1 **it's quality, a new well won't work; but if it's  
2 quantity, it could be a new well or hooking up  
3 to the City's line.**

4 Q. When I asked Mr. Clement questions, he said,  
5 well, you know, we could dig, perhaps, an  
6 impaired domestic well another 23 feet down and,  
7 you know, we could solve the problem in that  
8 fashion. Do you recall that testimony?

9 **A. Yes. Yes, I do.**

10 Q. But what we've learned from looking at actual  
11 well log data and based on your years of  
12 experience as a geologist, would you agree that  
13 sometimes it's not as simple as just digging  
14 down another 23 feet?

15 **A. Yes, that's correct.**

16 Q. And, in fact, one could dig down another 23 feet  
17 and it's possible that you could be either in a  
18 clay layer or in an area that doesn't yield  
19 water; is that right?

20 **A. That -- that very well could be.**

21 Q. So the idea of simply just digging new wells,  
22 that may not always be a solution to address  
23 impairment; is that true?

24 **A. That's correct.**

25 Q. ASR Phase I and ASR Phase II both prohibit

Page 1593

1 withdrawal of recharge credits if the water  
 2 level is below the minimum index level in the  
 3 index cells, correct?  
 4 **A. Correct.**  
 5 Q. And the chief engineer also concluded in his  
 6 August 8, 2005 ASR initial order that the public  
 7 interest was protected if the recharge credits  
 8 could not be withdrawn when the water level was  
 9 below the currently established minimum index  
 10 levels, right?  
 11 **MR. OLEEN:** Objection, I think it  
 12 assumes facts in evidence, you're probably  
 13 correct, but if you're going to be reciting  
 14 orders, I'd prefer that you look at the  
 15 language.  
 16 **MR. STUCKY:** I'm trying to speed up  
 17 this hearing process just a little bit.  
 18 **PRESIDING OFFICER:** I know. I know.  
 19 **MR. STUCKY:** I can pull up the  
 20 orders and have him flip to that part, if  
 21 that would -- I was trying to save a little  
 22 time here.  
 23 **MR. OLEEN:** Yeah, and I don't want  
 24 the witness to be agreeing with you that  
 25 orders say things when he hasn't seen what

Page 1594

1 the orders say, unless he remembers.  
 2 **BY MR. STUCKY:**  
 3 Q. Mr. Letourneau, based on my question, do you  
 4 remember --  
 5 **A. I'd have to look at the order, David, yeah.**  
 6 Q. So off the top of your head, would you at least  
 7 agree that in ASR Phase I initial order and ASR  
 8 Phase II order, signed by the chief engineer,  
 9 that there was at least a condition established  
 10 that the City would not drop below the 1993  
 11 levels?  
 12 **MR. MCLEOD:** I'm going to ask  
 13 counsel to clarify, does he mean by  
 14 exercising the ASR rights, or is he  
 15 suggesting that the permits say that the  
 16 City can never allow a water level to drop  
 17 below the '93 level?  
 18 **PRESIDING OFFICER:** Where are the  
 19 permits in the record? I think -- I hate  
 20 to do that, but I think it'll solve the  
 21 objections if we're looking at the permit  
 22 language. Or the letter that you're  
 23 referring to.  
 24 **BY MR. STUCKY:**  
 25 Q. Let's start with Exhibit 26. I would ask -- I

Page 1595

1 would ask that you turn to requirement number 13  
 2 on Exhibit 26, on page 12 of 21 of that  
 3 document. In 13, does it indicate that the City  
 4 will not drop below a certain index level?  
 5 **A. It does.**  
 6 Q. So to repeat my question before, and this is  
 7 during operation of ASR Phase I to get to  
 8 Mr. McLeod's --  
 9 **MR. MCLEOD:** I'm going to object to  
 10 the form of the question and ask that that  
 11 paragraph just be read into the record  
 12 verbatim instead of counsel's  
 13 characterization.  
 14 **BY MR. STUCKY:**  
 15 Q. Please do that, Mr. Letourneau.  
 16 **A. Number 13, that if the project is operated so  
 17 that recharge credits cannot be withdrawn if the  
 18 static water level in the index well is below  
 19 the lowest index water level for that index  
 20 well, the public interest in not diverting Equus  
 21 Beds groundwater will be protected.**  
 22 Q. Tell me what was meant by that lowest index  
 23 level as it -- as it is defined in that order.  
 24 **A. It's the bottom of the basin storage area, and  
 25 below that, then, is considered Equus Beds**

Page 1596

1 **groundwater.**  
 2 Q. So is the minimum index level that's being  
 3 referred to there the 1993 level?  
 4 **A. Yes.**  
 5 Q. I would ask now that you flip to Exhibit 28 in  
 6 your notebook. I would ask that you look at  
 7 page 5 of that document, number 8, very last  
 8 sentence, and just to satisfy any objections,  
 9 please just read that last sentence into the  
 10 record.  
 11 **A. That recharge credits may be withdrawn from a  
 12 cell only when recharge credits are determined  
 13 to be available from the cell and the static  
 14 water level at its index well is above the  
 15 lowest index level; however, water may be  
 16 recharged when the static water level is below  
 17 the lowest index level in that well.**  
 18 Q. So in other words, if the water level is below  
 19 that lowest index level, the City can recharge,  
 20 but they can't withdraw water from below that  
 21 index level; is that right?  
 22 **A. That's correct.**  
 23 Q. And, again, in ASR Phase II, would you agree  
 24 with me that we're referring to the 1993 levels  
 25 as far as that index level; is that right?

1 **A. That's correct.**

2 Q. So it was already read into the record, at  
3 least, with respect to ASR Phase I, it was  
4 stated that it would be in the public interest  
5 not to allow the City to withdraw water below  
6 that minimum index cell?

7 **MR. MCLEOD:** I object to that  
8 question, I think that's a  
9 mischaracterization of what the order says.

10 **BY MR. STUCKY:**

11 Q. Let's read it again, it says, that if the  
12 project is operated so that recharge credits  
13 cannot be withdrawn if the static water level in  
14 index well is below the lowest index water level  
15 for that index well, comma, the public interest  
16 in not diverting Equus Beds groundwater will be  
17 protected. Is that what it states?

18 **A. Correct, below that level is Equus Beds  
19 groundwater.**

20 Q. So in other words, does it appear to be stating  
21 that by precluding the City --

22 **MR. MCLEOD:** I'm going to object  
23 again, I think that the condition speaks  
24 for itself, and trying to recharacterize it  
25 in other words and ask the witness to read

1 **that's trying to say.**

2 Q. I guess my question was did -- as it was  
3 contemplated, from your opinion, in that order,  
4 was the 1993 level picked as a bottom because at  
5 least at that time it was viewed as being in the  
6 public interest to pick that bottom at that  
7 time?

8 **A. That was the bottom. I think if the bottom  
9 would have been a 1980 level, that's what it  
10 would have been. So that was the bottom, that  
11 was the starting point, that was the bottom at  
12 the time.**

13 Q. And at least that phraseology in that order  
14 suggests that not dipping below that bottom,  
15 would you interpret it as stating that that  
16 would be in the public interest?

17 **A. At that time, yes.**

18 Q. And just to refresh since you're the expert  
19 witness for the Division of Water Resources,  
20 again, the Division of Water Resources hasn't  
21 done any specific analysis or modeling on water  
22 quality or minimum desirable streamflow, right?

23 **MR. OLEEN:** Objection, asked and  
24 answered.

25 **PRESIDING OFFICER:** Fair.

1 it is suggesting that if the condition is  
2 not as stated there, the public interest  
3 would not be protected, that's just not  
4 what the condition says. He's trying to  
5 imply a contrapositive that's not stated.

6 **PRESIDING OFFICER:** I think it's  
7 reasonable to inquire as to  
8 Mr. Letourneau's understanding of the  
9 condition.

10 **BY MR. STUCKY:**

11 Q. Mr. Letourneau, based on your understanding of  
12 that condition, at least when it was signed off  
13 on by the chief engineer with respect to ASR  
14 Phase I, do you believe it was the intent of  
15 that order to suggest that precluding the City  
16 to withdraw water with regard to its ASR  
17 facility below the 1993 levels would help to  
18 protect the public interest?

19 **A. Well, it -- that 1993 level is what set the  
20 index, minimum index level, and we didn't want  
21 some -- Wichita to take a recharge credit from  
22 below the in -- from the basin storage area.  
23 And so it's in the public interest that Wichita  
24 just pump their recharge credits from their  
25 space in the aquifer. I think that's what**

1 **MR. STUCKY:** I'll move on.

2 **BY MR. STUCKY:**

3 Q. With respect to this hearing, we've talked a lot  
4 about the -- how an AMC, an aquifer maintenance  
5 credit, would be accumulated and the fact that  
6 it leaves water in the aquifer. However, we've  
7 had very little discussion about the impacts  
8 that would occur when one actually withdraws  
9 that water from the aquifer. Would you agree  
10 that there's been less discussion of that  
11 aspect?

12 **A. Yes.**

13 Q. Let's turn to Exhibit 13 in the notebook before  
14 you. In that answer, at least -- in Exhibit 13,  
15 in the answer to interrogatory number 16, you  
16 indicate in your answer, at least, that after an  
17 AMC is accumulated, it states, and I'm going to  
18 quote, that any subsequent request by Wichita to  
19 cash in and withdraw any AMCs that might be  
20 accumulated would have to be applied for and  
21 approved by DWR, end quote. What is meant by  
22 applied for and approved by DWR with respect to  
23 cashing in an AMC credit?

24 **A. Well, an AMC credit is diverted under the  
25 authority of a permit, and so anything over and**

Page 1601

1 above -- they have the ability to divert 19,000  
 2 recharge credits right now, and anything over  
 3 and above 19,000 would take another application  
 4 and a permit, an approved permit.  
 5 Q. So I guess my question for you is this: At the  
 6 point at which one is cashing in and withdrawing  
 7 these credits, is it your position that it  
 8 should be looked at again by the chief engineer  
 9 and the Division of Water Resources?  
 10 A. **Not -- not over 19,000. If it's less than**  
 11 **19,000, they already have authority for that.**  
 12 MR. OLEEN: If I may, point of  
 13 clarification, Mr. Stucky?  
 14 MR. STUCKY: Sure.  
 15 MR. OLEEN: Are we looking at DWR's  
 16 response to GMD2's second set of  
 17 interrogatories number 16, the original  
 18 response or number 16, the amended  
 19 response?  
 20 MR. STUCKY: Number 16, the original  
 21 response.  
 22 MR. OLEEN: Why --  
 23 MR. STUCKY: The amended response  
 24 would be found in Exhibit 15.  
 25 MR. OLEEN: Why are we looking at

Page 1602

1 the original set instead of the amended?  
 2 **BY MR. STUCKY:**  
 3 Q. Okay. Let's go to Exhibit 15. It states in the  
 4 second-to-last sentence of that answer, it  
 5 states, if Wichita then wished to withdraw more  
 6 recharge credits, AMCs or physical, than the  
 7 current recharge-credit withdrawal limitation of  
 8 19 (sic) acre-feet, comma, then any such  
 9 additional withdrawals first would have to be  
 10 applied for and approved by DWR. So what we  
 11 have there is that same language, would have to  
 12 be applied for and approved by DWR, but the  
 13 difference is it's after that first 19,000  
 14 acre-feet is withdrawn, is that the answer now?  
 15 A. **Correct.**  
 16 Q. Okay.  
 17 A. **It was my answer before also, but my verbal.**  
 18 MR. OLEEN: Thank you.  
 19 **BY MR. STUCKY:**  
 20 Q. So is it your belief that this hearing, then, is  
 21 to also determine how not only the AMC credits  
 22 could be accumulated but also to determine the  
 23 circumstances under which they could be  
 24 withdrawn?  
 25 A. **Well, I mean, if you're talking about the**

Page 1603

1 **priority of withdrawal, that's something that**  
 2 **we'll discuss, yeah, that we're going to further**  
 3 **discuss. Is that what you mean?**  
 4 Q. I guess my question is so if we're talking about  
 5 the priority of the withdrawal and we're talking  
 6 about some of those specifics about how we would  
 7 withdraw an AMC credit in the future, you're  
 8 saying that some of that requires some further  
 9 discussion and determination?  
 10 A. **Yeah, right now, the City can withdraw their**  
 11 **recharge credits however they see fit, and we**  
 12 **don't have an approval of an AMC yet.**  
 13 Q. And so then let's say just hypothetically we do  
 14 have an approval of an AMC and a credit itself,  
 15 the accumulation of the credit itself, are you  
 16 saying that how to withdraw that credit should  
 17 be subject to a later hearing?  
 18 A. **No. I don't want another hearing ever. But,**  
 19 **no, I mean, it would -- in their proposal, we**  
 20 **did talk about pumping the 40,000 acre-feet**  
 21 **first and then the recharge credit second, so**  
 22 **that's on the table for discussion. And an AMC**  
 23 **would be a recharge credit. So if the City**  
 24 **agreed to pumping the 40,000 first and then the**  
 25 **AMC -- the recharge credit second, that's**

Page 1604

1 **something that we could lay out in a permit**  
 2 **condition.**  
 3 Q. Let me ask you this: At least with respect to  
 4 lowering the minimum index level and based on  
 5 some of that well log data we looked at, is it  
 6 now your belief that it may not be in the public  
 7 interest to lower that minimum index level?  
 8 A. **I can't say that until we review it more.**  
 9 Q. So in other words, whereas before when Mr. Oleen  
 10 was asking you questions, you thought that  
 11 lowering the minimum index level was in the  
 12 public interest, are you saying now that you  
 13 want to review this proposal further before you  
 14 make that determination?  
 15 A. **We will give that consideration, yes,**  
 16 **definitely.**  
 17 Q. Let's turn away from the concept of lowering  
 18 minimum index levels and let's move back to the  
 19 idea of attaching conditions to the withdrawal  
 20 of AMC credits. We talked about several  
 21 conditions already, so I'm not going to talk  
 22 about any of those conditions, but let's talk  
 23 about a few others. And, in fact, in  
 24 Exhibit 77, you already read a number of the  
 25 conditions that you've identified into the

1 record, so I'm not going to look back at those  
2 again. Is a potential condition if the City  
3 were to accumulate an aquifer maintenance credit  
4 and they're able -- while they accumulate that  
5 aquifer maintenance credit they're able to  
6 divert that water to the City and they're able  
7 to use it for municipal use, would you agree  
8 with me so far?

9 **A. So far.**

10 Q. But then later they're able to withdraw another  
11 gallon of water from the aquifer and use it in  
12 the form of a credit; is that right?

13 **A. Correct.**

14 Q. So my question is after they use that credit  
15 under the AMC proposal, do you believe that a  
16 viable condition would be that the City have to  
17 replace that gallon of water in the future?

18 **A. No, because they previously did not pump it.**

19 Q. Well, just a moment ago, you told me that to  
20 withdraw an AMC credit you would have to -- you  
21 would have to pump a gallon of water from the  
22 aquifer to cash in that credit, if you will?

23 **A. Correct. That's correct.**

24 Q. So in other words, if they've already used a  
25 gallon of water in the City and now they've

1 **authority of Health and Environment on the**  
2 **authority of Division of Water Resources. I**  
3 **don't know how those two would blend because**  
4 **they already are subject to Health and**  
5 **Environment, whether it's a permit condition of**  
6 **ours or not.**

7 Q. In your deposition on page 63, which is  
8 Exhibit 20, Mr. Lee Rolfs asked you in a  
9 question shown on line 8, so is DWR thinking  
10 about imposing conditions on any approval that  
11 they have to get appropriate KDHE, Kansas  
12 Department of Health and Environment, approval  
13 before they can forward -- they go forward --  
14 before they can go forward? Your answer was,  
15 that's a good thought, I mean, putting that  
16 condition in.

17 **A. You'll have to -- what page again?**

18 Q. Page 63.

19 **A. Oh, I'm sorry.**

20 Q. Starting on line 8, the question was asked if it  
21 would be good to put KDHE approval as one of the  
22 conditions?

23 **A. Yeah, it's a thought, I mean, but then after**  
24 **further thought, they already have -- KDHE**  
25 **already has authority without making it a DWR**

1 withdrawn a gallon of water from the aquifer, so  
2 we have 2 gallons now withdrawn used, one in the  
3 City, one withdrawn from the aquifer, would it  
4 be sensible, then, that the City would have to  
5 replace that gallon of water that was actually  
6 withdrawn from the aquifer when the AMC credit  
7 was cashed in?

8 **A. They're two different items, David, that's**  
9 **two -- two different things.**

10 Q. We'll come back to that.

11 **A. Okay.**

12 Q. With respect to another permit condition, during  
13 your deposition, I believe that your testimony  
14 was that this proposal of the City should be  
15 subject to KDHE approval. Is that something you  
16 stated in your deposition?

17 **A. I think it already is, yes.**

18 Q. So you're agreeing that should be a permit  
19 condition?

20 **A. You know, I don't know if it's appropriate to**  
21 **make that a water right permit condition because**  
22 **the City is already subject to Health and**  
23 **Environment standards, through -- through the**  
24 **authority of Health and Environment, so I don't**  
25 **understand why you would want to tie the**

1 **permit condition.**

2 Q. In fact, in the Phase II order, is there a  
3 permit condition that there has to be KDHE  
4 approval?

5 **A. You'll have to show it to me, I'm not --**

6 Q. Let's go back to Exhibit 28.

7 **A. I'm there.**

8 Q. And if we go to number 12, very last line, last  
9 clause, it says, that the plan should also be  
10 consistent with any requirements which KDHE may  
11 impose for any UIC permits KDHE may issue  
12 pertaining to the ASR wells. And in other  
13 words, number 12 is part of the permit  
14 conditions; is that right?

15 **A. That's correct.**

16 Q. So now going back to your deposition answer,  
17 when asked if that should be a potential permit  
18 condition, you indicated that's a good thought  
19 and you suggest that that could potentially be  
20 put in. As you're sitting here today, could  
21 that be a potential permit condition?

22 **A. It -- yeah, it could be a potential permit**  
23 **condition. I don't think it's necessary, but I**  
24 **think it could be.**

25 Q. In DWR Exhibit 1, there's a draft order in DWR

Page 1609

1 Exhibit 1. I would ask that you turn, it's the  
 2 second page of the proposed draft order, there's  
 3 that red line where it shows 660 feet. Have you  
 4 found that portion?  
 5 **A. Yes. Yes, I'm there.**  
 6 Q. And what we're referring to is to protect  
 7 existing domestic well owners located within  
 8 660 feet of an existing or new ASR well, it says  
 9 the City has agreed to test -- agreed that the  
 10 water quality should be preserved; is that  
 11 right?  
 12 **A. That's correct.**  
 13 Q. And also within that 660 feet, it's stated that  
 14 the City will protect against impairment; is  
 15 that right?  
 16 **A. Correct.**  
 17 Q. And that's actually shown in the next line which  
 18 is number 13; is that right?  
 19 **A. Well, there's -- there's quality impairment and**  
 20 **quantity impairment, yes.**  
 21 Q. So there's a difference -- so there's a  
 22 difference there. Now, when Mr. Pajor was on  
 23 the stand, and I can have you look again at  
 24 Exhibit 27, which was the MOU that -- well, I'll  
 25 have you -- let's go to Exhibit 27 just for your

Page 1610

1 benefit. And you would agree that Exhibit 27 is  
 2 the memorandum of understanding for ASR Phase  
 3 II?  
 4 **A. Yes. Yep, that's it.**  
 5 Q. With respect to the commitment shown under issue  
 6 number 5, would you agree with me, like  
 7 Mr. Pajor agreed with me, that at least with  
 8 respect to water quality we don't find that  
 9 660-foot requirement?  
 10 **A. I -- I agree.**  
 11 Q. And, in fact, at least in ASR Phase II, the  
 12 permit condition protects the water quality for  
 13 all well owners regardless of whether they're  
 14 within 660 feet; is that right?  
 15 **A. That's correct.**  
 16 Q. So I guess my question is in this proposed  
 17 order, why would we want to make it more  
 18 restrictive? Shouldn't we protect the water  
 19 quality for all well owners regardless of  
 20 whether they're within 660 feet and make it  
 21 consistent with ASR Phase II?  
 22 **A. Well, we could. I actually thought we just**  
 23 **carried over the standards from the MOU into the**  
 24 **draft order. And I just have to point out that**  
 25 **that is a draft order, and what you're talking**

Page 1611

1 **about is something that we could consider.**  
 2 Q. So making it consistent with the ASR Phase II  
 3 memorandum of understanding, you -- your  
 4 recommendation would be make -- your  
 5 recommendation is to make it consistent with  
 6 that MOU; is that right?  
 7 **A. That's right.**  
 8 **MR. OLEEN:** Objection, misstates the  
 9 witness's testimony.  
 10 **MR. STUCKY:** That's what he just  
 11 said.  
 12 **MR. OLEEN:** I made my objection.  
 13 **PRESIDING OFFICER:** That's what I  
 14 heard him say.  
 15 **BY MR. STUCKY:**  
 16 Q. We heard the City state that they could improve  
 17 their infrastructure, in other words, they could  
 18 at some point change their infrastructure so  
 19 they can divert water into the aquifer and pull  
 20 water out of the aquifer at the same time. Do  
 21 you recall that?  
 22 **A. Yes.**  
 23 Q. Do you believe it should be a permit condition  
 24 for the City to improve their infrastructure at  
 25 some point in the future?

Page 1612

1 **A. Well, can you ask that last part again, I'm**  
 2 **sorry?**  
 3 Q. I guess my question is when we're talking about  
 4 permit conditions for the City, do you think any  
 5 permit conditions should be focused on asking  
 6 the City to improve some of their existing  
 7 infrastructure?  
 8 **A. I don't think that ought to be a permit**  
 9 **condition.**  
 10 Q. Do you believe, and I think you already answered  
 11 this -- strike that, I'll move on.  
 12 We've talked a little bit about the  
 13 accounting methodology for -- under the City's  
 14 proposal; is that right?  
 15 **A. That's correct.**  
 16 Q. With respect to the accounting methodology, you  
 17 have stated that it's your viewpoint that there  
 18 should be no regulatory change that's required  
 19 to be made; is that right?  
 20 **A. You mean as far as to define an AMC or something**  
 21 **like that?**  
 22 Q. Yeah, to in other words effectuate the  
 23 accounting methodology for the AMC proposal,  
 24 your previous testimony was that you don't  
 25 believe there needs to be a regulatory change,

1 is that what you stated?  
2 **A. That was our legal counsel that believed that.**  
3 Q. Let's turn to Exhibit 22 and if you could turn  
4 with me to K.A.R. 5-12-2. It's on page 129,  
5 just to help you out.  
6 **A. I'm there.**  
7 Q. Would you agree with me that K.A.R. 5-12-2 deals  
8 with aquifer storage and recovery accounting?  
9 **A. Yes.**  
10 Q. Would you agree with me that this is the -- if  
11 you were analyzing the accounting methodology  
12 and how it's applied, this is the regulation you  
13 would look at within the Equus Beds district?  
14 **MR. OLEEN:** I object, I don't think  
15 the witness can draw legal conclusions, nor  
16 do I think he does ASR accounting, I don't  
17 think he's testified that he does ASR  
18 accounting.  
19 **A. I don't do the accounting.**  
20 **BY MR. STUCKY:**  
21 Q. Well, let me ask you this: Have you ever looked  
22 at this regulation before?  
23 **A. Yes.**  
24 Q. And I actually misspoke, it's a statewide  
25 regulation, have you looked at this regulation

1 **A. Okay.**  
2 Q. -- and the blue line has to do with the physical  
3 recharge accounting --  
4 **A. Okay.**  
5 Q. -- does that sound accurate?  
6 **A. Yes.**  
7 Q. And at least for 2015, Mr. McCormick testified  
8 that there was a variance of almost 1,000 feet  
9 between those two types of accounting  
10 methodologies; is that right?  
11 **A. That's correct.**  
12 Q. At least with respect to wetter years and for  
13 the years -- such as the year 2015, would you  
14 agree that there's variance, significant  
15 variance in the accounting methods?  
16 **A. Those lines are --**  
17 **MR. OLEEN:** I'm going to object  
18 again, I don't think this -- I think this  
19 witness said he doesn't do ASR accounting.  
20 And he can look at a graph, I guess, and  
21 confirm whether or not there's distance  
22 between two points, but I don't think he  
23 can go into any more detail than that.  
24 **PRESIDING OFFICER:** Can you rephrase  
25 what you're getting at --

1 before?  
2 **A. Yes.**  
3 Q. In your job, have you had the occasion to apply  
4 this regulation to anything that you've worked  
5 on?  
6 **A. No.**  
7 **MR. STUCKY:** I'll withdraw the line  
8 of questioning.  
9 **BY MR. STUCKY:**  
10 Q. Let's turn to figure 16 in the City's proposal  
11 found on page 4-6. Let me know when you're  
12 there.  
13 **A. I'm there.**  
14 Q. Mr. Letourneau, at least for the year 2015,  
15 Mr. McCormick -- well, let me back up and state  
16 that the two lines shown on figure 16 show a  
17 difference between the actual physical recharge  
18 under the existing accounting and the AMC  
19 accounting. Would you agree that that's what  
20 those two lines show?  
21 **A. Yeah, but you'll have to help me because my**  
22 **legend is cut off at the bottom, what is the**  
23 **green line and what is the blue line?**  
24 Q. If I were to tell you the green line has to do  
25 with the AMC accounting approach --

1 **MR. STUCKY:** Yes.  
2 **PRESIDING OFFICER:** -- without going  
3 into specifics?  
4 **BY MR. STUCKY:**  
5 Q. When we're looking at a difference of 1,000  
6 acre-feet between the ASR accounting with  
7 physical credits versus the AMC credits, when  
8 we're looking at a difference of 1,000  
9 acre-feet, in your mind, is that a significant  
10 difference?  
11 **A. In one year, yes. But these -- these lines are**  
12 **pretty close up until that one year.**  
13 Q. So, again, you're the witness for the Division  
14 of Water Resources and the expert that's been  
15 designated for this hearing, at least for the  
16 purpose of analyzing wetter years under the  
17 City's accounting methodology, would it be your  
18 recommendation that perhaps the City should do  
19 some more analysis of how they go about their  
20 accounting, at least in the wetter years?  
21 **A. Well, this has to do with no availability in the**  
22 **basin storage area. If it was -- if there was**  
23 **availability in the basin storage area for a**  
24 **physical recharge credit, then a very wet year,**  
25 **they could put in all of the physical recharge**

Page 1617

1 credits that were available. So the -- the  
 2 reason that this line is higher, in my opinion,  
 3 is because it is a wet year and there's no space  
 4 for the aquifer, they were able to accumulate  
 5 ASR -- AMC credit in a wet year.  
 6 Q. So you're saying, and we can come back and  
 7 address this point, you're saying in 2015 there  
 8 was no room for physical recharge of the  
 9 aquifer?  
 10 A. Other than in the basin storage -- I mean, in  
 11 the recharge basin.  
 12 Q. What was not -- I guess I'm unclear. What was  
 13 unavailable for recharge in the year 2015?  
 14 A. I don't believe there was any space available in  
 15 the basin storage area because the water table  
 16 was so high, in the index levels. The index  
 17 level was too high for a physical recharge  
 18 credit other than in the recharge basin. So I  
 19 believe that ...  
 20 Q. I'm going to ask you one more time to clarify.  
 21 I've asked colleagues to my left and to my right  
 22 if they understand what you're saying, and they  
 23 both tell me they don't. Can you just explain  
 24 to me what -- one more time what was available  
 25 for recharge in 2015 and what space was not

Page 1618

1 available for recharge?  
 2 A. Well, you understand the basin storage area, if  
 3 it's too high, there's no room for recharge  
 4 credits.  
 5 Q. Understood.  
 6 A. Okay. In 2015, I believe that the water table  
 7 was too high, so there wasn't space available to  
 8 do a physical recharge credit other than the  
 9 recharge basin that does not have that -- that  
 10 upper level restriction.  
 11 Q. Is part of the reason there's variance between  
 12 the actual physical recharge accounting method  
 13 and the AMC accounting method in wetter years  
 14 because there's more leakage from the aquifer in  
 15 wetter years?  
 16 A. Maybe, yes, that could be. And -- and depending  
 17 where the recharge credits are. If -- it's my  
 18 understanding if you put in the recharge credits  
 19 in the basin -- in the recharge basin, then  
 20 there's about 50 percent of that leaks out of  
 21 the account.  
 22 Q. And we'll come back to whether there was  
 23 recharge in 2015, but assuming we're able to  
 24 demonstrate that there was, in fact, recharge in  
 25 the year 2015 and we see this large variance

Page 1619

1 between the AMC accounting and the actual  
 2 physical recharge accounting, at least in wetter  
 3 years like 2015, do you believe that there's  
 4 enough variance between the two accounting  
 5 methodologies that at least for wetter years it  
 6 requires further discussion with the City?  
 7 A. Your question -- we can consider it, it's worth  
 8 asking about, definitely.  
 9 Q. Now I'd like to get a little more into the heart  
 10 of the matter before us here today. Before we  
 11 do that, I would like to walk through just a few  
 12 of the regulations that you would be applying as  
 13 you analyze an aquifer maintenance credit.  
 14 Let's start there.  
 15 MR. OLEEN: I'm sorry, I don't mean  
 16 to interrupt Mr. Stucky, I don't know  
 17 exactly what our time limitations are, I  
 18 wonder if this is a good time to stop  
 19 before going down a certain new route of  
 20 questioning?  
 21 PRESIDING OFFICER: We have five  
 22 minutes, the church wants us to leave at  
 23 3:00 o'clock.  
 24 MR. STUCKY: I was just asking  
 25 questions, I can --

Page 1620

1 PRESIDING OFFICER: You've got until  
 2 3:00 o'clock so --  
 3 MR. STUCKY: I can be done for the  
 4 day, I mean, that's fine, it's --  
 5 PRESIDING OFFICER: Just whatever  
 6 makes sense. If -- I leave that up to you.  
 7 MR. STUCKY: May I approach the  
 8 witness?  
 9 PRESIDING OFFICER: Yes.  
 10 BY MR. STUCKY:  
 11 Q. Once again, I'm going to hand the witness my  
 12 learned colleague's phone. This -- what's shown  
 13 on the phone, on Mr. Boese's phone is the  
 14 recharge that actually occurred in 2015.  
 15 MR. MCLEOD: Is counsel asking a  
 16 question --  
 17 MR. STUCKY: I am.  
 18 MR. MCLEOD: -- or is he testifying?  
 19 BY MR. STUCKY:  
 20 Q. If I were to tell you that the recharge that  
 21 occurred in 2015 was north of 1800 acre-feet,  
 22 would you have reason to disagree with that  
 23 number?  
 24 A. No, I wouldn't.  
 25 Q. So to correct our record, would you agree, at

1 least, that in 2015 there was physical recharge  
 2 of the aquifer by the City?  
 3 **A. Yeah, is that per well or index cell?**  
 4 Q. Well, let's actually -- you know, we have it  
 5 right in front of us, let's go to table 4-2  
 6 that's already before you. And clean up this  
 7 point with the City's data.  
 8 **A. Oh, okay.**  
 9 Q. Let's look at 2015 and it shows acre-feet of  
 10 actual physical recharge total in 2015, what is  
 11 that number?  
 12 **A. It's almost 1800 acre-feet.**  
 13 Q. It's 1,890.4 acre-feet; is that right?  
 14 **A. Oh, yes. I was in the wrong column.**  
 15 Q. So in other words, we had a total recharge of  
 16 almost 1900 --  
 17 **A. That's right.**  
 18 Q. -- acre-feet in 2015; is that right?  
 19 **A. That's correct.**  
 20 **MR. STUCKY:** Having clarified and  
 21 cleaned up that question, I note that it's  
 22 one minute till 3:00 o'clock, and I'm about  
 23 to delve into another significant line of  
 24 questioning, should we call it a day?  
 25 **PRESIDING OFFICER:** I think so.

1 Thank you, everyone. We will resume on  
 2 March 2nd, and I will send out another  
 3 notice with those details. But thank you,  
 4 everyone, that closes the hearing for today  
 5 but does not end the hearing or close the  
 6 record.  
 7 (Whereupon, the proceedings were  
 8 adjourned at 5:00 p.m.)  
 9

**PRESIDING OFFICER:** Okay. We are  
now on the record. It is 8:30 in the  
morning on March 2nd, 2020. This is the  
continuation of an administrative hearing  
and the title of which is In the Matter of  
the City of Wichita's Phase II Aquifer  
Storage and Recovery Project in Harvey and  
Sedgwick Counties, Kansas, Case  
Number 18 WATER 14014.  
My name is Constance C. Owen, and I'm  
serving as presiding officer. And we are  
continuing to conduct business at the First  
Mennonite Church of Halstead.  
And I believe that we were in  
cross-examination with Lane Letourneau. So  
we'll proceed with that. Mr. --  
**MR. OLEEN:** Ms. Owen --  
**PRESIDING OFFICER:** Pardon me.  
**MR. OLEEN:** -- if I may, I neglected  
to introduce my colleague for the record  
over these past proceedings, and if I could  
announce their appearances for your  
benefit, if I may.  
**PRESIDING OFFICER:** Please do.  
**MR. OLEEN:** This is my colleague

1 Stephanie Murray, she's also a staff  
2 attorney with the KDA, Division of Water  
3 Resources. She's been here throughout  
4 these proceedings. I actually don't recall  
5 whether she has submitted an official  
6 written entry of appearance, but she will  
7 do so promptly, if that hasn't already been  
8 done.  
9 **PRESIDING OFFICER:** I've considered  
10 Stephanie a part of the team all along, so  
11 thank you very much.  
12 Any other preliminaries before we start?  
13 Okay, great. Mr. Stucky.  
14  
15 CROSS-EXAMINATION (Cont.)  
16 **BY MR. STUCKY:**  
17 Q. Good morning --  
18 **A. Good morning.**  
19 Q. -- Mr. Letourneau.  
20 **A. Good morning.**  
21 Q. Last time when we were here, I think we were  
22 discussing the concept of the accounting, and we  
23 were beginning our discussion with respect to  
24 the accounting. And I believe that we had  
25 mentioned a letter from the chief engineer where

1 **A. Yeah, the accounting method of counting a**  
2 **recharge credit wouldn't change. An aquifer**  
3 **maintenance credit is a recharge credit. So the**  
4 **AMC is a different name for a recharge credit,**  
5 **but there's still accounting for a recharge**  
6 **credit. I think that's what we meant by that**  
7 **answer.**  
8 Q. So just to clarify, in the City's proposal, as  
9 distinguished from an ASR II credit, does the  
10 accounting method for the AMC credits change,  
11 are we -- is the City proposing a new type of  
12 accounting?  
13 **A. I don't think we're -- I don't think the City is**  
14 **proposing a new type of accounting, but they are**  
15 **proposing a new type of recharge credit.**  
16 Q. Okay. I'd ask that you now turn to Exhibit 26,  
17 it's going to be in Volume II of the notebook in  
18 front of you.  
19 **A. 26?**  
20 Q. Yeah, Exhibit 26, please. If you're on  
21 Exhibit 26, I'd ask that you turn to page 11 on  
22 Exhibit 26. And specifically, once again, just  
23 so we're clear for the record, would you agree  
24 that Exhibit 26 is the August 8th, 2005 ASR  
25 Phase I initial order?

1 he had indicated that a different -- that the  
2 AMC credits could be utilized, that there would  
3 be a different form of accounting essentially  
4 that would be used. Do you recall a discussion  
5 about that last time?  
6 **A. Yes.**  
7 Q. So just so I -- just so I'm clear, is it your  
8 view that aquifer maintenance credits are  
9 simply, quote, just a different form of  
10 accounting, end quote?  
11 **A. Yes.**  
12 Q. I'd ask that you now turn to Exhibit 11 in the  
13 white notebook of Volume I. I'd ask that you  
14 turn to page 7 of Exhibit 11, it's question  
15 number 10.  
16 **A. Okay.**  
17 Q. In question number 10, it says, please explain  
18 in detail the accounting method that will be  
19 used to determine water entering and leaving the  
20 aquifer with the AMC proposal. The answer was,  
21 it is DWR's understanding that under the AMC  
22 proposal, the accounting method would not  
23 change, end quote. Do you know what is meant by  
24 the phrase, the accounting method would not  
25 change, as it's used in that answer?

1 **A. Yes.**  
2 Q. And number -- number 3 on page 11, could you  
3 read that for the record?  
4 **A. That passive recharge credits should not be**  
5 **allowed because they are not, quote,**  
6 **artificial - just a second - because they are**  
7 **not, quote, artificial recharge as defined in**  
8 **K.A.R. 5-1-1 because no source water is being**  
9 **artificially recharged to create those credits.**  
10 Q. So at least as it related to the ASR Phase I  
11 order, the idea was that source water had to be  
12 physically injected into the aquifers, was that  
13 the concept of ASR Phase I?  
14 **A. Yes.**  
15 Q. And, in fact, as the statement implies, if the  
16 source water wasn't injected into the aquifer,  
17 that was going to be considered a passive  
18 recharge credit; is that true?  
19 **A. That's correct.**  
20 Q. And also as used in number 3, would you agree  
21 that the term recharged and -- that's used in  
22 the context of water being put into the aquifer  
23 for storage, would you agree that's the context  
24 it's used?  
25 **A. Yes, in number 3 it is, correct.**

Page 1632

1 Q. So at least as of the Phase I order as implied  
 2 in number 3, passive recharge credits were not  
 3 allowed; is that true?  
 4 **MR. OLEEN:** Objection, I think he's  
 5 calling for a legal conclusion.  
 6 **PRESIDING OFFICER:** Well, I think  
 7 that's what the exhibit just said but let's  
 8 see where you're going with this,  
 9 Mr. Stucky.  
 10 **MR. STUCKY:** I think he's familiar  
 11 with this order and he can answer the  
 12 question.  
 13 **BY MR. STUCKY:**  
 14 Q. Based on your familiarity with this order and  
 15 your understanding of the history of ASR Phase I  
 16 and ASR Phase II, and also as it's stated in  
 17 number 3, would you agree with me that at least  
 18 as of the ASR Phase I order, passive recharge  
 19 credits were not allowed?  
 20 **A. That's correct. And we -- and, sorry, David,**  
 21 **but we agree that passive recharge credits**  
 22 **should still not be allowed so ...**  
 23 Q. Now, is it also true that the term passive  
 24 recharge credits is not defined in statute or  
 25 regulation?

Page 1633

1 **A. That's -- not that I'm aware of.**  
 2 Q. And so part of the definition for passive  
 3 recharge credits is actually obtained from the  
 4 ASR Phase I and Phase II orders. Is that a true  
 5 statement?  
 6 **A. That's correct.**  
 7 Q. I would ask that you now turn to Exhibit 28,  
 8 also in the same notebook. Actually, strike  
 9 that, let's move back to Exhibit 26. If you  
 10 could go to finding number 10 in Exhibit 26 in  
 11 that ASR Phase I initial order.  
 12 **A. Okay.**  
 13 Q. Okay. Let's go to 10b of -- on, it says page 2  
 14 of 11 at the top of that page. At the bottom is  
 15 10b, though, could you read 10b for the record?  
 16 **A. I don't -- you might have to help me, I don't**  
 17 **know what --**  
 18 **MR. STUCKY:** May I approach the  
 19 witness?  
 20 **PRESIDING OFFICER:** Yes.  
 21 **A. Yeah. I've got the -- I'm in 26. Oh, okay.**  
 22 **Okay. 10b?**  
 23 **BY MR. STUCKY:**  
 24 Q. Yes, could you read 10b for the record?  
 25 **A. Will the City be considered to be recharging**

Page 1634

1 **water into the Equus Beds by the concept of**  
 2 **passive recharge, water which the City could**  
 3 **have legally pumped but did not?**  
 4 Q. So in other words, at least as it's used in this  
 5 phrase, the concept of passive recharge credits  
 6 is defined as, quote, water which the City could  
 7 have legally pumped but did not pump, end quote.  
 8 Is that a true statement?  
 9 **A. That's true.**  
 10 Q. So in other words, the idea that the City could  
 11 have diverted water out of the aquifer but chose  
 12 not to, that was considered a passive recharge  
 13 credit, at least at the time of this ASR Phase I  
 14 order. Is that a true statement?  
 15 **A. That's true.**  
 16 Q. Now I'd ask that you turn to finding number 42  
 17 and that's on page 9 out of 21. Could you read  
 18 finding number 42? At the very top, it says  
 19 9 -- page 9 out of 21, if you're on that page.  
 20 **A. I'm there. Item number 42, the final amended**  
 21 **MOU between the City and GMD did not contain an**  
 22 **agreement or recommendation concerning the**  
 23 **City's request for passive recharge credits,**  
 24 **credits for not pumping City wells in the basin**  
 25 **storage area, and deferred the matter to the**

Page 1635

1 **chief engineer.**  
 2 Q. So -- and I'm going to focus on the middle of  
 3 that particular sentence, what it states is  
 4 passive recharge credits, paren, and then it  
 5 says, credits for pumping City wells in the  
 6 basin storage area, and then we see another  
 7 paren. So in other words, again, passive  
 8 recharge credits, at least as it's shown with  
 9 the parentheses here, was -- passive recharge  
 10 credits were defined as credits for not pumping  
 11 the City wells in the basin storage area. Is  
 12 that how it was defined there?  
 13 **A. That's how 42 reads.**  
 14 Q. Now I'd ask that you turn to ASR Phase II order,  
 15 which is found in Exhibit 28. If you could turn  
 16 with me to page 5. If you could read for me  
 17 what's stated as numerical -- number 2 in the  
 18 order for the -- could you read that for the  
 19 record?  
 20 **A. That passive recharge credits shall not be**  
 21 **allowed.**  
 22 Q. So in other words, when the ASR Phase II order  
 23 was adopted by the chief engineer, at that time  
 24 as well, the idea of passive recharge credits  
 25 also were not allowed; is that right?

1 **A. That's correct.**  
 2 Q. Do you have any reason to believe that the  
 3 definition of passive recharge credits would  
 4 have changed between ASR Phase I order and ASR  
 5 Phase II order?  
 6 **A. No.**  
 7 Q. So in other words, once again, in ASR Phase II  
 8 order, passive recharge credits would have been  
 9 defined as essentially water left in the aquifer  
 10 that the City could have pumped but chose not  
 11 to. Is that a true statement?  
 12 **A. Yes, I mean, that -- that's true.**  
 13 Q. So -- and I think you already indicated that at  
 14 least at this point -- well, and in general, I  
 15 think you told me that it's the Division of  
 16 Water Resources' position that passive recharge  
 17 credits should not be allowed. Is that a true  
 18 statement?  
 19 **A. That's correct.**  
 20 Q. As far as the definition of passive recharge  
 21 credits goes, is it still DWR's official  
 22 position that passive recharge credits should be  
 23 defined as they are defined in ASR Phase I  
 24 order?  
 25 **MR. OLEEN:** Objection, I think

1 misstates the witness's testimony.  
 2 **MR. STUCKY:** I'm asking a question.  
 3 **MR. OLEEN:** Well, but you said isn't  
 4 it true that it's DWR's opinion that the  
 5 definition of passive recharge credits is  
 6 as it is in the -- in these orders, and  
 7 where is DWR's official position? Perhaps  
 8 if you could rephrase, I would withdraw my  
 9 objection, perhaps I misheard.  
 10 **PRESIDING OFFICER:** I think I  
 11 understand what you're asking but try  
 12 again.  
 13 **BY MR. STUCKY:**  
 14 Q. Okay. Let's -- let's back up again. In the ASR  
 15 Phase I order, we have a definition of passive  
 16 recharge credits; is that true?  
 17 **A. Well, it doesn't say passive recharge credits**  
 18 **are defined as.**  
 19 Q. But at least there's an implication of what  
 20 passive recharge credits mean in ASR Phase I  
 21 order; is that true?  
 22 **A. Yes.**  
 23 Q. And my question is at this point does the  
 24 Division of Water Resources still agree with the  
 25 definition or the implied definition of passive

1 recharge credits in ASR Phase I order?  
 2 **A. Yes.**  
 3 Q. Now, I'd ask that you turn to, in your black  
 4 notebook before you, it's the City's black  
 5 notebook, to the proposal document. As you're  
 6 looking, getting to the proposal document, based  
 7 on the prior discussion we had, just on a  
 8 surface level, would you agree with me that the  
 9 City is proposing to receive aquifer maintenance  
 10 credits by offsetting pumping of the City's  
 11 existing groundwater rights in the Equus Beds  
 12 Aquifer with surface water diverted from the  
 13 Little Arkansas River, treated, and sent to the  
 14 City for municipal use? In a nutshell, would  
 15 you agree that's the City's proposal?  
 16 **A. Yes.**  
 17 Q. Now I'd ask that you turn to page 1-2 of the  
 18 City's proposal. Let me know when you're on  
 19 that page.  
 20 **A. I'm -- I'm there.**  
 21 Q. On the very bottom of that page, two sentences  
 22 up from the bottom of that page, there's a  
 23 sentence that begins, the water left in storage.  
 24 Can you read that sentence for the record?  
 25 **A. The water left in storage as a result of**

1 **utilizing Little Arkansas River flows rather**  
 2 **than groundwater from the Equus Beds well field**  
 3 **would be considered as an ASR aquifer**  
 4 **maintenance credit, AMC, with similar**  
 5 **characteristics to the current ASR recharge**  
 6 **credits.**  
 7 Q. So in other words, at least as is suggested in  
 8 this sentence, the concept of an aquifer  
 9 maintenance credit is accumulated or created  
 10 based on the water left in storage. Is that a  
 11 true statement?  
 12 **A. Well, it's -- it's water left in storage, but**  
 13 **it's water taken from the Little Ark River. I**  
 14 **mean, Little Ark River water has to be available**  
 15 **to -- available and treated before it becomes an**  
 16 **AMC.**  
 17 Q. Correct. So for each gallon of water that is  
 18 taken from the Little Arkansas River and treated  
 19 and sent to the City, essentially there would be  
 20 credit given for another gallon essentially for  
 21 an aquifer maintenance credit because water is  
 22 being left in storage. Is that what this  
 23 sentence is implying?  
 24 **A. Correct, if -- if there's no space in the**  
 25 **aquifer to accumulate a physical recharge**

Page 1640

1 **credit, then the City, under this proposal,**  
 2 **would get an aquifer maintenance credit.**  
 3 Q. I now ask that you turn to page 3-1 of the  
 4 City's proposal document.  
 5 **PRESIDING OFFICER:** I'm sorry,  
 6 where'd you turn?  
 7 **MR. STUCKY:** Page 3-1.  
 8 **PRESIDING OFFICER:** Thank you.  
 9 **BY MR. STUCKY:**  
 10 Q. On page 3-1, there's also a sentence that's two  
 11 sentences from the bottom, could you read that  
 12 aloud for the record?  
 13 **A. The water left in storage because of utilizing**  
 14 **Little Arkansas River flows rather than**  
 15 **groundwater from the Equus Beds well field would**  
 16 **be considered an ASR aquifer maintenance credit,**  
 17 **AMC, with similar characteristics to the current**  
 18 **ASR recharge credits.**  
 19 Q. So same implication here, correct?  
 20 **A. Correct.**  
 21 Q. In other words, if water is diverted from the  
 22 Little Arkansas River and the City chooses to  
 23 leave water in the aquifer, they're going to get  
 24 a credit. Is that essentially what this is  
 25 saying?

Page 1641

1 **A. That's correct.**  
 2 Q. So with respect to this concept of passive  
 3 recharge credits, based on the fact that the  
 4 City is seeking credit for not pumping out of  
 5 the aquifer; is that true?  
 6 **A. Yes, I mean, they want to keep the water levels**  
 7 **up so they're not pumping from the aquifer.**  
 8 Q. So based on the fact that they're seeking this  
 9 credit for not pumping water out of the aquifer,  
 10 wouldn't that be similar to the passive recharge  
 11 credit that's prohibited in ASR Phase I and  
 12 Phase II orders?  
 13 **A. We -- we saw a definite difference in the**  
 14 **passive recharge credit that was in the old**  
 15 **orders and the new aquifer maintenance credit**  
 16 **under this proposal, we saw a difference in that**  
 17 **because of the Little Arkansas diversion, the**  
 18 **infrastructure and things, so that's where we**  
 19 **saw the difference. There is similarity,**  
 20 **though, where the water is not pumped from the**  
 21 **aquifer, we can -- we fully agree with that.**  
 22 Q. Well, let me ask it this way: The City is  
 23 seeking credit for not pumping water from the  
 24 aquifer and leaving that water in storage under  
 25 the AMC proposal; is that true?

Page 1642

1 **A. That's true, we call that management, management**  
 2 **of the groundwater.**  
 3 Q. But just to be clear, if the City wanted to  
 4 choose that water, they have a legal right to  
 5 pump that water; is that true?  
 6 **A. Absolutely.**  
 7 Q. So backing up, then, to the ASR Phase I  
 8 definition of a passive recharge credit, we  
 9 agreed that definition was water which the City  
 10 could have legally pumped but did not pump, end  
 11 quote. So based on that definition, can you  
 12 explain again for the record how an aquifer  
 13 maintenance credit is different from that  
 14 definition of what's prohibited in a passive  
 15 recharge credit?  
 16 **A. Well, at the time of that order, the passive**  
 17 **recharge credits were talking about using water**  
 18 **from Cheney. It was -- Phase II wasn't even**  
 19 **there, they -- it was -- the talk was using**  
 20 **water from Cheney and not pumping the aquifer,**  
 21 **and so that's what we considered a passive**  
 22 **recharge credit at that time.**  
 23 Q. Now, Mr. Letourneau, I understand that there  
 24 might have been discussions about Cheney  
 25 Reservoir at the time of the ASR Phase I and

Page 1643

1 Phase II order, but would you at least agree  
 2 with me if you were to flip through the ASR  
 3 Phase I and Phase II order, we won't find any  
 4 mention of Cheney Reservoir as far as in the  
 5 context of a passive recharge credit? Is that a  
 6 true statement?  
 7 **A. That's true.**  
 8 Q. Now, let me back up. At least initially, when  
 9 the City first came to you with a concept of an  
 10 aquifer maintenance credit, there was concern  
 11 among DWR staff that these -- that these aquifer  
 12 maintenance credits were passive recharge  
 13 credits; is that true?  
 14 **A. Sure. I mean, we looked at it, I mean,**  
 15 **definitely, to -- we -- yeah, I mean, in the**  
 16 **very beginning -- in the very beginning of the**  
 17 **discussion, we fully questioned it.**  
 18 Q. And, in fact, in your deposition, you stated the  
 19 same thing, that at least initially there was  
 20 quite a bit of concern that passive -- that  
 21 aquifer maintenance credits were, in fact, just  
 22 passive recharge credits, is that what you  
 23 stated in your deposition?  
 24 **A. Could be, yeah.**  
 25 Q. And I think you also said in your deposition

1 that at least initially it was the Division of  
2 Water Resources' position that these aquifer  
3 maintenance credits should not be allowed  
4 because they were being considered passive  
5 recharge credits. Is that also a true  
6 statement?

7 **A. Yes.**

8 Q. But then later, I think you also indicate in  
9 your deposition that more consideration was  
10 given to the concept, and at some point the  
11 Division of Water Resources changed their  
12 opinion, official opinion with regard to whether  
13 or not aquifer maintenance credits were passive  
14 recharge credits. Is that also true?

15 **A. Yeah, we did change our opinion, I mean, when --**  
16 **when we saw the validity of the infrastructure,**  
17 **managing the aquifer full, that we felt it**  
18 **appropriate to move forward with the concept of**  
19 **aquifer maintenance credits.**

20 Q. In your deposition, you mentioned that there  
21 were several individuals with the Division of  
22 Water Resources that were concerned that aquifer  
23 maintenance credits were just nothing more than  
24 passive recharge credits. Is that also  
25 something you state in your deposition?

1 **A. I'd like -- I'd have to trust you that my -- I**  
2 **don't have my deposition in front of me, but I**  
3 **trust you, David, that that's what I said.**

4 Q. Well, I'll ask you, then, for the record,  
5 initially, did the Division of -- were there  
6 several individuals among the Division of Water  
7 Resources that had concern that aquifer  
8 maintenance credits were, in fact, passive  
9 recharge credits?

10 **A. I don't know if we -- if the concern was AMCs**  
11 **were passive recharge credits, but there was**  
12 **concern about accumulating these credits this**  
13 **way without us -- without us fully reviewing it,**  
14 **reviewing the proposal. But, yeah, when it**  
15 **first came to us, yeah, there was several of us**  
16 **that said we need to take a long, hard look at**  
17 **this.**

18 Q. So tell me, then, what conversations occurred or  
19 what tipped the balance, if you will, in favor  
20 of believing that these were not, in fact,  
21 passive recharge credits?

22 **A. Well, I -- I don't remember the specific**  
23 **conversation, but I know about how the Division**  
24 **felt about it. And, again, I've got to go back**  
25 **to the water is available, high flows in the**

1 **Little Ark, it's diverted from -- it's diverted**  
2 **with the A -- the ASR diversion works, the**  
3 **surface water is treated just as if it would**  
4 **become a physical recharge credit, there's no**  
5 **space in the aquifer for the recharge credit**  
6 **because if it was it would be put into the**  
7 **aquifer; but because space is not there, it's**  
8 **taken to town and they get a credit for it.**  
9 **That -- that was the tipping point for us was**  
10 **the infrastructure.**

11 Q. So in other words, and I'm going to make sure I  
12 understand what you mean by infrastructure, the  
13 idea that the water could be treated, is that  
14 what you mean by infrastructure?

15 **A. Could be treated and injected into the --**  
16 **everything is the same as far as ASR, everything**  
17 **from the start is -- high flows from the river,**  
18 **treated as if it's going to be injected into the**  
19 **aquifer, but then it's -- there's no space there**  
20 **for it, so we didn't -- we felt it appropriate**  
21 **not to make the City pump the space just to**  
22 **replace it.**

23 Q. So just so I'm clear what you're saying here,  
24 though, if we take overflow water from the  
25 Little Arkansas River and it's treated, it

1 would, under the AMC proposal, it would be sent  
2 directly to the City for municipal use; is that  
3 right?

4 **A. From -- from the T at the ASR facility. I mean,**  
5 **it goes -- it goes to a spot to see if there's**  
6 **space in the aquifer; if there is no space, then**  
7 **it's sent directly to the City, that's correct.**

8 Q. So at least with respect to that water, that  
9 source water that's sent directly to the City,  
10 that source water isn't physically injected into  
11 the aquifer, correct?

12 **A. That's correct.**

13 Q. And that source water isn't stored in the  
14 aquifer; is that correct?

15 **A. That's correct.**

16 **MR. OLEEN:** Objection, he's calling  
17 for a legal conclusion because that  
18 phraseology comes from the statute.  
19 Actually the regulation.

20 **PRESIDING OFFICER:** I'm confused.

21 **MR. OLEEN:** Okay.

22 **MR. STUCKY:** I'll -- I can get to  
23 those regulations in a minute.

24 **PRESIDING OFFICER:** Okay.

25 **MR. OLEEN:** Yeah, he -- the phrase

Page 1648

1 "is stored" is in a particular regulation;  
 2 the cite I don't have right with me right  
 3 now, I can get it. But I object to him  
 4 asking this witness what that word means, I  
 5 think it's something that lawyers should  
 6 argue about. I'll get the regulation if  
 7 you prefer.  
 8 **PRESIDING OFFICER:** Can you try  
 9 again?  
 10 **MR. STUCKY:** Yes.  
 11 **BY MR. STUCKY:**  
 12 Q. The water that's taken from the Little Arkansas  
 13 River and used in the -- at the City source for  
 14 municipal use, that water isn't actually placed  
 15 in the aquifer; is that true?  
 16 **A. It's not placed in the basin storage area.**  
 17 Q. And whether I use the term stored or contained  
 18 in the aquifer, whichever terminology will  
 19 suffice at this point in the hearing, you would  
 20 agree that that water is neither contained nor  
 21 stored in the aquifer; is that true?  
 22 **A. That's -- that's correct.**  
 23 Q. Back when we were here a few weeks ago, there  
 24 was a discussion with Mr. McCormick about water  
 25 that could be left in Cheney Reservoir and how

Page 1649

1 that was viewed, at least by the City, as how  
 2 the concept of a passive recharge credit was  
 3 embedded. Do you recall that discussion?  
 4 **A. Yes.**  
 5 Q. So with respect to Cheney Reservoir, and I'll  
 6 let you now speak to your understanding of ASR  
 7 Phase I and the discussions with regard to  
 8 Cheney Reservoir, tell me what your  
 9 understanding was as it related to Cheney  
 10 Reservoir when it -- with ASR Phase I.  
 11 **A. And for the record, I was not in -- I was not**  
 12 **part of those discussions, but I do understand**  
 13 **what -- about DW -- the Division of Water**  
 14 **Resources. So it's my understanding secondhand**  
 15 **that the City wanted credit for the operation of**  
 16 **Cheney Reservoir, saying that we're going to**  
 17 **divert Cheney water in lieu of Equus Beds**  
 18 **groundwater and we want credit for that. And**  
 19 **that's what the Division of Water Resources did**  
 20 **not feel appropriate.**  
 21 Q. I want to back up just for a moment. You said  
 22 that with respect to the ASR Phase I discussions  
 23 with regard to Cheney Reservoir, you weren't  
 24 part of those discussions; is that true?  
 25 **A. No.**

Page 1650

1 Q. Well --  
 2 **A. Oh, no, you're right, that is true, I was not**  
 3 **part of those discussions.**  
 4 Q. Because just a moment ago, I think, and my  
 5 memory may not be serving me correctly, but I  
 6 think you said that when ASR Phase I order was  
 7 being put into place, it was your belief that  
 8 Cheney Reservoir was being discussed and that  
 9 was the context of that ASR Phase I order, but I  
 10 believe it's your testimony now that you weren't  
 11 part of those discussions, correct?  
 12 **A. That's correct. I mean, I worked for the**  
 13 **Division and I knew about them but I was not in**  
 14 **those meetings.**  
 15 Q. So at least as your understanding goes for this  
 16 concept of passive recharge credits, the City at  
 17 some point wanted credit for not -- not pumping  
 18 out of the aquifer because it was pumping out of  
 19 Cheney Reservoir instead; is that right?  
 20 **A. That's correct.**  
 21 Q. And the Division of Water Resources says that  
 22 should not be allowed, right?  
 23 **A. That's correct.**  
 24 Q. I asked Mr. McCormick if we were, in fact, to  
 25 instead pump water out of El Dorado Reservoir,

Page 1651

1 if the City started to pump water out of  
 2 El Dorado Reservoir and in turn was not pumping  
 3 out of the aquifer, would that be viewed as a  
 4 passive recharge credit, if they are asking for  
 5 a credit for pumping out of El Dorado Reservoir?  
 6 **A. Yes, that would be pass -- we would consider**  
 7 **that -- we, DWR, would consider that a passive**  
 8 **recharge credit.**  
 9 Q. Now, Mr. Letourneau, you're familiar with the  
 10 statutes and regulations that allow a city or a  
 11 municipality to pipe water from one reservoir to  
 12 another location, you're familiar with those  
 13 statutes and regulations?  
 14 **A. Yes.**  
 15 Q. And without delving into those in great detail,  
 16 would you at least agree with me there are  
 17 statutes and regulations that allow a  
 18 municipality, for example, to divert water from  
 19 El Dorado Reservoir to another city?  
 20 **A. Yes.**  
 21 Q. So at least from a conceptual standpoint, would  
 22 it be possible for the City to divert water from  
 23 El Dorado Reservoir and treat it at their ASR  
 24 Phase -- Phase I treatment facility?  
 25 **A. Yes, it could.**

1 Q. And so just walk through this with me for a  
2 moment, let's say that the City is taking water  
3 when -- from El Dorado Reservoir when it's above  
4 a certain flood pool, similar to what they're  
5 doing at Cheney Reservoir, they're taking that  
6 water to their ASR Phase I treatment facility  
7 near Bentley and they're treating it, you follow  
8 me so far?

9 **A. So far.**

10 Q. And then at that point, after it's treated,  
11 they're sending it back to the City for  
12 municipal use. Do you understand my scenario?

13 **A. Yes.**

14 Q. Now, under that scenario, if the City were then  
15 to say, we should get credit for not having  
16 taken water out of the aquifer, do you believe  
17 that the City should get credit for not taking  
18 water out of the aquifer in that context?

19 **A. No, I mean, that's not part of this proposal,  
20 plus the AMC is still just a functioning  
21 equivalent of diversions at the Little Ark,  
22 that's -- that's the proposal in front of us.**

23 **That -- Cheney, El Dorado, anything else, we  
24 would consider that a passive recharge credit.**

25 Q. Well, let me ask you this: Let's say the City

1 this proposal and whether this proposal is  
2 a good idea or not.

3 **PRESIDING OFFICER: Okay.**

4 **MR. STUCKY: Can I speak to that?**

5 **PRESIDING OFFICER: Of course.**

6 **MR. STUCKY: I think that this is a  
7 fair line of questioning to try and  
8 determine under what circumstances we have  
9 a passive recharge credit and under what  
10 circumstances we don't have a passive  
11 recharge credit, and I think this line of  
12 scenarios makes sense. And I'm almost back  
13 to the main point, but I think it helps to  
14 define for the record under what  
15 circumstances we have a passive recharge  
16 credit and under what circumstances we  
17 don't, I think they're fair questions.**

18 **PRESIDING OFFICER: Well, that's  
19 where I thought you were going with this,  
20 was trying to set up comparisons. So  
21 within that context, I'll let you finish  
22 that up.**

23 **A. I'm willing to sum it up, I mean, under -- we  
24 can throw out a bunch of what-ifs and what if  
25 Bentley, what if Big Ark, what if the only**

1 were to build a recharge facility along the Big  
2 Arkansas River and they were to take water from  
3 the Big Arkansas River, treat it at their  
4 Bentley treatment facility, and then send it to  
5 the City for municipal use, do you think the  
6 City under that scenario should get credit for  
7 not having pumped out of the aquifer?

8 **A. I mean, that's not part of this proposal, I -- I  
9 mean -- I mean, right now, no, because that's  
10 not part of this proposal.**

11 Q. Well, let's say that in the future it is a  
12 proposal made by the City, I'm asking from your  
13 understanding and opinion of passive recharge  
14 credits would that be allowed?

15 **MR. MCLEOD: Relevance.**

16 **MR. OLEEN: I join in that. I  
17 understand where opposing counsel is going,  
18 he's trying to make implications about kind  
19 of a house of cards argument, but we're  
20 here to talk about this proposal. If in  
21 the future there's some other proposal akin  
22 to what Mr. Stucky is hypothesizing, then  
23 that proposal will be considered. So I  
24 don't see the value in going down this line  
25 of hypotheticals; we're here to talk about**

1 **proposal we have in -- everything other than  
2 diversions from the Little Ark through the ASR  
3 diversion works would be considered passive  
4 recharge credits right now. Anything else.  
5 Right now, the only AMCs are from the Little Ark  
6 diversion and the ASR project, that's it.**

7 Q. Okay. I think you answered my question. So if  
8 someone from the City then came to you and said,  
9 we want to take floodwater from the Big Arkansas  
10 River, treat it at our Bentley treatment  
11 facility, send it to the City for municipal use,  
12 and at the same time get a recharge credit, you  
13 would say, you can't do that because it's a  
14 passive recharge credit, correct?

15 **A. As of right now, yes.**

16 Q. So in your view, then, the distinction here with  
17 respect to the Little Arkansas River, is the  
18 distinction the nature of where the water is  
19 coming from then?

20 **A. Well, it's the start of the ASR, I mean, yeah,  
21 it's coming from the Little Ark, ASR diversion,  
22 treated at the ASR facility, there's just not  
23 space in the aquifer. That's what it boils down  
24 to.**

25 Q. So as you're sitting here today, then, is it

Page 1656

1 still your position that the City's proposal as  
 2 it's before us today is not a passive recharge  
 3 credit?  
 4 **A. It's not a passive recharge credit.**  
 5 Q. Now I'd like to turn to the concept of change  
 6 applications. When -- when you were asked in  
 7 your deposition by Mr. Rolfs under what  
 8 circumstances a water right can be changed  
 9 without a change application, you gave a list of  
 10 examples; is that correct?  
 11 **A. Yeah, I'd have to see my deposition but -- now,**  
 12 **the only thing that can be changed, the word**  
 13 **changed, is point of diversion, place of use,**  
 14 **and use made of water. Now, if we want to talk**  
 15 **about modifications, to us there's a difference**  
 16 **in a change and a modification.**  
 17 Q. Well, and I'll just read it for the -- I'll sum  
 18 it up for the record. On page 56, line 8 of  
 19 your deposition, you stated that there were  
 20 several examples of -- minor examples of how a  
 21 water right could be changed without any kind of  
 22 change application or new application, and you  
 23 said if one wanted to change the meter  
 24 requirements, one wanted to reduce the amount of  
 25 water used, or even divide the water right, a

Page 1657

1 change application or a new application was not  
 2 required. Was that your testimony?  
 3 **A. That's correct.**  
 4 Q. And I think you also said in your deposition  
 5 testimony that typographical errors could also  
 6 be changed in a water right without any kind of  
 7 change application, is that also what you  
 8 stated?  
 9 **A. Correct.**  
 10 Q. And I believe that you also opined in your  
 11 deposition that with respect to the City's  
 12 proposal, it's your belief that there's no  
 13 change application needed. Is that still your  
 14 testimony?  
 15 **A. Well, there's -- a change application couldn't**  
 16 **be used because we're not changing the point of**  
 17 **diversion, place of use, or use made of water.**  
 18 Q. Can a change application be used to expand a  
 19 water right in the sense of increasing the  
 20 amount of water to be used?  
 21 **A. No.**  
 22 Q. And, in fact, would you agree with me that if  
 23 one's trying to expand the amount of water to be  
 24 used, you can't do it unless you file a new  
 25 application or for a new permit? Is that a true

Page 1658

1 statement?  
 2 **A. That's correct.**  
 3 Q. Now, at least as it relates to the City's  
 4 proposal, would you agree with me that there's  
 5 no new application here and there's no change  
 6 application that's been filed?  
 7 **A. That's correct.**  
 8 Q. And at least as the proposal exists before us  
 9 today, there -- there isn't a new permit that  
 10 has been requested, correct?  
 11 **A. Correct.**  
 12 Q. In fact, the City is trying to modify a prior  
 13 permit essentially, is that what's going on  
 14 here?  
 15 **A. They're trying to lower the index cell level as**  
 16 **a permit condition, that's correct. But they're**  
 17 **not -- they're not seeking to divert additional**  
 18 **water here.**  
 19 Q. We'll circle back to that, Mr. Letourneau, but  
 20 for our purposes, with respect to a change  
 21 application, what must an owner demonstrate when  
 22 applying for a change application?  
 23 **A. They must demonstrate it's the same local source**  
 24 **of supply and demonstrate they won't impair**  
 25 **existing water rights. And I think there's**

Page 1659

1 **another one, but I don't have 706(b) -- or**  
 2 **708(b) in front of me.**  
 3 Q. I would ask that you turn to Exhibit 21,  
 4 although it's not an official exhibit for the  
 5 record, if you could go to 21. Turn with me to  
 6 pages 8 through 9 which is where I think you'll  
 7 find K.S.A. 82a-708(b).  
 8 **A. I'm there.**  
 9 Q. Is that the statute you were looking for,  
 10 Mr. Letourneau?  
 11 **A. Yep, correct. And, again, that's titled**  
 12 **Application for Change in Place of Use, Point of**  
 13 **Diversion, or Use, and that's -- when I said use**  
 14 **made of water, it's use.**  
 15 Q. And what requirements must be shown or  
 16 demonstrated by the applicant pursuant to this  
 17 statute?  
 18 **A. Demonstrate to the chief engineer that any**  
 19 **proposed change is reasonable and will not**  
 20 **impair existing water rights, demonstrate to the**  
 21 **chief engineer that the proposed change relates**  
 22 **to the same local source of supply as to which**  
 23 **the water right relates.**  
 24 Q. And then what's number 4?  
 25 **A. Receive the approval of the chief engineer with**

1 **respect to any proposed change.**  
2 Q. And then I think in the next sentence, it says  
3 that the chief engineer shall approve or reject  
4 the application for change in accordance with  
5 the provisions and procedures prescribed for  
6 processing original applications for permission  
7 to appropriate water. So in other words, this  
8 statute circles back to the same requirements  
9 that must be shown to get an original  
10 application to appropriate water; is that true?  
11 **A. That's true.**  
12 Q. If one is seeking an original application to  
13 appropriate water, must the applicant show that  
14 there's compliance, for example, with safe yield  
15 regulations?  
16 **A. In 711, it refers to safe yield, reasonable**  
17 **raising and lowering -- area, safe yield,**  
18 **reasonable raising and lowering, shall not**  
19 **impair.**  
20 Q. Well, let's go ahead and turn to page 12 of this  
21 notebook where we find K.S.A. 82a-711, and you  
22 agreed with me that 708(b) references that an  
23 applicant, when they're seeking a change  
24 application, must also show the requirements  
25 that an applicant must show when applying for a

1 new application, right?  
2 **A. That's correct.**  
3 Q. And so in K.S.A. 82a-711, there's -- in  
4 subsection (b), it says, in ascertaining whether  
5 a proposed use will prejudicially and  
6 unreasonably affect the public interest, the  
7 chief engineer shall take into consideration,  
8 could you read for the record 1 through 5?  
9 **A. Established minimum desirable streamflow**  
10 **requirements; the area, safe yield, and the**  
11 **recharge rate of the appropriate water supply;**  
12 **the priority of existing claims of all persons**  
13 **to use the water of the appropriate water**  
14 **supply; the amount of each claim to use water**  
15 **from the appropriate water supply; and all other**  
16 **matters pertaining to such question.**  
17 Q. Now, Mr. Letourneau, am I correct that at least  
18 at some point as we were going through this  
19 whole AMC proposal and this hearing phase, would  
20 you agree that at least at some point it was the  
21 position of the Division of Water Resources that  
22 the City of Wichita would have to show that they  
23 were in compliance with all five of those  
24 requirements?  
25 **A. Well, the AMC -- okay, it's not the same local**

1 **source of supply because the local source of**  
2 **supply is the Equus Beds and these are recharge**  
3 **credits. So we considered it a different**  
4 **source. And then they're not subject to safe**  
5 **yield because it's not Equus Beds water. And,**  
6 **let me see, the priority of existing claims,**  
7 **they will be -- recharge credits have to be**  
8 **picked up with an appropriation of water that is**  
9 **junior. So -- and MDS, yeah, they'll be subject**  
10 **to MDS, but if the aquifer is at a -- operated**  
11 **at a more full state, it's better for**  
12 **streamflow. So, yeah, I mean, generally we --**  
13 **we would have taken this into consideration**  
14 **but ...**  
15 Q. And I can pull up, I believe, a prior order in  
16 this case from the chief engineer indicating  
17 that these requirements would need to be shown,  
18 but would you agree with me that at least at  
19 some point it was the Division of Water  
20 Resources' position that the City of Wichita  
21 would at least have to address how they could  
22 meet or be exempted from these five  
23 requirements?  
24 **A. Well, they wouldn't be exempted, but, yeah,**  
25 **any -- any new appropriation is subject to these**

1 **items, yes. But these aren't -- we don't have a**  
2 **new appropriation here, and we don't have a**  
3 **change application in front of us. And the AMCs**  
4 **are still subject to what's already been**  
5 **approved, the 19,000 acre-feet of recharge**  
6 **credits are already approved.**  
7 Q. If recharge credits weren't exempt from safe  
8 yield requirements, would you agree that safe  
9 yield requirements would apply to the City's  
10 proposal?  
11 **A. No, 'cause they're still a recharge credit.**  
12 Q. But my question, I guess, and I didn't word it  
13 properly, the reason we're not applying safe  
14 yield here is because there's a specific  
15 exemption for recharge credits from safe yield;  
16 is that correct?  
17 **A. Correct.**  
18 Q. And if that exemption, for example, didn't  
19 exist, then safe yield would apply; is that  
20 right?  
21 **A. However the GMD's rule would be written. Right**  
22 **now they're exempt, but if the GMD's rules said**  
23 **that they had to be -- had to meet safe yield,**  
24 **then, yes, they would have to meet safe yield.**  
25 Q. And I think you already answered this, it

Page 1664

1 indicates that it has to be the same source of  
 2 supply, I think you indicated that with respect  
 3 to an aquifer maintenance credit, the source of  
 4 supply has changed, is that -- is that true,  
 5 from the prior ASR Phase II orders? Or prior  
 6 ASR Phase II physical recharge credits?  
 7 **A. Well, they're the same recharge credits. I**  
 8 **mean, so any recharge credit is not Equus Beds**  
 9 **water, and so whether it's a physical recharge**  
 10 **credit or an aquifer maintenance credit, it's a**  
 11 **recharge credit and it's different than Equus**  
 12 **Beds.**  
 13 Q. I guess maybe I'm unclear what you're saying.  
 14 You're saying that the water that's left in  
 15 storage through the City's aquifer maintenance  
 16 credits is not Equus Beds water?  
 17 **A. Well, we -- it's not diverted but it does -- we**  
 18 **do change -- change it from Equus Beds to**  
 19 **recharge credit because there is no space in the**  
 20 **aquifer. So that is a change.**  
 21 Q. But --  
 22 **A. Well, let me say -- I'm sorry, David, let me say**  
 23 **modification, because I don't want to get**  
 24 **changes confused -- confused with modifications.**  
 25 Q. But with an ASR Phase II credit, water is

Page 1665

1 injected into the aquifer, true?  
 2 **A. True.**  
 3 Q. And then when that water is taken back out of  
 4 the aquifer, it's the same source water that was  
 5 injected. Is that a true statement?  
 6 **A. That's true.**  
 7 Q. But with respect to an aquifer maintenance  
 8 credit, there's no source water injected into  
 9 the aquifer, true?  
 10 **A. True.**  
 11 Q. And so because of that, there's no source water  
 12 available to take back out of the aquifer under  
 13 an aquifer maintenance credit. Is that also  
 14 true?  
 15 **A. Can you ask me that again?**  
 16 Q. Well, if there's no source water injected into  
 17 the aquifer pursuant to an aquifer maintenance  
 18 credit, there's not source water in the aquifer  
 19 to then take back out later, true?  
 20 **A. Under the -- yes, under that scenario.**  
 21 Q. So I guess my question, then, is -- is this:  
 22 With respect to an ASR Phase II recharge credit  
 23 versus an aquifer maintenance credit, would you  
 24 agree with me at the point that the water is  
 25 withdrawn from the aquifer, the source, at least

Page 1666

1 at that point, has changed?  
 2 **A. Yes.**  
 3 Q. And I think you also would agree with me on a  
 4 surface level here that the Division of Water  
 5 Resources has not filed for any kind of change  
 6 application or paid any kind of fee to do so?  
 7 **A. You mean the City of Wichita?**  
 8 Q. I'm sorry, strike that question from the record.  
 9 Would you agree with me that the City of Wichita  
 10 has not filed a change application or paid a fee  
 11 to do so?  
 12 **A. There's -- it wouldn't be appropriate because**  
 13 **they're not changing point of diversion, place**  
 14 **of use, or use made of water.**  
 15 Q. And so they haven't done it, correct?  
 16 **A. Correct.**  
 17 Q. Did the City file any kind of new application  
 18 to -- or seek a new permit for these aquifer  
 19 maintenance credits?  
 20 **A. There was a series of new applications filed for**  
 21 **more than 19,000 acre-feet of recharge credits,**  
 22 **and I -- I'd have to ask the -- I don't**  
 23 **remember, I think it was up to about 30,000**  
 24 **acre-feet of authority for recharge credits, but**  
 25 **then the City requested that those be dismissed.**

Page 1667

1 **And so what we have in front of us now is**  
 2 **approved 19,000 acre-feet of recharge credits.**  
 3 **PRESIDING OFFICER:** And can I ask  
 4 where that's written? I've tried to find  
 5 it and I haven't. I'm sure I'm just  
 6 missing it but ...  
 7 **A. What's been written that --**  
 8 **PRESIDING OFFICER:** The 19,500 limit  
 9 on withdrawing credits?  
 10 **A. Oh, okay. Well, yeah, we can put that together**  
 11 **for you. What that is, we just added up --**  
 12 **PRESIDING OFFICER:** No, I'm sorry,  
 13 I'm -- where is that documented? Is that a  
 14 condition in the permit, is that -- I'm not  
 15 sure where -- I've heard that a couple  
 16 times, and that was one of my questions for  
 17 today was where is that documented?  
 18 **A. Well, it's the approved app -- we'll get that**  
 19 **for you, it's the current approved applications,**  
 20 **when we add them all up, it's the 19,000**  
 21 **acre-feet. So they've got approval for --**  
 22 **they've got approved applications to recover**  
 23 **19,000 acre-feet of recharge credits when**  
 24 **they're available.**  
 25 **PRESIDING OFFICER:** And that comes

1 from adding up all of the additional ASR  
 2 permits for Phase II?  
 3 **A. Correct.**  
 4 **BY MR. STUCKY:**  
 5 Q. And my esteemed colleague has a list of all the  
 6 permit numbers the City has. If we were to add  
 7 those -- the cumulative effect of those permits  
 8 for each year, that's where we get this 19,000  
 9 acre-feet?  
 10 **A. It's 19,000 or 19,500, I'm not quite sure, but**  
 11 **it's -- but, yes, that's where -- that's where**  
 12 **it comes from.**  
 13 **PRESIDING OFFICER:** Thank you.  
 14 Sorry to interrupt.  
 15 **A. Oh, no, it's important.**  
 16 **BY MR. STUCKY:**  
 17 Q. So you mentioned that there were some  
 18 applications for new permits where the City was  
 19 seeking to increase that amount; is that true?  
 20 **A. Correct.**  
 21 Q. And those permits have been withdrawn; is that  
 22 correct?  
 23 **A. That's correct.**  
 24 Q. So as we sit here today, as we discuss the  
 25 City's proposal, would you agree with me that

1 **A. No, impairment, if we would want to go to**  
 2 **706(b), first sentence of 706(b).**  
 3 Q. Please read that for the record.  
 4 **A. Okay. It shall be unlawful for any person to**  
 5 **prevent, by diversion or otherwise, any waters**  
 6 **of this state from moving to a person having a**  
 7 **prior right to use the same, or for any person**  
 8 **without agreement with the State of Kansas to**  
 9 **divert or take any water that has been released**  
 10 **from storage under the authority of the water**  
 11 **reservation rights held by the State of Kansas.**  
 12 **That's what we consider impairment.**  
 13 Q. Okay. Well, could you turn back to K.S.A.  
 14 82a-711?  
 15 **A. Okay.**  
 16 Q. Once again, this is a statute I believe you're  
 17 quite familiar with; is that correct?  
 18 **A. Absolutely.**  
 19 Q. Could you read for me subsection (c) of K.S.A.  
 20 82a-711, that first sentence?  
 21 **A. With regard to whether the proposed use will**  
 22 **impair a use under an existing water right,**  
 23 **impairment shall include the unreasonable**  
 24 **raising or lowering of the static water level or**  
 25 **the unreasonable increase or decrease of**

1 there's no new application for a permit pending  
 2 before us today?  
 3 **A. I agree.**  
 4 Q. And, in fact, the City hasn't paid any kind of  
 5 fee or anything of that nature to the Division  
 6 of Water Resources to seek a new permit as we  
 7 sit here today?  
 8 **MR. MCLEOD:** Asked and answered.  
 9 **BY MR. STUCKY:**  
 10 Q. I ask with respect to a fee?  
 11 **A. There's no application, no filing fee, correct.**  
 12 Q. Would you agree with me that the City, with  
 13 respect to this proposal, needs to show that  
 14 their -- their proposal isn't going to cause  
 15 impairment to the aquifer?  
 16 **A. Well, it would be impairment to existing water**  
 17 **rights. We -- we don't have the authority on**  
 18 **impairment to an aquifer, but we have authority**  
 19 **on impairment to existing water rights.**  
 20 Q. Would you agree, then, that the City must show  
 21 or demonstrate that they're not going to cause  
 22 impairment to existing water rights?  
 23 **A. Yes.**  
 24 Q. Would you agree that an aspect of impairment is  
 25 not unreasonably lowering the water table?

1 **streamflow or the unreasonable deterioration of**  
 2 **the water quality at a water user's point of**  
 3 **diversion beyond a reasonable economic limit.**  
 4 Q. So as it relates to K.S.A. 82a-711, there's  
 5 some -- some flesh put on the bones of what  
 6 constitutes impairment; is that right?  
 7 **A. That's correct.**  
 8 Q. And there's at least three components I think I  
 9 see here. First of all, one must show that  
 10 there's not an unreasonable raising or lowering  
 11 of the static water level; is that true?  
 12 **A. That's true.**  
 13 Q. And the applicant must also show that there's  
 14 not an unreasonable increase or decrease of the  
 15 streamflow; is that also true?  
 16 **A. That's true.**  
 17 Q. And the applicant must also show that there's  
 18 not an unreasonable deterioration of the water  
 19 quality; is that also true?  
 20 **A. That's true.**  
 21 Q. So now as we go back to the definition of  
 22 impairment, would you agree now that the City  
 23 would have to show that all three of those  
 24 conditions are met?  
 25 **A. Yes, but those statutes work together. I mean,**

Page 1672

1 **you can have a lowering of the water table as**  
 2 **long as you do not take water that somebody else**  
 3 **has the right to. That's the Ogallala Aquifer**  
 4 **every day. And so --**  
 5 Q. So in other words, these statutes, whether it's  
 6 K.S.A. 82a-708(b) or 711, they must be construed  
 7 together is your opinion?  
 8 **A. Correct.**  
 9 **MR. OLEEN:** Objection, calls for a  
 10 legal conclusion.  
 11 **PRESIDING OFFICER:** Okay.  
 12 **BY MR. STUCKY:**  
 13 Q. Is it also your belief that the City must show  
 14 that this proposal won't prejudicially and  
 15 unreasonably affect the public interest?  
 16 **A. Yes.**  
 17 Q. And are some of the aspects of what it means to  
 18 prejudicially and unreasonably affect the public  
 19 interest, is one of those minimum desirable  
 20 streamflow?  
 21 **A. Yes.**  
 22 Q. And generally speaking, and, again, we're going  
 23 to back up because we're going to disagree with  
 24 respect to the application to the proposal, but  
 25 in a general sense, would you agree that part of

Page 1673

1 determining what's in the public interest would  
 2 be conducting safe yield calculations?  
 3 **A. Well, not for the ASR proposal.**  
 4 Q. Okay. And, again, I'm excepting out the ASR  
 5 proposal.  
 6 **A. Okay.**  
 7 Q. But in general, would you agree that safe yield  
 8 calculations are part of what helps to determine  
 9 what's in the public interest?  
 10 **A. Yes. Yep.**  
 11 Q. Just so we have a clear record, I'm not sure  
 12 this has been stated on the record, what is the  
 13 concept of safe yield?  
 14 **A. Well, safe yield is, in simple terms, the amount**  
 15 **of water the aquifer will safely provide.**  
 16 Q. And in other words, if a given location is  
 17 over-appropriated and there's not water  
 18 available and an applicant is applying for a  
 19 water right, that water right would be denied if  
 20 it's in violation of those safe yield  
 21 principles, correct?  
 22 **A. Correct.**  
 23 Q. When one -- when the Division of Water Resources  
 24 is trying to determine what's in the public  
 25 interest, does the Division of Water Resources

Page 1674

1 also consider the priority of existing water  
 2 rights?  
 3 **A. Yes, and that -- that's even stated in 711, that**  
 4 **we -- the priority of existing claims of all**  
 5 **persons to use the water of the appropriate**  
 6 **water supply. So, yes, I mean, we look at**  
 7 **priority.**  
 8 Q. Earlier, a few weeks ago, and if your memory  
 9 still serves you in this regard, Mr. Oleen asked  
 10 you about a letter that was submitted by the  
 11 Chief Engineer Barfield with regard to this AMC  
 12 proposal. Do you recall the discussion on that  
 13 letter?  
 14 **A. Yes.**  
 15 Q. And in that letter, Mr. Barfield states that  
 16 it's his view that the aquifer maintenance  
 17 credits, at least at that time, were in the  
 18 public interest. Is that a true statement?  
 19 **A. Yes.**  
 20 Q. Is it still your belief that aquifer maintenance  
 21 credits are in the public interest?  
 22 **A. Yeah, we -- the Division right now, we stand --**  
 23 **we stand behind David Barfield's two letters.**  
 24 Q. But you would, at least, agree that although  
 25 that's the position of the Division of Water

Page 1675

1 Resources, this determination now is up to a  
 2 different hearing officer; is that right?  
 3 **A. Yes.**  
 4 Q. Now, if it was determined clear back in 2017  
 5 that the City's proposal was in the public  
 6 interest, would you also agree with me that the  
 7 Division of Water Resources made that initial  
 8 determination through Mr. Barfield prior to the  
 9 City's proposal being submitted?  
 10 **A. I'd have to see the dates, David, I'm not sure**  
 11 **about that. I got to -- I'd have to look at the**  
 12 **dates.**  
 13 Q. I'll circle back to that.  
 14 **A. Okay.**  
 15 Q. When the Division of Water Resources first  
 16 determined that the City's proposal was in the  
 17 public interest, did the Division of Water  
 18 Resources consider minimum desirable streamflow  
 19 to help formulate that opinion?  
 20 **A. You know, the discussion we had about minimum**  
 21 **desirable streamflow is the aquifer is now being**  
 22 **managed at a higher level, and as the higher**  
 23 **level of the aquifer discharges into the stream**  
 24 **that it's -- it's better for minimum desirable**  
 25 **streamflow. The high -- and what we looked at**

1 **was the higher aquifer conditions are better**  
2 **for -- better for MDS.**

3 Q. And just so we have a clear distinction, when  
4 we're talking higher aquifer conditions, we're  
5 talking about the higher aquifer based on the  
6 City pumping out of the Little Arkansas River  
7 and treating it and sending to the City and not  
8 pumping out of the aquifer, is that why the  
9 aquifer levels would be higher?

10 **A. Yes.**

11 Q. But would you also agree with me that at least  
12 at the point when the City, if you will, cashes  
13 in their aquifer maintenance credits, at that  
14 point, the City would start to pump water out of  
15 the aquifer; is that true?

16 **A. That's true.**

17 Q. So at least we're -- when we're talking higher  
18 water levels, we're not talking about the point  
19 in time in which the City cashes in their  
20 aquifer maintenance credits, if you will; is  
21 that -- is that true?

22 **A. Well, no, going into -- this proposal going into**  
23 **a 1 percent drought, the aquifer is at a higher**  
24 **level, so they would cash in their recharge**  
25 **credits, once -- once they pump their 40,000,**

1 be an industrial user or an irrigation user, in  
2 that sense, this water is part of a larger  
3 aquifer, the Equus Beds Aquifer; is that -- is  
4 that true?

5 **A. Well, that's where it's stored, but it's a**  
6 **different source of water.**

7 Q. Okay. I'm just trying to understand. You're  
8 saying that we have the Equus Beds Groundwater  
9 Management aquifer -- or, I'm sorry, that's not  
10 the official term, strike that. We have the  
11 Equus Beds Aquifer on one hand, and you're  
12 saying the basin storage area is something  
13 different, is that what your testimony is?

14 **A. Well, it's located in the aquifer, but it's a**  
15 **different source of water in the aquifer.**

16 Q. So if an irrigator is withdrawing water out of  
17 the basin storage area, you're saying that's  
18 water they're withdrawing out of the basin  
19 storage area?

20 **A. That's -- that's water from the Equus Beds.**

21 Q. Well, if the -- if the -- if an irrigator,  
22 though, is taking water that is found in the  
23 basin storage area and they're using it for  
24 irrigation purposes, is that water being taken  
25 out of the Equus Beds Aquifer, or is it water

1 **they'd cash in their recharge credits, the**  
2 **aquifer would be at a higher level, that's what**  
3 **this proposal is about.**

4 Q. But at the point when they cash them in, then  
5 they would start to deplete the aquifer at that  
6 point; is that true?

7 **A. Maybe. I mean, we just have to see the aquifer**  
8 **conditions at the time.**

9 Q. Well, if they were to cash in the aquifer  
10 maintenance credit, if you will, they would take  
11 water out of the aquifer at that point, true?

12 **A. They would take water out of the basin storage**  
13 **area.**

14 Q. Which is part of the aquifer?

15 **A. No, it's -- it's a tank in the aquifer, we'll**  
16 **call it. It's -- it's space in the aquifer, but**  
17 **it's not the aquifer.**

18 Q. With respect to the basin storage area, that  
19 space in the aquifer, is there irrigation rights  
20 where they have the right to take water out of  
21 that area that we're considering the basin  
22 storage area?

23 **A. Yes, everybody can take water out of there.**

24 Q. So in the sense that other constituents can take  
25 water out of this basin storage area, whether it

1 being taken out of the basin storage area?

2 **A. Equus Beds.**

3 Q. Okay. But on the other hand, if the City is  
4 pumping water, let's say their 40,000 acre-feet  
5 of native credits, and they're pumping that  
6 water out of the basin storage area, is that  
7 Equus Beds water or basin storage area water?

8 **A. Their native water rights are Equus Beds.**

9 Q. So the distinction you're making here is if it's  
10 the accumulation of an aquifer maintenance  
11 credit, you're saying that's water that's in the  
12 basin storage area, that's the distinction  
13 you're making here?

14 **A. Correct.**

15 Q. We were talking about the concept of minimum  
16 desirable streamflow just a moment ago when we  
17 went off on that clarification. You indicated  
18 that as the City was coming to the Division of  
19 Water Resources and discussing whether or not  
20 this would be in the public interest, this  
21 concept that minimum desirable streamflow would  
22 be protected was -- was based on the fact that  
23 water would be left in storage and the aquifer  
24 would be kept full. Is that -- is that a true  
25 statement?

Page 1680

1 **A. Yes.**  
 2 Q. Did the Division of Water -- and I think you  
 3 answered this a couple weeks ago, but did the  
 4 Division of Water Resources do any kind of  
 5 independent calculations or modeling or  
 6 research, if you will, to determine that minimum  
 7 desirable streamflow would be protected through  
 8 the City's proposal?  
 9 **A. No. There's only two areas in the state, this**  
 10 **not being one of them, that -- well, there's one**  
 11 **that we regulate groundwater for minimum**  
 12 **desirable streamflow, and that's the Republican**  
 13 **River, and then prob -- soon we will be**  
 14 **administering groundwater for minimum desirable**  
 15 **streamflow in Rattlesnake Creek in 2021, but we**  
 16 **had not administered minimum desirable**  
 17 **streamflow groundwater rights in this particular**  
 18 **basin. Now, with that said, anything junior to**  
 19 **1984 is subject to minimum desirable streamflow.**  
 20 **But we -- but we have not done that in this**  
 21 **basin.**  
 22 Q. Would you agree that the City's permits as they  
 23 relate to obtaining recharge credits pursuant to  
 24 ASR Phase I and ASR Phase II, would you agree  
 25 that those permits were sought post 1985, that

Page 1681

1 cutoff --  
 2 **A. So '84 --**  
 3 Q. -- date you mentioned?  
 4 **A. I'm sorry, David, I interrupted you. 1984, they**  
 5 **were post 1984.**  
 6 Q. So in other words, the City's permits as they  
 7 exist with respect to ASR Phase I and Phase II,  
 8 minimum desirable streamflow would apply to  
 9 those permits; is that true?  
 10 **A. Yes.**  
 11 Q. And I think you already answered that with  
 12 respect to minimum desirable streamflow, the  
 13 Division of Water Resources didn't conduct  
 14 independent analysis or investigation of how  
 15 minimum desirable streamflow would be protected  
 16 through the City's proposal?  
 17 **A. No.**  
 18 Q. And did the Division of Water Resources consider  
 19 what the impact would be on minimum desirable  
 20 streamflow at the point that these aquifer  
 21 maintenance credits are cashed in?  
 22 **A. No, but we don't do that with any -- any**  
 23 **applications or permits. What happens is if --**  
 24 **and, again, we don't regulate groundwater here,**  
 25 **but if these -- if we did, like the Republican**

Page 1682

1 **River, we approve new applic -- we approved new**  
 2 **applications and they're subject to, I'll say**  
 3 **MDS if the flows at the gages go below a certain**  
 4 **number of days, and then we do issue orders and**  
 5 **we administer water rights as if the 1984 was a**  
 6 **water right, you know, the gage on the river was**  
 7 **a water right with a 1984 priority. And these**  
 8 **will have that same type of condition.**  
 9 Q. So back at the time in 2011 when Chief Engineer  
 10 Barfield first determined that these aquifer  
 11 maintenance credits were in the public interest,  
 12 would you agree with me that because they were  
 13 considered exempt, there were no safe yield  
 14 calculations conducted?  
 15 **A. That's true.**  
 16 Q. What analysis was done back in 2017 to ensure  
 17 that the City's proposal wouldn't cause  
 18 impairment? And let me break that down for you  
 19 just a little bit. What analysis was done back  
 20 in 2017 to ensure that the City's proposal  
 21 wouldn't unreasonably raise or lower the static  
 22 water level of the aquifer?  
 23 **A. Well, that's a question for our modelers that**  
 24 **I'm not -- I'm not privy to that group right**  
 25 **now.**

Page 1683

1 Q. So at least at this point you're not sure?  
 2 **A. I'm not sure what analysis was done, but we**  
 3 **would have used, I know that team would have**  
 4 **used the model and what's proposed. And when**  
 5 **you look at the -- those figures with the static**  
 6 **water levels in there, it did not seem**  
 7 **unreasonable to those folks that there was an**  
 8 **unreasonable lowering. There's -- you know,**  
 9 **we're talking about the top 10 percent of this**  
 10 **aquifer, and so that's what they -- but, again,**  
 11 **that's -- that's part of the team that they**  
 12 **would have to answer that.**  
 13 Q. Back in 2017, do you know what analysis the  
 14 Division of Water Resources did with respect to  
 15 water quality as it relates to the City's  
 16 proposal?  
 17 **A. No, I don't know what they did. But then again**  
 18 **we're not changing -- there's no proposed**  
 19 **modification to Phase I, and that was the bigger**  
 20 **water quality component of ASR, if I recall**  
 21 **correctly. And then I know that there's**  
 22 **concerns about the gradient of the salt plume,**  
 23 **but trying to manage the aquifer in a more full**  
 24 **condition, then the gradient should not be there**  
 25 **to move the salt plumes.**

1 Q. But as you're sitting here today and you're  
2 testifying as the expert for the Division of  
3 Water Resources, you haven't seen any analysis  
4 or research, if you will, from the Division of  
5 Water Resources that indicates the impact that  
6 the City's proposal will have on water quality,  
7 correct?

8 **A. That's correct.**

9 Q. Last time when we were here, we talked about  
10 several different well logs that showed that the  
11 practical saturated thickness was actually less  
12 than what was calculated in the City's proposal.  
13 Do you recall that discussion?

14 **A. I recall those were observation wells.**

15 Q. And based on that discussion, do you believe,  
16 then, that there's now more concern about  
17 whether or not the City's proposal is, in fact,  
18 in the public interest?

19 **A. You know, those were -- you know, that raised a  
20 good question, I -- we have to say that, but  
21 then we did not look at well logs from  
22 production wells. And so we would -- there  
23 were, you know, a good number of observation  
24 wells, but then it would be good to look at a  
25 good number of production wells and then get an**

1 changing the circumstances under which those  
2 recharge credits can be withdrawn. Is that also  
3 right?

4 **A. Well, it's -- do you mean in order of priority,  
5 David, is that -- when you say about withdrawn,  
6 can you help me with that?**

7 Q. In other words -- well, how they're accumulated  
8 and the circumstances under which they're  
9 withdrawn in the sense that there's no water  
10 injected into the aquifer; is that -- is that  
11 true?

12 **A. Well, withdrawing the recharge credits, it's the  
13 same, it's under the authority of that 19,000  
14 acre-feet.**

15 Q. I guess let me ask it this way: Is the City  
16 seeking to lower the minimum index level and in  
17 that sense change their permitting proposal from  
18 ASR Phase I?

19 **A. They are proposing to lower the index levels.**

20 Q. So in the sense that they're seeking to be able  
21 to withdraw recharge credits when the bottoms on  
22 the aquifer are lower, that's changing the  
23 circumstances under which those recharge credits  
24 can be withdrawn; is that right?

25 **A. Yes, they could leave them in the aquifer**

1 **average of the production versus the observation  
2 wells.**

3 **Now, I don't know if -- if those were  
4 observation wells picked on a location or if  
5 those were originally test drilled and test  
6 pumped to see what that might produce. But  
7 some -- some well logs from some production  
8 wells would be good to look at also. But I have  
9 to say for your question, yeah, it raised a  
10 question.**

11 Q. So as you're sitting here today, would it be  
12 your recommendation, then, in the future to look  
13 at some of those production wells and look at  
14 some other well log data to ensure that the  
15 static water level is protected by the City's  
16 proposal?

17 **A. Yeah, but the average is the average; that would  
18 be good to look at.**

19 Q. With respect to the City's aquifer maintenance  
20 credit proposal, you told me, I think, a moment  
21 ago that the City is seeking to change how  
22 recharge credits can be accumulated; is that --  
23 is that right?

24 **A. Correct.**

25 Q. And I think you also told me that the City is

1 **longer.**

2 Q. Is the concept of the 1993 level, that current  
3 minimum index level, is that a fundamental  
4 aspect of ASR Phase I and Phase II orders?

5 **A. Yes. And I bet MDS wasn't looked at when we did  
6 those levels, you know.**

7 Q. Would you agree, then, if we're seeking to lower  
8 that bottom from the 1993 level to a new level,  
9 that's a fundamental change to those permits?

10 **A. It's a fundamental modification to the permit  
11 conditions.**

12 Q. And I think you also indicated that we're making  
13 a fundamental change to those prior permits in  
14 the sense of how the recharge credits are  
15 accumulated, that accounting; is that -- is that  
16 true?

17 **A. We're making a modification to the accounting.**

18 Q. In this hearing, I believe I've heard quite a  
19 bit of discussion about the benefits of leaving  
20 water in the aquifer and leaving the aquifer  
21 fuller, there's been a lot of discussion about  
22 that; is that correct?

23 **A. That's correct.**

24 Q. But on the other hand, it's at least my  
25 editorial view that there's been less discussion

Page 1688

1 about the impacts of the City's proposal when we  
 2 actually withdraw those credits, those AMC  
 3 credits in the future, so I'd like to focus on  
 4 that. Do you believe that at the point that the  
 5 aquifer maintenance credits are withdrawn it  
 6 could -- it will take water out of the aquifer?  
 7 **A. Any recharge credit will take water out of the**  
 8 **basin storage area.**  
 9 Q. And so when these aquifer maintenance credits  
 10 are withdrawn, would you agree at that point,  
 11 water is taken out of the basin storage area?  
 12 **A. Yes.**  
 13 Q. And so at least at that point, would you agree  
 14 that depending on how much water is taken out,  
 15 there's the potential to deplete the basin  
 16 storage area at that point?  
 17 **A. Yes.**  
 18 Q. And just so we're clear here, we've had a lot of  
 19 discussion about drought modeling and taking out  
 20 these credits during the time of a drought, but  
 21 would you agree with me that the City under  
 22 their current proposal could withdraw these  
 23 aquifer maintenance credits both in a time of  
 24 drought and actually any other time for that  
 25 nature?

Page 1689

1 **A. Yes.**  
 2 Q. So would you agree with me, at least, that at  
 3 the point when these aquifer maintenance credits  
 4 are withdrawn and water is taken out, it would  
 5 cause the water -- the static water level at the  
 6 basin storage area to decline?  
 7 **A. It could, yes.**  
 8 Q. At the point that this basin storage area is  
 9 starting to decline because these recharge  
 10 credits are being withdrawn, at that point, is  
 11 there the potential for that to accelerate the  
 12 migration of the chloride plume near Burrton, or  
 13 do you know?  
 14 **A. I don't know. It would depend on where the**  
 15 **recharge credits were pumped from. That would**  
 16 **be the biggest thing, but I don't -- at**  
 17 **19,000 -- I mean, 19,000 acre-feet, I don't know**  
 18 **how much that would move the salt plume.**  
 19 Q. Is that something that you believe there should  
 20 be a proper analysis on?  
 21 **A. I mean, that's -- I'm sure it's already been**  
 22 **done at 19,000, right? When -- when Phase I and**  
 23 **Phase II was done, I'm sure that analysis was**  
 24 **done. And this is not any more water than from**  
 25 **Phase I or Phase II.**

Page 1690

1 Q. Well, at least the distinction, though, I think,  
 2 and, again, for -- in a simple sense, I think  
 3 everyone understands is in ASR Phase I and Phase  
 4 II, the City was injecting water into the  
 5 aquifer; is that right?  
 6 **A. That's true.**  
 7 Q. So with the -- so I'm asking specific to the  
 8 aquifer maintenance credit proposal, are you  
 9 aware of any analysis that's been provided by  
 10 the Division of Water Resources or the City that  
 11 suggests to you what the impacts to water  
 12 quality will be at the point that an aquifer  
 13 maintenance credit is withdrawn?  
 14 **A. Not to me but I don't know about the modelers.**  
 15 Q. Under the City's proposal, they're proposing a  
 16 cap on both the ASR Phase II credits and the  
 17 aquifer maintenance credits of 120,000  
 18 acre-feet. Is that a true statement?  
 19 **A. That's true.**  
 20 Q. So there's the possibility, at least, that if  
 21 120,000 acre-feet of credits were accumulated,  
 22 the City could cash them in at the rate of  
 23 19,000 acre-feet a year; is that -- is that  
 24 true?  
 25 **A. That's true.**

Page 1691

1 Q. At the point, if we were to assume the City was  
 2 to cash in this entire 120,000 acre-feet of  
 3 credits, at that point, could it have the  
 4 potential over a number of years to deplete the  
 5 basin storage area by 120,000 acre-feet?  
 6 **MR. OLEEN:** I respectfully object  
 7 because of relevance. Again, this is a  
 8 hypothetical that's not before us, and I --  
 9 I think it's irrelevant, and I also think  
 10 it's prejudicial in the sense that it, in  
 11 my opinion, it's an attempt to make the  
 12 proposal before us seem scarier than it is  
 13 by talking about, well, what if in the  
 14 future this proposal looks different than  
 15 it does today and the City can withdraw  
 16 120,000 acre-feet of recharge credits in  
 17 one year? That's not what's before us, and  
 18 that's misleading the public to think that  
 19 that's before us right now.  
 20 **PRESIDING OFFICER:** Did you ask  
 21 about 120,000 acre-feet of credits in one  
 22 year?  
 23 **MR. STUCKY:** No, I did not, over  
 24 time, at the rate of 19,000 acre-feet a  
 25 year and --

1 **PRESIDING OFFICER:** Okay. Let me  
2 address the objection. This entire  
3 proposal is based on projections into the  
4 future, and I think this is a legitimate  
5 question because if we're trying to figure  
6 out what will this proposal do and not do  
7 and what are the impacts, it's all about  
8 trying to decide what it could do in the  
9 future. So I think since this is something  
10 that is currently possible to happen under  
11 the current proposal, then this line of  
12 questioning is appropriate.

13 **MR. OLEEN:** But it's not possible to  
14 withdraw 120,000 in one year and if he --  
15 if I misheard, then I withdraw my  
16 objection.

17 **PRESIDING OFFICER:** Okay. I think  
18 you misheard because you were not asking  
19 about one year?

20 **MR. STUCKY:** No.

21 **PRESIDING OFFICER:** Just reaching  
22 the 120,000 acre-foot cap at some point?

23 **MR. STUCKY:** Yeah.

24 **PRESIDING OFFICER:** Okay.

25 **BY MR. STUCKY:**

1 north of 50,000 acre-feet of recharge credits  
2 during an eight-year drought, that's on one  
3 hand, right?

4 **A. Right.**

5 Q. But on the other hand, a different, separate  
6 part of the City's proposal is that we're going  
7 to place a cap on recharge credits of 120,000  
8 acre-feet, that's a different part of the  
9 proposal, right?

10 **A. Accumulated 120,000.**

11 Q. And the answer to that is correct?

12 **A. Correct.**

13 Q. And so what we're talking about is just this  
14 120,000 acre-foot cap. I'm not talking about  
15 what -- what the City did in their drought  
16 modeling right now, I'm just talking about this  
17 cap at this point. If we have a cap --

18 **MR. MCLEOD:** I'm -- I'm going to  
19 object on relevance, and the reason that I  
20 do is there is no cap currently, and  
21 currently the City can draw the 1900 --  
22 excuse me, the 19,000 acre-feet annually  
23 with no cap. So -- so what's the point of  
24 the question? I don't see the point.

25 **PRESIDING OFFICER:** Well, I think

1 Q. And I spelled out that we were withdrawing that  
2 19,000 acre-feet a year, did you understand that  
3 was the nature of my question, Mr. Letourneau?

4 **A. Yes, that's the nature of the question, but then**  
5 **that's not the proposal. I mean, we -- we lined**  
6 **up the withdrawal of the recharge credit based**  
7 **on the City's drought monitoring in the**  
8 **proposal, and so I think it was -- I can't**  
9 **remember exactly, it's roughly 50,000 acre-feet**  
10 **over eight years. And the 120 came from the**  
11 **USGS model space in the aquifer, then the 120 --**  
12 **yeah, the 50,000 acre-feet of recharge credits,**  
13 **that was justified with back-to-back one-year**  
14 **droughts. And so if -- we don't have -- that's**  
15 **the proposal in front of us. But if we had a**  
16 **proposal in front of us that said, look, we got**  
17 **120,000 acre-feet of recharge credits and we**  
18 **want to pump 19,000 acre-feet per year, then,**  
19 **yes, that would have an impact on the aquifer.**

20 Q. I'm going to draw a distinction and we can -- we  
21 can go and read pages from the proposal to help  
22 to clarify this distinction, but I think we're  
23 talking about two different things. On one  
24 hand, we have the City's drought modeling where  
25 they say, we're going to actually need somewhere

1 it's part of the proposal, and maybe it's  
2 a -- maybe it's more of a protection for  
3 the public interest, maybe it's not, and I  
4 think it's important to explore the  
5 different possibilities that could arise  
6 under this proposal. So I'll let it go  
7 ahead.

8 **MR. STUCKY:** Thank you.

9 **BY MR. STUCKY:**

10 Q. So this 120,000 acre-feet cap, you told me a  
11 moment ago that although the City is saying that  
12 we'll need about 50,000 or north of 50,000  
13 acre-feet of water during our modeled eight-year  
14 drought, you told me a moment ago that these  
15 credits can be withdrawn both in the time of a  
16 drought and at other times as well; is that  
17 right?

18 **A. That's correct.**

19 Q. So in other words, as the City is using -- if  
20 the City accumulates 120,000 acre-feet of  
21 credits, this water can be withdrawn, then, at  
22 any time subject to 19,000 acre-feet a year?

23 **A. That's correct.**

24 Q. So then that brings us back to our question,  
25 circle back to our question after this series of

Page 1696

1 objections, if the City is to accumulate 120,000  
 2 acre-feet of credits, do you follow me so far?  
 3 **A. So far.**  
 4 Q. And the City were to withdraw those at a rate of  
 5 19,000 acre-feet per year, subject to  
 6 gradational losses, subject to those gradational  
 7 losses, is there the potential, over the course  
 8 of time, to take 120,000 acre-feet of water out  
 9 of the aquifer?  
 10 **A. Yes.**  
 11 Q. So at least if 120,000 acre-feet of water was  
 12 taken over the course of time, whether it's in a  
 13 time of drought or a different time, there's the  
 14 chance of depleting the aquifer to the tune of  
 15 120,000 acre-feet over the course of time; is  
 16 that true?  
 17 **A. Over the course of time. And at one time, it**  
 18 **was there in 1993.**  
 19 Q. Let me ask you about this 120,000 acre-foot cap.  
 20 Just a moment ago, you said to me, well, the  
 21 City actually only needs just north of 50,000  
 22 acre-feet during the time of a drought. Do you  
 23 recall saying that a moment ago?  
 24 **A. Yes, that -- of the modeled 1 percent eight-year**  
 25 **drought.**

Page 1697

1 Q. If that's all the City needs during an  
 2 eight-year modeled drought, do you believe the  
 3 cap should be closer to 50 or 60,000 acre-feet,  
 4 if that's all they need?  
 5 **A. Well, there's not a cap now, so it's like --**  
 6 **there's not a cap now, the 120 was the space in**  
 7 **the aquifer, so that's why we felt the 120 was**  
 8 **reasonable. But then the recharge credits don't**  
 9 **renew, and so we don't know if we're going to**  
 10 **have a 1 percent drought back to back or if**  
 11 **they're going to be 100 years apart. And so we**  
 12 **felt it justified to have 120, or whatever**  
 13 **the -- you know, we were fine with the 120**  
 14 **because there's no cap right now.**  
 15 Q. Well, I want to clarify one thing you said a  
 16 moment ago. You said the recharge credits,  
 17 quote, don't renew, end quote.  
 18 **A. That's correct.**  
 19 Q. If the City were to accumulate 120,000  
 20 acre-foot -- feet of credits and they withdraw  
 21 in the year 19,000 acre-feet of credits and that  
 22 pulls the number down to 101,000 of acre-feet of  
 23 credits, do you follow?  
 24 **A. Uh-huh, yes.**  
 25 Q. But the City then at that point decided to

Page 1698

1 either inject water into the aquifer or  
 2 accumulate credits through the aquifer  
 3 maintenance credits, the City could get back to  
 4 120,000 acre-feet of credits, correct?  
 5 **A. That's correct.**  
 6 Q. So going back to my question, the 120,000  
 7 acre-feet of credits, is that essentially, then,  
 8 based on your testimony, planning for the  
 9 possibility of two back-to-back 1 percent  
 10 droughts?  
 11 **A. Correct. I mean, that's how the Division of**  
 12 **Water Resources looked at it.**  
 13 Q. But if we were to model a 1 percent drought and  
 14 we discovered, as the City modeled, that they  
 15 only need 50,000 acre-feet of credits and we're  
 16 doubling that, would that be closer to 100,000  
 17 acre-feet of credits?  
 18 **A. Double -- doubling 50 is 100.**  
 19 Q. So my question is if we're trying to base this  
 20 on allowing the City to plan for two  
 21 back-to-back 1 percent droughts, is a cap of  
 22 100,000 acre-feet more appropriate?  
 23 **A. It could be, yes.**  
 24 Q. And if, in fact, the City -- in the City's  
 25 proposal they were only asking for consideration

Page 1699

1 of planning for one 1 percent drought, would you  
 2 agree, then, that if we're just planning for one  
 3 eight-year drought, 50,000 of credits is all  
 4 they would need; is that right?  
 5 **A. According to this proposal, yes.**  
 6 Q. And so if we were just planning for one major  
 7 drought, would you believe that a reasonable cap  
 8 would then be closer to 50,000 acre-feet?  
 9 **A. Well, I don't -- you know, I don't know if a**  
 10 **cap's even necessary in the first place. I**  
 11 **mean, it's part -- it's part of their proposal.**  
 12 **We didn't require a cap in Phase I or Phase II,**  
 13 **but, I mean, if -- if you want to say that we're**  
 14 **going to require a cap and what would be**  
 15 **appropriate, then, yes, whatever's in this**  
 16 **proposal.**  
 17 Q. Do you know at what rate the City has  
 18 accumulated ASR Phase II recharge credits?  
 19 **A. No. I mean, I know that it's been slow. I**  
 20 **think they've got about 6,000 roughly now. But**  
 21 **I'm not -- but I'm not quite sure.**  
 22 Q. Based on the gradational losses that ASR Phase  
 23 II credits are subject to and also the  
 24 gradational losses that were testified to by  
 25 Mr. McCormick, is it possible for the City to

1 accumulate 120,000 acre-foot of credits based  
2 solely on ASA -- ASR Phase II credits alone?  
3 **A. Not with the losses. I mean, you might -- you**  
4 **might max out in a year, but then the losses**  
5 **that -- I mean, the cells leak so ...**  
6 Q. So in other words, the only way that the City  
7 could conceivably get to 120,000 acre-feet of  
8 credits is through this aquifer maintenance  
9 credit proposal. Is that a true statement?  
10 **A. Yes, but then they leak also. They -- they've**  
11 **proposed to have some of those recharge credits**  
12 **go away also.**  
13 Q. Would you agree with me that at the point when  
14 these 120,000 acre-feet of credit are withdrawn  
15 over a course of years at a rate of 19,000  
16 acre-feet a year, would you agree that at least  
17 at that point, there's the potential to cause  
18 impairment to existing wells in the basin  
19 storage area?  
20 **A. Could be but then we've got the condition --**  
21 **we're going to have the condition that if water**  
22 **rights are impacted, not even impaired but**  
23 **impacted, that the City will make them whole.**  
24 Q. Would you also agree with me that at the point  
25 these 120,000 acre-feet of credits are withdrawn

1 domestic wells or other wells are impaired we'd  
2 have a condition in place that the City would  
3 have to do something about that; is that right?  
4 **A. Correct.**  
5 Q. What would the City have to do?  
6 **A. I think it says to make them whole, however they**  
7 **do it, whether they drill them a well, provide**  
8 **them water, something to make them whole.**  
9 Q. Let me ask you this: When we visited last time,  
10 at least in one of the index cells, you told me  
11 that under the City's proposal, the practical  
12 saturated thickness could be closer to 19 or  
13 21 feet, at least in one of those index cells,  
14 based on the monitoring -- City's monitoring  
15 well we discussed. Do you recall that  
16 discussion?  
17 **A. Correct, yes.**  
18 Q. Under that scenario, if -- if we have a  
19 situation where water just isn't available, is  
20 it possible that some wells could dry up and  
21 they couldn't be made whole, pursuant to the  
22 City withdrawing all this water?  
23 **A. Well, yes, I mean, very worst-case scenario but,**  
24 **first of all, the space in the aquifer has**  
25 **already been there at one point in time and**

1 over time, there's the potential to adversely  
2 impact water quality either in the sense of the  
3 migration of the Burrton chloride plume or  
4 otherwise?  
5 **A. It could happen, but, again, those protections**  
6 **are there, and we did not see those types of**  
7 **problems in 1993.**  
8 Q. Would you also agree with me that at the point  
9 this 120,000 acre-feet of credits is withdrawn  
10 over time there would be the potential for  
11 minimum desirable streamflow to be affected?  
12 **A. Yes.**  
13 Q. And if we define public interest in the context  
14 of other irrigation users in the basin storage  
15 area, would you agree with me that at least as  
16 public interest relates to those other users,  
17 this withdrawing 120,000 acre-feet of credits  
18 may not be in the public interest at that point?  
19 **A. Yeah, I -- you know, I didn't see the impact in**  
20 **1993, but if there was an impact, then it would**  
21 **not be in the public interest.**  
22 Q. Just a moment ago on impairment, you mentioned  
23 that, well, if the City is to withdraw 120,000  
24 acre-feet of credits at a rate of 19,000  
25 acre-feet a year over a course of time and if

1 **people weren't impacted then, and the City has**  
2 **the ability to rotate their pumping around.**  
3 **I -- I don't know of a scenario where in this**  
4 **particular Equus Beds well field that the City's**  
5 **going to dry it up. I mean, there's a million,**  
6 **2 million acre-feet of storage, we're talking**  
7 **about 120,000 acre-feet of space in the top of**  
8 **it. Very worst-case situation, yes, but I don't**  
9 **see the City coming in here and operating the**  
10 **well field in such a way that it damages it.**  
11 **Pragmatic approach.**  
12 Q. So what you're doing here, and the City talked  
13 about their results-based form of management, we  
14 talked about that concept in the first days of  
15 this hearing; is that right?  
16 **A. Yes.**  
17 Q. That the City has transitioned to this  
18 results-based form of management, do you recall  
19 that discussion from the very first days of this  
20 hearing?  
21 **A. Yes.**  
22 Q. So what you're saying here is because the City  
23 has transitioned to this results-based form of  
24 management, you're trusting the City, then, to  
25 manage the aquifer in a way that's beneficial to

Page 1704

1 all users, is that what you're saying?  
 2 **A. Yes.**  
 3 Q. Would you at least agree with me, though, that  
 4 in this proposal there's nothing that obligates  
 5 the City to manage the aquifer in that way?  
 6 **A. Yeah, but I -- whether it's the City of Wichita**  
 7 **or even the City of Hays and what they're doing,**  
 8 **I don't see a city investing a lot of money into**  
 9 **a system and then going in and messing it all**  
 10 **up.**  
 11 Q. So here's my question: Are there permit  
 12 conditions that we could put into place that  
 13 would ensure that the City withdraws these  
 14 credits and manages the aquifer in a way that's  
 15 beneficial to all users, are there permit  
 16 conditions one could put in place to that  
 17 effect?  
 18 **A. Yes, we could figure those out, definitely.**  
 19 **Starting out with the aquifer full is very good**  
 20 **for everybody.**  
 21 Q. So do you believe those are permit conditions  
 22 that the Division of Water Resources should  
 23 discuss and should, in fact, be adopted by  
 24 Ms. Owen in this case?  
 25 **A. Well, ultimately, the chief engineer, I mean --**

Page 1705

1 **it's something to discuss, definitely.**  
 2 Q. As you're sitting here today, and I think you  
 3 were looking to a colleague a moment ago, as  
 4 you're sitting here today, are you aware of what  
 5 some of those potential permit conditions could  
 6 be other than ensuring that any effect to other  
 7 existing wells would be corrected?  
 8 **A. No, I -- I don't have any examples other than**  
 9 **the draft conditions that we have. But those**  
 10 **are draft conditions that could be tweaked.**  
 11 Q. So I think what you're saying here is maybe some  
 12 conditions should be put into the City's  
 13 proposal to ensure that the City is going to  
 14 manage the aquifer in a manner like they say  
 15 they will, conducive to all the users. Is that  
 16 what you're saying?  
 17 **A. Yeah, I mean, yeah, we could do -- I mean, it's**  
 18 **in their proposal, the junior water right**  
 19 **holders are protected by law, but if we want to**  
 20 **make it more specific, we can.**  
 21 Q. And would you agree with me that to the extent  
 22 that can be done, that would probably be  
 23 something beneficial?  
 24 **A. I mean, if it puts people at ease, yeah. As**  
 25 **long as they're reasonable, I mean, it needs to**

Page 1706

1 **be something that we would do to any other water**  
 2 **user in the state.**  
 3 Q. All right. I'd like to go ahead and shift gears  
 4 with you for a moment, Mr. Letourneau.  
 5 **PRESIDING OFFICER:** If I can  
 6 interrupt, if you're going to start a new  
 7 line of questioning, it's about 10:20,  
 8 might be a good time for a break. Would  
 9 that disrupt you too much?  
 10 **MR. STUCKY:** No.  
 11 **PRESIDING OFFICER:** Okay. Let's  
 12 take about a ten-minute break. Thanks.  
 13 (Thereupon, a recess was taken;  
 14 whereupon, the following was had.)  
 15 **PRESIDING OFFICER:** Okay. We're now  
 16 back on record and, Mr. Stucky.  
 17 **MR. STUCKY:** Thank you.  
 18 **BY MR. STUCKY:**  
 19 Q. Mr. Letourneau, did the City first bring the  
 20 concept of aquifer maintenance credits to the  
 21 Division of Water Resources' attention back in  
 22 2014?  
 23 **A. It -- it could be. I mean, at sometime they**  
 24 **brought them to us, but I don't remember the**  
 25 **year.**

Page 1707

1 Q. I would ask that you locate the black notebook,  
 2 which I think is already in front of you, the  
 3 City's notebook.  
 4 **A. Yes.**  
 5 Q. And there is a tab, a white tab and it's called  
 6 proposal correspondence in that notebook. And  
 7 if you would, it's numbered as page 16 in that  
 8 proposal correspondence. Would you agree with  
 9 me that these are meeting notes from November 17  
 10 of 2014, and it appears to be a meeting between  
 11 members of the Division of Water Resources and  
 12 members of the City; is that right?  
 13 **A. Yes, that's correct.**  
 14 Q. And at that point, it appears that -- and it  
 15 says these notes were prepared by Brian Meier,  
 16 who is, in fact, in the room; is that right?  
 17 **A. That's correct.**  
 18 Q. And so -- and, of course, Mr. Meier can testify  
 19 to it, but would you agree that these notes  
 20 would accurately reflect what was discussed  
 21 during this meeting?  
 22 **A. Yes.**  
 23 Q. Now, I would like for you to turn now to page 19  
 24 of these -- in the black notebook. At the  
 25 bottom of that page, there's a number 4, and it

1 says, water supply operations strategy and  
2 operational credits. And then it says in  
3 subsection (b), ASR conjunctive use credits.  
4 And it talks about this concept of high water  
5 levels from reduced pumping, and it basically  
6 just outlines the City's aquifer maintenance  
7 credit proposal in the next lines; is that  
8 correct?  
9 **A. That's correct.**  
10 Q. So at that point, was it being called -- just so  
11 I'm clear on the terminology here, at that  
12 point, was it being called an ASR conjunctive  
13 use credit?  
14 **A. Well, that's what this was titled, I mean, at**  
15 **the time we didn't know what -- what we were**  
16 **going to call them.**  
17 Q. But at least, and I see the terminology of  
18 conjunctive use credits, and I could highlight  
19 how many times it's in this document, but at  
20 that point, at least, the Division of Water  
21 Resources, so I'm clear on my terminology, was  
22 calling an aquifer maintenance credit a  
23 conjunctive use credit; is that right?  
24 **A. Well, we weren't -- I mean, that's the**  
25 **terminology that was being discussed, we weren't**

1 meeting, is that right --  
2 **A. That's correct.**  
3 Q. -- you were shown to be at this meeting?  
4 **A. Correct.**  
5 Q. So at least as early as 2014, this concept of  
6 aquifer maintenance credits was being discussed  
7 with the City; is that right?  
8 **A. Yes.**  
9 Q. Can you tell me who from the Groundwater  
10 Management District No. 2 was present at this  
11 meeting?  
12 **A. There was no one there from GMD2.**  
13 Q. Do you know if GMD2 was invited to this meeting?  
14 **A. I don't know.**  
15 Q. When do you think GMD2 first became aware -- do  
16 you know when GMD2 first became aware of the  
17 City's proposal with respect to AMC credits?  
18 **A. No, I don't know.**  
19 Q. Moving back to the regulation change with  
20 respect to K.A.R. 5-12-1(b)(2), what was the  
21 reason for wanting to propose a regulation  
22 change with -- with respect to how the bottoms  
23 would be defined?  
24 **A. Well, I believe we learned a lot at the end of**  
25 **2011 and 2012 and where the levels were and --**

1 **really calling it anything at the time.**  
2 Q. Well, any reference to conjunctive use credits  
3 in these meeting minutes, that would be the same  
4 as a reference to an aquifer maintenance credit;  
5 is that right?  
6 **A. That's correct.**  
7 Q. Is the concept of conjunctive use credits found  
8 anywhere in statute or regulation?  
9 **A. Not in Kansas. I don't know about other states.**  
10 Q. I'd like you to turn back to page 17 in this  
11 proposal correspondence. During this meeting,  
12 it appears to me that there was also a  
13 discussion as shown in number 2, subsection (c),  
14 little (iii) on page 17, there was a discussion  
15 about proposing a regulation change to K.A.R.  
16 5-12-1(b)(2); is that true?  
17 **A. That's true.**  
18 Q. And that regulation, in fact, provides  
19 specific -- specifics on how the bottom of the  
20 basin storage area is to be calculated for ASR  
21 permitting; is that right?  
22 **A. That's correct.**  
23 Q. And, in fact, I read from this notebook. Back  
24 in -- and would you also agree with me, and it's  
25 shown on the prior page, but you were at this

1 **in the aquifer, and like I'd stated earlier**  
2 **about Dale Goter from the City approaching me in**  
3 **the Capitol about the potential of stranding any**  
4 **recharge credits that were accumulated. But**  
5 **then just the timing of this also, we were**  
6 **talking to Dairy Farmers of America in Garden**  
7 **City when they were under construction and**  
8 **coming -- they were going to have a lot of water**  
9 **available after they did the milk processing,**  
10 **and so there was the potential, and it has --**  
11 **nothing has happened of that yet other than the**  
12 **talk of potentially recharge -- doing an aquifer**  
13 **recharge project near DFA, Dairy Farmers of**  
14 **America, plus also there was this, so there**  
15 **was -- there were two discussions happening**  
16 **about lowering -- changing the definition of the**  
17 **minimum index level.**  
18 Q. And so it was this concept of changing how the  
19 minimum index level was defined, those  
20 discussions were occurring as early as 2014; is  
21 that right?  
22 **A. That's correct.**  
23 Q. Were those discussions occurring prior to your  
24 knowledge?  
25 **A. Well, you know, there -- we were -- I would see,**

Page 1712

1 like, Joe Pajor at a water authority meeting or  
 2 something like that and he would discuss them  
 3 with me. But I don't know the exact dates.  
 4 Q. But as far as an official meeting, are you aware  
 5 of a prior official meeting where there is a  
 6 bunch of members from the City and a bunch of  
 7 members from the Division of Water Resources  
 8 present?  
 9 **A. No, not that I'm aware of.**  
 10 Q. So at that point, you were discussing a proposed  
 11 change to that particular regulation, and --  
 12 with the regulation being K.A.R. 5-12-1(b)(2);  
 13 is that right?  
 14 **A. That's correct.**  
 15 Q. Is it true that that regulation and how an index  
 16 level was defined, is it true that that  
 17 regulation was, in fact, changed?  
 18 **A. It was changed, yes.**  
 19 Q. Do you know the year that regulation was  
 20 changed?  
 21 **A. I could look it up, but I'm not quite sure.**  
 22 Q. I'd ask that you turn in your exhibit notebook,  
 23 it would be Volume Number II, Exhibit 22,  
 24 page 5.  
 25 **A. Okay, I'm there.**

Page 1713

1 Q. And I misspoke, there's two different places I  
 2 want to visit about. But it's on page 127 it's  
 3 labeled at the bottom, K.A.R. 5-12-1.  
 4 **MR. STUCKY:** May I approach the  
 5 witness?  
 6 **PRESIDING OFFICER:** Yes.  
 7 **BY MR. STUCKY:**  
 8 Q. Did you find it?  
 9 **A. Yeah, I just -- I only had one hand because of**  
 10 **the microphone.**  
 11 Q. Here we find K.A.R. 5-12-1, and if you turn to  
 12 the last page of this regulation, it says, as  
 13 amended on April 29, 2016. So would you agree  
 14 with me that it was amended in 2016?  
 15 **A. Yes.**  
 16 Q. And, in fact, that amendment was the same  
 17 amendment that was being discussed with the City  
 18 as early as 2014; is that right?  
 19 **A. That's correct.**  
 20 Q. So I want to make sure I'm clear what this  
 21 change was as it relates to the City's proposal.  
 22 Prior to 2016, would you agree with me that the  
 23 basin -- the bottom of the basin storage area  
 24 was defined as the lowest water level that  
 25 occurred in the basin storage area within ten

Page 1714

1 years of filing an ASR application or a longer  
 2 period of time, if needed? Does that sound  
 3 right?  
 4 **A. That sounds right.**  
 5 Q. And would you agree that through this regulation  
 6 change, it was essentially redefined as 20 feet  
 7 above bedrock or an alternatively proposed  
 8 level? Is that essentially what happened?  
 9 **A. Yes.**  
 10 Q. As it relates to your discussions with the City  
 11 and also as it relates to your interpretation of  
 12 this regulation, what does an alternatively  
 13 proposed level mean?  
 14 **MR. OLEEN:** May I ask for  
 15 clarification, Mr. Stucky, where you're  
 16 getting that phrase again, please.  
 17 **MR. STUCKY:** Sure. Let's turn to  
 18 K.A.R. 5-1 -- well, can I go off the record  
 19 just for a minute?  
 20 **PRESIDING OFFICER:** That's fine.  
 21 (Discussion held off the record.)  
 22 **BY MR. STUCKY:**  
 23 Q. If you could turn to K.A.R. 5-1-1(uu).  
 24 **PRESIDING OFFICER:** Are we back on?  
 25 **MR. STUCKY:** Yeah, back on the

Page 1715

1 record.  
 2 **BY MR. STUCKY:**  
 3 Q. There we go. And it's on page 5.  
 4 **A. Okay.**  
 5 Q. (uu), it states, minimum index level means  
 6 20 feet above the bedrock elevation or an  
 7 alternatively proposed minimum elevation for  
 8 storage within a basin storage area or, if the  
 9 basin storage area is subdivided, a smaller  
 10 subdivided area. Would you agree that I read  
 11 the current definition correctly?  
 12 **A. Yes.**  
 13 Q. So my question is what does alternatively  
 14 proposed minimum elevation mean as used in this  
 15 context?  
 16 **A. Well, minimum index level means 20 feet above**  
 17 **bedrock or an alternatively proposed minimum**  
 18 **elevation for storage, I mean, it's -- it can be**  
 19 **something different than 20 feet.**  
 20 Q. Okay. And how -- how is this alternatively  
 21 proposed level defined? In other words, how  
 22 does the Division of Water Resources determine  
 23 if an alternatively proposed minimum index level  
 24 is reasonable, how is that -- how would you make  
 25 that determination?

1 **A. Well, I'm sure our modelers would look at it to**  
2 **make sure it didn't cause an impact.**  
3 Q. Well, I guess my question is is there any type  
4 of other definitions or other regulations to  
5 look to to try and determine if -- what defines  
6 an alternatively proposed minimum index level?  
7 **A. No.**  
8 Q. So similar to -- so basically you would know it  
9 when you see it; is that right?  
10 **A. Yeah, I think that's a good way of putting it, I**  
11 **mean, if -- here comes a different proposed**  
12 **level, if it -- if it appears reasonable, then**  
13 **we would consider it reasonable.**  
14 Q. So the City of Wichita proposed this regulation  
15 change; is that right?  
16 **A. Well, I mean, they asked us to do it, they**  
17 **didn't propose it; they felt like they needed to**  
18 **do it. But then again too, we had the other --**  
19 **the other aquifer storage and recovery**  
20 **potentially looming in southwest Kansas.**  
21 Q. So when this regulation change occurred, the  
22 City of Wichita saw it as beneficial to them to  
23 redefine how a minimum index level would be  
24 constructed; is that right?  
25 **A. Yes, they felt it appropriate that they move the**

1 **bottom so they didn't strand recharge credits.**  
2 Q. I think you said that there's another ASR  
3 project being considered in southwest Kansas, is  
4 that what you said?  
5 **A. I don't know if it still is. It was when Dairy**  
6 **Farmers of America was being constructed.**  
7 Q. As you're sitting here today, are there any  
8 other pending permits or existing permits with  
9 respect to an ASR recharge facility in the State  
10 of Kansas other than the City of Wichita?  
11 **A. No.**  
12 Q. At the time when this regulation change was  
13 sought, were there any other ASR recharge  
14 permits being requested elsewhere in the state?  
15 **A. No.**  
16 Q. And so this concept with the dairy farmers or  
17 the dairy association, that was just in concept;  
18 is that -- is that right?  
19 **A. That was in concept, but it would not have**  
20 **worked under the current rules.**  
21 Q. Did anyone besides the City testify in support  
22 of this regulation change? Do you know when  
23 this regulation was changed?  
24 **A. I attended the hearing and, no, not -- not that**  
25 **I'm aware of. I don't recall anybody other than**

1 **the City.**  
2 Q. Did anyone testify in opposition to this  
3 regulation being changed?  
4 **A. They did, there was a lot of misunderstanding**  
5 **and there was -- there was -- there was**  
6 **opposition.**  
7 Q. Did the GMD2, the District, did they testify in  
8 opposition to the regulation change?  
9 **A. If I recall correctly, yes.**  
10 Q. Do you recall who the other parties were that  
11 testified in opposition?  
12 **A. You know, I want to say like Harvey County Farm**  
13 **Bureau and things, but, again, there was a lot**  
14 **of misunderstanding. This is a statewide rule,**  
15 **and folks felt that this was a local rule. But**  
16 **it did affect folks locally, but it was -- there**  
17 **was a lot of misunderstanding at the time.**  
18 Q. So I think you answered another question I had,  
19 this is a statewide regulation, then?  
20 **A. That's correct.**  
21 Q. And despite that opposition, I think it suffices  
22 to say that the chief engineer approved of that  
23 regulation change at that time; is that right?  
24 **A. That's correct.**  
25 Q. At the time that this regulation change was

1 made, was there any discussion of individual  
2 well log data at that time?  
3 **A. Not that I -- not that I recall.**  
4 Q. Previously, you -- you indicated in your  
5 deposition, I believe, that it's your opinion  
6 that the City's proposal complies with current  
7 regulations and statutes; is that -- is that  
8 right?  
9 **A. That's correct.**  
10 Q. And, in fact, in your deposition, just for a  
11 clear record, that's in several different  
12 places, specifically on page 88, lines 19  
13 through 21, you talk about how the City -- I'm  
14 sorry, scratch that. You talk about how the  
15 Division of Water Resources had an official  
16 letter opining about how this proposal is legal  
17 and that you agreed with that letter. Would  
18 you -- would you agree that I'm accurately  
19 stating your testimony?  
20 **A. Yes.**  
21 Q. And so there was this letter from Chief Engineer  
22 Barfield, and he said, we've considered the  
23 statutes and regulations and we believe that  
24 aquifer maintenance credits are legal; is that  
25 right?

Page 1720

1 **A. That's correct.**  
 2 Q. And, in fact, I believe you stated in your  
 3 deposition that you also looked at those  
 4 statutes and regulations to help determine the  
 5 lawfulness of aquifer maintenance credits; is  
 6 that right?  
 7 **A. That's correct.**  
 8 Q. I think this question is already answered, but  
 9 I'm going to go ahead and ask it anyway, is it  
 10 still your position that aquifer maintenance  
 11 credits are legal?  
 12 **A. Yes.**  
 13 Q. And the reason for that is you believe that  
 14 aquifer maintenance credits are consistent with  
 15 ASR regulations; is that right?  
 16 **A. That's correct.**  
 17 Q. I'd ask that you turn to Exhibit 22 in our  
 18 notebook in front of you, it's Volume II.  
 19 Actually, I guess that's already open, should be  
 20 open.  
 21 **A. Uh-huh.**  
 22 Q. If you could turn with me to K.A.R. 5-12-1(a),  
 23 and it's found on pages 127 through 128 of these  
 24 regulations. Let me know when you're on those  
 25 pages.

Page 1721

1 **A. I'm there, 5-12-1.**  
 2 Q. Is K.A.R. 5-12-1 essentially the overarching  
 3 regulation or the basis, the fundamental  
 4 regulation that allows for aquifer storage and  
 5 recovery?  
 6 **A. Yes.**  
 7 Q. And, in fact, if you were trying to define or  
 8 look under what circumstances a recharge  
 9 proposal is legal, is this the regulation you  
 10 would look to?  
 11 **MR. OLEEN:** Objection, I think we're  
 12 kind of getting close to asking for legal  
 13 opinion.  
 14 **MR. STUCKY:** May I speak to that?  
 15 **PRESIDING OFFICER:** Yes.  
 16 **MR. STUCKY:** In his deposition,  
 17 which you've already ruled it can be  
 18 considered part of his official -- his  
 19 official expert report --  
 20 **PRESIDING OFFICER:** Uh-huh.  
 21 **MR. STUCKY:** -- in his deposition,  
 22 and I can go through chapter and verse,  
 23 page by page all the places it was  
 24 discussed how these regulations apply --  
 25 first of all, throughout his deposition, he

Page 1722

1 discusses how these regulations apply  
 2 throughout the deposition, number one.  
 3 Number two, he also stated in prior  
 4 testimony and in his deposition that he  
 5 applies these regulations and statutes to  
 6 his everyday work. And, number three, he's  
 7 rendering an opinion on the legality of the  
 8 City's proposal. So it's well within the  
 9 province of this witness's testimony.  
 10 **MR. OLEEN:** I believe his opinion  
 11 was -- in the official written testimony  
 12 that Mr. Letourneau submitted on behalf of  
 13 DWR, he referenced a letter that the chief  
 14 engineer had drafted and issued in  
 15 conjunction with consultation with legal  
 16 counsel. I understand that there might be  
 17 kind of a gray area here in that we have  
 18 officials in the world of water who apply  
 19 these laws, and so they do have some  
 20 familiarity with them, but I'm aware of the  
 21 legal arguments that GMD and Intervenors  
 22 wish to make in certain ways and they've  
 23 made -- I believe they made those arguments  
 24 in their motion to dismiss and motion for  
 25 summary judgment. And I would just ask

Page 1723

1 Madam Hearing Officer to keep legal  
 2 arguments for lawyer-written briefs at the  
 3 end of these proceedings.  
 4 Mr. Letourneau has been on this hot  
 5 seat, I think the longest witness at this  
 6 point, and, you know, he's certainly  
 7 subject to questioning by virtue of his  
 8 position with the DWR and the opinions that  
 9 he has submitted as his written testimony,  
 10 but he's not an attorney, he's not here  
 11 with assistance of counsel to go through  
 12 analysis and interpretation in great detail  
 13 of these regs and statutes, even though  
 14 that's part of what he does in his job.  
 15 But when he does it in his job, he has  
 16 someone like me or he has someone like  
 17 Ms. Murray or he has someone else with whom  
 18 he can consult, and he doesn't have that as  
 19 he's sitting there in the chair.  
 20 **MR. STUCKY:** And then part of my  
 21 response to that is, you know, we have this  
 22 official letter that's being advocated that  
 23 also outlines the legality of this  
 24 proposal, he applies regulations to his  
 25 everyday job, and I think it's prejudicial

1 to the District and to other parties for  
2 there to be an official position as far as  
3 what these legalities are and introduce  
4 these letters and not allow us to ask  
5 questions with respect to what's already  
6 been adopted in deposition testimony,  
7 through the letter of the chief engineer  
8 and otherwise. And, again, he's testified  
9 over and over again that he understands  
10 these regulations, he's applied them in his  
11 everyday job, I think asking some basic  
12 questions about them is fair.

13 **PRESIDING OFFICER:** I understand  
14 both arguments, I think what -- I think  
15 what we should do with this, it is a rather  
16 unique situation, but I do think it's  
17 appropriate to ask along the lines of in  
18 his official duties did he look at these  
19 and how did he apply them, rather than an  
20 overall opinion about what is or isn't  
21 legal, because then we're limiting it to  
22 what did he personally do in relation to  
23 this proposal. Can we go forward with  
24 that?

25 **MR. STUCKY:** Yes, we can.

1 **MR. OLEEN:** -- I mean, I think I'm  
2 right in saying that titles of statutes and  
3 regulations have no legal significance.  
4 **PRESIDING OFFICER:** Can you try to  
5 rephrase, and, again, I think it's more  
6 along the lines of exactly what did he do  
7 in the process of any evaluation he did or  
8 involvement he had with this proposal and  
9 evaluating it and did he view these and  
10 what were his conclusions and how they  
11 relate to the proposal?

12 **BY MR. STUCKY:**

13 Q. Let's go to the heart of the language in this  
14 regulation and how you applied it. It says, an  
15 operator may store water in an aquifer storage  
16 and recovery system under a permit to  
17 appropriate water for artificial recharge if the  
18 water appropriated is source water. With  
19 respect to an aquifer maintenance credit, where  
20 does the aquifer storage occur?

21 **A. In the basin storage area.**

22 Q. And how does the storage occur?

23 **A. By the accounting method, the -- the gallon is**  
24 **taken to town, but then the gallon is accounted**  
25 **for in the basin storage area.**

1 **PRESIDING OFFICER:** Mr. Oleen?

2 **MR. OLEEN:** Yes.

3 **MR. STUCKY:** I can ask all my  
4 questions in that context.

5 **BY MR. STUCKY:**

6 Q. So K.A.R. 5-12-1, you indicated, I think a  
7 minute ago, and I might have lost my train of  
8 thought, but I think you said that you would  
9 have looked at that regulation as you applied it  
10 to the City's aquifer maintenance credit  
11 proposal; is that right?

12 **A. That's correct. That's correct, sorry.**

13 Q. As you applied this regulation to the City's  
14 aquifer maintenance credit proposal, I assume  
15 that you would have looked at the title of this  
16 regulation; is that right?

17 **A. Correct.**

18 Q. As you applied it to the City's aquifer  
19 maintenance credit proposal, what did you  
20 consider storage to mean in that title?

21 **MR. OLEEN:** May I respectfully  
22 object on relevance because, again, this  
23 kind of gets into statutory and regulatory  
24 construction and --

25 **PRESIDING OFFICER:** Uh-huh.

1 Q. As it's used in the context of this regulation,  
2 how did you -- with an aquifer maintenance  
3 credit, where is the recovery system, how does  
4 that apply?

5 **A. It's a recharge credit, so any recovery system**  
6 **that's there to recover a recharge credit, it's**  
7 **the same if it's aquifer maintenance credit or a**  
8 **physical recharge credit.**

9 Q. Where does -- with respect to an aquifer  
10 maintenance credit, how does artificial recharge  
11 occur as it's defined in this regulation, or  
12 it's used in this regulation?

13 **A. Well, if you go to the definition of recharge**  
14 **credit -- they have to tie together, and so let**  
15 **me get back to recharge credit.**

16 Q. And for the record, is that found in K.A.R.  
17 5-22-1(c)?

18 **A. When I get there, yeah, I'll tell you. So**  
19 **recharge credit is defined in K.A.R. 5-1-1 and**  
20 **then (mmm). A recharge credit means the**  
21 **quantity of water that is stored in the basin**  
22 **storage area that is available for subsequent**  
23 **appropriation for beneficial use by the operator**  
24 **of the aquifer storage and recovery system. And**  
25 **so when our attorneys looked at it, they just**

Page 1728

1 **felt whether it's a physical recharge credit or**  
 2 **an aquifer maintenance credit, it's a recharge**  
 3 **credit. And so any recovery that is laid out in**  
 4 **K.A.R. 5-12-1, it's for a recharge credit.**  
 5 Q. As it's used in 5 -- in that regulation you just  
 6 defined, what is the -- how did you apply the  
 7 term subsequent in that definition?  
 8 **A. Well, David, we -- the ASR was already there,**  
 9 **and we didn't go in and pick this proposal apart**  
 10 **word by word. And so this was a modification to**  
 11 **an already approved aquifer storage and**  
 12 **recovery. So we -- we didn't pick apart the**  
 13 **word storage, and we didn't pick apart the word**  
 14 **subsequent and things. This was a recharge**  
 15 **credit that's already laid out into the rules**  
 16 **that we felt, and so this is another form of a**  
 17 **recharge credit, and so that -- that's how we**  
 18 **applied it, if that makes sense.**  
 19 Q. I think so. So as we go back to K.A.R. 5-12-1,  
 20 it says that it's going to be artificial  
 21 recharge if the water appropriated is source  
 22 water. And so I'm clear, with respect to an  
 23 aquifer maintenance credit, there's no source  
 24 water actually injected, physically injected  
 25 into the aquifer itself; is that right?

Page 1729

1 **A. That's correct.**  
 2 Q. And so at least as it relates to these  
 3 regulations, there is no source water that's  
 4 subsequently taken back out of the aquifer with  
 5 respect to an aquifer maintenance credit; is  
 6 that right?  
 7 **A. That's correct, I believe so.**  
 8 **MR. OLEEN:** I -- I object because I  
 9 think this is, again, getting too close to  
 10 legal conclusions, and I wish opposing  
 11 counsel would make their legal arguments in  
 12 a legal brief.  
 13 **PRESIDING OFFICER:** Okay. Yeah,  
 14 let's move -- let's -- I'm not comfortable  
 15 with that question either so ...  
 16 **BY MR. STUCKY:**  
 17 Q. With respect to the definition of a recharge  
 18 credit, would you agree with me that a recharge  
 19 credit is defined in K.A.R. 5-22-1(ee) and also  
 20 in K.A.R. 5-1-1(mmm) in the context of water  
 21 actually put into the aquifer, would you agree  
 22 that that's how it's defined?  
 23 **A. (mmm) just says -- (mmm) states, again, I'll**  
 24 **read it again, recharge credit means the**  
 25 **quantity of water that is stored in the basin**

Page 1730

1 **storage area that's available for subsequent**  
 2 **appropriation for beneficial use by the operator**  
 3 **of the aquifer storage and recovery. And so for**  
 4 **the record, we -- we reviewed that recharge**  
 5 **credit definition to see if we needed to make a**  
 6 **modification to it, and we didn't feel it was**  
 7 **necessary because it didn't say water that was**  
 8 **injected in the aquifer. It was water that's**  
 9 **stored in the aquifer. And, David, you'd have**  
 10 **to tell me the other reference to look at.**  
 11 Q. The other one was K.A.R. 5-22-1(ee).  
 12 **A. That's a GMD regulation, where is that located?**  
 13 Q. That's in Number 24 in your notebook.  
 14 **A. Okay.**  
 15 Q. And (ee), in fact, uses the same definition.  
 16 **A. Okay.**  
 17 Q. It says, means the quantity of water that is  
 18 stored in the basin storage area and that is  
 19 available for subsequent appropriation for  
 20 beneficial use by the operator of the aquifer  
 21 storage and recovery. So --  
 22 **A. Okay.**  
 23 Q. -- in other words, as you're sitting here today,  
 24 you didn't conduct any kind of careful analysis  
 25 of what the term subsequent means or how that

Page 1731

1 may apply to the City's proposal; is that right?  
 2 **A. No, but it -- to me, to answer that, available**  
 3 **for subsequent appropriation meaning we would**  
 4 **appropriate that with a different permit. I**  
 5 **believe that's what that means. And, you know,**  
 6 **for the record, we -- there's no definition of**  
 7 **AMCs, there's no definition of physical recharge**  
 8 **credit. We -- we gave a sincere review of that,**  
 9 **our legal staff did, and we don't mind changing**  
 10 **rules, we do that. And so we just didn't feel**  
 11 **it necessary to make a modification to our rules**  
 12 **based on this particular proposal.**  
 13 Q. Also in K.A.R. 5-22-1, in (c), there's a  
 14 definition of aquifer storage, is there not?  
 15 **A. Yes, there is.**  
 16 Q. And it says, it means the act of storing water  
 17 in the unsaturated portion of an aquifer by  
 18 artificial recharge for subsequent diversion and  
 19 beneficial use. Would you agree with that --  
 20 that I read it accurately?  
 21 **A. That's correct.**  
 22 Q. Did you construe for the purposes of defining  
 23 the legality of aquifer maintenance credits what  
 24 it means to -- what this act of storing water  
 25 means?

1 **A. No, I didn't construe anything.**  
2 Q. As -- if you were trying to determine what  
3 unsaturated portion of the aquifer meant, would  
4 that mean the portion of the aquifer where water  
5 doesn't exist?  
6 **A. Yes.**  
7 Q. And so in other words, the storage contemplates  
8 that water would be put in this unsaturated  
9 portion; is that right?  
10 **A. That's correct.**  
11 **MR. OLEEN:** Objection, I don't --  
12 I'm sorry, Mr. Stucky, objection, I -- I  
13 don't think the witness can testify to what  
14 the regulation contemplates. I think  
15 that's a legal conclusion.  
16 **MR. STUCKY:** I can ask him if that's  
17 how he interprets the regulation.  
18 **PRESIDING OFFICER:** Okay.  
19 **BY MR. STUCKY:**  
20 Q. Is that how you interpret the regulation?  
21 **A. Yes, but I have to add to that because part of**  
22 **the aquifer maintenance credit was not requiring**  
23 **the City to unsaturate the portion of the**  
24 **aquifer just to put water back into it. So**  
25 **you're -- you're correct, I mean, the**

1 and consists of an apparatus for diversion,  
2 treatment, recharge, storage, extraction, and  
3 distribution. So with respect to the City's  
4 aquifer maintenance proposal, is it your view,  
5 as you looked at that definition, that all  
6 aspects of that definition are met?  
7 **A. Yes.**  
8 Q. And I guess my question is as it applies to this  
9 definition, for example, if no source water is  
10 actually physically injected into the aquifer,  
11 how does one store or recover source water from  
12 the aquifer?  
13 **A. By -- by the accounting of a recharge credit.**  
14 Q. But the source water has already been sent  
15 directly to the City with respect to an aquifer  
16 maintenance credit; is that right?  
17 **A. That's correct.**  
18 Q. And, again, no source water is put in the  
19 aquifer, correct?  
20 **A. Under -- under the scenario of an AMC, source**  
21 **water is not put in the aquifer.**  
22 Q. And so at least you would agree with me that  
23 there's no storage of source water and then  
24 recov -- subsequent recovery of that source  
25 water from the aquifer; is that right?

1 **unsaturated portion of the aquifer is the**  
2 **dewatered space in the aquifer to put a physical**  
3 **recharge credit in. We just didn't want to**  
4 **require the City to unsaturate that to put water**  
5 **back in.**  
6 Q. Okay. And I think you've answered my question,  
7 then. With respect to an aquifer maintenance  
8 credit, it's possible to accumulate aquifer  
9 maintenance credits when the aquifer or the  
10 basin storage area is fully saturated; is that  
11 right?  
12 **A. That's correct.**  
13 Q. So in other words, with respect to the aquifer  
14 maintenance credit, we don't have to put water  
15 into an unsaturated portion of the aquifer,  
16 per se; is that right?  
17 **A. That's correct.**  
18 Q. Let's turn now back to aquifer storage and  
19 recovery system, that definition, it's in (d),  
20 right below. It says, aquifer storage and  
21 recovery system means a physical infrastructure  
22 that meets the following conditions. And  
23 there's a couple conditions, it says, is  
24 constructed and operated for artificial  
25 recharge, storage, and recovery of source water

1 **A. If it's the physical source water you're talking**  
2 **about, I agree with that.**  
3 Q. And if one is trying to accumulate -- has  
4 accumulated an aquifer maintenance credit and  
5 then that water is being withdrawn, I think it's  
6 your testimony that the source of that water  
7 then is not, in fact, source water from the  
8 Little Arkansas River; the source of that water  
9 is water left in storage that was not pumped.  
10 Is that right?  
11 **A. That's correct.**  
12 Q. Let's turn, then, to the mechanics of the City's  
13 proposal. You said in your deposition that you  
14 are, quote -- the City's proposal allows for,  
15 quote, to avoid a step just to pump a gallon to  
16 replace it with a gallon, end quote.  
17 **A. That's correct.**  
18 Q. Is that still your position today?  
19 **A. Yes.**  
20 Q. So as we track a gallon of the City's water,  
21 what happens is with an aquifer maintenance  
22 credit, the City sends a gallon of water  
23 directly to the City for municipal use and then  
24 at the same time a credit is accumulated where  
25 they can withdraw another gallon of water out of

Page 1736

1 the aquifer at a later time because that water  
 2 was left in storage; is that right?  
 3 **MR. OLEEN:** I respectfully object  
 4 because I think we went through this entire  
 5 line of questioning; I know it's been  
 6 awhile, but I think we went through that  
 7 entire line of questioning with Wichita's  
 8 Mr. Pajor and I know we went through it  
 9 with Mr. Letourneau. And he's been on that  
 10 seat a long time, and we've all been here a  
 11 long time, and I prefer not to go through  
 12 that entire line of questioning again.  
 13 **PRESIDING OFFICER:** It does sound  
 14 familiar, are we going somewhere different?  
 15 **MR. STUCKY:** Yeah, I'm summing up,  
 16 actually, for what it's worth. And short  
 17 of a few objections, I'll sum up relatively  
 18 quickly.  
 19 **PRESIDING OFFICER:** Okay.  
 20 **BY MR. STUCKY:**  
 21 Q. So that is -- was your prior -- is that your  
 22 testimony?  
 23 **A. Well, it's a gallon -- okay. They divert water**  
 24 **from the Little Ark, treat it through the ASR**  
 25 **infrastructure, take it to a point to see if**

Page 1737

1 **there's water -- space available in the basin**  
 2 **storage area, and if not, then they take it**  
 3 **directly to town. But I see it as the same**  
 4 **gallon of water. I don't see it as two separate**  
 5 **gallons. It's the same as if it was a**  
 6 **physical -- it would be a physical recharge**  
 7 **credit if space was available.**  
 8 Q. But if space isn't available, if a gallon of  
 9 water is sent to the City and then when that AMC  
 10 credit is withdrawn, another gallon of water can  
 11 be taken out of the aquifer. Is that a true  
 12 statement?  
 13 **A. At a later date, yes.**  
 14 Q. So for each gallon of water the City sends to --  
 15 sends directly to the City for municipal use  
 16 after treating it, they can then subsequently  
 17 take another gallon out of the aquifer based on  
 18 the water left in storage; is that right?  
 19 **A. Well, it's not quite a gallon because they leak**  
 20 **a little bit, but yes. Yes.**  
 21 Q. So do you believe that because the City  
 22 essentially is able to -- well, let me ask you  
 23 this: So they're essentially pumping a gallon  
 24 and then taking another gallon later; is that  
 25 right?

Page 1738

1 **A. Yes.**  
 2 Q. And so do you believe that the City is  
 3 essentially double dipping or getting a two for  
 4 one, if you will, through this proposal?  
 5 **A. I -- I do not because the City has the ability**  
 6 **to pump the hole in the aquifer. Today they**  
 7 **could go out there and pump the gallon just to**  
 8 **replace it with a gallon, and that's what**  
 9 **they're not doing. Well, they have to do that**  
 10 **now, but this proposal is saying that they're**  
 11 **not going to pump a gallon just to replace it**  
 12 **with a gallon.**  
 13 Q. In your deposition, and just so it's for  
 14 everyone's benefit, on page 68 of your  
 15 deposition, Mr. Rolfs essentially asked you that  
 16 exact same question, he said in his question  
 17 that -- that you were accumulating these aquifer  
 18 maintenance credits and sending water directly  
 19 to the City at the same time. And he  
 20 essentially, I think, asked you if this was in  
 21 essence, double dipping, and I believe your  
 22 answer was that it was technically, if approved,  
 23 I think it could happen, I think was your  
 24 answer. Does that sound like the line of  
 25 questioning you were asked?

Page 1739

1 **A. Yeah, it does, but I think I probably answered**  
 2 **that wrong because I don't think it's double**  
 3 **dipping. And I'm not trying -- I always try to**  
 4 **be very consistent with my answers, but I**  
 5 **don't -- I don't think it's double dipping**  
 6 **because the City can pump the hole. They --**  
 7 **they could run that loop, they could take it out**  
 8 **of the aquifer, send it to town, and put**  
 9 **these -- these -- the water into the aquifer**  
 10 **so ...**  
 11 Q. And I think you've already testified, I believe,  
 12 but I -- you know, it was long enough ago, you  
 13 said that when the -- through a basin storage  
 14 area, the City can also recharge the aquifer  
 15 even when it's full; is that right?  
 16 **A. They can in one of the recharge pits.**  
 17 Q. Okay. I'm going to wrap this up for everyone's  
 18 benefit, I'm going to use the whiteboard.  
 19 **A. How do we preserve this for the record?**  
 20 Q. I just want to sum -- sum this up.  
 21 **MR. OLEEN:** And so I don't interrupt  
 22 you when you get deep into it, Mr. Stucky,  
 23 I'm going to object, I don't know what this  
 24 whiteboard exercise -- I don't know the  
 25 benefits of that, it's certainly not

1 something that can be preserved for the  
2 record, for Madam Hearing Officer, your  
3 later review, the chief engineer's later  
4 review, some other court's later review.  
5 We're not talking about the scene of an  
6 accident here, I don't understand and nor  
7 do I think it's appropriate to use a  
8 whiteboard. Maybe some explanation about  
9 how it's relevant to sum up things.  
10 Actually, why are we summing up things,  
11 this is not a closing argument, this is  
12 Mr. Letourneau on cross-examination as  
13 well?  
14 **PRESIDING OFFICER:** Mr. Stucky.  
15 **MR. STUCKY:** What I'd like to do is  
16 I'd like to outline what he said with  
17 respect to the City's ASR proposal and I  
18 want to outline the differences with  
19 respect to the AMC proposal, and I think it  
20 would be easy for everyone to visualize if  
21 it's on a whiteboard. We put things on the  
22 screen previously in this hearing and  
23 it's -- there's public in the room and I  
24 think it beneficial to have it on the  
25 whiteboard so we can see.

1 statements as we first came into this  
2 hearing process.  
3 **MR. OLEEN:** But, I mean, Mr. Stucky  
4 says that he's written them down, and maybe  
5 he wrote them down accurately, but other  
6 counsel doesn't know and can't confirm  
7 that. What we know the witness said is  
8 what will be produced in the transcript.  
9 And so I object to trying to have an  
10 attorney characterize testimony of previous  
11 witnesses in the course of some sort of  
12 closing argument exercise.  
13 And we have a few people in the room,  
14 it's significantly dwindled, what was  
15 previously shown on the screen up top were  
16 documents that -- that had already been  
17 created and that the parties had seen  
18 before, and this is something that we're  
19 creating ad hoc right now, and so I think  
20 it's different in that way too.  
21 **PRESIDING OFFICER:** I'm going to --  
22 afraid I'm going to have to side with  
23 Mr. Oleen and Mr. McLeod. I know you've  
24 taken great pains to be prepared to do that  
25 and I regret that, but this does seem to be

1 **MR. MCLEOD:** If that's the  
2 explanation, I will raise my own objection  
3 at this point for the City. That all would  
4 have been splendidly -- splendidly done  
5 because they had Mr. Letourneau's  
6 deposition for a long time, could have  
7 generated that entire exhibit prehearing,  
8 and had that been done, I would not object  
9 to it. But -- but having not done it, I  
10 think it's not proper to do it on the  
11 whiteboard today.  
12 **MR. OLEEN:** I obviously have  
13 concerns about and am not okay with  
14 Mr. Stucky purporting to summarize DWR's  
15 witness in Mr. Stucky's words on a  
16 whiteboard. That can all be summarized in  
17 a legal brief after we have our great  
18 stenographer's transcript from these  
19 proceedings.  
20 **MR. STUCKY:** And my response to  
21 Mr. McLeod's objection is that some of  
22 these statements that I wrote down from  
23 prior testimony were given during the  
24 testimony in this hearing. I didn't have  
25 the benefit of having those prior

1 something nobody's had an opportunity to  
2 see before or be ready to respond to. And,  
3 again, I think you'll have opportunity to  
4 make the points that you would otherwise  
5 make so ...  
6 **MR. STUCKY:** And for the record,  
7 there was no pain caused to me, Mr. Boese  
8 brought the whiteboard so ...  
9 **PRESIDING OFFICER:** Thank you,  
10 Mr. Boese.  
11 **MR. STUCKY:** So really no bother to  
12 me.  
13 **BY MR. STUCKY:**  
14 Q. I'll just finish my line of questioning very,  
15 very quickly without a whiteboard, then. With  
16 respect to an ASR Phase II recharge credit  
17 that's accumulated, I think you, and you can  
18 agree or disagree with me as far as what your  
19 prior testimony was, I think you previously  
20 said, number one, water is taken during overflow  
21 from the Little Arkansas River with a surface  
22 water permit; is that right?  
23 **A. Correct.**  
24 Q. Number two, I think you said it's treated at the  
25 Bentley ASR facility, right?

Page 1744

1 **A. Yes.**  
 2 Q. And number three, you said it's injected into  
 3 the aquifer?  
 4 **A. Correct.**  
 5 Q. And number four, I think you've said that the  
 6 artificial recharge credit is then created based  
 7 on the beneficial use obtained for physical  
 8 recharge; is that right?  
 9 **A. Correct.**  
 10 Q. And then number five, you said that it -- that  
 11 this water, the source water is stored in the  
 12 aquifer for future use subject to any losses, I  
 13 think is what you stated. Does that sound  
 14 right?  
 15 **A. Yes, close.**  
 16 Q. And then number six, you indicated that it's  
 17 diverted to the City for municipal use under a  
 18 different permit; is that right?  
 19 **A. That's correct.**  
 20 Q. So we had six steps here with a ASR II recharge  
 21 credit. I wasn't able to write these on the  
 22 whiteboard for your benefit, but would you agree  
 23 that with respect to an aquifer maintenance  
 24 credit, steps three through five would not  
 25 exist; is that true? And I'll refresh those,

Page 1745

1 step three was water injected into the aquifer,  
 2 step number four was artificial recharge credit  
 3 created based on a beneficial use for physical  
 4 recharge, and number five was this source water  
 5 is stored in the aquifer for future use, would  
 6 you agree that those three steps, at least,  
 7 would not exist with respect to an aquifer  
 8 maintenance credit?  
 9 **A. A physical -- number three, if I recall,**  
 10 **physical would not occur, that's correct**  
 11 **physical recharge would not occur. But a re --**  
 12 **a recharge credit happens in that number four,**  
 13 **but then number five is correct, source water is**  
 14 **not taken to town.**  
 15 Q. Okay. And let me clarify number four,  
 16 number four, you said that at the time with a  
 17 ASR II credit, the recharge credit is created at  
 18 the point that water is injected into the  
 19 aquifer, that's what you stated?  
 20 **A. That's correct.**  
 21 Q. But number four would not apply to an aquifer  
 22 maintenance credit because this recharge credit  
 23 is actually created at the point the water is  
 24 treated and sent directly to the City; is that  
 25 right?

Page 1746

1 **A. That's right.**  
 2 Q. And, in fact, number five also would not exist  
 3 with respect to an aquifer maintenance credit  
 4 because no source water is stored in the  
 5 aquifer; is that right?  
 6 **A. That's correct.**  
 7 Q. And really there should have been another step,  
 8 there's no ability, then, to take that source  
 9 water out of the aquifer and use it at a later  
 10 time; is that right?  
 11 **A. That's correct, because it's a recharge credit.**  
 12 **It's the recharge credit that they can take out**  
 13 **and use.**  
 14 Q. So at least as it relates to the steps or the  
 15 mechanics of how a recharge credit is  
 16 accumulated pursuant to ASR Phase II, you would  
 17 agree with me that there's several of those  
 18 steps that would not be found with the  
 19 accumulation of an aquifer maintenance credit;  
 20 is that right?  
 21 **A. That's right.**  
 22 **MR. STUCKY:** No further questions.  
 23 **PRESIDING OFFICER:** Ms. Wendling.  
 24 //  
 25 //

Page 1747

1 **CROSS-EXAMINATION**  
 2 **BY MS. WENDLING:**  
 3 Q. All right. Mr. Letourneau, I believe you spoke  
 4 about your roles and responsibilities, and those  
 5 include the annual reporting process; is that  
 6 correct?  
 7 **A. Well, I -- I'm not responsible for the aquifer**  
 8 **storage and recovery reporting, but annual water**  
 9 **use reports are part of my program, yes. Or our**  
 10 **program, I should say, I'm sorry.**  
 11 Q. I will possibly use the wrong terminology  
 12 occasionally.  
 13 **A. That's okay.**  
 14 Q. What is the purpose of the annual water use  
 15 report?  
 16 **A. For a regular appropriation, annual water use**  
 17 **reporting has been a permit condition, I**  
 18 **believe, since the late '50s, but it wasn't**  
 19 **until 1988 that water use reporting became**  
 20 **required by state statute. And we require an**  
 21 **annual water use report of any -- any active**  
 22 **water right, any approved water right so we know**  
 23 **how much water is being used, because you can't**  
 24 **manage the resource appropriately if you don't**  
 25 **know how much water is being used. Plus the**

1 **development period of a permit, we have to know**  
2 **the annual water use reporting so we know the**  
3 **maximum year of record during the development or**  
4 **perfection period so we can issue the**  
5 **certificate which quantifies that particular**  
6 **property right. So it's very important data.**

7 Q. All right. And what happens if someone fails to  
8 report?

9 **A. If someone fails to report, they are subject to**  
10 **a civil penalty. And recently, I think two**  
11 **years ago, the legislature changed that**  
12 **particular statute that if someone fails -- they**  
13 **fail to file the report and we don't get it,**  
14 **then they are subject to a suspension. So not**  
15 **only is there a civil penalty but we can also**  
16 **suspend the use of water until we receive the**  
17 **annual water use report.**

18 Q. Okay. And do you know based on your experience  
19 with the water use reports how the reported  
20 quantity used compares to the authorized  
21 quantity?

22 **A. Yes, I can speak to averages for the whole**  
23 **state. The certificates are based on a maximum**  
24 **year of record, the maximum one out of five**  
25 **years, so you're going to need that maximum**

1 **application and a change application.**

2 Q. And other than a new appropriation of water, is  
3 there any other reason for a new application?

4 **A. No. Whether -- whether it's temporary, that's**  
5 **new, term permit, that's new, and a new**  
6 **appropriation of water is new so ...**

7 Q. And do all water rights come with permit  
8 conditions?

9 **A. Yes, now they do.**

10 Q. Now they do?

11 **A. Yeah.**

12 Q. Previously they didn't?

13 **A. I'm sorry that I stalled, I thought about**  
14 **temporary permits, but, yes, sometimes we will**  
15 **put a permit condition on a temporary for a**  
16 **meter. Now term permits have conditions, but**  
17 **yes --**

18 Q. Okay.

19 **A. -- they all have conditions.**

20 Q. And we talked about the difference -- well, you  
21 were also responsible for change applications,  
22 correct?

23 **A. That's correct.**

24 Q. And you mentioned a difference between a change  
25 and a modification, and I wasn't quite clear on

1 **amount of water 20 percent of the time. So,**  
2 **normally, folks, especially like in the**  
3 **irrigation world, they use approximately on**  
4 **average 65 to 70 percent of their authorized**  
5 **quantity each year.**

6 Q. Did I hear you correctly saying you use -- water  
7 users use their maximum amount only about  
8 20 percent of the time?

9 **A. Well, that's how the perfection period is built**  
10 **up, one out of five years, that maximum year of**  
11 **record. And so, yes, for -- the statistics show**  
12 **that folks need that one out of five or two out**  
13 **of ten years.**

14 Q. Okay. And in your roles and responsibilities,  
15 you also review new applications for water  
16 appropriation?

17 **A. Yes.**

18 Q. And I think we discussed the factors that you  
19 consider in your previous testimony; is that  
20 correct?

21 **A. That's correct.**

22 Q. Are there public hearings held for new  
23 appropriations or new applications?

24 **A. There can be. Very seldom but, yes, I mean,**  
25 **sometimes we do have a public hearing for a new**

1 that. Can you tell me what is a change and what  
2 is a modification?

3 **A. Yes, under the statute, change applications are**  
4 **filed for three specific reasons. We can -- the**  
5 **statute lays out you can change the point of**  
6 **diversion, the place of use, or use made of**  
7 **water. And if you're asking about the proposal**  
8 **here today, it's about changing permit**  
9 **conditions, and the change statute does not**  
10 **allow a change for permit conditions. It's only**  
11 **a change in point of diversion, place of use,**  
12 **and use made of water.**

13 Q. So use made of water, can you tell me what the  
14 uses are?

15 **A. Yeah, pretty -- I think so. Artificial**  
16 **recharge, domestic -- they're alphabetical in**  
17 **our rules, but there's 13 different beneficial**  
18 **uses of water, and artificial recharge,**  
19 **domestic, irrigation, industrial, recreational,**  
20 **municipal, thermal exchange, which is a fancy**  
21 **word for heat pump, and then hydropower is**  
22 **another one. And I probably won't -- I'd have**  
23 **to look at the rule to lay out all the 13.**

24 Q. So if I'm changing between those 13 uses, that's  
25 when I file a change application?

Page 1752

1 **A. If you're changing, say, from irrigation to**  
 2 **municipal, that does require a change in use**  
 3 **made of water, that's correct.**  
 4 Q. But irrigation to livestock does not?  
 5 **A. Yes, irrigation to livestock is stock watering.**  
 6 **And I'm sorry I didn't mention that particular**  
 7 **beneficial use, but, yes, that requires a**  
 8 **change.**  
 9 Q. Okay.  
 10 **A. Now, if it's domestic use, someone can just**  
 11 **dismiss their irrigation water right but retain**  
 12 **that well for domestic purposes, and that**  
 13 **doesn't require a change application.**  
 14 Q. But municipal use to ASR use, would that change  
 15 of use require a change application?  
 16 **A. Yes, if you were changing from municipal use to,**  
 17 **it's artificial recharge, then, yes, that would**  
 18 **require a change.**  
 19 Q. Okay. And do you recall how it was determined  
 20 that a change application was -- or a new  
 21 application, neither of those were needed in  
 22 this -- for this proposal?  
 23 **A. Yes, because we weren't -- they weren't asking**  
 24 **for any new water, so that -- it was not a new**  
 25 **application. Now, with that said, there were**

Page 1753

1 **some new applications filed for additional**  
 2 **recharge credits, but those then were withdrawn,**  
 3 **the City requested that those be withdrawn and**  
 4 **dismissed. So then, again, we're not changing**  
 5 **point of diversion, place of use, or use made of**  
 6 **water, so that's why we didn't -- a change**  
 7 **application is not required.**  
 8 Q. Okay. Do you recall if there was a specific  
 9 discussion on whether such an application was  
 10 needed or if permitting the proposal document  
 11 was sufficient?  
 12 **A. Not amongst this group. I had somebody hit me**  
 13 **up about it in the Capitol, I don't remember the**  
 14 **legislator. But when I explained -- when I**  
 15 **explained it to them, they fully understood.**  
 16 Q. All right. And what is the purpose of the fees  
 17 associated with the new or change application?  
 18 **A. The fees, so our funding is state -- a little**  
 19 **bit of state water plan, fees, and state general**  
 20 **fund. And the legislature puts the fees in**  
 21 **the -- for new apps, changes, term permits,**  
 22 **temporaries, and then a fee for field**  
 23 **inspections to help offset the state general**  
 24 **fund costs.**  
 25 Q. But there's not a fee for these miscellaneous

Page 1754

1 uncharacterized modifications?  
 2 **A. That's -- that's correct. Now, there's a fee**  
 3 **for the determination of interest in a water**  
 4 **right. And those are the fees I can think of**  
 5 **off the top of my head.**  
 6 Q. Okay.  
 7 **A. But ...**  
 8 Q. And you also talked about the administration of  
 9 water rights for minimum desirable streamflow?  
 10 **A. Correct.**  
 11 Q. And that's presented in two specific areas?  
 12 **A. Well, we do -- for groundwater to surface water,**  
 13 **we have one specific area right now, with the**  
 14 **potential of another one in 2021. We do minimum**  
 15 **desirable streamflow with surface water rights**  
 16 **every year that those flows drop below the MDS**  
 17 **levels, I'll call them, but, yes, we do MDS**  
 18 **orders every year it gets dry.**  
 19 Q. So if I understand correctly, then, groundwater  
 20 use can impact minimum desirable streamflow?  
 21 **A. Yes, it can.**  
 22 Q. But you have only identified that occurring in  
 23 two specific cases?  
 24 **A. We have enough data in those two areas to**  
 25 **administer the groundwater pumping related to**

Page 1755

1 **the streamflow. And it's very narrow. Like the**  
 2 **Republican River alluvium is very attached to**  
 3 **the streamflow, and we've got the modeling to**  
 4 **show how to do groundwater administration in the**  
 5 **Republican River. And now we've got the data in**  
 6 **the Rattlesnake Creek to show the impact of the**  
 7 **groundwater pumping to the minimum -- minimum**  
 8 **desirable streamflow.**  
 9 Q. So if there were modeling to show that the  
 10 pumping considered by this proposal would impact  
 11 minimum desirable streamflow, what actions would  
 12 be taken?  
 13 **A. And I actually think the modeling has been done**  
 14 **and what the impact was, but if there -- if**  
 15 **there was -- and we want to say that MDS under**  
 16 **the statute's real-time administration, so you'd**  
 17 **want to look at the groundwater pumping that had**  
 18 **almost an instantaneous impact to the surface**  
 19 **water flow. Based on those conditions, yes, we**  
 20 **could do MDS administration.**  
 21 Q. And can you explain to me what MDS  
 22 administration is?  
 23 **A. There is -- there's a statute in the Water**  
 24 **Appropriation Act that lays out minimum**  
 25 **desirable streamflows in a ton of river basins**

1 **at each month of the year, and those are target**  
2 **flows for USGS gages along those rivers. And**  
3 **the amounts are in cubic feet per second. And**  
4 **703(a), I believe, is -- K.S.A. 82a-703(a), I**  
5 **think, Tessa, is --**

6 Q. Will you check GMD's Exhibit 21 in Volume II to  
7 confirm that I'm looking at the right section?

8 A. That -- that's correct.

9 Q. Okay.

10 A. And it starts K.S.A. 82a-703(a), (b), and then  
11 (c) lays out the watercourses that I had talked  
12 about.

13 Q. Okay. Sorry to interrupt you. So you were  
14 talking about how you would administer MDS.

15 A. Yes, if flows drop below these values, then we  
16 issue orders on water rights that are considered  
17 junior to that 1984 priority date, and then they  
18 cease pumping until the streamflow comes back  
19 for two weeks, I believe.

20 Q. And it's every single water right that's junior?

21 A. Every single surface water right that's junior.

22 And in the Republican River, it's every single  
23 surface and groundwater right that is junior.

24 But then to complicate things, in the -- in the  
25 Republican River, we have enough data there to

1 We have a proposal of proposed pumping, but we  
2 don't yet -- we have some modeling that shows  
3 streamflow could be impacted. How would you  
4 plan on addressing that if it is conclusively  
5 shown that the pumping impacts MDS?

6 A. Well, we would have to look at the modeling and  
7 look at the impact of -- the location and the  
8 impact of the groundwater pumping to actually  
9 make a determination if water rights  
10 administration would make a real-time -- a  
11 real-time effect on streamflow.

12 Q. And while you're doing that determination,  
13 surface water rights post 1984 would be  
14 suspended?

15 A. If -- if -- yes, we would do MDS administration  
16 on the surface water rights, and they're --  
17 yeah, they're administered until the streamflows  
18 come back.

19 Q. And does that include a bank storage well?

20 A. You know, that's a really good question, bank  
21 storage wells are considered surface water. But  
22 if the bank storage well is full, I imagine the  
23 stream's pretty full.

24 Q. All right. Doesn't matter then.

25 A. Yeah.

1 show how often people were on during MDS and off  
2 during MDS. So we've established what we call a  
3 consent agreement in our rules. And the folks  
4 were on 32 percent of the time when MDS  
5 administration was occurring, so they can enter  
6 into a consent agreement for 32 percent of their  
7 authorized quantity for a certainty of water  
8 supply during an MDS administration.

9 Q. And certainty of water supply during the  
10 administration means they would still be able to  
11 do some reduced pumping?

12 A. Correct.

13 Q. Okay. So with that, how does one -- how does  
14 DWR go about determining whether it's the  
15 surface water pumping or groundwater pumping  
16 that's impacting MDS? If you just turn off  
17 surface water rights, that doesn't help if it's  
18 an actual groundwater right that's impacting  
19 MDS?

20 A. Well, in the Republican River, we know that both  
21 surface water and groundwater rights are  
22 impacting the streamflow. And so that's why we  
23 issue orders on both surface and groundwater.

24 Q. Okay. In, for example, the Equus Beds and the  
25 Little Arkansas River, you don't have that data.

1 Q. Okay. When you are reviewing new applications,  
2 what role does need play in your decision  
3 whether or not to appropriate water?

4 A. Does what play, I'm sorry?

5 Q. Need?

6 A. Need?

7 Q. The water you would need for that?

8 A. Well, yeah, that -- that's a big role. Anybody  
9 that would apply for -- any -- any use of water  
10 is a beneficial use, and so actually folks get  
11 approval, but then they actually develop and  
12 perfect what is needed. And so they might get  
13 an application for, say, 100 gallons, and then  
14 as they move through the development period and  
15 only need 50 gallons, then the certificate is  
16 issued for 50, and then that other 50 becomes  
17 available for somebody else to appropriate.

18 Q. Okay. So at the time you're applying for the  
19 water permit, your need doesn't have to be  
20 certain?

21 A. Well, we have to have -- the need has to be  
22 reasonable. There has to be a -- the  
23 application has to be reasonable when it comes  
24 to us, and then if it meets all the criteria and  
25 reasonable, it can be approved, but then it's

Page 1760

1 **developed based on the actual need.**  
 2 Q. Okay. During your previous testimony, you said  
 3 that the City couldn't access the recharge  
 4 credits when they needed them. Do you recall  
 5 that testimony?  
 6 **A. Yes, that's correct.**  
 7 Q. Can you explain to me what you meant by needed  
 8 in that context?  
 9 **A. Right, under the current levels that -- or the**  
 10 **1993 levels, we learned from the '11 and '12**  
 11 **drought that everybody's pumping, not just the**  
 12 **City's, but the domestics, the irrigators,**  
 13 **anybody else in the Equus Beds well field drew**  
 14 **that water table down very close to that 1993**  
 15 **level. With that said, I don't know if it ever**  
 16 **got below that, but it was very, very close and**  
 17 **it create -- created concerns for the City.**  
 18 **Below that current 1993 level, they cannot**  
 19 **access the recharge credits. And so if it's**  
 20 **below that level and they're in a drought and**  
 21 **they need the recharge credits, that's when they**  
 22 **could not access them. And I think that's what**  
 23 **I meant by that.**  
 24 Q. All right. So need in terms of needing their  
 25 water supply?

Page 1761

1 **A. Correct, uh-huh.**  
 2 Q. So by lowering the index levels, the City is now  
 3 able to access more of that water when they need  
 4 it?  
 5 **A. Correct.**  
 6 Q. And that's water that they are not presently --  
 7 would not presently be able to access with the  
 8 existing minimum index level?  
 9 **A. Well, they can access their native water rights**  
 10 **below that level, but they can't access recharge**  
 11 **credits.**  
 12 Q. Have you quantified the amount of water the City  
 13 would be able to access with the lowered index  
 14 level?  
 15 **A. 19,000 acre-feet if they -- if they can build**  
 16 **that much credit.**  
 17 Q. Under the existing permit?  
 18 **A. Correct.**  
 19 Q. I'm talking about just the change in index level  
 20 alone, because they can always apply for more  
 21 permits, so have you quantified the difference  
 22 between the existing minimum index level and the  
 23 proposed minimum index level?  
 24 **A. I -- I don't know if we did.**  
 25 Q. Does having a water right guarantee the holder

Page 1762

1 of that right access to water whenever they want  
 2 that water?  
 3 **A. No.**  
 4 Q. So you talked about needing to have a reasonable  
 5 quantity of water for your application. How  
 6 does -- how is the reasonable quantity  
 7 determined?  
 8 **A. For -- it's different for the different**  
 9 **beneficial uses of water. So, like, irrigation,**  
 10 **it's acre-foot per acre based on your region of**  
 11 **the state. For stock watering, it's up to**  
 12 **15 gallons per head per day for a confined**  
 13 **feeding operation of cattle, 35 gallons per head**  
 14 **per day for a dairy. For cities, it's gallons**  
 15 **per person per day based on a projected growth.**  
 16 Q. For the City's reasonable use, how did you  
 17 incorporate water customers or utility  
 18 customers, or is it limited to this population  
 19 of that municipality?  
 20 **A. Well, part of the projection for a city is its**  
 21 **people, its industrial users, and then any other**  
 22 **use that they might have, whether it be golf**  
 23 **courses, recreational use, but it's -- it's**  
 24 **everything that is encompassed in that city.**  
 25 Q. And does all of the -- is all of that

Page 1763

1 categorized as municipal use, or is it  
 2 separately categorized for the portion that's  
 3 industrial or recreational?  
 4 **A. It's all umbrellaed under municipal use.**  
 5 Q. And that also includes -- municipal use includes  
 6 any customers the City of Wichita might choose  
 7 to sell the water?  
 8 **A. That's correct.**  
 9 Q. Regardless of the use of that customer?  
 10 **A. That's -- that's correct. I'm trying to think**  
 11 **if we have -- I don't -- I know Wichita doesn't,**  
 12 **but I don't know if we've got any municipality**  
 13 **that has, like, a stand-alone golf course or**  
 14 **something. But I think it's all umbrellaed**  
 15 **under municipal.**  
 16 Q. So if the City of Wichita had water rights for  
 17 irrigation purposes, hypothetically the City of  
 18 Wichita owned farmland, is that water use for  
 19 irrigation purposes subject to the reasonable  
 20 limits for irrigation or reasonable limits for  
 21 municipal use?  
 22 **A. For irrigation. Under that scenario, it's**  
 23 **irrigation.**  
 24 Q. Okay. And the same thing, if the City of  
 25 Wichita has a pool that uses water for

1 recreational use, is that subject to the  
2 reasonable quantity for recreation or for  
3 municipal use?  
4 **A. Now that -- under that scenario, it's under the**  
5 **municipal umbrella.**  
6 Q. How would one know which reasonable use is going  
7 to apply under municipal use if irrigation is  
8 irrigation rules and rec pools are municipal  
9 rules?  
10 **A. Tessa, I may have misunderstood, I thought that**  
11 **you said that the City owned farm ground under**  
12 **that scenario for irrigation.**  
13 Q. Uh-huh.  
14 **A. So that's a stand-alone irrigation permit in our**  
15 **eyes.**  
16 Q. Okay.  
17 **A. But if it's -- if it's, say, the water park in**  
18 **Wichita, that's under -- that's serviced by the**  
19 **distribution system of the City, so that's the**  
20 **umbrella -- so that would be the connection, the**  
21 **common distribution system of the City. That**  
22 **would be the municipal use.**  
23 Q. So an industrial facility that's under the City  
24 of Wichita common distribution system falls  
25 under reasonable municipal use, not reasonable

1 industrial use?  
2 **A. That's correct.**  
3 Q. And how does drought planning fit into  
4 reasonable -- a reasonable use for drought  
5 planning, how does -- how is that ...  
6 **A. Well, we hope that somebody plans for a drought.**  
7 **I mean, we get -- we get phone calls, City of**  
8 **Florence most recent, you know, they're out of**  
9 **water, they didn't plan for a drought, so we're**  
10 **hoping that municipalities plan for a drought,**  
11 **and so that -- that's to be part of the**  
12 **reasonable -- when they're justifying an**  
13 **application, that would be part of it, we would**  
14 **hope.**  
15 Q. Okay. So the use -- using water for a drought  
16 falls under the generic municipal umbrella as  
17 well?  
18 **A. Yes.**  
19 Q. And if I am applying for an irrigation permit,  
20 am I also able to factor in drought when I need  
21 that appropriation?  
22 **A. Yeah, when we do irrigation, it's the net**  
23 **irrigation requirement of -- it's the maximum**  
24 **irrigation needed in that county based on, I**  
25 **believe, USDA numbers; it's the Kansas**

1 **irrigation Guide is what we use, and I believe**  
2 **those are USDA numbers. And that is the maximum**  
3 **needed, and so that's when we'll set up the max**  
4 **needed for irrigation, approve it, and then**  
5 **that's when they develop the maximum year one**  
6 **out of five years, so that does help with**  
7 **drought.**  
8 **With that said, though, in '11 and '12, the**  
9 **irrigators got behind because of double**  
10 **cropping, and it just was very, very brutal. So**  
11 **they actually needed additional water, and so**  
12 **that's when we developed the drought term**  
13 **permit. But then we made modifications to the**  
14 **MYFA statute to help with the irrigators.**  
15 **Irrigators can make adjustments on short-term,**  
16 **they can make short-term planning decisions, and**  
17 **so that's a pretty good drought tool for**  
18 **irrigation. Not for a municipality, though.**  
19 Q. So if an irrigator wants to plan for a drought,  
20 they use the MYFA tool?  
21 **A. Well, if they get in a bind because of the**  
22 **drought they use the MYFA tool. Hopefully,**  
23 **we've set up their water rights on a maximum**  
24 **year of record that they have enough water most**  
25 **of the time for a drought.**

1 Q. But you said the maximum year of record is one  
2 out of five years, correct?  
3 **A. Correct, but they have that quantity every year.**  
4 **That -- that quantity is established based out**  
5 **of one out of five years, but they have that**  
6 **quantity every year.**  
7 Q. And for -- what the City's proposal is the  
8 quantity of water they would need 1 out of  
9 100 years for this 1 percent drought?  
10 **A. Well, it's -- it's three out of eight years in a**  
11 **1 percent drought.**  
12 Q. Okay. And from what I understood, you use the  
13 annual water use reporting to ensure compliance  
14 with the reasonable quantity; is that correct?  
15 **A. If -- if we're calling the authorized quantity**  
16 **reasonable, then, yes, compliance with the**  
17 **authorized quantities.**  
18 Q. When would the authorized quantity not be  
19 reasonable?  
20 **A. It -- it always is, yep.**  
21 Q. And for -- because I recently had the privilege  
22 of submitting one, if you're doing a livestock  
23 water use reporting, do you report number of  
24 head, type of animal by month, by location?  
25 **A. As a secondary to that annual water use report.**

Page 1768

1 **The primary, though, is the meter readings from**  
 2 **each well. But then if -- if, say, a meter goes**  
 3 **down, or something, we ask for that secondary**  
 4 **information so we can determine an estimated**  
 5 **quantity based on head per day.**  
 6 Q. So the head per day is not required?  
 7 **A. Well, not if somebody has good meter data, then**  
 8 **we don't follow up on the secondary.**  
 9 Q. You don't follow up but it's still submitted?  
 10 **A. Correct.**  
 11 Q. Okay. I was going to say I wasted my time  
 12 presenting that.  
 13 **A. Did you have good meter readings?**  
 14 Q. Yes.  
 15 **A. Okay. Thank you for that extra data, though,**  
 16 **because to add to that, not to tie us up, we use**  
 17 **that water use data to make sure that another**  
 18 **new application that may come in is reasonable**  
 19 **because we compare those numbers to their peers.**  
 20 **That's what we -- that's another use of our**  
 21 **annual water use information.**  
 22 Q. So I believe you have a considerable amount of  
 23 data for irrigation and livestock use based on  
 24 these water use reports, would you agree?  
 25 **A. Well, every beneficial use we do.**

Page 1769

1 Q. So help me understand what type of information  
 2 you have on municipal use that is similar to the  
 3 number of head by month, by location?  
 4 **A. Municipal use on their annual water use reports,**  
 5 **we have the detail for each well or pump site,**  
 6 **then we have detail on their distribution**  
 7 **system. We've got raw water diverted under**  
 8 **their rights by month, then raw water purchased**  
 9 **by month, then raw water sold by month, and then**  
 10 **we actually have a breakdown of the industrial**  
 11 **users in that distribution system. And we also**  
 12 **ask for the residential and commercial data by**  
 13 **month and then the water provided free, because**  
 14 **with that particular matrix we can determine the**  
 15 **unaccounted for water for a municipality because**  
 16 **of leaks or slow customer meters.**  
 17 **Then we also ask for the number of each**  
 18 **type of hookup, then we ask for the population.**  
 19 **And add to that, then, we ask for the amount of**  
 20 **water that's treated and then discharged. And**  
 21 **so we -- and then a breakdown, then, of detail**  
 22 **for every wholesale customer by month. And so**  
 23 **we've got extremely detailed information on**  
 24 **municipal use in Kansas.**  
 25 Q. Do you feel certain that municipal use is

Page 1770

1 reasonable?  
 2 **A. Yes.**  
 3 Q. And the proposed use for the AMCs is all  
 4 categorized as municipal use; is that correct?  
 5 **A. To use the recharge credits, yes, that's --**  
 6 **that's considered municipal use. Accumulating**  
 7 **them is considered artificial recharge.**  
 8 Q. So based on our earlier example where the City  
 9 of Wichita has a field that they irrigate, AMCs  
 10 cannot be used to irrigate?  
 11 **A. If it's an irrigation water right, that's**  
 12 **correct. But if it's an irrigation system**  
 13 **within their common distribution system, they**  
 14 **could.**  
 15 Q. So AMCs could be used to operate the City's  
 16 fountains?  
 17 **A. Yes.**  
 18 Q. To your knowledge, are all of these water rights  
 19 issued to the City municipal use water rights?  
 20 **A. Well --**  
 21 Q. Or storage, aquifer storage?  
 22 **A. Yes.**  
 23 Q. Is it possible that an authorized quantity or a  
 24 water right exceed the reasonable use  
 25 limitation?

Page 1771

1 **A. I -- I don't know how that could occur. I don't**  
 2 **know.**  
 3 Q. For -- if I have a stock watering water right  
 4 that is authorized for 100 acre-feet, but based  
 5 on the number of livestock I have in that area  
 6 it -- a reasonable quantity would allow, would  
 7 say, no, you can use 200 feet but I'm only  
 8 authorized for 100?  
 9 **A. Then you couldn't use more than 100 acre-feet.**  
 10 Q. Okay. And if we turn that scenario around where  
 11 I'm authorized for 100 acre-feet but the number  
 12 of live -- I don't have any livestock that year,  
 13 so my reasonable use would be zero?  
 14 **A. Correct.**  
 15 Q. And so I would not be allowed to use my  
 16 authorized amount because I didn't have any  
 17 livestock?  
 18 **A. Correct, you can't -- you can't use -- you have**  
 19 **to use that water for its beneficial purpose.**  
 20 Q. And beneficial use, is that -- that's the list  
 21 of 13 items?  
 22 **A. Yes, Kansas has 13 beneficial uses of water. I**  
 23 **should count them.**  
 24 Q. I believe that is in K.A.R. 5-1-1 --  
 25 **A. Correct.**

1 Q. -- that we've been in earlier, Exhibit 22. Do  
2 you want to flip to the definition of beneficial  
3 use, I believe it's (o)?  
4 **A. I sure hope it's 13. Okay.**  
5 **PRESIDING OFFICER:** Uh-oh.  
6 **A. What'd they add?**  
7 **BY MS. WENDLING:**  
8 Q. Do you see storage listed as one of the uses for  
9 beneficial use?  
10 **A. No, storage is not.**  
11 Q. Okay. And --  
12 **A. It's actually 14, for the record, there's 14**  
13 **beneficial uses of water.**  
14 Q. All right. So in storing potentially 120,000  
15 acre-feet of water in the basin storage area,  
16 how is that considered a beneficial use if  
17 storage is not listed as a beneficial use?  
18 **A. That would be -- you can store water for a**  
19 **beneficial use, and this is no different than a**  
20 **reservoir. You can have storage in a reservoir**  
21 **for municipal use, recreational use, for**  
22 **industrial use. And so they can store water in**  
23 **this basin storage area for municipal use.**  
24 Q. Does the concept of storing water for future  
25 beneficial use apply equally to all water uses?

1 Q. And we've talked about their native water rights  
2 being roughly 40,000 acre-feet per year; is that  
3 correct?  
4 **A. In the Equus Beds well field, yes.**  
5 Q. And also the ability to withdraw 19,000 or  
6 19,500, one of the two, acre-feet of water in  
7 recharge credits?  
8 **A. When they accumulate that amount of recharge**  
9 **credits, yes.**  
10 Q. Okay. And then the City would also have water  
11 rights from Cheney Reservoir; is that correct?  
12 **A. That's correct.**  
13 Q. And do you happen to know that quantity?  
14 **A. I believe it's 60,000 acre-feet. I can't --**  
15 **it's 60 or 70,000, I can't remember.**  
16 Q. Okay. And then they also have a permit that  
17 allows them to withdraw water from the Little  
18 Arkansas River -- divert water from the Little  
19 Arkansas River; is that correct?  
20 **A. That's correct.**  
21 Q. And if I said that was roughly 45,000 acre-feet,  
22 does that sound correct?  
23 **A. I don't know. I don't.**  
24 Q. Are you familiar with their permit to divert  
25 water from the Little Arkansas?

1 **A. Yes, yes, I believe so. I mean, you have to**  
2 **store it before you can use it, that's how I can**  
3 **see it -- that being equal for all beneficial**  
4 **uses. Say if you've got a right for irrigation**  
5 **but your source is storage in a reservoir, you**  
6 **have to store it in that reservoir first before**  
7 **it becomes available for irrigation. And so**  
8 **same -- this is the same with the recharge**  
9 **credits, they have to store the recharge credits**  
10 **before they're available for municipal use.**  
11 Q. So I'm irrigating and I know this year I'm not  
12 using my full water appropriation, can I pump  
13 that water to store in my water tower for next  
14 year when I think I'll need it?  
15 **A. What I would do is apply for a MYFA, and that**  
16 **way under a multi-year flex account you would**  
17 **have that ability to use that in the future, up**  
18 **to five times authorized.**  
19 Q. But could I build my own water tower to store my  
20 appropriated water right?  
21 **A. Yeah, I don't see why you couldn't.**  
22 Q. In your role administering water appropriation  
23 rights, are you familiar with water -- Wichita's  
24 water rights generally?  
25 **A. Yes, I think so.**

1 **A. Yes, I -- yeah, I know there's a series of**  
2 **permits, but I don't know the authorized**  
3 **quantity off the top of my head.**  
4 Q. Okay. So if we were to add up all those  
5 numbers, the 40,000 in native water rights,  
6 19,000 in recharge credits, 50 -- or 60 to  
7 70,000 from Cheney, and 45,000 from the Little  
8 Arkansas River, can you do that math in your  
9 head by any chance?  
10 **A. I can do it.**  
11 Q. Do you happen to know the City's annual water  
12 use roughly?  
13 **A. 60 to 70,000, I believe.**  
14 Q. Which roughly matches exactly their water rights  
15 from Cheney; is that correct?  
16 **A. Correct.**  
17 Q. So then the additional roughly 100,000 acre-feet  
18 in water rights, if you look at the native water  
19 rights, recharge credits, and Little Arkansas  
20 River, exceeds their typical annual reported  
21 use?  
22 **A. Yes.**  
23 Q. And with that, it's still considered a  
24 reasonable authorized quantity for the City?  
25 **A. Yes, because two of those sources that you**

Page 1776

1 referenced, the surface water from the Little  
 2 Ark and Cheney, are not available during a  
 3 drought. And so we hope that most  
 4 municipalities have multiple sources in case  
 5 they do get into a drought situation where water  
 6 is not available in their surface water systems.  
 7 Q. Is there any point in time where the authorized  
 8 quantity would exceed a reasonable amount for a  
 9 municipality?  
 10 A. I don't -- I don't think so, I don't -- I don't  
 11 know of an example of that.  
 12 Q. So the City could seek, you know, 500,000  
 13 acre-feet in water, and that would still be  
 14 considered reasonable?  
 15 A. No, we'd have to line up what the City is  
 16 requesting with population demands, municipal  
 17 demands -- or demands of the municipality. We  
 18 had a former person that just said an applicant  
 19 cannot come in and ask for blue sky, they have  
 20 to have the appropriate justification for  
 21 quantities.  
 22 Q. All right. And in this case, the drought  
 23 modeling is that justification?  
 24 A. Yes, but then there's no additional quantity  
 25 being asked for from the City; it's a

Page 1777

1 different -- it's a different source of quantity  
 2 but not an overall arching additional quantity.  
 3 Q. Okay. And we talked about the annual water use  
 4 reporting, and if someone fails to use their  
 5 full appropriation in year one, that's fine. At  
 6 what point does nonuse become an issue for a  
 7 water right holder?  
 8 A. There's no partial abandonment in the State of  
 9 Kansas, and so once you have established your  
 10 water right and you're actively putting water to  
 11 beneficial use within the terms and conditions  
 12 and limitations of that water right, it's not  
 13 subject to any forfeiture. Now, if you've got  
 14 total nonuse and you are in an area of Kansas  
 15 that's still open to new appropriations and you  
 16 do not have due and sufficient cause for nonuse,  
 17 then the statute says the water right is subject  
 18 to forfeiture through abandonment after five  
 19 consecutive years of nonuse without due and  
 20 sufficient cause for nonuse. But we've got a  
 21 list of due and sufficient causes for nonuse  
 22 that we pretty much went to all of the reasons  
 23 that people reported for nonuse, and you have to  
 24 try really hard in Kansas to forfeit a water  
 25 right through abandonment.

Page 1778

1 Q. Can you explain the rule of perfection with the  
 2 water right?  
 3 A. Absolutely. So very clear in Kansas law, you  
 4 can apply for what's reasonable, and if it meets  
 5 the criteria, then you are approved for a permit  
 6 to appropriate water for a beneficial use. Now,  
 7 you've got to complete the diversion works under  
 8 the law. Then once you start putting water to  
 9 beneficial use, the first time a drop of water  
 10 hits the ground, you've developed a water right,  
 11 but it is not yet quantified.  
 12 So you've got five years to perfect or  
 13 develop, but then we will even grant an  
 14 extension in time, the rules allow that, for --  
 15 to provide an opportunity to perfect and develop  
 16 a water right until that water right holder then  
 17 feels they've got a maximum year of record,  
 18 then, to write the certificate on. And once we  
 19 write the certificate, then that's your  
 20 quantified property right. So you apply for  
 21 what's reasonable, but then you get a  
 22 certificate based on your actual use in a  
 23 maximum year of record.  
 24 Q. And while I'm perfecting, I'm bound by the  
 25 reasonable quantity condition?

Page 1779

1 A. You're bound by the authorized quantity.  
 2 Q. Okay. So if it's a wet year, I have an  
 3 irrigation water right, I don't need to water my  
 4 crops every day, but I'm going to just so that I  
 5 have that documented water use, am I allowed to  
 6 do that?  
 7 A. That happens. As long as the water doesn't  
 8 leave the place of use, then we consider that  
 9 not a waste of water. So that is the biggest  
 10 use it or lose it in Kansas right there is I'm  
 11 going to maximize my permit one year and get  
 12 the -- get the full benefit so we write the  
 13 certificate. But that -- that's legal to do.  
 14 Q. And I could also in the same scenario where I  
 15 have irrigation rights dig a hole in my ground  
 16 and just start filling this pond for one given  
 17 year so that I can maximize my water use?  
 18 A. Well, what's the pond for? See, the irrigation  
 19 water right's got to be used for irrigation,  
 20 which is watering crops. So filling a pond is  
 21 not irrigation, so that --  
 22 Q. Could I grow algae or something in my pond?  
 23 A. Well, yeah, I don't know.  
 24 Q. Okay. All right. And if I fail to perfect my  
 25 right, that quantity could be appropriated to

1 someone else?  
2 **A. It can be if that area is still open to new**  
3 **appropriation.**  
4 Q. Okay. All right. You were maybe not directly  
5 involved but familiar with the Phase I and Phase  
6 II approvals, correct?  
7 **A. Correct.**  
8 Q. And Mr. Stucky asked you a series of questions  
9 about the regulatory changes to 5-1-1 and  
10 5-1-12, I believe -- or 5-12-1.  
11 **A. Uh-huh.**  
12 Q. And did you have an involvement in proposing  
13 those regulatory changes?  
14 **A. I was part of the team, yes.**  
15 Q. And how -- who initially proposed those  
16 regulatory changes, do you recall?  
17 **A. Well, the City approached us after the '11 and**  
18 **'12 drought and then we had the Dairy Farmers of**  
19 **America under construction. So it was the chief**  
20 **engineer that ultimately proposed the changes.**  
21 Q. And you mentioned that there was a public  
22 hearing and there were several concerns?  
23 **A. Yes, absolutely.**  
24 Q. But you don't recall the specifics?  
25 **A. Well, I mean, it was -- yeah, it was going to**

1 Q. All right. You don't recall if there was a  
2 public hearing on the regulatory changes?  
3 **A. Oh, yeah, no, there was a public hearing, yes.**  
4 Q. Okay. But you don't recall the comments made  
5 during that hearing?  
6 **A. Well, recall generally that folks were concerned**  
7 **about Wichita dewatering the aquifer.**  
8 Q. Do you recall if there were a number of local  
9 groups, Kansas Farm Bureau, Kansas Livestock  
10 Association, GMDs that participated in that?  
11 **A. I remember, I believe, Sedgwick and Harvey**  
12 **County Farm Bureaus, but I don't know about --**  
13 **and I know Farm Bureau, of course, but I don't**  
14 **recall KLA.**  
15 Q. I don't believe you have our binder.  
16 **MS. WENDLING:** May I approach the  
17 witness?  
18 **PRESIDING OFFICER:** Yes.  
19 **MS. WENDLING:** And you.  
20 **BY MS. WENDLING:**  
21 Q. Tab number 7, can you flip to that and tell me  
22 what it appears to be?  
23 **A. Yes, the sign-in sheet for that hearing, that**  
24 **particular hearing.**  
25 Q. Okay. And as you flip through the attach -- the

1 **dewater the aquifer down to -- I think at that**  
2 **time there was confusion about bedrock, and**  
3 **there might even have been a draft about bedrock**  
4 **but I can't -- I don't recall. But, yeah, there**  
5 **was a big concern that Wichita was going to come**  
6 **in and dewater the aquifer, there was a lot of**  
7 **misunderstanding at that time.**  
8 Q. Okay. And do you know what was done to address  
9 that concern?  
10 **A. Well --**  
11 Q. Or the misunderstanding?  
12 **A. Well, just tried to lay out what the City had**  
13 **proposed. I mean, the talking points that I**  
14 **used were those graphics of the well field and**  
15 **the proposal, that table, the proposal that**  
16 **shows --**  
17 Q. This is going back to the concerns on the  
18 regulatory changes. So you were already using  
19 the proposal table --  
20 **A. No, no, not at that point. You know, that's a**  
21 **real good question, Tessa, I don't know what --**  
22 **what we did at that time. I think -- I know**  
23 **that we had one-on-one conversations with**  
24 **people, but I don't think there was a public --**  
25 **any type of public comment about it.**

1 additional pages, can you tell me what those  
2 appear to be?  
3 **A. Yeah, the -- the first item is from Kansas**  
4 **Legislative Research Department, with a -- I'm**  
5 **not reading it fully but with a couple -- with a**  
6 **comment about the rules. And then --**  
7 Q. If you flip about midway through, do you see a  
8 letter with the Kansas Farm Bureau letterhead on  
9 the top? It's about ten pages in.  
10 **A. Okay, I'm there.**  
11 Q. Okay. Does this refresh your recollection of  
12 whether or not Kansas Farm Bureau participated?  
13 **A. Yeah, I remember Farm Bureau did, but it was KLA**  
14 **that I wasn't sure about.**  
15 Q. Can you keep -- well, actually, while we're  
16 here, will you turn to the second page of the  
17 Kansas Farm Bureau letter?  
18 **A. Uh-huh, yes.**  
19 Q. Can you read the last sentence?  
20 **A. We strongly urge the agency not to adopt these**  
21 **proposed regulations.**  
22 Q. Now, if you go another one, two -- another ten  
23 pages, will you see a letter with the KLA  
24 letterhead?  
25 **A. Okay.**

Page 1784

1 Q. And can you read the last sentence of that  
2 letter?  
3 **A. KLA urges the DWR to examine the potential**  
4 **adverse effects of these regulatory changes**  
5 **prior to moving forward with the final rule.**  
6 Q. Now, what would you -- how would you describe  
7 this packet of information I have under tab  
8 number 7?  
9 **A. Well, these were folks that were concerned about**  
10 **the -- the rule changes, but I know that the**  
11 **chief engineer at the -- the chief engineer was**  
12 **the hearing officer on that -- was the hearing**  
13 **officer for that hearing, and there was a**  
14 **genuine -- a general misunderstanding about what**  
15 **these changes would do, and the chief was fully**  
16 **aware of that, and so he was comfortable moving**  
17 **in to adopting these rules.**  
18 Q. Would you believe me if I said these were the  
19 public comments received regarding the proposed  
20 regulatory changes?  
21 **A. Oh, yes, absolutely.**  
22 **MS. WENDLING:** I would like to admit  
23 item number 7 as Intervenor's Exhibit 7.  
24 **PRESIDING OFFICER:** Any objection?  
25 **MR. MCLEOD:** Relevance and we have

Page 1785

1 had our own public comment sections in this  
2 hearing, extensive public comment, actually  
3 directed to the topic of this hearing;  
4 whereas, these comments are directed to a  
5 regulatory change that occurred in 2016.  
6 I'm not seeing the purpose for which this  
7 will be properly offered.  
8 **MR. OLEEN:** I join in that to the  
9 extent that these are admitted to try to  
10 imply that opposition to a previous issue  
11 that was before DWR somehow equals  
12 opposition to this matter here.  
13 **PRESIDING OFFICER:** Response?  
14 **MR. STUCKY:** And I don't object.  
15 **MS. WENDLING:** The rules in place at  
16 the time that Phase I and Phase II were  
17 approved are very relevant to the ASR  
18 project as a whole. A change to those  
19 rules and regulations impacted those  
20 approvals in Phase I and Phase II and  
21 should -- it's very relevant to the matter  
22 here because we're now evaluating the ASR  
23 project under a new set of rules, and I  
24 believe the comments and concerns regarding  
25 that rule change are equally relevant to

Page 1786

1 this matter.  
2 **PRESIDING OFFICER:** So these rule  
3 changes went into effect after Phase II was  
4 approved?  
5 **MS. WENDLING:** Correct.  
6 **MR. OLEEN:** I guess I would just --  
7 if the Intervenor's want to put forth  
8 written public comments in opposition to  
9 the proposal today, fine. But I don't --  
10 there is relevancy, admittedly, to the  
11 regulation change that was considered at  
12 this time because that's a regulation that  
13 is implicated under this proposal, yes,  
14 but -- but I don't think it's fair to say  
15 that everybody that objected to the reg --  
16 regulatory change back then are also  
17 objecting to the proposal now. They didn't  
18 have the proposal in front of them then,  
19 and so I think they're probably -- a lot of  
20 these people that objected back then, I  
21 think they probably have submitted public  
22 comments in opposition to this proposal,  
23 but then we can submit those comments, or  
24 they are already submitted before you and  
25 will be considered by you.

Page 1787

1 **MR. STUCKY:** Can I speak to this?  
2 **PRESIDING OFFICER:** Yes.  
3 **MR. STUCKY:** I think that the  
4 position here is that these public comments  
5 are germane to this regulation change, and  
6 the City's proposal wouldn't even be before  
7 us today if it wasn't for this regulation  
8 change. And I think that the context of  
9 this is that we've had discussions about  
10 what happened back in 1993 and whether it  
11 was a concern back then and whether it's a  
12 concern now, we've had lots of testimony  
13 from Mr. Letourneau, from the City's  
14 experts as far as applying what we learned  
15 in the past to the proposal before us  
16 today.  
17 So I think that given the fact that this  
18 is directly germane to this proposal,  
19 because we couldn't have this proposal  
20 without this regulation change, although  
21 there may be limited relevance, as a  
22 hearing officer and someone that's trained  
23 as a lawyer, certainly you can sift through  
24 the level of relevance this has, and I  
25 think it should be admitted.

1 **PRESIDING OFFICER:** Are you offering  
2 this for the purpose of suggesting that  
3 everyone who objected to the regulation  
4 objects to this proposal today?

5 **MS. WENDLING:** No, I'm not. If you  
6 actually look through all the comments,  
7 you'll also see that some people speak in  
8 favor of the proposal -- the regulation  
9 change, and I am not saying those  
10 individuals speak in favor of this proposal  
11 either. I'm saying these were the thoughts  
12 at the time of this specific regulation.

13 **PRESIDING OFFICER:** Okay. I think  
14 I'm able to distinguish between the  
15 different levels of comment and the  
16 particular limited relevancy of this, and,  
17 again, the number of times so far I've  
18 erred on the side of a complete record,  
19 and I'm going to do that again now. So we  
20 will allow this exhibit.

21 **MS. WENDLING:** Okay.

22 **MR. OLEEN:** For the record, sorry to  
23 interrupt, Ms. Wendling, will this be  
24 Intervenors' Exhibit 1 or Intervenors'  
25 Exhibit 7?

1 **allow changes in the Wichita ASR that may be**  
2 **detrimental to the area, such concerns can only**  
3 **receive full and due consideration when the**  
4 **issue is ripe, that is in the context of a**  
5 **specific project proposal or request for change.**  
6 **If the new project or a change to the Wichita**  
7 **ASR project is proposed pursuant to these rule**  
8 **modifications, a full hearing will be held and a**  
9 **record of facts and concerns will be made and**  
10 **acted upon.**

11 Q. Do you understand this hearing that we're in  
12 today to be the type of hearing referred to in  
13 that statement?

14 **A. Well, I think we didn't anticipate this hearing**  
15 **to turn into a trial, I mean, I'll say that,**  
16 **but, yes, I mean, we knew that there would be an**  
17 **administrative hearing.**

18 Q. Okay. And at the time of this letter,  
19 March 8th, 2016, were -- was DWR aware of the  
20 City's desire to submit this proposal?

21 **A. Yes, I'm sure we were because of meetings that**  
22 **we'd been having, yes.**

23 Q. So the regulation change was made with awareness  
24 of the City's desired modification?

25 **A. Yes.**

1 **MS. WENDLING:** I'm going to go with  
2 7 so that they're easier to find.

3 **PRESIDING OFFICER:** Court reporter,  
4 are you tracking with that?

5 **THE REPORTER:** Yes, I am.

6 **PRESIDING OFFICER:** Thank you. So  
7 Intervenors' Exhibit 7 will be admitted.

8 **BY MR. STUCKY:**

9 Q. Now, can I have you turn in that same  
10 Intervenors' notebook to tab 21? And this is  
11 not in the notebook that has been provided. Can  
12 you read the second paragraph -- or, wait, can  
13 you tell me what this document is?

14 **PRESIDING OFFICER:** I'm terribly  
15 sorry, I was taking notes, where are we?

16 **MS. WENDLING:** Okay, 21, tab 21 in  
17 the Intervenors' binder.

18 **PRESIDING OFFICER:** Thank you.

19 **A. Okay. I -- this is a letter dated March 8th,**  
20 **2016 from Chief Engineer David Barfield to Equus**  
21 **Beds Groundwater Management District No. 2.**

22 **BY MS. WENDLING:**

23 Q. Now, can you read the second paragraph for me?

24 **A. While I have heard the Board's and others'**  
25 **concerns that the proposed rule change would**

1 Q. How often do you have -- how often do you need  
2 to have public hearings?  
3 **A. Any -- any rule modification, we have to have a**  
4 **public hearing; any local enhanced management**  
5 **area, we have a public hearing; any Intensive**  
6 **Groundwater Use Control Area, we have a public**  
7 **hearing; any new aquifer storage and recovery**  
8 **permits, we have to have a public hearing, I**  
9 **believe. But that's the ones that I'm aware**  
10 **that we have to have.**

11 Q. And if you were to estimate, do you know how  
12 many, approximately, public hearings you have in  
13 any given year?

14 **A. Oh, it's, like, one every five years maybe,**  
15 **two -- two every five years.**

16 Q. Oh, that few?

17 **A. Yeah.**

18 Q. How often does DWR have a position on the  
19 proposal or application prior to the public  
20 hearing?

21 **A. Some -- it de -- many times we do, I believe.**  
22 **I -- I'm -- the reason -- I'm thinking about**  
23 **each ones that we have. I know, like, some --**  
24 **yeah, I think we do have a position going into**  
25 **the hearing, I believe, if I understand your**

Page 1792

1 **question.**  
 2 Q. What is the purpose of the public hearing if DWR  
 3 has already formed a position prior to the  
 4 public hearing?  
 5 **A. Well, if we -- when we go into these public**  
 6 **hearings and then we actually learn something**  
 7 **more, then we want to take into consideration**  
 8 **the things that we've learned in the public**  
 9 **hearing.**  
 10 Q. Okay. You've talked previously about the  
 11 Chinese walls that were put in place after it  
 12 was determined that this case was ready -- or  
 13 the matter was ready for a public hearing; is  
 14 that correct?  
 15 **A. That's correct.**  
 16 Q. If the Chinese walls were implemented after the  
 17 decision had already been made about the  
 18 reasonableness of the proposal, what has been  
 19 your role subsequent to the Chinese walls?  
 20 **A. Well, just to be the DWR lead person in this**  
 21 **process.**  
 22 Q. But no further analysis?  
 23 **A. No, no, no further analysis.**  
 24 Q. How -- how long do these Chinese walls stay in  
 25 place?

Page 1793

1 **A. Until the order is issued, I believe. Until --**  
 2 **until -- I think until this order is issued and**  
 3 **becomes final, and that comes after the chief**  
 4 **engineer -- I know Madam Hearing Officer will**  
 5 **make a recommendation to the chief engineer,**  
 6 **then the chief engineer issues the final order,**  
 7 **and that's when I believe the Chinese walls are**  
 8 **down and we can talk about it.**  
 9 Q. Okay. So while the chief engineer is  
 10 considering the hearing officer's  
 11 recommendation, there will still be information  
 12 barriers?  
 13 **A. Yeah.**  
 14 Q. Chinese walls, I'm used to calling them. Now,  
 15 do they remain in place in the event there is an  
 16 appeal?  
 17 **A. Yes, because if there's an appeal, then the**  
 18 **order does not become final.**  
 19 Q. Okay.  
 20 **A. And so, yes, they're still there.**  
 21 Q. All right. And if it's brought to the Court  
 22 after an appeal to the secretary of ag, do the  
 23 barriers still remain in place?  
 24 **A. I don't know.**  
 25 **MR. OLEEN:** I object to this line of

Page 1794

1 questioning because I think we're getting  
 2 into asking the witness about legal  
 3 matters --  
 4 **MS. WENDLING:** Withdrawn.  
 5 **MR. OLEEN:** -- about which I don't  
 6 think he's qualified to testify about how  
 7 long Chinese walls will be in place.  
 8 **BY MS. WENDLING:**  
 9 Q. In response to some of the errors and  
 10 discrepancies in the proposal, you said a few  
 11 times, well, that raises a question or that's  
 12 something to consider. In light of the public  
 13 hearing happening now and a recommendation  
 14 coming out of this hearing, how does that  
 15 consideration play a part in this process?  
 16 **A. Okay. What we would do, that proposal -- we**  
 17 **don't want to get multiple proposals out there,**  
 18 **that's really important because -- in my mind**  
 19 **because that would confuse things, so we would**  
 20 **make corrections to this proposal for us to**  
 21 **consider but keep the same proposal with a**  
 22 **correction and then initial and date.**  
 23 Q. Okay. But there's not a need for a subsequent  
 24 public hearing based on those subsequent  
 25 modifications?

Page 1795

1 **A. I don't -- I don't believe so.**  
 2 Q. And you have mentioned, I think, in regard to  
 3 some of the testi -- or questions asked on  
 4 practical saturated thickness versus saturated  
 5 thickness by Mr. Stucky last time around that  
 6 further technical analysis might need to be  
 7 done; is that correct?  
 8 **A. Yeah, I think that those well logs definitely**  
 9 **raised a question to me, but I didn't review the**  
 10 **model, I didn't review the well logs. I do**  
 11 **know, from 10,000 feet, that the USGS model took**  
 12 **into account any well log data that's available,**  
 13 **but, yes, it would be worth looking at some**  
 14 **production wells in addition to the observation**  
 15 **wells.**  
 16 Q. And based on the Chinese walls that are in  
 17 place, you're limited to one technical resource  
 18 for that analysis?  
 19 **A. Right, correct. Well, we could do it, there's**  
 20 **two or three of us that could look at it.**  
 21 Q. Do you have any -- do you have an opinion on --  
 22 or any knowledge from the proposal whether or  
 23 not we know how the aquifer will recover from  
 24 the proposed -- I guess proposed pumping as  
 25 identified in tables 2-3 and 2-5 of this

1 proposal?  
2 **A. I don't have any modeling data or -- but**  
3 **real-world experience tells us that it recovers**  
4 **well because it's full, full or fairly full now.**  
5 **I don't know what the pumping was in '11 and**  
6 **'12, but, I mean, that's analysis that we could**  
7 **do to see what levels -- it was close to the '93**  
8 **level in '11 and '12 based on the conversations**  
9 **that we were having. And in seven years, six,**  
10 **seven years, the aquifer recovered.**  
11 Q. So from a two-year drought, it took six to  
12 seven years. Do you know when we're looking at  
13 an eight-year drought how that recovery time  
14 might compare?  
15 **A. I -- I don't know.**  
16 Q. Do you think that's reasonable to consider?  
17 **A. Yeah, I mean, I think -- yes, I think it's**  
18 **reasonable.**  
19 Q. When you're looking at the reasonableness of  
20 this proposal to lower the minimum index  
21 wells -- index level, sorry, does the  
22 availability of alternative sources of supply  
23 factor in on the reasonableness?  
24 **A. Not -- not on this one, it did not. What we**  
25 **looked at, Tessa, at the end of eight-year**

1 **five-year window; then we look at 2000 to 2009**  
2 **data, and that's in the statute, and the City --**  
3 **we'd have to rely on the 2000 and 2009 data, and**  
4 **the City had, I'll call it reduced use at that**  
5 **time. Plus when you look at a public water**  
6 **supply, they don't have the opportunity for**  
7 **flexibility with the reduced amount, they got**  
8 **health and public safety concerns that they have**  
9 **to deal with.**  
10 **So in our mind, a multi-year flex account**  
11 **did not work well for the City, or any city, not**  
12 **just Wichita but any city for that matter.**  
13 **Because they need -- they need the water on the**  
14 **front end, which they borrow from the back end,**  
15 **and a city does not have that luxury then to**  
16 **borrow.**  
17 Q. Okay. So would you say there -- the 2000 to  
18 2009 data, your flex account -- the flex account  
19 is based on usage during that period, not your  
20 authorized quantities?  
21 **A. That's correct.**  
22 Q. And that's based on this statute?  
23 **A. That's correct.**  
24 Q. And a statute could be changed?  
25 **A. Statutes can be changed, definitely. Actually,**

1 **drought, the aquifer was still 80 percent full,**  
2 **we considered that to be reasonable.**  
3 Q. Okay. When you say 80 percent full, can you  
4 elaborate on what that means?  
5 **A. Well, I mean the aquifer -- based on this**  
6 **proposal, the aquifer still has 80 percent of**  
7 **the saturated thickness remaining.**  
8 Q. And when we discussed the difference between  
9 practical saturated thickness and saturated  
10 thickness, meaning the potential for clay layers  
11 in some of that space, you're not considering  
12 those layers?  
13 **A. No.**  
14 Q. And 80 percent full doesn't mean that it's all  
15 water?  
16 **A. Yeah, 80 percent full -- well, no, I mean, the**  
17 **practical -- correct, it's layers of sand and**  
18 **gravel and clay.**  
19 Q. Okay. Regarding the multi-year flex accounts, I  
20 believe you said that you had looked at that for  
21 the City and it's not -- it's good for  
22 irrigators but not good for the City. How have  
23 you determined that it's not right for the City?  
24 **A. I need to remember everything about that, but it**  
25 **was a short planning period for the City, a**

1 **we just changed the multi -- we're working on**  
2 **changing the multi-year flex account statute**  
3 **this year to accommodate irrigators that have**  
4 **been approved after the 2009 by allowing a net**  
5 **irrigation requirement calculation, which**  
6 **doesn't work for a city, but it does work for an**  
7 **irrigator.**  
8 Q. But could be changed to work for the City?  
9 **A. Well, we'd have to -- we'd have to make -- we'd**  
10 **have to see if we could do that. I don't -- I**  
11 **don't know under what parameters yet.**  
12 Q. And a multi-year flex account is five years, but  
13 could you have two multi-year flex accounts back  
14 to back for a total of ten years?  
15 **A. Yes.**  
16 Q. A water right allows you the use of the water,  
17 but does it -- do you own that water?  
18 **A. You don't own the water, but you own the right**  
19 **to use the water.**  
20 Q. Okay. And do you have a guaranteed right to  
21 access that water?  
22 **A. Only if it's available.**  
23 Q. So if it's in a 1 percent drought and that water  
24 is not available, you don't have a guaranteed  
25 right?

Page 1800

1 **A. That's correct.**  
 2 Q. Do you believe other water users in the basin  
 3 storage area are able to store their water in  
 4 the basin storage area, or is it exclusively  
 5 Wichita?  
 6 **A. No, the other water users have a right to Equus**  
 7 **Beds water.**  
 8 Q. Okay.  
 9 **A. The basin storage area is aquifer storage and**  
 10 **recovery.**  
 11 Q. Where is the basin storage area located?  
 12 **A. In the very top 120,000 acre-foot of the Equus**  
 13 **Beds.**  
 14 Q. And when was the basin storage area created?  
 15 **A. In Phase I.**  
 16 Q. And based on your understanding of Phase I, was  
 17 the basin storage area completely unsaturated,  
 18 it was -- there was 120,000 acre-feet  
 19 unsaturated in the Equus Beds?  
 20 **A. Well, at one time, in 1993, it was unsaturated,**  
 21 **I believe. I believe that was the lowest**  
 22 **portion of the aquifer at that time.**  
 23 Q. So it was unsaturated in '93 but not unsaturated  
 24 when Phase I was approved?  
 25 **A. That very well could be, yes.**

Page 1801

1 Q. So what happened to that water that is in the  
 2 top 120,000 acre-feet, the Equus Beds water that  
 3 was in that 120,000 acre-feet?  
 4 **A. It was diverted by all water users.**  
 5 Q. How do you know that? If the water -- if it was  
 6 physically in the Equus Beds, because you said  
 7 it was not unsaturated at that point, meaning it  
 8 was saturated, the water was still sitting there  
 9 at the time that ASR Phase I was approved, and  
 10 just with a magic wand it converted to the basin  
 11 storage area?  
 12 **A. I guess I don't quite understand your question.**  
 13 **There -- there wasn't a magic wand or -- there**  
 14 **was -- there was a determination made at the '93**  
 15 **level that there was available storage area for**  
 16 **the ASR to operate.**  
 17 Q. Okay. All right. We'll move on. You mentioned  
 18 that permit conditions exist for all water  
 19 permits. And what is the purpose of those  
 20 permit conditions?  
 21 **A. To make sure folks comply with the conditions,**  
 22 **limitations, and terms of the water right.**  
 23 Q. Are permit conditions consistent for all water  
 24 permits?  
 25 **A. Consistent that everyone has permit conditions**

Page 1802

1 **but we have -- there's unique permit conditions**  
 2 **depending on the uniqueness of a permit or a**  
 3 **water right.**  
 4 Q. Can you turn to tab 18 in this notebook?  
 5 **MS. WENDLING:** This is not in the  
 6 existing binder.  
 7 **BY MS. WENDLING:**  
 8 Q. Can you tell me what item 18 is?  
 9 **A. It's approval of application and permit to**  
 10 **proceed for application file number 46,627.**  
 11 Q. Is that in your 18? I believe that one's 17  
 12 unless I put them in the wrong one.  
 13 **A. I think I've got -- this is 18.**  
 14 Q. 18 and it's 46,627?  
 15 **A. 46,627. Did I say that wrong?**  
 16 Q. No. Can you then switch to 17? I might have  
 17 put yours backwards.  
 18 **A. Oh, I'm --**  
 19 Q. I'm looking for 46,714.  
 20 **A. Okay, here it is, I'm sorry. 46,71 -- this is**  
 21 **approval of application and permit to proceed**  
 22 **for 46,714.**  
 23 **MS. WENDLING:** And for clarity, I  
 24 believe these have been taken -- judicial  
 25 notice has been taken of the permits, so

Page 1803

1 I'm not planning on introducing this, I  
 2 just wanted it here for us to look at.  
 3 **MR. OLEEN:** And that's fine,  
 4 Ms. Wendling. You handed me a permit for  
 5 46,627.  
 6 **MS. WENDLING:** Here's another one.  
 7 **BY MS. WENDLING:**  
 8 Q. Can you help me identify the permit conditions  
 9 for this 46,714?  
 10 **A. Well, the permit conditions are -- start at**  
 11 **number 1, I mean, the priority date; the second**  
 12 **condition is the place of use; third condition**  
 13 **is the authorized point of diversion; fourth**  
 14 **condition is the maximum rate.**  
 15 Q. So you would consider each one of these  
 16 enumerated items to be a permit condition?  
 17 **A. Yes.**  
 18 Q. And is it your understanding that DWR has the  
 19 authority to change any of these permit  
 20 conditions so long as it's not place of use --  
 21 the three things you said earlier?  
 22 **A. Right, yes. Correct.**  
 23 Q. And when you see the priority date on item  
 24 number 1, can you tell me what the significance  
 25 of that date is?

1 **A. Well, it -- the priority date is an attribute of**  
2 **a water right, and so that's the date that it's**  
3 **assigned, and that's when it gets its, basically**  
4 **its place in line for all other applications,**  
5 **water rights.**  
6 Q. All right. And if I said this was one of the  
7 multiple permits approved in Phase II, would all  
8 of the permits in Phase II have this same  
9 priority date?  
10 **A. Depends on the date that they were filed, I'm**  
11 **not quite sure. If they were filed all in the**  
12 **same day, then, yes, they would have the same**  
13 **priority date.**  
14 Q. And in terms of an impairment proceeding, anyone  
15 with a water right prior to February 12th, 2007  
16 would have a priority over this appropriation  
17 right?  
18 **A. That's correct.**  
19 Q. In the -- when looking at -- and there's a --  
20 let's see. Number 6, is that the perfection  
21 period?  
22 **A. Yes.**  
23 Q. As we contemplate the AMCs, how -- what is the  
24 perfection period for an AMC, or how is an AMC  
25 perfected?

1 perfection for credits?  
2 **A. Yes. They're under -- that's this, you have to**  
3 **perfect the credit, and then you have to perfect**  
4 **them for municipal use by putting them to**  
5 **beneficial use.**  
6 **PRESIDING OFFICER:** So are there two  
7 different --  
8 **A. Yes.**  
9 **PRESIDING OFFICER:** -- perfections?  
10 **A. Yes.**  
11 **PRESIDING OFFICER:** They're not  
12 combine them into one?  
13 **A. No, I don't believe so. They're two different**  
14 **authorities.**  
15 **PRESIDING OFFICER:** Okay.  
16 **A. There's an authority to accumulate and an**  
17 **authority to use.**  
18 **PRESIDING OFFICER:** So the ultimate  
19 certificate would reflect two different  
20 perfections?  
21 **A. There's two certificates. It would be a**  
22 **certificate for the, I believe -- you know what,**  
23 **I got to think about this a little bit.**  
24 **PRESIDING OFFICER:** Okay.  
25 **A. So I'm kind of looking at Doug -- Doug Schemm,**

1 **A. Well, an AMC would be perfected by accumulating**  
2 **them in the basin storage area, I mean, that's**  
3 **how they're perfected.**  
4 Q. Okay. Accumulation, not use?  
5 **A. Correct. I believe so. Well, you know, I need**  
6 **to think about that a little bit. I think -- so**  
7 **the -- the ASR, the recharge credit of that**  
8 **would be perfected under accumulation, but the**  
9 **use of the recharge credit would be actual use.**  
10 **Under municipal use. The 19,000 used would have**  
11 **to be perfected.**  
12 Q. Okay.  
13 **A. So --**  
14 **PRESIDING OFFICER:** I am confused.  
15 **A. Okay. It is complicated. So there's authority**  
16 **for artificial recharge, and to perfect**  
17 **artificial recharge, you would have to**  
18 **accumulate the artificial recharge credits.**  
19 **This is what I believe just setting here in the**  
20 **hot seat. Then, though, to perfect the recharge**  
21 **credits for municipal purposes under that, it's**  
22 **a different permit, and you would actually have**  
23 **to perfect those by actually putting those to**  
24 **beneficial use.**  
25 **PRESIDING OFFICER:** So you have

1 **so they -- they accumulate the credit, but then**  
2 **they have to use it so they have to -- I'm even**  
3 **looking at Tim. I'd have to think about this a**  
4 **little bit.**  
5 **MS. WENDLING:** I was going to say  
6 it's close to 1:00, do we want to break and  
7 he can think about it?  
8 **PRESIDING OFFICER:** Might be a good  
9 time for a break.  
10 **A. Yeah I got to think about this.**  
11 **PRESIDING OFFICER:** Might be a good  
12 time.  
13 **A. Yeah, I got to ask one of the team folks.**  
14 **PRESIDING OFFICER:** All right.  
15 Well, we've gotten up to almost 1:00  
16 o'clock, let's take a break until 2:00.  
17 Thank you.  
18 (Thereupon, a lunch recess was  
19 taken; whereupon the following was  
20 had.)  
21 **PRESIDING OFFICER:** Okay. We're now  
22 back on the record, it is 1:55. And,  
23 Ms. Wendling.  
24 **BY MS. WENDLING:**  
25 Q. Before the break, we were talking about

Page 1808

1   perfections for recharge credits, and you were  
2   going to think about that over lunch. Have you  
3   any more information on how recharge credits are  
4   perfected?  
5   **A. Yes, absolutely. So let's look at the permit**  
6   **for 46,267 (sic), that particular permit has two**  
7   **beneficial uses of water. So that's surface**  
8   **water diversion from the Little Ark. So if**  
9   **water is diverted and that water becomes treated**  
10  **and becomes a recharge credit, then that is**  
11  **perfected for the artificial recharge portion of**  
12  **that recharge credit. If water is diverted from**  
13  **that particular permit, though, and taken**  
14  **directly to town, that is then perfected for**  
15  **municipal use.**  
16   **So -- now then there was much discussion,**  
17  **then, about 46,714, water -- what rights are**  
18  **perfected based on use? And so for the City,**  
19  **then, to perfect a recharge credit as municipal**  
20  **use, they would have to recover that and then**  
21  **use it for municipal use. Under a different --**  
22  **that's a different authority. For the hearing**  
23  **officer, these are two separate permits --**  
24   **PRESIDING OFFICER: Okay.**  
25  **A. -- okay? So the initial permit that I talked**

Page 1809

1   **about, 46,627 --**  
2   **PRESIDING OFFICER: Okay.**  
3   **A. -- that's the dual use, which is artificial**  
4   **recharge, that's the accumulation of credits;**  
5   **the minute they accumulate a credit, it's**  
6   **perfected for that part. But then there's a**  
7   **dual use on that to where they can take surface**  
8   **water directly to town, not related to the**  
9   **recharge. And so that particular use, when used**  
10  **for municipal use only, can be perfected for**  
11  **municipal use. It's paragraph number 2 there,**  
12  **the first sentence there talks -- shall be used**  
13  **for both artificial recharge in the area and for**  
14  **municipal use. I can see a question is why**  
15  **I'm --**  
16   **PRESIDING OFFICER: Yes.**  
17  **A. -- I want to be very, very clear with this.**  
18   **PRESIDING OFFICER: So under 46,627**  
19   **as it currently stands, water still has to**  
20   **be physically injected for subsequent**  
21   **withdrawal, and that creates the credits?**  
22  **A. Correct.**  
23   **PRESIDING OFFICER: So the**  
24   **municipal, I think you said if it's**  
25   **diverted and taken directly to town --**

Page 1810

1   **A. Correct, that's not related to the ASR at all.**  
2   **That is just stand-alone surface water.**  
3   **PRESIDING OFFICER: So that's**  
4   **authorized under 46,627 as well?**  
5   **A. Correct.**  
6   **PRESIDING OFFICER: So that one**  
7   **permit allows direct surface diversion as**  
8   **well as --**  
9   **A. Artificial recharge.**  
10  **PRESIDING OFFICER: -- aquifer**  
11  **storage?**  
12  **A. Correct. And to be very clear, it's -- the**  
13  **beneficial uses are artificial recharge and**  
14  **municipal.**  
15   **PRESIDING OFFICER: And so**  
16   **perfection of artificial recharge occurs at**  
17   **the point the credit is accumulated?**  
18  **A. Correct.**  
19   **PRESIDING OFFICER: So is there any**  
20   **perfection that occurs when water has been**  
21   **physically stored under the ASR and**  
22   **subsequently withdrawn and recovered, does**  
23   **the act of withdrawing and recovery perfect**  
24   **anything?**  
25  **A. And that's the second authority, that is under**

Page 1811

1   **file number 46,714. So there's two -- there's**  
2   **two levels of perfection here, there's two**  
3   **perfections that have to take place for the**  
4   **recharge credit, the perfection of accumulation**  
5   **and then the perfection of use. And those are**  
6   **under two separate authorities.**  
7   **PRESIDING OFFICER: So those perfect**  
8   **two separate authorizations?**  
9   **A. Correct.**  
10  **PRESIDING OFFICER: Okay. So a**  
11  **certificate would be ultimately issued for**  
12  **46,714 for municipal use based on the water**  
13  **recovered from storage and used for**  
14  **municipal use?**  
15  **A. Yes, that's my understanding.**  
16   **PRESIDING OFFICER: The certificate**  
17   **for 46,627, would there be two certificates**  
18   **or a single certificate with two different**  
19   **descriptions of perfection?**  
20  **A. A single certificate with two beneficial uses,**  
21  **quantifying it -- we call them dual use, but**  
22  **this would be a single certificate under 46,627,**  
23  **with a quantity for artificial recharge and a**  
24  **quantity for municipal.**  
25   **PRESIDING OFFICER: Thank you.**

1 Excuse me for a minute while I take notes,  
2 I don't want to lose this. Okay, thank  
3 you.  
4 **BY MS. WENDLING:**  
5 Q. You mentioned for 46,227 (sic) the dual use, the  
6 two certificates, is there a certificate -- when  
7 you add the two certificates together, are they  
8 capped at the 45,000 acre-feet? In item  
9 number 5? Or can it be 45,000 for each use?  
10 **A. It -- they -- they both are capped at 45,230**  
11 **acre-feet.**  
12 Q. So the City could use 45,000 acre-feet to town  
13 for immediate municipal use and 45,000 acre-feet  
14 for recharge?  
15 **A. Based on my -- yes, based on the quick review of**  
16 **this permit, that's correct.**  
17 Q. Okay. And if we back up just a little bit,  
18 these two permits that I gave you, are they part  
19 of the Phase II approval --  
20 **A. I believe so.**  
21 Q. -- ASR Phase II approval?  
22 **A. I believe so, yes.**  
23 Q. If we quickly look at GMD Exhibit 28 in their  
24 second Volume II binder.  
25 **A. Yes.**

1 **groundwater from the Equus Beds Aquifer, except**  
2 **for recovery of water recharged pursuant to the**  
3 **approved Aquifer Storage and Recovery Project,**  
4 **and any subsequent modifications, in excess of**  
5 **the amount approved herein nor in excess of the**  
6 **amount found by the chief engineer to have been**  
7 **actually used for the approved purpose during**  
8 **one calendar year subsequent to approval of the**  
9 **application and within the time specified for**  
10 **perfection or any authorized extension thereof.**  
11 Q. So --  
12 **A. Is that slow enough?**  
13 Q. Does this mean within the perfection period the  
14 City would need to withdraw their recharge  
15 credits in order to perfect them?  
16 **A. Yes.**  
17 Q. Do you -- will AMCs have a similar perfection  
18 concept in that they would also need to be  
19 withdrawn and used for municipal use during the  
20 perfection period?  
21 **A. Yeah, they're a recharge credit, so yes.**  
22 Q. Now, moving on to the -- we heard about  
23 challenges associated with artificial recharge,  
24 and that's the need for the City submitting this  
25 proposal; is that correct?

1 Q. And Exhibit 28 is the Phase II ASR approval?  
2 **A. Yes.**  
3 Q. If you go to page 9, can you tell me what is on  
4 page 9?  
5 **A. It is the list of attachments to the order.**  
6 Q. And the first -- or attachments 2 and 3, can you  
7 tell us what those are?  
8 **A. Correct, yes.**  
9 Q. Those -- the two sample permits we've just been  
10 discussing, there's actually several more of  
11 those permits with -- associated with Phase II?  
12 **A. Yes.**  
13 Q. And earlier when you were talking about the  
14 19,000 or 19,500 in authorized recharge credits  
15 for the City's use, is that what happens if you  
16 add up items 3 through 26 roughly?  
17 **A. That I don't know.**  
18 Q. Okay. Okay. So going back to permit 46,714,  
19 can you find item number 7 on the second page?  
20 **A. Okay.**  
21 Q. Can you read the first two lines for me?  
22 **A. In item 7?**  
23 Q. Yep.  
24 **A. Okay. That the applicant shall not be deemed to**  
25 **have acquired a water appropriation for**

1 **A. No, I don't understand that.**  
2 Q. Okay. The City is not currently able to  
3 accumulate recharge credits because the aquifer  
4 is full. Is that your understanding?  
5 **A. Yeah, they -- well, but the GMD showed me where**  
6 **the aquifer is at a level that they can**  
7 **accumulate some physical recharge credits. The**  
8 **City wants to manage the aquifer full, but they**  
9 **can pump the hole to create the space for**  
10 **physical recharge credit.**  
11 Q. Do you believe it's easy for the City to  
12 accumulate physical recharge credits?  
13 **A. I think so, if the hole is -- if the space in**  
14 **the aquifer is there, I think the City's got the**  
15 **capability to accumulate physical recharge**  
16 **credits.**  
17 Q. And in the past ten years, do you know how many  
18 recharge credits the City's accumulated?  
19 **A. I think -- no, not specifically, but I've heard**  
20 **6 to 7,000 acre-feet.**  
21 Q. And is it your understanding the aquifer has  
22 been full the entire time that Phase II has been  
23 in operation?  
24 **A. I -- I don't know.**  
25 Q. When the -- we discussed impairments, you -- and

Page 1816

1 the 1993 levels, one of the statements you made  
 2 is that you were not aware of any issues  
 3 reported in 1993; is that correct?  
 4 **A. That's correct.**  
 5 Q. The 1993 levels used as the minimum index  
 6 levels, are those taken from first quarter of  
 7 '93, sometime in the January through March 1993  
 8 time frame?  
 9 **A. I believe so, yes.**  
 10 Q. So the -- those levels, then, represent what  
 11 happened in 1992 rather than what would happen  
 12 in the future; is that correct?  
 13 **A. Well, it happened in all of the years coming up**  
 14 **to 1992.**  
 15 Q. Okay. And do you recall if 1992 was a wet year?  
 16 **A. I don't, I don't recall.**  
 17 Q. If you would find the black binder from the City  
 18 which contains the proposal. And we're going to  
 19 go to attachment F of the proposal. This is a  
 20 single page, and it's an annual and seasonal  
 21 total PDSI comparison.  
 22 **A. Is it back in the book, Tessa, is it --**  
 23 Q. Yes.  
 24 **A. Okay.**  
 25 Q. So there's a -- behind the proposal there's a

Page 1817

1 tab that says attachments F through J.  
 2 **A. Okay.**  
 3 Q. And it should be the first page behind that.  
 4 **A. Okay.**  
 5 Q. And if you look about midway down the table,  
 6 you'll see years, and what I'm looking at are  
 7 the years of 1991, '92, and '93 --  
 8 **A. Okay.**  
 9 Q. -- on the right-hand column. Can you read the  
 10 annual PDSI numbers for 1991, '92, and '93?  
 11 **A. The -- is it the annual number that you want?**  
 12 Q. Yeah, we'll use the annual number.  
 13 **A. So 1991 is a minus 30.85; '92 is a 5.03; '93 is**  
 14 **a 49.15.**  
 15 Q. And we've learned a lot about PDSI numbers  
 16 throughout this hearing. Based on that  
 17 information, would you say that 1993 was wetter  
 18 than '91 and '92?  
 19 **A. Yes.**  
 20 Q. So would you need to actually look at complaints  
 21 during '91 and '92 to see if there were -- was  
 22 potential impairment?  
 23 **A. That's a good point, we didn't have any**  
 24 **complaints then either, but it's a good thing to**  
 25 **bring up.**

Page 1818

1 Q. Have you participated in many impairment  
 2 proceedings?  
 3 **A. The few that we've had, yes.**  
 4 Q. Okay. And what is DWR's role in an impairment  
 5 proceeding?  
 6 **A. Well, we administer water rights, and so we make**  
 7 **a determination if impairment actually occurs,**  
 8 **and we've even written rules on how to**  
 9 **investigate an impairment. And surface water we**  
 10 **do quite often when it gets dry, but we do have**  
 11 **a few groundwater impairment complaints. And so**  
 12 **if -- if impairment is found, it's our role to**  
 13 **curtail the junior pumping until the senior**  
 14 **pumping is satisfied.**  
 15 Q. Does impairment occur when the complaint is made  
 16 or when it's been evidenced that the junior  
 17 right holder is actually causing impairment?  
 18 **A. Well, an impairment complaint can be made, but**  
 19 **then we do -- we study it to make a**  
 20 **determination that impairment is actually**  
 21 **occurring.**  
 22 Q. Okay. And you don't curtail use until you've  
 23 determined that the impairment is occurring?  
 24 **A. That's correct, because we do get folks claiming**  
 25 **impairment when they're not being impaired.**

Page 1819

1 Q. Okay. How long does the investigation take DWR  
 2 to perform to determine whether or not there is  
 3 impairment?  
 4 **A. Surface water, it's pretty real time, I mean, we**  
 5 **can make a determination quickly. In a**  
 6 **groundwater situation, we actually have to look**  
 7 **at pumping and recovery so we can determine the**  
 8 **well-to-well impact. So we're getting better at**  
 9 **them. It depends on when in the season, but it**  
 10 **can take a season to make that determination.**  
 11 Q. And I believe you recalled during the discovery  
 12 stage, I asked about the -- what DWR had done to  
 13 evaluate impairment, and response was DWR  
 14 determines the potential for impairment upon the  
 15 submission of an application; no ASR related  
 16 permit applications from Wichita are before DWR  
 17 at this time. Does that sound like what the  
 18 response would have been?  
 19 **A. Well, okay, so you're asking if we would make a**  
 20 **determination of impairment would occur if we**  
 21 **received a new application?**  
 22 Q. I had asked what DWR had done with regard to  
 23 impairment in this proposal.  
 24 **A. Okay.**  
 25 Q. And I interpreted your response as we didn't

1 look at impairment for this proposal because  
2 it's not a new or change application?  
3 **A. Okay. We didn't look at impairment related to a**  
4 **new application or a change, but then we did**  
5 **look at the table with the aquifer still**  
6 **80 percent full at the end of eight years of a**  
7 **1 percent drought, we didn't feel that**  
8 **impairment would occur.**  
9 Q. Okay. When you say the aquifer is 80 percent  
10 full, that sounds like a lot of water given the  
11 size of the aquifer. Is that your  
12 understanding?  
13 **A. Yes.**  
14 Q. If -- and is it also your understanding that the  
15 area is over-appropriated and new applications  
16 within the Equus Beds well field are not being  
17 approved?  
18 **A. Correct.**  
19 Q. So if there's all that water, why are we not  
20 appropriating it to others for beneficial use?  
21 **A. Well, because the area is beyond what's**  
22 **considered safe yield for that particular**  
23 **aquifer.**  
24 Q. And who determines safe yield?  
25 **A. Well, it's in our rules. We use the GMD**

1 **A. Okay.**  
2 Q. We also discussed a letter that was written by  
3 the chief engineer, DWR Exhibit 4, in September  
4 of '17, if you want to look at it, addressing --  
5 believing that the model was sufficient. Do you  
6 recall discussing that letter?  
7 **A. Yes.**  
8 Q. We talked about two different models throughout  
9 this hearing, MODSIM and MODFLOW. Do you know  
10 which model that letter was referring to?  
11 **A. No. I believe it'd be the MODFLOW, but I'm not**  
12 **sure. Again, I'm not the modeler.**  
13 Q. Okay. Do you know if DWR looked at both models  
14 or if they only looked at one of the two?  
15 **A. I don't -- I'm not sure.**  
16 Q. With regard to the permits allowing the  
17 withdrawal or recovery of 19,000 acre-feet, that  
18 number is not limited if the City submits new  
19 applications or further applications; is that  
20 correct?  
21 **A. That's correct.**  
22 Q. In any analysis, have you seen, either by the  
23 City, Burns & McDonnell, or DWR, contemplation  
24 of that number being increased beyond 19,000?  
25 **A. At one time, there were some new applications**

1 **numbers, and I believe -- I'd have to review it,**  
2 **but I'm sure it's 6 inches of recharge in a**  
3 **two-mile circle. So -- which would be, well,**  
4 **2640 -- 2,640 acre-feet available in a two-mile**  
5 **circle. I think.**  
6 Q. So there's a significant amount of water because  
7 the aquifer is 80 percent full but not enough  
8 water to appropriate for beneficial use?  
9 **A. That's correct.**  
10 Q. And the permit similar to 46,714 and other  
11 permits attached to ASR Phase II, which we just  
12 looked at, what was the minimum index level  
13 attached to those permits?  
14 **A. Let me see. Do you know where they are in here,**  
15 **Tessa?**  
16 Q. Well, you can either look at -- in Intervenor's  
17 notebook, Number 18, or 28 --  
18 **A. Okay.**  
19 Q. -- in the GMD notebook, which is the Phase II.  
20 These would be the current minimum index levels.  
21 **A. They're in every -- can you point me to a**  
22 **paragraph so I don't have to read the whole**  
23 **thing?**  
24 Q. I'll just move on, I'm sure it's covered in  
25 something.

1 **filed to increase it to, I believe, 30, but then**  
2 **the City requested that those applications be**  
3 **withdrawn.**  
4 Q. And the proposal before us is, and the modeling  
5 associated with that proposal, is based on a  
6 19,000 limit?  
7 **A. Correct.**  
8 Q. You had previously said regarding water quality  
9 that because no changes were being made to Phase  
10 I you didn't have any water quality concerns.  
11 Can you elaborate why only changes to Phase I  
12 would give rise to water quality?  
13 **A. Well, can you ask the last part of that, Tessa,**  
14 **I'm sorry?**  
15 Q. Why do you believe that only changes to Phase I  
16 of the ASR project would cause -- could cause  
17 water quality issues but not changes to Phase  
18 II?  
19 **A. Okay, just the geographic location of Phase I to**  
20 **hold back the salt plume barrier. And there's**  
21 **no -- there's always water quality concerns, but**  
22 **there's no additional water quality concerns**  
23 **based on these potential modifications.**  
24 Q. So you don't believe there's any water quality  
25 implications to lowering the Equus Beds to the

Page 1824

1 newly proposed minimum index levels?  
 2 **A. We don't -- we don't believe so.**  
 3 Q. Okay. And Phase I is dealing with the Burrton  
 4 chloride plume, correct?  
 5 **A. Correct.**  
 6 Q. And if we don't change Phase I, we'll have that  
 7 barrier, is that your general understanding?  
 8 **A. Yeah, I don't know how well the barrier is**  
 9 **working, but correct, that's right.**  
 10 Q. Now, is there also chloride contamination from  
 11 the Arkansas River?  
 12 **A. Yes.**  
 13 Q. And we do not have a barrier to prevent that  
 14 chloride from moving into the Equus Beds, is  
 15 that your understanding?  
 16 **A. That's my understanding.**  
 17 Q. But you don't think lowering the minimum index  
 18 levels in that area could impact the chloride  
 19 migration from the Arkansas River?  
 20 **A. I don't -- I don't think -- the lowering wasn't**  
 21 **significant enough that I believe that there**  
 22 **would be an impact.**  
 23 Q. Okay. I attempted this earlier, and I didn't  
 24 convey -- communicate it well, the basin storage  
 25 area is 120,000 acre-feet, correct?

Page 1825

1 **A. Correct.**  
 2 Q. And the City has approximately 6,000 acre-feet  
 3 in recharge credits?  
 4 **A. I think so.**  
 5 Q. So what else is -- as we sit here today, what  
 6 else is in the basin storage area?  
 7 **A. Well, okay, whether it's Equus Beds or basin**  
 8 **storage area, that's all about accounting, okay,**  
 9 **whatever we call it, it's about accounting. So,**  
 10 **currently, if the water level is full, then the**  
 11 **Equus Beds water is in that particular space.**  
 12 Q. Okay.  
 13 **A. Okay. So -- and if somebody is pulling water**  
 14 **from that particular space, other than a**  
 15 **recharge credit, they're pumping Equus Beds**  
 16 **water.**  
 17 Q. All right. So even though the basin storage  
 18 area sits below many water right holders in this  
 19 area, when they use their water appropriation  
 20 rights, those water users are using Equus Beds  
 21 water, and the City well potentially next -- you  
 22 know, a little ways down would -- could use  
 23 either Equus Beds water or basin storage area  
 24 water?  
 25 **A. That's correct.**

Page 1826

1 Q. If we turn to GMD2 Exhibit 26, which is also in  
 2 Volume II, on page 12, if you look at conclusion  
 3 number 13.  
 4 **A. Okay.**  
 5 Q. And can you read 13 for all of us?  
 6 **A. That if the project is operated so that recharge**  
 7 **credits cannot be withdrawn if the static water**  
 8 **level in the index well is below the lowest**  
 9 **index water level for that index well, the**  
 10 **public interest in not diverting Equus Beds**  
 11 **water will be protected.**  
 12 Q. Can you -- what do you believe is meant by not  
 13 diverting Equus Beds groundwater?  
 14 **A. Well, if the low -- the lowest index water level**  
 15 **is Equus Beds water.**  
 16 Q. Below that?  
 17 **A. Below that.**  
 18 Q. Anything below the minimum index level?  
 19 **A. Is Equus Beds water. And so the project, when**  
 20 **operated, recharge credits cannot be drawn below**  
 21 **that index well; therefore, the recharge credits**  
 22 **are not diverted from the Equus Beds.**  
 23 Q. Okay. So at the time this was approved, the  
 24 index levels were the 1993 levels, and you're  
 25 saying anything below the index levels, meaning

Page 1827

1 the 1993 levels, is Equus Beds water. Am I  
 2 understanding you correctly?  
 3 **A. That's correct.**  
 4 Q. So if anything below the 1993 levels is Equus  
 5 Beds water, when we allow the City to go below  
 6 those '93 levels, is the City not withdrawing  
 7 Equus Beds water?  
 8 **A. If this -- if this proposal is approved, then**  
 9 **the minimum index water level will be lowered,**  
 10 **and that's basin storage area then.**  
 11 Q. Oh. So upon approval of the City's proposal,  
 12 the difference between the current minimum index  
 13 levels and the new minimum index levels, all  
 14 that water in that area is converted from Equus  
 15 Beds water to basin storage area water?  
 16 **A. Well, no, it -- it moves that index level down,**  
 17 **then the City then would have the ability to put**  
 18 **recharge credits into that area. Now, an AMC**  
 19 **would convert Equus Beds to a recharge credit,**  
 20 **but a physical recharge credit is still a**  
 21 **physical recharge credit.**  
 22 Q. But when the aquifer is full, you can't put  
 23 water in that space?  
 24 **A. No, not physical water, you cannot.**  
 25 Q. We've talked a lot about leaving water in the

1 aquifer and the City leaving water in the  
2 aquifer to earn AMCs. Is the water in that  
3 context left in the aquifer a portion of their  
4 what we call native water rights?

5 **A. Yes, they -- they would have to divert their  
6 native water right to create the hole in the  
7 aquifer.**

8 Q. I'm talking -- I actually was talking about the  
9 opposite. I want to leave the water in the  
10 aquifer, not -- we're not on the hole side. So  
11 we talked about the City earning credits for  
12 leaving water in the aquifer, are you with me?

13 **A. Yep. Yep.**

14 Q. So what water does the City leave in the  
15 aquifer?

16 **A. It would be their native water right or any  
17 re -- any accumulated recharge credit.**

18 Q. Okay. So is the amount of AMCs that the City  
19 can accumulate limited by the quantity of native  
20 water rights and any available recharge credit  
21 since they get a -- it's an offset of what they  
22 could have pumped?

23 **A. Not at this point.**

24 Q. Okay. So even though today the City would have  
25 the ability to withdraw roughly 46,000

1 Q. Okay. Do you see findings 12 and 13?

2 **A. Yes.**

3 Q. I read findings 12 and 13 to protect domestic  
4 well owners; is that correct?

5 **A. Yes, that's correct.**

6 Q. And when I read through these proposed permit  
7 conditions, I haven't found something that  
8 similarly offers those benefits to a -- an  
9 irrigator water permit holder or someone with a  
10 stock watering permit or another municipality in  
11 the area. Am I correct in reading those to be  
12 limited to domestic wells?

13 **A. Yes.**

14 Q. Okay.

15 **A. But please note, though, that this is still a  
16 draft and other things can be considered. But  
17 right now as written, it was to protect domestic  
18 well owners within the spacing requirements.**

19 Q. Okay. And one of the remedies proposed in  
20 previous permit conditions, or even in these, is  
21 the possibility of a home water treatment  
22 system?

23 **A. Yeah, I think -- I think anything's on the  
24 table.**

25 Q. If the impairment or impact caused to other

1 acre-feet, by leaving that water in and earning  
2 AMCs, they could actually earn 80,000 in AMCs?  
3 It's not based at all on their water rights left  
4 in the aquifer?

5 **A. That's correct.**

6 Q. Earlier today we talked about water use  
7 reporting and that the use reported is generally  
8 less than the authorized amount?

9 **A. Correct.**

10 Q. So that would imply that those users are also  
11 leaving water in the aquifer; is that correct?

12 **A. That's correct.**

13 Q. And do they receive any type of credit for what  
14 they leave in the aquifer?

15 **A. No. But they're not part of an aquifer storage  
16 and recovery.**

17 Q. You might have a lot more applications after  
18 this.

19 Switching gears to the proposed permit  
20 conditions that we talked about, I believe now  
21 this would be -- I think it's DWR Exhibit  
22 Number 1 where they talk about proposed permit  
23 conditions. And this is the proposed findings,  
24 be about page 6 maybe of that.

25 **A. I'm on -- I'm on page 6.**

1 water users in the Equus Beds is chloride  
2 contamination where a home treatment system  
3 doesn't necessarily solve that, especially if  
4 you're irrigating, have you seen anything  
5 proposed to deal with that type of potential  
6 impact?

7 **A. No.**

8 Q. It's also been said throughout the course of  
9 these proceedings that the City would be forced  
10 to make a hole in the aquifer, as you started to  
11 talk about earlier; is that correct?

12 **A. They would have to create a hole to generate  
13 recharge credits; to be able to accumulate  
14 recharge credits, they'd have to lower the  
15 aquifer.**

16 Q. Is pumping a hole in the aquifer the City's only  
17 option to obtain a water supply needed?

18 **A. The only option to obtain a water supply, is  
19 that ...**

20 Q. Yes.

21 **A. It's the option to create recharge credits.**

22 Q. But if the City needs additional water supply,  
23 they would potentially have other options?

24 **A. Oh, sure. I understand now, thanks.**

25 Q. Does -- has DWR issued or contemplated issuing

Page 1832

1 an order requiring the City to pump a hole in  
 2 the aquifer?  
 3 **A. No, I mean, that's -- that's how ASR is**  
 4 **currently approved, we would not have to issue**  
 5 **an order to do that.**  
 6 Q. Okay. So is it the City's decision whether or  
 7 not they pump a hole in the aquifer?  
 8 **A. Yes, it's based on their management decisions.**  
 9 Q. Did the ASR Phase I or II guarantee the City a  
 10 specified amount of recharge credits?  
 11 **A. No, it placed no limit on it.**  
 12 Q. Okay. Did it guarantee that within ten years  
 13 the City would have enough recharge credits to  
 14 meet their supply needs?  
 15 **A. No.**  
 16 Q. So in this context, it's actually the City's  
 17 decision to pump a hole in the aquifer, they're  
 18 not required to do it; is that correct?  
 19 **A. That's correct.**  
 20 Q. Are you familiar with the Burrton IGUCA?  
 21 **A. Yes.**  
 22 Q. Can you briefly describe what an IGUCA is?  
 23 **A. An IGUCA is an Intensive Groundwater Use Control**  
 24 **Area.**  
 25 Q. And why is -- do you know why we have the IGUCA

Page 1833

1 for Burrton?  
 2 **A. Because of water quality and it lays out**  
 3 **corrective controls that provides the GMD the**  
 4 **opportunity for an additional study to see if**  
 5 **new appropriations are available.**  
 6 Q. Okay. In the Intervenor's notebook, can you  
 7 find tab number 6?  
 8 **A. Okay.**  
 9 Q. In the -- well, can you tell me what this  
 10 document is?  
 11 **A. This document is a letter dated October 4th,**  
 12 **2016 from the City of Wichita, Alan King, to our**  
 13 **agency, in care of David Barfield, chief**  
 14 **engineer.**  
 15 Q. Have you seen this letter before?  
 16 **A. Not until today.**  
 17 Q. Okay. Can you read the first two sentences of  
 18 the third paragraph for us?  
 19 **A. For the record, this -- we did the Burrton IGUCA**  
 20 **review, and this is a letter commenting on that**  
 21 **particular IGUCA review. And the sentences that**  
 22 **Tessa wants me to read is, the City of Wichita**  
 23 **supports the continuation of the IGUCA as long**  
 24 **as the IGUCA does not limit the City's ability**  
 25 **to withdraw water from any of its wells,**

Page 1834

1 **including recharge credits. Further, the City**  
 2 **would be a proponent of expanding the IGUCA**  
 3 **boundary to include the ASR Phase I wells if the**  
 4 **IGUCA guaranteed the City could transfer the**  
 5 **point of withdrawal of recharge credits from any**  
 6 **of the IGUCA-affected wells to other city wells.**  
 7 Q. What do you believe is meant by transferring the  
 8 point of withdrawal of recharge credits?  
 9 **MR. OLEEN:** I kind of want to object  
 10 because the witness has said he's never  
 11 seen this letter before, he didn't write  
 12 this letter before, I feel like this is  
 13 kind of a sandbagging of my witness, and  
 14 these questions should have been asked of  
 15 the Wichita officials when they were on the  
 16 stand. I don't think he's qualified to  
 17 answer that question is my official  
 18 objection.  
 19 **PRESIDING OFFICER:** Your response?  
 20 **MS. WENDLING:** I believe in his  
 21 position he would have been involved in  
 22 reviewing the IGUCA and able to give, in  
 23 his experience, what it would mean to  
 24 transfer the point of withdrawal for the  
 25 research credits.

Page 1835

1 **PRESIDING OFFICER:** So perhaps you  
 2 could ask that way instead of what was the  
 3 City requesting.  
 4 **MS. WENDLING:** Okay.  
 5 **PRESIDING OFFICER:** Instead of what  
 6 was the City's intent.  
 7 **MS. WENDLING:** Okay.  
 8 **BY MS. WENDLING:**  
 9 Q. What do you understand the City was requesting  
 10 by asking to transfer the point of withdrawal of  
 11 recharge credits?  
 12 **A. Well, to help, in my position, it was another**  
 13 **team, the water management team who's Chinese**  
 14 **walled off that did --**  
 15 Q. Okay.  
 16 **A. -- the Burrton IGUCA review and the McPherson**  
 17 **IGUCA review, and so -- but what I see there is**  
 18 **to transfer the water use from close to the salt**  
 19 **plume, leave that water there, and gain that**  
 20 **authority farther away from the salt plume,**  
 21 **that's how I read that.**  
 22 Q. Okay. If the ability to withdraw recharge  
 23 credits is transferred, would that allow  
 24 additional withdrawals at locations outside of  
 25 the IGUCA?

1 **A. Yes, it could.**  
2 Q. To your knowledge, has that been contemplated in  
3 any of the analysis?  
4 **A. We haven't given it -- we -- we've not -- we've**  
5 **not done any study or anything on that, no.**  
6 **MS. WENDLING:** All right. I have no  
7 further questions.  
8 **PRESIDING OFFICER:** Yes.  
9 **MR. OLEEN:** Would the witness like a  
10 break before I begin my line of redirect?  
11 **A. No. What's a break? But thank you, no, I'm**  
12 **good.**  
13  
14 **REDIRECT EXAMINATION**  
15 **BY MR. OLEEN:**  
16 Q. Okay. Mr. Letourneau, I'm now presented with a  
17 chance to ask you some redirect questions and --  
18 regarding your cross-examination, and your  
19 cross-examination has gone on not only on  
20 today's date but also the hearing days we had  
21 back in February, so I'll try to work backwards  
22 in terms of my topics and talk about what we  
23 talked about today first. But I do need to go  
24 back and revisit some of your testimony from  
25 February.

1 concerns about which we talked before regarding  
2 well spacing consents or waivers, right?  
3 **A. Correct.**  
4 Q. Okay. Are there -- currently, are there spacing  
5 concerns between existing ASR wells and these  
6 other existing irrigation rights or stock  
7 watering rights that Ms. Wendling was referring  
8 to when she asked you why 12 and 13 don't cover  
9 irrigation or stock watering rights?  
10 **A. I'm not aware of any spacing situations other**  
11 **than the domestics.**  
12 Q. So I know you -- as you sit here today you don't  
13 have access to all the other available data that  
14 you would have at your office, but are you  
15 saying that you don't believe that there are any  
16 existing irrigation or stock watering water  
17 rights that are within 660 feet of an existing  
18 ASR well?  
19 **A. I don't know, though. Without having that data,**  
20 **I don't know, but I don't think -- I don't**  
21 **believe there is.**  
22 Q. Okay. And assuming that there isn't, why -- if  
23 there's -- why does the 660 foot, where does  
24 that radius -- under what context does that  
25 radius originate?

1 As to Ms. Wendling's line of  
2 cross-examination, she had asked you some  
3 questions regarding proposed draft permit  
4 conditions 12 and 13 that are part of an  
5 enclosure to DWR Exhibit Number 1. Do you  
6 remember that just now?  
7 **A. Yes.**  
8 Q. And would you -- well, do you -- if I said that  
9 those two proposed conditions that you were  
10 talking about at numbers 12 and 13 pertain to  
11 protecting existing domestic well owners, do you  
12 recall that line of discussion?  
13 **A. Yes.**  
14 Q. Okay. Maybe just be best if you turn to that  
15 now, please, those proposed draft conditions 12  
16 and 13 that are enclosed to DWR Exhibit 1, that  
17 letter. You -- I believe you testified that  
18 numbers 12 and 13 only pertain to domestic  
19 wells, right?  
20 **A. Yeah, I just read the first line, but yes.**  
21 Q. Okay. Well, I always want you to read as much  
22 as you need to read to answer questions  
23 accurately, but my question is this: With  
24 respect to existing domestic well owners, isn't  
25 it true that we have some well spacing concerns,

1 **A. That spacing -- that spacing requirements to**  
2 **domestic wells of 660 feet.**  
3 Q. I guess my question is does it -- if it's true  
4 that these other irrigation and stock watering  
5 rights that Ms. Wendling was asking you about,  
6 if it's true that they're not within 660 feet,  
7 does that make a difference and explain why  
8 maybe those types of water rights are not listed  
9 in proposed conditions 12 and 13?  
10 **A. Well, I don't -- I guess I don't quite**  
11 **understand the -- I mean, everybody's protected**  
12 **by priority, whether it's domestic or any use in**  
13 **even spacing. So, I mean, this right here is**  
14 **just -- domestic well owners within 660 feet are**  
15 **protected with these permit conditions.**  
16 Q. While I'm on this topic of well spacing, I'll go  
17 back actually to a line of questioning that  
18 happened back in February from Mr. Stucky, and  
19 do you recall a line of questioning about GMD2  
20 requesting that Wichita solicit domestic well  
21 spacing consent forms?  
22 **A. Yes, correct.**  
23 Q. And that discussion about a waiver of spacing  
24 requirements?  
25 **A. A consent, yeah, the -- the owners consented to**

Page 1840

1 **less spacing requirements.**  
 2 Q. Some owners did?  
 3 **A. Correct.**  
 4 Q. Because did I understand it correctly that not  
 5 everybody returned consent forms?  
 6 **A. I think --**  
 7 Q. Or do you know?  
 8 **A. I think that's correct. I'm -- I'm not sure,**  
 9 **but yeah.**  
 10 Q. Okay. If you ever don't know, feel free to tell  
 11 me you don't know. So even though consent forms  
 12 were solicited, isn't it true that a waiver of  
 13 spacing requirements was granted?  
 14 **A. Yes, I believe so.**  
 15 Q. And who actually grants that waiver?  
 16 **A. Oh, the chief engineer.**  
 17 Q. Okay.  
 18 **A. The chief engineer grants the waivers of the**  
 19 **rules.**  
 20 Q. So I want to clear up something because I think  
 21 there's -- I think there's been discussion about  
 22 GMD granting waivers of spacing requirements,  
 23 and I want you to tell me if it's incorrect that  
 24 they -- that GMD grants waivers of spacing  
 25 requirements?

Page 1841

1 **A. No, but the GMD recommends a waiver of a rule.**  
 2 **But the chief engineer is the one that**  
 3 **ultimately waives the rule.**  
 4 Q. So regardless of what the GMD might recommend,  
 5 it's still within the power of the chief  
 6 engineer to decide whether or not to waive a  
 7 particular DWR regulation?  
 8 **A. That's correct.**  
 9 Q. Regulations that would include a regulation that  
 10 pertains to well spacing?  
 11 **A. That's correct.**  
 12 Q. So there was discussion, I believe, back in  
 13 February, Mr. Stucky's line of questioning about  
 14 the validity of previous well spacing consents,  
 15 right, remember that line of discussion?  
 16 **A. Yes, absolutely, yes.**  
 17 Q. And about the validity of -- the ongoing  
 18 validity of GMD's previous recommendation to  
 19 waive spacing. Do you remember that line of  
 20 questioning?  
 21 **A. Yes.**  
 22 Q. So what I want to know is that notwithstanding  
 23 whatever GMD might recommend as the course of  
 24 these proceedings, if the chief engineer  
 25 believes that it's appropriate to waive the

Page 1842

1 spacing regulations, can he do that?  
 2 **A. Yes.**  
 3 Q. And do you think -- is it DWR's opinion, rather,  
 4 that the proposed conditions relating -- let me  
 5 strike that and start over, I'll do a better  
 6 job. Going back to the proposed conditions 12  
 7 and 13 that were attached to DWR Exhibit 1, does  
 8 DWR believe that conditions in substantially  
 9 that form, I understand they're still drafts,  
 10 but does DWR believe that conditions in  
 11 substantially those forms would have the effect  
 12 of protecting these domestic well owners from  
 13 water quality or quantity concerns?  
 14 **A. Yes, absolutely. These two conditions protect**  
 15 **every domestic owner, you know, in that**  
 16 **category, and everybody that even signed the**  
 17 **domestic consent form. I mean, these conditions**  
 18 **protect the people that signed those consent**  
 19 **forms.**  
 20 Q. So do you -- does DWR believe that conditions  
 21 like this provides sufficient protection such  
 22 that it doesn't matter if GMD2 is now  
 23 recommending that their waivers be rescinded,  
 24 assuming that can happen? Are you telling me  
 25 that DWR believes that these proposed conditions

Page 1843

1 provide adequate enough protection that to the  
 2 extent some spacing regulation still applies,  
 3 the chief engineer should waive it?  
 4 **A. Yes.**  
 5 Q. Now, back to Ms. Wendling's line of questioning  
 6 again today, and we talked about Intervenor's  
 7 Exhibit -- well, tab 17, which I believe was tab  
 8 17 in the Intervenor's book, and it is the  
 9 actual permit for existing Wichita permit  
 10 46,627.  
 11 **A. Okay.**  
 12 Q. Let me know when you've found that.  
 13 **A. I'm here, yep.**  
 14 Q. Okay. So Ms. Wendling had asked you some  
 15 questions about the authorized quantity under  
 16 this permit, and I believe you said that this  
 17 particular permit regarding file number 46,627  
 18 is a dual use permit, correct?  
 19 **A. That's correct.**  
 20 Q. Okay. And she had asked you, if you would turn  
 21 to paragraph number 5, she asked you, didn't  
 22 she, about that authorized quantity of 45,230  
 23 acre-feet and whether that quantity is 45,230  
 24 acre-feet of municipal use water and also a  
 25 separate 45,230 acre-feet of artificial recharge

1 use water. Do you remember that question?  
2 **A. Correct.**

3 Q. And I think you had said that you had just  
4 briefly looked at this permit and that I thought  
5 you agreed with her that it was two separate  
6 45,230 acre-foot authorized quantities?

7 **A. It's a single quantity.**

8 Q. Okay. Well, that's -- go ahead.

9 **A. I was just going to say, it's not spelled out  
10 per use under this permit, but it's a single  
11 quantity of 45,230.**

12 Q. Well, you tell me if this clarifies things. I'd  
13 like you to refer to paragraph 23. I know  
14 you're always asked to make decisions on  
15 documents that you're not given full time to  
16 review, and I'd like you to review paragraph 23,  
17 tell me when you're done.

18 **A. Okay. Yeah, paragraph 5 and 23 are together  
19 but -- as far as quantity, and 23 states, that  
20 the rate of diversion and quantity of water  
21 approved under this permit for municipal use is  
22 further limited to the rate of diversion and  
23 quantity which when combined with the rate of  
24 diversion and quantity of the water authorized  
25 for artificial recharge will provide a maximum**

1 **diversion rate not in excess of 41,667 gallons  
2 per minute and to a quantity not to exceed, in  
3 parentheses, 45,230 acre-feet of water for any  
4 calendar year.**

5 Q. So I guess what I want to know is now that  
6 you've read paragraph 23 that changes your  
7 answer -- that changes what I understood your  
8 answer to be to Ms. Wendling's question about  
9 the dual usages under this permit and whether  
10 this authorizes 45,230 for each of those two  
11 uses or not?

12 **A. Well, they're limited to one another. That's --  
13 that's the maximum for each one during --  
14 limited to each other during one calendar year.**

15 Q. So that -- and for the benefit not only perhaps  
16 of Ms. Wendling but anyone else here, that sort  
17 of a limitation means -- does that effectively  
18 mean that you don't get two 45,000 numbers that  
19 you can pump, there's one 45,000 number between  
20 the two dual uses?

21 **A. That's correct. Both -- both of them together  
22 can divert 45,230.**

23 Q. Okay. Jumping back now to a line of questioning  
24 from Mr. Stucky, he had -- let me start over. I  
25 believe he asked you a question about whether if

1 the City were to only accumulate recharge  
2 credits under the current Phase II permits, so  
3 only recharge credits that are accumulated from  
4 physical recharge of water, I believe he asked  
5 you a question whether you thought the City  
6 could ever reach 120,000 acre-feet of such  
7 physical recharge credit. And I don't recall  
8 what your answer was, I thought it might be no,  
9 but what was your answer again?

10 **A. Well, I thought about if -- currently the space  
11 in the aquifer is 120,000, according to the USGS  
12 model. And so if we were at -- and recharge  
13 credits leak, they've got a -- they've got --  
14 part of them go away each year. So I thought  
15 that if the max was 120 but a little bit was  
16 going away each year that they could never get  
17 to 120. But if -- if they had a year -- if they  
18 were close to 120 and, say, 12,000 of them  
19 leaked away but they had a year where they  
20 accumulated 15,000, then for a short period of  
21 time, they could accumulate 120. But on paper.  
22 That's ...**

23 Q. What I wanted to clarify, I understand that  
24 because of this -- the fact that the recharge  
25 credits leak that, you know, you can't perhaps

1 stay -- or it can be difficult to stay at any  
2 certain number, pick a number, of accumulated  
3 recharge credits because they're constantly  
4 slowly decreasing at some rate.

5 **A. Right.**

6 Q. But I want to know whether your answer -- and so  
7 if your answer is saying it can be difficult to  
8 stay at 120,000 acre-feet, or any other number,  
9 I get that, but I want to make sure that you  
10 weren't -- or I want to know if you were saying  
11 that you don't think they could ever accumulate  
12 something close to that amount?

13 **A. Oh, it would take a long time that they could  
14 accumulate something close to that amount. But  
15 with that in mind, once they're maxed at 120,  
16 that leaks a little bit. But --**

17 Q. Right, I understand that everything leaks.

18 **A. Right.**

19 Q. And currently physical recharge credits are not  
20 subject to a cap of 120,000 or anything, right?

21 **A. That's correct.**

22 Q. Mr. Stucky also had a line of questioning about  
23 the propriety of imposing certain conditions on  
24 ASR Phase II permits, assuming Wichita's  
25 proposal is approved, and I believe there was a

Page 1848

1 discussion about whether there's -- the proposal  
 2 has any language indicating that the AMCs or any  
 3 recharge credits could only be withdrawn in a  
 4 drought situation. Do you remember a line of  
 5 questioning maybe along those lines?  
 6 **A. Yes.**  
 7 Q. Well, regardless, I guess what I want to know is  
 8 to the extent some might think that, oh, let's  
 9 just put a drought condition on withdrawal of  
 10 recharge credits, number one, I guess I want to  
 11 know is there currently some sort of condition  
 12 that requires Wichita to only be able to  
 13 withdraw accumulated recharge credits under the  
 14 current system, are they only allowed to do that  
 15 if there's some sort of drought trigger or  
 16 condition that is in effect?  
 17 **A. No, they can withdraw the recharge credits now.**  
 18 Q. Okay. So to the extent that the GMD or anybody  
 19 else wants there to be some sort of specific  
 20 drought condition or trigger in the event that  
 21 this proposal is approved, is that an easy thing  
 22 to do?  
 23 **A. No. You never know when you're in a drought**  
 24 **until you're a year or two into it.**  
 25 Q. So --

Page 1849

1 **A. So it's kind of hard to start it, I mean, it's**  
 2 **kind of -- what's the starting point of the**  
 3 **drought? You don't know you're in a drought**  
 4 **until you're well into the drought.**  
 5 Q. So do you think it might be easy to hypothecate  
 6 about we add drought conditions, but actually  
 7 drafting that in a way that is useful is  
 8 difficult?  
 9 **A. Yeah, I don't know when to start it.**  
 10 Q. Do you think based on what you've read of the  
 11 proposal and what you've heard of the testimony  
 12 from the City's witnesses, do you think that  
 13 they have an incentive if this proposal is  
 14 approved to withdraw any recharge credits when  
 15 there's not a drought?  
 16 **A. Not based on this proposal.**  
 17 Q. Stay on the subject of AMCs, I believe  
 18 Mr. Stucky had a line of questioning about the  
 19 source water of AMC, and I'd like to, again,  
 20 direct your attention to DWR Exhibit 1 and ask  
 21 you to turn to the enclosure to that DWR  
 22 Exhibit 1. And once you're there, if you'd read  
 23 the -- well, so we know what we're talking  
 24 about, this is the responses, it's titled  
 25 Responses to GMD2 Legal/Policy Questions and

Page 1850

1 Comments, correct? It's the enclosure to DWR  
 2 Exhibit 1 which is a June 1st, 2018 letter?  
 3 **A. June, yes.**  
 4 Q. Okay. Are you at the enclosure?  
 5 **A. I'm there now.**  
 6 Q. Okay. The top says Responses to GMD2  
 7 Legal/Policy Questions and Comments, right?  
 8 **A. Correct.**  
 9 Q. And at the very bottom, there is a paragraph  
 10 that is in response to a question about source  
 11 water, right?  
 12 **A. That's correct.**  
 13 Q. And would you read the first sentence of that  
 14 paragraph response?  
 15 **A. The source water for these credits is the Little**  
 16 **Arkansas River pursuant to Water Right File**  
 17 **Number 46,427.**  
 18 Q. And, actually, did you perhaps misspeak, is that  
 19 46,627?  
 20 **A. I'm sorry, 46,627.**  
 21 Q. And is this statement talking about source water  
 22 for the proposed AMCs?  
 23 **A. That's correct.**  
 24 Q. And so maybe you said this before, but do you  
 25 agree with that statement that the source water

Page 1851

1 for AMCs would be the Little Ark River pursuant  
 2 to Water Right File Number 46,627?  
 3 **A. Yes.**  
 4 Q. Staying on this enclosure, if you turn to the  
 5 next page of this document that we said was  
 6 titled Responses to GMD2 Legal/Policy Questions  
 7 and Comments, at the top, there's a question  
 8 that says, how is an AMC stored in the aquifer  
 9 by artificial recharge. Do you see that?  
 10 **A. Yes.**  
 11 Q. Would you please read the response.  
 12 **A. It is stored in the aquifer as the functional**  
 13 **equivalent of a physical replacement of water,**  
 14 **as expressed above.**  
 15 Q. That was DWR's position at the time this letter  
 16 was sent, right?  
 17 **A. Correct.**  
 18 Q. Is it still DWR's position today regarding this  
 19 issue?  
 20 **A. Yes.**  
 21 Q. To stay on this issue of storage, water storage,  
 22 I don't want to do it because I objected to it  
 23 but you were forced to talk some about the  
 24 regulations, so because others had you do it,  
 25 I'm going to have you do it too for a little bit

1 but not long. If you'd please turn to what I  
2 believe is -- well, it is GMD2's Exhibit 22,  
3 which is purportedly the current regulations and  
4 statutes that DWR administers and enforces. And  
5 if you'd please turn to page 6 where Mr. Stucky  
6 previously asked you questions about the  
7 definition of a recharge credit, which is  
8 technically in K.A.R. 5-1-1, I believe (mmm),  
9 it's on page 6. Do you see that?

10 **A. Yes.**

11 Q. And that (mmm) definition of recharge credit, I  
12 think Mr. Stucky had you -- had you read that,  
13 but regardless do you see where -- where it has  
14 the clause "water that is stored in the basin  
15 storage area," right?

16 **A. That's correct.**

17 Q. And I think Mr. Stucky made some references to  
18 the usage of that verb clause "is stored" as  
19 referring to water that is injected. As you  
20 understand the -- I know you're not a lawyer and  
21 you shouldn't have to be making legal  
22 conclusions, but is it your -- is it DWR's  
23 position, to your knowledge, that that phrase  
24 "water that is stored" is not limited to water  
25 that is stored by physical injection?

1 talk about. So if Mr. Stucky wants to ask  
2 more questions about the definition of  
3 recharge credit in (mmm), I'm fine with  
4 that. I don't think this should allow him  
5 to ask I don't know how many questions  
6 about other regulations.  
7 **PRESIDING OFFICER:** If you're  
8 willing to go forward with that  
9 understanding, then I'm sure we'll be  
10 hearing more about it, but, yes, you can go  
11 forward, and then you can ask whatever  
12 follow-up questions on this regulation  
13 you'd like to.

14 **MR. STUCKY:** And just on this  
15 regulation or any of the regulations, if we  
16 go down this line of questioning?

17 **PRESIDING OFFICER:** If this is where  
18 Mr. Oleen is going to stop in terms of  
19 talking about regulations, then I think  
20 this is as far as it will go. I don't know  
21 where this is headed.

22 **MR. OLEEN:** I will limit my  
23 questions to this particular regulation.

24 **PRESIDING OFFICER:** Okay.

25 **BY MR. OLEEN:**

1 **A. That's correct.**

2 **MR. STUCKY:** Your Honor, I would  
3 like to just -- this isn't actually even an  
4 objection, it's a qualification. I am fine  
5 if Mr. Oleen goes down this whole line of  
6 questioning as far as interpretation of the  
7 statutes, in fact, I'm perfectly fine with  
8 that, but I was cut off from a detailed  
9 examination of these regulations and was  
10 cut short significantly in my cross in that  
11 regard. So all I would ask in return for  
12 Mr. Oleen now being allowed to go down this  
13 line of questioning is for me to have --  
14 for this to open the door for me to fully  
15 go down that line of questioning, that's my  
16 request on the record.

17 **MR. OLEEN:** I would be fine with  
18 opening the door a smidgen to talk about  
19 (mmm). This is the only one I want to talk  
20 about because -- and I objected earlier  
21 because Mr. Stucky was using the words "is  
22 stored" and trying, in my opinion, to put  
23 words in my witness's mouth about what --  
24 what that means. This is the only  
25 regulation that I want -- that I want to

1 Q. And what I want to know, Mr. Letourneau, to the  
2 extent you know, I want to know if DWR has  
3 interpreted that verb clause "is stored" to not  
4 be limited to just water that is stored by  
5 physical injection?

6 **A. Well, it's just -- it's water that's stored,  
7 it's not water -- it's not limited to the water  
8 that was physically put there by injection.  
9 The -- our legal team looked at that and said  
10 it's water that's stored, whether it be an AMC  
11 or a physical recharge credit.**

12 Q. So is another way of saying it is that, to your  
13 understanding, DWR's interpreting that phrase to  
14 refer to where the water is and not necessarily  
15 how it got there?

16 **A. That's correct.**

17 Q. That's all I have to say about that. Going on  
18 to the different key aspects of Wichita's  
19 proposal which is lowering the 1993 bottoms, as  
20 we sometimes refer to them, I think you told  
21 Mr. Stucky that that amounted to -- or that  
22 would amount to a, quote, fundamental change.  
23 Do you recall using that phraseology?

24 **A. Yes, it's a fundamental change to the permit  
25 conditions but not an overall fundamental change**

Page 1856

1 **to the whole project.**  
 2 Q. When you said fundamental change, did you mean  
 3 material change in the eyes of DWR as -- as it  
 4 pertains to the basin storage area or the  
 5 aquifer as a whole?  
 6 **A. No.**  
 7 Q. So is it -- is it still DWR's opinion, as I  
 8 think you have testified, that lowering the  
 9 bottoms is not that big a deal in DWR's -- well,  
 10 I don't want to put those words in your mouth.  
 11 **A. Right.**  
 12 Q. I thought you said that lowering the bottoms  
 13 compared to the remaining modeled thickness,  
 14 average thickness of the aquifer is not that  
 15 great. Is that what you said?  
 16 **A. Yeah, we -- we feel that lowering the bottoms is**  
 17 **reasonable.**  
 18 Q. On the issue of the '93 bottoms, stay on that  
 19 topic, there have been a line of discussion from  
 20 Mr. Stucky -- line of discussions from  
 21 Mr. Stucky about GMD2 Exhibit 26, if you would  
 22 please turn to that. Which is the ASR Phase I  
 23 initial approval order, I will represent to you.  
 24 Have you found that document?  
 25 **A. Yes, yes, I'm there, thanks.**

Page 1857

1 Q. If you turn to page 12 of 21, paragraph 13, are  
 2 you there?  
 3 **A. I'm there, yes.**  
 4 Q. Do you remember a line of questioning about --  
 5 about that particular paragraph 13 and  
 6 questioning about supposed implications about,  
 7 quote, public interest, as it's referenced in  
 8 that paragraph 13?  
 9 **A. Yes.**  
 10 Q. At the time that this Phase I approval was  
 11 issued, which was maybe around 2005; is that  
 12 right?  
 13 **A. August 8th of 2005.**  
 14 Q. At the time that this Phase I approval was  
 15 issued, the chief engineer at the time would not  
 16 have had available to him the modeling reports  
 17 that DWR has recently been presented with by the  
 18 City as part of its proposal; is that accurate?  
 19 **A. Yeah, that -- we didn't have the proposal at**  
 20 **that time.**  
 21 Q. So at the time that this Phase I approval was  
 22 issued, the chief engineer would not have had  
 23 the -- all the graphs and tables that you have  
 24 previously looked and testified about that show  
 25 different things in the City's proposal that

Page 1858

1 we're considering today, right?  
 2 **A. Correct.**  
 3 Q. Kind of staying on the issue of, quote, public  
 4 interest, previously Mr. Stucky asked you a line  
 5 of questioning about whether and how DWR thinks  
 6 this proposal might be in the public interest,  
 7 and you actually submitted written testimony  
 8 that addressed that issue in this matter, right?  
 9 **A. Correct.**  
 10 Q. And I believe you said -- well, what did you say  
 11 was why this proposal might be in the public's  
 12 best interest? What was DWR's understanding?  
 13 **A. Well, starting with the aquifer in full**  
 14 **conditions going into a 1 percent drought,**  
 15 **that's better -- that's better for every well**  
 16 **owner in the aquifer.**  
 17 Q. And taken as an item of, quote, public interest,  
 18 is that a big one, or is that a little one?  
 19 **A. Oh, that's a big one to us. I mean, it's just**  
 20 **much better going into a drought with a full**  
 21 **aquifer.**  
 22 Q. And can you tell me some of the implications,  
 23 can you unpack that statement of going into an  
 24 aquifer full -- excuse me, going into a 1  
 25 percent drought with a full aquifer, can you

Page 1859

1 kind of unpack that and tell me some of the  
 2 beneficial implications of that?  
 3 **A. Well, off the top of my head, I mean, when the**  
 4 **aquifer's full, you got reduced pumping costs,**  
 5 **well-to-well impacts are -- don't happen with a**  
 6 **full aquifer, and just the state of the resource**  
 7 **is so much better off going into a drought with**  
 8 **a full aquifer.**  
 9 Q. When you said reduced pumping costs, to whom  
 10 were you referring and how are -- how are there  
 11 reduced pumping costs?  
 12 **A. Well, when you pump a well, you've got to**  
 13 **overcome the head, I'll call it, the water**  
 14 **table, and so if it's -- if the water table is**  
 15 **lower, it takes more energy to pump the water.**  
 16 **Therefore, if it's higher, less energy and less**  
 17 **pumping costs. And just the well-to-well impact**  
 18 **isn't there, I mean, there's just less concern**  
 19 **when you've got more water in your well. It was**  
 20 **a big one to us.**  
 21 Q. I'd like to ask you to turn to GMD Exhibit 28  
 22 now, which I'll represent is the approval for  
 23 the ASR Phase II concept. Have you found that?  
 24 **A. Yes. Yes, thank you.**  
 25 Q. If you'd turn to page 5 of that approval of ASR

1 Phase II, and in a minute, I want to talk about  
2 paragraphs 5 and 6 on that page 5. But first I  
3 want to clarify, I think it's necessary, but  
4 does DWR view recognition of the proposed AMCs  
5 as being purely an accounting exercise?

6 **A. Yes.**

7 Q. And I don't know if you've read paragraph 5 of  
8 GMD -- on page 5 of GMD Exhibit 28 before into  
9 the record but if you would please do so now.

10 **A. That the model and accounting methodology**  
11 **remains as previously submitted, until otherwise**  
12 **modified by formal written approval of the chief**  
13 **engineer.**

14 Q. And so is it your understanding that -- well,  
15 let me take you back to DWR Exhibit 1, the  
16 letter dated June 1st, 2018 by Chief Engineer  
17 Barfield. Do you see there on the first page,  
18 second paragraph where it starts with, and I'm  
19 going to start mid sentence but it says, it is  
20 the position of myself, do you see that there?

21 **A. Yes.**

22 Q. Would you please read that through the rest of  
23 the sentence.

24 **A. It is the position of myself and the Division of**  
25 **Water Resources that AMCs, as proposed in this**

1 Q. Regardless of whatever this paragraph 6 means,  
2 we're nevertheless holding a hearing today about  
3 what in the context of AMCs you have said DWR  
4 believes constitutes an accounting concept; is  
5 that true?

6 **A. That's correct.**

7 Q. Switching gears here, and I'm nearing the end,  
8 there was a discussion back in February where  
9 Mr. Stucky had you look at some well logs in the  
10 context of calculating practical saturated  
11 thickness as compared to average saturated  
12 thickness. Do you recall that line of  
13 questioning?

14 **A. Yes, I do.**

15 Q. I believe you've even said today that you think  
16 those -- was it about three wells that  
17 Mr. Stucky had you review?

18 **A. Three or four. I -- I don't remember now.**

19 Q. Did you testify today that you thought those  
20 were observation wells?

21 **A. I believe those were observation wells in the --**  
22 **based on that thing, but, I mean, I think that's**  
23 **what they were.**

24 Q. And let's assume that they are.

25 **A. Okay.**

1 **project, constitute a potential additional**  
2 **method to accumulate and account for recharge**  
3 **credit under existing authorities.**

4 Q. Is it your understanding, and there's a lot more  
5 to this letter, there's also, as we've gone  
6 through, an enclosure that addresses other legal  
7 and policy questions, and feel free to refer to  
8 that if you need to, but is it your  
9 understanding based on what you just read and  
10 the reference to existing authorities that one  
11 of those, if not the main one, is that paragraph  
12 5 from the ASR Phase II approval, GMD2 Exhibit  
13 28 that you just read?

14 **A. Yes.**

15 Q. And, in fact, paragraph 6, does that contemplate  
16 not needing to hold additional public hearings  
17 regarding certain accounting methodologies?

18 **A. Yes, it states, that if the City develops an**  
19 **improved model or methodology to account for**  
20 **water stored in the basin storage area that is**  
21 **approved by the chief engineer, after**  
22 **consideration of the recommendation of the GMD2,**  
23 **that the chief engineer may approve such**  
24 **approved methodology without the necessity of**  
25 **holding additional public hearings.**

1 Q. You also testified today, you made a distinction  
2 between production wells and observation wells.

3 **A. Right.**

4 Q. And I think you said it might be a good idea if  
5 you're going to look at anything to look at  
6 production wells, is that what you said?

7 **A. Correct. That is correct, Aaron, I mean, the**  
8 **production wells are normally what we find in**  
9 **any -- in any area, the better wells are the**  
10 **production wells.**

11 Q. And can you elaborate on -- to the extent one is  
12 going to go through the exercise that Mr. Stucky  
13 had you do, can you elaborate to me on why it  
14 makes a difference, if it does in your opinion,  
15 about doing that with observation wells versus  
16 doing it with production wells?

17 **A. Well, again, I don't know under what**  
18 **circumstance these observation wells were put**  
19 **in, whether it was based on geography and**  
20 **location or if these observation wells were test**  
21 **drilled and test pumped. And if then they**  
22 **didn't have adequate saturated thickness or the**  
23 **pumping ability, if those wells were turned into**  
24 **observation wells. That happens quite a bit,**  
25 **the wells that aren't put into production become**

Page 1864

1 **observation wells.**  
 2 **But the wells that are normally very**  
 3 **good -- I mean, the good -- the wells that test**  
 4 **pump then become the production wells. And so**  
 5 **it would be good under that scenario if we**  
 6 **reviewed not only the observation wells but then**  
 7 **also the production wells to get -- when you're**  
 8 **looking at an average, the more data, the better**  
 9 **basically.**  
 10 Q. And so with respect to that data, are you saying  
 11 that to the extent that data has any sort of  
 12 persuasive value, it's more persuasive to you if  
 13 it's coming from a production well versus an  
 14 observation well?  
 15 **A. Yes. With the caveat I don't know what**  
 16 **condition these observation wells were put in.**  
 17 Q. Those wells that Mr. Stucky had you review, and  
 18 I know you think maybe they were only  
 19 observation wells, but do you feel like those  
 20 wells are representative of the area that's  
 21 implicated under this ASR Phase II proposal?  
 22 **A. Well, I think production wells would be more**  
 23 **representative of this area than observation**  
 24 **wells, but these wells -- these observation**  
 25 **wells obviously are being used for something.**

Page 1865

1 **For observation so ...**  
 2 Q. To stay on kind of the concept of the practical  
 3 saturated thickness versus average saturated  
 4 thickness in an aquifer, is it true based on  
 5 your experience in working for DWR that a well  
 6 with a low practical saturated thickness means  
 7 it will be a poorly yielding well in terms of  
 8 water?  
 9 **A. No, no, it depends on -- it depends on the**  
 10 **aquifer properties if -- if it's a good yielding**  
 11 **well or not, not the saturated thickness. You**  
 12 **can have a lot of saturated thickness with a lot**  
 13 **of clays and things that don't produce as much**  
 14 **as less saturated thickness that are nothing but**  
 15 **high transmissivity sand. You can have a dang**  
 16 **good well with not a lot of saturated thickness.**  
 17 Q. There -- shifting gears, Mr. Letourneau, there  
 18 has been a line of questioning previously when  
 19 you were crossed by Mr. Stucky about -- I don't  
 20 know if it -- who may have uttered this phrase  
 21 but excluding GMD from discussions about the  
 22 proposal that we're here today to talk about.  
 23 Do you remember kind of that line of  
 24 questioning?  
 25 **A. Yes.**

Page 1866

1 Q. And do you -- well, let me say it this way. DWR  
 2 Exhibit Number 1, I'll have you turn to for  
 3 hopefully the last time.  
 4 **A. That's fine.**  
 5 Q. The first paragraph, doesn't it -- it's  
 6 addressed to GMD2 Board of Directors, this  
 7 letter?  
 8 **A. Yes.**  
 9 Q. And isn't the first paragraph thanking the Board  
 10 for their comments from their initial review of  
 11 Wichita's proposed changes to ASR Phase II? Is  
 12 that right?  
 13 **A. Yes, that's correct.**  
 14 Q. So I guess do you feel like, was GMD excluded  
 15 from discussions or no, and if so, how?  
 16 **A. No, they were not excluded. They were not part**  
 17 **of the early meetings, they were -- that the**  
 18 **chief, if I recall correctly, asked the City and**  
 19 **the GMD to work out modeling differences. Then**  
 20 **I knew that we were going to go to a meeting in**  
 21 **Halstead, if I recall correctly, and I think the**  
 22 **City may have gotten a letter from Tim Boese,**  
 23 **like, the day before or the night before with a**  
 24 **list of things that they had tried to work**  
 25 **through. And then if I recall correctly, Alan**

Page 1867

1 **King had written a letter to thank them for all**  
 2 **the process, but then we were going to move**  
 3 **forward with the proposal.**  
 4 **Then DWR and the City worked through the**  
 5 **proposal, but then I know that David had kept**  
 6 **GMD in the loop -- in the loop appropriately.**  
 7 **This letter is after the Alan King letter. I**  
 8 **know that last -- the comments that we got from**  
 9 **Tim Boese, there were some things that we**  
 10 **implemented from Tim's last comments, and so**  
 11 **we -- we didn't fully exclude them.**  
 12 Q. So the City may have ceased seeking GMD's input  
 13 as to modeling questions, is that what I  
 14 understand --  
 15 **A. I -- I believe so, yes.**  
 16 Q. But at least at the time of this letter, GMD was  
 17 still being engaged in the course of coming up  
 18 with potential proposed conditions for this  
 19 proposal that we're here talking about, right?  
 20 **A. Yes, I believe so.**  
 21 Q. What I hope will be my last question,  
 22 Mr. Letourneau, anytime that DWR is -- is  
 23 considering whether impairment might occur, if  
 24 DWR doesn't think that there is reasonable proof  
 25 suggesting that impairment will occur, will that

1 stop DWR from approving whatever change or new  
2 application or modification may be in front of  
3 it?

4 **A. No, we will approve it if we don't think -- if**  
5 **we don't see impairment will occur, we'll**  
6 **approve it.**

7 Q. And if someone were to claim impairment in the  
8 future, or at any time, does DWR have a set of  
9 statutes and regulations that gives DWR tools to  
10 investigate, address, and, if necessary,  
11 remediate that impairment?

12 **A. Yes, yes, it's K.A.R. 5-4-1 and 5-4-1(a). And 1**  
13 **deals with direct well-to-well impairment, and**  
14 **1(a) deals with an overall lowering of the water**  
15 **table impairment.**

16 **MR. OLEEN:** No further questions.

17 **PRESIDING OFFICER:** Mr. McLeod.

18 **MR. MCLEOD:** Just before I start, I  
19 will ask again if the witness needs a break  
20 because he's been sitting here for a while?

21 **A. I -- you know, yeah, I think a five-minute break**  
22 **would be good.**

23 **PRESIDING OFFICER:** Okay.

24 **A. Yeah, thank you.**

25 **PRESIDING OFFICER:** Okay. We'll go

1 recommendation on -- actually seeking their  
2 review of a staff decision of recommendation to  
3 deny well spacing waivers. Counsel, I think, in  
4 his questioning characterized materials in the  
5 last paragraph on the second page of this letter  
6 as advancing to the District assurances that  
7 water levels would not drop below the 1993 index  
8 level. Do you see that second clause in the  
9 last paragraph there?

10 **A. Yes.**

11 Q. And, first, for a little foundation, you didn't  
12 write this letter, did you, Mr. Letourneau?

13 **A. No.**

14 Q. And when you look at the text that's actually  
15 here -- well, if you would read that second  
16 clause in the last paragraph.

17 **A. Brian, let me see, the second clause, and**  
18 **whereas --**

19 Q. Yeah.

20 **A. -- ASR water rights may be utilized only when**  
21 **water levels exceed the level observed in 1993.**

22 Q. That's good.

23 **A. Okay.**

24 Q. Okay. Anywhere in this letter do the words  
25 assure or assurances appear?

1 off the record.  
2 (Thereupon, a recess was taken;  
3 whereupon, the following was had.)  
4 **PRESIDING OFFICER:** Okay. We're  
5 back on the record. And, Mr. McLeod.  
6 **MR. MCLEOD:** Thank you.

7  
8 **RECROSS EXAMINATION**  
9 **BY MR. MCLEOD:**

10 Q. Mr. Letourneau, I think it was back in our  
11 February hearing days when the District's  
12 counsel asked you about some letters that were  
13 marked Exhibits 53 and 57 of the District, if  
14 you can find those in their hearing volume.

15 **A. I'm getting there. Thank you for your patience.**

16 **PRESIDING OFFICER:** I'm sorry, which  
17 exhibit numbers?

18 **MR. MCLEOD:** Numbers 53 and 57.

19 **PRESIDING OFFICER:** Thank you.

20 **A. I'm at 53, Brian.**

21 **BY MR. MCLEOD:**

22 Q. Okay. With respect to this document, a letter I  
23 believe by David Warren, who at the time was  
24 city director of utilities, contacting the Board  
25 of Directors of the District, seeking their

1 **A. No, I don't see them when I review it.**  
2 Q. And does that text, ASR water rights may be  
3 utilized only when water levels exceed the level  
4 observed in 1993, does that say that  
5 Mr. Warren's assuring the index levels will  
6 never drop below the 1993 levels?

7 **A. No.**

8 Q. Looking at the actual language that's -- that's  
9 in the letter, rather than an assurance from  
10 Mr. Warren that water levels would not drop  
11 below the 1993 levels, does it not seem to you  
12 like Mr. Warren was just reciting the existing  
13 limit at that time on the recovery of ASR  
14 credits?

15 **A. That's correct.**

16 Q. And as you had indicated, I think, in response  
17 to Mr. Oleen's questioning, it really is the  
18 chief engineer that ultimately makes the  
19 decision on spacing waivers, is it not?

20 **A. That's correct.**

21 Q. If you will look now at Exhibit 57 of the  
22 District, and you will see, I think, in -- well,  
23 let me ask you, is this a set of letters that  
24 are roughly in the same format to different  
25 addressees?

Page 1872

1 **A. That's correct.**  
 2 Q. And all of these apparently written by Debra  
 3 Ary --  
 4 **A. That's correct.**  
 5 Q. -- of the City? And you, therefore, didn't  
 6 write any of these, correct, Mr. Letourneau?  
 7 **A. That's correct, I did not.**  
 8 Q. And I think Counsel had asked you a similar  
 9 question as to this whole series of letters,  
 10 whether they were providing assurances that  
 11 water levels would not drop below the 1993 index  
 12 level. Do you see the words assure or  
 13 assurances anywhere in any of these letters?  
 14 **A. No.**  
 15 Q. If you look, for example, on the first -- the  
 16 first page, the first letter, the last sentence  
 17 in the end of the first paragraph, what does  
 18 that sentence actually say?  
 19 **A. Withdrawals will not be permitted if water**  
 20 **levels are below the 1993 baseline established**  
 21 **by the ASR permit.**  
 22 Q. Okay. And the sentence before that is clearly  
 23 directed to recharge credits, is it not?  
 24 **A. That's correct.**  
 25 Q. So it's -- instead of saying that water levels

Page 1873

1 would never drop below the 1993 index levels, I  
 2 mean, it's completely possible Ms. Ary was  
 3 simply trying to convey that withdrawals of  
 4 credits would not be permitted if the water  
 5 levels were below the 1993 index level?  
 6 **A. That's correct.**  
 7 Q. And, again, potentially could have just been  
 8 saying that because at that -- at that time that  
 9 was the index level that mattered for purposes  
 10 of the credit recovery condition, correct?  
 11 **A. That's correct.**  
 12 Q. Still is today, in fact, unless the City's  
 13 proposal is approved, correct?  
 14 **A. That's correct.**  
 15 Q. For people who did send consent forms for  
 16 spacing waivers, did the consent forms change  
 17 the ability of a domestic well owner to seek  
 18 resolution on an impairment issue if such an  
 19 issue arises?  
 20 **A. No.**  
 21 Q. So even if the domestic well owners signed a  
 22 waiver consent, they would still have  
 23 protections through DWR's authority to  
 24 administer impairment complaints?  
 25 **A. That's correct.**

Page 1874

1 Q. In the process to try to develop permit  
 2 conditions, has the City communicated its  
 3 intentions to remedy quantity or quality issues  
 4 for domestic well owners if any such are created  
 5 by the permit modifications requested?  
 6 **A. Yes.**  
 7 Q. Has DWR granted waivers of spacing on other  
 8 applications wherein DWR's opinion impairment  
 9 was unlikely?  
 10 **A. Yes.**  
 11 Q. Does that happen frequently?  
 12 **A. Yeah, that's the -- that's the rule we waive the**  
 13 **most is spacing.**  
 14 Q. In many of the questions that Counsel asked you  
 15 about multiple uses and what AMCs are, I think  
 16 you had indicated that to DWR, AMCs are the  
 17 result of an accounting exercise?  
 18 **A. That's correct.**  
 19 Q. And Ms. Wendling had you go through the entire  
 20 list of uses that are referenced in statute, and  
 21 I think municipal and recharge uses were  
 22 relevant uses that you saw?  
 23 **A. That's correct.**  
 24 Q. She pointed out that storage is not specifically  
 25 mentioned there. Let me ask you this question,

Page 1875

1 in recognize the exist -- in recognizing the  
 2 existence of water left in the aquifer for  
 3 purposes of an accounting process, is that a use  
 4 of water within the meaning of any of those 14  
 5 uses in the statute?  
 6 **A. No.**  
 7 Q. Safe yield, there has just -- there has been a  
 8 tremendous amount of discussion on safe yield in  
 9 the questioning thus far. I'm going to give you  
 10 a couple of scenarios to speak to, I'll try to  
 11 go slow and be simple with them. In scenario  
 12 number one, the water level in the aquifer is at  
 13 X, the City pumps a gallon of water out of the  
 14 aquifer, the City recharges the aquifer, the  
 15 City now has a credit, the water level in the  
 16 aquifer is again at X. Scenario two, the water  
 17 level in the aquifer is at X, the City takes a  
 18 gallon of water to town and doesn't reduce the  
 19 water level in the aquifer by pumping, the water  
 20 level in the aquifer is X, the City has a  
 21 credit. So in each scenario, water level in the  
 22 aquifer is at X, the City has a credit. If safe  
 23 yield is not implicated in scenario one with the  
 24 physical recharge credit, how can safe yield be  
 25 implicated in scenario two?

1 **A. It cannot.**

2 Q. Minimum desirable streamflow, Mr. Letourneau, do  
3 you know whether there was any extensive  
4 modeling as to minimum desirable streamflow in  
5 the -- in the approval of the ASR Phase I or  
6 Phase II permits?

7 **A. I don't believe there was. But -- but I wasn't**  
8 **part of it, but until now, MDS has not been**  
9 **brought up.**

10 Q. So in the evaluation of new applications, is it  
11 typical for either the DWR or any of the  
12 groundwater management districts to analyze  
13 minimum desirable streamflow in connection with  
14 a new application?

15 **A. No, we don't.**

16 Q. And I think you indicated, Mr. Letourneau, that  
17 the most typical way the DWR approaches minimum  
18 desirable streamflow is through what you call  
19 real-time administration?

20 **A. That's correct.**

21 Q. And as I understood your general description of  
22 that, if in a stream water levels are falling  
23 below minimum desirable streamflow, essentially  
24 everyone who has a junior right, a right after  
25 1984 in time, they are subject to curtailment in

1 users, you would look to those who were most  
2 proximate to the river as likely contributors to  
3 the issue, correct?

4 **A. That's correct.**

5 Q. So if we were to take this down the road that  
6 the District has suggested, things would be  
7 developed such that when the stream gages drop  
8 below minimum desirable streamflow targets, you  
9 would go through and shut off the surface right  
10 users and also all of the groundwater users  
11 after 1984 with proximity to the river, and then  
12 if that still didn't alleviate the condition,  
13 what further step would you take towards other  
14 groundwater users?

15 **A. Well, we'd look at -- we would have to reach**  
16 **out, then, using a model, have to reach out to**  
17 **see the percentage of impact, 'cause some of the**  
18 **pumping comes from streamflow in a groundwater**  
19 **situation, in -- in the situation where the**  
20 **aquifer contributes to the stream. And so with**  
21 **the model, you can make a determination of how**  
22 **much of that pumping is from streamflow, and**  
23 **then we would look at the percentage of impact**  
24 **and then curtail on that percentage of impact.**

25 Q. And it wouldn't -- I mean, there would not be a

1 order to bring that stream back up to minimum  
2 desirable streamflow?

3 **A. That's correct.**

4 Q. So in practice, if you were going to -- and let  
5 me back up. I think you indicated that  
6 currently DWR doesn't really have complete  
7 information for the Equus Beds Aquifer but you  
8 do for the Republican River and Rattlesnake  
9 Creek?

10 **A. That's correct.**

11 Q. So currently, in the Equus Beds Aquifer, you  
12 wouldn't have complete information to know what  
13 groundwater wells, for example, might be tied to  
14 a minimum desirable streamflow problem?

15 **A. What wells and what impact the well has based on**  
16 **proximity to the stream.**

17 Q. So in -- if you had the situation where minimum  
18 desirable streamflow was below the scheduled  
19 target and -- first you would look to surface  
20 water rights, correct?

21 **A. Correct.**

22 Q. And one of which would be the City surface water  
23 intake?

24 **A. That's correct.**

25 Q. And then in terms of identifying groundwater

1 scenario where you would just go through, for  
2 example, and shut off the City's rights and not  
3 investigate any other groundwater users who were  
4 also drawing water in that time frame?

5 **A. No, it's everybody in, anybody junior to 1984.**

6 Q. Now, Mr. Letourneau, I think you indicated that  
7 one of the things that had to do with minimum  
8 desirable streamflow is how dry a period you're  
9 in?

10 **A. That's correct.**

11 Q. And so any water right could affect minimum  
12 desirable streamflow if there were a prolonged  
13 dry period?

14 **A. Yes.**

15 Q. And so it would be -- it would be foolish as a  
16 matter of course and practice for an efficient  
17 water agency to deny every permit that might  
18 conceivably have an impact on minimum desirable  
19 streamflow in a dry year, correct?

20 **A. That's correct.**

21 Q. And that's one reason why DWR approaches the  
22 issue via real-time administration, correct?

23 **A. That's correct, because if water's available, we**  
24 **want folks to be able to put that water to**  
25 **beneficial use.**

Page 1880

1 Q. As opposed to denying a permit because in some  
 2 far-flung dry period it might have an impact on  
 3 minimum desirable streamflow?  
 4 **A. That's correct.**  
 5 Q. Mr. Letourneau, if the City has planned too  
 6 conservatively and projected too conservatively  
 7 and as a consequence over-prepares for drought,  
 8 what harm does that cause?  
 9 **A. We -- we don't see it causing any harm.**  
 10 Q. Counsel asked you an entire battery of questions  
 11 on independent modeling and how much independent  
 12 modeling DWR had done and -- as to which you  
 13 were largely unaware because of the Chinese wall  
 14 issues, but the more fundamental question I  
 15 would ask you, how much independent modeling do  
 16 you need to support the idea that AMCs allow the  
 17 City to leave the aquifer full?  
 18 **A. Yeah, we don't need a model for that.**  
 19 Q. How much independent modeling do you need to  
 20 know that it's better to go into a 1 percent  
 21 drought with a full aquifer?  
 22 **A. We -- we don't need modeling for that.**  
 23 Q. I think you were present through Mr. Paul  
 24 McCormick's testimony, and one of the series of  
 25 questions that your counsel asked Mr. McCormick

Page 1881

1 had to do with the notion that in terms of  
 2 public benefit there is benefit of leaving water  
 3 in situ to settle out rather than churning the  
 4 water by pumping the hole and recharging and  
 5 pumping the hole and recharging. Do you recall  
 6 that testimony?  
 7 **A. Yes.**  
 8 Q. Are you of that same view with respect to the  
 9 benefits of leaving water in situ?  
 10 **A. It seems very reasonable, yes.**  
 11 Q. Possibly you might be able to remember back to  
 12 the very -- the very early stages of the case  
 13 when Mr. Pajor was on the stand and I had  
 14 attempted to ask Mr. Pajor some questions about  
 15 when you take water from the aquifer, is that  
 16 water then gone and hence does it matter that  
 17 much if you make the City take it out earlier,  
 18 and I was stopped by a rash of objections.  
 19 But Counsel asked you some questions about  
 20 multi-year flex accounts, and I recall you  
 21 mentioned that there had been a study of usage  
 22 and how usage was affected, and if I got down in  
 23 my notes the gist of what you said, your results  
 24 of the study basically showed that within the  
 25 five-year window the use was the same with and

Page 1882

1 without the multi-year flex account. So despite  
 2 all the rocks and dirt and complications that  
 3 make it hard to say that water that's been taken  
 4 out is gone, that was the result, at least, with  
 5 respect to multi-year flex accounts, it was the  
 6 same whether they used the mechanism or whether  
 7 they didn't?  
 8 **A. That -- that's correct, that's what we**  
 9 **determined.**  
 10 Q. Counsel had asked you with respect to the City's  
 11 change in practices around 1993 whether --  
 12 whether the City's pre-1993 use was part of what  
 13 had been causing depletion in the aquifer, and  
 14 you said that it was. Was everyone else's  
 15 pre-1993 use also?  
 16 **A. Oh, absolutely.**  
 17 Q. And Counsel had -- had asked you whether the  
 18 City drawing credit when index levels are  
 19 declining is mandated by any permit condition,  
 20 and I believe you concurred with him that it was  
 21 not. But if the City does not draw credits  
 22 prior to the index level sinking below 1993  
 23 levels in an index cell, is the City effectively  
 24 out credit recovery in that index cell for the  
 25 duration of the drought?

Page 1883

1 **A. Yes, while the water table is below there, those**  
 2 **recharge credits are stranded and the City**  
 3 **cannot -- cannot acquire them.**  
 4 Q. And there has been a lot of questioning about  
 5 the permit conditions and whether they currently  
 6 strictly require the City to use native rights  
 7 first. First, let's unpack that -- that concept  
 8 some. In terms of using native rights first, do  
 9 you see that as a condition that would apply  
 10 generally or more on a well-to-well basis?  
 11 **A. It -- that's a good question. If -- if the**  
 12 **index cells don't get moved, then I don't see**  
 13 **how that condition could work for the City. But**  
 14 **on a well to well, that could very well work**  
 15 **just based on the aquifer properties in each**  
 16 **index cell.**  
 17 Q. Would it seem to you to make any sense to say  
 18 that if the City had 100 acre-feet of native  
 19 rights left at one well that it would have to  
 20 pump down that one well by that 100 acre-feet  
 21 before it could take credit at any of the other  
 22 wells?  
 23 **A. No.**  
 24 Q. So doing it on a well-by-well basis and  
 25 exhausting native rights for that well before

1 pumping credits for that well would make more  
2 sense?

3 **A. You're kind of confusing me, Brian. So I**  
4 **think -- now, so they need recharge -- does the**  
5 **City need -- in your scenario, does the City**  
6 **need recharge credits, is that -- can you help**  
7 **me with your question?**

8 Q. So let me back up. In terms of the notion of  
9 using the native rights first, which I think you  
10 remember Mr. Pajor thought that was all right  
11 and there are even places in the material where  
12 the City seems to have said that's a good idea.

13 **A. Right.**

14 Q. In terms of implementing that as a permit  
15 requirement, it would not be implemented in such  
16 a way that if the City had one well with 100  
17 acre-feet of native rights left and no native  
18 rights it could pump at any of its other wells,  
19 right, the City should not have to idle all of  
20 those other wells in order to draw that last 100  
21 acre-feet before it could draw credit at any of  
22 the wells?

23 **A. I -- I agree with that. You need to have -- the**  
24 **City needs to have the flexibility to operate**  
25 **its best wells in the best locations.**

1 Q. So I just wanted to clean that up because in all  
2 the discussions of using native rights first --

3 **A. Okay.**

4 Q. -- that had -- that had somehow escaped  
5 coverage. Now, both as to that notion of using  
6 native rights first and then as to the -- as to  
7 the notion that there currently is no permit  
8 condition that says the City would only look to  
9 take these credits for the 1 percent drought, do  
10 you recall the part of Mr. Pajor's testimony  
11 where he said, this is the most expensive water  
12 that the City has?

13 **A. Yes.**

14 Q. Because this -- this water has been treated,  
15 injected; to then pump it out, it's being pumped  
16 once again to get it out of the aquifer for  
17 recovery. And then I believe you had added the  
18 point in your testimony that also these credits  
19 when they're taken, they don't annually renew?

20 **A. That's correct.**

21 Q. And do all of those considerations give the City  
22 incentive not to take these credits unless it  
23 really needs to take them?

24 **A. That's -- that's correct.**

25 Q. There was a long, long winding discussion on

1 leakage, and you probably remember, I think it's  
2 figure 16 in the proposal where there are two  
3 green lines and as the two green lines climb up  
4 towards the upper diagonal, they diverge and it  
5 represents, as I recall, the -- a difference in  
6 accounting methods between the AMC accounting  
7 and the physical recharge, and the variance  
8 occurs to a greater extent the more water is in  
9 the aquifer. If you would turn to page 4-2 in  
10 the proposal.

11 **A. I'm there, Brian.**

12 Q. Okay. As part of a whole long series of  
13 questions where Counsel ultimately suggested  
14 there might need to be reworking of this whole  
15 leakage concept, Counsel had you read the  
16 language in the next-to-the-last paragraph, last  
17 sentence of that paragraph, under these  
18 conditions, 95 percent of the water recharged is  
19 retained as a recharge credit. Now, Counsel  
20 didn't have you read any of the text that  
21 preceded that. And it's important,  
22 Mr. Letourneau, under what conditions -- under  
23 what conditions does that paragraph indicate  
24 that 95 percent of the water recharged is  
25 retained as a recharge credit?

1 Q. So I just wanted to clean that up because in all  
2 the discussions of using native rights first --

3 **A. Okay.**

4 Q. -- that had -- that had somehow escaped  
5 coverage. Now, both as to that notion of using  
6 native rights first and then as to the -- as to  
7 the notion that there currently is no permit  
8 condition that says the City would only look to  
9 take these credits for the 1 percent drought, do  
10 you recall the part of Mr. Pajor's testimony  
11 where he said, this is the most expensive water  
12 that the City has?

13 **A. Yes.**

14 Q. Because this -- this water has been treated,  
15 injected; to then pump it out, it's being pumped  
16 once again to get it out of the aquifer for  
17 recovery. And then I believe you had added the  
18 point in your testimony that also these credits  
19 when they're taken, they don't annually renew?

20 **A. That's correct.**

21 Q. And do all of those considerations give the City  
22 incentive not to take these credits unless it  
23 really needs to take them?

24 **A. That's -- that's correct.**

25 Q. There was a long, long winding discussion on

1 **A. The water levels are at or below the observed in**  
2 **1998.**

3 Q. Thank you. So you were here for Mr. McCormick's  
4 testimony, I know, and I believe during his  
5 testimony, Mr. McCormick explained that this 95  
6 percent retention was modeled on the 1998 levels  
7 purposely, and I think you recognized in your  
8 own earlier testimony that as the aquifer is  
9 fuller, the leakage grows, I think you may have  
10 calculated it, or Mr. McCormick calculated it at  
11 maybe 64 percent in some years when the aquifer  
12 is full, and the premise of this, I believe, as  
13 Mr. McCormick explained it in his testimony, was  
14 we don't want to make the City pump the aquifer  
15 down to 1998 levels in order to retain 95  
16 percent of the credit, so for purposes of the  
17 AMC accounting, we use the 5 percent leakage  
18 figure in order to not penalize the City for not  
19 pumping the aquifer down to the 1998 levels. Do  
20 you remember that testimony?

21 **A. Yes.**

22 Q. And when you consider that, Mr. Letourneau,  
23 would it seem to you that the reason that the  
24 accounting methods differ is that we're doing  
25 this 1998 simulated accounting for the leakage

Page 1888

1 on the AMCs while we're using the real leakage  
 2 in the aquifer for the physical credits?  
 3 **A. Correct.**  
 4 Q. And so rather than some premise that all of the  
 5 math needs to be reworked to figure out why  
 6 those numbers are different, I think the actual  
 7 question is do you think it's reasonable to  
 8 premise this aspect of the AMC accounting on the  
 9 1998 level and to use that 5 percent assumption  
 10 for the reason that we don't want to penalize  
 11 the City for not pumping the aquifer down to the  
 12 1998 level?  
 13 **A. Yes, we -- we felt it reasonable.**  
 14 Q. Mr. Letourneau, does the City have any legal  
 15 right to impair senior water right holders?  
 16 **A. No.**  
 17 Q. Counsel asked you a question whether if we focus  
 18 on when credits are drawn, recovery of credits  
 19 reduces water in the aquifer. Do you recall  
 20 that?  
 21 **A. Yes.**  
 22 Q. And that's true of all credits, isn't it?  
 23 **A. Yes.**  
 24 Q. That's true for the physical credits that exist  
 25 today, isn't it?

Page 1889

1 **A. That's true.**  
 2 Q. It's true when any party exercises their native  
 3 rights too, isn't it?  
 4 **A. That's true.**  
 5 Q. As a -- as a result, should we all not pump  
 6 anything out of the aquifer in order to not  
 7 reduce the water level?  
 8 **A. No.**  
 9 Q. That would make it difficult to make a useful  
 10 distribution of the water, wouldn't it?  
 11 **A. We need to put water to beneficial use, it's in  
 12 the public interest.**  
 13 Q. Several times as we were talking about practical  
 14 saturated thickness issues, you had responded to  
 15 counsel that the MODFLOW model takes account of  
 16 well logs, and then that line of questioning was  
 17 promptly not pursued. So tell us what you mean  
 18 by that, how does the MODFLOW model take account  
 19 of well logs?  
 20 **A. Well, it's my understanding based on what the  
 21 modelers tell me that the USGS, when they  
 22 develop the model, they use all of the data that  
 23 they have; and so I would think that this  
 24 MODFLOW model, again, I would have to ask Sam  
 25 Perkins or David Barfield if it took into**

Page 1890

1 **account all of the well logs. You know, so I  
 2 don't know how many hundreds of well logs are in  
 3 there, but the USGS model would take those into  
 4 account, I believe.**  
 5 Q. On the first of the four observation well sites  
 6 that Counsel picked out, which I'm thinking was  
 7 perhaps the index well 2C, if I got that  
 8 correctly in my notes, Counsel had asked you if  
 9 the issues with the difference in total  
 10 saturated thickness and practical saturated  
 11 thickness in that well gave you a concern, and  
 12 you said it didn't give you a concern unless  
 13 there were similar problems in the rest of the  
 14 aquifer. Why, I will just ask you to explain  
 15 that answer further since Counsel pretty much  
 16 left off there?  
 17 **A. If I recall correctly, that particular well was  
 18 clear to the north of the well field, and you  
 19 would anticipate something at the edge of the  
 20 well field to not represent what's in the heart  
 21 of the well field. So I -- I would anticipate  
 22 something clear to the edge of the well field to  
 23 have less saturated thickness, because if it's  
 24 still good, the well field would have expanded  
 25 beyond that area until it got to a boundary that**

Page 1891

1 **wasn't good.**  
 2 Q. Then with respect to two of the other  
 3 observation wells, the wells in 10C and cell 21,  
 4 Counsel asked you similar questions of, well,  
 5 you know, what if we only considered that index  
 6 cell in isolation, would you consider that that  
 7 raised an issue, and you indicated that it  
 8 would. So let me ask you for each of those two  
 9 index wells, what if we didn't look at the well  
 10 in that index well solely in isolation, would it  
 11 still raise an issue?  
 12 **A. No, I think it would -- I mean, I'm counting on  
 13 the model taking into account all of the well  
 14 logs in the area.**  
 15 Q. Mr. Letourneau, in your experience with wells  
 16 and lithology logs, have you ever known a  
 17 driller's log to be wrong in terms of describing  
 18 lithology or depth?  
 19 **A. Yes.**  
 20 Q. Have you ever seen an instance where a driller  
 21 called a unit by mistake such as mislabeling  
 22 clay shale?  
 23 **A. Yes.**  
 24 Q. Are clay layers uniform across an unconsolidated  
 25 aquifer?

1 **A. No.**  
2 Q. So drilling at one location, would that give you  
3 any idea of the lithographic conditions for that  
4 entire index cell?  
5 **A. No.**  
6 Q. Even if the well is smack dab in the middle,  
7 it's just one data point, isn't it?  
8 **A. That's correct.**  
9 Q. The well in index cell 01, do you remember where  
10 that well was located in relationship to the  
11 cell boundary?  
12 **A. I -- no, I don't remember if it was clear to the**  
13 **north of those wells, I don't remember the**  
14 **labels, Brian.**  
15 Q. Okay. It's probably not worth going back to  
16 review the document in detail.  
17 **A. Okay.**  
18 Q. In your experience as a geologist and based on  
19 your experience at DWR, do you think that a  
20 single well log represents a four-square-mile  
21 area?  
22 **A. No.**  
23 Q. You were also here during Mr. Clement's  
24 testimony, correct?  
25 **A. Correct.**

1 the chief engineer at the time of the 2005  
2 permits didn't have a lot of the material that  
3 is present in the City's proposal in terms of  
4 modeling results. The language in the permit  
5 that says that the public interest will be  
6 protected if the water levels don't go below the  
7 1993 index levels, does that language say that  
8 the public interest won't be protected if the  
9 index levels are lowered?  
10 **A. No.**  
11 Q. During questions on the accounting method,  
12 Counsel referred you to an interrogatory  
13 response, I believe it was DWR's response to  
14 interrogatory number 10 in Exhibit 11, and there  
15 was language that Counsel, again, asked you  
16 questions about, language that said the  
17 accounting methods would not change. But if you  
18 look back to the start of that question, when  
19 you look back to the actual question, wasn't the  
20 question -- the question that was being answered  
21 in that interrogatory response a question about  
22 accounting for the water entering and leaving  
23 the aquifer?  
24 **A. Where is that at, Brian, I'll look?**  
25 Q. Exhibit 11, response to interrogatory number 10.

1 Q. Do you remember the part of Mr. Clement's  
2 testimony where he described the model reflects  
3 interpretable bedrock based on USGS  
4 incorporating well log information from multiple  
5 resources?  
6 **A. Yes.**  
7 Q. Is that your understanding as well?  
8 **A. Yes.**  
9 Q. And do you recall also Mr. Clement's testimony  
10 that the saturated thickness values are average  
11 values based on the USGS model?  
12 **A. Yes.**  
13 Q. Can you draw conclusions about the practical  
14 saturated thickness for a four-square-mile index  
15 cell based on a single well?  
16 **A. No.**  
17 Q. During discussion of 1993 and the 1993 levels,  
18 you had observed in February that there weren't  
19 complaints in '93, and today I think you said or  
20 in '92 and '91. And Counsel asked you that  
21 doesn't mean that there won't be complaints, and  
22 my question is it doesn't mean there will be,  
23 does it?  
24 **A. Correct.**  
25 Q. Mr. Oleen had brought out in questioning that

1 **A. That's correct, please explain in detail the**  
2 **accounting method that will be used to determine**  
3 **water entering and leaving the aquifer with the**  
4 **AMC proposal.**  
5 Q. Okay. And as indicated by DWR's response, the  
6 accounting method to do that is not going to  
7 change, correct, with the proposal?  
8 **A. That's correct.**  
9 Q. Mr. Letourneau, in DWR's view, are AMCs passive  
10 recharge credits?  
11 **A. No.**  
12 Q. Counsel asked you some -- some hypotheticals  
13 about, gee, what if the source water was from  
14 El Dorado, what if the source water was from the  
15 Big Ark. Mr. Letourneau, does the City have any  
16 permit that enables it to inject water from  
17 El Dorado or water from the Big Ark into the  
18 aquifer?  
19 **A. No.**  
20 Q. And is that part of what distinguishes AMCs as a  
21 use of source water from the Little Ark?  
22 **A. That's correct.**  
23 Q. Back to minimum desirable streamflow. I think  
24 you indicated that -- that as DWR evaluated the  
25 proposal and its likely impact on minimum

Page 1896

1 desirable streamflow, you believe minimum  
 2 desirable streamflow will actually be helped by  
 3 the proposal because as a result of the fuller  
 4 aquifer, there will be more water flowing out of  
 5 the aquifer into the adjacent stream, correct?  
 6 **A. That's what we think.**  
 7 Q. And so you did evaluate that issue of minimum  
 8 desirable streamflow, and you actually saw that  
 9 as part of the public benefit of the proposal,  
 10 correct?  
 11 **A. That's correct.**  
 12 Q. And that line of reasoning would hold true even  
 13 as far as going into a drought with a fuller  
 14 aquifer, wouldn't it?  
 15 **A. Oh, absolutely.**  
 16 Q. There was a whole line of questions about the  
 17 120,000 acre-foot cap asked in a way that  
 18 intimated that this would be some kind of change  
 19 for water quality purposes or minimum desirable  
 20 streamflow. Currently, is there a cap?  
 21 **A. No, no cap.**  
 22 Q. If -- if the City could accumulate 200,000  
 23 acre-feet in credits, could the City then  
 24 withdraw that under current permit conditions  
 25 14,000 acre-feet annually?

Page 1897

1 **A. 19,000.**  
 2 Q. I'm sorry, 19,000, thank you?  
 3 **A. 19,000 acre-feet annually, that's correct.**  
 4 Q. So I think you had tried to allude to this in  
 5 your earlier testimony and -- and it somehow was  
 6 missed or beshadowed. But to the extent that  
 7 the City's right to withdraw that 19,000  
 8 acre-feet of credits annually already exists  
 9 under the current permits, any minimum desirable  
 10 streamflow analysis that that called for needed  
 11 to be done in Phase I and Phase II, didn't it?  
 12 **A. That's correct.**  
 13 Q. Any impact on chloride migration needed to be  
 14 done in Phase I or Phase II, didn't it?  
 15 **A. Yes.**  
 16 Q. And whether or not there's 120,000 acre-foot  
 17 cap, the significant fact is the City can draw  
 18 that 19,000 acre-feet a year, correct?  
 19 **A. That's correct.**  
 20 Q. That's what will have an impact or not have an  
 21 impact on minimum desirable streamflow and  
 22 chloride migration, correct?  
 23 **A. That's correct.**  
 24 Q. And in terms of trying to present that as some  
 25 kind of a horrible that's only a change in the

Page 1898

1 current proposal, that's not accurate, is it?  
 2 **A. That's correct.**  
 3 Q. Just as a matter of cleanup, Counsel asked you  
 4 some questions about creation of credit, and I  
 5 think you had -- had indicated that in a sense  
 6 physical credits are created at the point of  
 7 injection and that AMCs are created when water  
 8 is treated and taken to town. But in terms of  
 9 knowing what number of credits are accumulated,  
 10 when does the City actually recognize those,  
 11 when can we tell if we've got credits from  
 12 physical recharge or under the proposal from  
 13 AMCs?  
 14 **A. Brian, I think that happens as soon as the water**  
 15 **is treated and the City makes the decision if**  
 16 **there's room in the aquifer or not.**  
 17 Q. So but -- but my question relates to recognition  
 18 of that. In terms of when that is booked for  
 19 the City, when the City would be allowed to  
 20 potentially recover that credit, do we not have  
 21 to wait for the annual accounting report?  
 22 **A. Oh, yes.**  
 23 Q. Ms. Wendling asked you a question about if the  
 24 City wanted to -- wanted to raise that 19,000  
 25 acre-foot annual limit, is that set in stone or

Page 1899

1 could the City do that, and I think you  
 2 indicated that the City could make a future  
 3 request to increase that amount. If the City  
 4 did that, would that have to be done by the  
 5 filing of a permit application and the  
 6 full-blown permit approval process?  
 7 **A. Yes.**  
 8 Q. And so if you needed to look at the impact on  
 9 chloride migration or the impact on minimum  
 10 desirable streamflow of raising that annual  
 11 number, then DWR could do that at the time that  
 12 that permit application was adjudicated,  
 13 correct?  
 14 **A. That's correct.**  
 15 Q. Ms. Wendling's discussion of the regulatory  
 16 change in 2016 that altered the definition of  
 17 minimum index level, we saw that whole group of  
 18 comments where people thought it would have  
 19 horrible consequences. What impact has that  
 20 regulatory change had to date?  
 21 **A. Nothing to date.**  
 22 Q. In the proposal that the City submitted, does  
 23 the City propose to dewater the aquifer to  
 24 bedrock?  
 25 **A. No, absolutely not.**

1 Q. Ms. Wendling asked you a question about drought  
2 recovery to the effect that since it took six or  
3 seven years to recover from the drought of 2011,  
4 '12, wouldn't it be reasonable to study recovery  
5 from the projected eight-year drought, and I  
6 think you indicated it would. Let's back up a  
7 little bit, it's been six or seven years since  
8 the drought of 2011 and '12, but did it take  
9 that full six to seven period to recover from  
10 that drought?

11 **A. You know, Brian, I'm not sure when the water  
12 level came back, I'd have to ask.**

13 Q. And I think you further indicated in response to  
14 that line of questioning that you thought the  
15 modeling showing the 80 percent saturated  
16 thickness remaining at the end of year eight was  
17 an adequate indication that we would have decent  
18 recovery?

19 **A. Yes, that's correct.**

20 Q. With respect to the questions that Mr. Oleen  
21 asked about the distinction between domestic  
22 wells and other wells and the draft permit  
23 conditions in paragraphs 12 and 13 that speak  
24 specifically to domestic wells, in addition to  
25 the factors that Mr. Oleen brought out, is it

1 also your experience that domestic wells in the  
2 aquifer tend to be shallower than irrigation  
3 wells?

4 **A. Yes, shallower and they don't have as much rate  
5 requirements.**

6 Q. And so in just comparing those characteristics,  
7 domestic wells could be more susceptible to  
8 impacts from the proposal than an irrigation  
9 well would like to be?

10 **A. Yes.**

11 Q. Ms. Wendling asked you if pumping a hole in the  
12 aquifer was mandated by the City's permit, and  
13 you concurred with her that it is not, but for  
14 practical purposes, if the City wants physical  
15 recharge credits under the permit conditions  
16 that exist today, will the City have to pump  
17 down the aquifer to accomplish that?

18 **A. Yes.**

19 **MR. MCLEOD:** I don't have further  
20 questions for the witness.

21 **PRESIDING OFFICER:** Okay.

22 Mr. Stucky.

23 **MR. STUCKY:** Thank you.

24 //

25 //

1 RE CROSS EXAMINATION

2 **BY MR. STUCKY:**

3 Q. With respect to ASR Phase I, Ms. Wendling asked  
4 you some questions with respect to the Division  
5 of Water Resources' opinion with regard to ASR  
6 Phase I, do you recall some of those questions?

7 **A. Yes.**

8 Q. I would ask that you turn to Exhibit 78 in the  
9 notebooks before you, I think it's probably the  
10 very last volume, Volume VI, I believe. Are you  
11 there?

12 **A. Yes, I'm there.**

13 Q. Could you turn to -- well, let me first ask you  
14 this: With respect to ASR Phase I, when it  
15 comes -- came to that hearing with regard to ASR  
16 Phase I, do you know whether or not the Division  
17 of Water Resources took an official opinion for  
18 or against ASR Phase I?

19 **A. I don't know.**

20 Q. I would ask that you -- well, let me first of  
21 all back up. With respect to Exhibit 78, would  
22 you -- would you recognize this as a copy of the  
23 official transcript for the ASR Phase I hearing?

24 **A. Yes.**

25 Q. And, in fact, we have some official stamps on it

1 that it was received by the Kansas Department of  
2 Agriculture Legal Section on February 9, 2005.

3 Would you agree with that?

4 **A. Yes.**

5 Q. And there's another stamp that indicates it was  
6 received by the Stafford Field Office, Division  
7 of Water Resources on March 25, 2016, which I  
8 guess would be sometime later for some reason?

9 **A. That's correct.**

10 Q. So would you agree for the purposes of this  
11 record as -- for you to take a minute to look  
12 through it a little bit, would you agree that  
13 this is the official transcript for ASR Phase I?

14 **A. Yes, this is it.**

15 **MR. STUCKY:** In conferring with  
16 Mr. Oleen previous to reconvening on my  
17 questioning, it's my understanding that  
18 this transcript is actually not part of the  
19 hearing record in this case, and so I'm  
20 going to ask, because we're going to have  
21 several questions from our witnesses with  
22 regard to this transcript, I would ask this  
23 transcript be admitted at this time.

24 **PRESIDING OFFICER:** Objection?

25 **MR. OLEEN:** Oh, only one about cost,

Page 1904

1 I wondered if -- I mean, what the  
 2 transcript says, I don't have reason to  
 3 object what it says. I almost wish perhaps  
 4 you could take judicial notice of it and we  
 5 wouldn't have to -- 'cause it's essentially  
 6 an entire binder, the transcript itself has  
 7 Volumes I and II, to keep down costs, I  
 8 would prefer that you take judicial notice  
 9 of it, I don't have any problem with that.  
 10 **MR. STUCKY:** And we're perfectly  
 11 comfortable with you taking judicial notice  
 12 of what's shown as Exhibit 78 and  
 13 Exhibit 79 in our notebook, we're  
 14 completely comfortable with that so long as  
 15 we can reference it in our findings of  
 16 fact.  
 17 **PRESIDING OFFICER:** Any objections  
 18 from the City or the Intervenors?  
 19 **MR. OLEEN:** If I could, before  
 20 they --  
 21 **PRESIDING OFFICER:** Yeah.  
 22 **MR. OLEEN:** -- lodge an objection, I  
 23 would point out that we do not have the  
 24 transcript for the Phase II hearing reduced  
 25 to written form. We just have a recording

Page 1905

1 of that. For reasons unbeknownst to me it  
 2 was never reduced to written form. So I  
 3 don't -- I would prefer that you could take  
 4 judicial notice of both, but the fact that  
 5 you can't is part of our fault, I guess.  
 6 So I'm not objecting, I'm just making you  
 7 aware of that, and -- and other counsel to  
 8 the extent that causes them to have some  
 9 sort of objection.  
 10 **PRESIDING OFFICER:** Okay. Any  
 11 objection to judicial notice of the  
 12 transcript for the Phase I hearing?  
 13 **MS. WENDLING:** None here.  
 14 **PRESIDING OFFICER:** Mr. McLeod, do  
 15 you have objection to that?  
 16 **MR. MCLEOD:** I don't think there is  
 17 a basis for objection to either admitting  
 18 it or taking judicial notice, and the  
 19 second of those will be more cost  
 20 effective.  
 21 **PRESIDING OFFICER:** Yes, well, that  
 22 sounds pretty obvious, so I will take  
 23 judicial notice of what is labeled as GMD  
 24 Exhibit 78, it is the official transcript  
 25 of the Phase I ASR hearing that apparently

Page 1906

1 took place December of 2004.  
 2 **MR. OLEEN:** And, Mr. Stucky, can you  
 3 clarify, 78 is just Volume I, 79 is Volume  
 4 II?  
 5 **MR. STUCKY:** That's correct.  
 6 **PRESIDING OFFICER:** Oh, I'm sorry,  
 7 yes, okay, clarified.  
 8 **BY MR. STUCKY:**  
 9 Q. If you could, as it's shown in Exhibit 78 in our  
 10 notebook, just for simplicity, could you turn to  
 11 page 10 of this official transcript? And,  
 12 actually, let's back all the way up, there's  
 13 someone speaking on page 10, I want to back all  
 14 the way up to make it clear who is speaking.  
 15 Can you tell me, can you look at that transcript  
 16 and say who's speaking towards the top of  
 17 page 10, can you flip through and tell me that?  
 18 **A. Let me see. Well, I mean, it -- I think it's**  
 19 **David Pope because he talks about he has to note**  
 20 **that it's Lee Rolfs on his right and Jim Bagley**  
 21 **is to his left.**  
 22 Q. And, in fact, if you go back to what's numbered  
 23 as page 5, it says that it's Hearing Officer  
 24 Pope speaking. Is that a true statement?  
 25 **A. Yes.**

Page 1907

1 Q. Let's go back to page 10. Could you read that  
 2 first sentence of that first full paragraph on  
 3 page 10?  
 4 **A. On line 4, starting on line 4?**  
 5 Q. That's right.  
 6 **A. Okay. I might note that the Division of Water**  
 7 **Resources' staff will not be providing testimony**  
 8 **for or against these applications, but Mr. Rolfs**  
 9 **here, Mr. Leland Rolfs located to my right, as**  
 10 **legal counsel for me as chief engineer, will be**  
 11 **allowed to call witnesses for the limited**  
 12 **purposes of introducing documentation from the**  
 13 **agency files pertaining to these applications.**  
 14 Q. So in other words, as it related to ASR Phase I,  
 15 the Division of Water Resources didn't take a  
 16 position either for or against ASR Phase I; is  
 17 that right?  
 18 **A. That's correct.**  
 19 Q. Same question with respect to ASR Phase II, I  
 20 think you were more heavily involved in ASR  
 21 Phase II?  
 22 **A. Yeah, not the hearing, I didn't go -- I didn't**  
 23 **attend the hearing. Of course, I don't think**  
 24 **anybody attended that hearing, very many people**  
 25 **did, but I was -- yeah, I was more aware of**

1 **Phase II.**

2 Q. Do you know if the Division of Water Resources,  
3 based on your awareness of what did happen at  
4 that hearing, do you know if the Division of  
5 Water Resources took a position for or  
6 against --

7 **A. No.**

8 Q. -- ASR Phase II?

9 **A. No, we -- we did not take a stance.**

10 Q. So at least in contrast to the ASR Phase I  
11 hearings and the ASR Phase II hearings, this  
12 hearing is unique in the sense that the Division  
13 of Water Resources is actually taking a stand  
14 for or against a proposal. Is that a true  
15 statement?

16 **A. Yes, I would -- I would say yes. And kind of a  
17 difference here, David, sorry to interrupt you,  
18 this hearing wasn't even required; we wanted to  
19 have this particular hearing, slash, trial, in  
20 part, to get additional information.**

21 Q. In attachment F of the City's black notebook,  
22 there were some PDSI numbers that were discussed  
23 by Ms. Wendling. And in 1991, it's indicated  
24 that the PDSI was negative 30.85 in 1991; is  
25 that right?

1 numbers from the years prior; is that right?

2 **A. That's correct.**

3 Q. Ms. Wendling asked you some questions about when  
4 ASR credits are perfected. Do you recall those  
5 discussions?

6 **A. Yeah, I do.**

7 Q. So with respect - I think I'm maybe a little  
8 unclear here - with respect to an aquifer  
9 maintenance credit, when is it perfected? Is  
10 what is perfected a municipal use or a recharge  
11 credit, which is perfected?

12 **A. There's two types of perfection. It's the  
13 artificial recharge, so whenever that AMC would  
14 be counted as a recharge credit, then it would  
15 be perfected for artificial recharge. But then  
16 when it would be actually diverted for municipal  
17 use, it would be perfected for municipal use.**

18 Q. So I want to clarify what the steps are for when  
19 an aquifer maintenance credit is perfected.  
20 When we take overflow water from the Little  
21 Arkansas River and we treat it and send it  
22 directly to the City of Wichita, is there a  
23 perfection that occurs at that point when that  
24 source water is used directly in the City?

25 **A. Yes, it would be perfected as artificial**

1 **A. That's correct.**

2 Q. And, in fact, back in 1991, you were employed by  
3 the Division of Water Resources; is that  
4 correct?

5 **A. That's correct.**

6 Q. We had the question asked with respect to  
7 whether there were complaints in 1993 with  
8 respect to impairment in the Equus Beds Aquifer.  
9 Do you recall those discussions?

10 **A. Yes.**

11 Q. Were there complaints of users in the Equus Beds  
12 Aquifer back in 1991?

13 **A. Not that I'm aware of. I don't recall any.**

14 Q. Do you recall any in 1992?

15 **A. No, I don't.**

16 Q. And as you're sitting there today, I just want  
17 to clarify your testimony, although you're not  
18 aware of any complaints, you're also not aware  
19 that -- whether any were made at all; is that  
20 right?

21 **A. That's correct.**

22 Q. And there was a question about the fact that it  
23 rained a lot in 1993, but the effects that we  
24 would have seen with the 1993 levels, that would  
25 have been based on some of those negative PDSI

1 **recharge.**

2 Q. At the time that the source water is taken  
3 directly from the Little Arkansas River, treated  
4 and sent to the City, you're saying that there's  
5 a perfection of artificial recharge at that  
6 point?

7 **A. Yes, correct.**

8 Q. So what happens, then, when these aquifer  
9 maintenance credits are withdrawn at a later  
10 time and water is taken out of the aquifer at a  
11 later time, is there any kind of perfection that  
12 occurs at that time?

13 **A. Under a different authority, under a different  
14 permit, it's perfected as a municipal use. You  
15 have to get the recharge credit, which is  
16 artificial recharge, to be able to use it for  
17 municipal use later.**

18 Q. Let me just back up here, then, I'm having some  
19 trouble here. With ASR Phase I -- well,  
20 actually ASR Phase II order, the City of Wichita  
21 could take water directly from the Little  
22 Arkansas River right now, without this proposal  
23 being adopted, the City of Wichita could take  
24 water from the Little Arkansas River, treat it  
25 and use it in the City right now; is that

Page 1912

1 correct?

2 **A. Correct, but that's not source water, that's**

3 **surface water taken directly to town.**

4 Q. Okay. But under this current -- under the

5 current ASR Phase II structure, the City of

6 Wichita could take water from the Little

7 Arkansas River, treat it, and use it directly in

8 the City of Wichita; is that right?

9 **A. Correct.**

10 Q. And, in fact, we had some testimony from the

11 prior witnesses where they testified that, in

12 fact, some of this has already occurred in the

13 past where the City of Wichita has taken water

14 from the Little Arkansas River, treated it, and

15 sent it directly to the City for municipal use

16 when the water -- or the aquifer was full. Do

17 you recall that?

18 **A. Absolutely, yes.**

19 Q. So my question is this: When this water, under

20 the current ASR Phase II order, is taken from

21 the Little Arkansas River, treated, and sent

22 directly to the City for use, is that consumed

23 as a municipal use under ASR Phase II?

24 **A. Not under ASR Phase II, that is a direct surface**

25 **water diversion to the City. I don't believe**

Page 1913

1 **that's part of ASR.**

2 Q. Well, my question is this: What type of use is

3 made of that water when it's taken to the City?

4 **A. It's municipal use.**

5 Q. That's my question.

6 **A. Okay.**

7 Q. So now let's jump back to the aquifer

8 maintenance credit proposal, how is it different

9 with respect to an aquifer maintenance credit

10 proposal? You told me under that same scenario

11 if the water is taken from the Little Arkansas

12 River during a flood, treated, and sent to the

13 city, under ASR Phase II, that's used for

14 municipal purposes, how is it different with

15 respect to an aquifer maintenance credit, why

16 would that water not be viewed as a municipal

17 use at that point?

18 **A. Well, because the City would treat it, take it**

19 **to the infrastructure, and look to see if**

20 **there's space in the aquifer. If there's not**

21 **space in the aquifer, then they take it directly**

22 **to town and get credit for it as an A -- AMC.**

23 **If they treat surface water and it's not a**

24 **source water and they take it directly to town,**

25 **that's the surface water right -- that's the**

Page 1914

1 **dual use surface water of that particular**

2 **permit.**

3 Q. So --

4 **A. This is the proposed change.**

5 Q. Okay. So just so I'm clear, with the aquifer --

6 when an aquifer maintenance credit is

7 accumulated, when that source water is taken

8 from the Little Arkansas River, treated, and

9 sent to the City to be used, is it consumed for

10 a municipal purpose at that point?

11 **A. It's consumed when it gets to town, yes.**

12 Q. Okay. So it's similar to an ASR Phase II direct

13 diversion, if you will, in the sense that the

14 end use at that point is still for municipal

15 purposes, correct?

16 **A. That's correct.**

17 Q. So then that brings me to my question --

18 **PRESIDING OFFICER:** I'm sorry, I

19 thought I had this clear. My questions

20 earlier about perfection were not about the

21 proposal; they were about the existing --

22 **A. Okay.**

23 **PRESIDING OFFICER:** -- water right,

24 okay, the 46,627 dual use, and I think I

25 understand that. So if I understand what

Page 1915

1 you're saying, even though it sounds like

2 the same physical thing would happen where

3 surface water is taken from the -- under

4 the AMC proposal, surface water is taken

5 from the Little Ark, treated, sent right to

6 the City, that sounds like what takes place

7 during the current surface water diversion?

8 **A. That's correct.**

9 **PRESIDING OFFICER:** But under the

10 AMC proposal, that activity would not

11 perfect municipal use, that would perfect

12 recharge --

13 **A. No, it would --**

14 **PRESIDING OFFICER:** -- artificial

15 recharge?

16 **A. Under the -- not the proposal, we're not talking**

17 **about the proposal.**

18 **PRESIDING OFFICER:** I'm asking about

19 the proposal.

20 **A. Okay.**

21 **PRESIDING OFFICER:** I'm now moving

22 on to what I didn't ask before which is how

23 does perfection work with this AMC --

24 **A. Okay.**

25 **PRESIDING OFFICER:** -- concept?

1 **A. Under the proposal, yes, that scenario would**  
2 **perfect an AMC because it didn't require the**  
3 **City to pump the hole.**

4 **PRESIDING OFFICER:** Okay. Although  
5 it's the same physical behavior as --

6 **A. Absolutely.**

7 **PRESIDING OFFICER:** -- the municipal  
8 use?

9 **A. Yes.**

10 **PRESIDING OFFICER:** So the -- and  
11 forgive me, I know my brain's getting a  
12 little slow here this time of day, but if  
13 the -- the surface water that's being taken  
14 out of the Little Ark under the existing  
15 dual use permit that will then be used to  
16 perfect municipal use, is that the water  
17 that we're saying now is also going to  
18 generate AMC credits?

19 **A. Credit but it won't perfect municipal use in the**  
20 **second scenario.**

21 **PRESIDING OFFICER:** So -- so taking  
22 water from the Little Ark, treating it,  
23 sending it straight to the City perfects  
24 municipal use already?

25 **A. Right now, yes.**

1 **credits. I mean, you know it as you're treating**  
2 **that surface water whether there's room in the**  
3 **aquifer to put physical recharge credits in or**  
4 **not. So that -- that's -- so if there's room in**  
5 **the aquifer, they will create a physical**  
6 **recharge credit, and so they perfect a recharge**  
7 **credit at that point. And I have to say they**  
8 **perfect artificial recharge, that's the**  
9 **beneficial use.**

10 **So under this proposal, it's a functioning**  
11 **equivalent, AMC is a functioning equivalent of a**  
12 **physical recharge credit. So if the City pulls**  
13 **surface water and there's not room in the**  
14 **aquifer, then that goes to town but the City**  
15 **perfects artificial recharge, not municipal use.**

16 **PRESIDING OFFICER:** Okay. Thank you  
17 for bearing with me.

18 **A. Absolutely.**

19 **PRESIDING OFFICER:** I'm trying to  
20 make it very clear in my own head because I  
21 know I'm going to come back to this and go,  
22 what was that? So under the current  
23 permit, the use of the surface water in the  
24 City perfects municipal use --

25 **A. Correct.**

1 **PRESIDING OFFICER:** Under the  
2 current proposal, it would also perfect  
3 artificial recharge?

4 **A. It only perfects artificial recharge, it does**  
5 **not perfect municipal.**

6 **PRESIDING OFFICER:** So that would  
7 reduce the perfection under municipal?

8 **A. Correct.**

9 **PRESIDING OFFICER:** Okay. That  
10 helps. I lost my --

11 **A. Well, it is really -- this is a -- it's an**  
12 **accounting change, and so if an AMC is being**  
13 **generated and AMC is the only thing perfected**  
14 **under this proposal, that water is taken**  
15 **directly to town but it's not perfected as a**  
16 **municipal use.**

17 **PRESIDING OFFICER:** So the  
18 determination as to whether it perfects for  
19 municipal use or artificial recharge, that  
20 question is answered by whether or not  
21 there was room in the aquifer?

22 **A. Correct.**

23 **PRESIDING OFFICER:** Which you don't  
24 know until later?

25 **A. Well, you know it as you're generating the**

1 **PRESIDING OFFICE:** -- does not  
2 generate any recharge credits?

3 **A. That's correct. But then, Madam Hearing**  
4 **Officer, to add to that, not to confuse it, but**  
5 **if that same physical water is taken to town but**  
6 **if the AMC proposal is approved, it will be**  
7 **perfected as a artificial recharge and not**  
8 **municipal.**

9 **PRESIDING OFFICER:** Instead of?

10 **A. Instead of.**

11 **PRESIDING OFFICER:** That was the  
12 key.

13 **A. Uh-huh.**

14 **PRESIDING OFFICER:** Okay, thank you,  
15 sorry to interrupt.

16 **BY MR. STUCKY:**

17 **Q.** Mr. Letourneau, you have before you the City's  
18 proposal in that black notebook, correct?

19 **A. That's correct.**

20 **Q.** And you've read through that proposal  
21 previously; is that correct?

22 **A. Yes.**

23 **Q.** Could you point to me in that proposal where  
24 it's explained that when this water is sent  
25 directly to the City instead of being used for

Page 1920

1 municipal use, it's only going to be used for a  
 2 recharge perfection purpose, could you  
 3 explain -- or tell me where that's cited in the  
 4 proposal?  
 5 **A. Oh, not without -- not without a lot of review.**  
 6 Q. Well, I tell you what, unfortunately, it looks  
 7 like we're not going to finish today, so would  
 8 you be able to look at that proposal overnight  
 9 and tell me where --  
 10 **A. Well, maybe could --**  
 11 Q. -- in that proposal it's stated?  
 12 **A. Well, I mean, maybe could you just get to the**  
 13 **line of questioning, I mean, or what -- what is**  
 14 **it --**  
 15 Q. Well, I'll ask you this: In fact, that's not  
 16 stated in the proposal --  
 17 **A. Okay.**  
 18 Q. -- is that true?  
 19 **A. I -- I don't know, I don't think so. I mean,**  
 20 **that -- I would just think that that's how the**  
 21 **permits would be perfected.**  
 22 Q. So in other words, although it's not stated in  
 23 the proposal, this is your analysis of how we  
 24 can draw a distinction between the municipal use  
 25 found in ASR Phase II water sent directly to the

Page 1921

1 City and the distinction from the water sent  
 2 directly to the City with the AMC proposal,  
 3 that's your distinction, correct?  
 4 **A. That's my distinction, yes.**  
 5 Q. And, in fact, that distinction isn't made in the  
 6 proposal; is that true?  
 7 **A. I'll take your word for it that it's not.**  
 8 Q. Okay. But isn't it possible, then, with the AMC  
 9 credit proposal that we have two beneficial uses  
 10 that are made of the water at the same time? So  
 11 in other words, this water is used in the City  
 12 for municipal purposes, and at the same time,  
 13 isn't it possible that we have a recharge credit  
 14 that's created at the same time?  
 15 **A. Yes.**  
 16 Q. So let me then ask you, at the point -- under  
 17 the aquifer maintenance credit proposal, what  
 18 happens if all these credits are accumulated but  
 19 they're never withdrawn, does that -- does that  
 20 impact the perfection process at all?  
 21 **A. Yes, it sure could. I mean, you -- you've got a**  
 22 **set time frame, we have reasonable extensions in**  
 23 **time to perfect, but these recharge credits**  
 24 **leak, and so if nothing is ever used, then the**  
 25 **recharge credits go away.**

Page 1922

1 Q. So what you're telling me as you sit here today  
 2 and your testimony is that when these aquifer  
 3 maintenance credits are withdrawn at a later  
 4 time that that may or may not impact the  
 5 perfection process?  
 6 **A. It -- it perfects them when they're withdrawn at**  
 7 **a later time. You have to -- when you put water**  
 8 **to beneficial use under a permit to proceed is**  
 9 **when you perfect the water right.**  
 10 Q. So -- so there's -- and what would you call that  
 11 type of perfection when these AMC credits are  
 12 withdrawn at a later time, what use is being  
 13 made of the water at that point?  
 14 **A. That's municipal use.**  
 15 Q. So in other words, when under the aquifer  
 16 maintenance credit proposal, as it relates to  
 17 perfection, to make sure I understand this, when  
 18 the water is sent directly to the City for  
 19 municipal use, because of the nature of the  
 20 existing permits, that water is consumed both  
 21 for municipal purposes and a new type of  
 22 recharge credit is accumulated; is that correct?  
 23 **A. It's perfected for artificial recharge but not**  
 24 **perfected for municipal. It's used for**  
 25 **municipal, but it wouldn't be perfected for**

Page 1923

1 **municipal.**  
 2 Q. Okay. And so you're saying that the point at  
 3 which it's perfected for municipal use is when  
 4 those AMC credits are withdrawn at a later time?  
 5 **A. Correct.**  
 6 Q. Okay. And once again, this is not part of the  
 7 proposal specifically, but it's your analysis;  
 8 is that true?  
 9 **A. Yeah, it seems to be like water rights 101.**  
 10 Q. Right now, the reason --  
 11 **PRESIDING OFFICER:** I'm sorry, I got  
 12 to ask this or I'll lose it, so taking the  
 13 surface water to town helps perfect  
 14 artificial recharge and then using those  
 15 credits perfects municipal use?  
 16 **A. Correct.**  
 17 **PRESIDING OFFICER:** So the same  
 18 behavior perfects two different uses?  
 19 **A. Correct.**  
 20 **PRESIDING OFFICER:** Okay.  
 21 **MR. STUCKY:** You ready for me?  
 22 **PRESIDING OFFICER:** Yes, I'm sorry,  
 23 go ahead.  
 24 **BY MR. STUCKY:**  
 25 Q. I'll go ahead and shift focuses to the concept

1 of impairment. And you were asked some  
2 questions about the determinations made by the  
3 Division of Water Resources with respect to  
4 impairment, and I heard you draw a distinction  
5 between well-to-well impairment on one hand  
6 versus the impairment that has to do with the  
7 overall raising or lowering of the water level.  
8 Was that distinction made?

9 **A. Regional impairment, yes.**

10 Q. Am I correct that when it comes to well-to-well  
11 impairment that, for lack of a better term, the  
12 province of the Division of Water Resources is  
13 to decide?

14 **A. Yes.**

15 Q. In fact, the Groundwater Management District can  
16 make recommendations in that regard, but the  
17 ultimate decision making authority lies with the  
18 Division of Water Resources; is that right?

19 **A. That's correct.**

20 Q. But what about this idea of the overall  
21 impairment of the water table, would you agree  
22 with me that with respect to the overall  
23 impairment of the water table, there's, in fact,  
24 a regulation in place that indicates that that  
25 falls within the province of the Groundwater

1 Q. Just a minor aspect of cleanup, I think that  
2 Mr. Oleen asked you a question about spacing for  
3 irrigation wells, and there was a question with  
4 regard to the level of spacing that's needed,  
5 and I think he might have said something with  
6 reference to 660 feet. But would you agree that  
7 the spacing requirement for irrigation is  
8 actually 1,320 feet?

9 **A. Yes, and I thought we talked about domestic. I  
10 don't recall the irrigation, but you're correct,  
11 660 for domestic and 1320 for irrigation.**

12 Q. You indicated that with respect to well spacing  
13 it's ultimately the Division of Water Resources'  
14 decision with regard to well spacing, correct?

15 **A. Correct, chief engineer.**

16 Q. But you would agree with me that it's incumbent  
17 upon the Groundwater Management District to make  
18 a recommendation in that regard to the Division  
19 of Water Resources; is that right?

20 **A. That's right.**

21 Q. You've worked for the Division of Water  
22 Resources a long time, have you not?

23 **A. I have.**

24 Q. In your experience, the Groundwater Management  
25 District has made a lot of recommendations --

1 Management District?

2 **A. What -- which one of these are rules? I want to  
3 find our rules.**

4 Q. Can you turn with me to K.A.R. 5-4-1(a)?  
5 **PRESIDING OFFICER:** Which one are we  
6 looking at?

7 **A. It's our impairment rules.**

8 **MR. STUCKY:** It's going to be in  
9 Exhibit 22. It's on page 71 of Exhibit 22.

10 **PRESIDING OFFICER:** Okay.

11 **A. And, yes, David, that -- it does talk about  
12 impaired -- prior right being impaired due to a  
13 regional lowering of the water table, and (b)(1)  
14 talks about if the area of complaint is located  
15 within the boundaries of a groundwater  
16 management district, the GMD Board shall  
17 recommend steps necessary to satisfy senior  
18 water rights.**

19 Q. So in other words, when we're talking about a  
20 general regional lowering or -- lowering of the  
21 water table, if we're in a groundwater  
22 management district, it's the job of the GMD to  
23 make a recommendation in that regard. Is that a  
24 true statement?

25 **A. That's true.**

1 the Equus Beds Groundwater Management District  
2 No. 2 has made a lot of recommendations to the  
3 Division of Water Resources with regard to well  
4 spacing and spacing waivers, have they not?

5 **A. That's correct.**

6 Q. For our purposes, would you agree with me that  
7 the vast majority of the time, the Division of  
8 Water Resources has accepted the recommendation  
9 of the GMD in that regard?

10 **A. Yes.**

11 Q. In fact, can you even remember very many times  
12 when the GMD's well spacing recommendations were  
13 not accepted?

14 **A. A handful. Yeah, just a handful.**

15 Q. Just a handful in the context of hundreds over  
16 the years, correct?

17 **A. That's correct.**

18 Q. So at least in that context, the recommendations  
19 that are made by the GMD because they're the  
20 ones on the local level that are managing the  
21 aquifer, at least in that context, would you  
22 agree that the recommendations made by the GMD  
23 carry, at least, some weight --

24 **A. Oh, yeah.**

25 Q. -- when it comes to the Division of Water

Page 1928

1 Resources?  
 2 **A. Yes.**  
 3 Q. Would you agree that the recommendations made by  
 4 a local GMD when it comes to well spacing would  
 5 carry a lot of weight to the Division of Water  
 6 Resources?  
 7 **A. Yes.**  
 8 Q. There was a question asked by Mr. Oleen where he  
 9 said something about how it's difficult to  
 10 impose limitations on the City during a drought  
 11 because a drought is not predictable. Did I  
 12 hear the question correctly?  
 13 **A. That's correct, yes.**  
 14 Q. But isn't the drought modeling and predictions  
 15 exactly what this hearing is about?  
 16 **A. Well, yeah, but we don't know when the drought**  
 17 **starts.**  
 18 Q. But isn't this whole -- this whole hearing based  
 19 on the notion of trying to predict what could  
 20 occur during a drought and how to deal with it?  
 21 **A. Yes.**  
 22 Q. So in the sense this hearing is about trying to  
 23 predict what a drought is about and how to deal  
 24 with it, wouldn't you agree that at least a  
 25 discussion on how we can put protections in

Page 1929

1 place to ensure all water users are protected,  
 2 wouldn't you agree that trying to predict how  
 3 that could be done would be a useful tool or a  
 4 useful exercise?  
 5 **A. Yes, but it'd be difficult to determine when the**  
 6 **drought starts, that's the whole hang-up. I --**  
 7 **we totally agree on the drought and the**  
 8 **quantities during a drought, but we don't know**  
 9 **when -- when it starts, you don't know when that**  
 10 **happens until you're a couple years into it.**  
 11 Q. You were asked a question with regards to the  
 12 source water for aquifer maintenance credits,  
 13 and you said that the source water is the Little  
 14 Arkansas River; is that right?  
 15 **A. That's correct.**  
 16 Q. Is there a distinction between the point in  
 17 which this water is sent to the City for use and  
 18 the point at which an aquifer maintenance credit  
 19 is withdrawn from the aquifer?  
 20 **A. Well, the recharge credit withdrawn from the**  
 21 **aquifer would be the wells.**  
 22 Q. Let me ask it this way: You said that with  
 23 respect to an aquifer maintenance credit, the  
 24 source water is water taken from the Little  
 25 Arkansas River, and you told me a moment ago

Page 1930

1 that during the perfection period when the  
 2 source water is sent directly to the City, we're  
 3 perfecting an artificial recharge credit at that  
 4 point; is that right?  
 5 **A. That's correct.**  
 6 Q. But would you agree with me at that point, the  
 7 source water would already -- already have been  
 8 consumed then by the City for its own municipal  
 9 purposes?  
 10 **A. Yes.**  
 11 Q. Mr. Oleen asked you a question or two, maybe  
 12 several questions, about K.A.R. 5-1-1(mmm). I  
 13 would ask that we now turn to that regulation,  
 14 which is also found in 22, Exhibit 22.  
 15 **PRESIDING OFFICER:** It's about ten  
 16 after 5:00, so maybe this topic would be  
 17 good to address now and then a stopping  
 18 point after that?  
 19 **MR. STUCKY:** Sure, whatever you  
 20 think.  
 21 **PRESIDING OFFICER:** Okay, if it  
 22 won't be too extensive?  
 23 **MR. STUCKY:** I'm going to ask about  
 24 that definition and every aspect of that  
 25 definition that flows from it so ...

Page 1931

1 **PRESIDING OFFICER:** I'm willing to  
 2 go about another five minutes. If you  
 3 think that's not enough, we'll wait till  
 4 tomorrow.  
 5 **MR. STUCKY:** We can start and see  
 6 how far we get.  
 7 **PRESIDING OFFICER:** Okay, five  
 8 minutes.  
 9 **BY MR. STUCKY:**  
 10 Q. You were asked a question about the recharge  
 11 credit, and it's found in (mmm). And I was told  
 12 because that question was asked I'd be able to  
 13 ask about that definition and any aspect of that  
 14 definition that directly flows from that  
 15 definition, correct?  
 16 **A. Correct.**  
 17 **MR. OLEEN:** Object, that's not my  
 18 characterization, I asked about the verb  
 19 clause "is stored," and I limited my  
 20 queries to that verb clause, and it was my  
 21 understanding that that's what Mr. Stucky  
 22 would be limited to as well.  
 23 **MR. STUCKY:** That was not my  
 24 understanding. My understanding was if he  
 25 asked any questions about this definition I

1 would also be allowed to ask any -- about  
2 any aspects of this definition. I'm not  
3 sure how -- how we're going to allow  
4 Mr. Oleen to ask about one phrase in this  
5 definition and not allow me to then ask  
6 about all phrases in this definition.  
7 **PRESIDING OFFICER:** Well, my  
8 understanding was that his request was if  
9 you were opening the door to this  
10 regulation that then he could ask about  
11 this regulation, so I didn't -- I didn't  
12 understand the limitation that you were  
13 assuming.  
14 **MR. OLEEN:** Okay. Well, that was  
15 perhaps my fault in not making that clear.  
16 I'm -- I'm a little unnerved when  
17 Mr. Stucky says he's going to ask every  
18 question that flows from this regulation.  
19 My initial objection was to Mr. Stucky  
20 using the phrase "is stored" in his line of  
21 questioning to Mr. Letourneau. That's why  
22 I wanted to go back and discuss this verb  
23 phrase. That's all I wanted to get into,  
24 and I -- I am, again, unnerved by  
25 Mr. Stucky's statement that he's going to

1 using a term utilized by Mr. Oleen, one  
2 aspect of this definition, ask questions  
3 about it, and then preclude us from looking  
4 at this definition in a holistic sense  
5 and -- and attach meaning to each term in  
6 that definition. So I'm asking for the  
7 ability to attach meaning to each term in  
8 that definition since Mr. Oleen was able to  
9 focus on at least one term in that  
10 definition.  
11 **MR. OLEEN:** And, again, Madam  
12 Hearing Officer, I wanted to ask about that  
13 particular verb phrase because I had  
14 previously objected when Mr. Stucky used  
15 that verb phrase in the context of asking  
16 Mr. Letourneau a question about recharge  
17 credits. And -- and that's the only reason  
18 why I wanted to -- at the time, I don't  
19 believe my objection was sustained and I  
20 believe Mr. Stucky was allowed to ask the  
21 question. And so that's why I wanted to  
22 ask the question about that particular  
23 phrase because of my prior objection, his  
24 usage of it.  
25 **PRESIDING OFFICER:** Okay. I

1 ask all questions that flow from this  
2 regulation. If that was the -- if I was  
3 going to open the door that wide as opposed  
4 to the little crack that I had intended,  
5 then I would not have asked my little  
6 question about the phrase "is stored."  
7 **PRESIDING OFFICER:** We'll return to  
8 the appropriate scope of what you're  
9 allowed to do when we return tomorrow. If  
10 you want to ask about this particular  
11 phrase in the next few minutes, please do  
12 so. If not, I'm going to answer this  
13 question about how much farther you can go  
14 tomorrow morning.  
15 **MR. STUCKY:** Okay.  
16 **PRESIDING OFFICER:** You ready to --  
17 **MR. STUCKY:** No, I -- I thought --  
18 **PRESIDING OFFICER:** Do you want to  
19 pursue the "is stored in"?  
20 **MR. STUCKY:** My understanding was  
21 I'd be able to ask about this definition  
22 and the entire context of this definition,  
23 and I don't think it's proper and fair to  
24 the District, or any other party for that  
25 matter, to allow one party to cherry-pick,

1 understand your positions, I'll decide this  
2 first thing tomorrow morning. It's 5:15  
3 and we're on recess until 8:30 tomorrow  
4 morning. Adjourned.  
5 (Whereupon, the proceedings were  
6 adjourned at 5:15 p.m.)

A P P E A R A N C E S

City of Wichita, Department of Public  
Works and Utilities, appears by their attorney,  
Brian K. McLeod, Deputy City Attorney, 435 North  
Main, 13th Floor, Wichita, Kansas 67202.

Equus Beds Groundwater Management District  
No. 2 appears by their attorneys, Thomas A. Adrian  
and David J. Stucky, Adrian & Pankratz, 301 North  
Main, Suite 400, Newton, Kansas 67114. Also  
present was Tim Boese.

Division of Water Resources appears by  
their attorneys, Aaron B. Oleen and Stephanie  
Murray, Kansas Department of Agriculture, 1320  
Research Park Drive, Manhattan Kansas 66502.

Intervenors appear by their attorney,  
Tessa M. Wendling, 1010 Chestnut Street, Halstead,  
Kansas 67056.

1	GMD2 EXHIBIT 59	1	<b>PRESIDING OFFICER:</b> We're now back
2	OFFERED 2223	2	on the record, it's 8:30 in the morning on
3	ADMITTED 2223	3	March 3rd, 2020, and we are continuing the
4		4	administrative hearing for the City of
5	GMD2 EXHIBIT 61	5	Wichita's proposal to modify their Aquifer
6	OFFERED 2052	6	Storage and Recovery Project Phase II.
7	ADMITTED 2052	7	And someone brought to my attention that
8		8	there may be weather sirens today. I don't
9	GMD2 EXHIBIT 62	9	intend to duck and cover, so respond as you
10	OFFERED 2054	10	wish, but I think it's probably just an
11	ADMITTED 2056	11	ordinary drill, I don't think we need to
12		12	worry about it, but I wouldn't want anybody
13	GMD2 EXHIBIT 63	13	to be disrupted.
14	OFFERED 2059	14	<b>UNIDENTIFIED:</b> Connie, cell phones
15	ADMITTED 2059	15	may go off too.
16		16	<b>PRESIDING OFFICER:</b> Okay. Cell
17	GMD2 EXHIBIT 71	17	phones may end up going off. Any other
18	OFFERED 2087	18	preliminary things before we get back to
19	ADMITTED 2087	19	where we left off yesterday?
20		20	Okay. Hearing none, as we closed
21	GMD2 EXHIBIT 73	21	yesterday, there were objections from DWR
22	OFFERED 2135	22	as to questioning by the GMD of Lane
23	ADMITTED 2136	23	Letourneau, who is still on the witness
24		24	stand, and I indicated that I would resolve
25		25	those first thing this morning.

Page 1945

1 And as I understand it, Mr. Oleen, your  
2 objections were basically in line of  
3 limiting legal opinion testimony from the  
4 witness, is that a good summary?  
5 **MR. OLEEN:** Yes, it was my  
6 understanding that I could ask -- I believe  
7 Mr. Stucky had objected on redirect when I  
8 asked Mr. Letourneau about the regulatory  
9 definition of recharge credit, I asked him  
10 a specific question pertaining to a  
11 specific verb clause. Mr. Stucky objected  
12 to me doing that because there were a  
13 previous set of objections related to a  
14 line of questioning regarding this  
15 regulation.  
16 It was my understanding that if I asked  
17 him what I believed was truly only one or  
18 two questions about the particular verb  
19 clause that that would open the door for  
20 Mr. Stucky to maybe also ask questions  
21 about that verb clause but not necessarily  
22 ask a bunch of additional questions beyond  
23 that. And I believe Mr. Stucky, he had a  
24 differing understanding of what you had  
25 allowed in that regard.

Page 1946

1 **PRESIDING OFFICER:** Okay. And your  
2 understanding, Mr. Stucky, was?  
3 **MR. STUCKY:** My understanding, Your  
4 Honor, was that I would be able to ask  
5 questions about any phrase in that  
6 definition and construe that entire  
7 definition with this witness, that was my  
8 understanding. And my position yesterday  
9 was based on the fact that his deposition,  
10 which has been admitted as an expert  
11 report, is replete with references and  
12 discussion of statutes. And, indeed, we're  
13 also introducing a letter from the chief  
14 engineer that opines on the legal aspects  
15 of this proposal, and the witness has  
16 adopted those legal opinions. And so  
17 either, A, that -- that should not be  
18 admitted as just rank hearsay, or -- on one  
19 hand, or on the other hand, if it is  
20 admitted, then it's the opinion -- it's the  
21 witness's opinion on these legal aspects  
22 and I should be free to engage in cross.  
23 That's the position in short.  
24 **PRESIDING OFFICER:** Okay. So you're  
25 wishing to -- to question the witness on, I

Page 1947

1 think it was 5-1-1(mmm), beyond the scope  
2 of what Mr. Oleen is comfortable with?  
3 **MR. STUCKY:** That is right.  
4 **PRESIDING OFFICER:** Okay. The issue  
5 of legal opinion testimony is one that has  
6 been covered before in this hearing and in  
7 these proceedings, so last night I took the  
8 opportunity to try to carefully review what  
9 had been argued regarding other witnesses,  
10 but the topic of legal opinion testimony  
11 with our experts in this case, and to  
12 review what I had previously decided and  
13 why, to be thorough and consistent.  
14 And the context of this hearing is one  
15 that many times over we've mentioned is  
16 rather unusual and that it is an  
17 administrative hearing, evidentiary rules  
18 are relaxed. And even in civil trials, the  
19 Court, which would be my role, has broad  
20 discretion regarding admissibility of  
21 evidence, so in an administrative setting,  
22 it would be at least -- at least that broad  
23 and flexible.  
24 And I reviewed my order on prehearing  
25 motions from July of 2019 and some other

Page 1948

1 aspects of the record, and in light of the  
2 fact that this is an administrative hearing  
3 and Mr. Letourneau's job necessarily  
4 requires the application of statutes and  
5 regulations as part of his duties, it is --  
6 I find it unnecessary and detrimental to  
7 prevent him from making any comments about  
8 how the statutes and regulations apply,  
9 that's part of his area of expertise,  
10 that's part of why he is here. And,  
11 indeed, in his prehearing brief, which I  
12 reviewed, he does make legal conclusions  
13 and adopt those of the chief engineer, and  
14 as Mr. Stucky said, that also took place in  
15 Mr. Letourneau's deposition.  
16 And also in reviewing the grounds for my  
17 order on prehearing motions, when I ruled  
18 on this very issue regarding other  
19 witnesses, the concern about legal opinion  
20 testimony from experts is that there would  
21 be confusion of a jury or a usurpation of  
22 the judicial role in determining legal  
23 conclusions. There's no jury and the  
24 testimony of someone in Mr. Letourneau's  
25 position as to how he applies regs and

1 statutes in the course of his job is not a  
2 usurpation of my authority, and any opinion  
3 he may have on how he applies those  
4 statutes and regs is not determinative. I  
5 am not bound to agree that what he says is  
6 true and accurate just because he says it's  
7 true and accurate. Likewise, I'm not bound  
8 to disagree.

9 The determination of laws and statutes  
10 and what they mean is the role of the  
11 Court, and so I am at liberty to make those  
12 decisions regardless of what witnesses  
13 testify, and any Court reviewing what I do  
14 is likewise free to make any decisions  
15 about what those statutes and laws  
16 actually -- or statutes and regs actually  
17 do mean.

18 So having said all that, I believe  
19 Mr. Stucky may go forward with further  
20 questions about K.A.R. 5-1-1(mmm) for all  
21 the reasons that I explained but primarily  
22 because Mr. Letourneau is speaking also in  
23 terms of what his job is, what he has done  
24 in the course of his job, and applying  
25 these regs and these statutes is part of

1 we'd look to find that aspect of this larger  
2 definition?

3 **A. Yes, that's correct.**

4 Q. So what is the basin storage area?

5 **A. Basin storage area means the portion of the  
6 aquifer used for aquifer storage that has  
7 defined horizontal boundaries and is delimited  
8 by a maximum index level and a minimum index  
9 level.**

10 Q. Okay. So basin storage area -- so to understand  
11 how basin storage area applies in this  
12 definition of recharge credit, I suppose we need  
13 to know what aquifer storage means; is that  
14 right? Is that defined by regulation as well?

15 If we were to look to K.A.R. 5-1-1(e) --

16 **A. Correct.**

17 Q. -- we would understand what aquifer storage  
18 means; is that right?

19 **A. That's correct.**

20 Q. And what is aquifer storage, then, in --

21 **A. Aquifer storage -- I'm sorry, I didn't let you  
22 stop. Aquifer storage means the act of storing  
23 water in an aquifer by artificial recharge for  
24 subsequent diversion and beneficial use.**

25 Q. Okay. So aquifer storage tells us it's the act

1 what his job is. That is his domain and  
2 his area of expertise.

3 So having said that, I'm going to  
4 overrule the objection, and, Mr. Stucky,  
5 you can proceed to ask about this  
6 particular regulation.

7 **MR. STUCKY:** Thank you, Your Honor.

9 **RECROSS EXAMINATION (Cont.)**

10 **BY MR. STUCKY:**

11 Q. Mr. Letourneau, if you could turn in the exhibit  
12 notebook, which is Volume Number II and it was  
13 Exhibit 22, if you could have that regulation in  
14 front of you.

15 **A. Even open from yesterday.**

16 Q. All right. So yesterday Mr. Oleen asked you  
17 some questions about the definition of a  
18 recharge credit, and I would like to understand  
19 this definition in a little greater detail as  
20 you would apply this definition in your job.

21 And so it says, recharge credit means the  
22 quantity of water that is stored in the basin  
23 storage area. What is a basin storage area, is  
24 that defined by statute? Or regulation, rather?  
25 Would that be K.A.R. 5-1-1(k), is that where

1 of storing water in an art -- aquifer by  
2 artificial recharge, is that what it says?

3 **A. Correct.**

4 Q. So in other words, to have aquifer storage,  
5 there has to be the act of putting water in the  
6 aquifer, is that what this is saying?

7 **A. No.**

8 Q. Well, tell me what you think this definition of  
9 aquifer storage means if you were applying it in  
10 your job.

11 **A. Okay. It means the act of storing water in an  
12 aquifer by artificial recharge for subsequent  
13 diversion and beneficial use, and a recharge  
14 credit can be artificial recharge.**

15 Q. So you think that this definition implies  
16 putting water in the aquifer for storage?

17 **A. Not necessarily. It does speak, though, Dave,  
18 to artificial recharge. Aquifer storage is  
19 artificial recharge.**

20 Q. If we were to go back, then, to the definition  
21 of basin storage area, it has a reference to  
22 both maximum index level and minimum index  
23 level; is that right?

24 **A. That's correct.**

25 Q. And maximum index level and minimum index level

Page 1953

1 are both also defined by statute, so --  
 2 **A. That's correct.**  
 3 Q. -- it further gives us context to this  
 4 definition of recharge credit; is that right?  
 5 **A. That's correct.**  
 6 Q. And, in fact, if you were to turn in this  
 7 regulation to (ss) and (uu), we would find  
 8 definitions of maximum index level and minimum  
 9 index level?  
 10 **A. That's correct.**  
 11 Q. Previously, you defined minimum index level, and  
 12 we discussed that that was changed by virtue of  
 13 a regulation change, that definition, but  
 14 there's also a definition of maximum index  
 15 level, what is that?  
 16 **A. The maximum index level means the maximum**  
 17 **elevation for storage within a basin storage**  
 18 **area or, if the basin storage area is**  
 19 **subdivided, a smaller subdivided area.**  
 20 Q. So when we look at this maximum versus minimum  
 21 index level, we're talking about essentially a  
 22 bottom and essentially a top, is that what we're  
 23 talking in this basin storage area?  
 24 **A. Yes.**  
 25 Q. So let's turn back, then, to this concept of a

Page 1954

1 basin storage area. It says, basin storage area  
 2 means the portion of the aquifer used for  
 3 aquifer storage, we just talked about what that  
 4 means, that has defined horizontal boundaries  
 5 and is delimited by maximum index levels and  
 6 minimum index levels. So what is your concept  
 7 of a basin storage area as it relates to aquifer  
 8 storage?  
 9 **A. It's a box in the aquifer.**  
 10 Q. It's a -- is it a place where water can be  
 11 stored?  
 12 **A. Yes.**  
 13 Q. Now let's turn back to -- well, let's now turn  
 14 to -- back to that original definition that  
 15 we're discussing in (mmm). So we -- what we  
 16 have here, it says, means the quantity of water  
 17 that is stored in the basin storage area, and we  
 18 talked about a basin storage area, and then it  
 19 says, and that is available for subsequent  
 20 appropriation for beneficial use by the operator  
 21 of an aquifer storage and recovery system.  
 22 Aquifer storage and recovery system is also  
 23 defined by regulation, is it not?  
 24 **A. Correct.**  
 25 Q. Is that found in subsection (f) of K.A.R. 5-1-1?

Page 1955

1 **A. Yes.**  
 2 Q. Aquifer storage and recovery system means the  
 3 physical infrastructure that meets the following  
 4 conditions, right, and number 1, it says, is  
 5 constructed and operated for artificial  
 6 recharge, storage, and recovery of source water.  
 7 And then there's a second requirement, it says,  
 8 and consists of apparatus for diversion,  
 9 treatment, recharge, storage, extraction, and  
 10 distribution. In aquifer storage and recovery  
 11 systems, to better understand what that means,  
 12 it references the concept of source water, does  
 13 it not?  
 14 **A. Yes.**  
 15 Q. And so, again, to really understand what we're  
 16 talking about with respect to a recharge credit,  
 17 because a recharge credit is defined in the  
 18 context of an aquifer storage and recovery  
 19 system, we'd have to know what source water is;  
 20 is that right?  
 21 **A. That's correct.**  
 22 Q. And source water is also defined by statute; is  
 23 that -- is that right?  
 24 **A. That's correct.**  
 25 Q. So let's turn now to the definition of source

Page 1956

1 water. And I think that's found in (yyy). It  
 2 says, source water means water used for  
 3 artificial recharge that meets the following  
 4 conditions, is available for appropriation for  
 5 beneficial use, is above base flow stage in the  
 6 stream, is not needed to satisfy minimum  
 7 desirable streamflow requirements, and will not  
 8 degrade the ambient groundwater quality in the  
 9 basin storage area. So as you look at this  
 10 definition of source water, it talks about  
 11 basically getting water above a base flow in a  
 12 stream in number 2; is that right?  
 13 **A. Correct.**  
 14 Q. So that would be analogous to getting water from  
 15 the Little Arkansas River when it's flooding,  
 16 would it not?  
 17 **A. Yes, correct.**  
 18 Q. And number 3, it says, is not needed to satisfy  
 19 minimum desirable streamflow, so once again, if  
 20 the river is really low, we're not going to take  
 21 water out to either send it to the City or put  
 22 it in an aquifer, correct?  
 23 **A. Yeah, that's correct, the trigger levels are**  
 24 **much -- the trigger levels to operate this**  
 25 **aquifer storage and recovery are much higher**

1 **than MDS.**

2 Q. And then the final requirement -- and the first  
3 requirement was a given, that it's available for  
4 appropriation for beneficial use, but the final  
5 requirement, it says, with respect to source  
6 water, it will not degrade the ambient  
7 groundwater quality in the basin storage area.  
8 So here we're talking about this concept of  
9 source water, and it's talking about source  
10 water and it's referencing pulling out the  
11 source water when it's above this minimum --  
12 this minimum desirable streamflow, and basically  
13 when this water is flooding, it's talking about  
14 the source water --

15 **MR. MCLEOD:** Is there a question  
16 somewhere here?

17 **MR. STUCKY:** There will be a  
18 question.

19 **BY MR. STUCKY:**

20 Q. And so that's what we discussed so far; is that  
21 right?

22 **A. Correct.**

23 Q. But this last requirement contemplates this idea  
24 that we're going to use this source water and  
25 put it in the basin storage area, is that right,

1 recovery system.

2 **A. Okay.**

3 Q. So as we look at that first part of that  
4 concept, it says, it is constructed and operated  
5 for artificial recharge storage and recovery of  
6 source water. So as source water is used in  
7 this statement and when we're talking about a  
8 recovery of source water, we're talking about  
9 getting the source water back, and you told me  
10 that the source water would be captured when  
11 we're above base flow of a stream and  
12 essentially it's flooding, if you will, for an  
13 easy conceptualization of this. But then we're  
14 talking about, it says artificial recharge  
15 storage, and then it says recovery of this  
16 source water?

17 **A. Correct.**

18 Q. In the context of this regulation with respect  
19 to basin storage area and recovery system, is it  
20 contemplating that that source water would be  
21 put in the aquifer so it could be recovered?

22 **A. Some type of recharge credit would be put in the  
23 aquifer. The source water becomes a recharge  
24 credit to be put in the aquifer.**

25 Q. So then if we turn back to this definition found

1 because it refers to whether or not we're going  
2 to degrade the ambient groundwater quality in  
3 the basin storage area; is that right?

4 **MR. OLEEN:** I object, I think he's  
5 misstating the particular regulation.

6 **PRESIDING OFFICER:** I'm interested  
7 in what Mr. Letourneau thinks the  
8 regulation says.

9 **BY MR. STUCKY:**

10 Q. Mr. Letourneau, I'll rephrase the question, this  
11 is going to take a little more time, I'll  
12 rephrase it. Number -- number 4, which I read  
13 word for word says, the final requirement is  
14 that it will not degrade the ambient groundwater  
15 quality in the basin storage area. So my  
16 question is if there's a concern here about  
17 degrading water quality in the groundwater of a  
18 basin storage area, doesn't that contemplate  
19 putting this source water that we got from this  
20 overflow into an aquifer?

21 **A. Yes, or not take it out. Either not take it out  
22 or whatever you put in has to be as good or  
23 better.**

24 Q. So now let's turn back to that definition that  
25 we found with respect to aquifer storage and

1 in (mmm) under recharge credit?

2 **A. Okay.**

3 Q. It says, recharge credit means the quantity of  
4 water that is stored in the basin storage area,  
5 and we talked about what a basin storage area is  
6 and what it means to store source water in the  
7 basin storage area, did we not?

8 **A. Correct.**

9 Q. And it says, then, and that is available for  
10 subsequent appropriation for beneficial use. So  
11 I guess my question is if there's some sort of  
12 act that occurs of storing water in a basin  
13 storage area, whatever that act is, and of  
14 course we may disagree on what that act  
15 constitutes, what is meant by this concept of  
16 subsequent appropriation as outlined in this  
17 regulation?

18 **A. Well, my thought on that is it took an  
19 appropriation to put the water in -- it took an  
20 appropriation to put the recharge credit into  
21 the basin storage area, then it's a subsequent  
22 appropriation to pump it back out and use it for  
23 municipal use.**

24 Q. But you just answered my question in the context  
25 of putting water in, is that how you answered my

Page 1961

1 question?  
 2 **A. A recharge credit in. We put a recharge**  
 3 **credit -- a recharge credit is stored in the**  
 4 **basin storage area, it takes an appropriation to**  
 5 **put a recharge credit into the basin storage**  
 6 **area and then a subsequent appropriation to pull**  
 7 **it out and put it to beneficial use. That's how**  
 8 **I -- that's how I see it.**  
 9 Q. Okay. And just to clarify, and I'm trying to  
 10 understand the Division of Water Resources'  
 11 position in this regard, just to clarify, this  
 12 dovetails into your discussion on perfection  
 13 that the put into the aquifer, if you will, is  
 14 created at that moment the water is sent  
 15 directly to the City, is that right, that's when  
 16 that recharge credit is created?  
 17 **A. The -- well, okay, the recharge credit is --**  
 18 **yes, I mean, if -- if the City --**  
 19 **MR. OLEEN:** I'm sorry, I'm going to  
 20 object just because are you talking about  
 21 recharge credits under the current Phase II  
 22 system or the contemplated AMCs?  
 23 **MR. STUCKY:** The contemplated AMCs,  
 24 I'll clarify.  
 25 **A. But then also perfection is not part of this**

Page 1962

1 **proposal. I mean, I'll answer the question, but**  
 2 **this proposal is about AMCs and about lowering**  
 3 **the bottom. It's not about perfection. But**  
 4 **I'll --**  
 5 **BY MR. STUCKY:**  
 6 Q. I'll withdraw that question.  
 7 **A. Okay.**  
 8 Q. I'll make it easier for you and withdraw that  
 9 question. Let me just ask this: As it relates  
 10 to these definitions, when it -- when it talks  
 11 about what's stored in the aquifer, are we  
 12 talking about storing a recharge credit in the  
 13 aquifer, or are we talking about storing source  
 14 water in the aquifer, what is being  
 15 contemplated?  
 16 **A. Well, source water becomes a recharge credit,**  
 17 **and it's the recharge credit, then, that's**  
 18 **stored in the aquifer. Well, it's stored in the**  
 19 **basin storage area, I'm sorry, that -- so source**  
 20 **water becomes a recharge credit, and a recharge**  
 21 **credit is stored in the basin storage area.**  
 22 Q. So you're telling me that as these definitions  
 23 exist -- well, let me back up here. Let's go  
 24 back to this definition of recharge credit found  
 25 on page 6 in (mmm). It says, recharge credit

Page 1963

1 means the quantity of water that is stored in  
 2 the basin storage area, so are you telling me  
 3 that instead of saying water in this definition,  
 4 it should read recharge credit means the  
 5 quantity of recharge credits that are stored in  
 6 the basin storage area, that we should read the  
 7 word water out of that definition?  
 8 **A. No, because water is -- water is part of that**  
 9 **definition. So recharge credit means the**  
 10 **quantity of water that's stored in the basin**  
 11 **storage area, but -- so, yeah, I mean, we**  
 12 **could -- we can say that source water becomes a**  
 13 **recharge credit, that is water, but then the**  
 14 **recharge credit is stored in the basin storage**  
 15 **area. It is -- it is water, but it's a -- but**  
 16 **the accounting is what calls it a recharge**  
 17 **credit.**  
 18 Q. And my question is, this is obvious with respect  
 19 to ASR Phase II, the recharge credit that's  
 20 stored in the aquifer that's a type of water,  
 21 that's, indeed, source water with ASR recharge  
 22 credit, right?  
 23 **A. That's correct.**  
 24 Q. So let me just ask this: With respect to an  
 25 aquifer maintenance credit, then, the water that

Page 1964

1 is stored in the aquifer, is that -- is that  
 2 source water?  
 3 **A. That -- yes, we would consider that source**  
 4 **water. Now, water is not physically put into**  
 5 **the aquifer, but it starts out as source water,**  
 6 **then is treated, taken to town, but then it**  
 7 **becomes an AMC because space is not in the**  
 8 **aquifer.**  
 9 Q. I'm still confused, Mr. Letourneau. You told me  
 10 that with an AMC the source water is sent  
 11 directly to the City for municipal use. Right  
 12 after it's taken out of the Little Arkansas  
 13 River, it's treated, it's sent directly to the  
 14 City for municipal use, so how does that source  
 15 water, when this aquifer maintenance credit is  
 16 accumulated, how does it become source water in  
 17 the aquifer if it's been sent to the City  
 18 already?  
 19 **A. By the accounting, by -- by the annual**  
 20 **accounting report.**  
 21 Q. So, basically, just so I'm clear and I can leave  
 22 this point alone, but because the accounting  
 23 report says that it's become source water,  
 24 that's what you're relying on to believe that  
 25 this has become source water?

1 **A. Well, I mean, it's all part of the operation,**  
2 **it's got to be source water, it's got to be high**  
3 **flow from the Little Ark that's pulled out, it's**  
4 **treated at the infra -- at the ASR**  
5 **infrastructure. There's a determination made if**  
6 **there's space in the aquifer; if there is, City**  
7 **will put it in, that's physical recharge credit,**  
8 **that's the same as Phase II right now. Now,**  
9 **though, source water comes out, it's treated at**  
10 **the facility, if there's not space in the**  
11 **aquifer, it goes to town but it becomes an AMC.**  
12 Q. But I thought you told me yesterday that no  
13 source water was actually put in the aquifer is  
14 what I thought you told me yesterday?  
15 **A. Water is not put in the aquifer but source --**  
16 **you got to look at the definition of source**  
17 **water.**  
18 Q. You said source water was basically similar to,  
19 analogous to this floodwater from the Little  
20 Arkansas River that can be taken out and  
21 treated, but I thought you told me in the  
22 context of an aquifer maintenance credit that  
23 source water is sent directly to the City for  
24 municipal use, I thought is what you told me?  
25 **A. And that -- in that case. But also the**

1 that?  
2 **A. Yes.**  
3 Q. Yesterday you were asked a question to  
4 distinguish between observation wells and  
5 production wells. Do you recall those  
6 questions?  
7 **A. Yes.**  
8 Q. And the question was asked if production wells  
9 can provide beneficial data for understanding  
10 the lithologic data in a well; is that right?  
11 **A. That's correct.**  
12 Q. Let me ask this: Are production wells usually  
13 designed to be drilled in a place that generates  
14 the most water?  
15 **A. Absolutely.**  
16 Q. So in the sense that production wells may be  
17 drilled in a place that generates the most  
18 water, could they also have the tendency to  
19 overestimate the amount of water in the aquifer?  
20 **A. That I don't know.**  
21 Q. Well, let me just ask this: Mr. Letourneau,  
22 your job for the Division of Water Resources is  
23 to not only address issues here in the Equus  
24 Beds Aquifer, but you're also -- you mentioned  
25 the Ogallala Aquifer yesterday, and you're very

1 **accounting, though, because there's not room in**  
2 **the aquifer, that source water is taken to town**  
3 **but we also develop a aquifer maintenance**  
4 **credit.**  
5 Q. And my question is, then, when we create this  
6 aquifer maintenance credit, would you at least  
7 agree that this act of creating this aquifer  
8 maintenance credit doesn't actually put source  
9 water into the basin storage area?  
10 **A. Yes, I can agree with that.**  
11 Q. All right. We'll move on, then, and let's --  
12 yesterday you were asked a question about -- you  
13 made a comment, I probably just didn't hear you  
14 correctly, I think you said that if the Division  
15 of Water Resources doesn't see impairment in the  
16 City's proposal, we will approve it, and I  
17 thought you said something to that effect. But  
18 would you agree with me that impairment is one  
19 of numerous factors that should be considered  
20 as -- as we're evaluating the City's proposal?  
21 **A. Oh, absolutely.**  
22 Q. And, in fact, I don't need to approach you with  
23 the order of the hearing officer in this case  
24 that indicates there's a multitude of factors  
25 that should be considered, you would agree with

1 familiar with issues out in western Kansas as  
2 well; is that right?  
3 **A. Well, the entire state, yes.**  
4 Q. Are you aware of a situation in western Kansas  
5 where there was an analysis of well logs and  
6 they were only looking at production wells for  
7 their analysis and it created skewed results as  
8 far as the actual health of the Ogallala  
9 Aquifer?  
10 **A. Well, I -- no, you'll have to be more specific,**  
11 **there's hundreds of cases.**  
12 Q. Well, I'm asking are you aware of a situation  
13 where -- where there's been some analysis  
14 performed on production wells in western Kansas  
15 and it created this tendency to overestimate the  
16 actual health of that Ogallala Aquifer or the  
17 actual amount of water in it?  
18 **A. No.**  
19 Q. Are you aware of such a -- such studies?  
20 **A. Not without additional details. And I'm not**  
21 **trying to be difficult, I just need more**  
22 **details, yeah.**  
23 Q. Okay. Are you aware that both KGS and the GMDs  
24 have been advocating that test well drill logs  
25 be required to be submitted to KDHE so that a

Page 1969

1 more complete aquifer record is established?  
 2 **A. Yeah, absolutely. And, actually, I've told the**  
 3 **health and environment -- I mean, I'm even part**  
 4 **of that group also, that we want all test logs,**  
 5 **everything, reported to the KGS.**  
 6 Q. Would you also agree with me that these test  
 7 well logs that we looked at last time we were  
 8 here, those are monitoring wells that were put  
 9 into place by the City; is that right?  
 10 **A. Yes.**  
 11 Q. And would you also agree with me that the City  
 12 has to submit water quality data based on these  
 13 actual test wells; is that right?  
 14 **A. That's correct.**  
 15 Q. So in other words, as the City generates their  
 16 reports to determine the health of the aquifer  
 17 and the impacts of their recharge project on  
 18 water quality, they're at least, in part,  
 19 relying on the results that they generate from  
 20 these test wells; is that right?  
 21 **A. Yes, absolutely.**  
 22 Q. So at least in that sense, the City of Wichita  
 23 believes that those test wells and the results  
 24 they produce are accurate; is that right?  
 25 **A. That's right.**

Page 1970

1 Q. Yesterday we were asked a question -- you were  
 2 asked some questions once again about whether  
 3 the Groundwater Management District  
 4 strategically picked a few test wells, whether  
 5 or not the Groundwater Management District  
 6 strategically picked just a handful of these  
 7 test wells that were the most -- that indicated  
 8 the most harmful effects in the aquifer. Do you  
 9 recall that question?  
 10 **A. I don't -- I don't remember that.**  
 11 Q. Well, do you recall Mr. McLeod asking you a  
 12 question about one of these test wells that was  
 13 in the northwest portion of the aquifer --  
 14 **A. Yes.**  
 15 Q. -- and whether that could skew the results?  
 16 **A. Yes, I do recall that.**  
 17 Q. And do you also recall in our -- our previous  
 18 exercise here where Mr. Oleen stood up on the  
 19 record and said that the GMD had strategically  
 20 cherry-picked a few of these test well logs, do  
 21 you recall that?  
 22 **A. No, but -- no, but I'll -- I can agree with it.**  
 23 **I don't remember that.**  
 24 Q. All right. Well, Mr. Letourneau, I would like  
 25 to talk with you about index well 14C.

Page 1971

1 **MR. STUCKY:** May I approach the  
 2 witness?  
 3 **PRESIDING OFFICER:** Yes.  
 4 **BY MR. STUCKY:**  
 5 Q. Mr. Letourneau, I've handed you another well  
 6 drilling log, and would you agree with me that  
 7 for the purposes of this record this is a -- an  
 8 official drilling log for 14 -- index well 14C  
 9 in the aquifer?  
 10 **A. That's correct.**  
 11 **MR. OLEEN:** Mr. Stucky, just point  
 12 of clarification, is this a new log apart  
 13 from the previous GMD Exhibit 80?  
 14 **MR. STUCKY:** Yes, it is.  
 15 **BY MR. STUCKY:**  
 16 Q. And if we were to turn in the City's proposal  
 17 document, just to orient everybody to where  
 18 index well 14C is, I think it's figure -- if you  
 19 could turn with me to figure 10 just so we can  
 20 orient where we're talking. Figure 10 of the  
 21 City's proposal. Were you able to turn to  
 22 figure 10?  
 23 **A. Oh, yes, I'm sorry.**  
 24 Q. And if we look at where index well 14 is, that's  
 25 right in the -- right in the basin storage area;

Page 1972

1 is that right?  
 2 **A. Yes, on the eastern -- on the, I'm sorry, on the**  
 3 **western edge.**  
 4 Q. And, in fact, it's fully in the basin storage  
 5 area; is that right?  
 6 **A. Yes.**  
 7 Q. So if we look at this well log for index well  
 8 14C, as we look at the clay layers in this well  
 9 log, would you agree with me that there's a  
 10 significant amount of clay?  
 11 **A. Yes.**  
 12 Q. And I don't want to waste anyone's time on the  
 13 record, but if I were to tell you that there is  
 14 97 feet of clay and you were to take out a  
 15 calculator and add it up, would you have reason  
 16 to disagree with that number?  
 17 **A. No.**  
 18 Q. So in other words, if -- and, in fact, in this  
 19 case, they only set the casing down to 150 feet,  
 20 is that right, because they were hitting clay?  
 21 **A. That's correct.**  
 22 Q. Okay. So even though bedrock, or shale, was  
 23 down much further, in fact, it looks like at  
 24 240 feet, it looks like here is where they hit  
 25 shale, they -- they set their -- they set it

1 only down almost 100 feet shy of that because of  
2 all the clay layers; is that right?  
3 **A. Probably. I mean ...**  
4 Q. So then again -- so, essentially, and we can go  
5 through in great detail of this exercise as far  
6 as practical saturated thickness as it relates  
7 to figure 10 and practical saturated thickness  
8 as it relates to figure 11, but if we use those  
9 numbers and I were to tell you that as it  
10 relates to figure 10, practical saturated  
11 thickness, if the clay layer is only 97 -- I'm  
12 sorry, if the clay layer is 97 feet, if I were  
13 to tell you as it relates to figure 10 the  
14 practical saturated thickness would only be  
15 104 feet, would you have reason to disagree with  
16 my math?  
17 **A. No.**  
18 Q. And, in fact, in the City's proposal, they say  
19 that the practical saturated thickness in index  
20 well 14 is 205 feet; is that right?  
21 **A. Well, average remaining saturated --**  
22 **MR. OLEEN:** Objection, objection.  
23 **BY MR. STUCKY:**  
24 Q. I'm sorry, yeah, I did misspeak. But actual  
25 practical saturated thickness is 205 feet, I'm

1 **A. That's correct.**  
2 Q. So once again, the practical saturated thickness  
3 that you gathered by looking at this well log is  
4 actually less -- is actually approximately half;  
5 is that right?  
6 **A. That's correct.**  
7 **MR. STUCKY:** May I approach the  
8 witness?  
9 **PRESIDING OFFICER:** Yes.  
10 **BY MR. STUCKY:**  
11 Q. I'm going to approach you here in a minute with  
12 a well log for index well 8. First of all,  
13 where is index well 8? Is it on the western  
14 half, is that right, of the aquifer?  
15 **A. That's correct.**  
16 **PRESIDING OFFICER:** Thank you.  
17 **BY MR. STUCKY:**  
18 Q. With respect to index well 8, do you have  
19 that -- another official monitoring well in the  
20 City and the well log, corresponding well log  
21 before you; is that right?  
22 **A. That's correct.**  
23 Q. Just to speed this up, this exercise up a little  
24 bit, if I were to tell you that on -- with  
25 respect to this exhibit that now is before you

1 sorry?  
2 **A. Correct.**  
3 Q. But, in fact, as we looked at that index  
4 monitoring well, the practical saturated  
5 thickness is actually about half of what's  
6 reported in that index cell, is that right, for  
7 that monitoring well?  
8 **A. For the monitoring well.**  
9 Q. And would you also agree with me as we look at  
10 where this monitoring well is located, it's  
11 essentially located relatively close to the  
12 middle of index well 14; is that right? Or  
13 index cell 14?  
14 **A. Yeah. Yes.**  
15 Q. And if we were to turn to figure 11 and I were  
16 to tell you once again that if we were to  
17 subtract out the 97 feet of clay and we get to a  
18 practical saturated thickness there, it would  
19 only be 94 feet, would you have reason to  
20 disagree with my number as it relates to figure  
21 11?  
22 **A. No.**  
23 Q. Okay. But in figure 11, we see the actual  
24 saturated thickness reported there is 194 feet;  
25 is that right?

1 there's 54 feet of clay in this lithologic data,  
2 would you have reason to disagree with that?  
3 **A. No.**  
4 Q. And if I were to tell you as it relates to  
5 figure 10, based on the calculations you did for  
6 me earlier, the practical saturated thickness  
7 would be only 135 feet at index well 8, would  
8 you have reason to disagree with that?  
9 **A. No.**  
10 Q. But, in fact, what's reported here is 205 feet  
11 of actual saturated thickness; is that right?  
12 **A. Correct.**  
13 Q. So once again, when we look at the difference  
14 between this practical saturated thickness and  
15 the actual saturated thickness, it looks like  
16 we're talking about a difference of, what,  
17 70 feet or something of that nature?  
18 **A. That's correct.**  
19 Q. And also the same exercise with respect to  
20 figure 11, if I were to tell you that as it  
21 relates to figure 11 the practical saturated  
22 thickness is 125 feet versus what is reported as  
23 the actual saturated thickness of 196 feet, you  
24 would also agree there is a disparity there; is  
25 that right?

Page 1977

1 **A. That's correct.**  
 2 Q. And as it relates to index well 8, this  
 3 monitoring well is also more or less in the  
 4 middle of that index cell; is that true?  
 5 **A. That's correct.**  
 6 Q. And certainly my esteemed colleague has a stack  
 7 of well logs and we could spend time in this  
 8 hearing going through them and I could tell you  
 9 that index well 26C has 117 feet of clay, index  
 10 well 31 has 117 feet of clay, and I could go on  
 11 down the list through these lithologic logs, but  
 12 without having to go through all this data to  
 13 overcome this objection that somehow we're  
 14 picking these -- these official monitoring wells  
 15 of the City in a spot that doesn't match up with  
 16 the City's data, would you at least agree with  
 17 me that we've shown you enough well logs that  
 18 gives you reason to believe that more data and  
 19 more research is needed in this regard?  
 20 **A. I'll ask the modelers when I can, I mean ...**  
 21 Q. But if you were to make an official  
 22 recommendation as it relates between the  
 23 disparity of the practical saturated thickness  
 24 and the actual saturated thickness shown in the  
 25 City's -- in the City's report, is it your

Page 1978

1 recommendation that these well logs, whether  
 2 they be the City's monitoring wells or from  
 3 their actual production wells, would it be your  
 4 recommendation that that data should be looked  
 5 at?  
 6 **A. Well, my recommendation would be -- I'm sure it**  
 7 **has been looked at by the modelers, but I**  
 8 **don't -- but, see, I can't talk to them, and so,**  
 9 **yes, it does raise a question, but I do want to**  
 10 **talk to the modelers.**  
 11 Q. So in other words --  
 12 **A. To answer the question is yes, it raises a**  
 13 **question and I need to talk to the modeler. But**  
 14 **I don't know --**  
 15 Q. I would like to --  
 16 **A. -- I don't know when I can talk to the modelers,**  
 17 **that's what we have to figure out.**  
 18 **MR. STUCKY:** I would just like to  
 19 move to admit those two well logs as the  
 20 District's Exhibit 81 (sic).  
 21 **PRESIDING OFFICER:** So for wells 14C  
 22 and 8 --  
 23 **MR. STUCKY:** That's correct.  
 24 **PRESIDING OFFICER:** -- you'd like  
 25 that to be Exhibit 81? Any objection?

Page 1979

1 Hearing none, Exhibit 81 will be admitted,  
 2 GMD 81.  
 3 **BY MR. STUCKY:**  
 4 Q. Yesterday you were asked a question about  
 5 whether or not we need -- we need a model to say  
 6 it's a good idea to keep the aquifer full. Do  
 7 you recall that question?  
 8 **A. Yeah.**  
 9 Q. But would you at least agree with me that a  
 10 model is important to determine the effects of  
 11 taking the water back out of the aquifer?  
 12 **A. Yeah, absolutely.**  
 13 Q. Yesterday Mr. McLeod asked you some questions  
 14 about safe yield, and he gave you two  
 15 hypotheticals, one that related to an ASR  
 16 Phase I recharge credit on one hand and an  
 17 aquifer maintenance credit on the other hand, do  
 18 you recall those two hypotheticals?  
 19 **A. Yes.**  
 20 Q. First of all, as it relates to safe yield, let  
 21 me just ask this: He asked you about safe yield  
 22 in the context of water levels; is that right?  
 23 **A. Yes.**  
 24 Q. But would you agree with me that safe yield  
 25 actually goes hand in hand with water available

Page 1980

1 for appropriation, and it's a calculation that  
 2 looks at the balances between recharge and  
 3 discharge of the aquifer?  
 4 **A. That's correct.**  
 5 Q. Nonetheless, I would like to look at those two  
 6 hypotheticals that Mr. McLeod brought up, and I  
 7 just want to use easy numbers that are easy for  
 8 everyone to understand. So let's assume with  
 9 Mr. McLeod's hypothetical that we're looking at  
 10 a 1-acre area, okay, and let's just assume that  
 11 the water in this 1-acre area is 10 feet above  
 12 bedrock, okay, you follow me?  
 13 **A. (Witness nods head affirmatively.)**  
 14 Q. Now, let's assume that with respect to a  
 15 physical recharge credit, an acre-foot of water  
 16 is injected into the aquifer. What would the  
 17 water level then be in this -- in this 1-acre  
 18 area?  
 19 **A. I don't know.**  
 20 Q. Well, we have to take into account the storage  
 21 coefficient, and it may be anywhere from .15, as  
 22 has been reported for this ASR project, or .2  
 23 but --  
 24 **MR. MCLEOD:** Is Counsel going to let  
 25 the witness testify or is Counsel

1 testifying?  
2 **MR. STUCKY:** I'm asking my question.  
3 **PRESIDING OFFICER:** I think you're  
4 setting up a hypothetical, right?  
5 **MR. STUCKY:** Right, that's right.  
6 **PRESIDING OFFICER:** Okay. So  
7 let's -- please try and set that up.  
8 **BY MR. STUCKY:**  
9 Q. Okay. So we have -- it's 10 feet above bedrock,  
10 let's say we inject an acre-foot of water into  
11 this 1-acre area. If we were to subtract out  
12 any kind of storage coefficients, if we assume  
13 that we can subtract out storage coefficients  
14 for sand and gravel, would you agree with me  
15 that the water level would go up by a foot?  
16 **A. Yes.**  
17 Q. Okay. So at that point, as we've injected in  
18 the water, we're now at 11 feet. Then let's say  
19 down the road that the same amount of recharge  
20 credits that were injected are taken out and  
21 let's say that we don't have to worry about  
22 gradational losses.  
23 **A. Okay.**  
24 Q. Let's say that that same amount is taken out in  
25 the future, what is the water level back to in

1 RE CROSS EXAMINATION  
2 **BY MS. WENDLING:**  
3 Q. Mr. Letourneau, we've talked about managing the  
4 aquifer full, do you recall that?  
5 **A. Absolutely.**  
6 Q. By managing the aquifer full, do you -- are you  
7 referring to the City not pumping their native  
8 40,000 acre-feet?  
9 **A. A portion -- well, they would -- they would**  
10 **operate a portion of it but not the full 40,000**  
11 **acre-feet --**  
12 Q. Okay.  
13 **A. -- unless they needed it.**  
14 Q. Is there any other component to managing the  
15 aquifer full that you're referring to?  
16 **A. From the City or other water users?**  
17 Q. The City?  
18 **A. No, the City by not pumping their native water**  
19 **rights can maintain a higher water level.**  
20 Q. And is the City solely responsible for managing  
21 the aquifer full?  
22 **A. They're -- they're responsible for managing**  
23 **their own water rights.**  
24 Q. But the fullness of the aquifer is not solely  
25 dependent on the City?

1 this 1-acre area?  
2 **A. 10 feet above bedrock.**  
3 Q. Now let's talk about the same concept with  
4 respect to an aquifer maintenance credit. Let's  
5 say we start at water level of 10 feet below the  
6 bedrock, right?  
7 **A. Okay.**  
8 Q. And then let's say that the City sends a gallon  
9 of water to -- to the City for municipal use,  
10 they've taken it out of the Little Arkansas  
11 River, they've treated it, they send it directly  
12 to the City for use, would you agree with me  
13 that the level of this aquifer -- or this water  
14 level in our hypothetical is still 10 feet,  
15 would you agree?  
16 **A. Yes.**  
17 Q. Now let's say in the future the City cashes in  
18 this credit and they're going to take out the  
19 corresponding amount they sent to the City for  
20 use, would you agree with me now the water level  
21 would drop to 9 feet?  
22 **A. Yes.**  
23 **MR. STUCKY:** No further questions.  
24 **PRESIDING OFFICER:** Ms. Wendling.  
25 //

1 **A. Correct.**  
2 Q. Okay.  
3 **A. That's correct.**  
4 Q. Do we know that the water sent directly to town  
5 is the direct offset of water that would have  
6 been or could have been pumped from the Equus  
7 Beds?  
8 **A. It -- it could or could not be.**  
9 Q. But we don't know conclusively that it is a  
10 direct offset?  
11 **A. It's -- it all relies on the accounting from the**  
12 **City.**  
13 Q. Okay. You previously also talked about in the  
14 context of saturated thickness and practical  
15 saturated thickness that the aquifer properties  
16 are important. Can you elaborate on which  
17 aquifer properties you're referring to?  
18 **A. The aquifer properties of the practical**  
19 **saturated thickness are some zones that provide**  
20 **more water than other zones is what I mean. So**  
21 **the aquifer properties of the better aquifer**  
22 **will provide more water.**  
23 Q. And do you know if that has been analyzed in the  
24 context of figures 10 and 11?  
25 **A. Not that I'm aware of. But, Tessa, I'm not**

Page 1985

1 sure.  
 2 Q. Okay.  
 3 **A. I'm sure test pumps were done, but I don't -- I**  
 4 **don't know the results.**  
 5 Q. Okay.  
 6 **MS. WENDLING:** May I approach the  
 7 witness?  
 8 **PRESIDING OFFICER:** Yes.  
 9 **BY MS. WENDLING:**  
 10 Q. Are you familiar with this book?  
 11 **A. Yes, absolutely.**  
 12 Q. Can you tell us what that is?  
 13 **A. This is Volume I of the Kansas Administrative**  
 14 **Regulations for 2009.**  
 15 Q. Sure. Can you turn to K.A.R. 5-1-1(k)?  
 16 **A. Can you -- what is it again?**  
 17 Q. 5-1-1(k), in the back of the definitions, this  
 18 would be the definition of basin storage area.  
 19 **MR. OLEEN:** Point of clarification,  
 20 Ms. Wendling, is this -- I don't recall if  
 21 that's the current volume of the  
 22 regulations. Is it your belief that --  
 23 **MS. WENDLING:** This is not the  
 24 current version. I'm looking at the  
 25 definition in page 4 at the time that Phase

Page 1986

1 It was approved.  
 2 **A. I'm there.**  
 3 **BY MS. WENDLING:**  
 4 Q. Can you read that definition of basin storage  
 5 area?  
 6 **A. Basin storage area means the portion of the**  
 7 **aquifer's unsaturated zone used for aquifer**  
 8 **storage that has been defined -- I'm sorry, that**  
 9 **has defined horizontal boundaries and is**  
 10 **delimited by the highest and lowest index water**  
 11 **level elevations.**  
 12 Q. Okay. And as we've discussed yesterday, that  
 13 was the reg -- one of many regulations that was  
 14 changed?  
 15 **MR. OLEEN:** I object --  
 16 **A. I have to look.**  
 17 **MR. OLEEN:** -- I don't think that  
 18 regulation was discussed as has been  
 19 changed. I thought it was the definition  
 20 for --  
 21 **BY MS. WENDLING:**  
 22 Q. Okay. We've already read the current definition  
 23 this morning so I think you can compare.  
 24 **A. I can compare if you need me to.**  
 25 Q. That's okay, it's already on the record.

Page 1987

1 **A. Okay.**  
 2 **MS. WENDLING:** No further questions.  
 3 **MR. OLEEN:** What's on the record?  
 4 **MS. WENDLING:** He read the  
 5 definition of basin storage area earlier  
 6 with Mr. Stucky. Thank you.  
 7 **PRESIDING OFFICER:** Mr. Oleen.  
 8  
 9 **REDIRECT EXAMINATION**  
 10 **BY MR. OLEEN:**  
 11 Q. Just one question, Mr. Letourneau, if you'd  
 12 please turn to what GMD2 has recently admitted  
 13 as Exhibit 81 (sic), it was those well logs.  
 14 You got them there?  
 15 **A. Got them.**  
 16 Q. I noticed -- well, at the top of each of  
 17 these -- let me back up. You went through an  
 18 exercise with Mr. Stucky about purported  
 19 calculations of practical saturated thickness  
 20 with respect to these two well logs; is that  
 21 correct?  
 22 **A. That's correct.**  
 23 Q. In box 4 of each of these well logs, do you see  
 24 where it -- it has a line regarding well's  
 25 static water level?

Page 1988

1 **A. I see 3.**  
 2 Q. Box number 4 on the first page of each of these  
 3 well logs?  
 4 **A. Yes, I see that.**  
 5 Q. Okay. And what does it say, what's the input  
 6 data in response to that line item of well's  
 7 static water level for each of these well logs?  
 8 **A. IW8C says, well's static water level not**  
 9 **checked.**  
 10 Q. And how about for IW14C?  
 11 **A. It's the same, static water level not checked.**  
 12 Q. My question to you is that wasn't brought up in  
 13 Mr. Stucky's exercise about the calculations  
 14 of -- purported calculations of practical  
 15 saturated thickness. Does that matter for  
 16 purposes of attempting to calculate practical  
 17 saturated thickness that these well logs say  
 18 that the well's static water level wasn't  
 19 checked?  
 20 **A. Well, it doesn't give us any aquifer**  
 21 **information, if that -- if that static level is**  
 22 **not checked, it doesn't tell us if it's confined**  
 23 **aquifer or unconfined aquifer.**  
 24 Q. So then does that, and you tell me, does that  
 25 call into question these purported claims of

1 Mr. Stucky about the practical saturated  
2 thickness for these wells and what that means as  
3 far as the availability of water?

4 **A. Absolutely. All this well log information  
5 brings into question everything, I mean, that's  
6 what we were hoping that the model had taken  
7 care of.**

8 Q. But I mean -- I mean the fact that these two  
9 well logs don't indicate where the well's static  
10 water level was noted at?

11 **A. That's correct.**

12 Q. Does that affect one's ability to determine  
13 practical saturated thickness with respect to  
14 these wells?

15 **A. Well, the practical saturated thickness is the  
16 sands and gravels, I mean, that's -- I mean, in  
17 my mind. I'd have to talk to other people.  
18 Never talked to anybody about it. But the  
19 practical saturated thickness is sands and  
20 gravels, okay, but the aquifer properties, what  
21 that static water level would be important to  
22 know if it's higher than the sands or -- so  
23 there's -- there's a lot of information that I  
24 would hope the model had taken care of.**

25 **MR. OLEEN:** Nothing further.

1 **A. That's correct.**

2 Q. And each was still a single data point in an  
3 index cell, correct?

4 **A. That's correct.**

5 Q. And I think you had indicated earlier that you  
6 can't determine from a single data point and the  
7 lithographic data for that single data point the  
8 lithography for an entire index cell; is that  
9 still correct?

10 **A. That's correct.**

11 Q. And, Mr. Letourneau, to the extent that the City  
12 relies on these wells for environmental  
13 reporting purposes, what does that have to do  
14 with practical saturated thickness?

15 **A. It doesn't.**

16 Q. In Counsel's revised hypothetical where we  
17 started with water levels 10 feet above bedrock  
18 and there was -- there was space in Counsel's  
19 hypothetical to inject water, did you notice  
20 that facet of the changed hypothetical?

21 **A. Yes.**

22 Q. So the step of pumping the aquifer down to do  
23 the recharge was left out of Counsel's  
24 hypothetical?

25 **A. Correct.**

1 **PRESIDING OFFICER:** Mr. McLeod.

2  
3 **RE-CROSS EXAMINATION**  
4 **BY MR. MCLEOD:**

5 Q. Mr. Letourneau, Mr. Stucky had asked you about  
6 portions of the regulations that refer to the  
7 requirement that source water not degrade  
8 groundwater quality, and I think you indicated  
9 that that would mean that you could -- you could

10 satisfy that by not taking water out or by  
11 making sure that the water you put in was of  
12 equal or greater quality than what was there.  
13 Does that, again, go to the issue that you  
14 previously had mentioned on water quality that  
15 leaving the water in situ instead of withdrawing  
16 and adding can be better for water quality?

17 **A. Yes.**

18 Q. On each of the additional index well logs that  
19 Mr. Stucky asked you about, was the practical  
20 saturated thickness shown on those well logs  
21 adequate for the wells?

22 **A. Yes.**

23 Q. And each of those wells was still an index  
24 observation well and not a production well,  
25 correct?

1 Q. And so it was -- it was posed as basically  
2 starting with the same static water level and  
3 withdrawing a credit after injection versus  
4 withdrawing a credit with no injection, correct?

5 **A. That's correct.**

6 Q. A fundamentally different hypothetical than the  
7 situation where the City has to pump the aquifer  
8 down at the beginning to make space for the  
9 recharge, correct?

10 **A. That's correct.**

11 Q. And, again, in this proposal, the City is not  
12 asking to be granted AMCs for periods during  
13 which it could do physical recharge, is it?

14 **A. That's correct.**

15 Q. So the whole premise of the proposal is that if  
16 the City has the ability to inject physical  
17 recharge, the City will inject physical recharge  
18 and the credit will be a physical recharge  
19 credit, correct?

20 **A. That's correct.**

21 Q. And so Counsel's hypothetical really didn't  
22 address the situation posed by the proposal, did  
23 it?

24 **A. No.**

25 **MR. MCLEOD:** I don't have further

Page 1993

1 questions for the witness.

2 **A. When do I get to say enough is enough?**

3 **MR. STUCKY:** Mr. Letourneau -- well,

4 actually, I'm willing to say enough is

5 enough. We'll -- I won't ask further

6 questions in the interest of getting this

7 done in five days, I'll be done with my

8 questioning so ...

9 **PRESIDING OFFICER:** Ms. Wendling.

10 **MS. WENDLING:** No further questions.

11 **PRESIDING OFFICER:** I'm seeing if I

12 have any questions.

13 **A. Sure. I'm going to leave this here so I'll pull**

14 **my gross straw out of it.**

15 **PRESIDING OFFICER:** Just a few.

16 **A. Sure.**

17 **PRESIDING OFFICER:** And maybe you

18 know these off the top of your head, maybe

19 you don't, that's fine, just say if you

20 don't. Have any permits either for new

21 appropriation or a change appropriation,

22 have any of those been approved since the

23 approval of the Phase II order but before

24 this proposal that would possibly come

25 under consideration in terms of junior or

Page 1994

1 senior rights?

2 **A. Any other than ASR?**

3 **PRESIDING OFFICER:** Correct.

4 **A. There have been a few, I believe irri -- one or**

5 **two irrigation water rights that have been**

6 **approved since Phase II, I think, yeah. There**

7 **was some that were -- they were able to wedge in**

8 **and meet safe yield.**

9 **PRESIDING OFFICER:** And as I look

10 back at items in the record regarding the

11 Phase I approvals, there was reference

12 made, there was a findings and order to

13 reflect changes in point of diversion

14 regarding the Phase I wells, there was

15 reference to change applications having

16 been filed to change point of diversion.

17 **A. Okay.**

18 **PRESIDING OFFICER:** I could not see

19 if those change applications had been

20 approved or if by referring to them in the

21 findings and order that was deemed the

22 approval?

23 **A. Well, Madam Hearing Officer, I would have to**

24 **review the file to make that determination. I**

25 **don't know off the top of my head.**

Page 1995

1 **PRESIDING OFFICER:** Okay.

2 **A. I do know that there were changes to points of**

3 **diversion to provide authority for recharge and**

4 **production, but I don't -- I'd have to look at**

5 **the file to see if those have been approved.**

6 **PRESIDING OFFICER:** Okay. And I'll

7 be more specific because I would like to

8 get the answer to this.

9 **A. Okay.**

10 **PRESIDING OFFICER:** Or at least be

11 pointed to where in the record the answer

12 is.

13 **A. Well, Tim or --**

14 **PRESIDING OFFICER:** There were

15 change -- I'm sorry.

16 **A. I'm sorry, Tim or Doug or Jeff may know so ...**

17 **PRESIDING OFFICER:** Okay. There

18 were changes -- applications to change

19 point of diversion from bank storage wells

20 to surface water pump sites under four

21 application numbers, and two were submitted

22 and then two were submitted separately, so

23 a total of four. And the file numbers were

24 45,572 and 45,575, and those I wrote down

25 November 14, 2005, I think that's the

Page 1996

1 application date; and the other two file

2 numbers were 45,573 and 45,574 and

3 January 30, 2006, I think was the

4 application date for those. And then the

5 findings and order that was issued

6 August 1st of 2006 was issued to modify the

7 Phase I approvals to reflect those changes,

8 so that tells me the changes were either

9 assumed approved or an actual approval was

10 issued.

11 **A. I'm sure they were approved.**

12 **PRESIDING OFFICER:** And that's all I

13 really want to know is if there were

14 separate approvals of those change

15 applications?

16 **A. Okay.**

17 **MR. OLEEN:** Madam Hearing Officer,

18 could you tell me again the date of the ASR

19 order that referenced these --

20 **PRESIDING OFFICER:** The findings and

21 order was August 1, 2006.

22 **A. Jeff, are you able to find it? Tim may know.**

23 **MR. BOESE:** Can I speak? Or would

24 you prefer to wait until I'm on the stand?

25 I think I know the answer to most of your

1 questions; I don't know about the specific  
2 file number, but I know the answer to most  
3 of your questions.  
4 **PRESIDING OFFICER:** If you know,  
5 we'll take it when you take the stand.  
6 **MR. BOESE:** Okay.  
7 **PRESIDING OFFICER:** We can answer  
8 that a little bit later on.  
9 My next question is that some sort of  
10 KDHE, Kansas Department of Health and  
11 Environment, approval is necessary or has  
12 been necessary for the approval of the  
13 Phase I and Phase II projects; is that  
14 right?  
15 **A. Correct.**  
16 **PRESIDING OFFICER:** And is KDHE  
17 approval required for the approval of this  
18 modification?  
19 **A. It's a modification to Phase II, so KDHE's**  
20 **approval is still there.**  
21 **PRESIDING OFFICER:** Does KDHE need  
22 to be asked for their approval for the  
23 modified changes?  
24 **A. Probably not necessary but we can -- we can sure**  
25 **send it to them, definitely.**

Page 1998

1 **PRESIDING OFFICER:** Okay. So KDHE  
2 has not been asked?  
3 **A. Not that I'm aware of. Because their approval**  
4 **is already there.**  
5 **PRESIDING OFFICER:** And a question,  
6 Ms. Wendling, regarding your clients, who  
7 are collectively referred to as the  
8 Intervenors, I assume somewhere back in the  
9 archives of this case, there's information  
10 on water rights they own? Those -- that  
11 information is -- I think should be a part  
12 of the record if it isn't.  
13 **MS. WENDLING:** Volume II is all the  
14 permit information for the Intervenors.  
15 **PRESIDING OFFICER:** Okay. Is there  
16 any objection to the permit inter -- what  
17 Ms. Wendling describes as the permit  
18 information for all of her clients to be a  
19 matter of record, any objection to the  
20 admission of those?  
21 **MR. STUCKY:** No.  
22 **MR. OLEEN:** Extremely soft objection  
23 in that I haven't gone through really those  
24 documents that are in that binder; I  
25 thought that would be something that her

1 witnesses might testify to. I don't -- I  
2 certainly don't object to you taking  
3 judicial notice of those permits, whatever  
4 they are; I just don't know if what's in  
5 that binder is --  
6 **PRESIDING OFFICER:** And perhaps I'm  
7 getting ahead of myself, is this something  
8 that you were going to introduce at a later  
9 point in time?  
10 **MS. WENDLING:** I had planned on  
11 calling three of the Intervenors but not  
12 all of them, and we may or may not refer to  
13 their permit documents, I don't know. I  
14 wouldn't have any reason to introduce all  
15 of them as exhibits because only three  
16 Intervenors will be ...  
17 **PRESIDING OFFICER:** Okay. Then I'm  
18 going to suspend my request for this  
19 information at this time and we'll address  
20 it when you present your case.  
21 And, Mr. Letourneau, regarding the  
22 discussion of the draft conditions should  
23 the City's proposal be approved, there were  
24 draft conditions, they've been referred to  
25 as 12 and 13 about protecting existing

Page 2000

1 domestic well owners from water quantity or  
2 quality problems that may be caused by the  
3 City, and these suggested conditions  
4 describe how the City will, as I think you  
5 said, make them whole. If there -- if that  
6 should come to pass, if the approval comes  
7 forward for the proposal and there are  
8 claims by existing domestic well owners  
9 within 660 feet that this new activity  
10 impairs them in some way, impacts them,  
11 then does the chief engineer have  
12 jurisdiction, or is it your view that the  
13 chief engineer would have jurisdiction to  
14 enforce those conditions, or who would  
15 enforce those?  
16 **A. Well, that's why it was so important to put**  
17 **those as permit conditions because the chief**  
18 **engineer has full authority to enforce permit**  
19 **conditions.**  
20 **PRESIDING OFFICER:** Okay.  
21 **A. And we would -- we would treat them like any**  
22 **other terms, conditions, and limitations of a**  
23 **permit or water right.**  
24 **PRESIDING OFFICER:** I think that's  
25 all I have.

Page 2001

1 **A. Okay.**  
 2 **PRESIDING OFFICER:** You are excused.  
 3 **A. Thank you.**  
 4 **PRESIDING OFFICER:** And it's about a  
 5 quarter to 10:00, let's take about a  
 6 ten-minute break.  
 7 (Thereupon, a recess was taken;  
 8 whereupon, the following was had.)  
 9 **PRESIDING OFFICER:** Okay. We're  
 10 back on the record. Mr. Oleen?  
 11 **MR. OLEEN:** DWR has no further  
 12 witnesses and rests its case, so to speak.  
 13 **PRESIDING OFFICER:** Thank you.  
 14 Mr. Stucky.  
 15 **MR. STUCKY:** I call Mr. Boese to the  
 16 stand and note for the record how he's no  
 17 longer sitting by me anymore.  
 18 **PRESIDING OFFICER:** Oh, okay.  
 19 **MR. MCLEOD:** Madam Hearing Officer,  
 20 before we swear and start with this  
 21 witness, it probably makes sense so we  
 22 don't interrupt things later to go ahead  
 23 and raise and get rulings on the matters  
 24 that relate to exclusion of certain  
 25 subjects from the testimony of the witness

Page 2002

1 due to the manner of disclosure or  
 2 nondisclosure of those issues in the expert  
 3 report that he furnished.  
 4 Mr. Stucky, is his report one of your  
 5 exhibits?  
 6 **MR. STUCKY:** Yes.  
 7 **MR. MCLEOD:** And number what?  
 8 **MR. STUCKY:** 39.  
 9 **MR. MCLEOD:** So if the hearing  
 10 officer could refer to that exhibit.  
 11 **PRESIDING OFFICER:** I have it.  
 12 **MR. MCLEOD:** Okay. And by way of  
 13 refresher, though probably everyone  
 14 recalls, in a barrage of pretrial motions,  
 15 it was established that witnesses  
 16 testifying as experts would need to include  
 17 the facts or documents that provided the  
 18 basis for the opinions that they were  
 19 stating, and it was also the District's own  
 20 very fervently advanced position that were  
 21 any calculations relied upon, those  
 22 calculations needed to be disclosed and the  
 23 persons performing those calculations and  
 24 the manner of performing the calculations  
 25 and the gathering of the data needed to all

Page 2003

1 be described in the report.  
 2 With that preface, I call your attention  
 3 to the fifth page of Mr. Boese's report,  
 4 the next-to-the-last paragraph and the last  
 5 statement in that paragraph which suggests  
 6 that certainly, most certainly the report  
 7 says, MDS would be negatively impacted by  
 8 the proposal and this should be further  
 9 evaluated. Indeed, adversely affecting MDS  
 10 would be considered an unreasonable  
 11 lowering of the static water level. And  
 12 there are no references to any supporting  
 13 facts or documents nor any explanation as  
 14 to how that conclusion stated there was  
 15 reached by the witness.  
 16 Beginning at the very bottom of the  
 17 page, the sentence that starts there in the  
 18 last paragraph and carries over to the next  
 19 page, certainly, the lowering of the  
 20 minimum index levels and allowing the City  
 21 to pump the aquifer below the current  
 22 minimum index levels will increase the  
 23 hydraulic gradient and increase the  
 24 migration of the salt contamination.  
 25 Again, as to that statement, no reference

Page 2004

1 to any supporting facts or documents nor  
 2 the manner in which that conclusion was  
 3 reached or any supporting calculations.  
 4 And turning to page 9, in the text that  
 5 begins in the carry-over paragraph at the  
 6 top -- actually, if we go back to page 8,  
 7 the problem begins on page 8 in the last  
 8 paragraph with the statement, clearly,  
 9 allowing accumulation of AMCs is  
 10 appropriation of additional groundwater in  
 11 excess of the safe yield of the source of  
 12 supply. AMCs would not only further  
 13 over-appropriate the source of supply in  
 14 the City's Equus Beds Aquifer well field  
 15 area but would also be a takings of the  
 16 prior water right holders in the area, as  
 17 their source of supply would be  
 18 appropriated by another junior water right.  
 19 The City's proposal would allow the City to  
 20 appropriate 120,000 acre-feet of  
 21 groundwater in an area that the source of  
 22 supply for the proposed AMCs is already  
 23 fully dedicated to existing senior water  
 24 rights, based on safe yield calculations.  
 25 None of the supporting facts or documents

Page 2005

1 nor, indeed, the calculations that are  
2 referenced have been furnished in support  
3 of that statement.  
4 And if we go to page 11, the entirety of  
5 paragraph 13, there are no references to  
6 supporting facts or documents but only the  
7 general statement that these conclusions  
8 are offered based on Mr. Boese's experience  
9 and expertise, with no identification of  
10 the facts or documents that he took into  
11 account via that experience and expertise  
12 to support these conclusions.  
13 Down in the documents and references  
14 reviewed and used for the report, again,  
15 you see no mention of any safe yield  
16 calculations, establishing for purposes of  
17 the report that Mr. Boese, in fact, didn't  
18 consult safe yield calculations for  
19 purposes of the conclusions that he stated  
20 were based on safe yield calculations.  
21 And so as to each of those matters,  
22 Mr. Boese has not complied with the  
23 standards that have been enforced in  
24 pretrial for City experts, and the City  
25 would request that as to each of those

Page 2006

1 matters identified the witness be precluded  
2 from testifying. And further that to the  
3 extent the report is admitted in evidence,  
4 even though it's cumulative in its  
5 entirety, those -- those segments of the  
6 report should be redacted if that occurs.  
7 **PRESIDING OFFICER:** Mr. Stucky.  
8 **MR. STUCKY:** Thank you. Well, my  
9 answer to this is severalfold. First of  
10 all, we had an opportunity to file motions  
11 in limine and -- and brief these particular  
12 issues through motions in limine. And for  
13 the record, I think this hearing officer  
14 can, of course, note that there was no  
15 motion in limine that was filed with  
16 respect to these concerns against  
17 Mr. Boese's report. And because of that,  
18 because we're hearing these issues for the  
19 first time during a trial, during the eve  
20 of trial, I don't think these concerns are  
21 properly raised. They should have been  
22 raised by our motion date. We had a motion  
23 date in this case for a reason, that's --  
24 that's number one.  
25 Number two, we lodged concerns with

Page 2007

1 respect to the City's expert reports as far  
2 as the technical components of it, and we  
3 filed those motions well in advance of any  
4 kind of motion date; and we filed our  
5 original concerns, and the City worked to  
6 modify their expert reports. And so what I  
7 would like to notify -- or note for the  
8 record is the City had months and months  
9 that they were given time to correct their  
10 expert reports because we filed our motion  
11 in limine in advance, you gave them time to  
12 correct their expert reports so they were  
13 able to reference more references to the  
14 proposal or technical aspects of the  
15 proposal, and so the City was given an  
16 opportunity to correct their expert reports  
17 in that fashion because that concern was  
18 raised.  
19 And so distinguish that with raising  
20 this concern for the first time on the  
21 record; whereas, the City got months and  
22 months to correct their expert reports  
23 because we complied with the motion  
24 deadline, here we have a situation where  
25 this is raised for the first time on the

Page 2008

1 record, there's no opportunity to correct  
2 expert reports. Of course, we could  
3 continue this hearing four or five months,  
4 and Mr. Boese could be afforded the same  
5 opportunity that the City was given with  
6 respect to their experts, but I think that  
7 the point is well made that based on that  
8 distinguish -- distinguishing between what  
9 happened in those two situations, the City  
10 would certainly be precluded from raising  
11 these concerns at this late juncture in the  
12 middle of a trial.  
13 But further what I would point out to  
14 the hearing officer is if we were to look  
15 at the City's expert reports and the  
16 amended expert reports that are utilized in  
17 this case, we still raised concerns that  
18 there were just cursory statements, that  
19 general references were made to the  
20 proposal document, that there was just  
21 cursory -- cursory references. In  
22 Mr. Boese's expert report at the end of his  
23 expert report, he references, in fact, a  
24 whole dearth of different documents that he  
25 considered and he looked at as he prepared

Page 2009

1 his expert report. And so certainly he can  
 2 reference those as it helps to formulate  
 3 his opinion.  
 4 But, additionally, as a final point in  
 5 this regard, we have a detailed exhibit  
 6 notebook with a number of exhibits that the  
 7 City has had for a long time in their  
 8 possession, and Mr. Boese will be  
 9 referencing those throughout his testimony  
 10 to help substantiate or build any opinions  
 11 that he may have in that regard. So based  
 12 on the fact that the City was afforded  
 13 leniency in this regard and given a chance  
 14 to amend their expert reports, my  
 15 suggestion is rather than to continue this  
 16 hearing to give Mr. Boese that same  
 17 courtesy, my suggestion is that Mr. Boese  
 18 be allowed to reference these technical  
 19 documents as he testifies to help further  
 20 substantiate these references in his expert  
 21 report.  
 22 **MR. MCLEOD:** And I just need to  
 23 refresh Counsel's recollection and correct  
 24 some things that he has inadvertently  
 25 misstated. If you recall back to the time

Page 2010

1 when motion papers were being exchanged,  
 2 the City pointed out some problems with  
 3 Mr. Boese's report, albeit not in a motion  
 4 but in its response to the District's  
 5 motion to show the extent and the degree to  
 6 which the District was being hypocritical  
 7 and attempting to assert and apply  
 8 standards that the District itself was not  
 9 following, and so some deficiencies in  
 10 Mr. Boese's report were specifically noted  
 11 in those motion response papers. But,  
 12 indeed, the District chose to ignore them  
 13 for all these many months.  
 14 So the idea that Mr. Boese did not have  
 15 an opportunity to correct these  
 16 deficiencies in his report, I think, is a  
 17 fallacy. The District had an opportunity,  
 18 the District was informed. In fact, when  
 19 we worked out some issues with Mr. Romero's  
 20 expert report pretrial, Counsel pressed for  
 21 a general -- a general consent from the  
 22 City to all other expert reports, and I  
 23 think I made it very clear at that time as  
 24 well that, indeed, the City would still  
 25 have problems that it had identified with

Page 2011

1 respect to some other expert reports.  
 2 Most importantly, Your Honor, I believe  
 3 in your hearing order that resolved the  
 4 pretrial motions that you specifically  
 5 ordered that the parties would retain these  
 6 types of objections for hearing if they had  
 7 them, and what the City is seeking is  
 8 simple parity and fairness, let the rules  
 9 that have been applied to the other parties  
 10 be applied to the District as well.  
 11 **PRESIDING OFFICER:** As I referenced  
 12 this morning, administrative hearings, the  
 13 rules of evidence are more relaxed, and  
 14 when it comes to admissibility of evidence,  
 15 the Presiding Officer's discretion is quite  
 16 broad.  
 17 We did have quite a number of prehearing  
 18 motions, there was an opportunity to raise  
 19 this earlier, I did not wish to preclude  
 20 any relevant or substantial concerns that  
 21 may come up once we got to the hearing.  
 22 But nonetheless, I believe that I am  
 23 possessed of the discretion to allow the  
 24 admission of this expert report, I can give  
 25 it the weight and the credibility that I

Page 2012

1 believe it deserves or does not deserve.  
 2 And I do require, Mr. Stucky, that  
 3 throughout the course of this testimony,  
 4 these statements that Mr. Boese has made  
 5 will be substantiated by the kind of  
 6 foundation that Mr. McLeod is seeking. So  
 7 having said that, please go ahead.  
 8 **MR. STUCKY:** Thank you.  
 9  
 10 TIM BOESE,  
 11 having been first duly sworn, was  
 12 examined and testified as follows:  
 13  
 14 **MR. STUCKY:** Your Honor, there was  
 15 one housekeeping item that was pointed out  
 16 to me. Exhibit 81 was noted as the  
 17 drilling logs, it was pointed out to me  
 18 that there was actually already an  
 19 Exhibit 81.  
 20 **PRESIDING OFFICER:** Oh.  
 21 **MR. STUCKY:** And so I'm asking that  
 22 those drilling logs be relabeled as the  
 23 District's 82 for the purposes of this  
 24 record.  
 25 **PRESIDING OFFICER:** Thank you, I

1 will make a note of that, just a moment.  
2 Thank you, go ahead.  
3  
4 **DIRECT EXAMINATION**  
5 **BY MR. STUCKY:**  
6 Q. You already stated your name is Tim Boese,  
7 correct?  
8 **A. I didn't, but I will, yes, my name is Tim Boese,**  
9 **B-O-E-S-E is the last name.**  
10 Q. And, Mr. Boese, how are you currently employed?  
11 **A. I'm the manager of the Equus Beds Groundwater**  
12 **Management District No. 2.**  
13 Q. Mr. Boese, I'd ask that you turn to Exhibit 39  
14 in that notebook before you, and we just  
15 discussed that exhibit, so hopefully you have it  
16 in front of you?  
17 **A. I don't but I will.**  
18 Q. Mr. Boese, do you know Exhibit 39 to be your  
19 expert report?  
20 **A. It is.**  
21 Q. Toward the end of that expert report, there's a  
22 signature where you have signed that expert  
23 report, correct?  
24 **A. Yes.**  
25 Q. And do the opinions that you state in that

1 expert report, are those still your opinions as  
2 you're sitting here today?  
3 **A. They are.**  
4 **MR. STUCKY:** I would like to just  
5 move to admit Exhibit 39 subject to  
6 foundation on those -- on those points that  
7 Mr. McLeod raised, I would ask to move to  
8 admit it subject to later foundation on  
9 those points.  
10 **PRESIDING OFFICER:** Any objection  
11 that hasn't already been lodged?  
12 **MR. MCLEOD:** I would say let's wait  
13 for the foundation for the admission.  
14 **PRESIDING OFFICER:** Mr. Stucky?  
15 **MR. STUCKY:** I can lay a foundation  
16 and admit it at the end, that's fine.  
17 **PRESIDING OFFICER:** Okay, thank you.  
18 **BY MR. STUCKY:**  
19 Q. I would ask that you turn to -- in your expert  
20 report to your resume or your CV in your expert  
21 report.  
22 **A. Well, I'm not sure that it got placed in here,**  
23 **Dave. We submitted an updated one, would you**  
24 **mind bringing me -- bringing me the updated one?**  
25 **I think all the parties do have the updated one,**

1 **but I'm not sure where it ended up. Thank you.**  
2 **PRESIDING OFFICER:** Thank you.  
3 **MR. STUCKY:** For the record, this is  
4 an updated CV or resume that we furnished  
5 to other counsel in this case, I think  
6 months ago, I believe, I'm not sure of all  
7 my dates here, but it's something that  
8 they've had in advance, and what we're  
9 asking, just to keep these exhibits neat  
10 and keep them in one logical location,  
11 we're asking to have permission to include  
12 this CV as part of Exhibit 39, which is his  
13 expert report?  
14 **MR. MCLEOD:** Can we just get a short  
15 description of what's different?  
16 **MR. STUCKY:** A short description of  
17 what's different -- well, we can ask the  
18 witness.  
19 **BY MR. STUCKY:**  
20 Q. What's different, a short description of what's  
21 different between your CV in the expert report  
22 and this new CV, just a short description in a  
23 minute or less?  
24 **A. There was a updated, essentially an expanded**  
25 **version of my job duties for the most part and**

1 **probably added in, if I remember right, a few**  
2 **other committees and associations that I have or**  
3 **have served on that I failed to -- to place on**  
4 **my short CV that was with my expert report. So**  
5 **it's -- I don't think there's anything**  
6 **necessarily new, it's more of an expansion of my**  
7 **duties that I've done with the District over the**  
8 **last 28 years, just to clarify my different job**  
9 **aspects.**  
10 **MR. STUCKY:** And, actually, I'll  
11 just make this simple since there was an  
12 objection to your original expert report,  
13 I'd move to admit this modified CV as the  
14 District's Exhibit 83.  
15 **PRESIDING OFFICER:** Any objections?  
16 Hearing none, 83 will be admitted.  
17 **BY MR. STUCKY:**  
18 Q. So, Mr. Boese, tell me what your -- your college  
19 education is.  
20 **A. I have a bachelor's of general studies from Fort**  
21 **Hays State University.**  
22 Q. When you were in college, did you take any  
23 classes in geology?  
24 **A. I did.**  
25 Q. Did you take any classes in engineering?

Page 2017

1 **A. I did.**  
 2 Q. Did you take any classes in hydrology?  
 3 **A. I don't know if it was specific hydrology**  
 4 **classes, but they were involved with at least**  
 5 **one or two of the geology classes that did have**  
 6 **hydrology as a component of that.**  
 7 Q. What is OTJ training regarding water rights?  
 8 **A. On-the-job training.**  
 9 Q. And you have got a fair amount of on-the-job  
 10 training with regard to water rights?  
 11 **A. That would be an accurate statement.**  
 12 Q. Okay. And how do you -- how have you done that?  
 13 **A. Well, I began my work with the District in 1992,**  
 14 **January of 1992, so I was trained in water**  
 15 **rights from both the District manager at the**  
 16 **time, which was Mike Dealy, and from the**  
 17 **District hydrologist, Don Koci, at the time when**  
 18 **I was originally employed.**  
 19 Q. So in addition to your college education, would  
 20 it suffice to say that you've also got training  
 21 on hydrology, geology, water rights, modeling as  
 22 you've been on the job with the -- with the  
 23 District; is that true?  
 24 **A. That is correct.**  
 25 Q. When did you -- when were you first employed by

Page 2018

1 the Equus Beds Groundwater Management District?  
 2 **A. I began employment, I believe it was January**  
 3 **27th of 1992.**  
 4 Q. And, Mr. Boese, if I say the District, would --  
 5 could we -- could you understand that that would  
 6 mean the Equus Beds District throughout my  
 7 questioning?  
 8 **A. Yes.**  
 9 Q. So you started with the District in 1992, how  
 10 did you start?  
 11 **A. I started out as what is termed a hydrologic**  
 12 **technician, I held that position from 1992**  
 13 **through 2000 -- most of 2005.**  
 14 Q. Now, the concept of a hydrologic technician is  
 15 in your resume, and it looks like you outlined a  
 16 number of items that are -- that a hydrologic  
 17 technician is responsible for, but could you  
 18 sum -- without reading them, could you sum it up  
 19 in a minute or less what some of the things are  
 20 a hydrologic technician could do?  
 21 **A. I'm not sure I could do it in a minute, but I'll**  
 22 **try. It's a multifaceted position which**  
 23 **conducts most of the data collection for the**  
 24 **District; that would include water level**  
 25 **measurements, water quality samples, performing**

Page 2019

1 **inspections, investigations, maintaining**  
 2 **equipment, including our weather stations and**  
 3 **our sampling and measuring equipment, repairing**  
 4 **water meters, assisting the public as needed in**  
 5 **filing various water permit applications and**  
 6 **change applications, collecting precipitation**  
 7 **data. I could go on and on, but it's a -- it's**  
 8 **a sort of field position and an office position**  
 9 **with a lot of time spent out in the field**  
 10 **collecting data and conducting inspections and**  
 11 **investigations.**  
 12 Q. So as a hydrologic technician, would you have  
 13 been responsible for both collecting data and  
 14 helping to analyze that data?  
 15 **A. Yes.**  
 16 Q. And during that time, who would you have been  
 17 working under, who was in charge of the  
 18 Groundwater Management District at that time?  
 19 **A. That was -- that was Mike Dealy.**  
 20 Q. So Mike Dealy would have helped, if you will,  
 21 train you in water rights or how you were  
 22 administering the data, if you will?  
 23 **A. Yes, I'd say that, along with Mr. Koci.**  
 24 Q. Okay. And Mr. Koci was also employed by the  
 25 Groundwater Management District at that time?

Page 2020

1 **A. He was until 2004, I believe. I might have to**  
 2 **look at Don to see if he nods, but I believe it**  
 3 **was 2004 when he left the District, so most of**  
 4 **that time when I was hydrologic technician, yes.**  
 5 Q. Is Mr. Koci in the room?  
 6 **A. He is.**  
 7 Q. Can you point him out for the record?  
 8 **A. He's the gentleman in the maroon-ish shirt at**  
 9 **the City's table.**  
 10 Q. And what was Mr. Dealy's role, and what was  
 11 Mr. Koci's role at that time?  
 12 **A. Mr. Dealy was the manager, and Mr. Koci was the**  
 13 **hydrologist for the District.**  
 14 Q. And do you know what their background and  
 15 education was to help credential them to train  
 16 you?  
 17 **A. I believe they both have degrees in geology.**  
 18 Q. When you were a hydrologic technician, did you  
 19 have the occasion to analyze well logs?  
 20 **A. I did.**  
 21 Q. And as you analyzed well logs, what kind of data  
 22 would you look at?  
 23 **A. Depth of water, the lithologic log, the sands**  
 24 **and gravels, the clays, the bedrock, also**  
 25 **witnessed monitoring wells being drilled. The**

1 **District owns and maintains over 500 monitoring**  
2 **wells, so as we've installed new ones or**  
3 **replaced wells, I would have also witnessed that**  
4 **drilling, logged the hole, ensured proper**  
5 **construction to District's specifications.**

6 Q. As your time as a hydrologic technician, how  
7 many well logs would you say you looked at,  
8 hundreds?

9 **A. Oh, yes, I'm sure, over hundred -- hundreds,**  
10 **yes.**

11 Q. As a hydrologic technician during that 13-year  
12 period, it looks like, how many well samples do  
13 you think you would have taken in that time?

14 **A. Thousands as far as samples from our monitoring**  
15 **wells or for -- or from production wells or**  
16 **other wells, it's -- it can vary from 200 to 500**  
17 **a year depending on -- on the needs of the**  
18 **District. So do the math, 13 years, probably at**  
19 **least 200 to 300 per year.**

20 Q. I note that it states as a hydrologic technician  
21 you performed -- helped perform water quality  
22 laboratory analysis, what did that detail, and  
23 you reference fluoride specifically, what --  
24 what did that entail?

25 **A. The District did have a lab -- water quality**

1 **laboratory, a fairly small laboratory, water**  
2 **quality area that we could -- we could perform**  
3 **analysis, and we did chloride and conductivity,**  
4 **specific conductance. We were a certified lab**  
5 **through KDHE for a period of time. We are no**  
6 **longer a certified lab.**

7 Q. And so at least in the past, analyzing this  
8 water quality data is something you were  
9 familiar with; is that right?

10 **A. Yes.**

11 Q. And it also looks that -- looks like you were  
12 responsible for plugging wells and meter  
13 inspections, a number of other requirements that  
14 you had in your job as well; is that right?

15 **A. Yes, it's -- it was a multifaceted position.**

16 Q. Okay. After -- after your time as a hydrologic  
17 technician, in 2005, did your job title change?

18 **A. It did, I began serving as the District**  
19 **hydrologist for a couple of years. During that**  
20 **time had some stints as interim manager also.**  
21 **Between 2006 and 2007, I served as interim**  
22 **manager for -- I can't say for how long each**  
23 **time but a few months each time.**

24 Q. And the reason for the interim manager position,  
25 why were you -- did you find yourself as an

1 interim manager during that period?

2 **A. Mr. Dealy resigned so the Board appointed me as**  
3 **interim manager while they conducted a search**  
4 **for a new manager. The District did hire a new**  
5 **manager, and he was with us for a short amount**  
6 **of time, his name was Lee Wheeler. Upon his**  
7 **resignation, I then served again as interim**  
8 **manager until the Board then appointed me as**  
9 **permanent manager.**

10 Q. Just tell me in a -- in a nutshell or a few  
11 minutes what your job was as a hydrologist.

12 **A. Well, it still would have been doing many of the**  
13 **same positions as a hydrologic technician, so I**  
14 **won't go into great detail as that because the**  
15 **hydrologist does do fieldwork also. I also**  
16 **would have been in charge of our water rights**  
17 **and protection programs. I would have been**  
18 **reviewing applications, metering -- meter**  
19 **inspections, maintaining our databases, our**  
20 **water quality and our -- and our points of**  
21 **diversions or well database, making**  
22 **recommendations to the Division of Water**  
23 **Resources, either for my manager to sign, or if**  
24 **I was interim manager for me to sign those**  
25 **recommendations regarding water permit**

1 **applications. Writing reports for the Board,**  
2 **particularly if the Board was looking at a**  
3 **request for a waiver, an exemption from some of**  
4 **our rules and regulations on a particular**  
5 **application, I would have authored those --**  
6 **those reports and presented that to our Board.**  
7 **Performing safe yield evaluations, spacing**  
8 **evaluations on water permit applications. Gosh,**  
9 **still collecting the data, analyzing data,**  
10 **making water level hydrographs. We produce an**  
11 **annual water level map, so I would have been**  
12 **doing that at the time.**

13 Q. You just mentioned hydrographs, tell me what --  
14 what modeling work you did as a hydrologist for  
15 the District.

16 **A. Well, we would have -- obviously when an**  
17 **applicant was requesting exemption or exception**  
18 **to our regulations, we would have done drawdown**  
19 **calculations, particularly if they're asking for**  
20 **spacing waivers, so we would have done drawdown**  
21 **calculations using the Theis equation generally.**  
22 **Also incorporated some modeling software that we**  
23 **had, I think it was called WinFlow; for -- for**  
24 **those more complicated drawdown scenarios, I**  
25 **would have done some of that. Obviously taken**

Page 2025

1 **the hydrographs and -- or the water level data**  
 2 **and projected that onto hydrographs for board**  
 3 **review.**  
 4 Q. Would you have also -- so it sounds like you did  
 5 some modeling while you were the hydrologist.  
 6 Is that a true statement?  
 7 **A. That's true.**  
 8 Q. Did you also look at modeling from other  
 9 entities outside the District?  
 10 **A. Yes, particularly if an applicant was requesting**  
 11 **a waiver and they provided their own -- their**  
 12 **own modeling, or if something we had requested**  
 13 **on a staff level for some additional modeling,**  
 14 **then we would review -- we would review that**  
 15 **model for -- make sure the inputs were correct,**  
 16 **the parameters that they established, the**  
 17 **outputs were -- were correct.**  
 18 Q. So as a hydrologist, your job was also to  
 19 analyze models that were presented to the  
 20 District?  
 21 **A. Yeah, absolutely, especially related to their**  
 22 **inputs and outputs of those models.**  
 23 Q. As a hydrologist, did you have any reason to  
 24 look at regulations?  
 25 **A. Absolutely, those are something that we would**

Page 2026

1 **use on a day-to-day basis or multiple times in a**  
 2 **day when reviewing applications, water permit**  
 3 **applications. Or I didn't really talk about it,**  
 4 **but we also administered abandoned well**  
 5 **programs, make sure the wells are plugged**  
 6 **properly; we have our own rules and regulations**  
 7 **through KDHE for those. We have our own rules**  
 8 **through the Kansas Corporation Commission for**  
 9 **cathodic bore holes, so we -- we use and**  
 10 **interpret those regulations, myself, all the**  
 11 **time, and did at that time also.**  
 12 Q. So those statutes and regulations, you would --  
 13 you would have to interpret them and apply them  
 14 in your daily job?  
 15 **A. Yes, absolutely.**  
 16 Q. And as a hydrologist, would you have also, at  
 17 least in part, received some training from Mike  
 18 Dealy or Don Koci as you were transitioning into  
 19 that role?  
 20 **A. Yeah, more from -- more from Mr. Dealy 'cause**  
 21 **Mr. Koci had already left the District.**  
 22 Q. What was Mr. -- Mr. Dealy's education?  
 23 **A. I believe he had a degree in geology. I don't**  
 24 **know if he had any advanced degrees, if he had a**  
 25 **master's or not, I cannot remember, but he was a**

Page 2027

1 **licensed geologist.**  
 2 Q. Did he work for a different Groundwater  
 3 Management District before joining the Equus  
 4 Beds?  
 5 **A. He did, he was, I believe, the assistant manager**  
 6 **of the Southwest Kansas Groundwater Management**  
 7 **District No. 3. And I don't know for how long,**  
 8 **but prior to coming to the District in 1984, he**  
 9 **would have been employed by GMD3 in Garden City.**  
 10 Q. After your time as a hydrologist in 2007, did  
 11 your role change?  
 12 **A. It did, I became the District manager in**  
 13 **November of 2007, which I've served until**  
 14 **present time.**  
 15 Q. As a manager, have you engaged in work in  
 16 groundwater modeling?  
 17 **A. Yes.**  
 18 Q. Just in a nutshell, explain what some of that  
 19 work is.  
 20 **A. I think that would be very similar to what was**  
 21 **done as the hydrologist, whether it's doing**  
 22 **drawdown simulations, maybe doing more**  
 23 **complicated with the WinFlow, which by the way**  
 24 **we don't use any longer but we did have that**  
 25 **software for a while. And as -- also as a**

Page 2028

1 **manager reviewing my hydrogeologist, which we**  
 2 **changed the title so I don't want to confuse**  
 3 **people. The hydrologist position is now called**  
 4 **the hydrogeologist position. Reviewing the**  
 5 **hydrogeologist's work on modeling, we have GMS**  
 6 **software, which was the interface for MODFLOW,**  
 7 **so I would review the hydrogeologist's work in**  
 8 **that regard.**  
 9 Q. Would you also look at water quality data as a  
 10 manager?  
 11 **A. Absolutely.**  
 12 Q. Is that a common part of your job?  
 13 **A. It is.**  
 14 Q. Would you also say that looking at models  
 15 proposed by outside entities would be a common  
 16 part of your job?  
 17 **A. Yeah, I don't know if I'd call it common, it --**  
 18 **it does happen. I mean, it's not -- it's not a**  
 19 **daily exercise, but we will look at them and I**  
 20 **will look at them as they become -- as they come**  
 21 **into the office for -- generally for water**  
 22 **permit application related activities.**  
 23 Q. So although it may not be daily, is that  
 24 something -- you've looked at a number of  
 25 different models as your time as a manager?

1 **A. I have -- I have looked at some, yes,**  
2 **absolutely.**  
3 Q. As a manager, have you also -- you mentioned  
4 some modeling you did as a hydrologist. As a  
5 manager, have you also engaged in similar forms  
6 of modeling or other forms of modeling?  
7 **A. Yes, particularly assistant -- assisting our**  
8 **hydrogeologist.**  
9 Q. And I think it was mentioned earlier that one of  
10 the hydrogeologists that you had was  
11 Mr. Clement, who has been in this room for  
12 sometime; is that right?  
13 **A. That is correct, he served as a District**  
14 **hydro -- I think we still called it hydrologist**  
15 **at that time, for a couple of years.**  
16 Q. And more recently there was another  
17 hydrogeologist that was employed by the  
18 District; is that right?  
19 **A. Yeah, we've had -- we've had a couple since**  
20 **then, but the most recent one was Steve**  
21 **Flaherty.**  
22 Q. And so as part of your role, would it have  
23 been your job to work closely with these  
24 hydro -- hydrogeologists as they analyzed models  
25 and data in that regard?

1 would you oftentimes -- oftentimes reference  
2 statutes or regulations?  
3 **A. Yes, most times.**  
4 Q. Okay. And in other words, some sort of issue  
5 would become -- come before the District, and  
6 you would analyze the statutes and regulations  
7 and then make a recommendation to the District  
8 Board?  
9 **A. That is correct.**  
10 Q. Okay. And so -- and, of course, I've been at  
11 the board meetings, you would have these  
12 PowerPoint presentations and you would  
13 essentially have the rules and regulations and  
14 how they applied in those PowerPoints. Is that  
15 a true statement?  
16 **A. Absolutely.**  
17 Q. Okay. And I think many in this room have been  
18 to these board meetings and have seen your  
19 presentations in that regard; is that true?  
20 **A. I would say there have been -- some of the**  
21 **people in this audience have definitely been**  
22 **there.**  
23 Q. When you would apply these statutes and  
24 regulations in your PowerPoint presentations to  
25 these interesting or unique issues that would

1 **A. Yes.**  
2 Q. So would you have worked with them to help to  
3 analyze models?  
4 **A. Yes.**  
5 Q. As the manager, would you give presentations to  
6 the District Board on occasion?  
7 **A. Yes, quite regularly.**  
8 Q. Tell me the nature of the presentations that you  
9 would give to the Equus Beds District Board.  
10 **A. Well, again, they could be related to water**  
11 **permit applications, whether that was something**  
12 **the Board needed to review 'cause the applicant**  
13 **was requesting an exemption or an exception to**  
14 **our regulations, or if the applicant had filed**  
15 **an application, let's say, in the Burrton**  
16 **Intensive Groundwater Use Control Area, that has**  
17 **to go in front of the Board.**  
18 I'd also present in front of the Board  
19 regarding budgets, budget needs, proposed rules  
20 and regulations that I felt the District needed  
21 to explore and draft those rules and regulations  
22 to present to the Board. Pretty much anything  
23 to do with the District, running the District  
24 could result in a presentation to my board.  
25 Q. When you would make those Board presentations,

1 come before the District, generally speaking,  
2 did you call Mr. Adrian, your counsel, to ask  
3 him how to interpret a regulation or a statute  
4 before you would present to the Board?  
5 **A. I would say -- I would say never, but I may have**  
6 **called him once or twice, so I'll say very, very**  
7 **rarely.**  
8 Q. So most of the time, you would look at these  
9 statutes and regulations yourself, draw a  
10 reasonable conclusion from them, and then  
11 present to the Board. Is that a true statement?  
12 **A. That is correct.**  
13 Q. Now, aside from these board meetings, which I  
14 understand to only occur once a month, would you  
15 have the occasion to review and apply statutes  
16 and regulations in your daily job description?  
17 **A. Yes, every -- every water permit application**  
18 **that we review has, for sure, our District**  
19 **specific regulations applied to.**  
20 Q. There's been a number of statutes and  
21 regulations that have been discussed previously  
22 in this hearing. Are those all statutes and  
23 regulations you're familiar with?  
24 **A. I would say I'm -- I can't think of one that I**  
25 **wasn't that we've discussed, so I would say**

Page 2033

1 **yes --**  
 2 Q. Okay.  
 3 **A. -- I'm familiar with them.**  
 4 Q. Would you describe yourself as very familiar  
 5 with those statutes and regulations?  
 6 **A. I would.**  
 7 Q. I think you already indicated this, you have --  
 8 you have experience in helping to develop  
 9 regulations; is that -- is that true?  
 10 **A. Yes, that's one of my roles as District manager**  
 11 **is to draft rules and regulations that I -- I**  
 12 **see that the Board needs to consider, and at**  
 13 **their direction, I would draft those rules and**  
 14 **regulations for their either approval or**  
 15 **modification.**  
 16 Q. Have you even had the occasion to testify before  
 17 the legislature regarding these rule changes?  
 18 **A. Yes.**  
 19 Q. And is the reason that you were asked to testify  
 20 because you are perceived as an expert on how  
 21 these regulations would impact the Equus Beds  
 22 Aquifer?  
 23 **MR. MCLEOD:** I'm going to object to  
 24 that question because that would inquire  
 25 into the state of mind of the legislators

Page 2034

1 making the request, which the witness is  
 2 not competent to speak to.  
 3 **MR. STUCKY:** I'll rephrase.  
 4 **PRESIDING OFFICER:** Thank you.  
 5 **BY MR. STUCKY:**  
 6 Q. Mr. Boese, why do you believe the District Board  
 7 asked you to testify before the legislature on  
 8 these regulations and rule changes?  
 9 **A. Well, as District manager, that would -- I would**  
 10 **be the expert in that rule and regulation and**  
 11 **why the District is proposing that rule and**  
 12 **regulation. And I -- I might comment also that**  
 13 **when a rule and regulation is being proposed and**  
 14 **it works through the process at the state level,**  
 15 **there is a legislative hearing on those, and**  
 16 **it's called the Rules and Regs Committee, so not**  
 17 **necessarily required to be there but that's**  
 18 **why -- in answer maybe to Mr. McLeod's question,**  
 19 **that's why I would go testify because they do**  
 20 **have a rule and reg, a legislative hearing, so**  
 21 **obviously if it's a District rule and**  
 22 **regulation, we would go answer any questions**  
 23 **they may have and present on that -- that rule**  
 24 **and regulation.**  
 25 Q. You indicated that you've reviewed permits and

Page 2035

1 applications in your time employed by the  
 2 District; is that -- is that true?  
 3 **A. That is correct.**  
 4 Q. And as you look at permits and applications,  
 5 each time you cross-reference statutes or  
 6 regulations that apply, is that what your  
 7 testimony was?  
 8 **A. Absolutely, we -- myself and that's how I**  
 9 **instruct my staff is we go through an extensive**  
 10 **review of every application with a checklist,**  
 11 **does it or does not meet any applicable**  
 12 **regulation that -- that's being considered with**  
 13 **that application.**  
 14 Q. How many permits and applications do you think  
 15 you've reviewed, and I don't need an exact  
 16 number but in the hundreds, in the thousands,  
 17 during your time employed with the District?  
 18 **A. It's for sure in the hundreds, and it very**  
 19 **likely approaches a thousand or more.**  
 20 Q. So would it also suffice to say that at a bare  
 21 minimum you've looked -- you've looked at the  
 22 relevant statutes and regulations at least a  
 23 thousand or more times?  
 24 **A. I think that would be a fairly -- fair**  
 25 **statement; I don't have an exact count but every**

Page 2036

1 **application. I should mention when -- we also**  
 2 **assist the public, the District members in**  
 3 **filing applications. So when we're assisting in**  
 4 **filing those applications, we would be using the**  
 5 **rules and regulations at that time to ensure**  
 6 **that what they're proposing would meet the rules**  
 7 **and regulations. So on one hand, we review the**  
 8 **applications, but we also assist with the**  
 9 **applications many times so it ends up being**  
 10 **almost a twofold process.**  
 11 Q. Would you then make a recommendation for  
 12 approval or denial of an application or permit  
 13 to the GMD Board?  
 14 **A. Generally, the -- the first recommendation goes**  
 15 **to the Division of Water Resources. So on a**  
 16 **staff level, according to our application**  
 17 **processing regulation, we have a specific**  
 18 **regulation, we -- the Division of Water**  
 19 **Resources sent us that application -- I should**  
 20 **back up. When we're talking about water permit**  
 21 **applications, it could be a new application or a**  
 22 **change application. We review that on a staff**  
 23 **level first. So my hydrogeologist or myself,**  
 24 **actually ends up being both if I have a**  
 25 **hydrogeologist, we do a dual review, review it ,**

1 if it meets our regulations, then that is the  
 2 recommendation for approval to Division of Water  
 3 Resources. We may add specific conditions that  
 4 we feel necessary for that application.  
 5 If that application does not meet any of  
 6 our rules and regulations, it's a  
 7 black-and-white review, then we recommend that  
 8 for denial. They can then appeal to the  
 9 District Board of Directors asking for an  
 10 exception to that particular rule and regulation  
 11 that wasn't met. At that time, then we would  
 12 make a recommendation to our -- I would make  
 13 that recommendation to our -- to our Board,  
 14 should that exception be granted or not, should  
 15 that application be approved or not; then that  
 16 would go to the Division of Water Resources.  
 17 Q. As part of your recommendations on approval on  
 18 permits, does it involve recommending special  
 19 conditions to protect the aquifer and senior  
 20 domestic and non-domestic water users?  
 21 A. It certainly can and it does sometimes.  
 22 Q. So, for example, in this case, there's been talk  
 23 about conditions that may be attached to the  
 24 approval of the City's proposal. Would some of  
 25 those conditions that you've highlighted in the

1 past to the Board, would those be similar kinds  
 2 of conditions, is that what we're talking about?  
 3 A. Yes, I -- I believe so. And as a matter of  
 4 fact, the 30 ASR Phase II applications that --  
 5 that are the subject of this proposal had  
 6 specific condition recommendations from the GMD,  
 7 from the District, attached to our  
 8 recommendation of approval on them.  
 9 Q. Most of the time, has the District Board  
 10 approved the recommendations, the staff  
 11 recommendation you give to them?  
 12 A. Yes, most -- most times. They may request a  
 13 modification. I would say almost all, all the  
 14 time they've gone with the staff recommendation,  
 15 my recommendation.  
 16 Q. How about the Division of Water Resources, does  
 17 the Division of Water Resources generally  
 18 approve of your recommendation or agree with  
 19 your recommendation?  
 20 A. Again, I would say almost always. I can think  
 21 of one or two instances that they did not  
 22 necessarily agree with our recommendation, and  
 23 perhaps that was modified after discussion with  
 24 the Division of Water Resources. But I can't  
 25 put a number to it but well over 99 percent of

1 the time, yes.  
 2 Q. So in that sense, at least, the Division of  
 3 Water Resources, at least, affords some weight  
 4 or some deference to your opinions in that  
 5 regard; is that true?  
 6 A. Yes, I believe so.  
 7 Q. Do you believe that part of the reason why your  
 8 opinion carries some weight is not only based on  
 9 your 28 years of experience with the Groundwater  
 10 Management District but also based on the fact  
 11 that as the manager of the District, you  
 12 understand this aquifer on a local level?  
 13 A. I -- I do believe that is true, I mean, that's  
 14 why the districts were formed was for that  
 15 local -- local input.  
 16 Q. Tell me about calculations with respect to safe  
 17 yield, is there any kind of special  
 18 consideration given to a groundwater management  
 19 district with respect to safe yield  
 20 calculations?  
 21 A. I'll speak for the Groundwater Management  
 22 District No. 2 that I'm employed with, I won't  
 23 speak to the other ones 'cause I don't know the  
 24 exact specifics, but we do have a special  
 25 regulation, it's K.A.R. 5-22-7, which is through

1 the Division of Water Resources, it is specific  
 2 to the Groundwater Management District No. 2.  
 3 Q. And so in other words, if there's a safe yield  
 4 calculation that needs to be made in a District,  
 5 in GMD2 - again, when I say the District, GMD2 -  
 6 is it the Division of Water Resources that would  
 7 do that safe yield calculation, or is it the GMD  
 8 Groundwater 2 District that does the  
 9 calculation?  
 10 A. It is the District, it is part of our  
 11 application review process.  
 12 Q. So in other words, the Division of Water  
 13 Resources relies on your calculation with  
 14 respect to safe yield; is that true?  
 15 A. That is correct.  
 16 Q. And I think that this goes hand in glove  
 17 together, but would the Division of Water  
 18 Resources then also defer to your recommendation  
 19 as far as what is exempt from safe yield then?  
 20 A. Yes, we would make a recommendation -- well, let  
 21 me back up. There are exemptions built into the  
 22 K.A.R. 5-22-7, the safe yield regulation, so if  
 23 it meets that exemption, then that's how we  
 24 would -- we would make that recommendation to  
 25 the Division of Water Resources that the

Page 2041

1 application be approved because it meets that  
 2 exemption. If an applicant is requesting an  
 3 exception that's not specifically spelled out in  
 4 that regulation, that would go to the District  
 5 Board; they could then make that recommendation  
 6 or not to the Division of Water Resources.  
 7 Q. Regarding your calculations with respect to safe  
 8 yield or also whether or not your opinion with  
 9 regard to whether an exemption applies, has the  
 10 Division of Water Resources generally gone with  
 11 your recommendations or accepted your  
 12 calculations?  
 13 A. Yes, I can't -- I can't think off the top of my  
 14 head a time that they didn't.  
 15 Q. Now, you indicated that you've been employed by  
 16 the District for 28 years; is that right?  
 17 A. Looks like a little over now, yes, a little over  
 18 28 years.  
 19 Q. And when did this ASR project first start, ASR  
 20 Phase I, when did -- when did those discussions  
 21 first start?  
 22 A. I don't know if I can put an exact date on it,  
 23 but it was, I would say, shortly after I started  
 24 with the District in 1992, the District, along  
 25 with the City of Wichita, and probably more

Page 2042

1 likely the City of Wichita's consultants began  
 2 exploring the idea of bank storage. That's the  
 3 water that's trapped or stored in the bank of a  
 4 river that's connected to the aquifer. In this  
 5 case, we're talking about the Little Arkansas  
 6 River. I -- I think those discussions generally  
 7 started because we were taking water level  
 8 measurements, and if memory serves me right, it  
 9 might have been 1992 or 1993 -- '93 following a  
 10 very high flow event in the Little Arkansas.  
 11 And obviously we knew the river and the aquifer  
 12 were connected, but we saw some very rapid  
 13 increases in the groundwater level immediately  
 14 adjacent to the river; we have a number of  
 15 monitoring wells that are very close to the  
 16 Little Arkansas.  
 17 I believe that's where that discussion  
 18 started of bank storage, can someone capture  
 19 that high flow and it ends up stored in the bank  
 20 of the Little Arkansas River and recharge it. I  
 21 would say those discussions probably started in  
 22 1992 or '93, if I remember correctly.  
 23 Q. So would it suffice to say that you've been  
 24 involved in ASR Phase I, ASR Phase II, and now  
 25 this aquifer maintenance credit proposal in some

Page 2043

1 capacity since the inception of ASR?  
 2 A. I believe that's correct, unless there were  
 3 discussions prior to my -- my starting in  
 4 January of 1992. But I'm unaware of any  
 5 discussions prior to that, so I would say that's  
 6 a true statement, I've been involved since the  
 7 beginning.  
 8 Q. Mr. Boese, you have had the -- the opportunity  
 9 to give presentations with respect to water law  
 10 and water regulations in the past, have you not?  
 11 A. I have.  
 12 Q. Have you even been asked to give a presentation  
 13 with respect to water law and water regulations  
 14 for CLE training of lawyers?  
 15 A. Yes.  
 16 Q. Tell me just one of the examples of when you  
 17 were asked to highlight for continuing legal  
 18 education credits for lawyers the nuances of  
 19 groundwater law.  
 20 A. The one that comes to mind, and I don't  
 21 remember -- I don't remember when it was, a few  
 22 years back, was what's called a HalfMoon  
 23 seminar. I think that's sort of a national  
 24 organization of training and providing  
 25 continuing education credits for -- for, I

Page 2044

1 think, attorneys and also, I believe,  
 2 engineering consultants. Gave a presentation,  
 3 basically sort of a water right 101, I guess you  
 4 would call it, on water rights, how -- how  
 5 they're applied, what they mean. It was a  
 6 pretty long presentation, maybe a couple of  
 7 hours, to a fairly large group of attorneys and  
 8 consultants.  
 9 Q. And so would you agree with me that your  
 10 two-hour presentation as you presented on water  
 11 law and water rights and these statutes and  
 12 regulations that are germane -- germane to the  
 13 issues before us today, would you agree with me  
 14 that there were numerous attorneys in the room  
 15 listening?  
 16 A. Yes.  
 17 Q. And would you also agree that this seminar was,  
 18 in fact, approved for CLE credits for these  
 19 attorneys?  
 20 A. That was my understanding, I received a nice  
 21 thank you from the HalfMoon seminar folks  
 22 thanking me for my presentation, that it was  
 23 well received, so I'm assuming so.  
 24 MR. MCLEOD: And I think we need  
 25 foundation on that if that's going to be

1 something that should be established of  
2 record, whether that was approved for CLE  
3 credit.

4 **MR. STUCKY:** I can easily establish  
5 that if we need to. I have it -- I have it  
6 in my CLE credits, so I can dig that up if  
7 we need to actually establish that.

8 **PRESIDING OFFICER:** Perhaps we could  
9 come back to that tomorrow.

10 **MR. STUCKY:** Okay. I can dig it up,  
11 or Tom can.

12 **BY MR. STUCKY:**

13 Q. Have you also given presentations on water  
14 rights and water law to the Governor's Water  
15 Conference?

16 **A. Yeah, I spoke a couple times at the Governor's**  
17 **Conference, including last year and I believe**  
18 **the year before, on a number of topics. I think**  
19 **last year's was an overview of the District and**  
20 **also, ironically, about this ASR proposal was**  
21 **one of the topics I discussed quite a bit about.**  
22 **I believe the year before that was about**  
23 **chloride contamination in the aquifer,**  
24 **particularly the Burrton -- the Burrton chloride**  
25 **contamination. So I have spoken, I believe,**

1 reports that helped to formulate your opinions  
2 in that regard?

3 **A. Yes.**

4 Q. And would you also have referenced some of the  
5 water quality calculations or measurements that  
6 you would have conducted as you were employed  
7 with the District?

8 **A. Yes, I believe -- I believe in my presentation I**  
9 **had some specific water quality hydrographs for**  
10 **the Burrton area, if I am remembering correctly,**  
11 **so yes.**

12 Q. Have you ever presented at any KDHE conferences?

13 **A. I have.**

14 Q. Tell me about the nature of some of those  
15 presentations.

16 **A. The -- the most recent one that I can remember**  
17 **was a conference that's put on mostly for the**  
18 **water well drillers in the state, and I was**  
19 **asked by Pam Chaffee, which works for Kansas**  
20 **Department of Health and Environment, she's in**  
21 **their water -- water well program, so she deals**  
22 **with abandoned wells and well construction, she**  
23 **asked me to present on GMD2 specific rules and**  
24 **regulations for proper abandoning and plugging**  
25 **of a well.**

1 **twice; there might have been another time in the**  
2 **Governor's Conference, but I know of at least**  
3 **twice.**

4 Q. I think everyone -- most people in this room are  
5 familiar with what the Governor's Conference is,  
6 so I don't know that we need lots of  
7 explanation, but would you agree it's a  
8 conference put on by the governor of the State  
9 of Kansas to bring some of the best minds on  
10 water law and water rights to the table to  
11 discuss these issues?

12 **A. Yeah, it's a -- it's a two-day conference that**  
13 **brings upwards of 6 or 700 people to the**  
14 **conference for a variety of topics from legal to**  
15 **technical to informational, so it's a -- it's a**  
16 **multifaceted conference.**

17 Q. Have you ever presented at this conference on  
18 the topic of chloride contamination and  
19 migration of the Burrton chloride plume?

20 **A. Yeah, I believe that was the 2018, the two years**  
21 **ago Governor's Conference, we -- I gave a**  
22 **presentation on contamination sites in the**  
23 **District, including the Burrton -- Burrton area.**

24 Q. So when you gave this presentation, would you  
25 have referenced specific studies or specific

1 **And I think I also spoke at a conservation**  
2 **district association that was put on by KDHE on**  
3 **a similar topic on proper plugging abandoning --**  
4 **of an abandoned well and also how to convert a**  
5 **well to an inactive status and what steps are**  
6 **needed on that.**

7 Q. So I assume given that it was KDHE, you would  
8 have talked about water quality in these  
9 presentations?

10 **A. Certainly about protecting water quality by**  
11 **properly plugging an abandoned well and -- and**  
12 **the associated rules and regulations on how to**  
13 **properly plug those wells.**

14 Q. Have you ever given any presentations at Kansas  
15 Water Authority meetings?

16 **A. I have.**

17 Q. Tell me a little bit about what Kansas Water  
18 Authority is and the nature of those  
19 presentations.

20 **A. Well, the Kansas Water Authority is the advisory**  
21 **organization to the Kansas Water Office, and our**  
22 **hearing officer happens to be the current chair**  
23 **of the Water Authority, I'll just mention that,**  
24 **so I have spoke to the Water Authority; they**  
25 **meet regularly, and, again, they're an advisory**

Page 2049

1 to the Kansas Water Office.  
 2 My presentations, then, would have been, I  
 3 believe, an overview of the District, I spoke to  
 4 them about when we were attempting to raise the  
 5 assessment cap for the groundwater management  
 6 districts. And I presented some other topics to  
 7 them; I think ASR probably was one of those  
 8 topics, along with chloride contamination.  
 9 Q. What is the Equus-Walnut RAC?  
 10 A. That's a regional advisory committee, those were  
 11 established a few years ago, they -- they sort  
 12 of replaced what used to be known as the basin  
 13 advisory committees, so there's a number of  
 14 these throughout the state. And the local one  
 15 is called the Equus-Walnut. It's a combination  
 16 of the Equus Beds area and the Walnut -- Walnut  
 17 Creek area, so it kind of has a multi --  
 18 multifaceted groundwater and surface water  
 19 group, it's a little complex, but they are an  
 20 advisory, then, to the Water Authority.  
 21 Q. Have you had the opportunity to present on  
 22 similar topics to what we've already discussed  
 23 at those meetings as well?  
 24 A. Yes, multiple times.  
 25 Q. And just to back up a little bit, as you

Page 2050

1 presented to the Equus-Walnut RAC or the Kansas  
 2 Water Authority or KDHE or HalfMoon, did you  
 3 volunteer to present, or were you asked by these  
 4 organizations to present?  
 5 A. I was asked.  
 6 Q. Have you had occasion to give presentations to  
 7 legislative committees, for example?  
 8 A. Yes.  
 9 Q. And so in other words, we could go on and on  
 10 through the different committees or entities  
 11 that have asked you to present, but would it  
 12 just suffice to say that you have given --  
 13 you've been asked a lot by outside entities that  
 14 deal with water law and water rights and you've  
 15 been asked a lot to present, would that be a  
 16 true statement?  
 17 A. That's true. And we really didn't touch base  
 18 but also spoke a number of times to different  
 19 organizations, civic organizations, Lions Club,  
 20 rotary clubs, Farm Bureaus, KLA, the Kansas  
 21 Livestock Association, I've spoke and presented  
 22 many times.  
 23 Q. Have you ever reviewed or assisted or  
 24 collaborated on KGS or USGS studies or reports?  
 25 A. Yes.

Page 2051

1 Q. I'd ask that you turn in your exhibit notebook  
 2 to Exhibit 61. I believe it's in Volume IV.  
 3 **PRESIDING OFFICER:** And, Mr. Stucky,  
 4 Mr. Boese -- for the record, Mr. Boese made  
 5 reference to making presentations on the  
 6 ASR to the Kansas Water Authority. That  
 7 has not occurred during the time that I  
 8 have been on the Kansas Water Authority nor  
 9 served as its chair. So I wanted to  
 10 clarify that. Do you agree with that,  
 11 Mr. Boese?  
 12 A. Yeah. I'd also agree that I believe I saw you  
 13 leave the room at the Governor's Conference when  
 14 I -- when I began presenting also.  
 15 **PRESIDING OFFICER:** And I did not  
 16 return until you were finished. Thank you,  
 17 please go ahead.  
 18 **BY MR. STUCKY:**  
 19 Q. With that clarification for the record, do you  
 20 recognize Exhibit 61?  
 21 A. I do.  
 22 Q. What is Exhibit 61?  
 23 A. That's a, I guess, a string of emails, both  
 24 between myself and Walter Aucott, which works  
 25 for the -- used to work for the USGS. It's

Page 2052

1 several emails, but essentially the USGS was  
 2 beginning their work on the groundwater flow  
 3 model, and I think they started that maybe in  
 4 2009, and they were inviting me to participate  
 5 in their meetings and discussions on that  
 6 groundwater model.  
 7 Q. When you say groundwater flow model, how was  
 8 that related to the proposal here today before  
 9 us?  
 10 A. Well, I believe that's the groundwater flow  
 11 model that was used in the City's proposal.  
 12 Q. So in other words, you were asked to help be  
 13 involved in developing this particular model, at  
 14 least, in some role?  
 15 A. Yeah, to provide input on aquifer parameters and  
 16 data, what have you related to that, yes.  
 17 **MR. STUCKY:** I move to admit the  
 18 District 61.  
 19 **PRESIDING OFFICER:** Any objections?  
 20 Hearing none, GMD 61 will be admitted.  
 21 **BY MR. STUCKY:**  
 22 Q. Mr. Boese, I'd ask that you now turn to  
 23 Exhibit 62.  
 24 A. Okay, I'm there.  
 25 Q. What is Exhibit 62?

1 **A. That is a letter, let me see who signed it, from**  
2 **Cristi Hansen, who is a hydrologist, I think she**  
3 **may be retired now, with the USGS. It's dated**  
4 **May 9th, 2012. This was a response letter to my**  
5 **review or my District's review, which would have**  
6 **been mostly myself, review of a report that**  
7 **Cristi had generated called U.S. Geological**  
8 **Survey Scientific Investigation Map, Status of**  
9 **Groundwater Levels and Storage Volume in the**  
10 **Equus Beds Aquifer near Wichita, Kansas**  
11 **July 2011.**

12 **So I had -- she had asked me for a**  
13 **technical review or sort of a peer review of**  
14 **that -- of her report, and I responded with, it**  
15 **looks like, at least 12 areas that I identified**  
16 **that I had questions about, might need some**  
17 **improvement, you know, might want to change this**  
18 **to this, just verifying data. And she responded**  
19 **with a thank you letter saying she'd consider**  
20 **those, she changed where she felt necessary, and**  
21 **provided a response to my review.**

22 Q. And just to back up for the record, on  
23 Exhibit 61, the model that you were working with  
24 USGS to review, that was the MODFLOW model  
25 that's been utilized by the City; is that right?

1 be the author indicated.  
2 **MR. STUCKY:** And I'm not moving to  
3 admit it for the -- I'm not using it for  
4 the truth of the matter asserted. I'm  
5 using it to indicate that these suggestions  
6 were made to -- to suggest or demonstrate  
7 that Mr. Boese actually worked with the  
8 USGS. I'm not concerned with a record of  
9 what it was that they were discussing; I  
10 just am admitting it for that purpose to  
11 show that he worked with the USGS, so I  
12 think it gets around any kind of hearsay  
13 objection, that's my number one response.  
14 And number two response is I think there  
15 was lots of leeway with the exhibits that  
16 Mr. McLeod was allowed to admit. In fact,  
17 there are several reports from USGS and  
18 otherwise, and so I would say that since  
19 this is signed by someone that works for  
20 USGS, Cristi Hansen, as the hydrologist, to  
21 the extent that we were -- Mr. McLeod was  
22 allowed to admit exhibits that were signed  
23 by members of USGS as an official  
24 government document, this also should be  
25 admitted under that exception so ...

1 Because there's several models that have been  
2 mentioned?

3 **A. Yes, yes, yes.**

4 Q. But moving back to Exhibit 62, so this is a  
5 situation where USGS asked you to do a peer  
6 review, you identified a number of concerns with  
7 the work they had done, and did they generally  
8 incorporate your concerns?

9 **A. I believe they incorporated some, some were --**  
10 **just required some further explanation of why**  
11 **they used particular data. So some -- some were**  
12 **corrected, some were an explanation by**  
13 **Ms. Hansen in that regard. So, again, this was**  
14 **a fairly common practice for the USGS or KGS**  
15 **would send reviews or draft reports to the**  
16 **District office, and we would review them and**  
17 **send back any comments. So this is an example**  
18 **of that response back from them.**

19 **MR. STUCKY:** I move to admit  
20 Exhibit 62.

21 **PRESIDING OFFICER:** Yes, sir.

22 **MR. MCLEOD:** I don't think there's  
23 foundation, I don't think the witness wrote  
24 this letter. I think the person to  
25 establish foundation for this letter would

1 **MR. MCLEOD:** I think there is a vast  
2 difference between official published  
3 reports of the USGS and a letter, but the  
4 foundational issue is we don't even know  
5 that this is what it purports to be. It's  
6 not a hearsay issue alone; it's that we  
7 don't know that this document is what it  
8 purports to be. Its authenticity is at  
9 issue.

10 **PRESIDING OFFICER:** So you cannot  
11 determine that this is a letter that shows  
12 that Mr. Boese was working with the USGS?

13 **MR. MCLEOD:** I can't without  
14 foundational testimony from the -- from the  
15 purported author saying that, indeed, this  
16 is a letter that she wrote.

17 **PRESIDING OFFICER:** I'm going to  
18 exercise my discretion because I can tell.  
19 We'll admit it.

20 **BY MR. STUCKY:**

21 Q. So would it suffice to say, Mr. Boese, without  
22 introducing more exhibits in this regard, that  
23 you have reviewed, assisted, or collaborated  
24 with both the KG -- KGS and the USGS on numerous  
25 studies, reports, and modeling?

1 **A. Yes, I think it's -- if you would look at many**  
 2 **of the USGS reports and KGS reports that were**  
 3 **published reports, you'll find acknowledgment in**  
 4 **the pages on those. And I can't say every one,**  
 5 **but most of them would acknowledge assistance by**  
 6 **either naming me personally or the Groundwater**  
 7 **Management District staff as assisting,**  
 8 **providing data or -- and/or technical review**  
 9 **of -- I think if you would look through any of**  
 10 **those USGS reports related to the Equus Beds,**  
 11 **you'll find that in almost all of them, an**  
 12 **acknowledgment that we assisted or myself**  
 13 **assisted personally.**  
 14 Q. Mr. Boese, you also have been asked to serve on  
 15 a number of boards germane to water rights or  
 16 water law. Is that a true statement?  
 17 **A. That's true.**  
 18 Q. I would ask that you turn now to Exhibit 63 in  
 19 that same notebook.  
 20 **A. Okay.**  
 21 Q. What is Exhibit 63?  
 22 **A. This is a letter dated April 23rd, 2010 from the**  
 23 **City of Wichita mayor at the time, Carl Brewer,**  
 24 **thanking me for agreeing to serve on what was**  
 25 **called the Water Utilities Advisory Task Force;**

1 with this particular letter?  
 2 **A. Yes.**  
 3 **MR. STUCKY:** I move to admit  
 4 Exhibit 63 into evidence.  
 5 **PRESIDING OFFICER:** Any objections?  
 6 GMD 63 will be admitted.  
 7 **BY MR. STUCKY:**  
 8 Q. Now, you said just a moment ago that I can't get  
 9 into the mind of Mayor Brewer as far as why I  
 10 was asked to serve on this task force, but  
 11 certainly we can look at parts of this letter.  
 12 Could you read for me the first sentence of that  
 13 second paragraph?  
 14 **A. You have been asked to serve on this task force**  
 15 **not only because of your technical expertise,**  
 16 **but also because of your leadership within the**  
 17 **community.**  
 18 Q. So let me stop you there. You were asked to  
 19 serve on this task force because of your, quote,  
 20 technical expertise, end quote. Is that a true  
 21 statement?  
 22 **A. Yes.**  
 23 Q. And so the mayor of the City of Wichita valued  
 24 your technical expertise on topics as they  
 25 related to the Equus Beds Aquifer and the ASR

1 **it was for the City of Wichita, that was a task**  
 2 **force that was formed that had a number of**  
 3 **individuals, and they asked myself to serve on**  
 4 **that task force to help provide recommendations**  
 5 **on the City's water supply, ASR, I think all the**  
 6 **way up to utility rates. And we met for a**  
 7 **number of years, I don't remember if it was one**  
 8 **or two years that we would meet regularly and --**  
 9 **as the City was going through sort of a review**  
 10 **of their water utilities program.**  
 11 Q. And part of the recommendations or advice you  
 12 were giving to the City concerned ASR. Is  
 13 that -- is that a true statement?  
 14 **A. That was a discussion topic of that task force,**  
 15 **and I can't get into Mr. -- Mr. -- or Mayor**  
 16 **Brewer's mind, but I'm guessing that was**  
 17 **probably a considerable consideration in why he**  
 18 **asked me to serve on that task force because of**  
 19 **my expertise of the Equus Beds Aquifer and the**  
 20 **recharge project, the ASR project.**  
 21 Q. Now, certainly, Mr. McLeod, as employed by the  
 22 City, could inquire if this is, in fact, Mayor  
 23 Brewer's signature, but is it your belief that  
 24 this letter was signed by Mayor Brewer and these  
 25 were the attachments that arrived to you with --

1 recharge project; is that true?  
 2 **A. I would say that's true.**  
 3 Q. Tell me, you might have answered this, and if  
 4 you have, I apologize, but in paragraph one,  
 5 it's also stated why this task force was formed,  
 6 could you read the last sentence of that first  
 7 paragraph?  
 8 **A. Specifically, the task force will be charged to**  
 9 **advise staff and the Wichita City Council on the**  
 10 **future rate structure, as well as the future**  
 11 **water supply for our community, including the**  
 12 **Aquifer Storage and Recovery, parentheses, ASR,**  
 13 **Project.**  
 14 Q. So we don't have to guess as to why your  
 15 technical expertise was valued, this prior  
 16 paragraph talks specifically about the ASR  
 17 project; is that true?  
 18 **A. That is true.**  
 19 Q. Through this task force, would you have given  
 20 recommendations to the City regarding their  
 21 permits and the nature of the regulations that  
 22 applied?  
 23 **A. Yeah, we -- we'd discuss a number of topics, and**  
 24 **of course, in that -- in that discussion**  
 25 **regulations and the ASR project obviously would**

1 have come up. And, for instance, if the task  
2 force was talking about, for instance, I believe  
3 on one occasion, talking about filing new water  
4 permits in the Equus Beds Aquifer, in the well  
5 field, and, of course, I was able to advise them  
6 that new water permits, other than recharge and  
7 recovery permits, would most likely not be --  
8 not be available due to our safe yield  
9 regulation because the area is  
10 over-appropriated. So I do remember having some  
11 of those discussions. So, absolutely, they  
12 would look to me for expertise of not only the  
13 Equus Beds Aquifer but the associated rules and  
14 regulations that were -- that govern us.  
15 Q. Was there ever a time, for example, where there  
16 was a discussion regarding, you know, say, a  
17 permit the City wanted to pursue and you were  
18 able to say, wait, wait, people in the room,  
19 there's a concern with a regulation, we may not  
20 be able to proceed with this plan as it's been  
21 discussed, did that ever happen?  
22 A. Yeah, I do remember that discussion about filing  
23 new water permits; I think there was even  
24 discussions about buying irrigation rights,  
25 which could be allowed but, you know, not quite

1 as simple as it sounds just to buy an irrigation  
2 right, you know, and just automatically start  
3 using it for municipal use. So those were --  
4 those were discussions that occurred that I was  
5 able to provide insight and guidance on to that  
6 task force.  
7 Q. So in other words, and if you -- if it helps,  
8 you can mention the name, but someone on the  
9 task force with the City of Wichita presented an  
10 idea, and then you were able to say, actually,  
11 we can't do that idea because this statute or  
12 regulation applies. Is that a characterization  
13 of what occurred?  
14 A. I don't remember exactly who started that  
15 discussion about buying -- buying irrigation  
16 water rights or filing new applications, whether  
17 it was someone on the task force, which may have  
18 been a non-City individual, or if it was a City  
19 individual that started that discussion. We had  
20 pretty open dialogue, so it was, I guess, sort  
21 of a free-for-all discussion sometimes where  
22 some people just have ideas and we would discuss  
23 them. Obviously being guided by the -- by the  
24 City, I mean, they would have an agenda for us  
25 to follow, but it was a very open brainstorming

1 session sometimes.  
2 Q. But would you -- do you think, though, that your  
3 recommendations with regard to statutes and  
4 regulations were taken to heart during these  
5 discussions?  
6 A. Yes.  
7 Q. Have you -- were you ever asked to serve on the  
8 City of Wichita ASR Project Executive Oversight  
9 Committee?  
10 A. I was.  
11 Q. What years were you asked to serve on the City  
12 of Wichita ASR Project Executive Oversight  
13 Committee?  
14 A. If my memory serves me right, which, again, I've  
15 been with the District for a long time, but I  
16 believe it was from about 2008 to 2011 when the  
17 Phase II was being conceived, permitted, bids  
18 being sent out. So I believe it was roughly  
19 about a three-year period between 2008 and 2011,  
20 if my memory serves me correctly.  
21 Q. In 20 seconds or less, what is the City of  
22 Wichita ASR Project Executive Oversight  
23 Committee?  
24 A. There was a handful of, I would say experts that  
25 would meet regularly to get an update on the

1 City's project, where they were at with regards  
2 to everything from permitting, to land  
3 acquisition, to funding, get an update and  
4 discuss and provide recommendations and insight  
5 on the next step forward.  
6 Q. Who would have asked you to serve on this  
7 committee?  
8 A. It would have been the City of Wichita; I don't  
9 remember if it was specifically director of the  
10 utilities at the time, David Warren, it may have  
11 been -- it may have been the city manager, I  
12 actually don't remember who asked me to serve on  
13 the committee, but it was a select few of a  
14 couple of City of Wichita personnel, a couple of  
15 consultants, myself, and then there was sort of  
16 an outside -- his name's failing me, but he was  
17 sort of a nationally known that worked for the,  
18 I believe the American Water Association. I  
19 don't remember his name but -- so it was a, I  
20 don't know, group of about six folks who would  
21 get together and get an update on the project  
22 and discuss where it was at and where it was  
23 heading.  
24 Q. How was this committee that you were asked to  
25 serve on by the City of Wichita different from

Page 2065

1 the Wichita Water Utilities Advisors Board?  
 2 **A. Well, the Executive Oversight Committee was very**  
 3 **specific, just to discuss ASR Phase II, again,**  
 4 **the permitting, the development, land**  
 5 **acquisition, funding, so it was specific to**  
 6 **that -- that project.**  
 7 Q. During those discussions with this oversight  
 8 committee, would you have also discussed  
 9 statutes and regulations and impacts to water  
 10 quality in the aquifer, would those topics have  
 11 come up in those discussions?  
 12 **A. Yes.**  
 13 Q. Would you have given input in that regard?  
 14 **A. Yes.**  
 15 Q. So at least as of 12 years ago when you were  
 16 asked to serve on that particular committee, at  
 17 least someone in the City saw you as  
 18 knowledgeable or as a resource on those topics.  
 19 Is that a true statement?  
 20 **A. Yes.**  
 21 Q. Previously, when the City of Wichita experts  
 22 have been on the stand, this concept of peer  
 23 reviews has been mentioned. Do you recall some  
 24 of those questions?  
 25 **A. Yes.**

Page 2066

1 Q. Do I need to rehearse for you what a -- what a  
 2 peer review is?  
 3 **A. No.**  
 4 Q. Okay. Have you had the occasion to conduct peer  
 5 reviews in the past?  
 6 **A. Yeah, I mean, there are different levels of peer**  
 7 **review. I mean, most of these we have done for**  
 8 **USGS would be considered a technical or peer**  
 9 **review, to look at the report, look at the data,**  
 10 **look at the conclusions, I would call those peer**  
 11 **reviews. Someone might call them technical**  
 12 **reviews. There's little difference in my mind**  
 13 **between the two.**  
 14 Q. So, for example, Exhibit 61 and 62, would you  
 15 consider your role in that regard a peer review,  
 16 or at least in part a peer review?  
 17 **A. 61 was the email from Mr. Aucott just asking me**  
 18 **to be involved with the -- I don't know if that**  
 19 **would have been a peer review because that was**  
 20 **during development of the model. 62 from -- the**  
 21 **letter back from Ms. Hansen would have been more**  
 22 **of a technical peer review type of review.**  
 23 Q. And are those isolated examples of when you've  
 24 been asked to peer review reports or -- or  
 25 modeling?

Page 2067

1 **A. Well, I've been asked, or the District's been**  
 2 **asked dozens of times to review USGS and KGS**  
 3 **reports.**  
 4 Q. So in other words, those aren't isolated  
 5 examples, correct?  
 6 **A. No, no.**  
 7 Q. I would ask that you turn in your notebook to  
 8 Exhibit 42. And, I'm sorry, you're going to  
 9 have to switch notebooks, it looks like that is  
 10 Volume III. What is Exhibit 42 in -- in the  
 11 notebook before you?  
 12 **A. Can you give me one second, the notebook has**  
 13 **come apart at some point in time so I'm**  
 14 **reconstructing it really quick? All right, I'm**  
 15 **there, sorry.**  
 16 Q. In a nutshell, what is Exhibit 42?  
 17 **A. Exhibit 42 is a Kansas Geological Survey, KGS,**  
 18 **report that was done by Dr. Don Whittemore. He**  
 19 **was looking at the Burrton Intensive Groundwater**  
 20 **Use Control Area, specifically the -- the**  
 21 **chloride, the chloride plume, contamination**  
 22 **plume in the Burrton area, looking at the change**  
 23 **in salinity, the distribution of salinity, and**  
 24 **how that salinity has moved over time.**  
 25 Q. Now, this is certainly an official government

Page 2068

1 document; is that -- is that true?  
 2 **A. Yes.**  
 3 **MR. STUCKY:** I would ask to move --  
 4 I'd move to admit the District's  
 5 Exhibit 42.  
 6 **PRESIDING OFFICER:** Any objections?  
 7 GMD 42 will be admitted.  
 8 **BY MR. STUCKY:**  
 9 Q. Now, under the acknowledgments of this report,  
 10 there's a reference to how much of this report  
 11 was extracted from a report from the Equus Beds  
 12 Groundwater Management District. Is that a true  
 13 statement?  
 14 **A. Yes.**  
 15 Q. Let me ask you this: Was a lot of that input  
 16 that was furnished by the GMD2 staff, was a lot  
 17 of that your input and work as it related to the  
 18 development of this report?  
 19 **A. Yes.**  
 20 Q. So in that sense, do you believe that you  
 21 collaborated with the USGS as they developed  
 22 this report on salinity and the migration of  
 23 chloride in the Equus Beds Aquifer?  
 24 **A. Yes, I assisted Dr. Whittemore in providing him**  
 25 **data and input in review of that original --**

1 that original report that District actually  
2 personally funded, and this was -- and this was  
3 an update that Dr. Whittemore did actually for  
4 the Kansas Department of Agriculture off of that  
5 original report.

6 Q. So I assume, then, since you helped to influence  
7 the writing of this report, you're very familiar  
8 with the report and its contents. Is that a  
9 true statement?

10 A. Yes, I haven't -- I haven't looked at it in the  
11 last month, but, yes, I'm familiar with it.

12 Q. I would ask that you now turn to Exhibit 44 in  
13 your notebook. Just to speed this up, is  
14 Exhibit 44 another USGS official report that was  
15 submitted by Klager, Kelly and Ziegler?

16 A. Yes.

17 Q. And, again, this is an official government  
18 document, is it not?

19 A. It is.

20 Q. And just in a nutshell, does this document talk  
21 about how the impacts of artificial recharge  
22 and -- and simulated well effects on chloride  
23 transport in the Equus Beds Aquifer?

24 A. Yeah, it -- it discusses not only effects of  
25 well pumping but also artificial recharge on the

1 A. I don't specifically remember exactly on this  
2 report, but, generally, the kind of assistance  
3 we provide is very similar for most of these  
4 reports; we're providing data, input, providing  
5 technical review if asked to do so, so I think  
6 that would be a generally true statement.

7 Q. So is this also a report that, at least, at some  
8 point you read and you're familiar with?

9 A. Yes.

10 Q. I would ask that you now turn to Exhibit 45 in  
11 that same notebook. What is Exhibit 45 just in  
12 a nutshell?

13 A. This is another USGS report, and it's titled  
14 Status of Groundwater Levels and Storage Volume  
15 in the Equus Beds Aquifer near Wichita, Kansas,  
16 January 2016. So, again, another report by USGS  
17 specific to the -- to the Wichita well field  
18 area, the basin storage area.

19 Q. And once again, this is a report that provides  
20 acknowledgements to GMD2, it's on the fifth page  
21 of this report as we count from the beginning of  
22 this exhibit, it's true that there is  
23 acknowledgment given to the District for the  
24 work and the collaboration in developing this  
25 report. Is that a true statement?

1 groundwater flow and the chloride movement in  
2 the -- in the well field area.

3 MR. STUCKY: I move to admit the  
4 District Exhibit 44 under the same basis  
5 that has often been used in this hearing as  
6 a government document.

7 PRESIDING OFFICER: Any objections?  
8 Hearing none, GMD Exhibit 44 is admitted.

9 BY MR. STUCKY:

10 Q. Now, Mr. Boese, without asking you to flip  
11 through this and go to the acknowledgment, would  
12 you agree with me that there is a reference in  
13 the acknowledgements of this report and that  
14 there was collaboration with the Equus Beds  
15 Groundwater Management District in the writing  
16 of this report?

17 A. I'm looking for the acknowledgment page, and I'm  
18 not seeing it off the top of my head, but I do  
19 recall providing some input into this report.

20 Q. So would your input have been similar to your  
21 input on the prior report, in other words, you  
22 would have furnished data, you would have helped  
23 to look at the modeling that was performed,  
24 would you have given all that same type of  
25 input?

1 A. Yes, in this specific report we provided --  
2 collecting and provided groundwater-level data  
3 that was used for the report.

4 Q. So once again, are you familiar with this  
5 report, and were you intimately involved in the  
6 development of this report?

7 A. I'm certainly familiar with it. Again, I've --  
8 I've looked at so many of these, it's hard for  
9 me to remember which one I reviewed and to what  
10 level. But this one we may have not did a  
11 technical review of because we're not in the  
12 acknowledgment, but I'm certainly familiar with  
13 the report and provided much of the data that  
14 was used in it.

15 MR. STUCKY: I move to admit the  
16 District Exhibit 46 -- or 45 under the same  
17 basis as before.

18 PRESIDING OFFICER: Any objections?  
19 Hearing none, GMD Exhibit 45 is admitted.

20 BY MR. STUCKY:

21 Q. Now could you turn to Exhibit 46?

22 A. Okay.

23 Q. What is Exhibit 46 in a nutshell?

24 A. This is, again, another USGS report, it's titled  
25 Simulation of Groundwater Flow, Effects of

Page 2073

1 **Artificial Recharge, and Storage Volume Changes**  
 2 **in the Equus Beds Aquifer near the City of**  
 3 **Wichita, Kansas Well Field, 1935 to 2008. I**  
 4 **believe this is the -- the USGS report that**  
 5 **deals with the model that is subject to the**  
 6 **City's proposal; I believe this same report is**  
 7 **in the City of Wichita's exhibit notebook, if**  
 8 **I'm -- if I'm not mistaken.**  
 9 **MR. STUCKY:** Okay. I move to admit  
 10 Exhibit 46 under the same basis.  
 11 **PRESIDING OFFICER:** Any objections?  
 12 Hearing none, 46 is admitted.  
 13 **BY MR. STUCKY:**  
 14 Q. So once again I gather from the acknowledgments  
 15 of this report that this -- this would be  
 16 another example of a USGS report where you would  
 17 have been involved in helping to develop it and  
 18 provide data. Is that a true statement?  
 19 **A. Yes.**  
 20 Q. And when I say you, I mean you personally. And  
 21 I understand that there are other members of the  
 22 District that likely would have helped, but you  
 23 would have been the manager of the District when  
 24 this report came out, would you not have been?  
 25 **A. Yes.**

Page 2074

1 Q. And so as the manager of the District, I assume  
 2 that you would have taken the lead in providing  
 3 the data or the input with respect to this  
 4 report. Is that a true statement?  
 5 **A. Yes.**  
 6 Q. So are these just -- and, again, I assume, so  
 7 you can testify to it later, this is another  
 8 report that you're familiar with; is that right?  
 9 **A. Yes.**  
 10 Q. What is a sustainability assessment as it was  
 11 referenced in one of these reports?  
 12 **A. I don't think we've admitted that one yet, Dave.**  
 13 **If you want to go back to the KGS, the Kansas**  
 14 **Geological Survey sustainability assessment, I**  
 15 **don't know that we've --**  
 16 Q. Could you turn to that exhibit?  
 17 **A. Yes. It's on page -- it's Exhibit 43.**  
 18 Q. Exhibit 43 is a sustainability assessment, then,  
 19 from -- with -- where KG -- where KGS was  
 20 involved; is that right?  
 21 **A. Yeah, the Kansas Geological Survey conducted**  
 22 **this at the request of the Groundwater**  
 23 **Management District; we -- we partially funded**  
 24 **that, along with the Kansas Water Office, I**  
 25 **believe, on this particular report. This was a**

Page 2075

1 **sustainability assessment that the KGS did for**  
 2 **the District where they essentially looked at**  
 3 **what would be the acceptable pumping. They did**  
 4 **it in a couple of different ways, by District**  
 5 **wide, I believe, by county, down to the township**  
 6 **level, and then also in defined areas that --**  
 7 **that we provided, the District provided, looked**  
 8 **at what would be the sustainable pumping or**  
 9 **withdrawal from the aquifer that would not cause**  
 10 **a groundwater decline on an average annual**  
 11 **basis.**  
 12 Q. And along with Mr. Flaherty, were you involved  
 13 in providing input and information to KGS  
 14 regarding the development of this report?  
 15 **A. We were -- we were very involved with this**  
 16 **report because we were, well, not only helping**  
 17 **pay for it, but we were providing much of the**  
 18 **data to the Kansas Geological Survey and**  
 19 **reviewing it.**  
 20 Q. Were you personally involved in providing the  
 21 data and helping to develop this report?  
 22 **A. Yes, along with my hydrogeologist at the time,**  
 23 **Steve Flaherty.**  
 24 **MR. STUCKY:** I move to admit the  
 25 District's Exhibit 43.

Page 2076

1 **PRESIDING OFFICER:** Any objections?  
 2 **MR. OLEEN:** No objection and I have  
 3 it flagged as it may have been admitted  
 4 before but that could be incorrect.  
 5 **A. It does have -- in my notebook, it does have an**  
 6 **exhibit tab on it. But I'm not sure.**  
 7 **PRESIDING OFFICER:** Okay. In the  
 8 event it may be a duplicate, but GMD  
 9 Exhibit 43 is admitted.  
 10 **BY MR. STUCKY:**  
 11 Q. Have you been involved with helping to review  
 12 work that's been performed by Burns & McDonnell  
 13 in the past?  
 14 **A. Yes.**  
 15 Q. Provide an exam -- just provide one example of  
 16 that.  
 17 **A. Well, besides the ASR project, I'll -- I'll**  
 18 **maybe provide a different one. The Board of**  
 19 **Public Utilities for McPherson, I'll just refer**  
 20 **to them as McPherson BPU, filed a series of**  
 21 **applications a few years ago for a new proposed**  
 22 **well field located south of the City of**  
 23 **McPherson a considerable distance, about, I**  
 24 **believe, 14 or 16 miles off the top of my head.**  
 25 **And part of that review required some**

1 modeling because it is in an area that has  
2 chloride contamination. So at the request of  
3 the District and working with the Board of  
4 Public Utilities, Burns & McDonnell did some  
5 modeling work to show and determine what those  
6 impacts of that new well field could have on  
7 that chloride movement and also the -- the  
8 sustainability of the aquifer at that location.

9 Q. So did Burns & McDonnell then ask you to  
10 essentially peer review some of their work in  
11 that regard?

12 A. Oh, we certainly reviewed it and were involved  
13 with -- with it during the process of developing  
14 that -- that model. We -- we requested  
15 additional monitoring wells be put in, which  
16 were put in so that could enhance that data  
17 collection and modeling, so, yeah, we were very  
18 involved in that.

19 Q. So did you give recommendations specifically to  
20 modelers that were employed by Burns &  
21 McDonnell?

22 A. Yes, between myself and my hydrogeologist, Steve  
23 Flaherty, we provided data and lots of  
24 recommendations related to that model.

25 Q. Okay. Who are some of the modelers involved on

1 there was hesitation to correct the model, but  
2 eventually that was done.

3 Q. Were there suggestions made by Mr. DeAngelis in  
4 how to correct the modeling, that you and  
5 Mr. Flaherty gave him additional input to  
6 correct his solutions and then to arrive at a  
7 final result?

8 A. Yeah, if I remember correctly, the -- because  
9 the groundwater flow direction was different, we  
10 believed different -- represented different than  
11 what was in the model, I think the --  
12 Mr. DeAngelis was -- idea was to basically just  
13 rotate the output, and we didn't think that was  
14 a proper way to do that.

15 Q. And as you explained it to him in greater  
16 detail, did he -- did he then agree with you as  
17 far as that not being a proper solution?

18 A. I -- I believe so. I'm trying to remember  
19 exactly what transpired there, but in the end,  
20 we were fairly confident that the model -- model  
21 was used properly.

22 Q. Certainly you have lots of experience with ASR  
23 Phase I, Phase II, and the AMC as it relates to  
24 recharge, but did this project also involve  
25 recharge rates?

1 this project?

2 A. I -- I'm trying to remember. I know Luca  
3 DeAngelis was one of the main modelers, I  
4 believe Mr. McCormick was involved, and  
5 Mr. Clement with Burns & McDonnell. I -- I  
6 can't say for what level they were involved, but  
7 I know Mr. DeAngelis was -- did quite a bit of  
8 it.

9 Q. Let's just mention Mr. DeAngelis. Can you give,  
10 like, an example of a suggestion that you would  
11 have made to Mr. DeAngelis as it related to this  
12 project and whether or not your recommendation  
13 was abided by Mr. DeAngelis, give an example.

14 A. Let's see. One instance I can -- I can think of  
15 is myself and Mr. Flaherty, my hydrogeologist,  
16 felt that there was some incorrect input into  
17 the model that would show in the groundwater  
18 flow direction at a different direction, that we  
19 believed there was a groundwater divide in the  
20 area and it wasn't accurately represented in the  
21 model. So we requested that that be modified in  
22 the model.

23 Q. And what was Mr. DeAngelis' immediate reaction  
24 or response to that suggestion?

25 A. Well, I think initially, I think there was --

1 A. Can you --

2 Q. The project with the McPherson Board of Public  
3 Utilities?

4 A. Oh, yeah, I mean, that was -- part of it was to  
5 look at -- the three permits that the Board of  
6 Public Utilities had applied for, I believe,  
7 were somewhere around 2900 acre-feet. Now,  
8 that's obviously a pretty large quantity of  
9 water that could be withdrawn from the aquifer,  
10 so part of that was not only looking at that  
11 chloride movement but would that be sustainable  
12 in that area. So certainly that had to be in  
13 the model, the recharge and the safe yield of  
14 that area.

15 Q. Ask that you turn back quickly to -- well, let  
16 me ask this: These -- these peer reviews and  
17 involvement you've had in looking at reports or  
18 modeling, this is not an exhaustive list that  
19 we've covered, is that a true statement, of the  
20 work you've performed as a District and as far  
21 as giving input on official government reports  
22 or modeling to Burns & Mac, what I've  
23 highlighted is not an exhaustive list; is that  
24 right?

25 A. That's correct.

Page 2081

1 Q. In other words, you've done a number of other  
 2 occasions; is that true?  
 3 **A. That is true.**  
 4 Q. I'd ask that you turn in your CV that's already  
 5 been marked as Exhibit 83, and to save you time,  
 6 if you haven't found it yet, on the last page,  
 7 there's a list -- well, I'm sorry, strike that  
 8 question. Let's turn back to Exhibit 39. Okay.  
 9 At the end of your expert report, there's a list  
 10 of documents that you indicated that you  
 11 reviewed and used for your report, it's on  
 12 page 11 of your report. Would you agree with  
 13 me?  
 14 **A. Yes.**  
 15 Q. And you listed a number of documents and reports  
 16 that you specifically reviewed in preparation  
 17 for this hearing, true?  
 18 **A. Yes.**  
 19 Q. And you would have -- and as you're sitting here  
 20 today, you agree those are all ones that you  
 21 would have reviewed in preparation for this  
 22 hearing?  
 23 **A. Yes.**  
 24 Q. Is that an exhaustive list of documents and  
 25 reports that you would have reviewed as you

Page 2082

1 prepared for your expert testimony?  
 2 **A. No.**  
 3 Q. And, in fact, Mr. Boese, as I can personally  
 4 attest, you've spent numerous nights in the  
 5 office looking at additional reports and studies  
 6 as you prepared for this hearing; is that true?  
 7 **MR. MCLEOD:** I'm going to object to  
 8 counsel personally attesting to items on  
 9 this.  
 10 **MR. STUCKY:** I'll just ask to  
 11 rephrase the question.  
 12 **PRESIDING OFFICER:** Fine.  
 13 **BY MR. STUCKY:**  
 14 Q. Mr. Boese, you've spent numerous hours in the  
 15 office at night and on weekends reviewing  
 16 additional reports and documents as you prepared  
 17 for your expert testimony. Is that a true  
 18 statement?  
 19 **A. That's -- that's very true.**  
 20 Q. Okay. And so this is very, very far from an  
 21 exhaustive list of what has helped to formulate  
 22 your expert opinions; is that true?  
 23 **A. That's true.**  
 24 Q. Mr. Boese, what is a -- what is the Groundwater  
 25 Management District Act?

Page 2083

1 **A. That was a legislative declaration and statute**  
 2 **that was 1972 -- or there was actually a**  
 3 **previous attempt, and I don't remember the date,**  
 4 **maybe '67 or so, but eventually it became the**  
 5 **Groundwater Management District Act, 1972. That**  
 6 **allowed for the formation of groundwater**  
 7 **management districts like the Equus Beds GMD2.**  
 8 **Then it's a series of regulations -- or**  
 9 **statutes, I'm sorry, that govern how a district**  
 10 **can be formed, governed, their powers, finance,**  
 11 **it's a -- it's a fairly long document.**  
 12 Q. I'd ask that you turn to Exhibit 23 in your  
 13 notebook before you. And, again, I believe  
 14 judicial notice has already been taken of  
 15 this -- of this particular reference in our  
 16 notebook, but is that, in fact, the Groundwater  
 17 Management District Act?  
 18 **A. Which book is it in, Dave?**  
 19 Q. Number II, Volume II.  
 20 **A. Thank you. I'm sorry, what was your question?**  
 21 Q. My question is is what's shown in our notebook  
 22 as Number 22, is that, in fact, the Groundwater  
 23 Management District Act?  
 24 **A. That is the -- yes, that is the Groundwater**  
 25 **Management District Act that was -- the most**

Page 2084

1 **recent update to that was November of 2018, so**  
 2 **that is the current Groundwater Management**  
 3 **District Act, which is K.S.A. 82a-1020 through**  
 4 **82a-1042.**  
 5 Q. Is that an act that -- or series of statutes  
 6 that would confer management of groundwater  
 7 management districts to a local level?  
 8 **A. Yes.**  
 9 Q. And so it would also dictate that these local  
 10 groundwater management districts would be  
 11 responsible, then, for managing the groundwater  
 12 resources of the State. Is that a true  
 13 statement? Or of the District, of the District?  
 14 **A. Yeah, the legislative declaration was taking**  
 15 **notice that the formation of a local groundwater**  
 16 **management district was in the public interest**  
 17 **for the proper management of that resource, so**  
 18 **yes.**  
 19 Q. Tell me what the Groundwater Management District  
 20 Act states about preserving the basic use  
 21 doctrine.  
 22 **A. I'll just go ahead and read that portion of the**  
 23 **legislative declaration, which is 82a-1020, it**  
 24 **says, it is the policy of this act to preserve**  
 25 **basic water use doctrine and to establish the**

1 **right of local water users to determine their**  
2 **destiny with respect to the use of groundwater**  
3 **insofar as it does not conflict with the basic**  
4 **laws and policies of the State of Kansas.**

5 Q. So in other words, this initial declaration is  
6 part of what you're basing your opinion on that  
7 this management and these duties as far as  
8 interpreting regulations for a local groundwater  
9 management district, are you saying that this  
10 declaration helps to create that duty?

11 **A. It -- it does and actually our -- the powers and**  
12 **duties are defined later on in this statute that**  
13 **we can review later, if necessary.**

14 Q. Well, Mr. Boese, I -- would it suffice to say  
15 that you could recite some of those duties and  
16 powers without even having to flip --

17 **A. Yeah, I -- I believe I could.**

18 Q. So just in a nutshell, for the record, to speed  
19 up this hearing process, tell me what some of  
20 those powers and duties are of the local  
21 groundwater management district.

22 **A. We can obviously be formed, we can have a**  
23 **office, we can employ staff, we can levy a**  
24 **special assessment. We get into the -- more of**  
25 **the nuts and bolts, part of our power or our**

1 **duty is to advise and assist in matters related**  
2 **to -- to groundwater, whether that be storage,**  
3 **recharge, anything that involves conservation**  
4 **and use of the resource.**

5 Q. Does this Management District Act suggest that a  
6 management program should be adopted by a local  
7 groundwater management district?

8 **A. It does, it does require adoption of a -- of a**  
9 **management program.**

10 Q. Has the District, in fact, adopted a management  
11 program?

12 **A. Yes.**

13 Q. Would you turn to Exhibit 71? Tell me when  
14 you're there.

15 **A. I'm there, Dave.**

16 Q. What is Exhibit 71?

17 **A. This is the current management program of the**  
18 **Equus Beds Groundwater Management District.**

19 Q. Is this -- so this is the management that was  
20 officially adopted effective May 1st of 1995?

21 **A. That's correct.**

22 **MR. STUCKY:** Under the same -- based  
23 on the fact that the witness has testified  
24 to what it is and also based on the fact  
25 that it's an official government document,

1 I move to admit the District's Exhibit 71.

2 **PRESIDING OFFICER:** Any objection?

3 71 will be admitted. Oh, I'm sorry, wait,  
4 did you have something to say?

5 **MR. MCLEOD:** If we could just get a  
6 clarification on the record whether this  
7 1995 document is the current management  
8 program?

9 **BY MR. STUCKY:**

10 Q. Could you clarify for the record if this  
11 document that's included in Exhibit 71 is the  
12 current management program for the District?

13 **A. It is.**

14 **MR. STUCKY:** I move to admit it at  
15 this point.

16 **PRESIDING OFFICER:** Okay. GMD 71  
17 will be admitted.

18 **BY MR. STUCKY:**

19 Q. Does your manage -- does the District's  
20 management program take into account aquifer  
21 safe yield principles?

22 **A. Yes.**

23 Q. In -- in 20 seconds or less, how does this  
24 management program take that into account?

25 **A. It's -- the goal of the District is to manage**

1 **the aquifer on a safe yield and basically --**  
2 **which would basically limit discharge to**  
3 **recharge and to prevent groundwater mining.**

4 Q. So does this management program dictate upon you  
5 as a manager of the District the need to conduct  
6 these safe yield calculations?

7 **A. Yes.**

8 Q. How does this management program take into  
9 account the concept of ground -- of groundwater  
10 quality principle?

11 **A. Again, that's one of the founding principles of**  
12 **the District, and the goal then would be to**  
13 **maintain the water quality through protection**  
14 **and remediation.**

15 Q. So once again, without making you read it for  
16 the record, just to speed this up, would you  
17 agree with me that this management program talks  
18 about the District's duty to analyze groundwater  
19 quality?

20 **A. Yes.**

21 Q. There's also some Groundwater Management  
22 District goals that are embedded within this  
23 management program. Is that a true statement?

24 **A. That is correct.**

25 Q. Is one of those goals to prevent groundwater

Page 2089

1 mining by balancing groundwater withdrawals with  
 2 annual recharge?  
 3 **A. Yes.**  
 4 Q. And, again, in the goals section, it talks about  
 5 the need to protect natural water quality and  
 6 remediate groundwater contamination, does it  
 7 not?  
 8 **A. It does.**  
 9 Q. Based -- now, you have told me that you started  
 10 with the District 28 years ago so tell me a  
 11 little bit about your history of your  
 12 involvement in ASR Phase I, and -- and I'm going  
 13 to ask you some specific questions to try and  
 14 speed this up a little bit. With respect to ASR  
 15 Phase I, would you have helped to develop rules  
 16 and regulations based on your involvement --  
 17 your role in the District as it related to ASR  
 18 Phase I?  
 19 **A. Yes. To be -- to be clear, I was the hydrologic**  
 20 **technician during Phase I, but I would have been**  
 21 **involved in reviewing and assisting in**  
 22 **formulation of those rules and regulations.**  
 23 Q. Would you as the hydrologic technician have been  
 24 responsible for looking at permit conditions?  
 25 **A. Yes.**

Page 2090

1 Q. Would you have been responsible for helping to  
 2 analyze water permits related to ASR Phase I?  
 3 **A. I think I did in Phase I. I'm trying to**  
 4 **remember that far back. I know absolutely in**  
 5 **Phase II, I reviewed every one of those. Phase**  
 6 **I, I think I would have assisted in reviewing**  
 7 **those applications.**  
 8 Q. Would you have looked at the memorandum of  
 9 understanding -- the memorandum of understanding  
 10 germane to ASR Phase I at that time?  
 11 **A. Yeah.**  
 12 Q. And would you have provided some input in the  
 13 development of that document as it related to  
 14 ASR Phase I?  
 15 **A. I certainly remember reviewing it and providing**  
 16 **any input to the -- to the District manager at**  
 17 **the time.**  
 18 Q. There's been discussion about ASR Phase I  
 19 facilities and the development of those  
 20 facilities in ASR Phase I. Would you also have  
 21 been involved in some of those discussions as it  
 22 related to the inception of ASR Phase I?  
 23 **A. Yes.**  
 24 Q. And I assume without you going into great detail  
 25 about your additional involvement in ASR Phase

Page 2091

1 I, there would have been other duties that you  
 2 would have helped with as it related to the  
 3 creation of this whole ASR Phase I concept. Is  
 4 that a true statement?  
 5 **A. Yes.**  
 6 Q. I would ask that you turn in your exhibit  
 7 notebook to Exhibit 26. And it's going to be in  
 8 Volume II, I believe, Mr. Boese.  
 9 **MR. STUCKY:** And just for the  
 10 record, I believe that Exhibit 26 has  
 11 already been admitted into evidence, the  
 12 District Exhibit 26.  
 13 **PRESIDING OFFICER:** I think so.  
 14 **MR. STUCKY:** Or there was judicial  
 15 notice of it.  
 16 **PRESIDING OFFICER:** Right, yeah,  
 17 this is the Phase I approval? Yeah.  
 18 **BY MR. STUCKY:**  
 19 Q. So it's already been discussed, Mr. Boese, but  
 20 there's several references -- so I assume this  
 21 is a document that you're very familiar with; is  
 22 that right?  
 23 **A. Yes.**  
 24 Q. And, in fact, it's a document that you would  
 25 have had input on back in your early employment

Page 2092

1 with the District. Is that a true statement?  
 2 **A. Yes.**  
 3 Q. Okay. I believe that there's three references  
 4 in this document to the concept of passive  
 5 recharge credits. And just to speed up this --  
 6 this discussion, specifically, it's on page 5,  
 7 found in 10b; page 14, number 3; and page 17,  
 8 order number 2. Do you agree with me that those  
 9 are the places passive recharge credits are --  
 10 are discussed in this particular document?  
 11 **MR. OLEEN:** Point of clarification,  
 12 Mr. Stucky, are we -- are you looking at  
 13 the Phase I approval, Exhibit 26?  
 14 **MR. STUCKY:** Yes.  
 15 **MR. OLEEN:** The witness can answer  
 16 your questions, I didn't seem to line up  
 17 those page numbers and paragraphs.  
 18 **A. I think, Mr. Stucky, I think the pages are**  
 19 **counting from the -- or, Mr. Oleen, the pages**  
 20 **are counting from the front, so I think when**  
 21 **Mr. Stucky said page 5, it's actually page 2 of**  
 22 **21 on the -- I mean, it's a little confusing**  
 23 **because the first couple of pages aren't**  
 24 **numbered. Does that make sense?**  
 25 **BY MR. STUCKY:**

1 Q. Yeah, that's -- that's correct, I was counting  
2 from the beginning of the exhibit, I apologize,  
3 but that's an important distinction to make for  
4 the record.

5 **A. So in answer to your question, Mr. Stucky,**  
6 **what's labeled as page 2 of 21, which would be**  
7 **page 5 as we count, does include language**  
8 **related to passive recharge credits. Can you**  
9 **tell me the other page numbers, Mr. Stucky?**

10 Q. The next one, counting from the beginning,  
11 page 14, number 3.

12 **A. Yes.**

13 Q. It's shown at the top as page 11 of 21,  
14 number 3, that also talks about passive recharge  
15 credits; is that right?

16 **A. Yes.**

17 Q. Okay. And then finally page -- it would be  
18 counting from the beginning, page 17, order  
19 number 2, so at the top of that it would be  
20 labeled as page 14 of 21 on the top of that  
21 document, do you see the final reference to --

22 **A. Yes.**

23 Q. -- passive recharge credits?

24 **A. Yes, I do.**

25 Q. Based on these three references throughout the

1 Q. Tell me when you're there. And just for the  
2 record, tell us what page out of 21 on the upper  
3 right-hand portion of this document it's found.

4 **A. It's page 12 of 21.**

5 Q. Tell me what conclusion number 13 tells us about  
6 minimum index levels.

7 **A. This was a conclusion by the chief engineer at**  
8 **the time that if the City could not withdraw**  
9 **credits below the minimum index level, which**  
10 **would have been the 1993 level that we've been**  
11 **commonly calling them, then the public interest**  
12 **in not diverting the Equus Beds groundwater**  
13 **below that would be protected.**

14 Q. So in other words, at least according to the  
15 chief engineer, in your view, if we're looking  
16 at water below those 1993 levels, as it's  
17 implied in this order and based on your  
18 interpretation of this order, whose water is it  
19 below those 1993 levels?

20 **A. It would be Equus Beds groundwater, it would**  
21 **be -- it would be naturally occurring**  
22 **groundwater. Not artificially recharged water.**

23 Q. So at least as it related to withdrawing below  
24 those -- those 1993 levels or withdrawing  
25 recharge credits below those 1993 levels, do you

1 document, would you agree with all the previous  
2 testimony, both Mr. Letourneau and perhaps the  
3 City's witnesses, that at least as it related to  
4 ASR Phase I, passive recharge credits were  
5 prohibited by this order?

6 **A. Yes.**

7 Q. As you look at the way passive recharge credits  
8 are -- are defined in this order, what jumps out  
9 at you?

10 **A. In relation to the first one, which is on page 2**  
11 **of 21, or page 5, the -- the chief engineer at**  
12 **the time lended a definition to passive recharge**  
13 **credit by calling it, with an i.e., water which**  
14 **the City could have legally pumped but did not**  
15 **pump. That stands out as being a passive**  
16 **recharge credit, it was -- would be getting**  
17 **credit for water not legally pumped from the**  
18 **City's native water rights.**

19 Q. Now, would you also agree with the prior  
20 testimony that this order talks about a minimum  
21 index level and what that means?

22 **A. Yes.**

23 Q. I would ask that you turn to conclusion  
24 number 13 in this document?

25 **A. Okay.**

1 believe the chief engineer is saying that the  
2 Equus Beds Aquifer would be protected by  
3 ensuring that does not occur?

4 **A. Yes.**

5 Q. And, in fact, the terminology that's used in  
6 this document is the public interest, is that  
7 right, is protected?

8 **A. That's correct.**

9 Q. And I've asked some questions about the meaning  
10 of that phraseology that's found there, but  
11 would -- do you agree with how I have phrased  
12 what that statement means, or is there anything  
13 additional, at least for our surface level  
14 purposes, that you would like to correct as far  
15 as how I characterized it?

16 **A. I think the only thing I would add is the basin**  
17 **storage area, which would be the area between**  
18 **the 1993 levels and the top of the aquifer, it's**  
19 **either the predevelopment or 10 feet below land**  
20 **surface, that was the area that was defined that**  
21 **the City could store water, inject water,**  
22 **surface water, and then recover later. And**  
23 **below that, they could not do that. They could**  
24 **inject below that but they could not recover.**

25 Q. Do you agree that passive recharge credits

Page 2097

1 should not be allowed pursuant to ASR Phase I?  
 2 **A. I do.**  
 3 Q. And also based on your employment with the  
 4 District, do you agree that there's significance  
 5 with the protection that was assured in the ASR  
 6 Phase I order as shown in recommendation  
 7 number 13?  
 8 **A. I do.**  
 9 Q. Now I'd like to shift to some of your brief  
 10 involvement or history with ASR Phase II. We  
 11 just established that you were involved from the  
 12 inception and through the development of ASR  
 13 Phase I. Were you also involved from the  
 14 inception and -- and through the development of  
 15 ASR Phase II?  
 16 **A. Yes.**  
 17 Q. During the development of ASR Phase II, would  
 18 you have had occasion to reference or look at  
 19 rules and regulations to try and determine what  
 20 would be proper with respect to ASR Phase II?  
 21 **A. Yes.**  
 22 Q. Tell me in -- briefly what that rule would have  
 23 been.  
 24 **A. Well, obviously, the City filed ASR Phase II**  
 25 **recharge recovery permits. Initially, they**

Page 2098

1 **filed 20 of them -- 20 of them, I believe. I**  
 2 **would have done all the review of those. And**  
 3 **then the City filed, I think, in two different**  
 4 **cases after that, I think four more at one time**  
 5 **and then six more, for a total of 30. Those are**  
 6 **what's subject to the proposal that we have in**  
 7 **front of us today. So I would have reviewed all**  
 8 **of those water permit applications to see if**  
 9 **they meet the District's rules and regulations**  
 10 **for an ASR water permit application.**  
 11 Q. And it sounds like during the development of ASR  
 12 Phase II there were also rule changes and  
 13 changes to regulations that were being pursued  
 14 at that time; is that true?  
 15 **A. Not that I recall. The -- the rules and**  
 16 **regulations in place for Phase I are the same**  
 17 **ones that were used for Phase II. I can't think**  
 18 **of any, necessarily, modifications. Now we have**  
 19 **a modification that occurred after that to -- to**  
 20 **the minimum index levels.**  
 21 Q. So were you involved in developing the rules and  
 22 the regulations, at least in some part, as they  
 23 related to ASR Phase I and ASR Phase II?  
 24 **A. Yes.**  
 25 Q. I think you already said that you -- you would

Page 2099

1 have recommended or helped to impose permit  
 2 conditions as it related to ASR Phase II?  
 3 **A. Yes.**  
 4 Q. There's been a lot of discussion about the  
 5 infrastructure for ASR Phase II and the  
 6 construction of this -- of this very impressive  
 7 infrastructure for ASR Phase II. Do you recall  
 8 some of that discussion?  
 9 **A. Yeah.**  
 10 Q. Would you have also given input on that  
 11 infrastructure based on your role with the  
 12 District during that time?  
 13 **A. As related to well siting and land acquisition**  
 14 **and -- and spacing waivers, those kind of**  
 15 **things, yes.**  
 16 Q. Would you also have, and I think you said this  
 17 already, and if you did, I apologize, but you  
 18 would have looked at the City's permits and  
 19 helped to analyze the City's permits related to  
 20 ASR Phase II?  
 21 **A. I believe I did every one of them myself, yes,**  
 22 **all 30 of them. I may have had some assistance**  
 23 **from a hydrogeologist at some point in time, but**  
 24 **I think I personally reviewed all 30 of them.**  
 25 **Actually, I know I personally reviewed all 30 of**

Page 2100

1 **them.**  
 2 Q. So in having personally reviewed all 30 of them,  
 3 the ultimate recommendation that came from the  
 4 District with regard to those permits, would  
 5 that have been your recommendation?  
 6 **A. That was -- because of the uniqueness of this**  
 7 **project, the District Board was also involved in**  
 8 **formulating those -- those recommendations based**  
 9 **on staff recommendations.**  
 10 Q. So it was your recommendation that went to the  
 11 Board; is that right?  
 12 **A. That would have been correct.**  
 13 Q. Did the Board go with your recommendations in  
 14 those regards with respect to those 32 permits?  
 15 **A. I can't think of when they did not. I mean,**  
 16 **there might have been some nuances, some slight**  
 17 **changes, you know, maybe some additions --**  
 18 **additional conditions, but by and large, I would**  
 19 **say that would be a true statement that they --**  
 20 **they went with staff recommendations of those**  
 21 **30.**  
 22 Q. Turn to Exhibit 28 in your notebook. Well,  
 23 let's -- let's strike that. Turn to Exhibit 58  
 24 in your notebook first. And just let me know  
 25 when you're there.

1 **A. Is that in Number IV, David?**  
2 Q. Truth is I just now found it, yes, Number IV.  
3 **A. 58, correct?**  
4 Q. That's correct. What is Exhibit 58, Mr. Boese?  
5 **A. 58 is a order from the chief engineer, Division**  
6 **of Water Resources. The date of the letter is**  
7 **September 24, 2009, or date of the cover letter,**  
8 **this is the findings and order approving Phase**  
9 **II of the ASR project.**  
10 Q. On that third page counting from the front,  
11 there's an approval of application and permit to  
12 proceed; is that right?  
13 **A. That's correct.**  
14 Q. And it's officially signed by Mr. Barfield; is  
15 that right?  
16 **A. Yes.**  
17 Q. So you referenced 32 permits that you personally  
18 reviewed and gave input on, would this be an  
19 example of one of those 32 permits?  
20 **A. Yes. And for clarification, I think it's 30. I**  
21 **may have misspoken, but it's 30 ASR Phase II**  
22 **applications. In addition to the Phase I's that**  
23 **I would have reviewed. But, yes, this is an**  
24 **example of one of the initial 20 ASR Phase II**  
25 **recharge and recovery permits that was approved**

1 aquifer unless we're above that 1993 level?  
2 **A. Yes, for that cell number 6, which is where this**  
3 **particular recharge and recovery well is located**  
4 **is in index cell number 6.**  
5 Q. If we were to walk through the other 29 permits  
6 that you reviewed, would we find the same  
7 requirement or -- in all additional 29 permits?  
8 In other words, that recharge credits couldn't  
9 be recovered if we were below that 1993 level?  
10 **A. Yes. And it's different for -- depending on**  
11 **what cell you're in, so that elevation number**  
12 **can change; but that was based on that minimum**  
13 **index level established at the time, which we**  
14 **have been calling the 1993 water levels.**  
15 Q. As it relates to our prior discussion in this  
16 hearing, would you agree that number 21 in this  
17 permit ensures that the City, being the operator  
18 of the aquifer storage and recovery well  
19 identified in this permit, shall not impair  
20 other water rights?  
21 **A. Yes.**  
22 Q. And would you agree that all these permit  
23 conditions should be attached weight and be  
24 given significance as they relate to ASR Phase  
25 II?

1 **by the chief engineer.**  
2 **MR. STUCKY:** I move to admit the  
3 District's Exhibit 58.  
4 **PRESIDING OFFICER:** Any objections?  
5 GMD 58 is admitted.  
6 **BY MR. STUCKY:**  
7 Q. As it relates to Exhibit 58, what does  
8 Exhibit 58 tell us about withdrawing below  
9 minimum index levels?  
10 **A. You want me to cite the -- the condition?**  
11 Q. Yes, please.  
12 **A. Condition 19, which is on page 3 of that**  
13 **approval, says the proposed recovery of water**  
14 **artificially recharged by the City shall only**  
15 **occur when recharge credits are determined to be**  
16 **available in cell number 6 and the static water**  
17 **level elevation is above elevation 1,387 mean**  
18 **sea level. Looks like they forgot the word**  
19 **feet, it should say 1,387 feet.**  
20 Q. So in other words, in this order from -- that's  
21 signed by Mr. Barfield, as it relates to a --  
22 this particular permit for ASR Phase II, and  
23 this permit number as you mentioned is 46,714,  
24 there's a specific requirement that recharge  
25 credits not be captured or withdrawn from the

1 **A. Yes.**  
2 Q. We talked about a number of -- a couple  
3 concepts, safe yield, minimum index levels, the  
4 public interest. Just to sum it up for us  
5 quickly on the record, if you can, what are some  
6 of those other permit conditions that you  
7 believe are important that stem from this given  
8 permit?  
9 **A. Well, I would say all of them are -- are**  
10 **important.**  
11 Q. Could you highlight some of the ones that have  
12 been discussed the most in this hearing?  
13 **A. Can I have a minute to look through them real**  
14 **quick, refresh my memory? Having glanced**  
15 **through it again, I believe they're all**  
16 **important. Obviously the -- some of the initial**  
17 **conditions on what the authorized rate and**  
18 **quantity are obviously very important; the**  
19 **perfection period, the time to complete is**  
20 **important; the requirement to have a KDHE UIC,**  
21 **underground injection control, permit is**  
22 **important. Obviously the ones we've already**  
23 **stated, that they can only withdraw the recharge**  
24 **credit when the water level is above those 1993**  
25 **levels, not impairing other water rights, not**

Page 2105

1 **negatively affecting the public interest,**  
 2 **subject -- it also had to be subject to our**  
 3 **approved MOU. Those are a few that I see, Dave.**  
 4 **Again, I think all conditions are important, but**  
 5 **some -- some may carry some additional weight.**  
 6 Q. So a lot of those concepts have already been  
 7 discussed in this hearing. As they're outlined  
 8 in the conditions in this permit, you would --  
 9 you would agree that those conditions are  
 10 important based on your 28 years of experience  
 11 with the District and having been involved in  
 12 reviewing these permits?  
 13 **A. Yes, and I would -- I would add a number of**  
 14 **these permit conditions were recommended by the**  
 15 **GMD, by the -- by the District.**  
 16 Q. And at this time when these permits came out,  
 17 we're talking 2009, you would have already been  
 18 the District manager at that time; is that  
 19 right?  
 20 **A. That's correct.**  
 21 Q. So if there was an official recommendation from  
 22 the District regarding these permit conditions,  
 23 those would have came from you; is that right?  
 24 **A. They would have came from the -- from the**  
 25 **District Board, I would have wrote the letter**

Page 2106

1 **based on the District Board action on those --**  
 2 **on the water permit applications, so based on**  
 3 **staff recommendations, which would have been**  
 4 **mine.**  
 5 Q. I now ask that you move back to Exhibit 28.  
 6 Tell me when you're on Exhibit 28 and Volume II,  
 7 it looks like.  
 8 **A. I'm finally there.**  
 9 Q. Okay. To speed up our talk about Exhibit 28,  
 10 you would agree with me that this is a finding  
 11 and order with regard to ASR Phase II; is that  
 12 right?  
 13 **A. Yes.**  
 14 Q. And, in fact, whether this was admitted into the  
 15 record, at the very bare minimum, there's been  
 16 judicial notice of this document because it's an  
 17 important document as it relates to ASR Phase  
 18 II; is that right?  
 19 **A. Yes.**  
 20 Q. Okay. In this document, there's also a  
 21 reference to passive recharge credits, and if we  
 22 count from the beginning, I believe it's on  
 23 page 5, order number 2.  
 24 **A. Yeah.**  
 25 Q. And it's already been read for the record that

Page 2107

1 it states that passive recharge credits shall  
 2 not be allowed. Mr. Boese, I asked a question  
 3 of Mr. Letourneau when he was on the stand if it  
 4 was his view of whether or not the same concept  
 5 of passive recharge credits that was embedded in  
 6 the ASR Phase I order is also embedded into this  
 7 ASR Phase II order. What's your belief in that  
 8 regard?  
 9 **A. I believe they're the same.**  
 10 Q. So in other words, you provided an  
 11 interpretation of what was meant from a  
 12 definition standpoint of a passive recharge  
 13 credit in ASR Phase I. Do you think that same  
 14 definition applies to ASR Phase II?  
 15 **A. Yes, specifically that it would represent water**  
 16 **not pumped from the City and water that is not**  
 17 **physically injected into the aquifer. Those are**  
 18 **the two -- two definitions that were given in**  
 19 **Phase I.**  
 20 Q. Also in Exhibit 20 -- 28, on page 5, order  
 21 number 8, there's a discussion about minimum  
 22 index levels; is that -- is that right?  
 23 **A. Yeah, it's a pretty long -- pretty long**  
 24 **condition, it probably should have been broken**  
 25 **into two; it talks about the top and the bottom,**

Page 2108

1 **but, yes, roughly about the last third --**  
 2 Q. Well, let's talk about the last sentence -- last  
 3 third of it.  
 4 **A. Yes.**  
 5 Q. Particularly that last sentence.  
 6 **A. Yes.**  
 7 Q. What does that tell us?  
 8 **A. That recharge credits may be withdrawn from a**  
 9 **cell only when recharge credits are determined**  
 10 **to be available from the cell and the static**  
 11 **water level at its index well is above the**  
 12 **lowest index level.**  
 13 Q. But it also references the fact that the City  
 14 can actually recharge even if the static water  
 15 level has dropped below that index level?  
 16 **A. Yes, the rest of that sentence says, however,**  
 17 **water may be recharged when the static water**  
 18 **level is below the lowest index level in that**  
 19 **well. It does not prohibit the City from --**  
 20 **from recharging when the water level is below**  
 21 **that but prohibits recovery.**  
 22 Q. So while we're on this point, number 8 also  
 23 tells us something about protecting neighboring  
 24 wells, what does it tell -- what does it tell us  
 25 about that?

1 **A. I'm sorry, can you repeat that or rephrase that?**  
2 Q. I'm sorry, I misspoke. The beginning of order  
3 number 8, what does that tell us?  
4 **A. That -- that speaks to when the City cannot**  
5 **inject if the water level is too high because it**  
6 **could impact other -- other users is why that**  
7 **condition was put in. I shouldn't say other**  
8 **users, could impact structures and those kind of**  
9 **things. We didn't want the water level to be**  
10 **raised too high, you don't want the water level**  
11 **at land surface necessarily, so there was a**  
12 **10-foot restriction. So it's predevelopment or**  
13 **10 feet, I generally just say it's 10 feet, but**  
14 **you definitely can't go above 10 feet above land**  
15 **surface.**  
16 Q. While we're on this subject, do both ASR Phase I  
17 order and ASR Phase II order, do they provide  
18 any assurances to other -- other water right  
19 holders in the District as far as the fact that  
20 there won't be impairment or their water quality  
21 will be preserved?  
22 **A. As far as the MOU with the District, which is**  
23 **referenced, there is some protections to**  
24 **domestic well owners within 660 feet if they're**  
25 **impaired, and there's also protection to**

1 II, in conjunction with the permits and the  
2 orders, what protections are offered to  
3 neighboring well owners pursuant to the City's  
4 operation of its ASR facilities?  
5 **A. I think there's -- the number one is the one we**  
6 **just talked about was the City cannot degrade**  
7 **the ambient groundwater use in the basin storage**  
8 **area. There's also a protection that the City**  
9 **can't withdraw the -- the credits below the 1993**  
10 **levels; that also protects other users from**  
11 **impairment by withdrawing of the groundwater**  
12 **below the 1993 levels.**  
13 Q. Mr. Boese, you're also familiar with the aquifer  
14 maintenance credit proposal; is that right?  
15 **A. Yes.**  
16 Q. When did you first become familiar with this  
17 concept of aquifer maintenance credits?  
18 **A. I probably can't put a specific date on it.**  
19 **Maybe a little bit of background, we were**  
20 **working with the City and their consultants to**  
21 **do some groundwater modeling on what -- what the**  
22 **groundwater level looked like in a drought. I**  
23 **think we started that maybe sometime in early**  
24 **2016, I'm not sure of the date, and then I**  
25 **believe sometime in 2017, the City or the City**

1 **domestic wells throughout the basin storage area**  
2 **if they're impacted by water quality, if that's**  
3 **what you're referring to.**  
4 Q. Well, let me ask you this, let's turn to number  
5 12 on page 6 of this document. At the very  
6 beginning, it says, that the source water used  
7 for artificial recharge shall not degrade the  
8 ambient groundwater quality use in the basin  
9 storage area. Previously, I asked  
10 Mr. Letourneau some questions about taking  
11 source water from the Little Arkansas River and  
12 putting it into the aquifer and the assurances  
13 in that regulation that we wouldn't impact,  
14 quote, the ambient groundwater quality in the  
15 basin storage area. Do you recall that -- that  
16 line of questioning?  
17 **A. Yes.**  
18 Q. And do you believe that this condition in  
19 number 12 identifies or embeds into this order  
20 that requirement?  
21 **A. Yes, it advises that the City's recharge**  
22 **activity would not degrade the ambient**  
23 **groundwater use in the basin storage area.**  
24 Q. So in conjunction with the memorandums of  
25 understanding in place for ASR Phase I and Phase

1 **consultants approached us with this AMC concept.**  
2 **PRESIDING OFFICER:** Excuse me, if  
3 this is a new line of questioning, maybe it  
4 would be a good time for a lunch break.  
5 **MR. STUCKY:** Sure.  
6 **PRESIDING OFFICER:** All right.  
7 Okay.  
8 **MR. STUCKY:** And I was just  
9 wondering if -- we did this another day,  
10 just I would love to get through this  
11 hearing in five days if we possibly could,  
12 is there a way we can shorten the lunch  
13 hour?  
14 **PRESIDING OFFICER:** We can shorten  
15 the lunch hour. I've just been rounding it  
16 up with the clock, but it is 12:20,  
17 everybody's usually back in plenty of time,  
18 how about 10 after 1:00, 50 minutes for  
19 lunch instead of a little over an hour?  
20 **MR. STUCKY:** I would even support  
21 starting at 1:00, if it's okay with  
22 everybody else.  
23 **MR. OLEEN:** I should support that  
24 but I'm hungry and concerned that I  
25 couldn't get back in time.

Page 2113

1 **MR. STUCKY:** All right.  
 2 **PRESIDING OFFICER:** Yeah, let's aim  
 3 for 10 after 1:00. Okay, thank you.  
 4 (Thereupon, a lunch recess was  
 5 taken; whereupon the following was  
 6 had.)  
 7 **PRESIDING OFFICER:** Okay. It's 10  
 8 after 1:00, we're back on the record. And,  
 9 Mr. Stucky, you may continue.  
 10 **BY MR. STUCKY:**  
 11 Q. Mr. Boese, I had just asked you a couple  
 12 questions about when you started your  
 13 involvement with the City's AMC proposal  
 14 concept.  
 15 **A. Mr. Stucky, could you pause one second, I'm**  
 16 **going to shut that door with the background**  
 17 **noise from the -- from their refrigerator and**  
 18 **stuff in there? Sorry, Dave.**  
 19 Q. With respect to the City's Exhibit Number 1,  
 20 which was the proposal document, have you --  
 21 have you also read that document on numerous  
 22 occasions?  
 23 **A. I have read it numerous times, yes.**  
 24 Q. And have you also examined the City's drought  
 25 model, at least in some capacity?

Page 2114

1 **A. Yeah.**  
 2 Q. Have you also examined the City's MODFLOW  
 3 modeling?  
 4 **A. Yes, between myself and my former**  
 5 **hydrogeologist, we actually received the model**  
 6 **and ran it through our GMS software, so yes.**  
 7 Q. And we already talked about Exhibit 61, which is  
 8 where you were invited by USGS to help formulate  
 9 that model. Would that also suggest your  
 10 involvement in developing that model and  
 11 understanding that model?  
 12 **A. Yes.**  
 13 Q. And as far as the City's proposal document,  
 14 would you describe yourself as quite familiar  
 15 with the City's proposal document?  
 16 **A. Yes.**  
 17 Q. And you understand the basic tenets of the  
 18 proposal document, so I don't think we need to  
 19 go through those again; is that right?  
 20 **A. That's correct.**  
 21 Q. As it related to the Equus Beds groundwater flow  
 22 model that's used in that proposal, tell me some  
 23 of the work you did in analyzing that particular  
 24 model, in a nutshell. And I think it's already  
 25 outlined in your expert report, so in a

Page 2115

1 nutshell, would you agree that you looked at the  
 2 model structure, you looked at initial and  
 3 boundary conditions, the suitability of input  
 4 files, the calibration process, you observed  
 5 data used to calibrate, you did that along with  
 6 your hydrogeologist?  
 7 **A. That's correct.**  
 8 Q. So along with your hydrogeologist, did you  
 9 examine as -- or examine that model in great  
 10 detail?  
 11 **A. I would say we did a pretty good job of**  
 12 **reviewing it. Again, we -- initially, we took**  
 13 **the City's MODFLOW and ran it into our GMS**  
 14 **because the GMS allows you to visually look at**  
 15 **the modeled results and the inputs much easier.**  
 16 **So we -- we did that, so we've been involved**  
 17 **with that for sometime.**  
 18 Q. Along with Steve, you -- did you look at all the  
 19 tables in the model?  
 20 **A. It may be hard to say if I looked at every**  
 21 **table, or we looked at every table, but I would**  
 22 **say we probably did. I mean, there may be some**  
 23 **tables that were embedded that we didn't -- we**  
 24 **didn't examine. So I don't want to answer that**  
 25 **we looked at every single one, but I would say**

Page 2116

1 **that we looked at every one that we -- that we**  
 2 **had available.**  
 3 Q. What about the MODSIM model, what was your --  
 4 what was your level of review with respect to  
 5 the drought model? It's in your expert report,  
 6 just to speed this up, would you agree that you  
 7 spot-checked data for the following parameters,  
 8 evapotranspiration, recharge rates, hydraulic  
 9 conductivity, pumping rates, layer thickness,  
 10 specific yield and storage, initial heads, top  
 11 and bottom elevations, are those all things you  
 12 looked at?  
 13 **A. That would have been for the MODFLOW model,**  
 14 **yeah.**  
 15 Q. Yes, I shifted gears.  
 16 **A. Yes, the MOD -- that would have been for the**  
 17 **MODFLOW, those parameters you're talking about**  
 18 **would have been MODFLOW model parameters.**  
 19 Q. Yeah, I misspoke, I --  
 20 **MR. OLEEN:** Point of clarification,  
 21 Mr. Stucky, were you reading from  
 22 Mr. Boese's report just now or not?  
 23 **MR. STUCKY:** Yeah, those are all  
 24 terms that I pulled out of his expert  
 25 report.

1 **MR. OLEEN:** But not like a specific  
2 list somewhere --  
3 **MR. STUCKY:** There is a list --  
4 **MR. OLEEN:** -- verbatim?  
5 **MR. STUCKY:** -- to that effect in  
6 his report, towards the beginning.  
7 **BY MR. STUCKY:**  
8 Q. So you've looked at both the MODSIM model and  
9 the MODFLOW model as it relates to the City's  
10 proposal?  
11 **A. Well, as far as the MODSIM, we looked at the --**  
12 **what the City gave us as far as inputs and**  
13 **outputs; we didn't actually run the MODSIM model**  
14 **at our office at all.**  
15 Q. What does it mean to analyze starting heads?  
16 **A. Well, you have to have a starting point where**  
17 **you're going to start your model at, and you**  
18 **can -- you can pick any year that you want, I**  
19 **guess, as far as what's available for the model,**  
20 **or you can modify those heads, the starting**  
21 **water level heads.**  
22 Q. Is that something you would have looked at with  
23 respect to the City's drought modeling?  
24 **A. To the MODFLOW model, yes.**  
25 Q. You indicated that your involvement in

1 that were discussed?  
2 **A. Yes, originally we agreed to start with 2010**  
3 **starting water level heads. And, in fact, there**  
4 **was a letter from the City when they provided**  
5 **the model to us in November, I believe, of 2016,**  
6 **it stated that the water level heads began in**  
7 **2020, 'cause we were modeling a 2011 and 2012**  
8 **drought repeated four times, so it was logical**  
9 **in two ways to start with the 2010, and that was**  
10 **the condition before the drought started.**  
11 **Excuse me. And 2010 was more -- more of an**  
12 **average representation of what the water levels**  
13 **in the well field are. '98 is pretty low, 2016,**  
14 **2017 is pretty high, 2010 was -- was more of a**  
15 **representative average of the water levels in**  
16 **the well field. So there was really two reasons**  
17 **that the 2010 -- and that was something that**  
18 **we'd agreed upon early on between the staff --**  
19 **the District staff and the District -- and the**  
20 **City consultants and staff, to start with 2010.**  
21 Q. Mr. Boese, a moment ago, and Your Honor looked  
22 at you when you said that, you said the starting  
23 heads should be 2020. I think you --  
24 **A. I'm sorry.**  
25 Q. -- you just misspoke, you meant 2010?

1 discussing the City's proposal that's before us  
2 today began in 2016. At some point -- so at  
3 least initially, were you pretty involved in the  
4 process and the discussions?  
5 **A. The -- the original discussions were -- involved**  
6 **the City desiring to know what the aquifer**  
7 **looked like during a drought, so we had a**  
8 **cooperative effort between myself and my staff,**  
9 **along with the City and the City's consultants**  
10 **to, I guess, put our minds together to see what**  
11 **the best way to look at what that would look**  
12 **like, what a drought scenario would look like,**  
13 **impact to the groundwater levels in the well**  
14 **field. So we started that -- again, I don't**  
15 **remember the date, I want to say it was early**  
16 **2016, and proceeded through that for several**  
17 **months.**  
18 Q. When those discussions first began, was -- we've  
19 talked about the 1998 levels and how the  
20 starting heads for the City's modeling was based  
21 on the 1998 levels. Do you recall that  
22 discussion?  
23 **A. You're right, the model that was used for the**  
24 **proposal starts with 1998 water level heads.**  
25 Q. At some point, were there other starting heads

1 **A. I did mean 2010, I'm sorry. I did mean 2010,**  
2 **yes, thank you.**  
3 Q. Turn to that black notebook from the City.  
4 **MR. OLEEN:** While the witness is  
5 doing that, Mr. Stucky, I'm sorry to  
6 interrupt again, I -- I don't see starting  
7 heads, I don't remember that phrase in this  
8 report, and I just -- I guess it's not your  
9 job to totally help me follow along where  
10 you're discussing, but you rattled off a  
11 list of modeling things that is supposedly  
12 in Mr. Boese's report and I'm not seeing a  
13 lot of modeling discussion. I wonder if I  
14 have an outdated expert report?  
15 **MR. MCLEOD:** I will just mention  
16 also I -- I quickly looked as that  
17 discussion was taking place and I didn't  
18 see any modeling information in Mr. Boese's  
19 report, and I'm wondering if Counsel is  
20 referencing a report that was never  
21 actually provided to the other parties.  
22 **PRESIDING OFFICER:** Could you remind  
23 me what exhibit number?  
24 **MR. OLEEN:** 39 --  
25 **PRESIDING OFFICER:** 39.

Page 2121

1 **MR. OLEEN:** -- Madam Officer. For  
 2 the record, the one I'm looking at is  
 3 dated -- my copy, at least, is dated  
 4 February 18, 2019.  
 5 **MR. STUCKY:** I would -- I would  
 6 agree that the reference to starting heads,  
 7 I'm not immediately seeing that term used  
 8 in the expert report, I must have  
 9 misremembered.  
 10 **MR. MCLEOD:** Madam Chairperson, I --  
 11 I'm just compelled to add at this juncture  
 12 as well, it sounded like in Mr. Boese's  
 13 testimony that he was saying that the  
 14 District had taken the model and data  
 15 provided by the City and ran that, he and  
 16 Mr. Flaherty, several times in their  
 17 software, which he described as providing  
 18 better visual presentation, and I don't  
 19 believe we were provided any of those  
 20 modeling results in discovery either. And  
 21 we did have discovery outstanding that  
 22 asked for such items.  
 23 **A. Can I speak to that or not?**  
 24 **BY MR. STUCKY:**  
 25 **Q.** Please speak to that, Mr. Boese.

Page 2122

1 **A. That was during the process of reviewing the**  
 2 **model. We did not provide -- I don't believe we**  
 3 **generated any official results. We provided**  
 4 **that back to the City, especially Mr. Macey**  
 5 **that's sitting here, and he could probably, if**  
 6 **you need to call him back, he could -- he could**  
 7 **attest to that that we sat down and assisted**  
 8 **Mr. Macey and the consultants. We did not**  
 9 **provide -- we did not produce a report; we were**  
 10 **merely trying to assist the City at that time to**  
 11 **understand if there were any issues with the**  
 12 **model.**  
 13 **MR. OLEEN:** My initial concern was  
 14 making sure that I had the current expert  
 15 report, and the copy that I have doesn't  
 16 have any modeling analysis in it. And if  
 17 that's not the line of questioning that  
 18 Mr. Stucky is going down, then I don't  
 19 really have concerns, but if we're going  
 20 down a line of questions about the  
 21 witness's modeling analyses, I don't see  
 22 those in this report. There's other  
 23 opinions on things, but I don't see  
 24 modeling critiques in here.  
 25 **MR. STUCKY:** The critiques on the

Page 2123

1 modeling and the results, that is, I  
 2 believe, discussed in this report, but at  
 3 least at this juncture, that's not the line  
 4 of questioning I was going to go down.  
 5 And, frankly, the extent to which I go down  
 6 that line of questioning with this witness  
 7 will be, at least to some degree, limited.  
 8 **PRESIDING OFFICER:** So we've had  
 9 responses to the objections, are there --  
 10 are you satisfied with the responses, where  
 11 are ...  
 12 **MR. MCLEOD:** I am not and I think  
 13 Mr. Stucky should point out to us at this  
 14 moment where in this report he believes the  
 15 modeling critique is set forth. And if I  
 16 understood what Mr. Boese just said in  
 17 response, he's saying that there was some  
 18 back and forth with Mr. Macey about  
 19 modeling results, but none of his modeling  
 20 results were preserved or provided in  
 21 discovery, I think he's recognizing that,  
 22 and so we don't have any foundation for  
 23 whatever modeling testimony he's going to  
 24 give based on that -- that modeling that he  
 25 says was done.

Page 2124

1 **PRESIDING OFFICER:** Can you help us  
 2 find our way through this?  
 3 **MR. STUCKY:** Yes. In his expert  
 4 report, he talks about the results in -- he  
 5 talks about the proposal and the data  
 6 utilized in the proposal and his analysis  
 7 of that data, and, frankly, I think that  
 8 consideration of the model would flow from  
 9 that or would stem from that.  
 10 But that said, I think for the purposes  
 11 of my questioning, I can keep the questions  
 12 focused on what's actually in the proposal  
 13 and the data sets that are in the proposal  
 14 that I don't think there's any question  
 15 that he indicates he reviewed so ...  
 16 **PRESIDING OFFICER:** Will that  
 17 address ...  
 18 **MR. MCLEOD:** It -- it utterly  
 19 doesn't, and I notice that Counsel again  
 20 didn't give us any specific references to  
 21 anything in this report. It appears to me  
 22 that we're setting up a raft of surprise  
 23 modeling testimony that was not shared in  
 24 discovery and is not referenced in the  
 25 witness's expert report, and it is just

1 grossly improper.  
2 **MR. STUCKY:** Okay.  
3 **PRESIDING OFFICER:** Well, if -- go  
4 ahead, Mr. Stucky. I thought I heard you  
5 say you were not going to be questioning  
6 about modeling now. Did I misunderstand?  
7 **MR. STUCKY:** Yeah, right now, I am  
8 just asking some background questions and  
9 the extent to which this witness -- we have  
10 another witness that will testify on the  
11 modeling, that wasn't the purpose of this  
12 witness. But for what it's worth, the  
13 report says, the drought and groundwater  
14 model submitted with the proposal  
15 indicates, on the bottom of page 4, and  
16 then there's a discussion of what it  
17 indicates and how -- how there was a  
18 concern with some of those results. And so  
19 it is referenced in different places in the  
20 report, and that's just one of several  
21 examples that it is something he  
22 references.  
23 But I was, at least at this point, I was  
24 planning on going down a different line of  
25 questioning. And as I look through what

1 levels or the modeled minimum drought water  
2 level. That's, again, a summation of  
3 what's in the proposal and testimony we've  
4 already had.  
5 And then where Mr. Boese is going with  
6 that is the coup d'etat at the end of that  
7 paragraph where he notes that there's a  
8 typo in table 2-10 of the proposal, notably  
9 for index cells 1 and 2 as the proposed  
10 levels don't accurately represent the  
11 current minimum index levels minus the  
12 proposed contingency. So that's not a  
13 modeling analysis, that's a summary of a  
14 couple things from the proposal, and then  
15 it's saying there's a typo in a table.  
16 And I think there is nothing in this  
17 report that enables this witness to testify  
18 to any modeling analysis, not about a  
19 MODFLOW analysis, not about a MODSIM  
20 analysis, because we have been furnished no  
21 details of those analyses, either in this  
22 report or in discovery responses.  
23 **PRESIDING OFFICER:** And that's what  
24 I heard you agreeing with in terms of the  
25 line of questioning that you want to --

1 I -- I plan to ask, it will have very, very  
2 little to do with the City's -- it's not  
3 going to be focused on the technical  
4 aspects of the City's modeling, and I think  
5 he'll discover that as I proceed with my  
6 questioning, if I am allowed to do so.  
7 **PRESIDING OFFICER:** So if he avoids  
8 the modeling issue --  
9 **MR. MCLEOD:** If he avoids anything  
10 that has to do with modeling altogether,  
11 because as I look at that paragraph he just  
12 referred to on page 4 of the report, it's  
13 just summing up what was done with the  
14 modeled 1 percent drought by the City. I  
15 mean, it basically just says, the drought  
16 and groundwater model submitted with the  
17 proposal indicates the groundwater levels  
18 in a modeled 1 percent drought will drop  
19 below established minimum index levels in  
20 17 of the 38 cells. That's -- that's just  
21 referencing what the proposal says.  
22 The proposed revised lowered minimum  
23 index levels also included a contingency  
24 between approximately 10 feet and 23 feet  
25 subtracted from either the existing minimum

1 **MR. STUCKY:** Yeah, I -- I should be  
2 allowed to ask about the proposal itself  
3 and the details of the proposal itself and  
4 the numbers utilized in the proposal and  
5 Mr. Boese's analysis of those numbers, but  
6 as far as trying to involve this expert  
7 in -- with regard to having dissected the  
8 model and the outcomes of the modeling, we  
9 have two experts that we've brought for  
10 that purpose, and that's the purpose for  
11 those two experts. We're using this  
12 witness for a different purpose. So if I  
13 would be allowed to proceed, I think it  
14 would be clear that that's not where I'm  
15 heading so ...  
16 **PRESIDING OFFICER:** Well, let's --  
17 mindful of the fact that you have other  
18 experts to address modeling analysis, let's  
19 work to avoid continuing objections and  
20 proceed.  
21 **MR. STUCKY:** Thank you.  
22 **BY MR. STUCKY:**  
23 Q. So if you could turn in that black notebook to  
24 the reference back in -- to the 2010 starting  
25 heads, tell me -- tell me where that reference

Page 2129

1 is made to the City having started with -- and,  
 2 again, this is being used for background  
 3 purposes. Tell me that when the -- where it  
 4 exists in the City's notebook to indicate that  
 5 when the -- when the City first began their  
 6 discussions that they were utilizing the 2010  
 7 starting heads.  
 8 **A. Okay. Again, it's in the black notebook under**  
 9 **proposal correspondence, it would be on page 40**  
 10 **and 41, 42. There's attachment 43, but I think**  
 11 **the crux of it is on page 40, which is a letter**  
 12 **from the City of Wichita and, excuse me, signed**  
 13 **by -- well, it's not signed, but it's from Alan**  
 14 **King, with the City of Wichita, this was dated**  
 15 **November 15th, 2016.**  
 16 **This followed several months of the GMD2**  
 17 **staff, the District staff, and the City staff**  
 18 **and consultants working on the modeling. I**  
 19 **think at some point the City became frustrated**  
 20 **with the amount of time it was taking and**  
 21 **decided to just go ahead and send the modeling**  
 22 **work that had been done to date to -- to the**  
 23 **District for review and comment.**  
 24 **And if I can find it here real quick, it**  
 25 **would be the one, two, three, fourth paragraph**

Page 2130

1 **on the first page, this is page 40 of the**  
 2 **exhibit notebook. And I'll just go ahead and**  
 3 **read it, the aquifer model presented in USGS**  
 4 **Scientific Report 2013-5042 has been utilized to**  
 5 **represent the response of the Equus Beds Aquifer**  
 6 **during an eight-year drought. The aquifer has**  
 7 **assumed to start the modeled drought relatively**  
 8 **full, emulating its condition in January 2011.**  
 9 **I -- I maybe misspoke, I said 2010, thinking the**  
 10 **end of 2010 starting water level heads, so**  
 11 **beginning of January 2011.**  
 12 Q. So this is a letter from Alan King. Based on  
 13 your involvement in the history of the inception  
 14 of this AMC proposal, do you know when and why  
 15 the City shifted from looking at 2011 levels and  
 16 shifted to 1998 levels?  
 17 **A. I don't know that I can put my finger on it;**  
 18 **that's when we received the -- the proposal and**  
 19 **then the model, it began at 1998, and the City**  
 20 **had some reasons for changing that. I don't**  
 21 **remember the discussions in between there or if**  
 22 **there were any discussions, but we had, at**  
 23 **least, originally agreed that, again, I'll say**  
 24 **the 2010, let's go ahead and call them the**  
 25 **January 2011 was the -- the appropriate starting**

Page 2131

1 **water level heads for that drought model.**  
 2 **Especially considering we were going to then**  
 3 **model the 2011 and 2012 drought, so that seemed**  
 4 **to make the most sense.**  
 5 Q. At some point, Mr. Boese, was the District  
 6 essentially excluded from the discussions  
 7 regarding the City's proposal and -- and these  
 8 conversations that were occurring with the  
 9 Division of Water Resources?  
 10 **A. There was many discussions we weren't involved**  
 11 **with that involved the City and the Division of**  
 12 **Water Resources, so I can't pinpoint on what day**  
 13 **we were excluded, although, again, I think the**  
 14 **City became frustrated with the amount of time**  
 15 **the modeling work was taking. I disagree with**  
 16 **that -- with that -- that take by the City,**  
 17 **modeling takes a lot of time, but they decided**  
 18 **to go ahead and just submit the model to us for**  
 19 **review, which we then did and -- and then the**  
 20 **City then proceeded with their proposal.**  
 21 **MR. STUCKY:** May I approach the  
 22 witness?  
 23 **PRESIDING OFFICER:** Yes.  
 24 **BY MR. STUCKY:**  
 25 Q. Mr. Boese, I've handed you what's a copy of a

Page 2132

1 November 8th, 2016 minutes from an Equus Beds  
 2 groundwater meeting, board meeting; is that  
 3 right?  
 4 **A. That's correct.**  
 5 Q. Are these -- do these represent the official  
 6 minutes of the board meeting that would have  
 7 been adopted by the Board?  
 8 **A. These were adopted by the Board at the next**  
 9 **board meeting, which would have been December,**  
 10 **I'm not sure of the date, December of 2016, and**  
 11 **they are official, they're signed by our Board**  
 12 **of Director's secretary, Jeff Winter.**  
 13 Q. On page 3 of those minutes there's an expression  
 14 of, I guess, a new proposal that was made by Joe  
 15 Pajor as far as the District's involvement in --  
 16 in this whole process. Can you tell us what  
 17 that entails?  
 18 **A. Would you like me to read it or --**  
 19 Q. Yeah, you can read relevant sections.  
 20 **A. Just -- just for clarification, this was in an**  
 21 **agenda item on our board meeting, our monthly**  
 22 **board meeting, it was called ASR Project Update**  
 23 **and Basin Storage Area Water Level Data, so I**  
 24 **updated the Board on what we were working on.**  
 25 **Board member Joe Pajor, which was then a**

1 **City of Wichita employee, I believe he's retired**  
 2 **now, expressed his frustration regarding, quote,**  
 3 **lack of progress on the cooperative effort**  
 4 **between the City of Wichita and the District**  
 5 **regarding evaluating modeling drought conditions**  
 6 **and access to the City's recharge credits, which**  
 7 **he described as, again, quote, leaderless -- a**  
 8 **leaderless process with, again, quote, too much**  
 9 **back and forth. Mr. Pajor then informed the**  
 10 **Board that the City had changed their approach**  
 11 **and that they would go ahead and take the**  
 12 **information that they had to date, that they had**  
 13 **gathered between previous work with the staff,**  
 14 **the District staff and City and go ahead and**  
 15 **send -- compile that data and model and send**  
 16 **that to the District for feedback within a**  
 17 **one-month period.**  
 18 Q. Prior to this decision by the City to move on  
 19 with the proposal and more or less leave the  
 20 District behind, did the District give  
 21 suggestions to the City regarding changes that  
 22 should be made to the proposal?  
 23 **A. Well, just for clarification, at this time there**  
 24 **was -- there was no proposal on -- on the books;**  
 25 **this was just really trying to understand what**

1 document. Do you recall that discussion?  
 2 **A. Yes.**  
 3 Q. Okay. And what we didn't get earlier in this  
 4 hearing was the response of the City to your  
 5 many suggestions, and I -- as we go through, it  
 6 looks like you made a number of suggestions or  
 7 corrections that you proposed with respect to  
 8 the proposal document. What we find here is  
 9 Mr. King's response; is that right?  
 10 **A. Well, I'm just -- I'm just a little bit**  
 11 **confused, this is -- let me look at this real**  
 12 **quick, if you don't mind. Yes, several**  
 13 **suggestions that were made by myself and**  
 14 **questions to the -- to the City.**  
 15 Q. As it's indicated by Mr. King, what was his  
 16 response to your suggestions?  
 17 **A. He didn't respond directly to me but responded**  
 18 **to District staff that said, I am not inclined**  
 19 **to respond to this.**  
 20 **MR. STUCKY:** I move to admit the  
 21 District 73 into evidence.  
 22 **PRESIDING OFFICER:** Any objections?  
 23 GMD 70 -- whoop.  
 24 **MR. MCLEOD:** I just think that the  
 25 witness's characterization of the document

1 **the impacts were to both the aquifer and to the**  
 2 **City's ability to pump recharge credits in a**  
 3 **drought. That's really all this was at the**  
 4 **time.**  
 5 Q. So back at that time, were -- were there  
 6 suggestions being made by the District as far as  
 7 how this proposal could be conceptualized or how  
 8 it could be formulated?  
 9 **A. I don't -- I don't think we were in the**  
 10 **proposal, the City wasn't in a proposal stage**  
 11 **yet, they were really just doing drought**  
 12 **modeling, but we were certainly working very**  
 13 **cooperatively with the City trying to understand**  
 14 **the best way to model that -- those impacts of**  
 15 **the drought.**  
 16 Q. Can you turn with me to Exhibit 73 in your  
 17 notebook?  
 18 **A. Which one is that in, Dave? I got it.**  
 19 Q. V.  
 20 **A. V.**  
 21 Q. Exhibit 73, earlier in this hearing, there was  
 22 an email introduced where you had given a number  
 23 of suggestions to the City regarding their  
 24 proposal document and issues you feel like  
 25 should have been addressed in the proposal

1 should be clarified. I am not seeing where  
 2 this response to staff, to GMD staff.  
 3 **PRESIDING OFFICER:** I'm sorry,  
 4 you're not seeing?  
 5 **MR. MCLEOD:** I'm not seeing where  
 6 this is a response to GMD staff by  
 7 Mr. King. I'm not seeing that.  
 8 **PRESIDING OFFICER:** I think that's  
 9 the point.  
 10 **MR. STUCKY:** Right, there was no  
 11 response to GMD staff, that's our point.  
 12 **MR. MCLEOD:** Okay. So the witness  
 13 is meaning to say there was not a response  
 14 to him or GMD staff?  
 15 **MR. STUCKY:** Right, yes, that's why  
 16 we're introducing it. I would move to  
 17 admit Exhibit 73.  
 18 **PRESIDING OFFICER:** GMD 73 will be  
 19 admitted.  
 20 **BY MR. STUCKY:**  
 21 Q. Earlier there were also some emails that were  
 22 identified, Mr. Boese, where you gave  
 23 suggestions with respect to keeping the aquifer  
 24 neutral with regard to the City's proposal. Do  
 25 you recall some of those emails?

Page 2137

1 **A. Yeah, that -- that was part of this email that**  
 2 **we just discussed.**  
 3 Q. And it was also involved -- it was part of  
 4 earlier emails as well, is that right, the idea  
 5 of keeping the aquifer neutral?  
 6 **A. I guess I'm just a little bit lost, can you --**  
 7 Q. Well, let me just zero in then.  
 8 **A. Okay.**  
 9 Q. As it relates to Exhibit 73, is there a  
 10 discussion or a request by you to keep the  
 11 aquifer neutral?  
 12 **A. I -- I forwarded to the City, and also I should**  
 13 **note also I -- this email also went to Division**  
 14 **of Water Resources, David Barfield and Lane**  
 15 **Letourneau, as well as the City's consultants,**  
 16 **Brian Meier with Burns & McDonnell. I was**  
 17 **forwarding the City and DWR some concepts that I**  
 18 **was considering and asking if they would**  
 19 **consider those. These were outside of the scope**  
 20 **of my board, my board had not at this time moved**  
 21 **to send these forward, although eventually we**  
 22 **did, and we can talk about that later.**  
 23 **Again, the proposal had been submitted, I**  
 24 **was reviewing the proposal, I had some -- some**  
 25 **concerns about aquifer maintenance credits and**

Page 2138

1 **how that could fit into proper management of the**  
 2 **groundwater resources, which is -- which is what**  
 3 **I am in charge of obviously.**  
 4 Q. What does it mean to keep the aquifer neutral?  
 5 **A. In this sense for water, withdrawn water would**  
 6 **have to be put back in, so that way the City**  
 7 **would not be expanding any additional divergence**  
 8 **from the aquifer.**  
 9 Q. Is it your -- still your belief that the City's  
 10 proposal should aspire to keeping it aquifer  
 11 neutral?  
 12 **A. Yes. And I should add that this was not**  
 13 **necessarily meaning I was supporting the**  
 14 **proposal or in opposition to the proposal at the**  
 15 **time or that my concepts were even legal. They**  
 16 **were conceptual ideas that I was willing to**  
 17 **discuss with the City and their consultants and**  
 18 **the Division of Water Resources.**  
 19 Q. At some point, did you suggest the concept of a  
 20 multi-year flex account to the City as a  
 21 possibility that should be discussed?  
 22 **A. We -- yes, myself and my staff hydrologist**  
 23 **brought that up more than once.**  
 24 Q. What was your response to that suggestion?  
 25 **A. What was the City's response or my response?**

Page 2139

1 Q. The City's response to your -- to your request  
 2 to discuss the concept of a MYFA?  
 3 **A. I would characterize it as not generally**  
 4 **acceptable. I don't know that they ever did**  
 5 **check on it, but we did obviously offer to help**  
 6 **in any way that would be possible to look at**  
 7 **that multi-year flex account option.**  
 8 Q. Mr. Boese, as this proposal was unfolding, were  
 9 there legal questions that you had, in other  
 10 words where you questioned the legality of the  
 11 City's proposal?  
 12 **A. Yes.**  
 13 Q. I'd ask that you turn to Exhibit 30. Exhibit 30  
 14 may have already been introduced, I don't -- I  
 15 don't recall, but it's a letter from  
 16 Mr. Barfield including a draft order; is that  
 17 right?  
 18 **A. Might give me a minute, Dave. This is an**  
 19 **undated letter, which I think Mr. Barfield has**  
 20 **mentioned before, he failed to date this letter,**  
 21 **but it was to both myself and Mr. King with the**  
 22 **City of Wichita. What was your question, Dave?**  
 23 Q. What was the purpose of this letter as shown in  
 24 Exhibit 30, and is it one that the District  
 25 received, is it a letter that you actually

Page 2140

1 received?  
 2 **MR. MCLEOD:** I'm going to object  
 3 'cause Counsel is asking the purpose of a  
 4 letter the witness didn't write.  
 5 **MR. STUCKY:** Well, I guess I can --  
 6 it's a matter of whether we want to speed  
 7 this hearing process up. I can ask him to  
 8 read specific lines of the letter, if  
 9 that's a helpful exercise, but I was trying  
 10 to speed this process up just a little bit,  
 11 if we could.  
 12 **PRESIDING OFFICER:** Could you  
 13 rephrase in a way with what he would know?  
 14 **BY MR. STUCKY:**  
 15 Q. Mr. Boese, you received this letter; is that  
 16 correct?  
 17 **A. Yes.**  
 18 Q. And as you read this letter, how did you  
 19 understand this letter, what did you understand  
 20 this letter to be saying to you?  
 21 **A. There are several things. I think the main**  
 22 **point of this letter was a -- the chief**  
 23 **engineer, Mr. Barfield, was sending out a draft**  
 24 **order of approval for review and comment by, I**  
 25 **believe, both the GMD2, the District, and the**

1 **City of Wichita. I think that was the main --**  
2 **and then there's also other information in that**  
3 **letter. It's a fairly lengthy letter, but I**  
4 **think the main -- the main goal of that letter**  
5 **was to provide the City and the District with**  
6 **draft orders of approval for us to review and**  
7 **comment on.**

8 **MR. STUCKY:** I move to admit the  
9 District's 30.

10 **PRESIDING OFFICER:** Any objections?

11 **BY MR. STUCKY:**

12 Q. Moving along --

13 **PRESIDING OFFICER:** I'm sorry, GMD  
14 30 will be admitted.

15 **MR. STUCKY:** Thank you, sorry.

16 **BY MR. STUCKY:**

17 Q. Moving along to Exhibit 31 in your notebook,  
18 what is Exhibit 31?

19 **A. This is a letter dated April 27, 2018 to the**  
20 **chief engineer, David Barfield, from the**  
21 **District, signed by myself, based on Board**  
22 **action at the District Board of Directors April**  
23 **19, 2018 letter. It was in response to the**  
24 **letter from Mr. Barfield that we just discussed,**  
25 **it was -- included four -- four items. One was**

1 **our review and comments regarding the draft**  
2 **conditions that Mr. Barfield had -- had sent**  
3 **previously, review and comments regarding the**  
4 **draft proposed replacement findings and order.**  
5 **Attachment C was AMC legal questions and**  
6 **comments, and attachment D was possible AMC**  
7 **accumulation and use policy considerations. And**  
8 **my board of directors -- let me read this letter**  
9 **real quick. Yeah, the Board passed a motion to**  
10 **send these comments and other questions to the**  
11 **chief engineer, and the City was copied on that**  
12 **letter.**

13 Q. So with respect to attachment A, was this an  
14 attempt by the District to give feedback or  
15 comments on several aspects of the City's AMC  
16 concept?

17 **A. Of the entire proposal.**

18 Q. Okay.

19 **A. AMC and minimum index levels, lowering of the**  
20 **minimum index levels.**

21 Q. What types of concerns were identified in  
22 attachment A in this letter that you sent to  
23 the -- to Mr. Barfield?

24 **A. It would take sometime to go through this, which**  
25 **we certainly can, but it's everything in red.**

1 **We had a lot of concerns, a lot of questions.**  
2 **If you wanted to give me five minutes, I could**  
3 **review this again, but there was several**  
4 **concerns with both lowering of the index level**  
5 **and with AMCs.**

6 Q. Have a lot of those concerns also been discussed  
7 in this hearing?

8 **A. Yes.**

9 Q. Let's turn to attachment B. You said that  
10 attachment B was -- was further comments  
11 regarding the proposed replacement findings and  
12 order for ASR Phase II; is that right?

13 **A. Yes.**

14 Q. And so you identified some concerns with those  
15 also shown in attachment B; is that right?

16 **A. Yes. Again, everything in red were -- were**  
17 **comments that I presented to my board and the**  
18 **Board made a motion to forward on to**  
19 **Mr. Barfield.**

20 Q. So in other words, for example, if there's a  
21 comment in red addressing the concept regarding  
22 passive recharge credits, for example, as shown  
23 at the start, kind of in the middle of  
24 attachment B, at the beginning of attachment B,  
25 those would have been your comments in red?

1 **A. They were my comments approved by the Board.**

2 Q. And so you -- you had concerns early on about  
3 this concept of passive recharge credits; is  
4 that right?

5 **A. Yes.**

6 Q. And in attachment C, you presented to  
7 Mr. Barfield concerns with the legality of the  
8 City's proposal; is that right?

9 **A. Yes.**

10 Q. With regard to these concerns with the legality  
11 of the City's proposal, are those still your  
12 opinions that are, in fact, rendered in your  
13 expert report today?

14 **A. Yes.**

15 Q. What is attachment D again of this letter?

16 **A. Attachment D was -- just remember we talked a**  
17 **little bit ago about the email that Mr. King**  
18 **advised, I think, or that stated he was inclined**  
19 **not to respond to, these were some of my**  
20 **thoughts on AMC accumulation and use, policy**  
21 **considerations, how possibly the AMCs could**  
22 **be -- could be considered again, not necessarily**  
23 **looking at the -- at the statutes and the**  
24 **regulations that may need to be changed to allow**  
25 **them but ways that perhaps we could find AMCs**

Page 2145

1 **acceptable.**  
 2 Q. So basically this, if you will, was a peace  
 3 offering from the District or an attempt to try  
 4 and see what could be done to find a middle  
 5 ground with the City, is that what this was?  
 6 **A. I think you could characterize that. It was --**  
 7 **it was my attempt to properly manage the**  
 8 **groundwater resource while still providing the**  
 9 **ability for the City to develop recharge**  
 10 **credits.**  
 11 Q. And these suggestions were what were effectively  
 12 ignored by Mr. King; is that right?  
 13 **A. Yes.**  
 14 **MR. STUCKY:** Move to admit the  
 15 District's 31 into evidence.  
 16 **PRESIDING OFFICER:** Any objections?  
 17 District's 31 will be admitted.  
 18 **BY MR. STUCKY:**  
 19 Q. Please turn to Exhibit 32 in that same notebook.  
 20 What is Exhibit 32?  
 21 **A. This is a letter to Mr. Barfield dated May 22nd,**  
 22 **2018, and it is - let's see who signed it here**  
 23 **from the City of Wichita - signed by Alan King**  
 24 **from the City of Wichita.**  
 25 Q. And just in general, who was Mr. King responding

Page 2146

1 to or writing to as he wrote this letter?  
 2 **A. He was responding to Mr. Barfield, the chief**  
 3 **engineer.**  
 4 Q. And he addresses some concerns that were raised  
 5 with the proposal and discusses those in this  
 6 letter, whose concerns is he discussing in this  
 7 letter?  
 8 **A. I'm sorry, can you -- who was Mr. King ...**  
 9 Q. Yeah. Mr. King is addressing a few different  
 10 considerations or concerns that were raised with  
 11 the proposal. Were those concerns raised by  
 12 Mr. Barfield, or were they concerns raised by  
 13 the District? Or do you know?  
 14 **A. I believe they're responding to both our**  
 15 **concerns and maybe some questions that**  
 16 **Mr. Barfield had at the time. Not entirely sure**  
 17 **but it looks like a lot of it is responding to**  
 18 **some of the District's concerns, but there may**  
 19 **be some mixed in there with Mr. Barfield's**  
 20 **concerns.**  
 21 **MR. STUCKY:** And I don't recall,  
 22 this may have been admitted by the City,  
 23 but in an abundance of caution, I'm going  
 24 to move to admit the District's Exhibit 32.  
 25 **PRESIDING OFFICER:** Any objections?

Page 2147

1 District 32 is admitted.  
 2 **BY MR. STUCKY:**  
 3 Q. Finally turn in your notebook to Exhibit 33,  
 4 what is Exhibit 33?  
 5 **A. This is a letter dated June 1st, 2018 to the**  
 6 **Groundwater Management District No. 2, in care**  
 7 **of myself, and to the City of Wichita.**  
 8 Q. And as you read this letter, how did you  
 9 interpret this letter from Mr. Barfield?  
 10 **A. Yeah, thank you for clarifying, I failed to**  
 11 **mention it was signed by Mr. Barfield.**  
 12 **This is in response to the letter that we**  
 13 **looked at before that was -- that was forwarded**  
 14 **by myself at my board's request regarding the**  
 15 **review that was dated April, look at the date**  
 16 **here real quick, it was dated April 27, 2018,**  
 17 **this is Mr. Barfield's response to that. In**  
 18 **particular, this addresses primarily or mostly**  
 19 **the AMC and his belief that the AMC concept was**  
 20 **legal and was a functional equivalent of a**  
 21 **recharge credit.**  
 22 **MR. STUCKY:** I move to admit the  
 23 District's Exhibit 33.  
 24 **MR. OLEEN:** I don't really have an  
 25 objection, I just wanted to point out this

Page 2148

1 exhibit is a duplicate of DWR Exhibit 1,  
 2 for the record.  
 3 **PRESIDING OFFICER:** Yeah, I was  
 4 going to mention that, so we'll admit it,  
 5 the District Exhibit 33 is admitted; it is  
 6 a duplicate of the front part of DWR 1.  
 7 **MR. OLEEN:** Thank you. And  
 8 actually, Madam Officer, I hope that DWR's  
 9 Exhibit 1 contains the entirety of what has  
 10 been admitted GMD Exhibit 33. My copy  
 11 does; I hope yours does too.  
 12 **BY MR. STUCKY:**  
 13 Q. Mr. Boese, yesterday -- oop.  
 14 **PRESIDING OFFICER:** I'm sorry.  
 15 **MR. STUCKY:** Sorry, I thought that  
 16 was editorial.  
 17 **PRESIDING OFFICER:** Well, my copy of  
 18 Exhibit 1 seems to be thinner than --  
 19 **MR. OLEEN:** Is it printed front and  
 20 back where GMD's is --  
 21 **PRESIDING OFFICER:** Oh, that would  
 22 explain it. Okay, thank you. Sorry. Go  
 23 ahead.  
 24 **BY MR. STUCKY:**  
 25 Q. Mr. Boese, it's already been brought up in this

1 hearing some emails and some correspondence from  
2 the District, and without having to engage in  
3 that entire discussion again, would you agree  
4 that early on the District identified some  
5 errors in the City's proposal in the numbers  
6 that they used in their tables?

7 **A. Yes.**

8 Q. And would you agree with what the prior record  
9 is, that you pointed out those errors early on  
10 in this whole discussion process, long before we  
11 were in these hearings, would you agree with  
12 that?

13 **A. Yes.**

14 Q. And would you also agree with the prior  
15 acknowledgment that you never received a  
16 response from the City regarding the errors that  
17 you pointed out, is that also agreed -- do you  
18 agree with that?

19 **A. I think that's mostly true. I do -- I do  
20 remember, since I wasn't on the stand before, I  
21 couldn't -- I couldn't interject, I do remember  
22 at least one typographical error that I thought  
23 I found, I had pointed out, I believe, to  
24 Mr. Clement, and I believe he responded with  
25 thanks, but it was never up -- I mean, it was**

1 **However, starting at the 1998 levels, at a lower  
2 level, I'm not sure that we now need that big of  
3 a contingency.**

4 Q. So in other words, to the extent you suggested a  
5 contingency that would have been greater than,  
6 let's say, 5 feet or 10 feet as suggested by  
7 Mr. McCormick, you're saying that those  
8 discussions occurred in the context of when the  
9 City first came to you and suggested that we  
10 were going to utilize the 2010 starting heads?

11 **A. That's my recollection --**

12 Q. Or 2011 starting heads, to clarify the record?

13 **A. That's my recollection. Again, we -- we met so  
14 many times and talked about so many things, I  
15 think it was a mischaracterization by  
16 Mr. McCormick by stating that I suggested they  
17 have a 10-foot contingency in this proposal. We  
18 did certainly talk about modeling errors and  
19 bracketing, plus or minus sort of elevations.**

20 Q. To the extent it was suggested by Mr. McCormick  
21 that was your position, is it your position that  
22 as we use the 1998 levels in the City's  
23 proposal, is it now your position that we need a  
24 10-foot contingency in their proposal?

25 **A. I don't believe that we need a 10-foot. If you**

1 **never updated in the proposal. So I wanted to  
2 make that clear, I do believe Mr. Clement  
3 responded to one of my pencil typo questions.**

4 Q. Mr. McCormick indicated that he thought it was  
5 possible that you suggested the 10-foot  
6 contingency. Do you recall Mr. McCormick's  
7 suggestion in that regard?

8 **A. Yes.**

9 Q. Do you recall any of the discussions with the  
10 City regarding the contingency, and can you tell  
11 us what the context would have been with respect  
12 to those discussions and whether or not you  
13 suggested a 10-foot contingency?

14 **A. My recollection is when we were doing some of  
15 the modeling, we talked about, you know, plus or  
16 minuses, you know, what -- models are never  
17 perfect, you can have a few feet plus or minus.  
18 And since we were using that 2010 starting water  
19 level head, it did make some sense to have sort  
20 of a plus or minus because the aquifer could be  
21 a little higher, could be a little lower.**

22 **I think Mr. McCormick mischaracterizes that  
23 I suggested a 10-foot contingency, but we did  
24 talk about the bracketing, you know, you could  
25 have a plus or minus water level elevation.**

1 **look at some of those results between the 1993  
2 and the new minimum index level, they may be a  
3 foot or 2 feet. To then have a 10-foot  
4 contingency seems quite odd that the contingency  
5 would be much different -- or much larger than  
6 the actual correction that's being made. Some  
7 of those, and we can go through those in detail,  
8 some of them are -- the model results were  
9 actually better than the existing so then we  
10 added the contingency. I don't agree that we  
11 need a 10 foot and certainly not a 20 or 23 in  
12 some aspects.**

13 Q. As you turn to Exhibit 1, which is the City's  
14 proposal, tell me what you're looking at to  
15 guide the discussions with respect to the  
16 contingency.

17 **A. I'm looking at table 2-11 on page 2-25, which is  
18 a table for the 38 index cells, that has the  
19 existing minimum index level, again we'll keep  
20 calling it the 1993 level, the proposed level --  
21 I'm sorry, I should have been looking at table  
22 2-10 on page 2-24, I apologize. Again, this is  
23 a similar table for the 38 index wells, shows  
24 what the drought elevation level showed, what  
25 the existing level, 1993 level, currently is.**

Page 2153

1 Q. And as you suggested that the contingency should  
 2 be less than 10 feet, tell us how your  
 3 conceptualization of that relates to this table.  
 4 **A. Well, I'll give you some examples, I think**  
 5 **that'd be the easiest thing. If you look at**  
 6 **IW5, the minimum drought model elevation is**  
 7 **1408 feet, and I'm going to round these off a**  
 8 **little bit, make it easier, the existing level**  
 9 **is 1407, so we're talking a foot difference.**  
 10 **However, the contingency then is 10 feet, so**  
 11 **it's ten times greater than the difference.**  
 12 **Seems odd that your contingency would be an**  
 13 **order of magnitude larger than -- than the**  
 14 **correction that's being requested -- or the**  
 15 **modification that's being requested.**  
 16 Q. The contingency was called a safety net by  
 17 Mr. Barfield, and that terminology was also used  
 18 by one of the City's experts when I asked a  
 19 question. Do you recall that?  
 20 **A. Yes.**  
 21 Q. So you're saying that as far as a safety net  
 22 goes or a margin -- margin of error, if you  
 23 will, we don't need one that's ten times what we  
 24 would expect from the modeled results. Is that  
 25 what you're saying?

Page 2154

1 **A. It seems excessive, especially since we're**  
 2 **already starting at the 1998 levels, which are**  
 3 **already a depressed level, it would seem odd**  
 4 **then to add another 10 foot when you're already**  
 5 **starting at a low level.**  
 6 Q. And I'm simply asking you these questions 'cause  
 7 it was suggested that you stated that these  
 8 contingencies were adequate and, in fact, you  
 9 came up with the ideas for these contingencies.  
 10 Based on that suggestion having been made, is it  
 11 now your position that the contingencies can be  
 12 less in the proposal, to the extent you ever  
 13 made that prior statement?  
 14 **A. I would certainly -- certainly think so.**  
 15 Q. Mr. Boese, what is the concept of a spacing  
 16 waiver?  
 17 **A. The District has a spacing regulation under**  
 18 **K.A.R. 5-22-2 which requires a minimum spacing**  
 19 **distance on an application, 660 feet to a**  
 20 **domestic well, 1320 feet to a non-domestic well.**  
 21 **I should go ahead and add there's some caveats**  
 22 **to that. From a well battery, you add 300 feet;**  
 23 **and then there's an enhanced well spacing area**  
 24 **in Reno County, which we probably don't need to**  
 25 **get into detail since we're not in Reno County,**

Page 2155

1 **which actually requires greater well spacing.**  
 2 **If an applicant is proposing a well that**  
 3 **does not meet those regulations, they can ask**  
 4 **for an exception from the District Board of**  
 5 **Directors. The District Board, as we noted**  
 6 **earlier, can then make that recommendation to**  
 7 **the Division of Water Resources for an exception**  
 8 **to that regulation if the Board so chooses.**  
 9 Q. And what did you say that regulation was?  
 10 **A. K.A.R. 5-22-2.**  
 11 Q. Okay. Can you turn to Exhibit 27 for me in the  
 12 District's notebooks? What is Exhibit 27?  
 13 **A. This is a memorandum of understanding between**  
 14 **the District and the City of Wichita for ASR**  
 15 **Phase II.**  
 16 **MR. STUCKY:** And do we have an  
 17 agreement on the record that we're taking  
 18 judicial notice of this document, that we  
 19 don't need to admit it, is that -- there's  
 20 an agreement to that already, right?  
 21 **A. I would note that mine -- mine has an exhibit**  
 22 **sticker on it already, so it may have been**  
 23 **admitted, I'm not 100 percent sure.**  
 24 **MR. OLEEN:** I think it might have  
 25 been admitted, but if not, I have an

Page 2156

1 agreement to that.  
 2 **MR. STUCKY:** Okay.  
 3 **PRESIDING OFFICER:** Yeah, I thought  
 4 I'd already administratively noticed it,  
 5 but if I haven't, I am now.  
 6 **MR. STUCKY:** Okay.  
 7 **BY MR. STUCKY:**  
 8 Q. With respect to Exhibit 27, what does it tell us  
 9 about spacing waivers? And specifically I'd ask  
 10 that you turn to B1 on page 4.  
 11 **A. This is a component of the MOU where the**  
 12 **District and the City agree that the District**  
 13 **Board would recommend a waiver of the well**  
 14 **spacing requirements for any City ASR well that**  
 15 **does not meet the spacing requirements. There**  
 16 **is a little bit of a caveat there, it says, that**  
 17 **the GMD2 would grant that based on a finding the**  
 18 **conditions set out above do exist and that**  
 19 **granting of the waiver will not unreasonably**  
 20 **impair the public interest. Those conditions**  
 21 **that were set above were that the well, the**  
 22 **proposed well would be used both for**  
 23 **artificial -- or for aquifer recharge as defined**  
 24 **by regulation and withdrawal of water for an**  
 25 **authorized use. So it made it narrow that it**

1 **had to be an aquifer storage and recovery well,**  
2 **a well that water is injected into and then**  
3 **withdrawn later.**  
4 Q. And you were involved in the development of this  
5 MOU; is that right?  
6 **A. Yes.**  
7 Q. And so as you're interpreting this MOU, that's  
8 also based on your discussion or involvement in  
9 having developed this MOU; is that right?  
10 **A. Yes.**  
11 Q. Now keep that in mind, let's turn to Exhibit 53,  
12 which has already been admitted into evidence.  
13 What is Exhibit 53?  
14 **A. Just waiting for everybody to catch up here. 53**  
15 **is a letter from the City of Wichita - I believe**  
16 **it was signed by David Warren, but let me check**  
17 **real quick. It was - dated October 10th, 2008,**  
18 **whereas the City was requesting spacing -- or**  
19 **that the District would grant a well spacing**  
20 **exception or exemption for several of the City**  
21 **ASR Phase II applications, looks like nine of**  
22 **them, nine of those applications.**  
23 Q. In this letter, toward the end of the letter  
24 there's some conditions under which the City is  
25 asking for waivers from this well spacing; is

1 been marked as well.  
2 **A. Yeah.**  
3 Q. Okay. Exhibit 57, we already had testimony that  
4 these are -- represent a series of letters that  
5 were sent from the City of Wichita to the  
6 domestic well owners asking for spacing waivers  
7 or consent forms. Is that -- is that what these  
8 letters were?  
9 **A. That's correct, the City sent these letters to**  
10 **domestic well owners that were located within**  
11 **660 feet of certain ASR Phase II applications**  
12 **asking those owners if they would sign a consent**  
13 **form to allow that -- that ASR well to be**  
14 **located closer than the regulations allow.**  
15 Q. There's already been some testimony to this  
16 effect, but what conditions were assured to  
17 these domestic owners as they were asked to sign  
18 off on these waivers?  
19 **MR. MCLEOD:** I'm going to object to  
20 the characterization in the sentence, I  
21 think we developed in prior testimony there  
22 are no mentions of any assurances in any of  
23 these letters.  
24 **BY MR. STUCKY:**  
25 Q. Well, let me just ask this, I'll rephrase, what

1 that right? And we find some of that in the  
2 last paragraph, correct?  
3 **A. Yes.**  
4 Q. What were some of the conditions under which the  
5 City of Wichita asked for well spacing waivers?  
6 **A. That the City would not be able to withdraw**  
7 **their aquifer storage and recovery credits if**  
8 **the water levels were below the 1993 levels.**  
9 Q. Now, you would have had a discussion with the  
10 District Board as they were considering these  
11 spacing waivers and also as it related to the  
12 City of Wichita's letter, would you not have had  
13 those discussions?  
14 **A. Yes.**  
15 Q. When you recommended to the GMD Board to grant  
16 these spacing waivers, did you explain it to the  
17 GMD Board in the context of the fact that there  
18 wouldn't be a drop below the 1993 levels?  
19 **A. I'm sure I did.**  
20 Q. Please turn to Exhibit 57 in that same notebook.  
21 And, Mr. Boese, did Exhibit 53 -- it had an  
22 exhibit sticker on it already, didn't it? Is  
23 that correct?  
24 **A. It did.**  
25 Q. Okay. Let's turn to Exhibit 57, that's already

1 do you find significant about the nature of this  
2 letter, Mr. Boese?  
3 **A. That the withdrawal of the recharge credits**  
4 **would not be permitted if water levels are below**  
5 **the 1993 minimum index levels that are**  
6 **established by the ASR permit. So the City was**  
7 **stating that they would not withdraw --**  
8 Q. And are you looking at the last sentence of the  
9 first paragraph?  
10 **A. Yes.**  
11 Q. Will you read it for the record?  
12 **A. Withdrawals will not be permitted if water**  
13 **levels are below the 1993 baseline established**  
14 **by the ASR permit.**  
15 Q. And so that line was put in all the letters that  
16 were sent to these well holders; is that right?  
17 **A. It does appear to be the same -- same letter to**  
18 **all of them, yes.**  
19 Q. Based on your experience, or 28 years of  
20 experience in the District, you had the  
21 opportunity to ask -- to help with spacing  
22 waivers and aid applicants with spacing waivers;  
23 is that -- is that true?  
24 **A. Yes.**  
25 Q. Okay. If you were interpreting what that meant,

Page 2161

1 if you were advising one of these well holders  
 2 what it meant in this letter that withdrawals  
 3 will not be permitted if water levels are below  
 4 the 1993 baseline, what would you tell one of  
 5 these water right holders?  
 6 **A. I think, first of all, I should make it clear**  
 7 **that I never asked a well owner, a domestic well**  
 8 **owner to sign consent forms. Oftentimes the**  
 9 **applicant does. We would not do that on a staff**  
 10 **level where I would ask a domestic well owner to**  
 11 **sign a consent form, that's up to the applicant**  
 12 **to ask. We do have a consent form that**  
 13 **applicants can use.**  
 14 **So first of all, I would advise them to**  
 15 **review the request considerably. They do not**  
 16 **have to sign it, they're not required to sign**  
 17 **it. If they ask specific questions, I would say**  
 18 **that the City could not withdraw recharge**  
 19 **credits below the 1993 levels.**  
 20 Q. Okay. And if the applicant asked you, if I sign  
 21 off on this waiver, do I have some assurance  
 22 that we're not going to drop below those 1993  
 23 levels, what would you tell the applicant?  
 24 **MR. OLEEN:** I think I want to  
 25 object, I think it's speculative, he said

Page 2162

1 he never -- he said he never asked any of  
 2 these well owners to sign any waivers so --  
 3 and we're talking about something that's in  
 4 the past. So it doesn't matter what he  
 5 says now he would have told these people  
 6 that he testified he never talked to. So  
 7 speculative and irrelevant.  
 8 **PRESIDING OFFICER:** I think what  
 9 he's getting at is if an applicant came to  
 10 him having received one of these and said,  
 11 Mr. Boese, what does this mean, then that's  
 12 what he's being asked.  
 13 **MR. OLEEN:** Well, if one did, then  
 14 it's relevant. If one never asked him  
 15 that, I don't see how it matters what he  
 16 would have said because he never said it.  
 17 **MR. STUCKY:** The relevance is  
 18 whether or not these spacing waivers are  
 19 still applicable to the proposal that's  
 20 before us today, that's the relevance, so  
 21 it's highly relevant in my view.  
 22 **MR. OLEEN:** And -- sorry, go ahead.  
 23 **MR. MCLEOD:** I think I'm  
 24 understanding where Mr. Oleen is going, and  
 25 I think I share this concern that what's

Page 2163

1 happening here is Counsel's trying to  
 2 convert these into assurances, although  
 3 they don't say they're assurances, the  
 4 author of the letter didn't say they were  
 5 assurances, and his most recent effort to  
 6 do that is to cast it in this mold of,  
 7 well, if any of these people had ever  
 8 asked, would Mr. Boese have told them these  
 9 were assurances. I don't think Mr. Boese  
 10 gets to interpret the letter, and I think  
 11 it is doubly irrelevant, as Mr. Oleen said,  
 12 because none of these people, in fact, ever  
 13 asked him and hence he never gave them  
 14 advice about whether these were assurances  
 15 and hence they never relied on the  
 16 interpretation that he never gave them  
 17 about whether these were assurances.  
 18 **MR. STUCKY:** I'll just ask a new  
 19 question. I think it's strongly already  
 20 implied from these letters, so I'll just  
 21 ask a new question.  
 22 **BY MR. STUCKY:**  
 23 Q. Mr. Boese, do you believe that new letters  
 24 should be sent to well owners in the Equus Beds  
 25 Aquifer to ask for new spacing waivers from the

Page 2164

1 City's new aquifer maintenance credit proposal  
 2 based on the fact that we're going below the  
 3 1993 levels in their proposal?  
 4 **A. Yes, 'cause I don't think the statements in**  
 5 **these letters that were sent would now be**  
 6 **correct. And for a point of record, because**  
 7 **I -- I do remember, I did talk to several of**  
 8 **these people and they did call. I can't -- I**  
 9 **can't produce a record of that right now, but --**  
 10 Q. You can testify, go ahead and testify to that.  
 11 **A. Well, I -- I can't remember my entire**  
 12 **discussion, but they received these letters. I**  
 13 **can tell you this Kelly Willmore, which is the**  
 14 **third letter, I vividly remember talking to her.**  
 15 **I believe I talked to Mrs. Heidebrecht on the**  
 16 **next one, and I also believe that I talked to**  
 17 **Mrs. Decker or perhaps Mrs. Decker's son. So I**  
 18 **did discuss -- I did -- these folks did call me**  
 19 **and ask these questions.**  
 20 Q. Okay. So that erases the objections. Would  
 21 you --  
 22 **MR. MCLEOD:** I'm sorry, it doesn't  
 23 erase the objections unless he specifically  
 24 remembers them asking if these provided  
 25 assurances and he told them that they did

1 provide assurances. That's the only way  
2 that it erases the objection.  
3 **BY MR. STUCKY:**  
4 Q. Did you tell any of these well owners at that  
5 time that an assurance offered by the City  
6 appeared to be that there wouldn't be a drop  
7 below the 1993 levels?  
8 **A. I don't know that I worded -- used the word**  
9 **assurance, but I'm not sure what the difference**  
10 **between the word assurances and will not be**  
11 **permitted are. I mean, I'm -- I'm just guessing**  
12 **I read the last sentence of that letter and**  
13 **discussed it, yes, the City will not be able to**  
14 **withdraw recharge credits below the 1990 (sic)**  
15 **level. Again, I'm not sure what the difference**  
16 **between assurances and not be permitted -- I**  
17 **think not be permitted may actually be stronger.**  
18 Q. Okay. So based on that, do you believe that new  
19 spacing waivers should be sought from well  
20 owners based on the City's aquifer maintenance  
21 credit proposal?  
22 **A. I believe that new spacing waivers should be**  
23 **sought either -- both from the domestic well**  
24 **owners and from the District Board of Directors**  
25 **because they based their decision also on the**

1 about some of the reasons a change application  
2 is needed and some of the reasons a change  
3 application is not applicable. Do you recall  
4 that discussion?  
5 **A. Yeah.**  
6 Q. And on a surface level, do you agree with  
7 some of the statements that were made by  
8 Mr. Letourneau?  
9 **A. I agree with some of the statements made by**  
10 **Mr. Letourneau.**  
11 Q. Would you agree that absent a change  
12 application, you can't change the place of use  
13 or the source of water or the point of  
14 diversion, for example?  
15 **A. You cannot change the source of water; it would**  
16 **be the use made of water, if that's what you**  
17 **meant. To change the use made of water, the**  
18 **point of diversion, or the place of use, you**  
19 **must file a change application.**  
20 Q. And no change app -- would you also agree with  
21 Mr. Letourneau that if you're trying to reduce  
22 the amount of water or you're correcting a  
23 typographical error with the water right that  
24 you don't need a change application at all; is  
25 that right?

1 **City not withdrawing their recharge credits**  
2 **below the 1993 levels.**  
3 Q. So do you believe that the District Board would  
4 have granted the spacing waivers back at that  
5 time, based on your discussions with them, if  
6 they believed that we would in the future drop  
7 below the 1993 levels?  
8 **A. I wouldn't have advised them to do that because**  
9 **it would have been an unknown. Until it was**  
10 **proven by the applicant that no one would be**  
11 **impaired by dropping below the 1993 levels, I**  
12 **would not have made that recommendation to my**  
13 **board to grant the waiver.**  
14 Q. So new spacing waivers need to be sought in both  
15 instances, both with respect to individual well  
16 owners and with respect to District Board  
17 approval; is that right?  
18 **A. That would be -- that would be my**  
19 **recommendation.**  
20 Q. Previously there's been a discussion of a change  
21 application. Change applications are found in  
22 K.S.A. 82a-708(b), and we've already had a lot  
23 of discussion about that; is that right?  
24 **A. Yes.**  
25 Q. And you listened to Mr. Letourneau's discussion

1 **A. That's correct.**  
2 Q. So if you're changing those -- those items that  
3 I mentioned, the place of use, the point of  
4 diversion, one would utilize a change  
5 application; is that right?  
6 **A. That's correct.**  
7 Q. What if you were to actually want to change  
8 other fundamental aspects of a water right,  
9 what would -- what would an applicant have to  
10 do? Would they -- would they be able to do that  
11 with a change application, or is the change  
12 application limited to those items you  
13 mentioned?  
14 **A. The change application is limited to those items**  
15 **that we mentioned, point of diversion, place of**  
16 **use, and use made of water.**  
17 Q. So what if, for example, an applicant came to  
18 you and they said, Mr. Boese I have an  
19 authorized quantity of 2,000 acre-feet and  
20 that's been perfected at that number, I want to  
21 double it to 4,000 acre-feet, what would you  
22 tell the applicant?  
23 **A. I would tell the applicant the only way to**  
24 **increase their appropriation is to file a new**  
25 **water permit application.**

Page 2169

1 Q. So there's several levels that are created, so  
 2 on one hand if we're making minor changes to a  
 3 water right, such as a typographical error, no  
 4 change application is needed; level two is we're  
 5 trying to change those aspects that you  
 6 mentioned and we would use the change  
 7 application, that's level two; level three, if  
 8 you will, is we're changing the very nature of  
 9 the water right, and a new application is  
 10 needed. Is that what you're saying?  
 11 **A. Yes.**  
 12 Q. Did the City file a new application or a change  
 13 application in this case?  
 14 **A. They did not file a change application. I think**  
 15 **as we discussed previously the City filed, I**  
 16 **believe, 30 new applications that have since**  
 17 **been dismissed. So in relation to what we're**  
 18 **talking about for today's proposal, there was**  
 19 **not a change application or a new application**  
 20 **filed.**  
 21 Q. I would ask that you turn to Exhibit 39 in your  
 22 expert report. Are you there, Mr. Boese?  
 23 **A. Yeah, I'm doing a little housekeeping.**  
 24 Q. Okay.  
 25 **A. I am there, Dave.**

Page 2170

1 Q. And if you could keep your expert report open in  
 2 front of you in addition to these other  
 3 exhibits. On page 5 of your expert report, you  
 4 render an opinion with regard to different  
 5 requirements the City would need to show with  
 6 respect to both a change application or if there  
 7 was a new application. Is that -- is that what  
 8 you state in your expert report?  
 9 **A. Yes.**  
 10 Q. And it's been discussed, in a nutshell,  
 11 Mr. Boese, what are some of those requirements  
 12 the City would have to show?  
 13 **A. I'm going to go ahead and turn to the K.S.A. so**  
 14 **we can maybe be specific, if that's all right**  
 15 **with you. I can --**  
 16 Q. Please do.  
 17 **A. -- I can recite them off my head for the most**  
 18 **part but just to be specific.**  
 19 Q. And for the record, which K.S.A. are you turning  
 20 to, would that be 82a-708(b)?  
 21 **A. I am. And, again, for reference, K.S.A.**  
 22 **82a-708(b) is -- is the application for change.**  
 23 **There are a number of things, the applicant has**  
 24 **to apply in writing, demonstrate to the chief**  
 25 **engineer the proposed change is reasonable and**

Page 2171

1 **will not impair existing water rights,**  
 2 **demonstrate that the change relates to the same**  
 3 **source of supply, and then obviously receive the**  
 4 **approval of the chief engineer. And it does go**  
 5 **on to say that the chief engineer shall approve**  
 6 **or reject the application in the same, I'll use**  
 7 **the word manner, it's longer than that, in the**  
 8 **same manner as original application.**  
 9 Q. Is it your belief the City has to show that they  
 10 meet all those requirements with their proposal  
 11 before us?  
 12 **A. Yes.**  
 13 Q. Now, we talked about a change application.  
 14 Similarly, one may request changes to a permit;  
 15 is that right? To a water permit?  
 16 **A. Request a change?**  
 17 Q. An applicant may request changes to a water  
 18 permit at some point, is that -- is that  
 19 something that an applicant might do at some  
 20 point?  
 21 **A. Yes.**  
 22 Q. Tell me what items can be corrected in a water  
 23 permit without any kind of change application or  
 24 otherwise.  
 25 **A. There -- generally, the Division of Water**

Page 2172

1 **Resources would issue findings and orders or**  
 2 **correctional orders to correct things such as**  
 3 **typos. I'll give you a perfect example. I**  
 4 **think just a week or two ago, we had a**  
 5 **certificate that came into our office on a water**  
 6 **right owner in Reno County, and the Division of**  
 7 **Water Resources had failed to put the section**  
 8 **number on the certificate. And when that**  
 9 **individual water right owner tried to record**  
 10 **that at the register of deeds, he could not**  
 11 **because it didn't have the legal description on**  
 12 **it. So that requires a correctional order or a**  
 13 **new certificate to be issued, that's a good**  
 14 **example.**  
 15 **An applicant can request that the place of**  
 16 **use be reduced, not changed, just reduced;**  
 17 **request that the quantity be reduced; the rate**  
 18 **be reduced. The water right can be divided into**  
 19 **two or more water rights, that can be done with**  
 20 **an order. Some conditions could be added such**  
 21 **as a meter requirement or maybe a monitoring**  
 22 **plan or a conservation plan or -- I think that**  
 23 **would be the main things I'm thinking of off the**  
 24 **top of my head. But, generally, they are minor**  
 25 **in detail and correctional in detail.**

1 Q. Could a change application apply to the permits  
2 that the City has brought before us through this  
3 proposal?

4 **A. No.**

5 Q. And why is that?

6 **A. They're not asking to change the point of  
7 diversion, the place of use, or the use made of  
8 water.**

9 Q. Now, I believe that there were some changes made  
10 to the permits identified in ASR Phase II for  
11 topographical reasons; is that right?

12 **A. Yeah, more correctional actually. Since we're  
13 discussing 1993 water levels, there was a  
14 technical correction made to the 1993 levels; we  
15 didn't change it to a different year, there was  
16 just additional data that was discovered, some  
17 new data, some errors that were made when those  
18 index levels of 1993 levels were established for  
19 some of the cells. So there was a correction  
20 made on that, that was a correctional order that  
21 did that.**

22 Q. So now distinguish between changing a few of the  
23 data points in the topographical information and  
24 perhaps an error in that, distinguish that now  
25 for me with changing from the 1993 level and

1 Q. How would the City have presented its proposal  
2 to have this aquifer maintenance credit adopted,  
3 how should they have presented it?

4 **A. It would have to be done through a new  
5 application, and, first of all, we'd have to  
6 determine if they were legal or not. I mean,  
7 they could file, I guess, without that being  
8 determined, but changing the fundamental part of  
9 a water right cannot be done with a mere  
10 request. And in my opinion, how the City can  
11 obtain recharge credits and when they can use  
12 them are the two most fundamental aspects of  
13 their water -- their ASR water permits.**

14 Q. And so in other words, if we set aside any  
15 concerns with the legality of the AMC proposal,  
16 we set that aside --

17 **A. Uh-huh.**

18 Q. -- theoretically if they were going to try to  
19 change those fundamental aspects of ASR Phase  
20 II, you believe that that would be properly done  
21 through new applications?

22 **A. Yes.**

23 Q. Is one of the considerations with respect to a  
24 new application or with respect to change  
25 application, is one of the things that must be

1 dropping that level, can the City do that  
2 through a change application?

3 **A. I don't believe so.**

4 Q. How would the City go about making that request  
5 properly, based on your 28 years of experience  
6 having worked in your role at the Equus Beds  
7 Groundwater Management District?

8 **A. In my opinion, that's a fundamental change, it  
9 would have to be done through a new application.**

10 Q. Also the same question, and we'll talk about  
11 this in more detail in a moment, but if the City  
12 through this aquifer maintenance credit proposal  
13 is, in fact, not injecting water into the  
14 aquifer anymore, do you believe that the  
15 City's -- so we have the minimum index aspect on  
16 one hand, dropping the minimum index level on  
17 one hand and we have this aquifer maintenance  
18 credit proposal on the other hand, do you think  
19 that the City's aquifer maintenance credit  
20 proposal can be done through merely a change  
21 application?

22 **A. It can't be done through a change application  
23 because it's not -- again, not changing the  
24 point of diversion, place of use, or use made of  
25 water.**

1 looked at safe yield, is that -- is that  
2 something that must be looked at?

3 **A. Yes, with a -- with a new application,  
4 absolutely; with a change application, it sort  
5 of depends on the nature of the change  
6 application. There are some exemptions in the  
7 safe yield, for instance, if -- if the well's  
8 been completed already and they're wanting to  
9 move the well, notice of proof has been properly  
10 filed, it would not have to meet safe yield to  
11 move that well. But, yes, safe yield has to be  
12 considered.**

13 Q. You already indicated when recharge credits  
14 could be withdrawn pursuant to ASR Phase I and  
15 ASR Phase II, and you indicated that if recharge  
16 credits have been accumulated by injecting water  
17 into the aquifer they can only be withdrawn if  
18 we're above those 1993 levels; is that right?

19 **A. That's correct.**

20 Q. So you're saying to change that would require a  
21 brand-new application, is that what you're  
22 saying?

23 **A. Yes.**

24 Q. In your expert report, on page 4 of your expert  
25 report found in 39, you identified some math

Page 2177

1 errors that were included in the City's proposal  
 2 and some concerns about the contingency, in your  
 3 expert report; is that right?  
 4 **A. Yes.**  
 5 Q. And prior to this -- this hearing process where  
 6 we've all been in the same room, were those  
 7 concerns ever addressed back to you by the City?  
 8 **A. I think other than that I noted I believe**  
 9 **Mr. Clement responded that, you know, thanks for**  
 10 **the catch, but as far as any corrections that**  
 11 **were made to the proposal, I don't believe**  
 12 **any -- any corrections were made. And I think**  
 13 **that was the one time the City responded that I**  
 14 **can remember.**  
 15 Q. At the very beginning of your report, it says,  
 16 the City's proposal advises that the minimum  
 17 index levels should be lowered so that the City  
 18 can withdraw the accumulated recharge credits  
 19 during an extended drought. Let me ask you  
 20 this: Could the City conceivably withdraw the  
 21 aquifer maintenance credits at a time other than  
 22 a drought based on your review of the proposal?  
 23 **A. Yes, there is no -- no specific condition that**  
 24 **would limit that. Although the proposal does**  
 25 **state that's what the needs are for, there is**

Page 2178

1 **a -- isn't a condition that would restrict only**  
 2 **for drought time removal.**  
 3 Q. Now, with respect to lowering minimum index  
 4 levels as you talk about on page 4 of your  
 5 report, you indicated that you have done work  
 6 with USGS and KGS with regard to migration of  
 7 the chloride plume, have you not?  
 8 **A. Yes.**  
 9 Q. And if you could turn to Exhibit 44 in Volume  
 10 III, the notebook in front of you.  
 11 **A. Okay.**  
 12 Q. What is 44?  
 13 **A. This is a report by the USGS, again titled**  
 14 **Preliminary Simulation of Chloride Transport in**  
 15 **the Equus Beds Aquifer and Simulated Effects of**  
 16 **Well Pumping and Artificial Recharge on**  
 17 **Groundwater Flow and Chloride Transport near the**  
 18 **City of Wichita, Kansas, 1990 through 2008.**  
 19 Q. And I believe that already has an exhibit marker  
 20 on it; is that right?  
 21 **A. I think you introduced it earlier and it was**  
 22 **admitted, but I don't have a marker on it at**  
 23 **this point in time.**  
 24 **MR. STUCKY:** To the extent it  
 25 wasn't, to clarify the record, I am moving

Page 2179

1 to admit Exhibit 44 if it wasn't.  
 2 **MR. MCLEOD:** What book are we in?  
 3 **MR. STUCKY:** Volume III, Mr. McLeod.  
 4 **MR. OLEEN:** Mr. Stucky, I wrote down  
 5 in my notes that 44 had already been  
 6 admitted.  
 7 **MR. STUCKY:** Thank you, Mr. Oleen.  
 8 **BY MR. STUCKY:**  
 9 Q. Mr. Boese, as you -- you worked with USGS in  
 10 developing this report, I assume that you gained  
 11 some experience with the migration of the  
 12 chloride plume in the Equus Beds Aquifer; is  
 13 that right?  
 14 **A. Yes.**  
 15 Q. And, in fact, the movement of the chloride plume  
 16 in the Equus Beds Aquifer, is that something  
 17 that you personally have been concerned with for  
 18 a long time?  
 19 **A. Yes. Again, this is only -- only talking about**  
 20 **a couple of the chloride plumes. Unfortunately,**  
 21 **we have many more. But, yes, in respect to**  
 22 **this, this is talking about a couple different**  
 23 **plumes.**  
 24 Q. In that report as it relates to the Big Ark and  
 25 the Burrton chloride plume, does it talk about

Page 2180

1 the fact that movement of the chloride plume  
 2 could be accelerated if the water table drops?  
 3 **A. Yes, it's in relationship to the amount of**  
 4 **pumping. USGS ran multiple scenarios of**  
 5 **different pumping options, some were with no**  
 6 **pumping, some with City pumping, some with City**  
 7 **and irrigation pumping, some with double City**  
 8 **pumping and no irrigation. There's multiple**  
 9 **ones, but, yes, there's -- City ran several**  
 10 **different scenarios and showed what those**  
 11 **impacts on that chloride movement by those**  
 12 **pumping scenarios were.**  
 13 Q. Based on your involvement with these USGS and  
 14 KGS studies that we identified earlier regarding  
 15 migration of the chloride plume, if the City  
 16 drops its minimum index level to a new level and  
 17 is able to recover recharge credits with that  
 18 bottom having been dropped, is it your belief  
 19 that that could have the potential to accelerate  
 20 the movement of the chloride plume?  
 21 **MR. MCLEOD:** I'm going to ask for  
 22 foundation because there still hasn't been  
 23 adequate foundation for the witness to  
 24 answer that question.  
 25 **MR. STUCKY:** And I'm not asking in

1 the context of the City's modeling; I'm  
2 asking in the context of his work with USGS  
3 and KGS. And what he just testified to was  
4 the simple premise that if the water table  
5 is dropped, the water level is dropped in  
6 the aquifer, there's the potential to  
7 accelerate the movement of a chloride  
8 plume, and I'm asking in that context,  
9 based on his understanding, if we drop the  
10 minimum index level and allow the City to  
11 withdraw when that bottom is lowered, and  
12 as a consequence the water table would also  
13 drop, would that have the potential to  
14 accelerate the movement of the chloride  
15 plume? That's my question so ...

16 **MR. MCLEOD:** And I have to point out  
17 at this juncture there are specific pumping  
18 scenarios that the USGS ran in the study in  
19 Exhibit 44 that's before us. And in order  
20 to answer a question as to whether he  
21 thinks that those studies show an impact  
22 from lowering the bottoms below the 1993  
23 levels and allowing AMCs, Mr. Boese would  
24 have had to model those scenarios in order  
25 to compare to the studies that were run.

1 And we haven't had anything to suggest that  
2 that happened. And I think before the  
3 witness can state a belief on what those  
4 USGS pumping scenarios show, he has to be  
5 able to say how those pumping scenarios  
6 relate to what would happen with the  
7 lowering of the index levels and the  
8 granting of AMCs.

9 **MR. OLEEN:** Madam Officer, I join in  
10 the objection also because there's a big  
11 report here, and I don't think it's enough  
12 foundation to just say I have -- I have  
13 some involvement with the creation of this  
14 report, therefore, do you agree that  
15 generally this 70-some-page report says X  
16 or Y. I would like to see some specific  
17 references to what this report supposedly  
18 says and whether it actually says what  
19 Mr. Boese is supposedly qualified to say  
20 that it says.

21 **BY MR. STUCKY:**

22 Q. Mr. Boese, do you have -- I'm going to ask a new  
23 question. Mr. Boese, do you have familiarity  
24 with the pumping scenarios as they're outlined  
25 in this USGS report?

1 **A. Yes.**

2 Q. Can you walk us through the pumping scenarios as  
3 they're outlined in this USGS report and  
4 indicate how they apply to the City's modeling  
5 and the migration of the chloride plume?

6 **A. Sure. This report is a large report, I don't  
7 disagree with that, there was a lot of work put  
8 into it. The City ran -- I mean, I'm sorry, the  
9 USGS ran, I believe six, and I'm going to look  
10 at it real quick to refresh my memory, six  
11 different pumping scenarios. One was just using  
12 the existing 1990 to 2008 pumping and artificial  
13 recharge conditions, that was the baseline.  
14 This is the pumping and the recharge in the  
15 Wichita well field area. Then they did a no  
16 pumping in the model area, so no pumping being  
17 taken out, no water being taken out; double  
18 Wichita municipal pumping from the Wichita well  
19 field with existing irrigation pumping; existing  
20 Wichita municipal pumping with no irrigation  
21 pumping in the modeled area; double Wichita  
22 municipal pumping in the Wichita well field and  
23 no irrigation pumping in the modeled area; and  
24 then increasing artificial recharge in the Phase  
25 I ASR project site by 2300 acre-feet. They ran**

1 **all those scenarios and evaluated them against  
2 that baseline to see if chloride movement from  
3 both the Burrton plume and the Arkansas River  
4 corridor saltwater contamination, if that  
5 increased the movement, the rate of movement of  
6 those chloride plumes.**

7 **So I could go through each one of those,  
8 but I think the easiest thing in relationship to  
9 what Mr. Stucky asked me would be to skip to the  
10 double Wichita municipal pumping, existing  
11 irrigation pumping scenario, which is the worst  
12 case of all those. I think we could all agree  
13 that's the most pumping. And that did increase  
14 the movement both from the Burrton chloride  
15 plume and the Arkansas River saltwater  
16 contamination, it did increase that movement  
17 into the Wichita well field area. And it  
18 increased it the most out of those scenarios.**

19 Q. So based on your understanding of those  
20 outcomes, how does that apply in your view to  
21 the City's concept of lowering the minimum index  
22 levels?

23 **A. Well, obviously they used -- the USGS used  
24 double Wichita municipal pumping and existing  
25 irrigation pumping, that would obviously lower**

Page 2185

1 the water table. Lowering the water table  
 2 increased the movement of the chloride plumes  
 3 from both locations the most out of all those  
 4 scenarios. And I should add that the only way  
 5 Wichita could probably do double municipal  
 6 pumping would be to pump recharge credits also.  
 7 Q. So how does that apply to the concept of  
 8 lowering the minimum index level as seen in the  
 9 City's proposal and your concern with chloride  
 10 movement regarding that?  
 11 **A. Well, again, the increased pumping would lower**  
 12 **the water tables; if the City was allowed to**  
 13 **withdraw credits below the 1993 level, that**  
 14 **obviously increases the hydraulic gradient, just**  
 15 **as this scenario did. Increasing the hydraulic**  
 16 **gradient increases the rate of movement of the**  
 17 **saltwater contamination.**  
 18 Q. So based on your work and involvement in those  
 19 studies and that modeling, do you believe the  
 20 City's proposal to lower the minimum index level  
 21 could have the impact, based on your expert  
 22 opinion, of accelerating the movement of the  
 23 chloride plume?  
 24 **A. Yes.**  
 25 Q. And from that standpoint, if we look at public

Page 2186

1 interest in the context of the -- the health,  
 2 overall quality and health of the aquifer in  
 3 that sense, is there a concern to the public  
 4 interest if we lower the minimum index level?  
 5 **A. Absolutely.**  
 6 Q. With respect to work where a water table has  
 7 dropped and how that's impacted minimum  
 8 desirable streamflow, what work have you done in  
 9 the past in your job in the District in that  
 10 regard?  
 11 **A. As far as impact of minimum desirable**  
 12 **streamflow?**  
 13 Q. If the water table drops?  
 14 **A. Well, certainly, you know, we're a groundwater**  
 15 **management district so we don't deal with**  
 16 **streamflow necessarily, although in relationship**  
 17 **to this project, minimum desirable streamflow is**  
 18 **important because the flow has to be higher for**  
 19 **the City to be able to operate their intakes on**  
 20 **the -- on the Little Arkansas.**  
 21 **Obviously, I look at minimum desirable**  
 22 **streamflow in the Little Ark because some of my**  
 23 **District members get impacted. Those that**  
 24 **withdraw from -- directly from the river get**  
 25 **impacted every year, almost every year, so I am**

Page 2187

1 oftentimes looking at streamflow gages on the  
 2 Little Arkansas. And, in fact, I do every month  
 3 for my board of directors, I advise them what  
 4 the streamflow is on the Little Arkansas at  
 5 every board meeting, both at the Highway 50 gage  
 6 and at the Valley Center gage.  
 7 Q. Have you done any analysis in what the effects  
 8 of lowering a water table would be and its  
 9 impacts on minimum desirable streamflow during  
 10 your time at the District?  
 11 **A. Well, I've certainly looked at the streamflow**  
 12 **response to groundwater levels. We measure**  
 13 **ground -- groundwater levels in all of our**  
 14 **monitoring wells quarterly, we have some**  
 15 **automated groundwater-level recording devices.**  
 16 **It's quite obvious when the water table drops**  
 17 **significantly, it impacts minimum desirable**  
 18 **streamflow in both the Big Arkansas and the**  
 19 **Little Arkansas River. We saw the Big Ark and**  
 20 **the Little Ark, at least, at locations go**  
 21 **completely dry during the 2011 and 2012 drought.**  
 22 **And, in fact, I have some pictures of them if we**  
 23 **want to look at them.**  
 24 Q. Well, and that's based on your own analysis that  
 25 MDS drops when the water table drops, that's

Page 2188

1 based on your own analysis and data you have  
 2 collected; is that right?  
 3 **A. Certainly data that I've looked at, I mean,**  
 4 **that's pretty base hydrology, the Little**  
 5 **Arkansas and the Big Arkansas are hydraulically**  
 6 **connected to the aquifer, when the groundwater**  
 7 **levels drop, they reduce the flow in the river,**  
 8 **both rivers.**  
 9 Q. So based on that very basic hydrology and your  
 10 background, understanding that if the water  
 11 level drops, we're going to a new minimum index  
 12 level, does that have the potential to also  
 13 decrease minimum desirable streamflow in the  
 14 aquifer?  
 15 **A. During that time when the recharge credits are**  
 16 **being recovered and driving those water levels**  
 17 **even lower than 1993 levels, absolutely.**  
 18 Q. So in other words, lowering the minimum index  
 19 level as articulated by the City, just based on  
 20 your experience working for the District, you  
 21 believe that has the potential to also  
 22 negatively affect minimum desirable streamflow?  
 23 **A. Yes.**  
 24 Q. Just a moment ago, just, I guess, for what it's  
 25 worth, you referenced some pictures, you said

1 that previously back in 2011, I think you said,  
2 the stream dried up; is that right?  
3 **A. I believe the pictures are from 2012, I would**  
4 **need to look at them again. I think they're in**  
5 **one of --**  
6 Q. Well, let's turn to Exhibit 54 while we're at  
7 it. Tell me when you're there, Mr. Boese.  
8 **A. I'm there, Dave.**  
9 Q. Mr. Boese, I usually don't question your memory  
10 on these things, do these appear to be photos  
11 from August of 2012 regarding the river in the  
12 Little Arkansas River in -- and first of all,  
13 where were these taken?  
14 **A. The -- the first one is standing just off of**  
15 **the -- or just on the Bentley bridge near**  
16 **Bentley, Kansas. This is a picture of the Big**  
17 **Arkansas River in August of 2012. And of**  
18 **considerable note would be the -- would be the**  
19 **four-wheeler or motorcycle tracks that are in**  
20 **the -- in the river. We're kind of used to**  
21 **seeing that in western Kansas, we're not used to**  
22 **seeing that in this part of Kansas.**  
23 Q. And on the next page, there's another photo that  
24 you took as GMD staff showing the river having  
25 dried up on the Little Arkansas River in Harvey

1 County, where was that taken?  
2 **A. This was taken in northwest Harvey County of the**  
3 **Little Arkansas River. That's the bed of the**  
4 **river completely dry, with a slight, I guess,**  
5 **disgusting looking puddle in it.**  
6 Q. And would you agree that both of these photos  
7 represent a true and accurate depiction of what  
8 the river looked like in August of 2012 for both  
9 the Big Arkansas River in the case of the first  
10 photo and the Little Arkansas River in the case  
11 of the second photo?  
12 **A. At these specific locations, yes, the river was**  
13 **not flowing, there was no water other than this**  
14 **water that you can see ponded up in either --**  
15 **either river at that location. It doesn't mean**  
16 **the entire river stretch was -- was dry**  
17 **throughout the District, but certainly at these**  
18 **locations there was no water flowing. You would**  
19 **say minimum desirable streamflow, there was no**  
20 **streamflow at these locations.**  
21 **MR. STUCKY:** I move to admit the  
22 District's Exhibit 54.  
23 **PRESIDING OFFICER:** Any objections?  
24 **MR. MCLEOD:** Just to clarify and  
25 only because the boxes on them say photo by

1 GMD2 staff, was the witness the staffer  
2 that took these photos?  
3 **BY MR. STUCKY:**  
4 Q. Mr. Boese, you were, in fact, the staff member,  
5 to the best of your memory, that took these  
6 photos, correct?  
7 **A. I'm going to -- I'm going to pause and say I**  
8 **don't know. I believe I was standing with one**  
9 **of my staff members, and I'm not sure which one**  
10 **of us held the camera when we took the pictures.**  
11 **I was there when the picture was taken. Did I**  
12 **snap the picture? I -- I do not entirely**  
13 **recall.**  
14 **MR. MCLEOD:** No objection.  
15 **MR. OLEEN:** I'm going to object, I  
16 don't recall if the witness testified that  
17 these depict portions of the river subject  
18 to MDS.  
19 **A. I'm -- I'm sorry, I'm not understanding your**  
20 **question.**  
21 **MR. STUCKY:** I don't either, I don't  
22 understand the objection.  
23 **A. The Little Arkansas River has an MDS flow on it.**  
24 **MR. STUCKY:** He's just saying that's  
25 what the river looked like, that it -- they

1 dried up in August of 2012, both the Big  
2 Arkansas and the Little Arkansas, that's  
3 what he was saying.  
4 **MR. OLEEN:** And he's testifying  
5 that -- 'cause they say, like, near  
6 Bentley, I don't know exactly where. He's  
7 testifying that these depict portions of  
8 the river that are subject to MDS at the  
9 time he's claiming these photographs were  
10 taken?  
11 **BY MR. STUCKY:**  
12 Q. Mr. Boese, did you hear the question, he's  
13 asking if whether or not these rivers were  
14 subject to minimum desirable streamflows at the  
15 time these pictures were taken, I think is the  
16 question?  
17 **A. Well, there's minimum desirable streamflow**  
18 **established on the Little Arkansas, I guess I**  
19 **will -- I'll need to look at what it is on the**  
20 **Big Arkansas.**  
21 **MR. STUCKY:** And I'm just going to  
22 speed this up, for the purposes of the  
23 admission of these exhibits, I would ask  
24 that they be admitted. I don't think  
25 that's a relevant objection for the purpose

Page 2193

1 of -- he's already testified that he was  
 2 present when the pictures were taken, what  
 3 they depict, I would ask that they be  
 4 admitted at this time.  
 5 **PRESIDING OFFICER:** Yeah, I -- I  
 6 don't think that they were being -- that he  
 7 represented that these were specific areas  
 8 subject to MDS, even though that was the  
 9 context of the conversation beforehand. So  
 10 I'm going to agree with Mr. Stucky and  
 11 admit these photos. GMD 4 -- or 54, sorry,  
 12 is admitted.  
 13 **BY MR. STUCKY:**  
 14 Q. So, Mr. Boese, as -- you're familiar with the,  
 15 at least in a general sense, with the expert  
 16 report of Dave Romero; is that right?  
 17 **A. Yes.**  
 18 Q. And Mr. Romero mentions in his expert report  
 19 that the concept of the river drying up and the  
 20 effects that that would have on the model,  
 21 that's -- that's something that he opines on; is  
 22 that right?  
 23 **A. Yes.**  
 24 Q. And without rendering any opinion on it, you  
 25 would at least stipulate that in 2012, which are

Page 2194

1 some of the years that were looked at for the  
 2 City's modeling, both the Big Arkansas and the  
 3 Little Arkansas did, in fact -- did, in fact,  
 4 dry up in at least one or more places; is that  
 5 true?  
 6 **A. Yes.**  
 7 Q. I know -- I think you answered this question,  
 8 but a rash of objections, using Mr. McLeod's  
 9 terminology, were made, do you believe that  
 10 dropping the minimum index level to a new  
 11 minimum index level could have the effect of  
 12 adversely impacting minimum desirable streamflow  
 13 when those credits are withdrawn?  
 14 **A. Yes.**  
 15 Q. Yesterday and the previous times when we were  
 16 here there was a series of questions asked to  
 17 Mr. Letourneau with regard to well drilling logs  
 18 and also the corresponding hydrographs. Do you  
 19 recall all those discussions?  
 20 **A. Yes.**  
 21 Q. And, in fact, we've had a series of well logs  
 22 that have already been admitted, is that right,  
 23 into evidence?  
 24 **A. Yes.**  
 25 Q. As far as all the well logs that have been

Page 2195

1 admitted, are those all ones that you would have  
 2 looked at?  
 3 **A. Yes.**  
 4 Q. Do you agree for the most part with  
 5 Mr. Letourneau's opinion with regard to the  
 6 variance between the practical saturated  
 7 thickness and the reported saturated thickness,  
 8 both with respect to dropping the minimum index  
 9 level and with respect to the modeled drought  
 10 scenarios?  
 11 **A. I agree with Mr. Letourneau, I was -- I had**  
 12 **slightly different numbers on some of them. I**  
 13 **think particularly IW1, when I -- when I did**  
 14 **the math, I actually had a less saturated**  
 15 **thickness --**  
 16 **MR. MCLEOD:** I'm going to object to  
 17 the line of questioning because practical  
 18 saturated thickness was not covered at all  
 19 in Mr. Boese's expert report, nor do I  
 20 recall any material on the topic of  
 21 practical saturated thickness being shared  
 22 with the City in discovery.  
 23 **PRESIDING OFFICER:** It wasn't in  
 24 Mr. Letourneau's report either.  
 25 **MR. MCLEOD:** Yes, and

Page 2196

1 Mr. Letourneau, however, was asked about it  
 2 on cross, by a hostile party, not by the  
 3 party that was sponsoring him as an expert.  
 4 **PRESIDING OFFICER:** Mr. Stucky.  
 5 **MR. STUCKY:** Well, I think that  
 6 there is -- his report does talk about the  
 7 impacts to the aquifer if we're to drop the  
 8 minimum index level, he talks about how  
 9 there's -- there's a fear that it could  
 10 adversely impact the aquifer, that it could  
 11 adversely impact minimum desirable  
 12 streamflow, and I think there's also  
 13 discussion in his report about how the  
 14 City's proposal -- in fact, I'm looking at  
 15 talks about water levels dropping based on  
 16 the City's proposal, he does talk about  
 17 water levels dropping. I would acknowledge  
 18 that the term practical saturated  
 19 thickness, end quote, is not actually  
 20 utilized in his report, but I think that  
 21 that discussion, and based on his role in  
 22 the District, properly stems from some of  
 23 the opinions he's already rendered in his  
 24 expert report. And also based on the  
 25 liberal nature of this hearing so ...

1 **PRESIDING OFFICER:** Mr. Oleen has  
2 stood up.  
3 **MR. OLEEN:** Just to say I join in  
4 the objection. DWR's witness was only  
5 asked about that concept on cross, and it's  
6 not something that appears -- the concept  
7 of saturated thickness isn't in Mr. Boese's  
8 report, and I think we're starting to  
9 stretch the bounds of what his report  
10 included, to include a lot more things that  
11 it doesn't include that GMD would like to  
12 talk about today, but I don't think it's  
13 appropriate to talk about it either.  
14 **MR. MCLEOD:** And just by way of  
15 brief rejoinder, it's a very critical  
16 distinction that it was on cross. I mean,  
17 it -- it obviously was an argument that the  
18 District had developed in detail and  
19 withheld all of it in discovery and Counsel  
20 managed to spring it as an ambush tactic,  
21 surprise tactic in Mr. Letourneau's exam on  
22 cross, and I think Counsel gets by with  
23 that, and that was very skillful. But it  
24 is then completely different to move the  
25 whole topic area over to the witness

1 they're sponsoring who said nothing about  
2 it in his expert report and then have him  
3 take up that whole ambushed topic area and  
4 carry the ball forward on it.  
5 **MR. STUCKY:** He talks about, and I'm  
6 quoting the bottom of page 5 of his report,  
7 he says, indeed, adversely affecting MDS  
8 would be considered an unreasonable  
9 lowering of the static water level, and  
10 he's talking about in the context of  
11 minimum index levels. I think he does talk  
12 about the concept of -- of lowering the  
13 static water level, and I think it does  
14 reasonably relate to his report for that  
15 reason.  
16 **PRESIDING OFFICER:** But I think what  
17 they're objecting to is the saturated  
18 thickness aspect of what you're asking  
19 about, not the MDS.  
20 **MR. STUCKY:** Well, but I think that  
21 saturated thickness goes hand in hand  
22 with -- with water levels, and he talked  
23 about how the City's proposal would --  
24 would have the effect of dropping the  
25 static water level, and I think saturated

1 thickness goes hand in hand with water  
2 levels. I mean, you're talking about the  
3 distance between bedrock and the static  
4 water level, and he says that static water  
5 level will drop, and so I think there is a  
6 correlation between the two.  
7 **PRESIDING OFFICER:** And remind me,  
8 when you were first qualifying Mr. Boese  
9 and questioning him, you did discuss the  
10 use of well logs?  
11 **MR. STUCKY:** That's right.  
12 **PRESIDING OFFICER:** And the review  
13 of well logs and the analysis of the  
14 contents of well logs?  
15 **MR. STUCKY:** Right, he's done that  
16 throughout his career in his 28 years with  
17 the District. He's looked at a lot of well  
18 logs.  
19 **MR. OLEEN:** If I may, Madam Hearing  
20 Officer, it's not only, perhaps, to  
21 Mr. Boese's qualifications. If he's looked  
22 at a lot of well logs, perhaps he's  
23 qualified to talk about the concept of  
24 practical saturated thickness. The point  
25 is that it wasn't in this expert report,

1 and I think, I have to disagree with  
2 Mr. Stucky, I think talking about static  
3 water levels is not the same as talking  
4 about the practical saturated thickness  
5 analysis, which Mr. Boese may be qualified  
6 to do, but it's more of a disclosure  
7 concern and preparing for this hearing than  
8 it is necessarily about Mr. Boese's  
9 knowledge that he has.  
10 And I would -- I'm sorry, I would also  
11 add that the well logs were not produced as  
12 part of the original exchange of the  
13 exhibits, if memory serves me correctly.  
14 That was something that was added on later  
15 in these proceedings.  
16 **A. Could I -- could I add something at this point  
17 in time? I just wanted to state that the well  
18 logs are wells for the IW wells that the City  
19 hired and had a consultant, so they -- they've  
20 had these well logs since 2001 when they were  
21 installed. Just wanted to point out that these  
22 are not -- these are the City's monitoring wells  
23 that they paid for to have those index wells.  
24 It was their consultant, their driller put those  
25 in. Just wanted to state that for the record.**

Page 2201

1 **MR. STUCKY:** It's not data we've  
 2 hidden from any party in this case.  
 3 **MR. OLEEN:** But the fact that  
 4 Mr. Boese is planning to testify about it  
 5 today at this hearing is something that I  
 6 think has been hidden.  
 7 **MR. MCLEOD:** And I join in that last  
 8 comment. If I -- if I willfully and  
 9 completely withhold an entire developed  
 10 argument in the course of responding to  
 11 discovery, it is not curative that the  
 12 underlying information is somewhere out  
 13 there where the other party could have got  
 14 it, albeit I've never told them that I'm  
 15 going to use that information for the  
 16 purpose that I've concealed in my responses  
 17 to discovery. To the extent that the  
 18 District made, in my opinion, early,  
 19 numerous, poorly founded complaints about  
 20 surprise, this is -- this is shameless  
 21 conduct by the District.  
 22 **PRESIDING OFFICER:** I am mindful of  
 23 the great deal of discretion I have  
 24 regarding admissibility, I am also mindful  
 25 of trying to uphold standards of fairness.

Page 2202

1 I am not going to impart any bad faith  
 2 behavior on any of the parties in this  
 3 particular case or in any other case.  
 4 Although I believe it is potentially  
 5 helpful to me to hear from Mr. Boese, in  
 6 this particular instance, because it's a  
 7 new argument, not in the expert reports,  
 8 I'm afraid I'm going to have to ask you,  
 9 Mr. Stucky, to move on.  
 10 I believe we need -- well, I'm going to  
 11 withdraw that. Everyone, I'm sure and I'm  
 12 confident, is doing their very best and  
 13 professional job they can. Let's keep it  
 14 courteous, let's be efficient, and I will  
 15 sustain the objection for the reasons  
 16 argued in terms of not clearly in the  
 17 expert report, matter of surprise. But,  
 18 again, I don't believe -- I'm not willing  
 19 to buy off on any particular ill will or  
 20 unprofessional conduct in that regard.  
 21 So, Mr. Stucky, if you'll proceed with  
 22 your next topic.  
 23 **MR. STUCKY:** I will do so.  
 24 **BY MR. STUCKY:**  
 25 Q. Mr. Boese, previously we talked about ASR Phase

Page 2203

1 I order and ASR Phase II order as it relates to  
 2 passive recharge credits. And, in fact, you  
 3 indicated that there was some conditions that  
 4 were made with regard to passive recharge  
 5 credits; is that true?  
 6 **A. Yes.**  
 7 Q. And, indeed, you gave us a definition of passive  
 8 recharge credits, what -- what was that  
 9 definition?  
 10 **A. The chief engineer when he wrote the ASR Phase I**  
 11 **order gave us a definition in that order, and I**  
 12 **don't know if I'll get it word for word, water**  
 13 **which the City could have pumped but did not.**  
 14 Q. Now I'd ask that you turn to page 1-2 of the  
 15 City's proposal document, which is identified in  
 16 Exhibit 1.  
 17 **PRESIDING OFFICER:** I'm sorry, where  
 18 are we in the proposal?  
 19 **MR. STUCKY:** Page 1-2 --  
 20 **PRESIDING OFFICER:** 1-2, thank you.  
 21 **MR. STUCKY:** -- in the proposal.  
 22 **BY MR. STUCKY:**  
 23 Q. The -- at the bottom of that page, I think it's  
 24 the last full sentence, can you read the  
 25 beginning of that sentence in their proposal?

Page 2204

1 Aloud for the record, Mr. Boese.  
 2 **A. Is it the second from the last that starts with**  
 3 **the water?**  
 4 Q. Yeah, second from the last, sorry.  
 5 **A. Okay. That's okay. The water left in storage**  
 6 **as a result of utilizing Little Arkansas River**  
 7 **flows rather than groundwater from the EBWF**  
 8 **would be considered as an ASR aquifer**  
 9 **maintenance credit, parentheses, AMC, with**  
 10 **similar characteristics to the current ASR**  
 11 **recharge credits.**  
 12 Q. So it talks about the water left in storage and  
 13 how that would get consideration as an aquifer  
 14 maintenance credit. Is that what it's saying?  
 15 **A. Yes.**  
 16 Q. Isn't that the same thing as what was prohibited  
 17 in ASR Phase I and Phase II orders and  
 18 memorandums of understanding?  
 19 **A. In the memorandum of understanding?**  
 20 Q. Well, I'm sorry, in the Phase I and Phase II  
 21 orders prohibiting passive recharge credits,  
 22 isn't that the same thing?  
 23 **A. Yes.**  
 24 Q. So in other words, is it your view that the  
 25 City's proposal as it relates to aquifer

1 maintenance credits is nothing more than a  
2 passive recharge credit?

3 **A. I believe that's exactly what it is.**

4 Q. And are you basing that on the fact that the  
5 definition that was identified in ASR Phase I is  
6 almost identical to the language used in the  
7 City's proposal?

8 **A. Yes.**

9 Q. Can the City re-appropriate water that is not  
10 pumped from existing water rights?

11 **A. No.**

12 Q. And why is that? Would it violate a safe yield  
13 principle?

14 **A. Yes. And the Wichita well field is extremely  
15 over-appropriated, and I'm sure we'll get to  
16 that, the foundation on that very shortly.  
17 Water that's not pumped does not go back into  
18 the -- into the pot, so to speak, that can be  
19 re-appropriated.**

20 Q. Let's turn to Exhibit 43 in your notebooks.  
21 What is Exhibit 43, Mr. Boese?

22 **A. I'm going to give the hearing officer a second  
23 to --**

24 **PRESIDING OFFICER:** Oh, I'm good.

25 Thank you.

1 **table on average per year in acre-feet. The**  
2 **blue, which is the middle number of those series**  
3 **of three numbers, is the average water use. And**  
4 **I should state I believe most of these are from**  
5 **the 2005 to 2014 reported water use to the**  
6 **Division of Water Resources, that's the average**  
7 **water use. And then the red, which is the**  
8 **bottom number in each township, is the**  
9 **authorized annual quantity.**

10 **So as -- as you look through these numbers,**  
11 **essentially every township, not near the**  
12 **authorized quantity is being pumped. If you**  
13 **compare the red, which is the authorized**  
14 **quantity, to the blue, which is the average**  
15 **water use, you can see that most are**  
16 **significantly lower as far as what is actually**  
17 **pumped compared to what is actually authorized.**

18 Q. So merely as a matter of house clean -- or  
19 housekeeping and cleanup, the City testified  
20 that to the extent water levels were restored in  
21 the aquifer, that would have been based in large  
22 part on the fact that the City reduced its  
23 pumping in the aquifer and had been a better  
24 steward of its management of the aquifer. Do  
25 you recall that testimony?

1 **A. That's a Kansas Geological Survey Equus Beds**  
2 **Groundwater Management District No. 2**  
3 **sustainability assessment.**

4 **BY MR. STUCKY:**

5 Q. There's been some discussion with respect to the  
6 fact that in the past the City has been a good  
7 steward of the aquifer. Do you recall some of  
8 that testimony from the City?

9 **A. Yes.**

10 Q. Could you turn to page 61 of this report? It's  
11 numbered at the bottom of the page.

12 **A. Okay.**

13 Q. What does page 61 tell us about whether or not  
14 other water users in the aquifer have been good  
15 stewards of their management of the water  
16 resource?

17 **A. I feel like I should give a little -- a little**  
18 **background. This is figures that were generated**  
19 **by Kansas Geological Survey; of course, the**  
20 **District staff was very involved in this**  
21 **process. There are three numbers in each**  
22 **township. The -- the top number is the average**  
23 **sustainable water use; in other words, how much**  
24 **water can be withdrawn from that township that**  
25 **would be sustainable without a declining water**

1 **A. Yes.**  
2 Q. Is it your belief that the aquifer also  
3 recovered because -- because others in the  
4 aquifer were not also fully pumping their water  
5 rights?

6 **A. That would be a component of that, absolutely.**

7 Q. And so, in fact, it was constituents throughout  
8 the Equus Beds Aquifer have, what this shows,  
9 have been a good steward of the management of  
10 the aquifer in the past, is that what this is  
11 showing us?

12 **A. Yes, on average, the -- the authorized quantity**  
13 **is not nearly being pumped every year.**

14 Q. Mr. Boese, I asked some prior questions about  
15 the difference between taking water directly  
16 from the Little Arkansas River and sending it to  
17 the City for use and an aquifer maintenance  
18 credit being created, and I was told that under  
19 that scenario that's not a passive recharge  
20 credit; but on the other hand, if we were to  
21 take water from El Dorado Reservoir, treat it,  
22 use it in the City that there would not be --  
23 that it would be a passive recharge credit if  
24 the City sought a credit for not pumping down  
25 the aquifer. Similarly, if -- the City would

Page 2209

1 not get a credit for pumping from Cheney  
 2 Reservoir. Do you recall all those discussions?  
 3 **A. Yes.**  
 4 Q. And I asked specifically if we were to take this  
 5 water from El Dorado Reservoir or from Cheney  
 6 Reservoir and first treat it in the Bentley  
 7 treatment facility, what's the distinction  
 8 between that and taking water from the Little  
 9 Arkansas River, do you recall me asking for that  
 10 distinction?  
 11 **A. Yes.**  
 12 Q. As you sat here and listened to all that  
 13 testimony, explain for me what that distinction  
 14 was that was made.  
 15 **A. I don't exactly recall. I believe that the**  
 16 **distinction was that the Little Arkansas River**  
 17 **is currently authorized for -- for recharge and**  
 18 **the El Dorado water is not authorized for**  
 19 **recharge, if I remember correctly.**  
 20 Q. Setting aside past distinctions that were made,  
 21 do you believe that those scenarios, taking  
 22 water from Cheney, treating it, and sending it  
 23 to the City, taking water from El Dorado  
 24 Reservoir, treating it, and sending it to the  
 25 City, taking water from the Big Arkansas River,

Page 2210

1 treating it, and sending it to the City is  
 2 essentially the same as the concept of taking  
 3 overflow water from the Little Arkansas River,  
 4 treating it, and sending it to the City in the  
 5 sense that all of those would be examples of  
 6 passive recharge credits if the City is seeking  
 7 credit for not having pumped the aquifer?  
 8 **A. I see no difference between -- between any of**  
 9 **them; all of them are using surface water in**  
 10 **lieu of pumping groundwater, and you don't get**  
 11 **credit for that. It's a good thing, but you**  
 12 **don't get credit for it.**  
 13 Q. Mr. Boese, you testified previously and it's  
 14 also outlined in your expert report work that  
 15 you've done with respect to safe yield analysis;  
 16 is that right?  
 17 **A. Yes.**  
 18 Q. And I think you indicated that -- that in the  
 19 past you've done a safe yield analysis with  
 20 regard to the City's permits for ASR Phase II.  
 21 Is that a true statement?  
 22 **A. I have, yes, I did it for every one of their 30**  
 23 **existing ASR permits.**  
 24 Q. First of all, what regulation applies -- well,  
 25 let's turn to Exhibit 24, K.A.R. 5-22-7(b)(7),

Page 2211

1 let's turn to that in Exhibit 24.  
 2 **A. Can you repeat which one you are wanting me to**  
 3 **look at, Dave?**  
 4 Q. K.A.R. 5-22-7 and subsection (b)(7).  
 5 **A. Okay.**  
 6 Q. Tell me what that regulation tells us about safe  
 7 yield and exempting an ASR well from safe yield.  
 8 **A. Says an application for an aquifer storage and**  
 9 **recovery well is exempt from safe yield.**  
 10 Q. Now, we'll talk about this in greater detail in  
 11 a moment, but is it your belief that an aquifer  
 12 maintenance credit is exempt from safe yield?  
 13 **A. No.**  
 14 Q. And why is that?  
 15 **A. An aquifer storage and recovery well is exempt**  
 16 **because it is adding an outside water source, in**  
 17 **this case the Little Arkansas River, to the**  
 18 **supply of the groundwater. We're in a heavily**  
 19 **over-appropriated aquifer, we're going to talk**  
 20 **about that in a little bit. To be able to be**  
 21 **exempt from safe yield, to gain approval for a**  
 22 **new appropriation right, you must add water to**  
 23 **the system. That is not water left in storage;**  
 24 **that is adding outside source water to the**  
 25 **system. An AMC does not do that.**

Page 2212

1 Q. If we were to turn to Exhibit 22 just so we can  
 2 look at these regulations, which is K.A.R.  
 3 5-3-9(b), and just to speed up your time,  
 4 Mr. Boese, it's on page 36 on Exhibit 22, would  
 5 you agree with me that that regulation indicates  
 6 that the public interest is protected only when  
 7 safe yield can be appropriated, and that's a  
 8 statewide regulation?  
 9 **A. Which -- which one were you looking at again,**  
 10 **Dave?**  
 11 Q. K.A.R. 5-3-9.  
 12 **A. Yes, subsection (b) says, unless otherwise**  
 13 **provided by regulation, it shall be considered**  
 14 **to be in the public interest that only the safe**  
 15 **yield of any water -- any source of supply shall**  
 16 **be appropriated.**  
 17 Q. So whereas K.A.R. 5-3-9 is a statewide  
 18 regulation, the other regulation we talked about  
 19 is unique to the Groundwater Management  
 20 District; is that true?  
 21 **A. That is correct.**  
 22 Q. And K.A.R. 5-22-7, as you indicate in your  
 23 expert report, is designed -- dictates upon the  
 24 GMD to ensure that safe yield calculations are  
 25 performed; is that -- is that true?

1 **A. That spells out the way that we perform the safe**  
2 **yield calculation, that is correct.**

3 Q. You indicated earlier that you performed safe  
4 yield calculations -- well, you -- let me just  
5 back up. Why -- I want to make sure I caught  
6 this. Why would ASR Phase II credits be exempt  
7 from safe yield, explain that to me, why you  
8 think that exemption was created?

9 **A. The existing physical recharge credits?**

10 Q. That's right, ASR Phase II credits?

11 **A. Because physical recharge adds to the supply, to**  
12 **the groundwater supply. Again, we're in an**  
13 **over-appropriated aquifer, all the water is**  
14 **already dedicated to other users; to be able to**  
15 **gain an additional appropriation, additional**  
16 **water must be added to the system. You must**  
17 **en -- enhance the recharge, you must add more**  
18 **water to the system.**

19 Q. On the other hand, with an aquifer maintenance  
20 credit proposal, is water added to the Equus  
21 Beds Aquifer by the City?

22 **A. No.**

23 Q. So that's the reason why you believe that  
24 it's -- that the City's proposal changes are not  
25 exempt from safe yield?

1 something that you do almost daily throughout  
2 your job; is that true?

3 **A. I -- I do a bunch. I would guess well over a**  
4 **thousand safe yield calculations that I've done**  
5 **in my time at the District. We average a couple**  
6 **of hundred per year, so I'm sure it's -- I'm**  
7 **sure it's way over a thousand, it may be in the**  
8 **multiple thousands of safe yield calculations**  
9 **that I've done.**

10 Q. I'd ask that you turn in your exhibit notebook  
11 to Exhibit 59. What is Exhibit 59?

12 **A. Exhibit 59 is the 30 safe yield calculations**  
13 **that I did, which would be one for each one of**  
14 **the existing ASR Phase II permits.**

15 Q. Explain on the first page of Exhibit 59 how  
16 these safe yield calculations work and what your  
17 finding was.

18 **A. These are done pursuant to K.A.R. 7-20 --**  
19 **5-22-7, excuse me, which specifies how we do**  
20 **safe yield calculations. This is conducted with**  
21 **a computer software, we use ArcGIS software,**  
22 **with a program that was originally written by**  
23 **Kansas Geological Survey for us.**

24 **Probably be easier just for me to explain**  
25 **this. The red small dot that is in the middle**

1 **A. That is correct, that is -- that is why they**  
2 **would not be exempt.**

3 Q. You indicated earlier that you would have  
4 performed safe yield calculations as it related  
5 to the ASR Phase II permits. Is that what you  
6 said earlier?

7 **A. I did perform them for this purpose, I did**  
8 **not -- I don't believe I performed them when I**  
9 **reviewed the applications because there was no**  
10 **need to review those for safe yield because they**  
11 **were exempt.**

12 Q. Okay. So -- and whereas ASR Phase II was  
13 exempt, it's your opinion that ASR -- that the  
14 AMC proposal is not exempt; is that right?

15 **A. That -- that is correct, AMC --**

16 Q. And so because of that, you have found merit  
17 looking into the safe yield calculations be  
18 conducted with respect to aquifer maintenance  
19 credits; is that right?

20 **A. Yes, I went ahead and ran safe yield evaluations**  
21 **on all 30 existing permits that the City wants**  
22 **to now be able to claim aquifer maintenance**  
23 **credits.**

24 Q. And just to back up, aquifer -- just to back up,  
25 running safe yield calculations, I mean, that's

1 **of the evaluation is the well location for ASR**  
2 **Phase II water permit 46,714. The larger circle**  
3 **is a two-mile-radius circle that is drawn around**  
4 **that point of diversion, that well location.**  
5 **All the red triangles with the circle around**  
6 **them are existing points of diversion, whether**  
7 **they be irrigation wells, municipal wells, base**  
8 **flow nodes on the Little Arkansas in this case**  
9 **had some of those, or any non-domestic well, any**  
10 **permitted well.**

11 **The spreadsheet to the right is a list of**  
12 **all of those points of diversion that are**  
13 **located within that two-mile-radius circle,**  
14 **along with their water right number, their legal**  
15 **description, footage measurements to the well,**  
16 **their type of use, and their authorized**  
17 **quantity. There are 8,042 acres in a two-mile**  
18 **circle. In Harvey County, we use 6 inches of**  
19 **recharge, so it's very simple math, 8,042 acres**  
20 **times half a foot would allow 4,021 acre-feet of**  
21 **appropriation in that evaluation area of**  
22 **consideration.**

23 **The spreadsheet then indicates that our**  
24 **total existing appropriation, which you'll find**  
25 **down at the bottom right-hand corner at this**

Page 2217

1 location, is a little bit over 11,000 acre-feet.  
 2 Of note is the next line, which is  
 3 nonconsumptive appropriations, those are the ASR  
 4 Phase II, three permits that are 500 acre-feet  
 5 each. You can see they are -- they are then  
 6 subtracted to come up with consumptive  
 7 appropriations of 9,572.35 acre-feet. This  
 8 location would then indicate that this area is  
 9 over-appropriated by over two times what it  
 10 should be.  
 11 Q. Okay. So -- and this would be for which permit  
 12 number?  
 13 A. This was ASR Phase II permit number 46,714.  
 14 Q. All right. Mr. Boese, without walking through  
 15 all those numbers in great detail, can you just  
 16 flip through and reference the permit number of  
 17 each of these and tell me if it's -- if it's  
 18 over-appropriated already and in a general sense  
 19 the extent to which it's over-appropriated. In  
 20 other words, if you can quickly say, we see that  
 21 it's over-appropriated by double or quadruple,  
 22 if you could just do some quick testimony to  
 23 walk through these and speed up the record.  
 24 A. Sure, and for -- just for expediency, every one  
 25 of these should be 4,028 -- 4,021 acre-feet that

Page 2218

1 should be allowed because they're all two-mile  
 2 circles in Harvey County. And I'm going to give  
 3 you the consumptive appropriation 'cause, again,  
 4 we do not count the ASR existing permits because  
 5 they are exempt. So I'm going to flip through  
 6 these fairly fast. 46,715 is about three and a  
 7 half times over-appropriated. 46,716 is almost  
 8 four times over-appropriated.  
 9 MR. OLEEN: I object, are you  
 10 saying, Mr. Boese, that the water right is  
 11 over-appropriated or the radius?  
 12 A. The area of consideration with the well location  
 13 as the proposed point of diversion if we were  
 14 running a new application, so it's a two-mile  
 15 circle drawn around the existing ASR Phase II  
 16 application or permit.  
 17 MR. OLEEN: So the radius is  
 18 over-appropriated. Okay, thank you for the  
 19 clarification.  
 20 A. Well, it's site specific. If I move -- if I  
 21 move the well location, the circle moves, so I  
 22 prefer to use the term at that location of where  
 23 the well is located, where the ASR well is  
 24 located, that area is -- it's specific to that  
 25 dot. If I move that dot a foot, the circle

Page 2219

1 moves a foot, if that makes sense. So it is  
 2 site specific to that well. It doesn't mean  
 3 that if I move somewhere else in that circle  
 4 that that number is the same.  
 5 BY MR. STUCKY:  
 6 Q. All right. Mr. Boese, proceed with your quick  
 7 summary.  
 8 A. Okay. I think I left on 46,716, which is about  
 9 four times over-appropriated. 46,717, which,  
 10 again, is close to four times over-appropriated.  
 11 46,718 is, again, about -- not quite four times  
 12 appropriated. And I do want to keep noting that  
 13 I'm subtracting the -- the ASR Phase II. In the  
 14 one I just talked about, 46,718 had  
 15 7500 acre-feet of ASR Phase II recharge credit  
 16 appropriation. So if those were added in, if  
 17 they were not exempt, it would actually be five  
 18 and a half times over-appropriated.  
 19 46,719 is, again, close to four times  
 20 over-appropriated. 46,720 is roughly three and  
 21 a half times over-appropriated. 46,721 is  
 22 roughly three times over-appropriated. 46,722  
 23 is about three and a half times  
 24 over-appropriated. 46,723 is about three and a  
 25 half times over-appropriated. 46,724 is almost

Page 2220

1 four times over-appropriated. 46,725 is a  
 2 little over double appropriated.  
 3 46,726 is a little over double  
 4 appropriated. 46,727 is about two and a half  
 5 times over-appropriated. 46,728 is about two  
 6 and a half times over-appropriated. 46,729 is  
 7 about one and a half times over-appropriated.  
 8 46,730 is about one and a half times  
 9 over-appropriated. 46,731 is about three and a  
 10 half times over-appropriated. And 46,732 is  
 11 about two and a half to three times  
 12 over-appropriated. And 46,733 is about two and  
 13 a half times over-appropriated.  
 14 And I probably should pause and say most or  
 15 all of these water permits were put in prior to  
 16 our safe yield regulation. Most of these were  
 17 approved, most of these permits were approved  
 18 prior to our safe yield regulation being in  
 19 effect. There hasn't been any new permits  
 20 allowed in the City of Wichita well field area  
 21 for a long time other than ASR permits or maybe  
 22 some small use type permits. And our safe yield  
 23 regulation went into effect in 1980, I believe,  
 24 so it's been closed for a long time.  
 25 PRESIDING OFFICER: Let's take a

1 quick break, maybe five, ten minutes.  
2 (Thereupon, a recess was taken;  
3 whereupon, the following was had.)  
4 **PRESIDING OFFICER:** Okay. We're  
5 back on the record. It's about a quarter  
6 till 4:00. Mr. Stucky.  
7 **BY MR. STUCKY:**  
8 Q. Mr. Boese, could you -- I think you were ready  
9 for safe yield evaluation for permit  
10 number 47,178, is that where we left off?  
11 **A. I'm sorry, Dave. Let me get to where I'm going**  
12 **here. Yes, sorry.**  
13 Q. Could you quickly wrap up your analysis of these  
14 safe yield calculations for the City's permits?  
15 **A. Sure. 47,178 is about two and a half times**  
16 **over-appropriated. 47,179 is almost four times**  
17 **over. 47,180 is over four times**  
18 **over-appropriated. 47,178 is about three times**  
19 **over-appropriated. 47,448 is about two and a**  
20 **half to three times over-appropriated. 47,449**  
21 **is about two and -- I'm sorry, three and a half**  
22 **times over-appropriated.**  
23 **47,450 is almost four times**  
24 **over-appropriated. 47,451 is almost four times**  
25 **over-approp -- I'm sorry, about three times**

1 **grossly over-appropriated.**  
2 Q. Okay.  
3 **A. And, in fact, I might just go ahead and add that**  
4 **some of these are very, very over-appropriated,**  
5 **and if you examine the spreadsheet on these,**  
6 **you'll see that in many of these the City of**  
7 **Wichita's native water rights over-appropriate**  
8 **the aquifer. Some of them where there's 14,000**  
9 **acre-feet, half of that or more may be the**  
10 **City's existing native water rights. So it's**  
11 **over-appropriated in a lot of places just by the**  
12 **City itself and then you add in the irrigation**  
13 **wells and other wells even further**  
14 **over-appropriates the area.**  
15 **MR. STUCKY:** I move to admit the  
16 District's Exhibit 59 into evidence.  
17 **PRESIDING OFFICER:** Any objection?  
18 District's 59 will be admitted.  
19 **BY MR. STUCKY:**  
20 Q. So summing up in, very quickly, Exhibit 59, if  
21 the City were to apply for new permits with  
22 respect to their AMC proposal, based on safe  
23 yield alone, would those permits be approved by  
24 the District?  
25 **A. For these 30 locations that I ran, I would not**

1 **over-appropriated. 47,452 is about three times**  
2 **over-appropriated. And 47,453 is about three**  
3 **times over-appropriated.**  
4 **And I -- I do feel like I need to clarify.**  
5 **I think I stated these are in Harvey County,**  
6 **we're using 6 inches, which is true. One or two**  
7 **of these, I believe, spill over into Sedgwick**  
8 **County, which we're also using 6 inches of**  
9 **recharge, so there was no difference in the**  
10 **maximum that would be allowed.**  
11 Q. You already testified that it's your view that  
12 the City's AMC proposal should be subject to new  
13 applications. Is that what you said before?  
14 **A. Yes.**  
15 Q. And so if it was subject to new applications, is  
16 it to follow that safe yield calculations would  
17 need to be made in your opinion?  
18 **A. Yes, AMC would not be exempt as an ASR well.**  
19 Q. And if you were to conduct those safe yield  
20 calculations, does what's shown in Exhibit 59  
21 substantially represent those safe yield  
22 calculations that you would -- you would make?  
23 **A. Yes. The difference being that I would not**  
24 **remove the -- the ASR quantity from the**  
25 **calculation, which means it would be even more**

1 **recommend them for approval. And I would go**  
2 **ahead and then also say anywhere in that Wichita**  
3 **well field area, I have evaluated enough and I**  
4 **have run some other calculations, I've looked at**  
5 **enough, there is no water available in the City**  
6 **of Wichita's existing well field for new**  
7 **appropriations, other than ASR wells or in some**  
8 **cases some small use type quantities.**  
9 Q. Mr. Boese, let's turn to Exhibit 41. Mr. Boese,  
10 what is Exhibit 41?  
11 **A. Exhibit 41 was a information and fact sheet that**  
12 **was prepared - the author indicated there was my**  
13 **former hydrologist, Steve Flaherty - on**  
14 **August 23rd, 2018. I can say that I also**  
15 **reviewed this document and assisted in its**  
16 **preparation. This was made for a Board of**  
17 **Directors meeting for the City's pending**  
18 **applications at the time, 48,704 through 48,733,**  
19 **these were the 30 new applications that the City**  
20 **then eventually withdrew and they were**  
21 **dismissed.**  
22 Q. So it's already been testified to, there's no  
23 new permits that are -- that are pending before  
24 us today because all of these were dismissed or  
25 withdrawn; is that right?

Page 2225

1 **A. That's correct.**  
 2 Q. But at the time when the City applied for 30 new  
 3 permits, you along with Mr. Flaherty did some  
 4 safe yield calculations on those permits; is  
 5 that right?  
 6 **A. Yes, I believe Mr. Flaherty did all the safe**  
 7 **yields and I reviewed them.**  
 8 Q. And so do these safe yields represent the  
 9 outcome of your analysis as it related to those  
 10 permits and what you were going to present or  
 11 did present to the Board in that regard?  
 12 **A. Yes. Yeah, we went ahead and -- although safe**  
 13 **yield would be exempt if it was a physical**  
 14 **recharge credit, we went ahead and did safe**  
 15 **yield evaluations at each one of these**  
 16 **locations.**  
 17 Q. Just to illustrate the nature of how  
 18 over-appropriated the aquifer is, did any of the  
 19 City's new permits meet safe yield cal --  
 20 **MR. OLEEN:** I -- sorry, you can  
 21 finish your question and then I'll object.  
 22 **BY MR. STUCKY:**  
 23 Q. Did any of -- did any of the City's new permits  
 24 that were applied for meet these safe yield  
 25 calculations?

Page 2226

1 **MR. OLEEN:** And I respectfully  
 2 object on relevance grounds. I know Madam  
 3 Hearing Officer doesn't need to be -- she  
 4 can determine what's relevant and what's  
 5 not, but we're not here to talk about any  
 6 pending applications, the record is already  
 7 voluminous enough, and so if there's not  
 8 really a reason to add another ream of  
 9 papers to it, I don't think we should be  
 10 doing that, so I object on that basis.  
 11 **PRESIDING OFFICER:** Can you explain  
 12 the relevance beyond the exhibit we just  
 13 did with all the safe yield calculations?  
 14 **MR. STUCKY:** Sure I could. The City  
 15 applied for permits related to this aquifer  
 16 maintenance credit proposal and, indeed, it  
 17 suggests that the City has the power to  
 18 seek future permits, and we've been talking  
 19 about what the City may or may not do in  
 20 the future. We know they attempted to  
 21 apply for these 30 permits in the past. It  
 22 stands to reason that if you as the hearing  
 23 officer approve their proposal, they'll  
 24 likely reapply for those 30 permits and  
 25 there'll -- there'll need to be a

Page 2227

1 determination of whether or not safe yield  
 2 is met. And so we think that it's highly  
 3 relevant for that reason as we're trying to  
 4 predict what's going to happen in the  
 5 future.  
 6 And second of all, we think it's highly  
 7 relevant to show just for the simple  
 8 purpose that the aquifer is -- is  
 9 over-appropriated and new applications  
 10 wouldn't be accepted in any of these  
 11 locations where the City sought to seek  
 12 additional permits.  
 13 **MR. MCLEOD:** And if I just -- if I  
 14 just followed that, Madam Hearing Officer,  
 15 I think where Counsel is mistaken, I think  
 16 that those permit apps presumed AMC  
 17 recovery. And if your decision approves  
 18 AMCs, it will be because you have found  
 19 that the AMCs are recharge credits. And if  
 20 you have found that the AMCs are recharge  
 21 credits, they're not subject to safe yield.  
 22 On the other hand, as Mr. Letourneau, I  
 23 think, said in his testimony, if you find  
 24 that they are not recharge credits, they  
 25 don't exist, and the question of safe yield

Page 2228

1 then is irrelevant for that reason. So  
 2 we're spending a lot of time on this  
 3 razzle-dazzle, and it is completely  
 4 irrelevant.  
 5 **MR. OLEEN:** I would just add that I  
 6 kind of think what Mr. Stucky mentioned,  
 7 his phraseology was maybe we seek to  
 8 predict the future or anticipate the  
 9 future, he said something like that, and  
 10 there's been a lot of hypotheticals about  
 11 future projects, future applications,  
 12 taking water from future reservoirs. We're  
 13 here today to talk about this proposal;  
 14 these applications are not part of this  
 15 proposal. We've just gone through 30 some  
 16 safe yield calculations from Mr. Boese, so  
 17 I think the evidence has -- there's enough  
 18 evidence in the record to the extent you --  
 19 well, as Mr. McLeod said, if AMCs aren't  
 20 recharge credits, then they don't exist.  
 21 But I'm personally done with hypotheticals,  
 22 I don't think it's necessary.  
 23 **PRESIDING OFFICER:** This sounds  
 24 like, if I understand what you're saying,  
 25 the purpose of this is to suggest possible

1 other courses of action the City might take  
2 if their proposal is not allowed to go  
3 forward as -- as proposed. Is that -- am I  
4 understanding that?  
5 **MR. STUCKY:** Right, it illustrates  
6 the fact that safe yield calculations would  
7 need to be calculated and safe yield would  
8 not be met if these new permits were  
9 reapplied for again. That's what it  
10 demonstrates.  
11 **PRESIDING OFFICER:** Okay. My --  
12 what -- that was a takeaway point basically  
13 that I got from the discussion we just had  
14 with Mr. Boese, and since these  
15 applications have been withdrawn and  
16 there's no telling if the proposal was  
17 denied if the City would indeed file these,  
18 so I think this probably does get a little  
19 too speculative. I think the idea that the  
20 area is well over-appropriated and if safe  
21 yield applies, then that would -- that  
22 would lead to some decisions.  
23 So I think I'm going to say that we  
24 don't need to go down this road, I think  
25 this is really -- I think looking at

1 testify as to these issues, and that motion in  
2 limine was overruled for that reason alone; is  
3 that -- for that reason, among other reasons.  
4 So, Mr. Boese, let's talk about your  
5 interpretation of these regulations. First of  
6 all, there's the aquifer storage and recovery  
7 permitting regulation found in K.A.R. 5-12-1(a).  
8 When you look at regulations, do you sometimes  
9 look at the title of the regulation to give you  
10 some guidance as far as what that regulation  
11 means?  
12 **A. Yes.**  
13 **Q.** What does the title of this regulation tell you  
14 and tell me the significance of any aspects of  
15 the title here?  
16 **A. This would --**  
17 **MR. OLEEN:** I object and I think I  
18 did similar objection during  
19 Mr. Letourneau's cross on the grounds that  
20 titles of laws and statutes don't have  
21 significance.  
22 **MR. STUCKY:** And I disagree, my --  
23 my understanding, and I guess we can brief  
24 this issue - if you would like me to brief  
25 it overnight, Madam Hearing Officer, I

1 possible implications and ramifications is  
2 important, but I think this gets into if  
3 the City were to refile these applications,  
4 and I think that's a little far into  
5 speculation. So let's skip over that part.  
6 **MR. STUCKY:** Will do.  
7 **BY MR. STUCKY:**  
8 **Q.** In your expert report, in page 6 and 7 of your  
9 expert report, which is found as Exhibit 39, are  
10 you on that?  
11 **A. I'm sorry, yes.**  
12 **Q.** Okay. On pages 6 and 7 of your expert report,  
13 you talk about some of the definitions that have  
14 to do with whether or not an aquifer maintenance  
15 credit is an artificial recharge, do you not?  
16 **A. Yes.**  
17 **Q.** Let's walk through -- and, again, just to clear  
18 the record here, these are all regulations or  
19 statutes that you would be quite familiar with,  
20 Mr. Boese, and that you would apply in your  
21 everyday job; is that right?  
22 **A. As it related to the ASR project and**  
23 **applications, yes.**  
24 **Q.** And, in fact, there was a motion in limine filed  
25 by the City where they targeted your ability to

1 can - but titles of statutes and  
2 regulations can be used in statutory  
3 construction to help draw implications as  
4 far as what the statute or regulation is  
5 about and how to properly construct it. I  
6 suppose -- that's my recollection. I  
7 suppose we can brief it tonight if we need  
8 to, but I -- I'm asking just a simple  
9 question in that regard, I don't -- I'm not  
10 sure that this objection is necessary.  
11 **MR. OLEEN:** If Mr. Stucky is going  
12 to go through a bunch of regulations, like  
13 I suspect he will, then I don't see the  
14 need to dwell on the title of them because  
15 we're about to get actually into the legal  
16 language.  
17 **PRESIDING OFFICER:** I believe that I  
18 ruled that it was okay and acceptable,  
19 permissible for Mr. Boese to testify  
20 regarding his interpretation through his  
21 job duties, his responsibilities, that he  
22 can testify about how he applies and reads  
23 the regulations. So it may not be -- it  
24 may or may not be true that an actual  
25 statutory construction of title has

Page 2233

1 significance, perhaps it does to Mr. Boese,  
 2 and I said he can testify about that. So  
 3 please go ahead.  
 4 **MR. STUCKY:** Thank you.  
 5 **BY MR. STUCKY:**  
 6 Q. Mr. Boese, what does the title Aquifer Storage  
 7 and Recovery tell you about this regulation --  
 8 I'm sorry, Aquifer Storage and Recovery  
 9 Permitting, what does that tell you based on the  
 10 title?  
 11 **A. That tells me that the regulation deals with**  
 12 **what has to be -- what has to be done for a**  
 13 **permit, for an aquifer storage and recovery**  
 14 **permit -- or project.**  
 15 Q. So in other words, do you believe there's both  
 16 an act of storage and an act of recovery  
 17 pursuant to this regulation?  
 18 **A. Yes.**  
 19 Q. Tell me what is meant in your view in this  
 20 regulation by storing water in an aquifer  
 21 storage and recovery system.  
 22 **A. That would be the physical injection, artificial**  
 23 **recharge of a source water.**  
 24 Q. And then that's done pursuant to a permit, is  
 25 that right, for artificial recharge?

Page 2234

1 **A. That's correct.**  
 2 Q. But there's a condition under which that permit  
 3 to appropriate water for artificial recharge,  
 4 there's a condition to that, it says, if the  
 5 water appropriated is source water, is that what  
 6 it says?  
 7 **A. Yes, it does.**  
 8 Q. And, in fact, there's a definition of source  
 9 water; is that right?  
 10 **A. That's correct.**  
 11 Q. Let's turn to the definition of source water. I  
 12 asked Mr. Letourneau a series of questions about  
 13 these four different requirements that help to  
 14 define source water, and without having to  
 15 rephrase those questions, tell me what you  
 16 believe this definition tells us about -- about  
 17 the nature of source water.  
 18 **A. That the source water would have to meet these**  
 19 **four conditions, it would have to be available;**  
 20 **it would obviously have to be out of above base**  
 21 **flow in a stream because that's number two; it**  
 22 **is not needed to satisfy minimum desirable**  
 23 **streamflow so it's not needed to maintain that**  
 24 **streamflow; and then would not degrade the**  
 25 **ambient quality in the basin storage area, so it**

Page 2235

1 **would have to be treated properly. So the**  
 2 **source water would have to be surface water,**  
 3 **above base flow, and available and not -- not**  
 4 **needed for streamflow.**  
 5 Q. In your view, what does number 4 suggest as you  
 6 would interpret the definition of source water?  
 7 **A. That source water would have to be of acceptable**  
 8 **quality to be injected into the aquifer so that**  
 9 **it did not degrade the ambient water quality.**  
 10 Q. Now, jumping back to the definition, then, of  
 11 aquifer storage and recovery permitting, it  
 12 says -- so what we're talking about here, it  
 13 says, for artificial recharge if the water  
 14 appropriated is source water, and, again, so  
 15 what you're saying this regulation means is  
 16 source water or overflow water needs to be  
 17 treated, and then it implies it would have to be  
 18 injected into the aquifer. Was that your  
 19 testimony?  
 20 **A. Have to be treated as necessary. The bank**  
 21 **storage wells in the ASR Phase I does not**  
 22 **require any treatment because the quality is --**  
 23 **is good enough, but it would have to be treated**  
 24 **as needed.**  
 25 Q. So let's talk about the concept of an aquifer

Page 2236

1 storage and recovery system that's in that next  
 2 regulation in your expert report. It says, it  
 3 means a physical infrastructure that meets the  
 4 following conditions, and we highlighted that  
 5 definition before, so what is meant in number 1  
 6 by artificial recharge, storage, and recovery of  
 7 source water in your view, what does that mean?  
 8 **A. That would be the physical injection of that**  
 9 **source water, the storing of that source water,**  
 10 **and then the recovery of that source water. So**  
 11 **three steps would be injection, storage, and**  
 12 **then eventual recovery.**  
 13 Q. And what is then meant in number 2 by diversion,  
 14 treatment, recharge, storage, and extraction and  
 15 distribution?  
 16 **A. That's defining the -- what the infrastructure,**  
 17 **the apparatus would be, so you would have to**  
 18 **have diversion from the source water, treatment**  
 19 **of the source water, physical recharge, storage**  
 20 **of that source water, extraction, or we could**  
 21 **say diversion of that source water, and then**  
 22 **distribution, in this case through municipal**  
 23 **pipeline.**  
 24 Q. Now, in the next definition, we find the  
 25 definition of artificial recharge, and that's

1 defined in a couple regulations, and that's  
2 already been testified in the record; is that  
3 right?  
4 **A. Yes.**  
5 Q. And in both of those regulations, it is also  
6 identified in your expert report, it means the  
7 use of source water to artificially replenish  
8 the water supply of the aquifer. Again, we find  
9 this definition of source water in artificial  
10 recharge, do we not?  
11 **A. Yes.**  
12 Q. And so we'd have to cross-reference once again  
13 the definition of source water to help to  
14 understand what artificial recharge means; is  
15 that true?  
16 **A. Yes.**  
17 Q. As you're applying this regulation, what do you  
18 think is meant by the concept of, quote,  
19 artificially replenish, end quote?  
20 **A. That would be adding to the supply of the**  
21 **groundwater source to restore the groundwater**  
22 **source, if there's a decline in it, so to add to**  
23 **the groundwater source.**  
24 Q. So in other words, in your view, and I think  
25 replenish is a simple term, as it relates to

1 water, the source water being the Little  
2 Arkansas River, none of that is actually  
3 injected into the aquifer. Is that the basis of  
4 your opinion?  
5 **A. That is. That is correct.**  
6 Q. Now let's talk about aquifer storage. It's  
7 defined in two regulations. The record is  
8 replete with the reference to those two  
9 regulations, so I'm not going to state them  
10 again. But it means the act of storing water in  
11 the unsaturated portion of an aquifer by  
12 artificial recharge for subsequent diversion and  
13 beneficial use. What is significant to you  
14 about the concept of storing water in the  
15 unsaturated portion of the aquifer?  
16 **A. That it's clearly putting water into the portion**  
17 **of the aquifer that does not contain**  
18 **groundwater.**  
19 Q. Let me ask you this: The very basis of the  
20 City's AMC proposal is the ability to re -- to  
21 accumulate AMC credits when the aquifer is fully  
22 saturated, isn't that the basis of the City's  
23 proposal?  
24 **A. Yes, fully or near fully saturated.**  
25 Q. So in other words, the Equus Beds Aquifer could

1 this regulation, it means to replenish or  
2 restore water into the aquifer, that's -- that's  
3 your view?  
4 **A. Yes.**  
5 Q. And it goes on to say, artificially replenish  
6 the water supply of the aquifer. So as it  
7 relates, then, to source water, if we look at  
8 this regulation as a whole, does this regulation  
9 mean that artificial recharge means to put  
10 source water, physically put source water into  
11 the aquifer?  
12 **A. Yes.**  
13 Q. The next definition that you outline in your  
14 expert report is aquifer storage. Let me talk  
15 just for a -- well, and let me back up. With  
16 respect to artificial recharge, does any  
17 artificial recharge occur as it relates to the  
18 City's aquifer maintenance credit proposal?  
19 **A. No, it's just merely water left in storage; that**  
20 **is not artificial recharge in any sense.**  
21 Q. And is that because with respect to the AMC  
22 proposal, no water is put into the aquifer?  
23 **A. That's right, no -- no outside water is added**  
24 **into the aquifer.**  
25 Q. And I should clarify my terminology, no source

1 be fully saturated and the City could still be  
2 accumulating AMC credits under their proposal;  
3 is that right?  
4 **A. Yes.**  
5 Q. So in that sense, would it essentially mean --  
6 be -- would the City's proposal essentially read  
7 the term unsaturated out of this definition?  
8 **A. Yes.**  
9 Q. Then this definition goes on to say, the  
10 unsaturated portion of an aquifer, and aquifer  
11 is also defined; is that true?  
12 **A. Yes.**  
13 Q. Okay. By artificial recharge for subsequent  
14 diversion and beneficial use. You just told me  
15 what artificial recharge means, and you said  
16 that that means replenishing the water supply by  
17 injecting source water into the aquifer. So now  
18 let's talk about the difference between ASR  
19 Phase II and an aquifer maintenance credit.  
20 With respect to ASR Phase II, water would be put  
21 into the unsaturated portion of the aquifer; is  
22 that true?  
23 **A. With a physical recharge credit, yes.**  
24 Q. But with an AMC, it doesn't matter if the  
25 aquifer is fully saturated or unsaturated; is

Page 2241

1 that right?

2 **A. Correct, although the only way they could get --**

3 **claim an AMC is it would have to be somewhat**

4 **full, so yes.**

5 Q. So as this definition goes on, it says for

6 subsequent diversion. So we talked about how

7 there's the act of storing water in the

8 unsaturated portion, you told me that's the act

9 of injecting water for storage in the aquifer;

10 then it goes on to say by artificial recharge,

11 we talked about what artificial recharge means;

12 then it says, for subsequent diversion and

13 beneficial use, tell me what the significance of

14 the word subsequent is in your view as you read

15 this regulation.

16 **A. I think that -- that clearly states that there**

17 **has to be a put to have a take. So you have to**

18 **put water to be able to take water. It's quite**

19 **obvious you have to add to the source, store it**

20 **before you can divert it. Again, a put before a**

21 **take, it's pretty simple.**

22 **MR. OLEEN:** I -- I object and I'll

23 likely get overruled, but are we -- are we

24 talking about interpretations that

25 Mr. Boese utilizes in his experience as

Page 2242

1 GMD2 manager, or is he just opining about

2 his interpretations of legal -- of legal

3 conclusions and interpretations?

4 **PRESIDING OFFICER:** My impression

5 it's the former.

6 **MR. OLEEN:** Okay.

7 **BY MR. STUCKY:**

8 Q. Now I'll ask the question, I guess, if we need

9 to. Mr. Boese, have you seen the word

10 subsequent in statutes and regulations before?

11 **A. I'm sure I have, it's right here, so, yes,**

12 **I've -- I've read that word before.**

13 Q. All right. As the word subsequent exists in

14 this regulation, use the word subsequent with

15 respect to an ASR Phase II credit in a sentence.

16 **A. Use the word subsequent?**

17 Q. Yes, how would that --

18 **A. For a physical recharge credit?**

19 Q. Yes.

20 **A. Injecting source water into the aquifer**

21 **establishes a physical recharge credit for**

22 **subsequent diversion.**

23 Q. Now use -- tell me if you can use the term

24 subsequent in a sentence with respect to the AMC

25 proposal.

Page 2243

1 **A. I don't think I can. You want me to --**

2 Q. Because there's no -- and that's because no

3 water is put in the aquifer for subsequent

4 diversion; is that true?

5 **A. I guess if you want me to make a sentence, I**

6 **could say, with an AMC there is no water stored**

7 **in the aquifer for subsequent diversion. If you**

8 **want me -- if you want me to make a sentence, I**

9 **could do that.**

10 Q. Thank you, Mr. Boese. Let's move on to the

11 concept of recharge credit. Recharge credit is

12 found in two regulations, and we already

13 discussed that with Mr. Letourneau; is that

14 right?

15 **A. Yes.**

16 Q. And, again, it states, it means the quantity of

17 water that is stored in the basin storage area,

18 so what is meant by the quantity of water that

19 is stored in the basin storage area, what is

20 that referring to?

21 **A. That refers to the source water being injected**

22 **and stored into the basin storage area.**

23 Q. And then it says, that is available for

24 subsequent appropriation for beneficial use.

25 What is meant by subsequent appropriation for

Page 2244

1 beneficial use in -- in the definition of

2 recharge credit?

3 **A. Again, it's that there must be a put before a**

4 **take, so to establish a recharge -- recharge**

5 **credit, that quantity of source water has to be**

6 **placed, stored into the basin storage area so**

7 **that it can be later diverted or pumped out, and**

8 **that's put the water in to take it out.**

9 Q. So once again, you can apply the definition of

10 recharge credit to a -- an ASR Phase II credit,

11 but are you able to fit an AMC credit within

12 this definition of recharge credit?

13 **A. No, because there is no quantity of water that**

14 **is placed into the -- that is stored, that is**

15 **placed into the basin storage area.**

16 Q. And then it goes on to say, for beneficial use

17 by an operator of the aquifer storage and

18 recovery system, and we already talked about

19 some words that you found significant in aquifer

20 storage and recovery system; is that right?

21 **A. Yes.**

22 Q. So, Mr. Boese, to sum up your discussion here,

23 do you believe that as you're applying -- well,

24 let me first ask you this: Other than the

25 statutes and regulations that we've already

1 touched on, are there other statutes and  
2 regulations that would significantly guide your  
3 analysis as you're trying to determine whether  
4 or not an aquifer maintenance credit is in  
5 compliance with current law?  
6 **A. Can you rephrase that, Dave, I didn't quite**  
7 **follow you?**  
8 Q. Well, we highlighted a number of regulations.  
9 **A. Uh-huh.**  
10 Q. And I didn't want to be limiting in your  
11 analysis in your expert report, were there other  
12 statutes or regulations that would significantly  
13 guide your opinion with respect to whether AMC  
14 credits are allowed by current law?  
15 **A. I think in relation to that, that would be the**  
16 **majority of them. Of course, there's other**  
17 **regulations that would be considered. Safe**  
18 **yield, K.A.R. 5-22-7, would obviously be**  
19 **considered.**  
20 Q. And I'm referring to the legality --  
21 **A. Okay.**  
22 Q. -- of the AMC proposal. Were these the main  
23 ones that would help clarify whether or not the  
24 AMC proposal is, in fact, in compliance with  
25 current law as it relates to whether an AMC

1 credit exists?  
2 **A. Yes. The only other one I can think of is the**  
3 **accounting regulation, the ASR accounting**  
4 **regulation.**  
5 Q. Tell me what that ASR accounting regulation is.  
6 **A. Just trying to remember the number, it's K.A.R.**  
7 **5-12, and we can look it up.**  
8 Q. Go ahead and turn to that.  
9 **A. Trying to remember the number off the top of my**  
10 **head.**  
11 Q. Is it K.A.R. 5-12-2(b) that you're referring to?  
12 **A. Yes.**  
13 Q. What does K.A.R. 5-12-2(b) add to our discussion  
14 that we just had?  
15 **A. It specifies what has to be included in the --**  
16 **in the ASR accounting report, and it lists a**  
17 **number of factors that must be included.**  
18 Q. Okay. For the record, which exhibit number are  
19 you on and what page?  
20 **A. I'm on 20 -- Exhibit 22 on page 129.**  
21 Q. And how does this regulation, what words jump  
22 out at you as far as adding to the discussion  
23 with respect to whether or not an AMC credit is  
24 defined by statute or regulation and allowed by  
25 statute and regulation?

1 **A. In K.A.R. 5-12-2(b), after you get through the**  
2 **number of things that may be included, it does**  
3 **specify that the accounting report shall**  
4 **specifically take into account the amount of**  
5 **natural recharge, and I think the next word is**  
6 **the important one, comma, artificial recharge.**  
7 **And, again, with AMCs, there would be no**  
8 **artificial recharge. And it does not say you**  
9 **take into account water that is not pumped out**  
10 **of the aquifer from -- from the City's water**  
11 **rights or from anybody else's water rights.**  
12 Q. And it also says in that next sentence that  
13 groundwater pumpage shall include recharge  
14 credits withdrawn as well as pumpage from all  
15 non-domestic wells. Is there any, the  
16 possibility for any recharge credits to be  
17 withdrawn with respect to the AMC proposal?  
18 **A. No.**  
19 Q. So as we sum this all up -- and I guess I should  
20 have asked this, is there any definition of  
21 aquifer maintenance credit anywhere in statute  
22 or regulation?  
23 **A. There is not.**  
24 Q. So as we sum this all up, is it your opinion  
25 that aquifer maintenance credits fall within the

1 definition of recharge credits that are allowed  
2 by current statute and regulations?  
3 **A. No.**  
4 Q. In your view, does the concept of aquifer  
5 maintenance credits even exist as being blessed  
6 by current statutes and regulations?  
7 **A. No.**  
8 Q. We've heard quite a bit of testimony about how  
9 the chief engineer provided a letter indicating  
10 that these aquifer maintenance credits were,  
11 quote, functional equivalent, end quote, of  
12 these ASR Phase II credits. Do you recall  
13 that -- that testimony?  
14 **A. Yes.**  
15 Q. Is the term functional equivalent found -- well,  
16 do this for me. Flip through all these statutes  
17 and regulations that are before you, and there's  
18 pages and pages of them, tell me where we find  
19 the term functional equivalent.  
20 **A. We do not.**  
21 **MR. OLEEN:** I object. I -- that's a  
22 dramatic tactic that I don't think is  
23 appropriate. If the witness wants to flip  
24 through all these statutes and regs and  
25 I'll wait here and, Mr. Stucky, we can do

Page 2249

1 that. Otherwise, he can just be asked if  
 2 he knows if it's in there or not.  
 3 **BY MR. STUCKY:**  
 4 Q. I'll rephrase. Mr. Boese, previously, you  
 5 flipped through and read through all these  
 6 statutes and regulations. Would you agree with  
 7 me that the concept of functional equivalent is  
 8 not found anywhere in these statutes or  
 9 regulations?  
 10 **A. I have never seen that term in statute or**  
 11 **regulation before.**  
 12 Q. When you look at applications and permits, do  
 13 you sometimes look at those applications and  
 14 permits and say, you know what, this is pretty  
 15 close, this is close enough, this is a  
 16 functional equivalent, I'm going to approve it,  
 17 is that something you do in your everyday job?  
 18 **A. No.**  
 19 Q. Okay.  
 20 **A. We look at applications, whether they're for a**  
 21 **water permit, whether they're a change**  
 22 **application, and I'll even branch out if it's a**  
 23 **application for a cathodic protection bore hole,**  
 24 **I don't -- I don't have that flexibility, it's**  
 25 **black and white, it either meets the regulations**

Page 2250

1 **or it does not.**  
 2 Q. So in other words, there's a level of precision  
 3 in compliance with the statutes and regulations  
 4 that's needed; is that true?  
 5 **A. Yes.**  
 6 Q. So in other words, this concept of functional  
 7 equivalent, in your view, it doesn't carry any  
 8 weight, is that what you're saying?  
 9 **A. Yes, I've never seen that term used before in**  
 10 **relationship to any water permit applications.**  
 11 Q. And similar to the old adage is close only  
 12 merits any kind of value in hand grenades and  
 13 horseshoes, is that what you're saying here?  
 14 **A. Yes.**  
 15 **MR. OLEEN:** Objection, I don't think  
 16 that's a question.  
 17 **MR. STUCKY:** I'll withdraw the  
 18 question and let Mr. Oleen have a sustained  
 19 objection, I'll withdraw it.  
 20 **BY MR. STUCKY:**  
 21 Q. Let's move on now to the concept of accounting  
 22 procedures as it relates to the expert report.  
 23 And the bottom of page 7 of your expert report,  
 24 you talked about some changes to these  
 25 accounting procedures. Is that something you

Page 2251

1 discussed in your expert report on the bottom of  
 2 page 7?  
 3 **A. Yes.**  
 4 Q. Tell me what your concern was with respect to  
 5 changing the accounting procedures as it relates  
 6 to the City's proposal.  
 7 **A. Well, again, the accounting procedures don't --**  
 8 **don't note an aquifer maintenance credit. It**  
 9 **lists a bunch of things that should be in the**  
 10 **accounting report and some that have to be.**  
 11 **There is no -- there's no mention of aquifer**  
 12 **maintenance credits, water left in storage,**  
 13 **whatever we want to call them, there is no --**  
 14 **there is no part of that accounting process,**  
 15 **procedure through that regulation that includes**  
 16 **aquifer maintenance credits.**  
 17 Q. So if the City wants to proceed with its  
 18 proposal, is it your belief that there needs to  
 19 be a regulation change to the accounting  
 20 regulation?  
 21 **A. I think it would be much more than just the**  
 22 **accounting regulation, but that would be one of**  
 23 **them.**  
 24 Q. Is that one of the regulations that would need  
 25 to be changed in your view?

Page 2252

1 **A. Yes.**  
 2 Q. Okay. But, in fact, I think you just testified  
 3 there would be a variety of regulations that  
 4 would merit changing, is that what you're  
 5 saying?  
 6 **A. Yes.**  
 7 Q. These regulations we've just talked about, they  
 8 were -- they were passed or adopted by --  
 9 sometime long before this concept of aquifer  
 10 maintenance credits was proposed by the City.  
 11 Is that a true statement?  
 12 **A. Yes, in fact, these -- these regulations and**  
 13 **these definitions had to be -- had to be made**  
 14 **when ASR Phase I was being permitted because we**  
 15 **didn't have any definitions like this in the**  
 16 **Kansas water regulations or statutes, so they**  
 17 **had to be formulated at that time to be able to**  
 18 **even review the ASR Phase I application. This**  
 19 **was a new project, no other ASR project in the**  
 20 **state.**  
 21 Q. You already answered, I think, my question, you  
 22 testified earlier that you were involved in the  
 23 formulation of these regulations based on your  
 24 role with the District when ASR Phase I was  
 25 being consummated. Is it your belief that as

1 these regulations were promulgated, the concept  
2 and what was contemplated was ASR Phase I  
3 credits and actually injecting water into the  
4 aquifer?

5 **A. Yes, that was the only thing that was**  
6 **contemplated in relationship to those was a**  
7 **physical injection of source water into the**  
8 **aquifer.**

9 Q. Turn with me to page 9 of your expert report.  
10 On page 9 of your expert report, you talk about  
11 this concept of the source water and the same  
12 local source of supply in your expert report --  
13 in your expert report. In a nutshell, tell me  
14 what you're talking about in that second  
15 paragraph.

16 **A. Well, AMCs would be a different source of water**  
17 **that we don't even have a definition of. We**  
18 **have a definition for -- for groundwater,**  
19 **surface water, and recharge credits; we do not**  
20 **have a definition for aquifer maintenance**  
21 **credits. That is an undefined source of water.**  
22 **I -- I don't even know how to define it, to be**  
23 **honest with you. It's -- it's groundwater left**  
24 **in storage. We have no definition that even**  
25 **comes close to an AMC.**

1 Q. And that's what you're stating with -- with your  
2 concern in that paragraph that it's a completely  
3 different source of water, is that what you're  
4 saying?

5 **A. Yeah, an undefined source, but it is a -- it is**  
6 **a different source of water.**

7 Q. Well, we talked about conditions in the chief  
8 engineer's order to modify the hearing and --  
9 and schedule dated September 27, 2018, and it  
10 states the proposed changes must relate to the  
11 same local source of supply. Is that something  
12 that's been stated previously?

13 **A. Yes, I think so.**

14 Q. How does that relate to an ASR credit for Phase  
15 II versus an AMC credit?

16 **A. Well, ASR Phase II physical recharge is a**  
17 **physical -- is a recharge credit as defined as a**  
18 **source of supply. AMCs are not defined, it**  
19 **would not be the same source of supply.**

20 Q. So in other words, in your view, is the City  
21 seeking to change the local source of supply  
22 pursuant to their permits?

23 **A. With an AMC concept, yes.**

24 **MR. OLEEN:** Mr. Stucky, point of  
25 clarification, would you mind directing me

1 to the chief engineer's order that you just  
2 referred to? It was some sort of --

3 **MR. STUCKY:** It was September 27,  
4 2018, it was called chief engineer's order  
5 to modify hearing and schedule.

6 **MR. OLEEN:** September 27, 2018,  
7 thank you.

8 **A. I -- I do believe the current hearing**  
9 **notification also states that, I think we may**  
10 **have that if we need to provide it, that**  
11 **Ms. Owen submitted.**

12 **BY MR. STUCKY:**

13 Q. Yeah, let me just ask without doing -- flipping  
14 through the record. Do you agree that the  
15 current orders of our current hearing officer  
16 also have a condition that there must be a  
17 relation to the same local source of supply?

18 **A. I believe it does, I think it was a similar**  
19 **language.**

20 Q. Okay. Let's move on to the concept of senior  
21 water rights. Turn with me to Exhibit 21. And,  
22 actually, as you're turning to it, I'm going to  
23 ask you this question: If I were to tell you  
24 that Exhibit 21 represents the Kansas Water  
25 Appropriation Act, would you have reason to

1 doubt that that's what that exhibit is, as  
2 you're turning to it?

3 **A. As I'm finding it. I put it on the wrong side**  
4 **of me, I'm sorry. Yes, it is the Kansas Water**  
5 **Appropriation Act.**

6 Q. What is the concept of first in time, first in  
7 right as is embedded in this act?

8 **A. The -- the applicant that files for an**  
9 **application, for a water permit application**  
10 **first has -- and is approved has right to that**  
11 **water first as compared to someone that files**  
12 **second. So priority matters in water**  
13 **appropriation, senior water rights have right to**  
14 **that water before the junior water right holder**  
15 **does.**

16 Q. With respect to an aquifer maintenance credit,  
17 if no water is actually being put in the aquifer  
18 by the City and these recharge credits are later  
19 withdrawn, whose water is being appropriated?

20 **A. It would be the --**

21 **MR. MCLEOD:** I'm going to object to  
22 that question as phrased because I don't  
23 think people own water under the Kansas  
24 framework.

25 **PRESIDING OFFICER:** That's fair, can

Page 2257

1 you rephrase?  
 2 **BY MR. STUCKY:**  
 3 Q. How is -- well, let's go to K.S.A. 82a-702.  
 4 What does K.S.A. 82a-702 tell us, Mr. Boese?  
 5 **A. The title is Dedication of Use of Water, and it**  
 6 **states, all water within the State of Kansas is**  
 7 **hereby dedicated to the use of the people of the**  
 8 **state, subject to the control and regulation of**  
 9 **the State in the manner herein described.**  
 10 Q. So in other words, is this telling us that water  
 11 within the Equus Beds Aquifer is dedicated to  
 12 the people of the State of Kansas that live  
 13 within the area of that aquifer?  
 14 **A. It's, yeah, stating all water within Kansas is**  
 15 **dedicated to the people of the state, so the**  
 16 **people that live locally, it would be**  
 17 **dedicated -- I shouldn't say live, those that**  
 18 **are using it locally, it would be dedicated to**  
 19 **those individuals.**  
 20 Q. So just applying this statute, when it comes to  
 21 withdrawing an AMC credit, apply this statute to  
 22 the concept of withdrawing an AMC credit, how  
 23 does this statute relate to that?  
 24 **A. Well, because we're in an over-appropriated**  
 25 **aquifer, all the water has already been**

Page 2258

1 **dedicated in the Wichita well field to other**  
 2 **users, including the City of Wichita with their**  
 3 **native water rights and irrigation water rights**  
 4 **and the stock watering water rights, so AMCs,**  
 5 **without adding to the supply, would have no**  
 6 **right to that water.**  
 7 Q. And is that because the water would already have  
 8 been dedicated to others pursuant to this  
 9 statute?  
 10 **A. Through their appropriations, their existing**  
 11 **appropriations, yes.**  
 12 Q. So do you believe that the City's AMC proposal  
 13 violates the very fundamental nature of the  
 14 Kansas Water Appropriation Act?  
 15 **A. Yes, that water's already dedicated to the**  
 16 **senior water right holders in the -- in the**  
 17 **Wichita well field area. Without adding a**  
 18 **supply, there can be no additional**  
 19 **appropriation.**  
 20 Q. So in your view, does it violate the concept of  
 21 first in time, first in right as used in the  
 22 Kansas Water Appropriation Act, the City's AMC  
 23 proposal?  
 24 **A. Yes, because they wouldn't have a right to the**  
 25 **water anyway.**

Page 2259

1 Q. But I am saying even if we assume that somehow  
 2 these aquifer maintenance credits somehow met  
 3 these regulations, if you assume that with me  
 4 for a moment.  
 5 **A. Okay.**  
 6 Q. Would you agree with me that these aquifer  
 7 maintenance credits, because no water is put in  
 8 the aquifer, would violate senior water right  
 9 holders' rights to the water and, therefore,  
 10 would violate the concept of first in time and  
 11 first in right?  
 12 **A. Yes.**  
 13 Q. And, in fact, Chief Engineer Pope said in his  
 14 prior orders that any water above the 1993  
 15 levels would be avail -- available for injecting  
 16 water into the aquifer, but any water below the  
 17 1993 levels, what did he say with respect to who  
 18 that water was dedicated to?  
 19 **A. Well, he said that -- he stated that that was**  
 20 **Equus Beds groundwater below the 1993 levels.**  
 21 **MR. OLEEN:** I object, I think it  
 22 misstates the order. We have the order, we  
 23 can all read, I think it -- I forget the  
 24 paragraph number, but we have it. I think  
 25 it misstates what the order says.

Page 2260

1 **MR. STUCKY:** He testified to that  
 2 earlier in his testimony, I brought that  
 3 specifically up and he testified to it.  
 4 **PRESIDING OFFICER:** Is this in the  
 5 ASR approval order?  
 6 **MR. STUCKY:** That's right.  
 7 **PRESIDING OFFICER:** The Phase II  
 8 approval order?  
 9 **MR. STUCKY:** Yeah, that's right.  
 10 **A. It's in the -- the Phase I approval order.**  
 11 **MR. STUCKY:** I'm sorry, he testified  
 12 to it earlier.  
 13 **MR. MCLEOD:** Just to clean up as to  
 14 form of the question and answer, I believe  
 15 the question was who is the water below the  
 16 '93 levels dedicated to, and the witness  
 17 said it's Equus Beds groundwater, and the  
 18 question and answer don't match. The  
 19 answer is not responsive to who is it  
 20 dedicated to.  
 21 **PRESIDING OFFICER:** And I'm afraid  
 22 I'm not following. So your -- are you  
 23 referring to a condition in the Phase I and  
 24 Phase II approvals? This is about the  
 25 lower -- the water below the minimum index

1 level?

2 **MR. STUCKY:** That's right. I can go  
3 back to the order if we want to circle back  
4 to it.

5 **PRESIDING OFFICER:** Well, just --  
6 I'm sorry to drag it out, but I just want  
7 to make clear what you're referring to, so  
8 if you do want to ask about that, yeah, I'd  
9 like to know which condition you're ...

10 **BY MR. STUCKY:**

11 Q. Mr. Boese, can you turn back to, I believe it's  
12 Exhibit 26 and tell us the condition you're  
13 referring to.

14 **A. It's conclusion number 13, which is on page 12,**  
15 **labeled page 12 of 21 of Exhibit 26.**

16 Q. And what does that conclusion tell us?

17 **A. I'll go ahead and read it for the record again,**  
18 **that if the project is operated so that recharge**  
19 **credits cannot be withdrawn if the static water**  
20 **level in the index well is below the lowest**  
21 **index water level for that index well, the**  
22 **public interest in not diverting Equus Beds**  
23 **groundwater will be protected.**

24 **So to answer your question again, the chief**  
25 **engineer is concluding here that the public**

1 Q. Do you believe that some cap is appropriate, at  
2 least for the ASR Phase II credits?

3 **A. I think that can be an appropriate condition.**

4 Q. And would you agree with what Mr. McLeod often  
5 says that some cap for the ASR Phase II credits  
6 is better than no cap at all?

7 **A. Yes.**

8 Q. So as it relates to the City's proposal, if --  
9 if we're trying to find common ground, is that

10 at least one aspect of the City's proposal that  
11 you would agree with, that there has to -- and  
12 I'm not saying that you agree with the number,  
13 I'm just saying that you agree with the fact  
14 that there should be a cap on the accumulation  
15 of ASR Phase II credits?

16 **A. I think that would be a reasonable condition to**  
17 **have a cap of the physical recharge credits.**

18 Q. And in your view, there can't be a cap of the  
19 AMC credits because there's no such thing, is  
20 that what you're saying?

21 **A. That -- that's correct.**

22 Q. Do you believe that the 120,000 acre-foot cap is  
23 appropriate, or do you think it's too high based  
24 on your analysis of the City's proposal?

25 **A. That -- that's way more than the City claims to**

1 interest is protected by not diverting, as he  
2 stated, Equus Beds groundwater. That implied  
3 that below the 1993 levels is Equus Beds  
4 groundwater, not recharge credits, that is  
5 already dedicated to other users. As we know  
6 because the area is fully over-appropriated.

7 Q. Mr. Boese, you also opine in your expert report  
8 that this concept of withdrawing 120,000  
9 acre-feet of credit violates the Kansas Water  
10 Appropriation Act as it relates to the AMC  
11 proposal. Why does it violate the KWAA? And I  
12 think you already answered that, is it for the  
13 same reason you just stated?

14 **A. Right, the water is already dedicated to other**  
15 **users, the area is fully -- or**  
16 **over-appropriated, as we noted with the 30**  
17 **safe yields, and the 30 plus that weren't**  
18 **admitted all showed that also, so that -- that**  
19 **water is already dedicated. Unless the City**  
20 **adds to the source, it cannot have an**  
21 **appropriation.**

22 Q. So, Mr. Boese, you listened to the discussion  
23 with respect to having a 120,000 acre-foot cap;  
24 is that right?

25 **A. Yes.**

1 **need in an extreme 1 percent drought, so I don't**  
2 **know why they would need 120,000 acre-feet, it**  
3 **seems excessive.**

4 Q. Well, Mr. McCormick told me that that 120,000  
5 acre-feet was based on the fact that that's the  
6 room in the aquifer for storage above the 1993  
7 levels. Do you recall that statement?

8 **A. Yes.**

9 Q. Do you believe that that's an appropriate way to  
10 define what that cap should be, to consider all  
11 the available storage in that area?

12 **A. No, I'm not sure how it even relates to what the**  
13 **City's needs are; it just happens to be the**  
14 **bathtub, if it was completely full between the**  
15 **'93 and the top of the -- of the aquifer. I --**  
16 **I don't know why the City would claim ownership**  
17 **of 120,000 acre-feet just because that storage**  
18 **area can hold that much.**

19 Q. And this is just a simple point, but there's  
20 other permit holders that are appropriating --  
21 appropriating out of that basin storage area, is  
22 that true, other than the City?

23 **A. Yes.**

24 Q. And so in other words, there's other users that  
25 would be utilizing that 120,000 acre-feet

Page 2265

1 already, is that -- is that what you've stated?  
 2 **A. Yes.**  
 3 Q. And so is that part of the reason that just  
 4 simply saying, you know what, hey, there's  
 5 120,000 acre-feet available for storage in this  
 6 area, let's make the cap consistent with that,  
 7 is that part of the reason you don't think that  
 8 that basis for coming up with a cap is a  
 9 scientific basis for -- for proposing a cap?  
 10 **A. It -- it seems very arbitrary to me just to**  
 11 **claim the cap as equal to the storage volume,**  
 12 **I'm not sure how -- how that is conceived.**  
 13 Q. Mr. Boese, both the Division of Water Resources  
 14 and the City of Wichita experts testified to the  
 15 fact repeatedly that these caps are subject  
 16 to -- this 120,000 acre-foot cap would be  
 17 subject to 19,000 acre-feet of withdrawal each  
 18 year. Do you recall that testimony?  
 19 **A. Yes.**  
 20 Q. And that was the official testimony of the City,  
 21 the official testimony of the Division of Water  
 22 Resources that these are subject to withdrawal  
 23 of 19,000 acre-feet a year. How many permits  
 24 does the City have currently?  
 25 **A. For Phase II?**

Page 2266

1 Q. For Phase II?  
 2 **A. They have 30 and those are the 30 that are**  
 3 **specified in the City's proposal as the ones**  
 4 **that they are desiring the changes to.**  
 5 Q. Mr. Boese, if you were to add up the water that  
 6 the City could withdraw in each -- each year  
 7 under these current permits, tell me what that  
 8 total quantity would be.  
 9 **A. Just so we're clear, we're talking about the**  
 10 **list that the City has in the -- in their**  
 11 **exhibit notebook, which is -- I guess, perhaps**  
 12 **there's not a page number, it's under cover**  
 13 **letter of the -- identifies the 30 ASR Phase II**  
 14 **permits that they are asking for the changes to,**  
 15 **those total 18,000 acre-feet.**  
 16 Q. Okay. So if you were to add them up, to clarify  
 17 the record that's been made by the Division of  
 18 Water Resources and the City throughout this  
 19 hearing, they could only be withdrawn at a total  
 20 of 18,000 acre-feet a year; is that right?  
 21 **A. That would be the total of these 30 that are**  
 22 **indicated here. I'm not talking about any of**  
 23 **the Phase I permits. So the 30 that are listed**  
 24 **here, the first 24 are authorized for 500**  
 25 **acre-feet each, which would equal 12,000**

Page 2267

1 **acre-feet; and the last six that are identified**  
 2 **are each authorized for 1,000. 12,000 plus**  
 3 **6,000 would be 18,000 acre-feet. I'm not sure**  
 4 **where the 19,000 number has come from, other**  
 5 **than perhaps they included one of the ASR Phase**  
 6 **I wells, I'm thinking perhaps the one that was**  
 7 **put in at the failed recharge basin number --**  
 8 **number 1 that now has a recharge and recovery**  
 9 **well which is part of Phase I.**  
 10 Q. But if you were to simply add up the 30 permits  
 11 that are actually referenced in the City's  
 12 proposal, this number of 19,000 would be a  
 13 misstatement by both the City and the Division  
 14 of Water Resources; is that correct?  
 15 **A. According to my research, it's 18,000 acre-feet.**  
 16 **And I actually verified that last night by**  
 17 **looking in at the DWR WRIS system, the Water**  
 18 **Right Information System. And, again, the first**  
 19 **24 are 500 acre-feet, and the last six are 1,000**  
 20 **acre-feet each.**  
 21 Q. Mr. Boese, there has been a discussion about  
 22 what the impact -- just bear with me for a  
 23 moment, Mr. Boese. Assume with me that there's  
 24 120,000 acre-feet of credits, of AMC credits  
 25 that are accumulated, okay, you follow me?

Page 2268

1 **A. Uh-huh.**  
 2 Q. If those could be withdrawn at a rate of  
 3 18,000 acre-feet per year --  
 4 **A. Okay.**  
 5 Q. -- when those credits are withdrawn, if no water  
 6 was put into the aquifer pursuant to the AMC  
 7 credit, in your view, could that cause harm to  
 8 the aquifer when those credits are withdrawn?  
 9 **A. It would certainly cause the aquifer to decline**  
 10 **when those recharge credits were withdrawn.**  
 11 Q. Okay. And based on your 28 years of experience  
 12 working for the District and having analyzed  
 13 data with regard to water declines, what do you  
 14 think the effect of the aquifer would be if  
 15 120,000 acre-feet of water are withdrawn over a  
 16 course of 18,000 acre-feet a year?  
 17 **A. Well, certainly if that's in combination with**  
 18 **the City's existing water rights and irrigation**  
 19 **rights in the area, that would cause a**  
 20 **substantial decline in the aquifer.**  
 21 Q. Could that have an effect on water quality?  
 22 **A. It certainly could. As we discussed earlier, it**  
 23 **would increase that hydraulic gradient, which**  
 24 **would cause the salinity movement from both the**  
 25 **Burton and the Arkansas River area, and it**

1 **could also impact shallower wells such as**  
2 **domestic wells or shallow irrigation wells.**  
3 Q. Could it have an impact to minimum desirable  
4 streamflow if there was aquifer declines?  
5 **A. It most certainly could. We saw declines in the**  
6 **brief 2011 and 2012 drought.**  
7 Q. In your view, could these declines caused by  
8 lowering the minimum index level or withdrawing  
9 these credits, could it cause impairment to  
10 other wells?  
11 **A. It could, it's something that should be**  
12 **evaluated.**  
13 Q. Well, based on your 28 years of experience and  
14 having examined impairment and wells, what is  
15 your expert opinion in that regard, do you  
16 believe the City's proposal has the potential to  
17 create impairment as it relates to other wells  
18 in the -- in the area of the City's well field?  
19 **A. Yes, that's why it was -- it was determined that**  
20 **we -- the City could not withdraw below the 1993**  
21 **levels, so below that could most certainly**  
22 **impair existing water rights.**  
23 Q. But also as it relates to withdrawing AMC  
24 credits, do you think that has the potential to  
25 impair wells in the area?

1 Q. Well, an ASR artificial recharge credit, what  
2 are the types of beneficial uses with -- with  
3 respect to an ASR II credit?  
4 **A. Are you talking about the withdrawal from the**  
5 **Little Arkansas River?**  
6 Q. Yeah.  
7 **A. Okay. I follow you now. The City water permit**  
8 **for Phase II, which is water permit 46,627,**  
9 **allows for both municipal use and recharge use,**  
10 **artificial recharge use.**  
11 Q. Okay. And under the City's current proposal,  
12 the City could take overflow water from the  
13 Little Arkansas, treat it, and use it directly  
14 in the City currently as that permit exists; is  
15 that right?  
16 **A. It is authorized for municipal use, yes.**  
17 Q. And so the beneficial use, if the City were to  
18 directly divert right now, would be municipal  
19 use; is that right?  
20 **A. If they diverted and took that treated water**  
21 **to -- to the City, that would be municipal use,**  
22 **yes.**  
23 Q. With -- now, you listened to Mr. Letourneau's  
24 testimony where he said that when that water is  
25 taken directly to the City pursuant to an AMC

1 **A. Yes, that -- that would cause a decline in the**  
2 **water table.**  
3 Q. Well, and my question was do you think it could  
4 cause impairment to wells in the area?  
5 **A. Yes, I'm sorry.**  
6 Q. And there is a distinction drawn between  
7 impairment to wells and overall impairment to  
8 the aquifer by lowering the water table. Do you  
9 believe that the City's proposal, both with  
10 respect to withdrawing AMC credits and with  
11 respect to lowering the minimum index level,  
12 could cause impairment on both -- to both  
13 aspects?  
14 **A. It would certainly cause decline in the aquifer,**  
15 **we usually don't say impairment of the aquifer**  
16 **but decline in the aquifer, and could cause**  
17 **impairment to other water users.**  
18 Q. With respect to an aquifer maintenance credit --  
19 well, strike -- strike that. With respect to an  
20 ASR Phase II credit, what were the two types of  
21 beneficial uses as outlined in page 9 of your  
22 expert report?  
23 **A. I'm sorry, I'm going to go ahead and flip to**  
24 **that so I can understand what -- what question**  
25 **you're asking.**

1 credit, that creates a recharge credit when it's  
2 used. Do you recall that testimony?  
3 **A. Yes.**  
4 Q. In your view, though, when that water is used in  
5 the City, does that create both -- does that  
6 create two types of uses at the same time  
7 essentially?  
8 **A. It would, it would be being used for --**  
9 **beneficially for municipal use, that would be**  
10 **the actual use, and somehow that would also be**  
11 **claimed as a recharge credit, which would be two**  
12 **uses of that same quantity of water.**  
13 Q. In your 28 years of experience in looking at  
14 permits and applications and water rights and  
15 applying statutes and regulations to them, have  
16 you ever seen a situation where 1 gallon of  
17 water can be used for two different beneficial  
18 uses at the exact same time?  
19 **A. Not at the same time. We have several permits**  
20 **in the District that have dual uses, but it's --**  
21 **it's one or the other at a particular moment in**  
22 **time. It can be used, for instance, for**  
23 **recreational use to fill a pond or for**  
24 **irrigation to water a green area at a housing**  
25 **development. That same gallon can't be used for**

Page 2273

1 **both.**  
 2 Q. The same gallon can't be used for two beneficial  
 3 uses at the exact same time, is that your  
 4 testimony?  
 5 **A. It cannot, that's correct.**  
 6 Q. But is it your opinion that the City's proposal  
 7 utilizes an AMC -- that when this AMC credit  
 8 concept is pursued, that same gallon of water is  
 9 used for two beneficial uses at the exact same  
 10 time, is that your testimony?  
 11 **A. Yes.**  
 12 Q. So have you ever seen a situation before where  
 13 someone is able to use a gallon of water for  
 14 their consumptive purposes and then  
 15 automatically get another gallon of water for a  
 16 later consumptive purpose, have you ever seen  
 17 that kind of concept before?  
 18 **A. No.**  
 19 Q. In your view, does the City essentially get a  
 20 two for one, if you will, 2 gallons of water for  
 21 every 1 gallon of water they send to the City  
 22 for municipal use?  
 23 **A. Under this proposal, they would get a beneficial**  
 24 **use of that gallon for municipal and a**  
 25 **beneficial use for recharge credit at the same**

Page 2274

1 **time, so it would be -- would be a two for one,**  
 2 **two uses for 1 gallon.**  
 3 Q. Have you ever seen a situation where essentially  
 4 without any kind of change application, without  
 5 any kind of new application or new permit being  
 6 proposed a water right user can come before a  
 7 hearing officer or otherwise and say, I'd like  
 8 to double my water right, have you ever seen  
 9 that happen before?  
 10 **A. No.**  
 11 Q. Is that another reason why you think that this  
 12 proposal should be denied?  
 13 **A. Yes.**  
 14 **MR. STUCKY:** I would move to admit  
 15 Exhibit 39 into evidence, I think it's been  
 16 adequately covered now.  
 17 **MR. MCLEOD:** And I'm still going to  
 18 object because I think there are persisting  
 19 foundational issues, and I would suggest  
 20 that we leave that question to be decided  
 21 after Mr. Boese has been cross-examined.  
 22 **MR. STUCKY:** I think he touched on  
 23 every one of those -- those points that  
 24 were highlighted, whether it be MDS or  
 25 water quality, I think he testified to all

Page 2275

1 those already.  
 2 **MR. MCLEOD:** I think there will be  
 3 questions whether he testified to them  
 4 competently.  
 5 **MR. STUCKY:** And my position is  
 6 that's not a basis to exclude an expert  
 7 report from admission. It's certainly  
 8 subject to later cross, but that's not a  
 9 reason to exclude it.  
 10 **PRESIDING OFFICER:** In my view,  
 11 sufficient foundation has been laid.  
 12 Again, this is an administrative context,  
 13 technical rules of evidence are not  
 14 strictly applied, and I believe that  
 15 Mr. Boese has been limited based on  
 16 objection to items in the expert report,  
 17 I've seen that that has been tracked, and  
 18 I'm going to overrule the objection and  
 19 admit Exhibit 39.  
 20 **BY MR. STUCKY:**  
 21 Q. So, Mr. Boese, for everyone's benefit, let's sum  
 22 this up in two minutes or less. Do you believe  
 23 that the City's proposal with respect to  
 24 lowering the minimum index levels based on your  
 25 28 years of experience where you've been

Page 2276

1 involved with the Groundwater Management  
 2 District, do you believe that's good for the  
 3 aquifer?  
 4 **A. No.**  
 5 Q. Do you believe that the potential to withdraw up  
 6 to 120,000 acre-feet of AMC credits is good for  
 7 the aquifer?  
 8 **A. No.**  
 9 Q. Do you believe, subject to a cap on the ASR II  
 10 credits, do you believe that the City's proposal  
 11 should be approved?  
 12 **A. I'm sorry, can you restate that?**  
 13 Q. Do you believe the City's AMC proposal should be  
 14 approved?  
 15 **A. No.**  
 16 Q. What is -- based on the deference afforded to  
 17 the Groundwater Management District and an  
 18 agency's interpretation of this proposal, what  
 19 is the official position of you, Mr. Boese, on  
 20 behalf of the Groundwater Management District as  
 21 it relates to the City's proposal?  
 22 **A. It should be denied.**  
 23 **MR. STUCKY:** No further questions.  
 24 **PRESIDING OFFICER:** And do I have --  
 25 do I understand when he says your official

1 position, does that reflect the view of  
2 your board?  
3 **A. It does, they have passed a motion.**  
4 **PRESIDING OFFICER:** Okay. It's five  
5 till 5:00. I think that's a good place to  
6 stop, and we will meet tomorrow morning at  
7 8:30.  
8 (Whereupon, the proceedings were  
9 adjourned at 4:57 p.m.)

**PRESIDING OFFICER:** Okay. It's now  
8:30 a.m. on March 4th, 2020, we are  
continuing with our hearing regarding the  
City of Wichita's proposal to modify their  
ASR Phase II project. And yesterday, I  
believe the GMD finished their direct  
examination of Mr. Boese. And, Mr. McLeod,  
you have cross.

**MR. MCLEOD:** Thank you.

**CROSS-EXAMINATION  
BY MR. MCLEOD:**

Q. Mr. Boese, yesterday Counsel asked you a  
question about K.S.A. 82a-702 as to whether that  
statute, which speaks to dedicating waters of  
the State to the people of Kansas, meant that  
the statute was dedicating water to the people  
who live and use water in the local aquifer.  
And I think you -- I think you concurred with  
Counsel that you believe that that statute does,  
in fact, dedicate the water in the aquifer to  
the local users. Is that what you said?

**A. I think that's a mischaracterization. I believe  
Mr. Stucky did say live, and I believe I tried  
to correct that. And if I wasn't clear, I**

1 intended to be, I said it's dedicated to the  
2 people of the State of Kansas; however, the  
3 local users use it so it would be not  
4 specifically necessarily dedicated to them, but  
5 that's the area that they're in so they're the  
6 ones using it so it would be their rights.

7 Q. I'm going to ask the reporter to read back the  
8 witness's testimony of yesterday for the record.  
9 A. And, again, if I misstated, I will correct that,  
10 but I believe Mr. Stucky said live and I -- I  
11 said live and I said I mean use the water.

12 (At this time, the reporter read  
13 the designated portion at Volume  
14 VIII, page 2257, lines 3 - 19.)

15 BY MR. MCLEOD:

16 Q. So the City's not an individual, is it,  
17 Mr. Boese?

18 A. I think, again, you're mischaracterizing it. By  
19 individual, I meant a water right holder. And I  
20 would like to go ahead and further clarify that  
21 by dedicated, I mean that the water is fully  
22 appropriated in the Wichita well field and,  
23 therefore, it's already dedicated to other  
24 users.

25 Q. So one of the reasons, Mr. Boese, that I asked

1 them.

2 Q. So in a similar vein, Mr. Boese, I want to ask  
3 you about -- about your concept of public  
4 interest because at some of the District's board  
5 meetings, you have made statements  
6 differentiating between the public interest and  
7 the local public interest. And to the extent  
8 that you see a difference between those  
9 concepts, could you explain them for the hearing  
10 officer?

11 A. Can you state where I've said that, a difference  
12 between local and public interest and public  
13 interest, do you have -- do you have a reference  
14 I can look at, board meeting minutes or a  
15 document where I've said that?

16 Q. I haven't brought a document. Are you saying  
17 you don't recall a board meeting where you  
18 expressed that the purpose of the District was  
19 to address and express the local public  
20 interest?

21 A. I do think that is one of the roles of a  
22 groundwater management district. The GMD Act  
23 specifically states it's in the public interest  
24 for a local groundwater management district to  
25 be formed for managing the resource. I believe

1 the questions about this disturbing testimony,  
2 I'm sure you have noticed in the public comments  
3 there have been many local residents who have  
4 expressed the sentiment that the City of  
5 Wichita, with its corporate borders some  
6 31 miles away, should not be able to come out to  
7 the Equus Beds Aquifer and have water. Do you  
8 share that sentiment, Mr. Boese?

9 A. I do not, it's a first in time, first in right;  
10 it doesn't matter necessarily where the entity  
11 is located at, it's where the application is  
12 made.

13 Q. And being a person who testified yesterday that  
14 you looked at the black-and-white letter of the  
15 statute, would you agree with me that when you  
16 read the black-and-white letter of K.S.A.  
17 82a-702 it doesn't say anything about local  
18 users?

19 A. I would agree. But I also was pointing to black  
20 and white when I'm reviewing regulations for  
21 applications. I don't know that I specifically  
22 said statute, but I -- I wasn't in that context  
23 talking about regulations. When I'm reviewing  
24 an application, I use our District regulations,  
25 and those are black and white when I review

1 you can connect the dots and say that's -- the  
2 District should be an expression of the public  
3 interest. We represent 2,000 water right  
4 holders from the City of Wichita down to the  
5 smallest irrigation user, we have to be able to  
6 represent their public interest.

7 Q. When the District is evaluating public interest  
8 for purposes of whether a particular application  
9 or proposal meets the public interest, is the  
10 District doing that with a view to the state  
11 public interest or the local public interest  
12 that you refer to?

13 A. I'm a little confused when you said when  
14 reviewing an application based on the public  
15 interest. We review applications based on our  
16 rules and regulations which are local to the  
17 Groundwater Management District.

18 Q. Don't the rules and regulations, many of them,  
19 refer to the public interest?

20 A. The Groundwater Management District rules and  
21 regulations?

22 Q. And the state statutes, specifically the  
23 statutes that relate to evaluation of permit and  
24 permit change applications?

25 A. Well, you said statutes and now you said

Page 2287

1 **regulations, which one are you referring to?**  
 2 Q. Well, Mr. Boese, I don't want to get into a  
 3 protracted argument with you, let's just go back  
 4 and do this very slowly so you can follow. If  
 5 you were to look at the statute that governs new  
 6 permit applications, is one of the -- is one of  
 7 the considerations for a new permit application  
 8 that the permit application, if granted, would  
 9 not unreasonably impact the public interest?  
 10 **A. Yes.**  
 11 Q. And when someone makes such an application and  
 12 it comes to the District Board for review, is  
 13 that one of the components that the District  
 14 Board speaks to when they evaluate the  
 15 application?  
 16 **A. Again, I'm just a little confused because the**  
 17 **District Board doesn't review most applications;**  
 18 **staff does. You're talking when it makes it to**  
 19 **the Board for review, let's say for a waiver or**  
 20 **something of that nature?**  
 21 Q. Whenever the Board has to consider the question  
 22 of whether an application or a change app  
 23 unreasonably affects the public interest, okay?  
 24 **A. Okay.**  
 25 Q. Is the Board looking to the public interest on a

Page 2288

1 statewide basis or what you have termed the  
 2 local public interest when they interpret and  
 3 apply the words public interest?  
 4 **A. We -- we would be looking at the local effects**  
 5 **of that application. So I'm not sure that I'm**  
 6 **quite following you, but if the local effects**  
 7 **would affect the public, then that would be the**  
 8 **local public interest. I'm not sure that I'm**  
 9 **worried if the application affects someone, say,**  
 10 **in Leavenworth. We're managed -- we're -- we're**  
 11 **formed for the local management of the resource.**  
 12 **I'm not really concerned maybe, perhaps, what**  
 13 **the public interest is in -- a couple hundred**  
 14 **miles away. I mean, that -- obviously the**  
 15 **application would have no bearing on the public**  
 16 **that's located outside of our Groundwater**  
 17 **Management District.**  
 18 Q. As among -- as among users who are local users,  
 19 or I will say users of the local aquifer supply,  
 20 is it your view that the Board's job is to  
 21 neutrally treat the City of Wichita in the same  
 22 basis as any other applicant when it applies  
 23 rules and regulations or interprets the public  
 24 interest?  
 25 **A. Yes, we're fair to all water users in reviewing**

Page 2289

1 **applications.**  
 2 Q. So you would not, for example, apply a bunch of  
 3 criteria to a City of Wichita request that you  
 4 would never apply to any other permit  
 5 applications or change requests, correct?  
 6 **A. It would depend on the nature of the City of**  
 7 **Wichita requests, just like it would depend on**  
 8 **any other water right applicant's request. If**  
 9 **the specific needs or conditions are needed,**  
 10 **then I would recommend that, and I do quite**  
 11 **frequently other than just the City of Wichita.**  
 12 Q. Mr. Boese, in reviewing your CV yesterday, I  
 13 didn't see reference to any professional  
 14 licenses. Do you hold any professional licenses  
 15 or certifications?  
 16 **A. I hold a certification in being a McCrometer**  
 17 **water meter technician, certified service**  
 18 **provider.**  
 19 Q. And how is such a certification obtained?  
 20 **A. That was specific training on repair,**  
 21 **installation, and sales of McCrometer water**  
 22 **meters through -- through the McCrometer**  
 23 **company.**  
 24 Q. Okay. So the manufacturer and distributor  
 25 provides that training?

Page 2290

1 **A. Yes.**  
 2 Q. And are there any other licenses or  
 3 certifications that you hold?  
 4 **A. No.**  
 5 Q. And you mentioned that some of the -- some of  
 6 the review that you had done of MODSIM and  
 7 MODFLOW actually was done by Mr. Flaherty when  
 8 he was at the District. Is Mr. Flaherty a  
 9 licensed geologist?  
 10 **A. He is -- well, I can't speak of what he is today**  
 11 **because he's no longer employed by me. He was**  
 12 **not a licensed geologist; he did hold a master's**  
 13 **degree in geology while he was employed with me.**  
 14 Q. Did he have any other professional licenses?  
 15 **A. Without reviewing his personnel file, which I**  
 16 **don't have access to, I'm not sure that I**  
 17 **could -- I could comment on that.**  
 18 Q. I think you indicated that -- that the degree  
 19 you hold is a bachelor's degree in general  
 20 studies. I don't recall your CV mentioning when  
 21 that degree was obtained. When did you obtain  
 22 that degree?  
 23 **A. 2011. Let me correct that, I'm not entirely**  
 24 **sure if it was 2010 or 2011, so I don't want --**  
 25 **I don't want to misspeak on the record.**

1 Q. So relatively recently, and it would follow that  
2 when you were hired to be District manager, you  
3 actually did not yet have a degree?  
4 **A. That's correct.**  
5 Q. Did you have the certification in meter work  
6 that you had referred to earlier?  
7 **A. I -- I did.**  
8 Q. In your college course work, did you take any  
9 classes on law?  
10 **A. Yes.**  
11 Q. And what were those classes?  
12 **A. I don't remember the title of the class, it was**  
13 **a business law class.**  
14 Q. So there was one general business law class?  
15 **A. From my recollection, yes.**  
16 Q. And do you recall who taught that?  
17 **A. Oh, gosh, no, I do not.**  
18 Q. And can you tell us about the -- about the  
19 subtopics, what the course covered in terms of  
20 law?  
21 **A. Well, you're asking me to remember things that I**  
22 **took years ago. I think there was -- part of**  
23 **that was contracts, how an agent is related to,**  
24 **let's say, in a contract situation. I**  
25 **specifically -- I specifically remember that.**

1 **A. I don't think the original CV had the specifics**  
2 **that I had -- that I would prefer to have in my**  
3 **CV.**  
4 Q. Would you say that -- that you made errors in  
5 preparing your initial CV?  
6 **A. Could you point those out to me?**  
7 Q. In terms of omitting all the content that later  
8 you needed to add in Exhibit 83?  
9 **A. So did you say error or omission?**  
10 Q. Well, I'm asking if you had left all that  
11 content out initially by error?  
12 **A. I left it out by omission. I -- I guess by**  
13 **error, I mean, I just -- it just didn't have the**  
14 **level of detail that my new one has.**  
15 Q. It wasn't because your experience vastly changed  
16 between the time you prepared the two documents,  
17 was it?  
18 **A. No.**  
19 Q. Mr. Boese, a number of other exhibits have been  
20 substituted since the District's notebooks were  
21 originally prepared. Do you know how many  
22 exhibits have been substituted and corrected in  
23 the District's notebooks?  
24 **A. We added some -- some of the drill logs that we**  
25 **had previously talked about, I think we gave**

1 **But it's been quite awhile ago, Mr. McLeod, so I**  
2 **don't remember all the topics.**  
3 Q. Can you tell me, Mr. Boese, who was Casimir  
4 Pulaski?  
5 **A. I -- I'm not aware of that.**  
6 Q. Would you be able to tell me who was Lew  
7 Wallace?  
8 **A. I'm not sure where your line of questioning is**  
9 **going, I believe -- I believe Mr. Wallace had**  
10 **some aspects of hydrology or geology, but the**  
11 **name is not catching me right now.**  
12 Q. How about Don Carlos Buell?  
13 **A. Again, that was a -- some hydrologist or**  
14 **geologist. Science, I believe.**  
15 Q. Would you agree with me, Mr. Boese, that you  
16 really don't know much about generals?  
17 **A. I -- again, I'm not sure where your line of**  
18 **questioning is going but -- but thank you.**  
19 Q. Moving on. Mr. Boese, I noticed that the CV  
20 that you provided that was admitted as  
21 Exhibit 83, it was extensively changed from the  
22 CV initially provided with your expert report,  
23 and is that because you had inadvertently left a  
24 large amount of content out of the initial  
25 version?

1 **those to -- to the counsel in the December**  
2 **hearing, if I remember correct, and we corrected**  
3 **a few water level hydrographs for the index**  
4 **wells. I'm trying to remember if there's**  
5 **anything else off the top of my head.**  
6 Q. Who prepared the originals of those exhibits?  
7 **A. Of the drill logs?**  
8 Q. Right.  
9 **A. The -- the well driller made the drilling log;**  
10 **the City's consultant, which is a licensed**  
11 **geologist, supplemented those with -- with their**  
12 **field notes. Then we made copies out of our**  
13 **files and brought them to you.**  
14 Q. Okay. In terms of compiling them for the  
15 exhibit book, I mean, who -- who was the person  
16 who undertook the task of preparing the actual  
17 exhibit and including it in the notebook?  
18 **MR. STUCKY:** I'm going to object as  
19 to relevance. These questions, I mean,  
20 they're -- they're not relevant at all to  
21 the nature of this hearing.  
22 **PRESIDING OFFICER:** Can you give me  
23 an idea of where you're going with this?  
24 **MR. MCLEOD:** Sure, I can. I mean,  
25 you probably noticed as we were discussing

Page 2295

1 the proposal, there was hammering and  
 2 hammering and hammering, at least six  
 3 times, I think, Counsel hammered on three  
 4 or four errors that were typos in nature,  
 5 figures and tables. And now we have  
 6 exhibits that have been, you know,  
 7 erroneous in their original iteration and  
 8 corrected by the District, and so questions  
 9 for Mr. Boese, I'd like to know if he was  
 10 involved in those errors, because if errors  
 11 are important, we need to find out if  
 12 Mr. Boese has made errors?  
 13 **PRESIDING OFFICER:** Then you may ask  
 14 that.  
 15 **BY MR. MCLEOD:**  
 16 Q. Mr. Boese, did you make errors in the original  
 17 exhibits that were corrected?  
 18 **A. Can you tell me which exhibits you're referring**  
 19 **to?**  
 20 Q. The ones that were corrected, Mr. Boese?  
 21 **A. The water level hydrographs?**  
 22 Q. Those are among the ones you identified.  
 23 **A. I identified the drill logs which we brought to**  
 24 **you; we haven't got to talking about the**  
 25 **hydrographs, I don't think at this point. But,**

Page 2296

1 **yes, they were errors that were either made by**  
 2 **my -- myself or my staff in preparing them; they**  
 3 **were minor in detail, although I felt it**  
 4 **necessary to correct those.**  
 5 Q. And when you say yourself or your staff, is it  
 6 because you don't recall whether it was yourself  
 7 or your staff that made those errors?  
 8 **A. It would have been my -- my staff that made**  
 9 **those errors, and I did not catch them when I**  
 10 **reviewed the water level hydrographs.**  
 11 Q. Let's go to Exhibit 4 in the GMD exhibit books.  
 12 Now, Mr. Boese, just for -- just for efficiency,  
 13 I'm going to represent to you that this exhibit  
 14 is the City of Wichita's second interrogatories  
 15 to the District, with the District's answers  
 16 also provided. And if you will turn to page 7,  
 17 numbered page 7 in the exhibit.  
 18 **A. I'm sorry, are you in Exhibit Number 4?**  
 19 Q. Number 4.  
 20 **A. And you said second request?**  
 21 Q. City of Wichita's second interrogatories to  
 22 Equus Beds Groundwater Management District  
 23 No. 2.  
 24 **A. Under Exhibit 4?**  
 25 Q. Under Exhibit 4 in the District's book.

Page 2297

1 **A. Under Volume I, Exhibit 4, mine says responses**  
 2 **to City of Wichita's first set of**  
 3 **interrogatories to Equus Beds Groundwater**  
 4 **Management District No. 2.**  
 5 Q. Well, that's handy.  
 6 **MR. MCLEOD:** May I approach the  
 7 witness --  
 8 **PRESIDING OFFICER:** Yes.  
 9 **MR. MCLEOD:** -- Madam Hearing  
 10 Officer?  
 11 **A. I know these were taken apart, I think, at some**  
 12 **point in time by the original court reporter, so**  
 13 **I'm not sure which one I'm looking at.**  
 14 **BY MR. MCLEOD:**  
 15 Q. Okay. Sorting that out in the book before the  
 16 witness, that exhibit is actually marked as the  
 17 District's Number 3. Mr. Boese, if you will  
 18 turn to page 7. You'll see the interrogatory  
 19 number 5 there, I believe, asks that if any of  
 20 the documents the District had been asked to  
 21 identify pursuant to the interrogatories or that  
 22 the City had asked to be produced pursuant to  
 23 any of the requests for production were withheld  
 24 under a claim of privilege, or not produced for  
 25 whatever reason, the District was asked to state

Page 2298

1 with specificity the claim of privilege or other  
 2 reasons to withhold production; identify each  
 3 document by date, author, and subject matter,  
 4 without disclosing its contents, in a manner  
 5 sufficient to allow it to be described to the  
 6 Hearing Officer for ruling on the privilege or  
 7 other reason asserted; and to produce those  
 8 portions of any document not subject to a claim  
 9 of privilege or other reason for non-production  
 10 by excising or otherwise protecting the portions  
 11 for which a privilege is asserted, if such a  
 12 technique does not result in disclosing the  
 13 contents of the portions for which some  
 14 privilege is asserted.  
 15 And if you will look at the response, what  
 16 did the District respond to that interrogatory?  
 17 **A. This interrogatory answer will be addressed at a**  
 18 **later time, through answers to the City's**  
 19 **requests for production of documents, with a**  
 20 **privilege log and any supplemental response.**  
 21 Q. In fact, Mr. Boese, was that privilege log ever  
 22 provided to the City?  
 23 **A. I don't recall.**  
 24 Q. If I were to tell you that, in fact, the  
 25 District never provided that privilege log to

1 the City, would you disagree with me?  
2 **A. I -- I don't recall, Mr. McLeod. So I can't**  
3 **agree or disagree with you.**  
4 Q. You would agree with me, Mr. Boese, that on  
5 page 14 of that exhibit -- excuse me, on page 16  
6 of that exhibit, you're the person who signed  
7 those interrogatory responses under oath,  
8 correct?  
9 **A. That is correct.**  
10 Q. And yet you're telling us today that you don't  
11 know if the answer to number 5 is true because  
12 you don't know if the privilege log was ever  
13 provided?  
14 **A. Could you repeat that question or rephrase that,**  
15 **I didn't quite follow?**  
16 Q. Let's break it down. Mr. Boese, on page 16, you  
17 did sign the answers to these interrogatories  
18 under oath, did you not?  
19 **A. Yes.**  
20 Q. And as we were looking at the response to  
21 interrogatory 5, it said that a privilege log  
22 would be produced, and I recall you testified  
23 that you don't know whether that ever actually  
24 happened or not. So I'm asking you now, are you  
25 telling us in the hearing that you signed under

1 compel. And as you know, the District  
2 filed motions to compel, and, in fact, as a  
3 result of the motions to compel we filed,  
4 you ordered that the City furnish us a  
5 number of additional documents and to  
6 properly answer some of our requests for  
7 admissions and interrogatories, I believe.  
8 And so there was -- there was an  
9 opportunity for the City to take corrective  
10 measures based on what we complained about.  
11 And as you know, the protocol with respect  
12 to motion hearings is to file a motion to  
13 compel -- or, actually, back up, there's  
14 another step, you have to first send a  
15 golden rule letter, give the other party an  
16 opportunity to respond, then you file a  
17 motion to compel. If the information still  
18 is not furnished, then of course it comes  
19 before a hearing, but to try and bootstrap  
20 some sort of motion to compel argument into  
21 this hearing is just not relevant and also  
22 not timely.  
23 **MR. MCLEOD:** Counsel's entire  
24 statement is entirely irrelevant. The  
25 objective here is to ascertain error and

1 oath these responses but you don't know whether  
2 the answer to interrogatory number 5 is true?  
3 **A. Yeah, I don't know if it was provided or not. I**  
4 **just flat don't recall.**  
5 Q. So you also wouldn't be able to speak to whether  
6 your signature under oath to that response was  
7 in error?  
8 **MR. STUCKY:** I'm going to object to  
9 this, it's mischaracterizing the nature of  
10 this question. This question says that  
11 sometime in the -- this interrogatory  
12 answer suggests that sometime in the future  
13 a privilege log might be provided. When he  
14 signed the interrogatories, he would have  
15 no knowledge if this future event would  
16 have occurred or not, so to try and  
17 bootstrap in some admission that when he  
18 signed this he would have had knowledge of  
19 whether or not it would be furnished is  
20 misstating the testimony.  
21 Furthermore, I guess I'm just objecting  
22 as to relevance. As you know very well, we  
23 had a motion hearing -- we had a motion  
24 deadline, we had a motion hearing, and  
25 there was opportunities to file motions to

1 credibility issues, the witness has signed  
2 a statement under oath, the witness has  
3 indicated that he doesn't know if this  
4 statement was true.  
5 Now, as far as it being a  
6 forward-looking statement, of course, we  
7 all know that there is a duty to supplement  
8 responses to interrogatories that lasts  
9 until the date of hearing. And, therefore,  
10 I would like to ask the witness one  
11 additional question in this line, whether  
12 this response was ever supplemented by him?  
13 **PRESIDING OFFICER:** Well, as I read  
14 this, the answers to these questions, the  
15 signature that Mr. Boese provided verified  
16 that the answers were true and correct to  
17 the best of his information, knowledge, and  
18 belief, and that was on February 4 of 2019,  
19 so at that point in time he signed that  
20 these were, to the best of his knowledge,  
21 correct answers. If something that was  
22 stated was intended to happen in the future  
23 did or didn't happen, that's a different  
24 matter than what he was signing to at the  
25 time. So he -- it's appropriate to ask if

Page 2303

1 those items were ever provided, but it is  
 2 not appropriate to imply that what he  
 3 signed at that time was not true if that  
 4 didn't end up happening. If you understand  
 5 my distinction.  
 6 **MR. MCLEOD:** And hence why I would  
 7 ask the further question whether the answer  
 8 was ever supplemented, because at some  
 9 point, certainly, the District knew that it  
 10 did not and was not going to provide the  
 11 privilege log.  
 12 **MR. STUCKY:** And I say objection,  
 13 asked and answered, he didn't recall.  
 14 **PRESIDING OFFICER:** I believe he has  
 15 said he does not recall, so, yes, I'm going  
 16 to sustain these objections, including the  
 17 implication that this was an answer that  
 18 was not true.  
 19 **MR. MCLEOD:** I'll move on.  
 20 **BY MR. MCLEOD:**  
 21 Q. Mr. Boese, in your CV, where are lithographic  
 22 logs mentioned?  
 23 **A. They are not. However, I would note that I did**  
 24 **state that I witnessed and inspected**  
 25 **construction of monitoring wells, which would**

Page 2304

1 **include reviewing and making lithologic logs**  
 2 **from those drill cuttings. I didn't**  
 3 **specifically note that; I think that would be**  
 4 **pretty hard to note every single piece of**  
 5 **document that I've ever reviewed on a CV.**  
 6 Q. This was during your service as hydrologic  
 7 technician for the District?  
 8 **A. And as hydrologist and as manager, I've been out**  
 9 **on -- I've reviewed lithologic logs and been out**  
 10 **on drill sites since I started with the**  
 11 **District.**  
 12 Q. In the CV that referenced to witnessing and  
 13 inspecting well construction, it is with the  
 14 duties described for the hydrologic technician,  
 15 correct?  
 16 **A. Yes, but if you notice under hydrologist and**  
 17 **interim manager, the first bullet point says,**  
 18 **performed most duties listed above under**  
 19 **hydrologic technician. And, again, under**  
 20 **manager, it says, as needed, performed many of**  
 21 **the duties listed under hydrologic technician.**  
 22 Q. When you say you witnessed and inspected the  
 23 construction of these wells, what did that  
 24 entail?  
 25 **A. Well, I'll use our monitoring well installation**

Page 2305

1 **as a -- as an example. We have a specification**  
 2 **on how a District monitoring well would be**  
 3 **drilled and constructed. So when we are adding**  
 4 **a new monitoring well or replacing an old one,**  
 5 **we will provide a staff member at the drill site**  
 6 **to ensure that the well is properly drilled to**  
 7 **the correct depth, casing is set properly,**  
 8 **screen is set properly, gravel pack is set**  
 9 **properly, grout is set properly, the well is**  
 10 **then developed properly, and during that time,**  
 11 **we would also log the hole as it is being**  
 12 **drilled by sampling drill cuttings and noting**  
 13 **what material was at depth.**  
 14 Q. Okay. How many wells did you oversee  
 15 construction of in that fashion?  
 16 **A. I don't have a count, Mr. McLeod, I would say**  
 17 **dozens. And I also did not mention cathodic**  
 18 **protection bore holes is another example where**  
 19 **we have a permitting process where an applicant**  
 20 **has to actually apply through our District**  
 21 **rather than the Kansas Corporation Commission**  
 22 **for cathodic protection bore holes; and I can go**  
 23 **into great detail, if you like, on what those**  
 24 **are, but, again, that is a similar sort of**  
 25 **processing, ensuring that surface casing is**

Page 2306

1 **properly set, logging the hole, properly grouted**  
 2 **to protect the aquifer.**  
 3 Q. Okay.  
 4 **A. And that would, again, be dozens that I've been**  
 5 **out on those also.**  
 6 Q. Do you again take lithographic samples for those  
 7 bore holes?  
 8 **A. Generally, yes, along with the driller, we -- we**  
 9 **coordinate with the driller, which is what most**  
 10 **inspectors would do is to coordinate with the**  
 11 **driller to take samples of drill cuttings on the**  
 12 **way down.**  
 13 Q. You had indicated at one point in your testimony  
 14 that at one point in time you were a certified  
 15 lab for KDHE as to some water quality and  
 16 laboratory analysis issues and that that's no  
 17 longer the case. Why is it no longer the case?  
 18 **A. That became very time consuming and cost**  
 19 **prohibitive for the District, with a -- with a**  
 20 **staff of four people and a small budget, to**  
 21 **maintain certification through KDHE. It was**  
 22 **quite a fair amount of work and use of**  
 23 **resources, both money and time, to maintain that**  
 24 **inspection -- or that certification.**  
 25 Q. You had mentioned with respect to your initial

1 service as interim manager that Mike Dealy had  
2 resigned and Lee Wheeler was there for a while  
3 but also resigned. What occasioned the  
4 resignations of Mr. Dealy and Mr. Wheeler?  
5 **A. You want me to speak to why they resigned?**  
6 Q. Yes.  
7 **A. I -- I don't know that I would feel comfortable**  
8 **discussing staff personnel. I -- I don't know**  
9 **that I can get into their minds of why they --**  
10 **why they resigned. That may be difficult for me**  
11 **to do.**  
12 Q. You don't know if there were stated reasons?  
13 **A. As far as written stated reasons?**  
14 Q. Yes.  
15 **A. I -- I do not recall. I was -- I was at the**  
16 **board meeting when Mr. Dealy resigned, and I**  
17 **don't believe he submitted any sort of written**  
18 **documentation. He may have, but I was probably**  
19 **not privy to it. And I do not recall if**  
20 **Mr. Wheeler had any written documentation on his**  
21 **resignation. He also resigned at a board**  
22 **meeting, but I don't know that there's any**  
23 **documentation specific to their reasons why they**  
24 **resigned.**  
25 Q. Mr. Boese, you indicated in your -- in your

1 Q. For how many of those hundreds of permit  
2 applications that you reviewed did you do a  
3 minimum desirable streamflow analysis?  
4 **A. None that I can be aware of.**  
5 Q. For how many of those permit applications that  
6 you reviewed did you do any chloride migration  
7 analysis to determine what impact they might  
8 have on chloride migration?  
9 **A. Many. Because if they're located in the two**  
10 **special groundwater areas, which would be the**  
11 **Burrton Intensive Groundwater Use Control Area**  
12 **or what we call the Hollow-Nikkel Special Water**  
13 **Quality Use Area, that is a requirement of their**  
14 **application process is to look at their impacts**  
15 **to chloride migration. So it would be dozens of**  
16 **those.**  
17 Q. And outside those special areas, have there been  
18 any?  
19 **A. Specifically related to chloride movement or any**  
20 **other contamination movement?**  
21 Q. To chloride movement?  
22 **A. I believe we have looked at some that have been**  
23 **near the Arkansas River and some that are near**  
24 **the -- some of the other oil field brine**  
25 **contaminated areas, we have looked at their**

1 testimony that you had -- had reviewed thousands  
2 of applications for permits in the aquifer, and  
3 you also indicated that this aquifer has been  
4 over-appropriated for a long time. How would  
5 there be thousands of applications in an aquifer  
6 that's been so over-appropriated for such a long  
7 time?  
8 **A. I believe I said hundreds and it could be a**  
9 **thousand or more applications, and I was**  
10 **referring both to new applications and change**  
11 **applications.**  
12 Q. So if you said thousands, you would want to  
13 correct that to hundreds at this point?  
14 **A. I -- again, I believe I said hundreds and it**  
15 **could be a thousand or more, but I would -- that**  
16 **would be my testimony today, it's been hundreds**  
17 **and very well could be over a thousand. And,**  
18 **again, a lot of those would have been change**  
19 **applications and a lot would have been new. And**  
20 **just so we're clear, the entire aquifer is not**  
21 **over-appropriated. I've been referring to the**  
22 **City of Wichita's well field area being**  
23 **over-appropriated. There are new permits still**  
24 **being applied for and approved throughout the**  
25 **District.**

1 **proximity to those chloride contamination**  
2 **plumes.**  
3 Q. Mr. Boese, if I understood correctly, you  
4 indicated in your main testimony that on  
5 occasions, even when you were hydrologist, you  
6 would sometimes assist applicants with their  
7 permit applications. Was I understanding that  
8 correctly?  
9 **A. That is something we do on a -- on a regular**  
10 **basis, we assist applicants with filing the**  
11 **proper paperwork with the Division of Water**  
12 **Resources for a change or a new application.**  
13 Q. And in this case, I'm sure you're aware it's  
14 been the District's position to be critical of  
15 DWR because its staff were communicating with  
16 the City on this proposal. Can you explain for  
17 me why it's okay for District staff to do that  
18 with permit applicants but it's not okay for  
19 DWR?  
20 **A. I think there's absolutely nothing wrong with**  
21 **the Division of Water Resources or the**  
22 **Groundwater Management District assisting an**  
23 **applicant by completing paperwork for a change**  
24 **or a new application. I'm not sure -- I'm not**  
25 **sure where you're going with we were critical of**

Page 2311

1 **DWR -- DWR was helping the City of Wichita file**  
 2 **an application by helping them write down what**  
 3 **the City was requesting, which is generally what**  
 4 **we do with an application is, let's say, a city**  
 5 **comes in and wants to file an application, I'll**  
 6 **ask them the information that they would like to**  
 7 **place on the application, I will assist them in**  
 8 **doing that, much like I would an irrigator. I'm**  
 9 **not advocating for the approval of that**  
 10 **application or the denial. I am assisting them**  
 11 **in filing the proper paperwork.**  
 12 Q. And if there's additional information that you  
 13 think is needed for the evaluation, do you -- do  
 14 you ask them for that information or help them  
 15 to develop it?  
 16 **A. When they're filing the application or when I'm**  
 17 **reviewing the application?**  
 18 Q. When you're reviewing the application?  
 19 **A. If there's information that is -- that is**  
 20 **lacking, then I would request that information**  
 21 **from the applicant.**  
 22 Q. Now, Mr. Boese, as Counsel was going through  
 23 with you the frequency with which the Board  
 24 defers to staff recommendations and DWR defers  
 25 to the District Board recommendations, I think

Page 2312

1 you had indicated that you couldn't recall an  
 2 instance in which DWR didn't defer to the  
 3 District on the issue of what is or is not  
 4 exempt from safe yield. Just to clarify, DWR  
 5 did not defer to the District's position in this  
 6 case, did they?  
 7 **A. I don't know that we've had that direct**  
 8 **conversation where I have written a letter of**  
 9 **denial for -- because we don't have an**  
 10 **application in front of us, so I don't think**  
 11 **I've written a letter of denial based on safe**  
 12 **yield, and I don't think that DWR has issued a**  
 13 **letter in response to that that they disagree**  
 14 **with me, if that's what you're saying.**  
 15 Q. So would you agree with me that the District has  
 16 made pretty clear in this case that it posits  
 17 that AMCs should be subject to safe yield, and  
 18 would you agree that DWR doesn't agree with that  
 19 conclusion?  
 20 **A. I would agree with that.**  
 21 Q. Mr. Boese, you talked about a number of  
 22 presentations you had given to different groups,  
 23 and I was curious, have you heard of the Kansas  
 24 Rural Water Association?  
 25 **A. I have.**

Page 2313

1 Q. Are you familiar with the annual attorney  
 2 roundtable that that group sponsors?  
 3 **A. I am not familiar with that.**  
 4 Q. So that would not be a group that you have been  
 5 asked to address over the years on water rights  
 6 issues?  
 7 **A. I have not been asked by that group to address**  
 8 **them, no. I'd be happy to if they invite me.**  
 9 Q. Mr. Boese, as we were looking at the letter that  
 10 was accepted as a letter signed by Cristi Hansen  
 11 thanking you for comments from a review that you  
 12 had done, I think that was admitted as  
 13 Exhibit 62, the review that you conducted in  
 14 that instance and your comments, were those  
 15 directed to her modeling results, or did you  
 16 also review and comment on her programming and  
 17 inputs?  
 18 **A. I'm going to have to review the -- review the**  
 19 **letter. Can you tell me what exhibit it is?**  
 20 Q. The letter is Exhibit 62.  
 21 **A. Can you repeat what you -- your question?**  
 22 Q. So the review and comments that she's thanking  
 23 you for --  
 24 **A. Uh-huh.**  
 25 Q. -- were your -- were your comments on her report

Page 2314

1 limited to her model results, or did you also  
 2 review and comment on her programming and  
 3 inputs?  
 4 **A. It appears modeled results, I didn't have the**  
 5 **model to -- to look at the exact what all the**  
 6 **inputs were. This is review of the texts, it**  
 7 **would have been review of her outputs.**  
 8 Q. Looking to Exhibit 63 in the District's book,  
 9 which was the letter from Mayor Carl Brewer  
 10 inviting you to serve on a committee.  
 11 Mr. Boese, was this a letter uniquely sent to  
 12 you, or was this a form letter that was  
 13 basically sent to all committee members?  
 14 **A. I have no idea.**  
 15 Q. Mr. Boese, have you ever helped an applicant in  
 16 more involved terms than simply filling out an  
 17 application as, for example, helping an  
 18 applicant to find a location for their point of  
 19 diversion that would meet safe yield or spacing  
 20 requirements?  
 21 **A. Yes.**  
 22 Q. Mr. Boese, in terms of your service on the  
 23 Executive Oversight Committee, which you  
 24 mentioned in your direct testimony, do you know  
 25 if the request to serve on that committee has

1 been a request commonly extended to prior  
2 managers of the District?  
3 **A. I am unaware. I don't know that there was a ASR**  
4 **Oversight -- Executive Oversight Committee that**  
5 **was available for other managers to serve on, I**  
6 **don't know. I can only speak to what I was**  
7 **asked to serve on.**  
8 Q. As we were looking at Exhibit 44 during your  
9 main testimony, Counsel had asked you about  
10 acknowledgments, and I think you were having  
11 trouble in that exhibit finding acknowledgments.  
12 If we look at the table of contents, indeed,  
13 there is not a reference to acknowledgments in  
14 that document, is there, Mr. Boese?  
15 **A. You're going to have to give me one minute,**  
16 **these exhibit notebooks have been used so much**  
17 **that they're beginning to not stay together very**  
18 **well. I don't see an acknowledgment in this**  
19 **particular copy of this -- this report.**  
20 Q. But if we go back to numbered page 72,  
21 Mr. Boese, there is a long section that spans  
22 the next few pages entitled References Cited,  
23 isn't there?  
24 **A. Yes, there is.**  
25 Q. And looking through the references cited in that

1 the nights that Counsel mentioned you had spent  
2 preparing for your testimony?  
3 **A. That would be my rate if I was asked by someone**  
4 **other than the Groundwater Management District**  
5 **to testify as an expert. I am receiving my**  
6 **normal salary for this job.**  
7 Q. Okay. So you're not actually charging the  
8 District that rate of \$175 an hour for this  
9 case?  
10 **A. Unfortunately, no.**  
11 Q. Mr. Boese, what is your normal salary?  
12 **A. Are you asking me a personnel question?**  
13 Q. I'm asking you a question that goes to the  
14 independence of the witness and is a matter of  
15 public record because it's a public salary?  
16 **A. It's a little over \$90,000 a year.**  
17 Q. In addition, Mr. Boese, do you get participation  
18 in the state pension system?  
19 **A. Yes, I do.**  
20 Q. And does the District contribute to that?  
21 **A. They're required to as part of the KPERs does**  
22 **require it, the employee and the employer**  
23 **contribution.**  
24 Q. Do you receive any other perks such as use of  
25 District vehicles or District cell phones or

1 USGS report, can you find a reference that  
2 refers to you or the -- or GMD2?  
3 **A. I do -- I do not see one, although I see**  
4 **references to other -- other people who did**  
5 **other work and they reference reports that we**  
6 **would have assisted in, but I don't see a direct**  
7 **reference to the Groundwater Management**  
8 **District.**  
9 Q. So whatever you may have done or the District  
10 may have done with respect to working with USGS  
11 on this particular report, it wasn't significant  
12 enough to get any direct mention in the  
13 references, was it?  
14 **A. All I can speak to is it's not listed in the**  
15 **reference. I would -- I would note we are**  
16 **mentioned more than at least -- at least once or**  
17 **more in the report, particularly on page 6 where**  
18 **it says the data that was used for the input**  
19 **came from GMD2 in part.**  
20 Q. Mr. Boese, in your expert report, you indicate  
21 that you're being paid by the District at a rate  
22 of \$175 per hour for expert testimony. Is that  
23 just for the testimony that you give on the  
24 stand, or are you also charging that rate for  
25 assistance to Counsel during the hearing and for

1 District data processing equipment?  
2 **A. I receive a cell phone allowance. And for full**  
3 **disclosure, I drive the District, one of the**  
4 **District vehicles home and back to work so it**  
5 **doesn't sit out -- outside at the office, which**  
6 **is a total of, I think, about six blocks. That**  
7 **way it can be parked inside at my house.**  
8 Q. Mr. Boese, you've worked at the District, I  
9 believe you said in your direct testimony, since  
10 1992?  
11 **A. That's correct.**  
12 Q. And during that time, I think you indicated  
13 that many other staff members, in fact, everyone  
14 who was there when you started has moved on to  
15 other employment?  
16 **A. That's true.**  
17 Q. And others have come and gone during your long  
18 tenure as well?  
19 **A. That would be also true.**  
20 Q. Mr. Boese, have you stayed at the District all  
21 of these years because of a particular affection  
22 and devotion to the job that you hold or because  
23 you didn't -- didn't find prospects elsewhere?  
24 **A. It would be the first that you said, I -- I am**  
25 **dedicated to the position and managing the**

Page 2319

1 **resources for the folks here in south central**  
 2 **Kansas.**  
 3 Q. And because of that, it's important to you  
 4 personally to retain your position as manager of  
 5 the District, isn't it, Mr. Boese?  
 6 **A. Yes, I enjoy my -- my job.**  
 7 Q. In consequence of which, you really can't afford  
 8 to get crosswise with the board majority on any  
 9 issue, can you?  
 10 **A. I -- I advise the Board based on my knowledge**  
 11 **and information that I have available. I**  
 12 **don't -- I don't try to appease the Board to**  
 13 **keep my job, if that's what you're saying.**  
 14 Q. Mr. Boese, in the years since you've been  
 15 District manager, have there been any occasions  
 16 where you had to take a position that was  
 17 unpopular with the board majority?  
 18 **A. Can you rephrase that, have I had a position**  
 19 **that was unpopular with the board majority?**  
 20 Q. Just in -- just in the years since you have been  
 21 the District manager --  
 22 **A. Okay.**  
 23 Q. -- have there been any occasions when you had to  
 24 take a position before the Board that was  
 25 contrary to the views of the board majority?

Page 2320

1 **A. Yes.**  
 2 Q. And how many of those occasions?  
 3 **A. I -- I don't know that I can count them off the**  
 4 **top of my head, but there has been times when I**  
 5 **have felt differently than the majority of the**  
 6 **Board and have made recommendation as such and**  
 7 **that the Board did not necessarily agree with,**  
 8 **whether that was administrative, budget wise, or**  
 9 **something else.**  
 10 Q. Mr. Boese, you had mentioned during your main  
 11 testimony the District's management program,  
 12 which the version introduced was, I believe it  
 13 was Exhibit 71, was dated May 1st of 1995, and  
 14 you clarified in your main testimony that that  
 15 is, indeed, the current document that represents  
 16 the management program of the District; is that  
 17 correct?  
 18 **A. That's correct.**  
 19 Q. Mr. Boese, is there a statute that bears upon  
 20 periodic review and revision of that management  
 21 program?  
 22 **A. An annual review. It's not required to be**  
 23 **revised every year, there's an annual review,**  
 24 **and then the Board can either affirm, keep it as**  
 25 **is, or propose that modifications be made.**

Page 2321

1 Q. And every year since 1995, has the Board  
 2 reviewed and affirmed the existing plan?  
 3 **A. They've either affirmed or recently they have**  
 4 **proposed for modifications to be made which are**  
 5 **in the process.**  
 6 Q. When you say recently, when did they propose the  
 7 modifications?  
 8 **A. It's -- they have not actually proposed the**  
 9 **modifications; they proposed that the management**  
 10 **program be updated, which is -- staff has been**  
 11 **working on not nearly enough due to other issues**  
 12 **such as this, but it is our goal to update our**  
 13 **management program shortly.**  
 14 Q. Because the existing iteration of the management  
 15 program hasn't been updated since 1995, it's  
 16 essentially all pre-ASR, isn't it?  
 17 **A. As far as any actual permits for ASR, yes. The**  
 18 **ASR was being discussed when it was -- when it**  
 19 **was last updated.**  
 20 Q. Do you think there's anything in the existing  
 21 management program that directly pertains to  
 22 ASR?  
 23 **A. Well, certainly, the goals of the District and**  
 24 **the guiding principles and the -- and the**  
 25 **policies that are stated in there pertain to all**

Page 2322

1 **water right -- all water rights in the District.**  
 2 **So specifically is the word ASR in the**  
 3 **management program, no, but the goals of the**  
 4 **District have not changed due to ASR.**  
 5 Q. As you read through some of the powers and  
 6 duties of the District in your main testimony,  
 7 one of those referenced the protection of water  
 8 quality and remediation of contamination. Do  
 9 you know, Mr. Boese, what has the District done  
 10 to remediate contamination?  
 11 **A. I'm sorry, you said that was under our powers**  
 12 **and duties; I think that's actually under one of**  
 13 **our -- one of our goals.**  
 14 Q. Thank you, yes, under one of your goals?  
 15 **A. What have they done to remediate?**  
 16 Q. To remediate contamination?  
 17 **A. Well, we've installed a monitoring well network**  
 18 **consisting of over 500 monitoring wells to track**  
 19 **chloride contamination and other contaminants.**  
 20 **As far as remediation project, we do not have**  
 21 **one.**  
 22 Q. Okay. So basically the District is tracking  
 23 chloride migration?  
 24 **A. Tracking, we're also cooperating with other**  
 25 **state and federal agencies on -- on possible**

1 remediation efforts.

2 Q. Mr. Boese, in terms of just clarifying your  
3 involvement with some ASR Phase I and Phase II  
4 issues, as far as the proposed permit conditions  
5 that came out of the District, wasn't it Mike  
6 Dealy who wrote the ASR Phase I and II permit  
7 conditions recommended by the Board?

8 **A. Not the Phase II, I wrote the Phase II. Phase**  
9 **I, I can't say that -- that Mr. Dealy did them**  
10 **by himself, we had other staff members, so I**  
11 **think that was -- I guess I'm a little confused,**  
12 **there would have been recommendations to our**  
13 **Board, and then the Board would have forwarded**  
14 **those on. So you say written in the -- they're**  
15 **actually in the permit? I mean, we wouldn't**  
16 **have typed -- typed in those conditions into the**  
17 **permit. We would have made recommendations to**  
18 **the Division of Water Resources.**

19 Q. In terms of the recommendations to the Board,  
20 when staff was giving the Board potential permit  
21 conditions to suggest to DWR, did Mr. Dealy  
22 write those for ASR Phase I?

23 **A. I'm sure he was involved in writing those. I**  
24 **would imagine other staff members were also**  
25 **assisting in that.**

1 Q. Were you one of those staff members, did you  
2 have any role in writing those recommended  
3 permit conditions?

4 **A. I certainly reviewed those at the time. Did I**  
5 **actually write them? I think collaboratively as**  
6 **a District staff, we all looked at those and**  
7 **made suggestions to Mr. Dealy to present to the**  
8 **Board; and I think Mr. Koci, who I don't believe**  
9 **is here today, was also involved with that.**

10 Q. And with respect to the -- to the memorandum of  
11 understanding, first the Phase I memorandum of  
12 understanding, what was your personal role with  
13 respect to the preparation of that Phase I MOU?

14 **A. That would have been mostly a review process**  
15 **when I was reviewing the language in that, along**  
16 **with the other staff members.**

17 Q. So you wouldn't have been actually the  
18 originator of the language in the MOU?

19 **A. For Phase I?**

20 Q. For Phase I?

21 **A. No.**

22 Q. And how about Phase II, Mr. Boese, would that be  
23 different, would you have had a greater role  
24 with the Phase II MOU?

25 **A. I believe so. I think that was also obviously**

1 **our District attorney and the City attorney, I**  
2 **think, were the main -- main authors of that.**

3 Q. Mr. Boese, as you were interpreting language  
4 from the Phase I permit and you noted that in  
5 your view the chief engineer issuing the permit  
6 at that time had defined passive recharge credit  
7 with a referenced i.e., water which the City  
8 could have legally pumped but did not pump, my  
9 question for you is could a later chief engineer  
10 have his or her own concept of a passive  
11 recharge credit that's different than that?

12 **A. Yes, but there's a precedent set with that**  
13 **original order, so I think they'd have to**  
14 **explain why that would be different.**

15 Q. Is the chief engineer who serves at any given  
16 time bound by the opinions of all prior chief  
17 engineers that have served with the Division of  
18 Water Resources?

19 **A. I don't know the answer to that.**

20 Q. In your main testimony, Mr. Boese, Counsel asked  
21 you if there was significance in the protection  
22 provided by the 1993 lower index levels, and you  
23 said there was significance in that protection.  
24 What is that significance, what significant  
25 protection is provided by the 1993 lower index

1 levels?

2 **A. That was to ensure that the water levels did not**  
3 **decline any further due to the City pumping**  
4 **recharge credits below 1993 levels, and then**  
5 **that would also protect the senior water right**  
6 **holders that already have that water dedicated**  
7 **to their use below that 1993 level.**

8 Q. Mr. Boese, you were present at the District when  
9 those 1993 levels were first determined,  
10 correct?

11 **A. Yes.**

12 Q. What was your role in the determination of those  
13 lower index levels?

14 **A. Just so we're clear, are we talking about the**  
15 **original order or the corrected numbers?**

16 Q. If there's a difference, please answer it both  
17 ways.

18 **A. I think my role was probably limited when they**  
19 **were first established because that was just not**  
20 **part of my job duty at that time. The corrected**  
21 **values, that was done largely with my staff,**  
22 **myself, I believe USGS was involved and the City**  
23 **of Wichita reviewed those. We found some**  
24 **discrepancies in what was issued as the 1993**  
25 **levels as to what we believed they should be,**

Page 2327

1 and that was a collaborative effort between,  
 2 again, multiple people and multiple -- multiple  
 3 agencies to correct those, so I was involved in  
 4 that, reviewing those.  
 5 Q. When the index levels were originally set,  
 6 describe the process, the process by which that  
 7 work was done.  
 8 A. Well, again, I think I just stated when the  
 9 original ones, I was -- that was not my role at  
 10 the District during that time, but if memory  
 11 serves me right, that was based on some USGS  
 12 data, interpolation of data that they had to  
 13 come up with a minimum index level at those  
 14 index well locations.  
 15 Q. So they -- they were looking at specific well  
 16 points, and they were applying in some way data  
 17 from a USGS document?  
 18 A. Again, I -- I don't feel real comfortable  
 19 because I don't know exactly what the role --  
 20 what the process was. That was my recollection  
 21 that that was based on some USGS data that  
 22 looked at available water level information. It  
 23 was also looking at predevelopment, which was  
 24 obviously more difficult because there's not  
 25 near as many data points for predevelopment, to

Page 2328

1 set the upper. The lower was based on the data  
 2 that was available when those were established.  
 3 Q. Do you recall when Mr. Clement was testifying,  
 4 he mentioned that there had been some use of  
 5 hand drawn contours, can you give us any detail  
 6 on that?  
 7 A. In relationship to?  
 8 Q. To the setting of the original '93 levels, do  
 9 you know what -- what role hand drawn contours  
 10 would have played in that process?  
 11 A. I assume that was taking the available data and  
 12 drawing in contours by hand to determine what  
 13 the ele -- the water level elevation would have  
 14 been in 1993 at specific index well locations.  
 15 Q. And just to explain that better for the record,  
 16 I mean, what is that, what is the significance  
 17 of the hand drawn contours, what do they  
 18 signify?  
 19 A. As compared to?  
 20 Q. I mean, somebody's drawing contours on a map --  
 21 A. Uh-huh.  
 22 Q. -- what do they signify? What does the contour  
 23 mean, what is its purpose on the map, what's it  
 24 showing?  
 25 A. Well, along that line of contour, the water

Page 2329

1 levels would all be the same, so you generally  
 2 would do it by hand rather than having, let's  
 3 say, a computer program do it because you can  
 4 generally be more -- more precise and accurate  
 5 with the hand contour to connect the data points  
 6 that you have. If you allow a computer program  
 7 to do it, it -- it may be -- there may be some  
 8 issues with that, so you -- if you can, you may  
 9 do it by hand to further -- further refine that  
 10 data.  
 11 Q. How much additional precision do you get with  
 12 hand drawn contour versus computer, or does it  
 13 matter depending on the area you're modeling?  
 14 A. I think it's certainly a matter on the data set  
 15 that you have.  
 16 Q. Mr. Boese, do you know, was -- in general, were  
 17 the 1993 levels set based on lowest levels that  
 18 had been recorded rather than actual water  
 19 volumes available in storage?  
 20 A. I'm not sure I understand the difference. It  
 21 would have been based on the available data that  
 22 we had and that the USGS had, I believe, or --  
 23 it would have been the water level. I'm not  
 24 sure where you're going with the storage. Those  
 25 two are interrelated, so I'm not sure where that

Page 2330

1 question's going.  
 2 Q. So, I mean, basically they selected the water  
 3 levels that were the lowest water levels of  
 4 record at that point in time?  
 5 A. The lowest water levels of record at that time,  
 6 well, that would have been -- at that time, it  
 7 would have been the water level, and I don't  
 8 know -- I'm not quite following the lowest at  
 9 that time; it just would have been the water  
 10 level at that time.  
 11 Q. Yeah, let me -- let me clarify that badly  
 12 phrased question. At the time they were  
 13 selecting water levels, they chose the lowest  
 14 water levels that were of record as of the time  
 15 they were selecting water levels, correct?  
 16 A. I'm not sure that clarified it, but the process  
 17 that I can remember, Mr. McLeod, is we keep  
 18 calling them the '93, which is a little bit of,  
 19 probably a misstatement because a lot of those  
 20 were October, I believe, of '92, some of them  
 21 were January of '90 -- '93, they selected the  
 22 water levels that were recorded at that time to  
 23 establish those 1993 levels.  
 24 Q. And were those, as far as folks knew, the lowest  
 25 water levels that had ever been recorded in the

1 aquifer?  
2 **A. In the Wichita well field area?**  
3 Q. Yes.  
4 **A. I believe they were.**  
5 Q. And -- and was that fact that they were the  
6 lowest levels folks knew of in the history of  
7 the well field area the basis for selecting  
8 them?  
9 **A. Yeah, the -- I mean, the regulation for ASR**  
10 **permitting before it was changed recently said**  
11 **that it was the lowest water level within ten**  
12 **years of filing an ASR permit application, so**  
13 **that would have fit into what was the lowest**  
14 **within that ten-year period. So let me maybe**  
15 **correct that, I can't say that those '93 levels**  
16 **were the lowest ever recorded, but for the**  
17 **purpose of ASR permitting, those would have been**  
18 **the lowest that were recorded within ten years**  
19 **of filing that application. I can't say what**  
20 **the water levels were, say, in 1975, if they**  
21 **were lower or something like that.**  
22 Q. Mr. Boese, looking to Board Exhibit 31, a letter  
23 of April 27, 2018 that was sent to the chief  
24 engineer over your signature.  
25 **A. Can you tell me which exhibit notebook that's**

1 **City was proposing with the AMCs, but shortly**  
2 **thereafter, yes, I would have been concerned**  
3 **about if they were passive recharge credits or**  
4 **not.**  
5 Q. Would it have been your view from roughly the  
6 time that AMCs were first proposed that they  
7 would be subject, in the District's view, to  
8 safe yield?  
9 **A. Again, as the concept was originally submitted**  
10 **or proposed from the City or the City's**  
11 **consultants, it took me some time to understand**  
12 **exactly what -- what AMCs were or were proposed**  
13 **to be, so I don't know at what point in time I**  
14 **started thinking about safe yield, but sometime**  
15 **thereafter. If you're looking for a date, I**  
16 **don't know.**  
17 Q. Mr. Boese, to the extent that it is, and let  
18 me -- let me just back up. It is the District's  
19 position that AMCs are subject to safe yield,  
20 correct?  
21 **A. Well, first of all, we don't think there is any**  
22 **such thing as AMCs, but if they were, we believe**  
23 **that is groundwater pumping that would be**  
24 **subject to safe yield.**  
25 Q. And it's also the District's view that their

1 **in, Mr. McLeod?**  
2 Q. 31 in the District's book.  
3 **A. Can you tell me which -- Number II, I think?**  
4 Q. Volume II, correct.  
5 **A. Thank you. Okay.**  
6 Q. And specifically with respect to the attachment  
7 C, which expressed some legal concerns, my -- my  
8 question is when did you -- when did you first  
9 formulate those legal concerns?  
10 **A. Are you looking as far as a specific date?**  
11 Q. If you know.  
12 **A. I -- I don't. Sometime prior to April 27 of**  
13 **2018. I mean, I'd had some -- some legal**  
14 **questions since the AMC concept was -- was**  
15 **submitted to me from the City's consultants back**  
16 **in 2017. I don't know when I actually**  
17 **formulated every one of these. I've had those**  
18 **questions since the original concept was -- was**  
19 **proposed from Burns & McDonnell.**  
20 Q. Was the passive recharge credit concern one of  
21 the concerns that you had from the time it was  
22 first proposed?  
23 **A. I don't know when I -- when I started thinking**  
24 **about passive recharge credits. It probably**  
25 **took me some time to understand exactly what the**

1 passive recharge credits is prohibited by the  
2 existing Phase I and Phase II permit language,  
3 correct?  
4 **A. Yes.**  
5 Q. And it's also the District's position that  
6 because these are not one of the three topics  
7 identified by statute as allowable for permit  
8 change applications, there's not even a way for  
9 DWR to consider these issues without a new  
10 permit application, correct?  
11 **A. That is my position, or the District's position,**  
12 **yes.**  
13 Q. And, Mr. Boese, does it not follow that in the  
14 discussions about finding halfway meeting points  
15 and other things in the case that there are  
16 none, you're categorically against the notion of  
17 AMCs, aren't you?  
18 **A. Because I -- I do not believe that they are**  
19 **legal, yes. If the City wants to pursue**  
20 **changing some statutes and regulations, then I**  
21 **would consider them, but since there is no**  
22 **definition of AMCs, there is no statute that**  
23 **mentions AMCs, or rules and regulations, then**  
24 **I have -- then I would be in opposition of AMCs**  
25 **because I don't believe they exist under current**

Page 2335

1 **statutes and regulations.**  
 2 Q. And, likewise, Mr. Boese, the District and you,  
 3 you're both categorically opposed to the  
 4 proposal to lower the 1993 index levels to the  
 5 proposed new levels, correct?  
 6 **A. With the -- with the way that the proposal was**  
 7 **submitted by the City, yes, because the items**  
 8 **that we believe should have been addressed in**  
 9 **that proposal are not in the proposal.**  
 10 Q. So to be clear, there are no permit conditions  
 11 that would change the District's position that  
 12 the District has taken in this case, correct?  
 13 **MR. STUCKY:** And I'm going to just  
 14 for the record object to the  
 15 characterization of the witness's testimony  
 16 as far as being categorically against. We  
 17 introduced exhibits, and, in fact, they  
 18 were discussed yesterday, where Mr. Boese  
 19 suggested some ideas where perhaps aquifer  
 20 maintenance credits, if they were allowed  
 21 by law, could be made aquifer neutral, and  
 22 he suggested some different ideas. In  
 23 fact, if you -- if you look at it that way,  
 24 it was basically a way to try and find  
 25 common ground and work with the District to

Page 2336

1 try and see how the aquifer could be  
 2 protected. And so there was those exact  
 3 communications that occurred. Now, they  
 4 weren't responded to, but those  
 5 communications occurred from Mr. Boese. So  
 6 to say that he was categorically against  
 7 when the testimony yesterday indicated that  
 8 he actually tried to find ways to work with  
 9 the City, I think, is a misstatement of the  
 10 testimony.  
 11 **PRESIDING OFFICER:** Mr. Boese, would  
 12 you like to modify based on what Mr. Stucky  
 13 said? Do you --  
 14 **A. Yes, I don't think maybe I was -- I was real**  
 15 **clear. As far as the AMCs, because there is no**  
 16 **statute or regulation, I cannot be in favor of**  
 17 **them. If there was a statute and regulation**  
 18 **that allowed AMCs, then as Mr. Stucky eloquently**  
 19 **put it, we may be able to find permit conditions**  
 20 **that we would -- we would be in favor of those.**  
 21 **BY MR. MCLEOD:**  
 22 Q. But it's the District's position that -- that  
 23 it's not statutorily allowed to have AMCs,  
 24 correct?  
 25 **A. Statutory and regulatory, yes.**

Page 2337

1 Q. And so as the law and regulations stand, isn't  
 2 it true, Mr. Boese, that there is no permit  
 3 condition or combination of permit conditions  
 4 that would make AMCs currently acceptable to the  
 5 District?  
 6 **A. I believe that would have to be a question for**  
 7 **my board of directors for us to discuss. I**  
 8 **don't know what these permit conditions are,**  
 9 **this hypothetical. I thought yesterday we**  
 10 **agreed to get away from hypothetical, but if we**  
 11 **want to go back, I don't know what hypothetical**  
 12 **conditions are being suggested. If you could --**  
 13 **if the City or the consultants could tell me**  
 14 **what those conditions would be, I would be glad**  
 15 **to review that and discuss that with my board,**  
 16 **if we could be -- if those would be something**  
 17 **that we could consider.**  
 18 Q. Are you saying you believe that there are permit  
 19 conditions that would make AMCs acceptable to  
 20 the Board even though the Board's position is  
 21 that they're legally not permitted by statute or  
 22 regulation?  
 23 **A. I believe that goes hand in hand; I think there**  
 24 **would have to be a regulation change and the**  
 25 **permit conditions that would be acceptable. I**

Page 2338

1 **don't see what the hang-up would be with -- with**  
 2 **changing a regulation if we could find an**  
 3 **acceptable use of AMCs. And acceptable**  
 4 **conditions. But as has been noted before, the**  
 5 **Division of Water Resources and the City are not**  
 6 **in favor of a regulation change at this time.**  
 7 Q. So would you agree with me, Mr. Boese, that the  
 8 hearing officer in this hearing process can't  
 9 change statutes or regulations?  
 10 **A. That's correct.**  
 11 Q. And is it your understanding that the chief  
 12 engineer can't change statutes?  
 13 **A. That's correct.**  
 14 Q. And so for purposes of the process that we're in  
 15 within the confines of this process where we  
 16 have a hearing officer and a chief engineer that  
 17 can't change statutes and the District's  
 18 position that statutes don't permit AMCs, the  
 19 District's position is that essentially that  
 20 there's no way to get to AMCs within this  
 21 proceeding, correct?  
 22 **A. I'm not entirely sure that we need a statute**  
 23 **change. As you may be aware of, there is**  
 24 **nothing in statute that even mentions ASR,**  
 25 **perhaps there should be, but there is not, so a**

1 **regulatory change with appropriate conditions**  
2 **may be possible. Can that be done in this**  
3 **hearing process? No, but that could be**  
4 **something that could be suggested by the hearing**  
5 **officer, I suppose.**

6 Q. Maybe we'll come back to this later. Mr. Boese,  
7 in terms of well spacing waivers, it's the chief  
8 engineer that grants those waivers, isn't it,  
9 ultimately?

10 **A. Yes.**

11 Q. And so as to the issue of whether new waivers  
12 would be needed with a change in the lower index  
13 levels, that would be something that the chief  
14 engineer would determine, correct?

15 **A. Yes, but I think it would take a recommendation**  
16 **by the District Board because that has a GMD2**  
17 **specific regulation regarding well spacing. So**  
18 **if an applicant wants a spacing waiver, an**  
19 **exemption to a regulation, they must request**  
20 **that from the Board, the Board must make a**  
21 **recommendation to the chief engineer.**

22 Q. So let's back up, Mr. Boese. The waivers that  
23 exist, they -- they have been granted by the  
24 chief engineer, correct?

25 **A. I would assume so.**

1 Q. Mr. Boese, with respect to the procedural --  
2 procedural issues of how requests to modify  
3 permits are or are not considered, as I recall  
4 your main testimony, you indicated that  
5 statutory change applications could alter the  
6 use of water, the point of diversion, or place  
7 of use of the water, correct?

8 **A. If you're talking about K.S.A. 82a-708(b) --**  
9 **Q. Yes.**

10 **A. -- that allow for change application, yes, point**  
11 **of diversion, place of use, and use made of**  
12 **water are the three -- three conditions that can**  
13 **be changed.**

14 Q. And you indicated that the City's proposal not  
15 being one of those three things could not be  
16 submitted as a change application under that  
17 statute, correct?

18 **A. That's correct.**

19 Q. And that's the District's position in this  
20 hearing as well, isn't it?

21 **A. Yes.**

22 Q. And then in your main testimony, Mr. Boese, you  
23 indicated that -- that, however, to correct  
24 typographical errors or to supply omitted  
25 information or to reduce the rate or the

1 Q. And there has been no formal action of any kind  
2 by the chief engineer in validating those  
3 waivers, correct?

4 **A. Not that I'm aware of.**

5 Q. And if the lower -- lower index levels in the  
6 City's proposal were approved, that also would  
7 not automatically invalidate those waivers,  
8 would it?

9 **A. No, but I think it would call into question the**  
10 **validity of the District's recommendation which**  
11 **was required to be sent to the chief engineer**  
12 **when the applicant requested a waiver. There's**  
13 **a --**

14 Q. Are you -- are you aware of any source of law or  
15 regulation that says that the waiver issue would  
16 have to be revisited and go back to the Board?

17 **A. No, I think -- I think that would be something**  
18 **that I would take back to my board for review,**  
19 **if they would consider the recommendation of a**  
20 **waiver invalid. And also if you look at the**  
21 **MOU, would it also be in conflict with the**  
22 **District's MOU because the Board granted that**  
23 **waiver based on language in the MOU that says**  
24 **the water levels will not be withdrawn below**  
25 **1993 levels.**

1 place -- places or quantity, you don't need to  
2 file a formal change application under the  
3 statute, those can be considered by the Board  
4 without one?

5 **A. By the -- by the Board or by the chief engineer?**

6 Q. Let me ask both questions.

7 **A. Okay.**

8 Q. Is it your view that they can be considered by  
9 the Board without a change application?

10 **A. Yeah, I don't think the Board would have any --**  
11 **any sense of reviewing someone asking to reduce**  
12 **their permit or a typographical error, so those**  
13 **would be corrected by the chief engineer.**

14 Q. So you don't believe the Board would even need  
15 to be asked?

16 **A. For a correctional order on those sort of errors**  
17 **and omissions, is that what you're asking?**

18 Q. Well, on the things that we've mentioned, which  
19 in addition to correction of errors and  
20 omissions, would be changes in the rate, place,  
21 or quantity of reductions, I think you also  
22 referenced dividing existing rights and adding  
23 metering plans or conservation requirements to  
24 the permit, that you believed all those changes  
25 were changes that the chief engineer could make

Page 2343

1 without a statutory change application?  
 2 **A. Yes.**  
 3 Q. And, Mr. Boese, given your other testimony  
 4 yesterday on direct that you believe in  
 5 black-and-white reading of statutes and  
 6 regulations and that there's no such thing as  
 7 close enough, I'm going to ask you to find for  
 8 us in the statutes or regulations the one that  
 9 says that the chief engineer can approve changes  
 10 for typographical errors, reductions in rate,  
 11 place, or quantity of use, supply of missing  
 12 legals, division of existing rights, the  
 13 addition of metering plans or conservation  
 14 requirements without a change application?  
 15 **A. There is none. What was -- I'm sorry, can you**  
 16 **rephrase your question, that was a very long**  
 17 **question?**  
 18 Q. Yeah, I think you answered it, I think you  
 19 agreed with me that there's not a provision in  
 20 statute or regulation that says the chief  
 21 engineer can do that without a change  
 22 application?  
 23 **A. I'd like to correct my answer, I am unaware of**  
 24 **that. I think I answered that definitively, and**  
 25 **I am unaware without reading the entire statutes**

Page 2344

1 **and regulations if those are -- if there's some**  
 2 **language about correcting typos, errors and**  
 3 **omissions, I think there actually may be, but**  
 4 **I'm unaware of where it's at.**  
 5 Q. Well, Mr. Boese, we're going to have a break  
 6 later on so that your counsel can work in  
 7 another witness who's on a schedule, so if  
 8 during that break you could look through the  
 9 statutes and regulations that your counsel has  
 10 conveniently provided in the notebook, please do  
 11 that and then when we come back, we'll revisit  
 12 this question.  
 13 **A. Can you tell me exactly what you'd like for me**  
 14 **to look at during that time, noting that the**  
 15 **statutes and regulations are several hundred**  
 16 **pages long?**  
 17 Q. Yes, we're looking for a statute or regulation  
 18 that -- that supports your view that the chief  
 19 engineer can change permits to correct  
 20 typographical errors or to reduce rate, place,  
 21 or quantity of use or supply missing legal re --  
 22 legal descriptions, divide existing rights, add  
 23 metering plans or conservation requirements  
 24 without a change application.  
 25 **A. Okay.**

Page 2345

1 Q. Mr. Boese, in your testimony about chloride  
 2 plume migration, you based, as I recall, your --  
 3 your expert opinion on the double pumping  
 4 scenario with -- with, I believe, existing  
 5 irrigation that was set forth in the USGS study,  
 6 I think that was Exhibit -- not sure what  
 7 exhibit that was.  
 8 **A. I believe it's 44 off the top of my head, but**  
 9 **we'll find out if I'm right in a minute, if**  
 10 **you'd like me to turn to it?**  
 11 Q. Yes, please.  
 12 **A. It is 44.**  
 13 Q. Okay. Mr. Boese, and the pumping scenario that  
 14 you have -- that you identified as the most  
 15 probative one in that study, as I recall, was  
 16 the scenario with double Wichita pumping plus  
 17 existing irrigation. Is that consistent with  
 18 your recollection?  
 19 **A. Yes, I believe so.**  
 20 Q. Now, Mr. Boese, to examine a little bit your  
 21 basis for that comparison, we know from the  
 22 tables in the City's proposal what the City  
 23 projects the volume of pumping would be in the  
 24 eight-year drought, correct?  
 25 **A. Yes.**

Page 2346

1 Q. Volume wise, how does the pumping assumed in  
 2 that double Wichita pumping plus existing  
 3 irrigation scenario compare to the volume that  
 4 the City projected in the eight-year drought?  
 5 **A. I think we should make some distinction that**  
 6 **this USGS report is for quite a bit longer**  
 7 **period of time, I believe from 1990 to 2008, so**  
 8 **it's a longer period of time. Would you like a**  
 9 **mass difference between the two, a volume**  
 10 **difference between the two?**  
 11 Q. Let's try average annual difference between the  
 12 two?  
 13 **A. It may take me a little while to calculate that.**  
 14 **I have to find the table first, so it's going to**  
 15 **take just a little while because it's a very**  
 16 **long report. You're talking about only the City**  
 17 **of Wichita pumping comparison; is that correct?**  
 18 **I think that was the question you asked me, how**  
 19 **does the City's pumping compare to the --**  
 20 Q. Yes.  
 21 **A. Okay. And the reason I ask that because I think**  
 22 **these are two different areas as far as aerial**  
 23 **coverage, so I think it would be best to focus**  
 24 **on the Wichita pumping.**  
 25 **I believe I have an answer for you,**

1 **Mr. McLeod. But I would like to note that I did**  
 2 **that very quickly so I'm not going to guarantee.**  
 3 **Generally, I would like to spend a little more**  
 4 **time, and unfortunately neither one of them are**  
 5 **averaged in either reports, which is why it took**  
 6 **me so long, I had to average. For the double**  
 7 **pumping scenario in the USGS report, according**  
 8 **to my very quick calculations, again I want to**  
 9 **note, the average City pumping was 52,064**  
 10 **acre-feet, five two zero six four. And in the**  
 11 **City's drought modeling pumping, the average**  
 12 **total Equus Beds well field and ASR City pumping**  
 13 **was 45,481, so a difference of about 6,000 -**  
 14 **well, let me do the math here - about 6500,**  
 15 **6600 acre-feet average difference per year.**  
 16 **And, again, I'm going to again note that I did**  
 17 **that quickly and I'm not going to guarantee**  
 18 **those -- those results without some further**  
 19 **review.**  
 20 Q. I appreciate that, Mr. Boese. Let me first ask  
 21 you, although I think it has probably become  
 22 obvious in the exercise, prior to doing this  
 23 calculation on the stand just now, you had not  
 24 done it previously, had you?  
 25 **A. I don't recall. I don't -- I don't believe I**

1 **simulation offer an example of what could occur**  
 2 **during a drought. So, again, much like the**  
 3 **City's proposal, probably not as exactly how**  
 4 **they would operate, neither would this be**  
 5 **exactly how the pumping would be in a drought.**  
 6 Q. And, Mr. Boese, in the modeling scenario that  
 7 the USGS report produced from that -- that  
 8 scenario with the double City pumping and  
 9 existing irrigation, what was the modeled impact  
 10 on migration of the chloride plumes at each  
 11 level?  
 12 **A. It's pretty involved, you want me to go through**  
 13 **each and every scenario?**  
 14 Q. No, just that scenario we were looking at, the  
 15 double Wichita pumping and --  
 16 **A. Double Wichita pumping.**  
 17 Q. -- existing irrigation?  
 18 **A. That can be found on page 71 if you would like**  
 19 **to review it, the double pumping and existing**  
 20 **irrigation pumping scenario, that would be in**  
 21 **comparison to what they establish as a baseline,**  
 22 **which is just the normal pumping from 1990 to**  
 23 **2008, the actual reported pumping, for the**  
 24 **movement along the Arkansas River, in layer 1,**  
 25 **it was -- resulted in a rate of movement of**

1 **had. I had -- I had compared the City's pumping**  
 2 **compared to the double Wichita pumping, those**  
 3 **scenarios. And, again, they're a much longer**  
 4 **period of time, 19 years compared to eight**  
 5 **years.**  
 6 Q. And now that you look at this calculation,  
 7 Mr. Boese, you can see, can't you, that the  
 8 double pumping scenario actually involves a  
 9 greater volume of pumping than the City's  
 10 modeled eight-year drought?  
 11 **A. Some years it involves more, some years it**  
 12 **involves less, but as far as the average, I**  
 13 **would agree a difference of about 6500**  
 14 **acre-feet, I believe I stated, per year.**  
 15 Q. And so there's -- there's not an exact match  
 16 between the modeled eight-year drought and the  
 17 double pumping scenario, and because of that,  
 18 Mr. Boese, you don't really have a basis to  
 19 conclude that that double pumping scenario is  
 20 indicative of what would happen in the City's  
 21 modeled eight-year drought, do you?  
 22 **A. As far as a direct, are they equal, no, but I**  
 23 **would point out on page 62 of the report, USGS**  
 24 **does acknowledge that that is just a scenario,**  
 25 **but it -- as they state, results from this**

1 **810 feet per year, which is 150 feet faster than**  
 2 **the baseline scenario; in layer 2, 870 feet per**  
 3 **year, which was 90 feet faster, 90 feet per year**  
 4 **faster than the baseline; in layer 3, 740 feet**  
 5 **per year, which was 80 feet per year faster than**  
 6 **the baseline for the Burrton plume. Layer 1 was**  
 7 **350 feet per year, which was 50 feet per year**  
 8 **slower than the baseline scenario; 210 feet per**  
 9 **year in layer 2, which was 60 feet per year**  
 10 **faster than the baseline; and 440 feet per year**  
 11 **in layer 3, which is 130 feet per year faster**  
 12 **than the baseline scenario.**  
 13 **So other than layer 2 -- or other than**  
 14 **layer 1 in the Burrton, it increased the**  
 15 **movement. The reason for the layer 1 for the**  
 16 **Burrton plume has been opined in this report**  
 17 **that that could have been due to migration**  
 18 **during pumping from the upper zone to the lower**  
 19 **zone of that -- that water which then would have**  
 20 **slowed that movement down.**  
 21 Q. So looking at the document that actually was the  
 22 basis for the conclusions that you drew and  
 23 testified to earlier, we see once you've done  
 24 the calculation that with a lower -- or, excuse  
 25 me, with a higher average annual volume pumping

Page 2351

1 than the City's modeled drought scenario, the  
 2 USGS scenario would still produce these chloride  
 3 migration numbers of only feet per year,  
 4 correct?  
 5 **A. That is correct.**  
 6 Q. And as to -- as to the upper layer of the  
 7 Burrton plume, the differential would actually  
 8 be that the migration would be slowed by 50 feet  
 9 per year?  
 10 **A. Again, I -- I think they offer some explanation**  
 11 **of that. During the drought when the -- when**  
 12 **the pumping is occurring, particularly from the**  
 13 **lower zone, there could have been movement from**  
 14 **the upper zone to the lower, which would have**  
 15 **then impeded that movement in the upper.**  
 16 Q. Now, in your main testimony, and, indeed, the  
 17 testimony of many witnesses, the District's  
 18 Counsel focused on the City's main benefits  
 19 analysis being the times during which the  
 20 aquifer is managed full and the City's not  
 21 drawing credits. And I'm going to ask you,  
 22 Mr. Boese, in the District's analysis to -- to  
 23 identify harms, has the District focused on the  
 24 time period during which credits would be  
 25 withdrawn?

Page 2352

1 **A. I'm sorry, can you rephrase?**  
 2 Q. As opposed to the time periods in which the City  
 3 believes the aquifer could be managed full with  
 4 the permit changes, aren't the District's harm  
 5 analyses all focused on the time at which the  
 6 AMCs or physical recharge credits would be  
 7 withdrawn?  
 8 **A. For movement of the chloride plume, yes, when**  
 9 **the recharge credits would be withdrawn or the**  
 10 **1993 levels were lowered. I don't think the**  
 11 **City had any -- any analysis in their proposal**  
 12 **for either one.**  
 13 Q. And -- and also with respect to the minimum  
 14 desirable streamflow issue, the District has  
 15 focused on the time at which credits would be  
 16 withdrawn, correct?  
 17 **A. That is true. And, again, I don't think either**  
 18 **one are reported in the City's proposal, either**  
 19 **scenarios.**  
 20 Q. If the City had to -- I'm going to back up. Did  
 21 you do any analysis to determine if the City  
 22 lowered the aquifer to 1998 rates in order to  
 23 facilitate physical recharge credits what the  
 24 impact of that would be on chloride migration in  
 25 the aquifer?

Page 2353

1 **A. Any specific analysis?**  
 2 Q. Any analysis?  
 3 **A. Well, again, I don't know that you necessarily**  
 4 **need a model, I mean, this was a model here, but**  
 5 **if you lower the water table, you increase the**  
 6 **hydraulic gradient, and saltwater contamination**  
 7 **will move at a faster rate, I mean, that's --**  
 8 **that's basic hydrology.**  
 9 Q. So if the 1998 -- if the City lowered the  
 10 aquifer to 1998 levels on a more or less  
 11 permanent basis to facilitate ASR physical  
 12 recharge, that would lower the gradient and  
 13 facilitate chloride migration, correct?  
 14 **A. Compared to what? Compared to where we're at**  
 15 **today or compared to 1993 levels?**  
 16 Q. Compared to where we're at today?  
 17 **A. Any reduction in the -- in the water level will**  
 18 **change the hydraulic gradient; it could be a**  
 19 **small change or it could be larger depending on**  
 20 **how much the hydraulic gradient is changed.**  
 21 Q. And do you think that there's a basis by which  
 22 you could compare, say, two years of the reduced  
 23 gradient at the 1993 levels to 20 years at the  
 24 1998 levels in terms of determining which of  
 25 those would have the greater impact on chloride

Page 2354

1 migration?  
 2 **A. I'm -- I'm sorry, you lost me about halfway**  
 3 **through that, you mentioned a couple different**  
 4 **time frames and years and I got a little lost,**  
 5 **I'm sorry.**  
 6 Q. Again, I'll try to simplify it into two  
 7 scenarios. Scenario one, the City lowers the  
 8 aquifer to 1998 levels for a 20-year period to  
 9 facilitate physical recharge credit  
 10 accumulation. Scenario number two, water levels  
 11 are pumped to the 1993 levels in a drought but  
 12 it only lasts for two years.  
 13 **A. Uh-huh. That could be modeled, I believe, and**  
 14 **that's what USGS was attempting to do here was**  
 15 **different pumping scenarios, I believe that**  
 16 **could be modeled. I think the model needs some**  
 17 **refinement to get more accurate on that.**  
 18 Q. But without running modeling, you wouldn't be  
 19 able to give a ballpark on which of those  
 20 scenarios would be worse in terms of effect on  
 21 chloride migration?  
 22 **A. 1998 level for 20 years and 1993 level for two**  
 23 **years?**  
 24 Q. Two years?  
 25 **A. I -- I don't have any way to do that sitting**

1 here today.

2 Q. Thank you. Do you agree, Mr. Boese, that for  
3 whatever period the aquifer can be managed full,  
4 that is going to prevent lowering of gradient,  
5 and that is going to help retard the migration  
6 of the chloride plume, isn't it?

7 **A. I think as I stated before, basic hydrology says  
8 if you lower the water table, the hydraulic  
9 gradient increases and it causes movement,  
10 advective movement of the chloride  
11 contamination. So if you're asking which one is  
12 better, I don't know, that's something the City  
13 should perform and ...**

14 Q. So, conversely, if you increase the water level,  
15 does it have the opposite effect?

16 **A. Reduces the hydraulic gradient?**

17 Q. Yes.

18 **A. Yes.**

19 Q. And, Mr. Boese, with respect to minimum  
20 desirable streamflow, would you also agree that  
21 a full aquifer provides a benefit in the sense  
22 of improving or maintaining minimum desirable  
23 streamflow?

24 **A. Yes.**

25 Q. I want to ask you a few questions about some

1 credits?

2 **A. That's my understanding.**

3 Q. And does the District review the modeling for  
4 those -- those reports on recharge credits?

5 **A. We review the report. As far as the actual  
6 model being submitted to us, we review the  
7 inputs and outputs to that model. We don't  
8 actually run the model at our office for that,  
9 if that's your question.**

10 Q. That was my question, thank you.

11 **A. Uh-huh.**

12 Q. During the 2011, 2012 drought, when you were  
13 showing us the pictures of dried up riverbeds,  
14 Mr. Boese, did the -- did the City draw recharge  
15 credits in 2011 or 2012?

16 **A. Without looking at the 2011 and 2012 accounting  
17 report -- are you asking if they pumped the  
18 recharge credits, or are you asking if they  
19 recharged the aquifer with recharge water?**

20 Q. If they pumped recharge credits during that  
21 2011, '12 drought?

22 **A. I'm unaware if they did. If they did, it may  
23 have been for maintenance pumping. I know they  
24 normally do some maintenance pumping at some of  
25 the injection sites. I -- I don't believe they**

1 elements of the City's proposal that I'm not  
2 sure if you accept or reject. As far as the  
3 City's belief that in an eight-year drought  
4 water levels in -- in at least 17 of its index  
5 cells would drop below the 1993 levels, do you  
6 believe that that's a reasonably accurate  
7 assumption?

8 **A. That's what the model indicates based on  
9 starting at 1998 water levels. That's what the  
10 model indicates.**

11 Q. The model that was used, by the way, Mr. Boese,  
12 does the District use that model itself for a  
13 number of purposes, that MODFLOW groundwater  
14 modeling?

15 **A. Does the District use that model?**

16 Q. Yes.

17 **A. No, but KGS just updated that model and I  
18 actually have not used it yet. We just -- we  
19 just got the updated report from KGS that has  
20 taken that USGS MODFLOW model and done some  
21 extensive review and changes and calibration to  
22 it. We will begin using it now that our  
23 contract is over with the KGS.**

24 Q. Do you know if the -- if that model is used for  
25 purposes of the annual accounting for recharge

1 **withdrew recharge credits. Without extensively  
2 reviewing the accounting report, I can't say for  
3 sure.**

4 Q. You do know that wells in the aquifer were  
5 pumping during 2011 and 2012, correct?

6 **A. Wells, which wells are we talking about?**

7 Q. There were some wells in the aquifer pumping,  
8 weren't there, during 2011 and '12?

9 **A. I think that would be a fair assumption, yes.**

10 Q. Had -- had the District recommended denial of  
11 permits for any of those wells that were pumping  
12 in 2011 and '12 on the basis that they might  
13 have an adverse impact on minimum desirable  
14 streamflow?

15 **A. I'm a little confused, once the permit is  
16 issued, we don't recommend denial of a permit.  
17 Are you talking about if someone had an  
18 application pending, or are you talking about a  
19 permit that was issued --**

20 Q. Right, applications for wells pending, did the  
21 District deny any of them based on modeling the  
22 possible impact on minimum desirable streamflow?

23 **A. And so we're clear, the District can't issue  
24 permits, are you talking about making a  
25 recommendation to the chief engineer?**

Page 2359

1 Q. Yes, let me clarify.  
 2 **A. No, I just wanted to make sure -- for the**  
 3 **record, we can't issue permits.**  
 4 Q. So the question is had the District, when  
 5 considering permits for wells that were pumping  
 6 during the 2011 and '12 drought, had the  
 7 District recommended that any of those be denied  
 8 based on their projected impact on minimum  
 9 desirable streamflow?  
 10 **A. You're really -- really quite confusing me**  
 11 **because you're asking if we were reviewing an**  
 12 **application for a pumping well. We wouldn't**  
 13 **have been reviewing a application for a pumping**  
 14 **well. The application has to be approved before**  
 15 **the well can pump, so I got -- I'm a little**  
 16 **confused on what your question was. If you're**  
 17 **asking if we were reviewing applications for --**  
 18 Q. Points of diversion?  
 19 **A. For proposed --**  
 20 Q. Yes.  
 21 **A. -- points of diversion? Because you said**  
 22 **pumping during '11 and '12 and I don't know how**  
 23 **a permit could have been pumping before its**  
 24 **approval. So if you're talking about reviewing**  
 25 **an application for a proposed point of diversion**

Page 2360

1 **and proposed use, did we deny it based on**  
 2 **minimum desirable streamflow or recommend denial**  
 3 **based on minimum desirable streamflow, the**  
 4 **answer would be no.**  
 5 Q. And when you saw in 2011 and '12 that streambeds  
 6 were drying up, did you go to DWR and ask DWR to  
 7 use its power to administer and shut down wells  
 8 in the aquifer in order to revive minimum  
 9 desirable streamflow in those riverbeds?  
 10 **A. We did not but I do remember having some**  
 11 **discussions about -- because we had never gone**  
 12 **there before, never had to curtail groundwater**  
 13 **pumping to restore streamflow. That**  
 14 **conversation was beginning based on that reduced**  
 15 **streamflow in the Little Arkansas and Arkansas,**  
 16 **that discussion was beginning to occur, at least**  
 17 **a cursory discussion with Division of Water**  
 18 **Resources of do we need to begin to look at this**  
 19 **and model if groundwater should be curtailed**  
 20 **near the river.**  
 21 Q. During the 2011 and 2012 drought period, did the  
 22 District recommend approval of any new permits  
 23 that were proximate to the river?  
 24 **A. Which river?**  
 25 Q. The Little Ark?

Page 2361

1 **A. Well, we have -- we have spacing requirements to**  
 2 **the Little Arkansas River, got to be a quarter a**  
 3 **mile away, so we would not allow -- we would not**  
 4 **recommend any -- any applications for approval**  
 5 **in close proximity to the river, and we haven't**  
 6 **for sometime.**  
 7 Q. Mr. Boese, did the District -- did the District  
 8 assist applicants for drought term permits  
 9 during the 2011 and 2012 drought in order to  
 10 enable irrigators to keep their wells pumping  
 11 despite the impact that was -- that was present  
 12 with minimum desirable streamflow?  
 13 **A. Did we assist with applications?**  
 14 Q. Yes.  
 15 **A. Yes.**  
 16 Q. And also multi-year flex accounts in that same  
 17 period, again with a view to keeping  
 18 irrigators' wells pumping?  
 19 **A. Yes, we assisted -- we assist any applicant that**  
 20 **asks for our assistance in filing paperwork.**  
 21 Q. Did you recommend approval of applications for  
 22 drought term permits, multi-year flex accounts,  
 23 and spacing waivers where necessary to allow  
 24 those irrigation wells to pump?  
 25 **A. I don't believe we did any review of drought**

Page 2362

1 **term permits because that was Division of Water**  
 2 **Resources. I don't recall reviewing those, that**  
 3 **was a special one time that the chief engineer**  
 4 **allowed. We do -- we do review multi-year flex**  
 5 **account applications, and we recommend**  
 6 **multi-year flex account applications for**  
 7 **approval in the past. I can't speak to well**  
 8 **spacing waivers in relation to, what, multi-year**  
 9 **flex account or any application or ...**  
 10 Q. Any applications that could have had an impact  
 11 on minimum desirable streamflow during 2011 and  
 12 '12, did you -- did you recommend to approve  
 13 spacing waivers so that those applications could  
 14 be approved?  
 15 **A. I don't recall any spacing waivers being granted**  
 16 **for being too close to the Little Arkansas**  
 17 **River, if that's what you're asking. I don't**  
 18 **recall those. I'd have to look. I mean, I**  
 19 **don't specifically remember making a**  
 20 **recommendation to my board to waive a spacing**  
 21 **regulation to the Little Arkansas, but I'd have**  
 22 **to do some research. You're asking me what**  
 23 **happened eight years ago, so I'm not -- not real**  
 24 **sure. Not that I can recall.**  
 25 Q. Mr. Boese, I don't know if I've asked this

1 already, I hope I'm not being redundant, has the  
2 Board ever recommended denial of any permit  
3 application due to the possible impact on  
4 minimum desirable streamflow?  
5 **A. Not that I can recall. But I should note we**  
6 **don't have a regulation as part of our**  
7 **regulation application processing that requires**  
8 **us to examine minimum desirable streamflow, so**  
9 **we don't -- that's not on our checklist.**  
10 Q. And looking at captions of things which were  
11 found to be informative in your testimony  
12 yesterday, the act that establishes groundwater  
13 management districts, it's the Groundwater  
14 Management District Act, correct?  
15 **A. Correct.**  
16 Q. It's not the Streamflow District Act, is it?  
17 **A. No.**  
18 Q. Do you know, Mr. Boese, how did the 1993 bottom  
19 index levels generally compare to the channel  
20 depths of the Little Arkansas River?  
21 **A. Not without doing some review.**  
22 Q. Since 1993, hasn't considerable groundwater  
23 development for irrigation been approved along  
24 the east edge of the District that could affect  
25 Little Arkansas streamflow?

1 calculations on the effect the difference  
2 between the 1993 index levels and the proposed  
3 low levels would have on the Little Arkansas  
4 River streamflow?  
5 **A. No, and I don't think those are in the City's**  
6 **proposal, those calculations.**  
7 Q. Mr. Boese, looking at Exhibit 43 in the  
8 District's book.  
9 **A. Okay.**  
10 Q. Counsel had asked you in your main testimony if  
11 that table shows that other users in addition to  
12 the City of Wichita are good stewards in the  
13 sense of under-pumping. Do you recall that?  
14 **A. Which table are you referring to?**  
15 Q. On Exhibit 43 --  
16 **A. I don't know that there's a table. I think**  
17 **there's a map or a figure, if that's what**  
18 **you're --**  
19 Q. There was a graphic that you interpreted in your  
20 main testimony, and I'm not sure which page.  
21 **A. 61 perhaps?**  
22 Q. Yes, I think that's it on page 61. Do you  
23 recall that testimony from yesterday?  
24 **A. Yes.**  
25 Q. And Counsel was suggesting that -- that this

1 **A. There have been new permits issued. I don't**  
2 **know that they would impact -- you're talking**  
3 **about streamflow in the Little Arkansas?**  
4 Q. Yes.  
5 **A. Again, there would have been none approved that**  
6 **would have violated well spacing to the Little**  
7 **Arkansas River. If you're talking about the**  
8 **ones that are over along, I believe what you're**  
9 **probably talking to along Ridge Road, those**  
10 **were -- most of them were some distance from the**  
11 **Little Arkansas River. Again, we have a -- we**  
12 **have a spacing requirement to the Little**  
13 **Arkansas River that someone cannot put a well**  
14 **within a quarter of a mile of the Little**  
15 **Arkansas for that very reason.**  
16 Q. Did the District otherwise give any  
17 consideration to minimum desirable streamflow  
18 and approval of those permits?  
19 **A. No, but, again, we have a well spacing**  
20 **regulation specific that the well has to be a**  
21 **quarter of a mile from the Little Arkansas**  
22 **River, and that is strictly to prevent**  
23 **impairment to the Little Arkansas River and**  
24 **minimum desirable streamflow.**  
25 Q. Has the District performed any gradient

1 shows that all of these other users could also  
2 have been equally responsible with the City for  
3 the recovery of the aquifer since 1993. Was  
4 that how you understood the line of questioning?  
5 **A. I don't remember him saying equally. I think he**  
6 **was -- I think he asked me the question if other**  
7 **users were not using their fully authorized**  
8 **quantity; I don't remember the exact question**  
9 **about equally but ...**  
10 Q. It's not important to the point of my  
11 question --  
12 **A. Okay.**  
13 Q. -- Mr. Boese. My question is this graphic, it  
14 doesn't -- it doesn't show any changes between  
15 what these users were pumping in 1993 and what  
16 they're pumping today, does it?  
17 **A. No. I think this was a time period of 2005 to**  
18 **2014, if memory serves me correctly; this was**  
19 **the average -- average use and average**  
20 **sustainable use and the authorized quantity for**  
21 **those time periods.**  
22 Q. And so if those quantities were similar in 1993  
23 and they never changed up to this time period,  
24 it says nothing at all about whether they  
25 contributed to the recovery between 1993 and

Page 2367

1 present day by changing their pumping behavior,  
 2 does it?  
 3 **A. Most of these areas in the District didn't --**  
 4 **didn't need recovery because they weren't in a**  
 5 **declining situation at the time. There's very**  
 6 **few areas in the District that are having**  
 7 **declines. One of them is the Wichita well**  
 8 **field, and the other one is in McPherson**  
 9 **Intensive Groundwater Use Control Area and parts**  
 10 **of McPherson, so there was no reason for the**  
 11 **water level to be restored in many parts of the**  
 12 **aquifer because it wasn't in any declining**  
 13 **situation in 1993. Is that your question?**  
 14 Q. No, my question was in terms of trying to figure  
 15 out whether there was any change in the pumping  
 16 behavior of any of these users from 1993 to  
 17 present date, we can't answer that question from  
 18 this graphic or any of the information that's  
 19 shown on it, can we?  
 20 **A. No, but I think we can answer the question that**  
 21 **largely the District is not in decline because**  
 22 **most of these users are not using their full**  
 23 **authorized quantity.**  
 24 Q. And, Mr. Boese, is that how users in the aquifer  
 25 manage to get along day to day even though some

Page 2368

1 areas are over-appropriated?  
 2 **A. What do you mean by get along day to day?**  
 3 Q. That -- that people are getting the quantities  
 4 of water they need even though the allocations  
 5 that have been made may exceed safe yield in  
 6 some areas?  
 7 **A. I think that's certainly a reason why the water**  
 8 **levels are stable because these areas that are**  
 9 **appropriated are not being fully pumped.**  
 10 **MR. MCLEOD:** Madam Hearing Officer,  
 11 when you're done taking your note, this  
 12 would be a good place to break so that  
 13 Counsel for the District can work in the  
 14 witness that's on a schedule.  
 15 **MR. STUCKY:** We're also -- we're  
 16 actually fine going to 11:00, we think our  
 17 direct will easily finish today even with  
 18 stopping early, so it's fine for the City  
 19 to proceed till 11:00.  
 20 **PRESIDING OFFICER:** Well, actually,  
 21 I'm ready for a break so it's -- thank you  
 22 for the suggestion, it's 10:30, let's take  
 23 about ten minutes.  
 24 (Thereupon, a recess was taken;  
 25 whereupon, the following was had.)

Page 2369

1 **PRESIDING OFFICER:** Okay. We're  
 2 back on the record. And, Mr. McLeod.  
 3 **MR. MCLEOD:** Thank you.  
 4 **A. Mr. McLeod, you'd asked me about where was**  
 5 **the -- some regulations or statutes where**  
 6 **corrections can be made?**  
 7 **BY MR. MCLEOD:**  
 8 Q. Yes.  
 9 **A. And I looked briefly, this is not an exhaustive**  
 10 **list, but there are some -- some in rules and**  
 11 **regs and statutes where corrections can be made.**  
 12 **I don't know if you want me to discuss that now**  
 13 **or not, but I did look and there are some**  
 14 **regarding point of diversion or place of use, if**  
 15 **there's better information that's made**  
 16 **available, there's corrections that can be made**  
 17 **to applications while they're pending. Do you**  
 18 **want to go into that now, or would you like me**  
 19 **to do that later?**  
 20 Q. No, let's do that now.  
 21 **A. Okay. I can -- I mean, I don't know how far you**  
 22 **want to go into that, but if you want to --**  
 23 **again, this is not an exhaustive list, I just**  
 24 **spent just a few -- a few minutes looking 'cause**  
 25 **I -- after our discussion, I knew there was --**

Page 2370

1 **there was some language about corrections that**  
 2 **could be made. And if you want to look at**  
 3 **K.A.R. 5-5-6(c), which is in the DWR rules and**  
 4 **regulations under Exhibit 22. And, again, I**  
 5 **want to note this is probably not an exhaustive**  
 6 **list, I'd probably have to do a little more**  
 7 **work.**  
 8 **K.A.R. 5-5-6(c) is titled Authorized Point**  
 9 **of Diversion or Place of Use, and (a) says, if a**  
 10 **point of diversion or place of use meets the**  
 11 **following conditions, the authorized location**  
 12 **shall be administratively corrected by the chief**  
 13 **engineer to the more accurate location and the**  
 14 **owner notified of this action, and then it lists**  
 15 **some reasons why that could be corrected. I**  
 16 **don't know how much detail you want to go -- go**  
 17 **into that, but that would be a type of**  
 18 **correction that the chief engineer could make**  
 19 **with the findings and order. So that -- that**  
 20 **might be one example that you were referring to**  
 21 **how a location or place of use could be -- a**  
 22 **findings and order could be issued to correct**  
 23 **the location.**  
 24 Q. Okay.  
 25 **A. Does that help a little bit on that -- that**

1 issue?

2 Q. Were there any others that you found?

3 **A. Yeah, I'm just gonna -- I mean, honestly, I**  
4 **don't know if we want to use our time on this or**  
5 **not, but I'd be glad to -- if you give me a**  
6 **minute, I think I could -- as I said, it was a**  
7 **pretty fast process, and I could do some more**  
8 **work but -- I'm trying to find the page number**  
9 **for you, give me one second. I'm not finding**  
10 **exactly what I was looking for on that one. Let**  
11 **me go to another one here, sorry.**

12 **Let's go to K.S.A. 82a-710, Mr. McLeod.**

13 **This talks about an application being returned**  
14 **for correction to an applicant, so, again,**  
15 **there's a correction that can be made during an**  
16 **application process.**

17 Q. This would be preapproval, though, correct?

18 **A. Yeah, I believe so but it is a mechanism to**  
19 **correct an issue with an application. I think**  
20 **that was the main two. I can definitely do some**  
21 **more research, but for sure I wanted to point**  
22 **out K.A.R. 5-5-6 that allows for errors to be**  
23 **corrected, and I believe there are --**  
24 **essentially I just did a word search for the**  
25 **word correction, so I'm trying to move through**

1 here fairly quick, but I wanted to point out  
2 that there is some mechanism to correct.

3 **Let me see if I can find this other one**  
4 **here that maybe we could discuss. If not, I can**  
5 **do more work during the -- during the time --**  
6 **that word correction shows up multiple times,**  
7 **and I think that was your question, is there --**  
8 **is there able to be corrected, and there are**  
9 **some areas that allow for corrections.**

10 **Why don't I do some more work during the**  
11 **break, but I did for sure want to point out**  
12 **those two that allow for correction of an**  
13 **application and that the chief engineer can**  
14 **correct place of use and point of diversion.**  
15 **And I'll do some more work during the break, but**  
16 **there are some -- some mechanisms for some of**  
17 **those things that you mentioned, Mr. McLeod.**

18 Q. Okay. We'll revisit it after the next witness.

19 Mr. Boese, very early on in witness testimony in  
20 the case was the issue of the City having to  
21 make early decisions to take credits because of  
22 declining index levels in the event of drought,  
23 and the question I have for you today is does it  
24 help anybody to force the City to make that  
25 decision early in a drought and draw its credits

1 before the water levels go below the '93 index  
2 levels?

3 **A. I'm a little unclear on the statement when you**  
4 **say force, I don't think I or anybody else has**  
5 **the ability to force any water right owner to do**  
6 **any -- anything as long as it's allowed by their**  
7 **permit conditions. So I don't -- I disagree**  
8 **with your term force, I don't think there's**  
9 **anybody forcing the City to perform any action,**  
10 **that's their decision.**

11 Q. The City would have to make its decision earlier  
12 in a drought because of the 1993 index level, do  
13 you agree with that?

14 **A. That's a decision by the City and the city**  
15 **council and those that operate their water**  
16 **utilities on how they operate their -- their**  
17 **water distribution system. I -- I wouldn't**  
18 **pretend to tell them what to do.**

19 Q. Let me ask it this way, Mr. Boese, to help you  
20 out of the problem that you're having. If the  
21 City draws its credits early in a drought in  
22 order to avoid loss of those credits due to the  
23 declining index levels, how does that help any  
24 other user in the aquifer?

25 **A. I -- I guess I'm still having a little trouble,**

1 **you're asking how the City's pumping helps**  
2 **somebody else?**

3 Q. How does it help any other user in the aquifer  
4 that the City has taken those credits in the  
5 first or second year of the drought versus being  
6 able to wait perhaps five years to take those  
7 credits?

8 **A. I'm just having a little tough with your -- the**  
9 **question of help, I -- are you implying that the**  
10 **City should help another water right owner? I'm**  
11 **just a little off on the help.**

12 Q. No, I'm asking you is there any benefit to any  
13 other user of the aquifer that the City has  
14 had -- has taken a credit in, say, the first or  
15 second year of the drought versus waiting till  
16 the fifth or sixth year of the drought, does  
17 that provide any benefit to any other user of  
18 the aquifer if that happens?

19 **A. I guess I'd have to give that some thought.**  
20 **Whether the City pumps their credits early or**  
21 **late, it's still a quantity of water withdrawn**  
22 **that would impact the water level in the**  
23 **aquifer, so I -- I don't see a difference**  
24 **necessarily. You're talking about pumping early**  
25 **or pumping late, it's still a quantity of water**

Page 2375

1 **being removed.**  
 2 Q. Because it's the same quantity, right, being  
 3 removed early or late?  
 4 **A. The difference is it can't withdraw those levels**  
 5 **below the 1993 levels, so once we hit the '93,**  
 6 **those credits cannot be removed, which does**  
 7 **provide a benefit to other users by not**  
 8 **depleting the aquifer any further.**  
 9 Q. But if they've been drawn before the index  
 10 levels decline below the 1993 levels, that  
 11 quantity of water is gone, isn't it?  
 12 **A. Yes, it's gone in either scenario.**  
 13 Q. Mr. Boese, when Mr. Pope was chief engineer and  
 14 issued the permit for the ASR Phase I project  
 15 rejecting passive recharge credits, was safe  
 16 yield his stated reason for rejecting passive  
 17 recharge credits?  
 18 **A. I don't think -- I don't believe he used the**  
 19 **term safe yield in that rejection. He -- he had**  
 20 **some other references about it was -- it was**  
 21 **representative water that could have been pumped**  
 22 **by the City that wasn't and also that there was**  
 23 **no source water being injected into the aquifer**  
 24 **for a passive recharge credit so therefore was**  
 25 **prohibited.**

Page 2376

1 Q. So the basis of his rejection of passive  
 2 recharge credits was that he felt within the  
 3 language of the regulation that the words did  
 4 not allow a credit without physical injection,  
 5 correct?  
 6 **A. Yes, but safe yield would be a component of that**  
 7 **passive recharge credit because safe yield --**  
 8 **recharge credits are exempt -- or an ASR well is**  
 9 **exempt from safe yield because of the additional**  
 10 **water supply that is added to the aquifer. In**  
 11 **an AMC, there is no water -- or a passive**  
 12 **recharge credit, excuse me, there is no water**  
 13 **being added to the system, so safe yield would**  
 14 **be a component of that.**  
 15 Q. Do you know whether in the proposal that was  
 16 considered for passive recharge credits, do you  
 17 know whether they were proposed to be subject to  
 18 safe yield?  
 19 **A. The proposal for passive recharge credits?**  
 20 Q. Yes. At the time of the ASR Phase I permit  
 21 application?  
 22 **A. I don't know that there was a proposal submitted**  
 23 **for passive recharge credits; there was**  
 24 **discussion about passive recharge credits. I**  
 25 **don't know if there was an official application**

Page 2377

1 **or document proposed similar to what we're**  
 2 **talking about today for passive recharge**  
 3 **credits.**  
 4 Q. We know they were under consideration because  
 5 the chief engineer issued an order specifically  
 6 prohibiting them, correct?  
 7 **A. There was some discussion, I don't know what**  
 8 **level that was, if that was a documented**  
 9 **proposal by the City or if there was a**  
 10 **discussion about it, I don't -- I don't know**  
 11 **that level of detail.**  
 12 Q. And the permit doesn't discuss any safe yield  
 13 issue with respect to those passive credits  
 14 because the chief engineer simply prohibited  
 15 them, correct?  
 16 **A. He does not discuss safe yield; he discussed**  
 17 **water not being injected into the aquifer,**  
 18 **which, again, I believe safe yield is a**  
 19 **component of that, that's why -- that's why**  
 20 **recharge credits are exempt from safe yield.**  
 21 Q. Now, Mr. Boese, I think you indicated during  
 22 your main testimony yesterday that you had some  
 23 involvement with -- at least you had reviewed  
 24 the MOU between the City and the District in  
 25 relation to the Phase I permit application. Was

Page 2378

1 that correct?  
 2 **A. When it was being formulated or since then or**  
 3 **both?**  
 4 Q. When it was being formulated, did you?  
 5 **A. I -- I recall reviewing that MOU during the**  
 6 **permitting process for Phase I, yes.**  
 7 Q. Do you recall, Mr. Boese, that in the MOU for  
 8 Phase I, the District agreed not to oppose the  
 9 concept of passive recharge credits in those  
 10 permit applications? Do you recall that?  
 11 **A. In the MOU it says they do not oppose?**  
 12 Q. That they agreed to not oppose passive recharge  
 13 credits?  
 14 **A. Can I review the MO --**  
 15 Q. Please do.  
 16 **A. Can you tell me what exhibit it is?**  
 17 Q. I'm not sure what exhibit it is.  
 18 **A. I can find it. Looks like it is 25. Which**  
 19 **number are you talking about specifically?**  
 20 **MR. STUCKY:** To speed this up, could  
 21 we have a line that we're looking at?  
 22 **PRESIDING OFFICER:** I assume  
 23 Mr. McLeod is looking for it. Are you  
 24 finding --  
 25 **MR. MCLEOD:** I am looking for it.

1 And I am -- I am not finding it.

2 **BY MR. MCLEOD:**

3 Q. Mr. Boese, I may come back to it later after an  
4 opportunity to review documents, but for now,  
5 let me rephrase the question to ask you did --  
6 did the Groundwater Management District  
7 recommend that passive recharge credits be  
8 rejected in the issuance of a Phase I permit?

9 **A. Without reviewing all of the documents and going  
10 back into my office and looking at every single  
11 file, I don't know that I can answer. I believe  
12 they -- they remained silent on that issue, but  
13 I -- without doing further -- further review, I  
14 cannot tell you definitively what the Board's  
15 decision was on that.**

16 Q. Mr. Boese, do you remember a day when we were  
17 all in the courthouse in Newton, Kansas arguing  
18 motions and during the District's presentation  
19 on some motion papers, your counsel, Mr. Stucky,  
20 inadvertently stated on the record that the  
21 District had opposed passive recharge credits at  
22 the time of the Phase I permits, and you had to  
23 correct him on that point. Do you recall that?

24 **A. To be honest, I don't recall that. I -- I would  
25 have to go back and read the -- read the**

1 **transcript. That was, I think, over a year ago,  
2 but that could be -- that could have happened, I  
3 don't recall.**

4 Q. We'll revisit -- we'll revisit the foundational  
5 point later. Would you agree with me that if  
6 passive recharge credits are a problem for safe  
7 yield today, they would have been a problem for  
8 safe yield at the time of the ASR Phase I permit  
9 application?

10 **A. I'm not sure I can answer that question because  
11 I wasn't the primary person reviewing the Phase  
12 I application, so that's a little bit difficult  
13 for me -- if you're asking me do I think they  
14 are, then, yes, they are a problem with safe  
15 yield now and they would have been then, but I  
16 wasn't the primary staff member that was  
17 reviewing and providing recommendations to the  
18 Board at that time. Obviously the exemption to  
19 our safe yield regulations says an ASR well, an  
20 aquifer storage and recovery, storage meaning  
21 injecting water into the aquifer in my opinion.**

22 Q. So if we should be able to find documentation  
23 that shows that the District didn't oppose  
24 passive recharge credits over safe yield  
25 concerns, would you be able to explain why not?

1 **A. I don't believe -- unless they're detailed in  
2 that documentation, and I would be looking into  
3 the minds of both my coworkers and my board that  
4 I don't know that I could answer that without  
5 documentation. Again, I'll come back to the  
6 safe yield regulation, exemption, aquifer  
7 storage and recovery. It doesn't say an AMC, it  
8 doesn't say a passive recharge well; it says  
9 aquifer storage and recovery, and we've gone  
10 through those -- those regulations that deal  
11 with that more than once.**

12 Q. Mr. Boese, I know you were present when I asked  
13 Mr. Letourneau about two scenarios and then  
14 later your counsel asked Mr. Letourneau about  
15 two revised scenarios. And I want to pose for  
16 you the same scenario that I did for  
17 Mr. Letourneau. If in scenario one we start  
18 with the water level of X, the City then pumps  
19 the water level down in order to create recharge  
20 capacity, and let's use the gallon for  
21 simplicity that we have used, the City pumps the  
22 water level down a gallon, the City recharges a  
23 gallon, the water level is back to X, the City  
24 has a credit. In scenario two, we start with  
25 the water level at X, the City doesn't pump the

1 aquifer down because it's taken water to town,  
2 the City gets an AMC credit. In each scenario,  
3 the water level in the aquifer is at X, the City  
4 has a credit, how can safe yield be implicated  
5 in the AMC scenario if it's not in the physical  
6 recharge scenario?

7 **A. I think we should be clear the safe yield  
8 regulation, you won't find the word water level  
9 anywhere in the safe yield regulation. The safe  
10 yield regulation is a calculation based on  
11 authorized quantity, proposed quantity, and  
12 recharge capabilities of the aquifer. We don't  
13 evaluate safe yield based on water levels. In  
14 that case, every time the water level come up, I  
15 would be compelled to recommend new applications  
16 for approval, and every time the water level  
17 went down, I would be compelled to recommend  
18 applications for denial.**

19 **We look at a calculation, does discharge  
20 exceed recharge, application is recommended for  
21 denial. Does discharge -- discharge less -- I  
22 should say permitted discharge in both cases, is  
23 permitted discharge less than recharge, then we  
24 can recommend an application for approval. We  
25 do not evaluate water levels to determine safe**

19 **We look at a calculation, does discharge  
20 exceed recharge, application is recommended for  
21 denial. Does discharge -- discharge less -- I  
22 should say permitted discharge in both cases, is  
23 permitted discharge less than recharge, then we  
24 can recommend an application for approval. We  
25 do not evaluate water levels to determine safe**

Page 2383

1 **yield. It doesn't mean we don't evaluate water**  
 2 **levels when we're reviewing an application, but**  
 3 **for safe yield purposes, it is a mathematical**  
 4 **calculation based on authorized quantity,**  
 5 **proposed quantity, and the recharge rate of the**  
 6 **aquifer for that area of consideration.**  
 7 **Under your scenario, when I am reviewing an**  
 8 **application, I would just merely look and say,**  
 9 **well, the water level is coming up or it's**  
 10 **stable, let's issue a permit; well, the water**  
 11 **level went down this year, let's deny a permit.**  
 12 **That's not the way -- that's not the way we**  
 13 **review safe yield. That's not what safe yield**  
 14 **means at all in my mind.**  
 15 Q. So let's hone in a little bit on the question  
 16 being whether safe yield, in fact, applies at  
 17 all. And in the physical recharge credit  
 18 scenario, we know that it does not, and in the  
 19 other scenario, aren't the considerations the  
 20 same? I mean, if the City withdraws the credit,  
 21 isn't the impact on the aquifer the same, just  
 22 the City withdraws the credit in the physical  
 23 recharge scenario?  
 24 **A. They're not the same; in the safe yield**  
 25 **regulation, we look at authorized quantity,**

Page 2384

1 **proposed quantity, and recharge rate. We do not**  
 2 **look at what -- what entities pump. If we go**  
 3 **back to that KGS sustainability assessment, if**  
 4 **we looked at what the average water use is and**  
 5 **we use that for safe yield, we'd be issuing new**  
 6 **permits all over the place.**  
 7 Q. But if the question is not how to analyze within  
 8 the safe yield regulation but whether by policy  
 9 the safe yield regulation ought to apply, isn't  
 10 the situation in each scenario the same or the  
 11 effect on the aquifer and hence the effect on  
 12 all other users in the aquifer and hence the  
 13 effect on any other users' water rights in the  
 14 aquifer in scenario one and two?  
 15 **A. The volume of the water in the aquifer, I**  
 16 **believe, would be the same; however, we're not**  
 17 **talking -- you haven't -- you skipped the part**  
 18 **about when those recharge credits are withdrawn**  
 19 **under a new appropriation right where no**  
 20 **appropriation can be authorized. That is a**  
 21 **totally different scenario, that's a different**  
 22 **situation.**  
 23 Q. So let's look at that one too, I mean, when the  
 24 credit is drawn in a physical -- in the physical  
 25 recharge scenario, I mean, you've already

Page 2385

1 indicated that within the Wichita well field  
 2 everything is appropriated and even  
 3 over-appropriated. And so in that sense,  
 4 somebody has, if you will, spoken for all of the  
 5 water that's there, and yet the City's allowed  
 6 to withdraw the physical recharge credit,  
 7 correct?  
 8 **A. Because they added to the supply, they enhanced**  
 9 **the recharge, that is correct.**  
 10 Q. So if that was your testimony in your main  
 11 testimony that your reasoning for why that's all  
 12 right and that should be different is because  
 13 the City has added to the supply, but,  
 14 Mr. Boese, if the City has, in fact, had to pump  
 15 the aquifer down in order to put that recharge  
 16 credit there, the City hasn't added to the  
 17 supply, has it?  
 18 **A. That would be a choice of stewardship of the**  
 19 **resource to the City. I -- I don't agree**  
 20 **with -- that that's a good stewardship. If the**  
 21 **City wants to make that decision, then they'll**  
 22 **have to live with their decision. If they want**  
 23 **to lower the water level to the 1998 levels and**  
 24 **start at a lower point going into a drought, if**  
 25 **the City is worrying about abandoning or**

Page 2386

1 **orphaning their recharge credits, that would be**  
 2 **a really bad idea to pump the aquifer down and**  
 3 **then go into a drought, we're going to hit the**  
 4 **'93 levels earlier and they're going to --**  
 5 **they're going to shoot themselves in the foot so**  
 6 **to speak. But that's their choice, that's**  
 7 **their -- that's their choice.**  
 8 Q. But yet if the City wants to have recharge  
 9 credits under the currently applicable permit  
 10 conditions, that's going to be how the City has  
 11 to do it, correct?  
 12 **A. I'm not forcing the City to do anything.**  
 13 Q. But if the City wants to have recharge credits,  
 14 that's going to be the mechanism the City has to  
 15 follow to do it under existing permit  
 16 conditions, isn't it?  
 17 **A. If the City has exhausted all other remedies,**  
 18 **including multi-year flex accounts, upgrading**  
 19 **their infrastructure. As we can see right now,**  
 20 **I just looked at the last -- last month's**  
 21 **injection report from the City and they injected**  
 22 **water from the bank storage wells into -- into**  
 23 **Phase I and the recharge basin. Apparently,**  
 24 **there's still some room in the aquifer. If the**  
 25 **City has exhausted those and that's their choice**

1 **if they want to pump the aquifer down and put**  
2 **themselves in a worse position going into a**  
3 **drought, then that's -- that's their choice.**  
4 **I -- there's other options that I think the City**  
5 **should have looked at if they haven't, and if**  
6 **they have, they should revisit those.**

7 Q. Do you believe that that pumping of the aquifer  
8 down to create recharge capacity is preferable  
9 to the AMC proposal?

10 **A. Is preferable?**

11 Q. Right, do you think it's better, do you think  
12 that it yields a better result for the aquifer  
13 for the City to pump the aquifer down in order  
14 to recharge it than to leave the aquifer full  
15 because the City's getting AMCs?

16 **A. Well, it seems to me you're focused on when the**  
17 **recharge credits, again, are established and not**  
18 **when the recharge credits are withdrawn.**

19 Q. Would there be a difference when the credits are  
20 withdrawn? I mean, when the credits are  
21 withdrawn, does it matter what kind of credit  
22 they are?

23 **A. Well, under the AMC proposal the City would be**  
24 **able to expand their recharge -- capabilities of**  
25 **gaining a recharge credit at a much faster rate**

1 roughly 95 percent retention rate. Let me ask  
2 you first, do you agree that when the aquifer is  
3 at those much lower levels the City would get  
4 that much higher retention rate of physical  
5 credits?

6 **A. Yes, I haven't evaluated those numbers if 95**  
7 **percent is right. I do know currently what**  
8 **the -- what the retention rate is on the**  
9 **physical recharge credits based on the**  
10 **accounting report. I haven't evaluated if it's**  
11 **true they would obtain 95 percent at the '98**  
12 **levels. Certainly, the higher the aquifer, the**  
13 **more -- the more would flow out of the aquifer**  
14 **the fuller it is.**

15 Q. And in that sense, certainly, the City's  
16 proposal, the AMCs would allow the City to  
17 accumulate credits on a full aquifer faster than  
18 it could by physical recharge, correct?

19 **A. Can you rephrase that? You lost me a little bit**  
20 **under what --**

21 Q. The City's proposal, the AMCs would allow the  
22 City to accumulate credits with the aquifer full  
23 faster than the City could accumulate physical  
24 recharge credits with the aquifer full, correct?

25 **A. With the current infrastructure, that appears**

1 **than they are right now under physical; they**  
2 **would create more recharge credits so they could**  
3 **pump more.**

4 Q. And in part, though, Mr. Boese, wouldn't that be  
5 due to the fact that the aquifer now is full,  
6 and the fact that the aquifer is full greatly  
7 limits the City's ability to put credits in and  
8 have them retained in the aquifer?

9 **A. That's the City's position; I haven't fully**  
10 **evaluated that. Obviously, as I just said,**  
11 **we're claiming the aquifer is full, which I**  
12 **think we should talk about that maybe in a**  
13 **little bit what full means, but there was**  
14 **recharge activities as early as a month ago**  
15 **by -- by the City. So apparently the aquifer is**  
16 **not completely full.**

17 Q. Well, Mr. Boese, you were present for the part  
18 of Mr. McCormick's testimony where Counsel  
19 walked him through calculations to show that  
20 only about 64 percent of credits that are  
21 injected with the aquifer's current -- current  
22 levels are retained. Do you remember that?

23 **A. Yes.**

24 Q. And whereas in the -- in the proposal, at 1998  
25 water levels there was an indication of a

1 **that would be correct, with the City's current**  
2 **physical recharge infrastructure.**

3 Q. Well, Mr. Boese, isn't the problem really the  
4 leakage out of the full aquifer into the  
5 adjacent streams? What -- what change could the  
6 City make to its infrastructure that would cause  
7 a difference in --

8 **A. I'm sorry, I thought you were talking about**  
9 **accumulating recharge. Were you talking about**  
10 **retaining what they already put in the ground,**  
11 **or were you talking about accumulating? I**  
12 **thought I heard you say accumulate recharge**  
13 **credits, that's two different things.**

14 Q. Is it? I mean, aren't the credits only  
15 accumulated when they're confirmed by the  
16 accounting report, isn't that when the City can  
17 recognize and potentially draw them?

18 **A. Yes, the annual accounting report.**

19 Q. And so irrespective of whatever the City is  
20 injecting, if 50 percent of it's leaking out,  
21 the City is not accumulating credits for that  
22 when the annual accounting report is done,  
23 right?

24 **A. They're --**

25 Q. The City is not going to get credits for the

Page 2391

1 leakage out?  
 2 **A. They're still accumulating recharge credits,**  
 3 **it's just minus whatever was leakage out.**  
 4 Q. Right, minus the leakage out. And my question  
 5 for you on infrastructure is given that, what  
 6 difference does it make how many new facilities  
 7 the City builds for injection, if the City is  
 8 just injecting, injecting, and watching it all  
 9 leak out of the full aquifer, how is that going  
 10 to help the City accumulate physical recharge  
 11 credits?  
 12 **A. Well, I think there's two components to that.**  
 13 **Again, you're -- you're confounding accumulation**  
 14 **and leakage, but maybe I can address what you're**  
 15 **saying, that the current high leakage that the**  
 16 **City's experienced with the recharge credit is**  
 17 **recharge basin 36, which is on the extreme**  
 18 **eastern edge of the basin storage area. If**  
 19 **there were other -- if they were injecting water**  
 20 **other than into that basin, to the west, the**  
 21 **leakage would not be near as high, so we're**  
 22 **really looking at some very skewed results**  
 23 **because most of the Phase II water is going into**  
 24 **recharge basin 36, which is eastern edge, closer**  
 25 **proximity to the river so the leakage is higher.**

Page 2392

1 **I have not seen anything that the City has**  
 2 **modeled to show what would happen if they**  
 3 **installed recharge basins to the west, what that**  
 4 **leakage would be.**  
 5 Q. Well, Mr. Boese, isn't the reason that most of  
 6 the leakage is occurring with respect to  
 7 recharge basin 36 and also the reason that most  
 8 of the water is going in there that the City  
 9 can't recharge with its injection wells when the  
 10 aquifer is full?  
 11 **A. Their injection is limited with their wells,**  
 12 **that sounds like an engineering issue that needs**  
 13 **to be resolved and see if there can be any**  
 14 **upgrades. It appears to me that the recharge**  
 15 **wells are not near able to handle the amount of**  
 16 **recharge water as the basin can, whether the**  
 17 **aquifer is full or low. I think that's a --**  
 18 **that's a known -- known issue.**  
 19 Q. I don't think we're making progress, so I'll  
 20 move on rather than have further back and forth  
 21 on that.  
 22 Mr. Boese, in your main testimony, you had  
 23 again indicated with respect to safe yield  
 24 calculations that you had done thousands of safe  
 25 yield calculations, and my question about that

Page 2393

1 is similar to the one I asked early in cross  
 2 today, did you perhaps mean hundreds of safe  
 3 yield calculations?  
 4 **A. I think it's probably thousands, to be honest**  
 5 **with you. I mean, it's -- it's over a thousand,**  
 6 **I can say that pretty definitively because I do**  
 7 **them not only on every application, but I also**  
 8 **do them at individual request, whether they're**  
 9 **an irrigator, I've done them for cities, I've**  
 10 **done them for industries who are looking at new**  
 11 **appropriations, they want to know if there is**  
 12 **water available in a location before they make**  
 13 **the application. So we do preliminary safe**  
 14 **yield evaluations, and maybe I should clarify**  
 15 **that a little bit between an official safe yield**  
 16 **evaluation that we do for an application**  
 17 **compared to a preliminary safe yield evaluation.**  
 18 Although they are identical for the most  
 19 part, I may spend a little more time on an  
 20 official one to ensure that every data set is  
 21 correct. Preliminary one looks just like the  
 22 safe yield evaluation that we looked through  
 23 yesterday, and I do many of those every year for  
 24 folks that are looking for possible new  
 25 appropriations, whether they're irrigators,

Page 2394

1 **municipalities, industries, recreational, stock**  
 2 **watering, just we get a lot of requests for**  
 3 **preliminary safe yield evaluations. So I lumped**  
 4 **that into that number, if that helps.**  
 5 Q. So the reason why we would have thousands of  
 6 safe yield calculations even though there were  
 7 only hundreds of permits that you reviewed is  
 8 you do these preliminary safe yield evaluations  
 9 for people who are thinking about permit  
 10 applications?  
 11 **A. Yes, we get -- we get numerous preliminary safe**  
 12 **yield evaluations every month. I -- I can't**  
 13 **tell you what the average number is, but it's --**  
 14 **it's well over 100 a year of those that we**  
 15 **generally do, those preliminary evaluations.**  
 16 Q. Mr. Boese, as you were going through the 30  
 17 different locations that you had done safe yield  
 18 calculations for City points of diversion, in  
 19 your main testimony yesterday you indicated that  
 20 most of the wells in these areas you were  
 21 looking at for your safe yield calculations had  
 22 been approved before safe yield requirements  
 23 were in effect, and I have to ask you that most  
 24 suggests to me that you're saying that some were  
 25 approved after the current safe yield

1 calculations requirements were in effect.  
2 **A. Well, the only reason I -- I stated that is**  
3 **there may have been one or two small use**  
4 **applications, and without reviewing each one, I**  
5 **would have to -- I would have to look. But that**  
6 **area has been effectively closed to new**  
7 **appropriations since the safe yield regulation**  
8 **went into effect in 1979 or 1980.**

9 **The District was one of the first areas in**  
10 **the state that had a safe yield regulation. My**  
11 **memory is failing me if it was 1979 or 1980, but**  
12 **there has been, in my recollection, no new**  
13 **permits that have been issued, unless they would**  
14 **have been a small use type permit. Again, I'm**  
15 **talking about the Wichita well field central**  
16 **location only. I'm not talking about anywhere**  
17 **else. Other than these ASR permits. And maybe**  
18 **some temporary type permits for construction or**  
19 **dewatering or something like that. So that's**  
20 **why I said most, I didn't want to -- in case**  
21 **there was one or two, perhaps, small use permits**  
22 **that would have been in that.**

23 **But as far as, let's say, a new irrigation**  
24 **right or a new municipal right or a new**  
25 **industrial right in that Wichita well field, I**

1 **can't think of any that have been approved since**  
2 **then. Of course, I was not with the District**  
3 **until 1992, so between 1980 and 1992, I don't**  
4 **know that I can -- I can attest to.**

5 Q. **Mr. Boese, in the -- in K.A.R. 5-22-7, is**  
6 **nonconsumptive use an exception to safe yield?**

7 **A. It is. I'm going to turn to that if that's all**  
8 **right with you. I'm there.**

9 Q. **And I think the question was already asked and**  
10 **answered.**

11 **A. Oh, I thought maybe you wanted me to reference**  
12 **or read it.**

13 Q. **No, that's all right. Mr. Boese, you had**  
14 **indicated in your -- in your main testimony**  
15 **after you reviewed all of the calculation**  
16 **numbers on the City's various points of**  
17 **diversion that you did safe yield calculations**  
18 **for that in a lot of places that the well site,**  
19 **the point of diversion would be considered**  
20 **over-appropriated just by the City itself and**  
21 **made worse by others. Does that imply that the**  
22 **City was first in time and that then other**  
23 **junior users were approved that made that**  
24 **condition worse?**

25 **A. Well, without reviewing each one of those, I --**

1 **I can't say that the City is senior, has senior**  
2 **water rights in every one of those locations,**  
3 **but by and large, I think the City's water**  
4 **rights are for the most part senior to most**  
5 **others in the Wichita well field area. There**  
6 **may be some that are -- that are senior; without**  
7 **reviewing, I don't know. And that -- that**  
8 **doesn't attest any to domestic well owner that**  
9 **may be senior to the City applications.**

10 Q. **And for that reason, I mean, such a breakdown, I**  
11 **think, would have been useful. How long would**  
12 **it take you to do such a breakdown showing**  
13 **who -- who actually is senior in each of those**  
14 **areas?**

15 **A. It would depend on how I sorted the -- the**  
16 **spreadsheet. If they're sorted by water right**  
17 **file, it would be fairly easy. If they're not**  
18 **sorted by water right file, it would take me a**  
19 **considerable amount of time, one that you would**  
20 **not want me to do at this -- at this hearing**  
21 **without giving me some time. I could review**  
22 **those and look if you would like. It depends on**  
23 **how I sorted the -- the spreadsheet output for**  
24 **those safe yield calculations. If they're by**  
25 **file number, it's fairly simple because in**

1 **Kansas, water rights are sequential, water right**  
2 **number 1 is before water right number 2; so if I**  
3 **sorted them that way, that may be somewhat easy**  
4 **for me to do. If I didn't sort them that way,**  
5 **it would not be fun.**

6 **MR. MCLEOD: Madam Hearing Officer,**  
7 **I know this is somewhat irregular, but I**  
8 **don't want to take the time for Mr. Boese**  
9 **to do that on the stand today. Would it be**  
10 **permissible to have Mr. Boese provide that**  
11 **breakdown in the period for written comment**  
12 **after the hearing has been adjourned?**

13 **PRESIDING OFFICER: What exactly are**  
14 **you wanting him to provide?**

15 **MR. MCLEOD: In those safe yield**  
16 **calcs a breakdown of the appropriations in**  
17 **the radius we're looking at so that we know**  
18 **who the senior rights holders are in those**  
19 **areas. The consideration being as to**  
20 **any -- any alleged impact or impairment**  
21 **would the City simply be impairing, if you**  
22 **would, its senior rights?**

23 **MR. STUCKY: Can I speak to that?**

24 **PRESIDING OFFICER: Yes, please.**

25 **MR. STUCKY: You know, I don't have**

Page 2399

1 any objection to the City -- or to  
 2 Mr. Boese being allowed to perform some of  
 3 the research and the work for the City, I  
 4 mean, this is essentially performing work  
 5 and research that the City could have or  
 6 should have done in advance of this  
 7 hearing. I don't have a problem with that  
 8 in exchange for us being able to look at  
 9 those hydrographs and that lithologic data  
 10 that I think is very germane to this  
 11 hearing. I'm not sure the relevance here,  
 12 but those -- that lithologic data and that  
 13 research that was performed and was done by  
 14 the District.  
 15 So in exchange for Mr. Boese being asked  
 16 to do this research, I would be asked to go  
 17 down that line of questioning in return  
 18 because I think that is crucial to the very  
 19 outcome of this hearing. And something  
 20 every -- everybody should be quite  
 21 concerned with, including the Division of  
 22 Water Resources.  
 23 **MR. MCLEOD:** First, I'm -- I'm not  
 24 going to offer that trade or exchange, so  
 25 if the answer is no in terms of Mr. Boese

Page 2400

1 producing this additional information that  
 2 he doesn't know today, that's fine. But  
 3 Mr. Boese has testified to conclusions  
 4 about impairment of senior rights, and I  
 5 think without knowing who the senior rights  
 6 holders are in each of those radii that  
 7 opinion is hollow. That's just -- I will  
 8 say that.  
 9 **A. I'm -- can I ask a question, I'm a little**  
 10 **confused on what I'm being asked?**  
 11 **PRESIDING OFFICER:** I am -- I am  
 12 too, go ahead.  
 13 **A. Mr. McLeod, this is kind of awkward, I'm going**  
 14 **to ask you a question. Are you asking that I**  
 15 **determine for the City's native water rights, or**  
 16 **are we talking about the recharge permits, what**  
 17 **is senior and what is junior? 'Cause in those**  
 18 **two-mile circles there are the City's native**  
 19 **water rights, Harvey County 6, Water Right 388,**  
 20 **and Water Right 1006. There's also their ASR**  
 21 **Phase II permit applications -- or approvals are**  
 22 **also in that -- in that two-mile circle. Which**  
 23 **one are you asking me to determine which ones**  
 24 **they are senior and junior to?**  
 25 **BY MR. MCLEOD:**

Page 2401

1 Q. So, I mean, probably both would be necessary,  
 2 but did you make any differentiation as you were  
 3 forming your conclusions that senior rights  
 4 would be impaired?  
 5 **A. And senior rights impaired by who?**  
 6 Q. That -- your conclusion that senior rights would  
 7 be impaired by allowing AMCs in any -- at any of  
 8 these points of division because in your view  
 9 all of them were over-appropriated under safe  
 10 yield?  
 11 **A. I was talking about the priority based from the**  
 12 **City's ASR Phase II permits, the ones that are**  
 13 **under consideration today; I was not talking**  
 14 **about the City's native water rights. I was**  
 15 **talking about the senior water rights that are**  
 16 **senior to the ASR Phase II applications.**  
 17 **MR. STUCKY:** And can I just lodge an  
 18 objection for the record? This line of  
 19 questioning is misstating the witness's  
 20 testimony. So what the witness testified  
 21 yesterday is if these AMCs are indeed a new  
 22 appropriation subject to safe yield, then  
 23 all prior water rights would -- would be  
 24 senior to when the City gets -- if the City  
 25 gets this approved. At that moment in

Page 2402

1 time, all water rights in the Equus Beds  
 2 Aquifer would then be senior, and it  
 3 doesn't matter if they were 1972, doesn't  
 4 matter if they're 1985, it doesn't matter  
 5 if they're 1999, they're all senior, that's  
 6 what the witness's testimony was, that an  
 7 AMC is, if adopted, if legal, is a new type  
 8 of appropriation. So this line of  
 9 questioning is not relevant. So my  
 10 question is relevance and misstates the  
 11 testimony.  
 12 **BY MR. MCLEOD:**  
 13 Q. I'd -- I'd like to ask the witness if  
 14 Mr. Stucky's right, Mr. Boese, what's your  
 15 understanding of the priority, if AMCs were  
 16 approved, what's your understanding of the  
 17 priority that AMCs would have?  
 18 **A. They'd be junior to every other water right in**  
 19 **the -- I mean, their file numbers are junior**  
 20 **that we're proposing today, those are all junior**  
 21 **to every water right in the -- in the well**  
 22 **field. They're -- the ASR Phase II are already**  
 23 **junior; the AMC would just allow expansion of --**  
 24 **of those recharge credits and they would be**  
 25 **junior.**

1 Q. Okay. And your answer to that question is based  
2 on the filing date of the ASR Phase II permit  
3 application, is that my understanding?

4 **MR. STUCKY:** And I'm going to object  
5 again, his testimony was he stated new  
6 applications would be required, and if new  
7 applications are being -- would be  
8 required, it would be brand-new water  
9 rights; in that sense, it would be junior  
10 to all other water rights in the aquifer,  
11 that was his testimony.

12 **MR. OLEEN:** May I interject just --  
13 in the dogfight just to say Mr. Stucky  
14 thinks he knows what the witness testified  
15 to; the witness is on the stand, he can say  
16 what he testified to, or we can ask our  
17 great stenographer to read back lines of  
18 questioning from the prior days.

19 **MR. STUCKY:** I'll -- I'll withdraw  
20 the objection.

21 **PRESIDING OFFICER:** Well, I'm  
22 confused.

23 **A. I can answer the question, the ASR Phase II**  
24 **permits that we're looking at today are junior.**  
25 **If the City files new permits for AMCs, which I**

1 **believe are required, they would be junior too,**  
2 **they would also be junior. All the City's ASR**  
3 **Phase II permits, existing and any pending in**  
4 **the future, are junior. It's based on the**  
5 **priority date of the application. ASR Phase II**  
6 **existing has a priority date; AMCs, if you file**  
7 **new applications for those, would have a**  
8 **priority date. Those are all junior to what's**  
9 **out there today.**

10 **BY MR. MCLEOD:**

11 Q. Thank you. And my question was whether you were  
12 basing that on the date of the application  
13 because I believe Counsel indicated he thought  
14 it would be if and when the concept was  
15 approved?

16 **A. Well, they're already junior, so I don't know --**  
17 **I mean, they're junior and in my opinion, they'd**  
18 **have to file new applications, they would also**  
19 **be junior. Every one of the ASR Phase II**  
20 **application permits are junior to what's out**  
21 **there. Whether they're AMCs or physical,**  
22 **they're all junior.**

23 **PRESIDING OFFICER:** Thank you, that  
24 clarifies something for me.

25 **A. In relationship to the work that, Mr. McLeod, I**

1 **don't know if you are still asking me to do**  
2 **that, I -- I do not have a way to evaluate the**  
3 **priority of the domestic water rights that are**  
4 **in the area, they don't have a file number. As**  
5 **you know, domestic water rights don't have to**  
6 **have a file number; it's the date that they can**  
7 **prove they first started using water. I cannot**  
8 **tell you if the City's water rights are junior**  
9 **or senior to any domestic wells.**

10 **BY MR. MCLEOD:**

11 Q. Okay. I will withdraw the request in any event.

12 Mr. Boese, I know a question came up  
13 yesterday about whether rules of construction in  
14 Kansas contemplate interpretation of statutes or  
15 regulations based on their captions, and I don't  
16 think anyone has briefed it yet, but I'm just  
17 going to ask the question this way: If  
18 Mr. Oleen is right in his premise that we don't  
19 interpret statutes or regulations by language in  
20 their sections, is it possible that your  
21 interpretation from yesterday based on a  
22 regulatory title could be wrong?

23 **A. Gosh, you lost me, Mr. McLeod, I may have to ask**  
24 **you to rephrase that or I'm not exactly -- I**  
25 **didn't understand the question. I'm not trying**

1 **to be difficult, I just did not understand the**  
2 **question.**

3 Q. I'll withdraw it. I think at some point  
4 somebody will probably brief it.

5 **PRESIDING OFFICER:** I'm going to  
6 stop here for a second and ask about our  
7 other witness who's time limited, are we --  
8 **MR. STUCKY:** Our plan is, Madam  
9 Hearing Officer, the pizza has been  
10 ordered, anyone in the room is welcome to  
11 partake of it, the individual that ordered  
12 it is going to pick up a credit card here  
13 shortly, and it should be here about noon.  
14 And so our idea was if we could break at  
15 noon, eat some pizza for 15 minutes, and  
16 then start with the next witness.

17 **PRESIDING OFFICER:** Okay, that's  
18 fine. I just didn't want to be running  
19 into the time that you need for him. Okay.  
20 Sorry, Mr. McLeod, go ahead.

21 **BY MR. MCLEOD:**

22 Q. Mr. Boese, looking back to where we started  
23 cross today with K.S.A. 82a-702.

24 **A. Yes.**

25 Q. Would you agree with me that that is a -- a

Page 2407

1 basic section of the Kansas Water Appropriation  
 2 Act in the sense that anybody who does not  
 3 understand that section and its application does  
 4 not understand the Kansas Water Appropriation  
 5 Act?  
 6 **A. I -- I guess you're asking me if somebody who**  
 7 **doesn't understand that doesn't -- I don't think**  
 8 **I can answer for somebody else in that regard.**  
 9 Q. Do you think an understanding of that section of  
 10 statute is essential to a working understanding  
 11 of the Kansas Water Appropriation Act as a  
 12 whole?  
 13 **A. It's part of the Water Appropriation Act, so I**  
 14 **think all the Water Appropriation Act sections**  
 15 **are -- are important. I'm not following your --**  
 16 **what you're asking me. I apologize.**  
 17 Q. Let's move on. Mr. Boese, way back in Joe  
 18 Pajor's testimony, I think he became  
 19 argumentative with Counsel on the point that if  
 20 you make this argument about all the water in  
 21 the aquifer is spoken for, then the physical  
 22 recharge credit presents the same problem as an  
 23 AMC in terms of possibly taking water already  
 24 dedicated to other users. And I'd like you to  
 25 address in any way you can distinguish to show

Page 2408

1 why that is a different problem for water that's  
 2 taken from that over-allocated area with a  
 3 physical credit versus an AMC?  
 4 **A. I would agree that all the water in the -- in**  
 5 **the well field is dedicated to other users, all**  
 6 **the groundwater. The only way that you can**  
 7 **dedicate any other water to anybody else is by**  
 8 **adding to the resource, by injecting treated**  
 9 **source water into the aquifer, that then becomes**  
 10 **additional supply.**  
 11 Q. But, again, Mr. Boese, if the City has had to  
 12 pump the aquifer down to add that water, it's  
 13 really not additional supply, is it?  
 14 **A. When you add a gallon of source water to the**  
 15 **aquifer, that is additional supply. What the**  
 16 **City did prior to that was the City's decision.**  
 17 **What the irrigator did prior to that was the**  
 18 **irrigator's decision. I'm talking about adding**  
 19 **to the supply, the only way to do that is to add**  
 20 **treated source water into the aquifer. It's not**  
 21 **water that was not pumped. That doesn't add**  
 22 **water, that doesn't add a gallon; when you don't**  
 23 **pump a gallon, it doesn't add a gallon. There**  
 24 **is no additional -- that was just water that was**  
 25 **already dedicated that wasn't used. The only**

Page 2409

1 **way that you can dedicate more water is by**  
 2 **adding to that supply.**  
 3 Q. But so if you withdraw a gallon and then add a  
 4 gallon, isn't the water in the aquifer where it  
 5 was before you took the gallon?  
 6 **A. It's where it was, but we're now talking about**  
 7 **water rights and property rights, that's a**  
 8 **different situation.**  
 9 Q. And yet now by virtue of having taken the gallon  
 10 and added a gallon, there's a credit, correct, a  
 11 physical recharge credit?  
 12 **A. You didn't have to take a gallon to add a**  
 13 **gallon.**  
 14 Q. Well, if the aquifer is full, you did, right? I  
 15 mean, if you need to create capacity for  
 16 recharge --  
 17 **A. Ah, you said need. No one forced them to -- no**  
 18 **one is forcing the City to gain a recharge**  
 19 **credit, that's the City's decision, and how they**  
 20 **gain them is up to them.**  
 21 Q. But if the City -- if the City wants the credit  
 22 and so pumps the aquifer down a gallon and then  
 23 injects a gallon, the water is -- the water in  
 24 the aquifer is where it was before the City did  
 25 anything and now the City has got a credit,

Page 2410

1 correct?  
 2 **A. Yes. I -- I still disconnect with no one made**  
 3 **the City pump a gallon down to add a gallon.**  
 4 **That was the City's decision. That's how they**  
 5 **decided how they wanted to gain a recharge**  
 6 **credit, no one is forcing them to gain recharge**  
 7 **credits.**  
 8 Q. But that aside, I mean, for the other users in  
 9 the aquifer, the water level is where it was  
 10 before the City did anything, and when the City  
 11 takes that physical recharge credit, it's going  
 12 to take water that was spoken for, correct, by  
 13 somebody's allocation?  
 14 **A. I think that would be true of any water right**  
 15 **holder that didn't pump their full water right;**  
 16 **they didn't get a credit for it so they couldn't**  
 17 **pump it.**  
 18 Q. So in the -- in the -- on the issue of the cap,  
 19 I think Counsel alluded to maybe the change that  
 20 should be made in the permits is just adding  
 21 some cap on use of credits to the existing  
 22 physical recharge credits. I'm -- I'm not sure  
 23 if I understood that line of questioning  
 24 completely. But I'm asking you, Mr. Boese, does  
 25 the -- does the District understand that the

1 City's not offering a cap if the AMCs are not  
 2 approved?  
 3 **A. Yes, I think Counsel's question was should there**  
 4 **be a cap on physical recharge credits, and I --**  
 5 **my comment was, yeah, that was something that**  
 6 **could be considered. I mean, I think there's**  
 7 **a -- there is a -- there's not a regulatory cap**  
 8 **or a permit condition on a cap of physical**  
 9 **recharge credits, it's quite evident that the**  
 10 **City is not going to be able to gain 120,000**  
 11 **acre-feet of physical recharge credits at their**  
 12 **current practice. I mean, we've gone for over**  
 13 **ten years and we're not even at 1,000 acre-feet**  
 14 **credit per year during that operation. So I --**  
 15 **I can't believe that the City would ever be able**  
 16 **to gain 120,000 acre-feet of physical recharge**  
 17 **credits with their current infrastructure and**  
 18 **system. It would be pretty difficult.**  
 19 Q. But you haven't looked at how that might or  
 20 might not work if the City reduced the aquifer  
 21 to the 1998 levels, have you?  
 22 **A. I have not, although the -- you know, the water**  
 23 **levels were lower during the early stages of**  
 24 **Phase I and Phase II, and we haven't seen a huge**  
 25 **number of recharge credits be accumulated to**

1 **date.**  
 2 Q. Mr. Boese, because your expert report reaches  
 3 conclusions concerning taking specifically, I  
 4 think you suggest that because all the water in  
 5 the aquifer is spoken for in these  
 6 over-appropriated areas, if the AMCs were  
 7 approved that that would be a taking. And my  
 8 first question for you concerning that,  
 9 Mr. Boese, have you taken any courses on  
 10 takings?  
 11 **A. No.**  
 12 Q. What are the elements to establish a compensable  
 13 taking?  
 14 **A. Are you asking me legal questions?**  
 15 Q. I am.  
 16 **MR. STUCKY:** Yeah, I'm going to --  
 17 well, I'm going to object as calling for a  
 18 legal conclusion on something outside the  
 19 statutes and regulations germane to water  
 20 rights and water law. But notwithstanding  
 21 that objection, I mean, I'm -- if my  
 22 witness wants to try and answer this,  
 23 I'm -- I'm fine with him attempting to  
 24 answer so ...  
 25 **MR. MCLEOD:** And I point out again,

1 Madam Hearing Officer, that the witness has  
 2 stated in his report that allowing AMCs in  
 3 these over-appropriated areas would be a  
 4 taking. It's a legal opinion that he's  
 5 given, and you know that the City objected  
 6 to witnesses being able to testify to their  
 7 legal arguments, but we have allowed that  
 8 all along the way. And now that he has put  
 9 that opinion of record, I don't see how the  
 10 parties are not -- are not allowed to  
 11 cross-examine him about his basis and  
 12 qualifications to have formed that opinion.  
 13 **PRESIDING OFFICER:** I think since  
 14 there is reference to it in the expert  
 15 report that you may question him about how  
 16 he came to that conclusion.  
 17 **BY MR. MCLEOD:**  
 18 Q. And, Mr. Boese, if you know, what are the  
 19 elements to establish a compensable taking?  
 20 **A. I'm not an attorney, so I'm going to decline to**  
 21 **answer that, I don't know the specifics.**  
 22 Q. Can you tell us what's the controlling source of  
 23 law under which taking analyses are conducted?  
 24 **A. Again, I'm not an attorney, so I'm going to**  
 25 **decline to answer that question.**

1 Q. Do you know if there's a rule against takings?  
 2 **A. A rule in what regard?**  
 3 Q. Is -- is there a legal rule, a statute, a  
 4 regulation --  
 5 **A. Are you talking about the Water Appropriation**  
 6 **Act?**  
 7 Q. Anywhere, any legal rule that you're aware of  
 8 that prohibits a taking?  
 9 **MR. STUCKY:** And I'm going to just  
 10 for the record, just to be clear in his  
 11 expert report, what his expert report says,  
 12 I think, is significant here. He refers to  
 13 a taking, and there, indeed, is -- he has  
 14 testified there's a taking of people's  
 15 water within the aquifer, but he doesn't  
 16 state a legal taking as protected by the  
 17 United States Constitution or the Tenth  
 18 Central case adopted by -- by the United  
 19 States Supreme Court. He doesn't  
 20 specifically refer to any of that. He's  
 21 talking about a taking of water, so I'm  
 22 not -- if we could direct this witness to  
 23 the specific part of his expert report and  
 24 ensure that that's the distinction that's  
 25 being drawn there, I'd appreciate that.

Page 2415

1 **PRESIDING OFFICER:** Well, that's  
 2 actually where I was trying to go was I  
 3 think it would be helpful for the witness  
 4 to explain what he meant when he wrote that  
 5 in his expert report.  
 6 **MR. MCLEOD:** So if the witness is  
 7 willing to stipulate what his counsel just  
 8 said that he doesn't mean to indicate that  
 9 there's a taking in any legal sense, no  
 10 constitutional taking and no taking within  
 11 any of the concepts of the Tenth Central  
 12 case, we would take that stipulation and I  
 13 think that will do.  
 14 **MR. STUCKY:** We're not stipulating  
 15 that there's not a legal taking, we've  
 16 briefed that issue and we've argued that  
 17 issue. What I'm saying is that this  
 18 particular witness I'm not sure was opining  
 19 one way or the other as to whether or not a  
 20 Tenth Central legal taking occurred.  
 21 That's what I'm saying. Neither  
 22 affirmative or -- or against that  
 23 particular issue, that's -- perhaps I need  
 24 to be directed in this expert report so I  
 25 can better answer what -- where Mr. McLeod

Page 2416

1 is referring.  
 2 **PRESIDING OFFICER:** Again -- oh,  
 3 Mr. Oleen.  
 4 **MR. OLEEN:** I'll just let you speak  
 5 first, Madam Hearing Officer.  
 6 **PRESIDING OFFICER:** I think it would  
 7 be helpful for the witness to explain what  
 8 he meant when he used the word take or  
 9 taking as you're referring to in his expert  
 10 report. So, Mr. Boese --  
 11 **A. I'm --**  
 12 **PRESIDING OFFICER:** -- let me know  
 13 when you find it.  
 14 **A. Well, thank you. Maybe Mr. McLeod could -- I**  
 15 **found it, it's on the bottom of page 8. Now**  
 16 **that I've read it, I think I can answer**  
 17 **Mr. McLeod's question if --**  
 18 **PRESIDING OFFICER:** Yes, just what  
 19 did you mean --  
 20 **A. Yeah.**  
 21 **PRESIDING OFFICER:** -- when you  
 22 wrote that, what does that mean in your  
 23 expert report?  
 24 **A. Thank you, I'm going to go ahead and read it, I**  
 25 **think for clarification, at least part of it. I**

Page 2417

1 **said, AMCs would not only further appropriate**  
 2 **the source of supply in the City's Equus Beds**  
 3 **Aquifer well field area but would also be a**  
 4 **takings of the prior water right holders in the**  
 5 **area as their source of supply would be**  
 6 **appropriated by another junior water right. In**  
 7 **that sense, I meant that the senior water right**  
 8 **holders, anything that is senior to the ASR**  
 9 **Phase II application, or AMCs, has a water**  
 10 **right, has a property right, and that water**  
 11 **right has specific quantity, rate, place of use.**  
 12 **If we appropriated water that was already**  
 13 **dedicated to that user, that would take from**  
 14 **their source of supply.**  
 15 **BY MR. MCLEOD:**  
 16 **Q. Do we -- do we not do that every time that we**  
 17 **allow a junior permit?**  
 18 **A. That's why we have a safe yield so that that --**  
 19 **so that we are not taking -- safe yield only**  
 20 **allows for water that's already -- to be**  
 21 **appropriated that's not already dedicated to**  
 22 **somebody else. That is specifically why we have**  
 23 **a safe yield regulation, why we don't allow**  
 24 **permits if we're fully appropriated and all the**  
 25 **water is already dedicated to other users,**

Page 2418

1 **that's exactly why we have a safe yield.**  
 2 **Q. The instance that you posit in your report,**  
 3 **Mr. Boese, if there's a senior right holder and**  
 4 **then somebody else comes along and diverts water**  
 5 **that's spoken for by that senior rights holder,**  
 6 **who's doing the taking?**  
 7 **A. Can you rephrase that, you lost me just a little**  
 8 **bit there?**  
 9 **Q. So you were positing a scenario where there's a**  
 10 **senior rights holder and then somebody else**  
 11 **comes along, gets an appropriation and diverts**  
 12 **water that's already spoken for by that senior**  
 13 **rights holder, who's doing the taking?**  
 14 **A. Well, we wouldn't allow a new permit if the area**  
 15 **is already fully appropriated, it's already**  
 16 **dedicated, so your scenario is impossible for me**  
 17 **to answer. Under the AMC proposal, that's**  
 18 **exactly what would happen.**  
 19 **Q. Under -- under your understanding, then, of the**  
 20 **AMC scenario who's doing the taking?**  
 21 **A. If an AMC was allowed?**  
 22 **Q. Yes.**  
 23 **A. The City of Wichita would be -- water would be**  
 24 **appropriated that's already dedicated to**  
 25 **somebody else. Is that --**

1 Q. And you've indicated that a lot of these areas  
 2 are over-appropriated now -- over-appropriated  
 3 now, so if a junior rights holder in those areas  
 4 that are over-appropriated now diverts water  
 5 that's spoken for by a senior rights holder,  
 6 that could happen, couldn't it, Mr. Boese?  
 7 **A. Those were allowed before safe yield regulation**  
 8 **so that water is dedicated to them, just as it**  
 9 **is a senior water rights. If there's an**  
 10 **impairment, then there would be an impairment**  
 11 **complaint. Could be an -- could be an**  
 12 **impairment complaint submitted to the chief**  
 13 **engineer and it would be evaluated.**  
 14 Q. Apart from -- apart from the issue of impairment  
 15 complaints and proceedings, is that use by the  
 16 junior water rights holder of water spoken for  
 17 by the senior rights holder in the  
 18 over-appropriated area a taking by that junior  
 19 rights holder?  
 20 **A. No, because there wasn't a safe yield**  
 21 **regulation -- that water is now dedicated for**  
 22 **that junior water right holder. As long as the**  
 23 **senior water right holder is being satisfied,**  
 24 **then, no, there is not a taking because the --**  
 25 **unless the senior water right is not being**

1 **satisfied and files an impairment complaint.**  
 2 Q. What if the senior right is not being satisfied?  
 3 **A. Then they can file an impairment complaint and**  
 4 **it can be determined by the Division of Water**  
 5 **Resources, in coordination with the GMD as**  
 6 **appropriate.**  
 7 Q. In that instance, though, is there also a  
 8 taking?  
 9 **A. A taking of the water -- senior water rights**  
 10 **supply. I'm not sure we're taking about a**  
 11 **taking of the supply. Yeah, there would be a**  
 12 **taking if the impairment was substantiated.**  
 13 Q. And in your view, would that taking be by the  
 14 junior rights holder?  
 15 **A. Again, the taking of the supply in an**  
 16 **impairment, if it was substantiated, yes, then**  
 17 **Division of Water Resources or the District,**  
 18 **depending on what scenario we're talking about,**  
 19 **would then search to find a remedy to satisfy**  
 20 **the senior water right holder.**  
 21 Q. Okay. And just to clean this up and maybe sew  
 22 it up, Mr. Boese, and in line with your  
 23 Counsel's statement, if I understand what you're  
 24 saying, you're testifying in your expert report  
 25 that approval of an AMC could result in a taking

1 of a senior rights holder supply, but you are  
 2 not testifying to the District's legal argument  
 3 that there's a constitutional taking here?  
 4 **A. I think our legal counsel has already briefed**  
 5 **that and will brief it further. I'm talking**  
 6 **about a taking of that water right holder's**  
 7 **property rights supply. And I think I say that**  
 8 **with the comment as their source of supply would**  
 9 **be appropriated by another junior water right.**  
 10 Q. And so just as a yes-or-no question, Mr. Boese,  
 11 you're -- you're not testifying that the legal  
 12 argument briefed by your counsel is correct as  
 13 it relates to takings, correct?  
 14 **A. Pardon? I didn't understand your question.**  
 15 Q. You're not testifying that the legal arguments  
 16 that have been briefed by your counsel as they  
 17 relate to takings are correct arguments, are  
 18 you?  
 19 **A. I'm -- you've completely lost me, Mr. McLeod,**  
 20 **can -- I'm not argue -- are you -- are you**  
 21 **asking me about my --**  
 22 **MR. STUCKY: I'll object to**  
 23 **relevance.**  
 24 **PRESIDING OFFICER: I think what I'm**  
 25 **hearing is he's not testifying either way.**

1 He's explaining what he said. I'm not  
 2 hearing him say anything about whether  
 3 legal arguments from his counsel are  
 4 correct or not.  
 5 **MR. MCLEOD: And that's what I'm**  
 6 **hearing too, and I'm trying to get a yes or**  
 7 **no on that, though, just to be absolutely**  
 8 **certain in the record.**  
 9 **PRESIDING OFFICER: Well, but you're**  
 10 **asking from one side, not is it neutral.**  
 11 **MR. MCLEOD: I can ask it this way.**  
 12 **BY MR. MCLEOD:**  
 13 Q. Mr. Boese, do you have foundational expertise to  
 14 form an opinion either way on whether your  
 15 counsel's legal argument concerning takings as  
 16 they briefed it in this case is correct?  
 17 **A. Without having that legal brief in front of me,**  
 18 **I -- I mean, if -- do you want to provide me**  
 19 **with that legal brief, I don't have it in front**  
 20 **of me?**  
 21 Q. Let me ask it the way I think the hearing  
 22 officer suggested, you're not testifying either  
 23 way as to whether your counsel's legal argument  
 24 on takings is correct, are you?  
 25 **MR. STUCKY: I'll just make it**

Page 2423

1 simple, I'll just stipulate for the record  
 2 that this witness is not taking a position  
 3 one way or another right now on whether or  
 4 not our legal arguments with respect to  
 5 takings are correct.  
 6 **A. I'll -- I'll agree with that, I think -- thank**  
 7 **you, Mr. -- yeah, I'll agree with that, I'm --**  
 8 **I'm not forming an opinion on the -- on the**  
 9 **District's -- on the legal brief at this time.**  
 10 **I was referring to the takings of a water right**  
 11 **holder's supply, which obviously may be a part**  
 12 **of Mr. Stucky's legal brief.**  
 13 **PRESIDING OFFICER:** I just saw the  
 14 pizza walk in.  
 15 **MR. ADRIAN:** Did you get that?  
 16 **PRESIDING OFFICER:** I think this  
 17 might be -- it's on the record. I think  
 18 this might be a good time for a short  
 19 break, and we had discussed, what,  
 20 15 minutes? So let's do that.  
 21 (Thereupon, a lunch recess was  
 22 taken; whereupon the following was  
 23 had.)  
 24 **PRESIDING OFFICER:** It is now 12:15,  
 25 12:16, and we are back on the record.

Page 2424

1 Mr. Stucky.  
 2 **MR. STUCKY:** Madam Hearing Officer,  
 3 at this time, I would like to call  
 4 Mr. Romero to the stand.  
 5 **PRESIDING OFFICER:** Oh, and I'll  
 6 make a note for the record that we are  
 7 taking Mr. Romero out of sequence due to  
 8 his travel plans so we're not necessarily  
 9 finished with Mr. Boese.  
 10 **MR. STUCKY:** And while Mr. Romero is  
 11 approaching the stand, Madam Hearing  
 12 Officer, to clean up the record and provide  
 13 a clear record, I'm prepared to argue the  
 14 importance -- the import of titles as it  
 15 relates to statutory construction, I'm  
 16 ready to cite United States Supreme Court  
 17 cases, Kansas Supreme Court cases, and  
 18 Kansas Court of Appeals cases on that  
 19 subject. If I may, we're prepared to argue  
 20 that issue.  
 21 **PRESIDING OFFICER:** Perhaps we  
 22 should do that at a time when Mr. Romero is  
 23 not available to us. Let's handle that  
 24 after being able --  
 25 **MR. STUCKY:** Okay.

Page 2425

1 **PRESIDING OFFICER:** -- we've covered  
 2 him since he's on a time constriction, is  
 3 that okay?  
 4 **MR. STUCKY:** Yes, that's perfect.  
 5  
 6 DAVE MARK ROMERO,  
 7 having been first duly sworn, was  
 8 examined and testified as follows:  
 9  
 10 **DIRECT EXAMINATION**  
 11 **BY MR. STUCKY:**  
 12 Q. Mr. Romero, please state your full name.  
 13 **A. My name is Dave Mark Romero.**  
 14 Q. And what is it you currently do?  
 15 **A. I'm a consultant, I'm the president of the firm**  
 16 **Balleau Groundwater, Incorporated; we're in**  
 17 **Albuquerque, New Mexico is where our office is.**  
 18 **I consult on water availability, I consult on**  
 19 **aquifer testing, specifications of wells. I do**  
 20 **a lot of analysis involving applications for**  
 21 **changes in water use and lots of technical**  
 22 **analysis done that way.**  
 23 Q. What is Balleau? I assume that's not a  
 24 character from The Jungle Book?  
 25 **A. No, it's the name of the firm founder. Peter**

Page 2426

1 **Balleau is the -- the founder of our firm, which**  
 2 **started in, oh, 1992, I believe.**  
 3 Q. And you're currently the president of Balleau?  
 4 **A. I am.**  
 5 Q. How long have you been the president of Balleau?  
 6 **A. I think since 2012.**  
 7 Q. Mr. Romero, I would ask that you turn to  
 8 Exhibit 68 in the notebooks before you.  
 9 **A. Okay, I'm there.**  
 10 Q. Mr. Romero, there's an expert report included as  
 11 shown on 68 in our exhibit notebook. Could you  
 12 turn with me to the page 14 out of 16 in this  
 13 expert report?  
 14 **A. I'm there.**  
 15 Q. Is that your signature on that page?  
 16 **A. It is.**  
 17 Q. And does this expert report contain a true and  
 18 accurate representation of your opinions as  
 19 they're going to come out in your testimony  
 20 today?  
 21 **A. It does.**  
 22 **MR. STUCKY:** I would move to just go  
 23 ahead and admit his expert report as  
 24 Exhibit 68. We will be referring to it  
 25 throughout his testimony.

1 **PRESIDING OFFICER:** Any objection?  
2 **MR. MCLEOD:** I just make the same  
3 objection about cumulative.  
4 **PRESIDING OFFICER:** Exhibit 68 will  
5 be admitted.  
6 **BY MR. STUCKY:**  
7 Q. Mr. Romero, on page 69 of your expert report,  
8 there's a couple graphs or maps that are  
9 referenced, that are included there; is that  
10 right?  
11 **A. Which page, you said 69?**  
12 Q. I'm sorry, Exhibit 69.  
13 **A. Yes, Exhibit 69 is a map and two charts with**  
14 **streamflow.**  
15 Q. Were those also created by you in preparation  
16 for your testimony today?  
17 **A. They were.**  
18 Q. And will you also be referencing those at some  
19 point in your testimony?  
20 **A. I will. And one thing I'd like to point out**  
21 **about the two figures. There are actually three**  
22 **pages in the exhibit, the first page is a map,**  
23 **the second and third pages are charts. And the**  
24 **charts were converted from Excel into an Adobe**  
25 **Acrobat file, and when that happened, sort of a**

1 the back of every expert report.  
2 **BY MR. STUCKY:**  
3 Q. And if you could -- have you flipped in your  
4 expert report to your CV or resume, Mr. Romero?  
5 **A. Yes.**  
6 Q. Okay. Now, I understand, Mr. Romero, that  
7 likely you've worked on additional projects and  
8 done additional things since this resume was  
9 furnished, and I understand that although a  
10 very, very, very detailed resume, it may not be  
11 exhaustive. But does it -- with those  
12 qualifications, does it represent a true and  
13 accurate depiction of things that you've done,  
14 your education, your titles, and in essence,  
15 your resume?  
16 **A. It does. There's a conference that I spoke at**  
17 **last October, and that's not in here, but that**  
18 **really doesn't change what you just described.**  
19 Q. And, Mr. Romero, tell me, what is your  
20 education, what educational background do you  
21 have to provide you with credentials to be here  
22 today?  
23 **A. I have a bachelor of science in mathematics,**  
24 **that's from the University of New Mexico, I got**  
25 **that in 1992; I have a master in science --**

1 ghost line got written into the -- written into  
2 the chart that only shows up when you print, and  
3 it only happened sometimes.  
4 **So I just want to clarify on the chart, the**  
5 **chart has a gray line which is streamflow, then**  
6 **it has a blue line which moves from roughly --**  
7 **there's a blue line that's a perfectly straight**  
8 **line, and that straight line is actually a typo**  
9 **that just shows up when you print the file. So**  
10 **the perfectly straight blue line that is on both**  
11 **charts should just be ignored.**  
12 Q. Mr. Romero, you indicated you created these  
13 documents, I would ask that these documents also  
14 be admitted as the District's Exhibit 69.  
15 **PRESIDING OFFICER:** Any objection?  
16 69 will be admitted.  
17 **BY MR. STUCKY:**  
18 Q. Mr. Romero, you had furnished a detailed CV or  
19 resume at some point; is that correct?  
20 **A. That is.**  
21 **MR. STUCKY:** And, in fact, I think  
22 all counsel has a copy of that CV, is that  
23 right, just to be clear? It was -- it was  
24 furnished previously, just want to make  
25 sure everyone has it? I believe it's in

1 **master of science in hydrology from the**  
2 **University of Arizona, and I obtained that in**  
3 **1996.**  
4 Q. What current licenses or certifications do you  
5 have, Mr. Romero?  
6 **A. I have a certification with the American**  
7 **Institute of Hydrology.**  
8 Q. You indicated a moment ago that you're currently  
9 the president of Balleau; is that -- is that  
10 right?  
11 **A. Yes.**  
12 Q. And that would be Balleau Groundwater,  
13 Incorporated?  
14 **A. Yes.**  
15 Q. Prior to that, it indicates in your resume that  
16 for sometime, it looks like about nine years,  
17 you were the vice-president and the hydrologist  
18 at Balleau; is that right?  
19 **A. Yes.**  
20 Q. And prior to that, you were the senior  
21 hydrologist at Balleau, tell me what it means to  
22 be a senior hydrologist.  
23 **A. A senior hydrologist takes on more**  
24 **responsibility than a person who's at an**  
25 **introductory level in terms of managing**

Page 2431

1 **projects, time lines, and some general**  
 2 **coordination with clients.**  
 3 Q. Tell me -- so a hydrologist, which has perhaps  
 4 less duties than a senior hydrologist, what kind  
 5 of duties would a senior hydrologist and/or a  
 6 hydrologist perform?  
 7 **A. A lot of obtaining data from public sources that**  
 8 **relates to wells, water levels, precipitation**  
 9 **data, geologic information, taking that**  
 10 **information and building it into a mapping**  
 11 **framework so that you could analyze things**  
 12 **geographically and organize information so that**  
 13 **we can assess water supply in areas, assess how**  
 14 **much water is moving through areas. A lot of**  
 15 **our work involves development of models and just**  
 16 **organizing the information that formulates the**  
 17 **technical basis for -- for models and opinions**  
 18 **that require some analysis.**  
 19 Q. You just mentioned models, how many models do  
 20 you believe that you've worked on or dissected  
 21 in some fashion?  
 22 **A. Over 100. I'd say that probably about a third**  
 23 **of the models that we've worked with have been**  
 24 **models that we developed ourselves.**  
 25 Q. Okay. So there was testimony from a witness

Page 2432

1 from the City of Wichita earlier that indicated  
 2 that most hydrologists in their career may  
 3 actually just help with one or two -- help  
 4 construct one or two models in their career  
 5 because that's a pretty unique duty, but your  
 6 testimony is that you've helped actually write  
 7 or develop more than 30 models?  
 8 **A. Yes. Yeah, it's -- it is somewhat of a**  
 9 **specialized type of thing, yeah.**  
 10 Q. And so in actually writing or developing models,  
 11 I assume that gives you a special insight into  
 12 how a model works in the sense of not only what  
 13 model inputs are and model outputs but also, if  
 14 you will, the guts of how the model actually  
 15 operates; is that -- is that right?  
 16 **A. Sure.**  
 17 Q. Now, in your resume, it indicates -- it  
 18 indicates that you worked on a number of  
 19 important projects germane to water rights. Can  
 20 you highlight just a few of those important  
 21 projects that relate to actual groundwater  
 22 modeling?  
 23 **A. Sure. The -- actually, the first job listed on**  
 24 **page 3 of my resume in southeastern Arizona,**  
 25 **that's a job that I was working on, it**

Page 2433

1 **involved -- a federal reserve water right was**  
 2 **being considered, and I was retained to analyze**  
 3 **some elements of the water right.**  
 4 **In that particular case, it involved a**  
 5 **river, and there was concern about habitat in**  
 6 **the river. And some augmentation wells were**  
 7 **part of the -- part of the water right that**  
 8 **could be used temporarily to augment flow in the**  
 9 **stream to maintain flows for habitat, so that**  
 10 **was related to analyzing effects of groundwater**  
 11 **pumping and augmentation flow in a setting for a**  
 12 **federal reserve water right for a national**  
 13 **conservation area.**  
 14 **I often in New Mexico am retained to**  
 15 **evaluate the hydrologic effects of applications**  
 16 **for water rights transfers for a change in place**  
 17 **of use. In -- in New Mexico actually, the state**  
 18 **engineer office has adopted two models that my**  
 19 **office developed for administration of water**  
 20 **rights. And so I -- I often have jobs in the**  
 21 **background where I am doing those kinds of**  
 22 **analyses.**  
 23 Q. I see one in southern California, the very next  
 24 one mentioned, the one with regard to source  
 25 water, an assessment in west Texas I see in

Page 2434

1 here. There's a -- would you agree with me  
 2 there's a whole bunch of examples in varying  
 3 states where you've done groundwater modeling  
 4 and tried to determine what the impacts would be  
 5 from pumping or uses of source water or whatever  
 6 the project may be?  
 7 **A. Yes. The one you mentioned in west Texas was**  
 8 **actually -- I was working for an oil and gas**  
 9 **company that was interested in source water**  
 10 **availability from a particular aquifer that they**  
 11 **were developing because they were using that**  
 12 **water for hydraulic fracturing, and they were**  
 13 **considering how much water -- how many wells**  
 14 **they would drill and how much water they would**  
 15 **pump from the well as an alternative to**  
 16 **purchasing some water from a city for the same**  
 17 **use. So I was evaluating how -- the potential**  
 18 **for water that could be produced from the**  
 19 **aquifer to help them -- to help guide their**  
 20 **decisions.**  
 21 Q. Mr. Romero, are you familiar with the model that  
 22 was used by the City of Wichita in their  
 23 proposal to predict effects on the aquifer  
 24 during an eight-year drought?  
 25 **A. I am familiar with it, it's a MODFLOW-based**

1 **model, and it's based on a model that was**  
 2 **developed by the U.S. Geological Survey.**  
 3 Q. Let me ask you this: Were you ever asked to  
 4 dissect and apply that model in another context  
 5 in the State of Kansas other than this case?  
 6 **A. The MODFLOW model?**  
 7 Q. Yes.  
 8 **A. Yes. My office developed a model in the area of**  
 9 **Groundwater Management District No. 5, it's a**  
 10 **pretty expansive model, it runs from -- from**  
 11 **about the area -- it runs along the Arkansas**  
 12 **from just east of the area of Quivira National**  
 13 **Wildlife Refuge all the way west to about Dodge**  
 14 **City, and it's a model that we developed to**  
 15 **analyze hydrologic effects from pumping. We**  
 16 **developed it a little over ten years ago, and**  
 17 **since that time, the chief engineer of Kansas,**  
 18 **Mr. David Barfield, has used that model to**  
 19 **evaluate an impairment claim that was filed by**  
 20 **the U.S. Fish & Wildlife Service at Quivira**  
 21 **National Wildlife Refuge. So that model's**  
 22 **been -- provided some technical foundation for**  
 23 **an impairment investigation.**  
 24 Q. So this variation of the MODFLOW model that you  
 25 helped write has been one that's actually been

1 Q. Have you ever taken the opportunity to conduct  
 2 peer review on -- on other modelers' work?  
 3 **A. I have. I'd say most of the peer -- peer review**  
 4 **work that I've done has been based in southern**  
 5 **California in the Upper Santa Ana River**  
 6 **Watershed. There's a model in a basin that's**  
 7 **known as the Bunker Hill Basin, and I was**  
 8 **retained years ago to do some peer review of a**  
 9 **model that was developed in that area. The**  
 10 **model was used for -- for water planning.**  
 11 In southern California, there are some  
 12 aqueducts that pull water from the northern part  
 13 of the state and they bring water into parts of  
 14 southern California and recharge the aquifer,  
 15 and the model is used for those types of  
 16 analyses of water planning. That particular  
 17 model also had a subsidence component built into  
 18 it because it's an area where there was a lot of  
 19 groundwater pumping and some water levels would  
 20 subside and affect infrastructure of buildings,  
 21 things like that.  
 22 Q. And I'll pause you for a moment, I'm guessing  
 23 you could probably talk all day about all the  
 24 additional work you've done and performed in  
 25 peer reviews and other modeling, but would it

1 utilized by the chief engineer -- chief engineer  
 2 of the Division of Water Resources to perform  
 3 modeling?  
 4 **A. Yes.**  
 5 Q. And I look at your resume -- well, Mr. Romero,  
 6 you live in New Mexico; is that right?  
 7 **A. I do.**  
 8 Q. And does it suffice to say that despite the fact  
 9 you live in New Mexico, you've done groundwater  
 10 modeling work all over the United States?  
 11 **A. I have.**  
 12 Q. And narrowing in --  
 13 **A. Mostly central to western, but yes.**  
 14 Q. But narrowing in on Kansas, this isn't your  
 15 first time that you've examined a MODFLOW model  
 16 for a major project in Kansas. Is that a true  
 17 statement?  
 18 **A. That's true.**  
 19 Q. And, in fact, you were actually asked to write a  
 20 model for GMD 5 that's been relied on; is that  
 21 true?  
 22 **A. Yes.**  
 23 Q. Are you familiar with the concept of -- of peer  
 24 review and what that means?  
 25 **A. I am.**

1 suffice to say that you have peer reviewed a  
 2 number of other modelers' work in the past?  
 3 **A. I have.**  
 4 Q. I want to jump back just for a moment to your  
 5 work history. We talked about your work as a  
 6 hydrologist a little bit, we talked about the  
 7 fact that you're now the president of this  
 8 company that you work for. Prior to that, it  
 9 indicates that you were a research assistant at  
 10 the University of Arizona. Tell me what that  
 11 entailed.  
 12 **A. That -- that involved -- it was actually some**  
 13 **modeling work that was related to MODFLOW. The**  
 14 **research project that I was working on, I**  
 15 **actually found that MODFLOW was a model that**  
 16 **could be used to simulate grids that had a more**  
 17 **complicated structure than ones people typically**  
 18 **use. People would use grids that were**  
 19 **rectangular in nature, and I found that you**  
 20 **could make a minor adjustment to the model and**  
 21 **you could change your grids to have different**  
 22 **shapes to fit certain areas where you want to**  
 23 **have more refinement in your grids. So it**  
 24 **was -- it was actually something that was**  
 25 **related to taking MODFLOW to another level of**

Page 2439

1 **use.**  
 2 Q. So, Mr. Romero, as -- as early as 25 or more  
 3 years ago, you were already analyzing,  
 4 dissecting, and applying the MODFLOW model. Is  
 5 that a true statement?  
 6 **A. That is.**  
 7 Q. Tell me -- well, and let me ask you this: As  
 8 someone that's familiar with graduate programs  
 9 and things of that nature, was it an honor to be  
 10 asked to be a research assistant at the  
 11 University of Arizona?  
 12 **A. You would need to be accepted by a professor to**  
 13 **do that. There was something that was related**  
 14 **to that, though, that I would consider an honor.**  
 15 **I was invited to submit a paper to a special**  
 16 **edition of a professional journal, the journal's**  
 17 **called Groundwater, and I was invited to submit**  
 18 **a paper based on presenting that research. So I**  
 19 **presented that research at a conference, and**  
 20 **then they picked some people there to submit**  
 21 **papers to -- to an invited edition of the**  
 22 **journal. So that was -- that was a distinction.**  
 23 **And you turn it in and it doesn't just go in, it**  
 24 **has to be peer reviewed and accepted, and it was**  
 25 **accepted.**

Page 2440

1 Q. So in other words, you've had peer reviewed and  
 2 published articles that were published in  
 3 leading journals on groundwater and things of  
 4 that nature?  
 5 **A. That was -- that was one article --**  
 6 Q. Uh-huh.  
 7 **A. -- in an invited journal. And it was at a time**  
 8 **when I was considering whether or not I would**  
 9 **pursue research or consulting. I stuck with**  
 10 **consulting and haven't really done many more**  
 11 **publications in peer review journals because I**  
 12 **write reports, consulting reports.**  
 13 Q. But at least at one point, you were published in  
 14 a major publication on groundwater, is that --  
 15 is that what this is?  
 16 **A. Yeah, a special edition of it, yeah.**  
 17 Q. And then I assume that being a staff research  
 18 assistant at -- well, you were a staff research  
 19 assistant, were you not?  
 20 **A. I was. That was -- while I was in school, I was**  
 21 **employed as a staff research assistant at**  
 22 **Los Alamos National Laboratory, and I was doing**  
 23 **geophysical work there. There was an interest**  
 24 **in plugging materials that would be used for**  
 25 **plugging certain pits in the ground where**

Page 2441

1 **testing was done. It was material science,**  
 2 **geotechnical.**  
 3 Q. Was that national laboratory ever stormed by  
 4 anybody while you were there?  
 5 **A. It wasn't.**  
 6 Q. That was a joke. But I assume that you had to  
 7 have a special security clearance when you were  
 8 working at that laboratory; is that right?  
 9 **A. Yes, I had a -- I had a Q clearance at the time.**  
 10 Q. So you worked on groundwater modeling, and as it  
 11 relates to the MODFLOW model, you've developed,  
 12 you've written, you've dissected models for over  
 13 25 years; is that right?  
 14 **A. Yes.**  
 15 Q. And would you consider yourself an expert on the  
 16 MODFLOW model, having actually written models in  
 17 that regard?  
 18 **A. Yes.**  
 19 Q. I believe it's indicated that you are involved  
 20 in a number of professional societies, and I see  
 21 a list in your CV, and I'm not going to read  
 22 them for the record, but just in a nutshell, in  
 23 maybe 45 seconds or less, Mr. Romero, can you  
 24 sum up what some of these professional societies  
 25 entail and why they're important for your work?

Page 2442

1 **A. They all have an interest in -- in groundwater**  
 2 **or hydrology in some sort of sense and moving**  
 3 **science forward to -- to help understand it**  
 4 **better.**  
 5 Q. Have you served as an officer or a president on  
 6 any of these associations?  
 7 **A. I have not.**  
 8 Q. Do any of these professional societies offer  
 9 special certifications or licenses that are  
 10 separate and apart from what you've already  
 11 mentioned?  
 12 **A. No.**  
 13 Q. Are there any, aside from those professional  
 14 societies listed, are there any committees or  
 15 boards that you currently serve on?  
 16 **A. Some technical advisory committees. I've been**  
 17 **on three different technical advisory committees**  
 18 **in southern California that were part of a peer**  
 19 **review -- part of a peer review committee, that**  
 20 **was related to peer review work. I'm on a**  
 21 **technical advisory committee right now in the**  
 22 **Lower Rio Grande that is involved with doing**  
 23 **some analysis on the Lower Rio Grande in a**  
 24 **settlement setting because there's some**  
 25 **litigation that's going on in that area.**

1 Q. Mr. Romero, you indicated that you've been  
2 published in a major journal on groundwater  
3 hydrology and modeling. I look in your -- in  
4 your resume and there's a whole list of  
5 publications and presentations that you've made  
6 on similar topics. Is that a true statement?  
7 **A. Yes.**  
8 Q. And I see, for example, a number of  
9 presentations, or publications as they are, that  
10 you made on MODFLOW. Is that a true statement?  
11 **A. Yes.**  
12 Q. Is this list intended to be an exhaustive list,  
13 or is it possible that you may have given other  
14 presentations or been published elsewhere that's  
15 not listed in this list?  
16 **A. Publications, no, but presentations, perhaps.**  
17 Q. So a number of professional organizations have  
18 asked you to present or write papers on the  
19 MODFLOW model, is that what this indicates to  
20 me?  
21 **A. Or on hydrologic analysis that oftentimes**  
22 **involves the MODFLOW model.**  
23 Q. So the answer, then, with that qualification, is  
24 yes?  
25 **A. Yes.**

1 these issues in an even deeper context?  
2 **A. Yes.**  
3 Q. So in other words, you -- and we'll talk about  
4 it in a moment, but in other words, you did some  
5 work and some research and some expansions of  
6 the application of the City's MODFLOW model  
7 that's -- that's greater than the work that was  
8 actually done by the modelers with the City. Is  
9 that a true statement?  
10 **A. Some of the analysis was taken to a further**  
11 **extent, yes.**  
12 Q. I assume that as you were looking at the  
13 modeling of the City that you also looked at the  
14 inputs and the outputs that the City relied upon  
15 in their modeling?  
16 **A. I did.**  
17 Q. And since I'm not a modeler, explain to me what  
18 the guts are of a model, what kind of -- if  
19 you're first looking at a model, what kind of  
20 things would you look at as you're trying to  
21 understand a model and trying to dissect it?  
22 **A. Excuse me. You get a -- basically, the files**  
23 **that were provided had a model work space, which**  
24 **is really just kind of a directory in a computer**  
25 **that has model input files. And the input files**

1 Q. You were hired to do analysis on the modeling  
2 performed by the City in this case; is that  
3 true?  
4 **A. That's true.**  
5 Q. And, in fact, you were retained by both Adrian &  
6 Pankratz and Wendling Law to help with that  
7 project; is that right?  
8 **A. Yes.**  
9 Q. Have you had an opportunity to read the proposal  
10 document that's included in Exhibit 1 of the  
11 City's exhibits?  
12 **A. I have. I didn't check that that's Exhibit 1**  
13 **but the proposal, yes.**  
14 Q. And, in fact, you've read the proposal and  
15 looked at the various attachments to the  
16 proposal. Is that a true statement?  
17 **A. I have.**  
18 Q. Have you also examined the MODFLOW modeling that  
19 was used as a -- for the development of the  
20 arguments in the proposal?  
21 **A. Yes.**  
22 Q. And, in fact, have you not only analyzed the  
23 City's MODFLOW model in its current form, but  
24 did you also do some of your own modifications  
25 to the MODFLOW model to try and understand all

1 **have information in them like how many model**  
2 **layers there are, parameters that make up the**  
3 **aquifer, hydraulic parameters that make up the**  
4 **aquifer, the time over which the model is run,**  
5 **specifications of pumping at particular wells.**  
6 **All that information is in digital files,**  
7 **that information is just read into a computer**  
8 **and it processes it and uses a groundwater flow**  
9 **equation to figure out how the system responds**  
10 **to pumping, for example. And then information**  
11 **is written to output files, and you examine the**  
12 **output files to see the modeled results.**  
13 Q. Let me just back up for a moment. As you  
14 examined the City's modeling and you performed  
15 your work, a lot of this modeling was -- the  
16 modeling work you did and the input files you  
17 relied on and worked upon, that was requested by  
18 the City at some point, is that right, to look  
19 at that?  
20 **A. Yes.**  
21 Q. Okay.  
22 **A. Yes.**  
23 Q. And, in fact, was there an exchange between you  
24 and Mr. McCormick where you furnished everything  
25 that you had looked at and relied upon in -- in

Page 2447

1 formulating your opinions?  
 2 **A. There was, we had a conference call one morning**  
 3 **first week of December and we discussed the**  
 4 **files; and he had some questions, I answered**  
 5 **them, and I clarified the work that I did and**  
 6 **then followed up with the modeled files that I**  
 7 **had created.**  
 8 Q. And to the extent we, for some reason, get an  
 9 objection with respect to any foundation of your  
 10 testimony, you have a jump drive here that could  
 11 be furnished to become part of a very, very,  
 12 very extensive record to support your work. Is  
 13 that a true statement?  
 14 **A. Yes, it would be the same information that I**  
 15 **provided to Mr. McCormick.**  
 16 Q. But if we were to -- I mean, I understand that a  
 17 model isn't something that's conducive to just  
 18 simply printing off but -- correct?  
 19 **A. Yes, that's correct.**  
 20 Q. But -- and, in fact, the City hasn't made -- you  
 21 know, hasn't produced a computer with a model on  
 22 it as an exhibit, or anything of that nature  
 23 either, but if we were to print off all your  
 24 research, all your work, it would create a  
 25 pretty voluminous record. Is that a true

Page 2448

1 statement?  
 2 **A. I think it would, yeah.**  
 3 Q. But in the event there's a question about  
 4 foundation, all that's available and we can go  
 5 ahead and introduce it all; is that true?  
 6 **A. Yes.**  
 7 Q. Now, through your modeling work, did you  
 8 evaluate the hydrologic effects to area wells?  
 9 **A. I did.**  
 10 Q. And we'll talk about that more in great detail  
 11 in a moment. But tell me, did you do any review  
 12 of the USGS-based analysis done by Burns &  
 13 McDonnell?  
 14 **A. I did, it's -- it's the MODFLOW portion of the**  
 15 **analysis that was done by Burns & McDonnell**  
 16 **that's described in the proposal.**  
 17 Q. Could you turn with me to Exhibit 46 in the  
 18 notebooks before you?  
 19 **A. I'm there.**  
 20 Q. This USGS-based analysis that was relied on by  
 21 Burns & McDonnell, is that shown in Exhibit 46?  
 22 **A. Yes.**  
 23 **MR. STUCKY:** I think it's already --  
 24 we've already moved to admit this, but to  
 25 the extent we haven't, I move to admit the

Page 2449

1 District's 46.  
 2 **PRESIDING OFFICER:** And can you  
 3 describe that exhibit again? I'm not sure  
 4 I'm looking at the right one.  
 5 **BY MR. STUCKY:**  
 6 Q. Can you describe --  
 7 **PRESIDING OFFICER:** It's the USGS  
 8 report?  
 9 **MR. STUCKY:** Yes. I move to admit  
 10 the USGS report that's been relied upon in  
 11 this case as an exhibit, as the District's  
 12 46.  
 13 **PRESIDING OFFICER:** Any objections?  
 14 **MR. OLEEN:** No, I believe it was  
 15 already admitted.  
 16 **PRESIDING OFFICER:** 46 will be  
 17 admitted, perhaps it's a duplicate.  
 18 **BY MR. STUCKY:**  
 19 Q. You mentioned a moment ago that you analyzed  
 20 this USGS-based analysis; is that right?  
 21 **A. I did. When I -- when I received the model**  
 22 **files that Burns & McDonnell worked with that**  
 23 **they provided with -- along with the proposal, I**  
 24 **also sought to get the USGS model files. And I**  
 25 **took a look at them and compared them.**

Page 2450

1 Q. So I assume you've read what's depicted in  
 2 Exhibit 46, probably on more than one occasion,  
 3 parts of it. Is that a true statement?  
 4 **A. Yes.**  
 5 Q. How did you first obtain the model files from  
 6 the City that were used by the City?  
 7 **A. They were provided to me by Wendling Law. It**  
 8 **was a set of files that looked like they'd been**  
 9 **prepared for release.**  
 10 Q. And was it your understanding that Ms. Wendling  
 11 with Wendling Law had asked for those model  
 12 files directly from the City to be furnished to  
 13 you?  
 14 **A. That was my understanding.**  
 15 Q. And, in fact, were those files in a format  
 16 provided by the City to GMD2 and the Intervenors  
 17 by Mr. Macey sometime in 2018?  
 18 **A. That's how they were described, yes.**  
 19 Q. The Burns & McDonnell analysis is based on the  
 20 USGS model, is it not?  
 21 **A. Yes.**  
 22 Q. And when you reviewed the modeling performed by  
 23 the City in that regard, did you find a  
 24 difference in the specifications when compared  
 25 to the USGS model?

1 **A. I did. That was something that -- that I found**  
2 **early on. Basically, I just want to clarify the**  
3 **situation is that the model is described in the**  
4 **proposal to be unchanged from the USGS model,**  
5 **and I did find a change in the model files that**  
6 **I received. The change relates to the way that**  
7 **model flows between model layers, and so I**  
8 **looked at that and I saw that that was a**  
9 **difference from the USGS model.**

10 **I then -- I then corrected that change and**  
11 **found -- and ran some analyses to see how much**  
12 **of a difference it would make, and I saw that in**  
13 **the City's 1 percent drought scenario, it made a**  
14 **difference on how water levels change on the**  
15 **order of a few feet or less, I'd say about**  
16 **3 feet or less.**

17 Q. Mr. Romero, could you turn to page 2 of your  
18 expert report? And, in fact, keep your expert  
19 report open in front of you, if you would. In  
20 your expert report on page 2, you indicate that  
21 based on these differences in the files that  
22 were provided to you and how they were altered  
23 from the original USGS files that there was a  
24 difference, you wrote, quote, that defines the  
25 proposed minimum index levels in both model

1 found that there wasn't much of a difference in  
2 the results, I went ahead and proceeded with my  
3 analysis using the models in the unaltered form.  
4 But I found that either way it really wouldn't  
5 affect my conclusions. So -- but I did operate  
6 the USGS model in its unaltered form, which was  
7 different from the files that I -- that I  
8 received from the City.

9 Q. And I assume when we talk about what makes a  
10 difference, if we're talking about a difference  
11 of a few feet or less in water levels and we're  
12 talking about a water table that's 1,000 feet  
13 above bedrock, a few feet or less really doesn't  
14 matter. Is that a true statement?

15 **A. It's a very small portion of the thickness**  
16 **you're describing.**

17 Q. Okay. But on the other hand, if we're talking  
18 about a water table that's -- that's, let's say,  
19 8 or 10 feet above bedrock, a few feet can make  
20 a difference. Is that a true statement?

21 **A. It's a larger percentage of the quantity.**

22 Q. Okay. So did you also take it upon yourself to  
23 contact Mr. McCormick and see if you could  
24 resolve this variance in what you found?

25 **A. I -- I did not.**

1 versions and found the change is in the order of  
2 a few feet or less, end quote. When you're --  
3 these feet that you're describing, what's that a  
4 reference to?

5 **A. That's a reference to the elevation of the**  
6 **minimum index level that the model solves for in**  
7 **the 1 percent drought scenario.**

8 Q. So based on what you found from the original  
9 input files of USGS versus what was furnished to  
10 you by the City, you found a difference in the  
11 water levels that made a difference in the water  
12 levels of a few feet or less?

13 **A. I did. But -- but I --**

14 Q. Now, tell me just for a moment, though, as we  
15 back up -- and we'll clarify this in a moment  
16 but let me just back up. Would you agree with  
17 me that in the City's proposal they indicate  
18 that the model files were unaltered from USGS?

19 **A. Yes.**

20 Q. Okay. Now, later you had the opportunity to --  
21 well, back up. You just testified that you took  
22 it upon yourself to go ahead and run the model  
23 with the unaltered data, is that what you  
24 testified to?

25 **A. I wrote that up in the report. I -- since I**

1 Q. Okay. Did Mr. McCormick then indicate to you at  
2 some point or in a supplemental report that  
3 there was no difference in the model files  
4 utilized by the City?

5 **A. Mr. McCormick wrote a supplemental report,**  
6 **supplemental expert report, and in that report,**  
7 **he described that he checked the point that I**  
8 **raised in my report and in there he indicated**  
9 **that the difference that I saw in the files that**  
10 **I received did not exist in the model files that**  
11 **he was working with. That -- I didn't follow up**  
12 **beyond that because I thought that it was**  
13 **probably a glitch.**

14 **In the proposal, Burns & McDonnell**  
15 **describes that they use a model interface called**  
16 **Groundwater Vistas. It's just a tool that is an**  
17 **interface to work with these models. These**  
18 **models can be difficult to work with and there**  
19 **are interfaces available where you can load the**  
20 **model up into the interface to work with it.**  
21 **And I have seen glitches occur with that -- with**  
22 **that modeling package before. So I suspected**  
23 **that when the models were put out by Burns &**  
24 **McDonnell for use that a glitch may have**  
25 **happened that made that difference occur.**

Page 2455

1 Q. So as you're sitting here today, I believe that  
 2 you're stating that you're willing to give  
 3 deference to Burns & McDonnell and their  
 4 interpretation that these unaltered model files  
 5 were used, is that what you're saying?  
 6 **A. That's what I'm saying.**  
 7 Q. But as you're sitting here today, you don't know  
 8 conclusively whether or not Burns & McDonnell,  
 9 indeed, utilized the unaltered model files; is  
 10 that right?  
 11 **A. I have not verified it personally, no.**  
 12 Q. But either way, you've run the City's modeling  
 13 both with these altered model files, if you  
 14 will, and also with the unaltered model files;  
 15 is that right?  
 16 **A. Yes.**  
 17 Q. And, again, the only way this would most likely  
 18 really matter if there was an error of a few  
 19 feet or less is if the saturated thickness of  
 20 the aquifer, for example, was -- was less than  
 21 20 or 10 feet; is that true?  
 22 **A. It -- it would depend on the question,**  
 23 **particular question that you're examining, but**  
 24 **the case of, you know, a few feet within**  
 25 **10 feet, that's about 30 percent. A few feet**

Page 2456

1 **within 1,000 feet, it's substantially smaller**  
 2 **and more in the negligible category.**  
 3 Q. So in other words, and I understand there's a  
 4 whole bunch of questions that could flow from  
 5 that, but if the saturated thickness is  
 6 something less than 20 feet, depending on what  
 7 it is you're analyzing, a few feet or less of  
 8 variance could matter; is that true?  
 9 **A. It could.**  
 10 Q. Did you analyze some work of Burns & McDonnell  
 11 with respect to some modeling that they  
 12 performed in Hays, Kansas?  
 13 **A. Yes, I was retained by GMD No. 5 to review an**  
 14 **analysis that Burns & McDonnell did that**  
 15 **involved a water transfer from within GMD 5**  
 16 **north to the City of Hays.**  
 17 Q. Did you discover any errors in the model files  
 18 that were relied upon by Burns & McDonnell in  
 19 that case?  
 20 **A. I did, I think it was the category of a glitch**  
 21 **like I described before.**  
 22 Q. And then did you coordinate then with Burns &  
 23 McDonnell to help them correct those errors?  
 24 **A. Not directly, but I coordinated with GMD No. 5,**  
 25 **and they coordinated with -- down the line**

Page 2457

1 **and -- until it eventually got to Burns &**  
 2 **McDonnell.**  
 3 Q. Are you familiar with this concept of a  
 4 contingency as it exists in the City's proposal?  
 5 **A. I am.**  
 6 Q. Do you know from a hypertechnical sense how the  
 7 City came up with the contingencies of 10 feet  
 8 or more in their proposal?  
 9 **A. I do not know how, it's -- there's a description**  
 10 **of adding the discrepancy in the proposal, but**  
 11 **there's not a lot of detail described.**  
 12 Q. So as someone who has written more than 30  
 13 models and has dissected somewhere in the tune  
 14 of hundreds of models, you're unable to tell  
 15 from looking at the City's proposal, the model  
 16 files they sent, and the modeling they performed  
 17 how they came up with this contingency?  
 18 **A. There's a statement in the proposal that says**  
 19 **the contingency is added, I think it's related**  
 20 **to variation in droughts, but there's just not a**  
 21 **lot of detail in how it was derived.**  
 22 Q. So if I were to ask you is there a scientific  
 23 basis or a research-based rationale for the  
 24 City's proposed contingency, how would you  
 25 answer that question?

Page 2458

1 **A. Can you repeat that, I'm sorry?**  
 2 Q. Well, I guess what I'm asking you is there is  
 3 not a specific analysis or scientific basis that  
 4 supports the contingencies listed by the City;  
 5 is that right?  
 6 **A. I didn't see any detail in the description, I**  
 7 **didn't see a lot of detail in the description,**  
 8 **but I'm not aware of how much thinking went**  
 9 **behind it, you know, how much work was done**  
 10 **behind putting it together.**  
 11 Q. Well, based on what was furnished to you by  
 12 looking at the proposal and all the data that  
 13 was given to you by the City, which you were  
 14 told is what we relied -- the City relied on,  
 15 did you see anything that allowed you to come up  
 16 with a scientific justification for these  
 17 contingencies?  
 18 **A. No.**  
 19 Q. Now, let's back up just for a moment. Assume  
 20 with me for a second, Mr. Romero, that, in fact,  
 21 there was a variance in the modeled files  
 22 between the original USGS ones and the ones  
 23 relied on by the City, assume with me that for a  
 24 moment, okay? If that resulted in a difference  
 25 of 2 -- 3 feet or less, would that essentially

1 add to the variance in these contingencies  
2 identified by the City?  
3 **A. Yes.**  
4 Q. So in other words -- and let me also back up. I  
5 think you were here in the part of the testimony  
6 where it was indicated that the Chief Engineer  
7 Barfield indicated that these contingencies are  
8 like a safety net, if you will. Do you recall  
9 that testimony?

10 **A. I heard that yesterday.**

11 Q. And if they're perceived as a safety net, is --  
12 and I'm trying to understand, you know, I took  
13 some courses in statistics, is that similar to a  
14 margin of error as you would look at it in  
15 statistics?

16 **A. It could be maybe a layman term that's similar,  
17 yeah.**

18 Q. So in other words, if there's a difference in  
19 these model files, it would add to these  
20 differences or the variance in the results; is  
21 that right?

22 **A. Yes.**

23 Q. Do you think that as you analyzed the City's  
24 data and the City's results that a lesser  
25 contingency, like in the -- to the tune of

1 **A. Did you say page 2-10?**

2 Q. That's right. 2-24, table 2-10. Tell me when  
3 you're there, Mr. Romero.

4 **A. I'm there.**

5 Q. Mr. Romero, let's look at, for example, index  
6 well 9. Can you tell me on index well 9, for  
7 example, what is the plus -- what is the  
8 difference that we're looking at as shown in  
9 those second two columns, what's the difference  
10 there?

11 **A. The difference between the second and third  
12 columns?**

13 Q. Yes, that's right. For index well 9?

14 **A. It's less than a foot.**

15 Q. Okay. Now, go over to the fifth column where  
16 there's a contingency that's noted that's been  
17 added. The contingency added there was 10 feet;  
18 is that right?

19 **A. Yes.**

20 Q. Is 10 feet greater than 20 percent of the  
21 difference shown in column two and three?

22 **A. It is.**

23 Q. So in other words, you talked about this  
24 tolerance of 20 percent for contingencies, would  
25 you agree as you scan through this table that

1 5 feet, might create some sort of more  
2 scientific or accurate contingency to propose?

3 **A. It would depend on what you were looking at  
4 if -- if I think about -- if I were adding a  
5 contingency to some model results that I was  
6 working with, if -- if I were interested in a  
7 contingency on a water level that was solved by  
8 the model, I would look at the model calibration  
9 and see how different observed and simulated  
10 heads are to see what sort of difference there  
11 is between what the model is showing in  
12 comparison to what's actually happening. And  
13 looking at those types of differences, you know,  
14 I'd be able to come up with a characterization  
15 of factor of safety. I think in most models  
16 that I've worked with, my comfort level after  
17 reviewing the models and understanding how they  
18 work has been on the order of plus or minus  
19 20-ish percent.**

20 Q. So, Mr. Romero, if you were to turn to page --  
21 to page 2-24 of the City's proposal in the black  
22 notebook and look at table 2-10. And to make  
23 this easy for you, Mr. Romero, I'd ask that as  
24 we proceed you keep the proposal document in  
25 front of you.

1 the contingencies added may be high based on  
2 what you're finding in this table as far as what  
3 your proposed tolerance was?  
4 **A. Well, those -- I mean, those are some tolerances  
5 that I've seen in other models that I just think  
6 a lot of models that I've looked at it's kind of  
7 played out that way. This is big -- this is  
8 bigger than that, yeah.**

9 Q. So -- so based on, at least, what your kind of  
10 general rule of thumb is with respect to what's  
11 appropriate in this contingency, if you will,  
12 would you at least agree with me that the  
13 contingencies proposed by the City here are  
14 higher than what you would normally accept in  
15 your work?

16 **A. It's higher than the 20 percent I described.  
17 I'm just cautious about what I normally accept;  
18 I mean, that's some -- that's something that  
19 I've seen. You know, there -- there are ways  
20 that you can actually characterize uncertainty,  
21 but it's very -- it takes a great deal of time  
22 and effort. You could run thousands of models  
23 and take averages and then actually create  
24 statistics, but I found that if you actually go  
25 that route, you oftentimes can circumvent having**

Page 2463

1 **to do all that if you just go with a plus or**  
 2 **minus 20 percent.**  
 3 Q. Mr. Romero, I'm not really sure that's the heart  
 4 of your concerns with the City's modeling anyway  
 5 so let's move on.  
 6 You have heard the discussion of the City's  
 7 planning that involves consideration of a  
 8 1 percent drought and a drought with a 1 percent  
 9 exceedance probability; is that right?  
 10 **A. Yes.**  
 11 Q. Have you also looked at the technical basis for  
 12 the City's proposal to lower the minimum index  
 13 level in USGS-based model analysis of water  
 14 level change?  
 15 **A. I have.**  
 16 Q. Are you aware that the City and Burns &  
 17 McDonnell used the USGS-based model to examine  
 18 the change to the aquifer water levels based on  
 19 a 1 percent drought?  
 20 **A. Yes.**  
 21 Q. Are you also aware that their analysis indicates  
 22 that water levels in the basin storage area will  
 23 generally be lower -- will generally lower the  
 24 current minimum index level in the 1 percent  
 25 drought simulation?

Page 2464

1 **A. You mean that in the 1 percent drought water**  
 2 **levels drop below the current minimum index**  
 3 **level?**  
 4 Q. Oh, I'm sorry, let me back up. Are you aware of  
 5 the part of their proposal that -- that allows  
 6 them to lower the minimum index level from the  
 7 1993 levels to a new lower level?  
 8 **A. Oh, yes, I'm aware of that. I -- I consider**  
 9 **that really to be the proposal, to -- to make**  
 10 **that change.**  
 11 Q. And are you also aware of their modeling that  
 12 indicates that during this 1 percent drought  
 13 simulation water levels would have the potential  
 14 to drop below the existing 1993 levels?  
 15 **A. I'm aware of that, yes.**  
 16 Q. Okay. In terms of the Burns & McDonnell model  
 17 analysis of a 1 percent drought, how is it  
 18 related to the minimum index level?  
 19 **A. The -- the City developed this simulation of the**  
 20 **1 percent drought, and with all the modeling and**  
 21 **analysis that was done, they came up with a**  
 22 **schedule of pumping during that drought; and you**  
 23 **run that pumping in the model, and it projects**  
 24 **that water levels get down -- in a lot of cells,**  
 25 **it lowers below the current minimum index level**

Page 2465

1 **and some it's above, but it's right in the area**  
 2 **of the current minimum index level and exceeds**  
 3 **it at some cells. And --**  
 4 Q. Does the City analysis indicate that water level  
 5 drawdowns associated with a 1 percent drought  
 6 are comparable to the existing minimum index  
 7 level?  
 8 **A. Yes, they're comparable and so I think that is**  
 9 **the -- I think that's the technical basis for**  
 10 **the reasoning to want to lower the proposed**  
 11 **minimum index level.**  
 12 Q. And your proposal, in fact, indicates how many  
 13 cells will drop below the 1993 level; is that  
 14 right?  
 15 **A. The -- the proposal does indicate that, I**  
 16 **believe, yeah.**  
 17 Q. What does -- what does the proposal indicate in  
 18 that regard?  
 19 **A. That -- just that there are a number of cells**  
 20 **where the model solves for a water level that is**  
 21 **at a lower elevation than the current minimum**  
 22 **index level.**  
 23 Q. Based on the City's model analysis, are you  
 24 aware of this argument that it triggers  
 25 conditions preventing the diversion of ASR

Page 2466

1 recharge credits below that 1998 level?  
 2 **A. I'm aware of that, yeah.**  
 3 Q. Is that what, in part, from the City's  
 4 standpoint, implies the technical basis for the  
 5 proposal to revise the minimum index levels?  
 6 **A. Yes. As I understand it, yes.**  
 7 Q. Is the model itself the accounting tool or basis  
 8 for proposing this lowering of the minimum index  
 9 levels?  
 10 **A. Yes.**  
 11 Q. And was that also due to the City's stated  
 12 concern that they needed more credits to be  
 13 pumped during their drought modeling?  
 14 **A. Can you just repeat that?**  
 15 Q. Well, in other words, and I'm not saying what  
 16 your opinion is in this regard, but is it your  
 17 understanding, at least, that based on the  
 18 City's testimony that part of their modeling and  
 19 their proposal is to try and help them obtain  
 20 more credits in the time of a drought?  
 21 **A. I believe to enable them to be able to divert**  
 22 **some credit.**  
 23 Q. Is it your understanding that this proposal  
 24 that's been submitted by the City was written by  
 25 Burns & McDonnell in conjunction with the City?

1 **A. Yes.**  
2 Q. And it includes some analysis of the 1 percent  
3 drought; is that -- is that right?  
4 **A. It does.**  
5 Q. Is there any reporting in the City's proposal as  
6 to the hydrologic impacts to rivers or wells  
7 where the aquifer drawdown would occur?  
8 **A. There's not.**  
9 Q. Let's focus on the fact that this information is  
10 absent from the proposal. It seems odd to file  
11 a proposal with the Kansas Department of  
12 Agriculture to allow lowering of the proposed  
13 minimum index levels but not report the  
14 hydrologic effects associated with the lowering;  
15 is that -- is that true?  
16 **A. I do -- I do a lot of work like this in**  
17 **New Mexico, and in that setting, the model's**  
18 **used to analyze the change to the system that**  
19 **will occur from an application. So having**  
20 **worked in that realm, I would say it seemed**  
21 **maybe a little odd, yeah, that there wasn't a**  
22 **lot of detail on that. There -- there are some**  
23 **results presented in terms of saturated**  
24 **thickness change and water level elevations,**  
25 **there's just not detail about wells or impacts**

1 **to rivers.**  
2 Q. Do you understand as it exists in -- and I'm not  
3 going to ask you for a legal interpretation,  
4 just to clear the objections, but do you  
5 understand what it means to divert groundwater?  
6 Do you understand what a diversion is of  
7 groundwater?  
8 **A. Yes, it's pumping groundwater out of an aquifer**  
9 **and you can meter it and know how much you take.**  
10 Q. Okay. And so if I were to refer to the term  
11 diversion, you understand that that has a -- a  
12 term of significance in the area of groundwater  
13 modeling and pumping; is that right?  
14 **A. Yes.**  
15 Q. Okay. Would the lowering to -- from the 1993  
16 level to a new level, would that effectively be  
17 a new diversion of groundwater with associated  
18 impacts to nearby rivers and neighboring wells?  
19 **A. From a technical standpoint, the way that I see**  
20 **it, yes. The City doesn't have a permit that**  
21 **allows that to happen. It seems to me that's**  
22 **what's being applied for or proposed.**  
23 Q. In the proposal developed by Burns & McDonnell,  
24 how are the hydrologic effects of their modeling  
25 reported? And -- and if you could turn to that

1 proposal document before you, if you need it, to  
2 help answer this question.  
3 **A. There -- there are results on figures 11 -- I'm**  
4 **sorry, hang on. Okay. There are results**  
5 **related to analysis in figure 6, 7, 8, and 9**  
6 **that illustrate groundwater elevations and**  
7 **percent of saturated thickness of aquifer from**  
8 **predevelopment condition. There are also some**  
9 **figures, figure 10 and 11, that report remaining**  
10 **average thickness of the aquifer. And so those**  
11 **are some results that are presented, just not at**  
12 **the detail of impacts to wells -- impacts to**  
13 **wells in the area or to rivers.**  
14 Q. So show me in the report where the proposal and  
15 any of the associated attachments address the  
16 hydrologic effects of the City's proposal on  
17 rivers.  
18 **A. I didn't find any in there, it's not in there.**  
19 Q. In other words, it's not addressed at all in any  
20 of the City's reports, any of their attachments,  
21 or any of the modeling; is that correct?  
22 **A. I didn't find it.**  
23 Q. Same question with respect to the hydrologic  
24 effects on area wells, show me in the City's  
25 proposal or all the related attachments where

1 they indicate the impacts to area wells in the  
2 well field.  
3 **A. It's -- it's not in there.**  
4 Q. In other words, once again, it wasn't addressed  
5 at all by the City?  
6 **A. It's not reported on. I don't know if it was**  
7 **analyzed, but it's not reported on in the -- in**  
8 **the proposal.**  
9 Q. And to clarify what you mean as reported on in  
10 the proposal, would you agree with me that it's  
11 not reported on in the proposal, all the  
12 attachments, and all the input files that you  
13 were asked to review?  
14 **A. I agree.**  
15 Q. I would ask that you -- I did see you turn to a  
16 few -- a few figures, if you will, where you  
17 were talking about hydrologic effects. Could  
18 you flip to one of those pages and tell me which  
19 one it is?  
20 **A. Looking at figure 11 right now.**  
21 Q. And states -- okay, figure 11 and that's right  
22 after page 2-25 --  
23 **A. Yes.**  
24 Q. -- in the proposal?  
25 **A. Yes.**

Page 2471

1 Q. This is looking at impacts to remaining  
 2 saturated thickness based on the City's  
 3 modeling, is it not, based on what? The  
 4 lowering of the minimum index levels? I'd ask  
 5 that you look at the bottom right-hand portion  
 6 of figure 11, if that helps to --  
 7 **A. Yeah.**  
 8 Q. -- refresh your memory as far as what this is  
 9 showing.  
 10 **A. Yeah, it's showing the -- at each index cell,**  
 11 **it's showing the average remaining aquifer**  
 12 **thickness.**  
 13 Q. Okay.  
 14 **A. Based on the -- on the proposed minimum index**  
 15 **level.**  
 16 Q. Now, Mr. Romero, we'll cover this in greater  
 17 detail later, but in figure 11, is this  
 18 essentially looking at averages for a  
 19 two-by-two-mile index cell essentially, is that  
 20 what it's looking at?  
 21 **A. Yes.**  
 22 Q. Same question with respect to figure 10, and  
 23 you're going to have to flip back just a few  
 24 pages to find figure 10, is that also looking at  
 25 two-by-two-mile-area averages for these index

Page 2472

1 cells?  
 2 **A. It is.**  
 3 Q. In other words, neither figure 10 nor figure 11  
 4 zero in and focus on the effects to any  
 5 individual wells. Is that -- is that a true  
 6 statement?  
 7 **A. It reports the -- the well -- the index well but**  
 8 **not to other -- other wells in the area.**  
 9 Q. So was that a correct statement, then?  
 10 **A. Can you --**  
 11 Q. That this is simply by cell and not focusing on  
 12 individual wells?  
 13 **A. Not other wells besides the index well.**  
 14 Q. Are figures 10 and 11 based on the bedrock  
 15 elevations reported in the actual model?  
 16 **A. I think they are just related to aquifer**  
 17 **thickness that's simulated in the model, and**  
 18 **that is above the bedrock, yes.**  
 19 Q. Mr. Romero, I believe that you were partially in  
 20 the room and you've also reviewed testimony that  
 21 occurred with respect to Mr. Letourneau, and  
 22 actually I think you were in the room when there  
 23 was original testimony about this concept of  
 24 practical saturated thickness. Do you recall  
 25 that discussion?

Page 2473

1 **A. I recall that discussion.**  
 2 **MR. MCLEOD:** I'm going to object to  
 3 this line of questioning being opened with  
 4 this witness. As we've gone through  
 5 before, it was brought out legitimately  
 6 with Mr. Letourneau on cross, but the  
 7 District is sponsoring this witness and  
 8 this is not a topic that he covered in his  
 9 report.  
 10 **MR. STUCKY:** I'll -- I'll come back  
 11 to that point. For now, although I'm not  
 12 going to concede that this issue is not  
 13 addressed in the report, I would like to  
 14 have the opportunity to have a more  
 15 organized and detailed response to that  
 16 objection. So I'm going to move on in my  
 17 line of questioning for now.  
 18 **BY MR. STUCKY:**  
 19 Q. Can you refer back to the document that is from  
 20 USGS that talks about the model analysis and the  
 21 specifications for the model itself? And was  
 22 that Exhibit 46, I believe?  
 23 **A. 46?**  
 24 Q. Yeah. Is that right?  
 25 **A. Yes.**

Page 2474

1 Q. In Exhibit 46, does it say that the USGS model  
 2 shouldn't be used to look at individual wells,  
 3 is that stated somewhere in that document?  
 4 **A. That statement sounds familiar. I have to go**  
 5 **to --**  
 6 Q. And when I say that, I'm referring to the  
 7 MODFLOW model in its unaltered format.  
 8 **A. Yes. Yes, you are referring to that, and you**  
 9 **want me to find where it says that?**  
 10 Q. To speed this process up, no. Would you --  
 11 would you agree with me that it does state that  
 12 somewhere?  
 13 **A. There is a statement like that in there, along**  
 14 **that line in here.**  
 15 Q. And is it true that when authors write models,  
 16 usually they will express various disclaimers or  
 17 limitations, if you will?  
 18 **A. Yes.**  
 19 Q. Now, did you take steps to modify -- modify the  
 20 MODFLOW modeling that was performed in this case  
 21 so you could look at the impacts of water  
 22 levels -- or the impacts, I'm sorry, to rivers  
 23 and wells in the area?  
 24 **A. I did. And the way that I -- the way that I use**  
 25 **models to evaluate effects to wells is I**

1 consider models to be -- or most general models  
2 to be suitable for assessing impacts to well  
3 areas, not necessarily a specific individual  
4 well. You can have -- you can have an area  
5 where there are wells and you have a model cell  
6 that represents really multiple wells in an  
7 area. And some wells may behave a little  
8 differently and some may behave just like the  
9 model, but the model can be used to kind of  
10 characterize an average condition in the area of  
11 these wells.

12 Q. And, Mr. Romero, I just want to make sure I  
13 clear the record here, you said that the City,  
14 in what you reviewed, didn't indicate any impact  
15 to the hydrologic effects to rivers or area  
16 wells. Do you recall that testimony?

17 A. Yes.

18 Q. Just to clarify, to break this down into two  
19 components, on one hand, there's the model that  
20 impacts of lowering the minimum index level; is  
21 that right?

22 A. Yes.

23 Q. To just clarify this breakdown, you didn't find  
24 any indication or results that indicate the  
25 impacts to rivers or area wells with respect to

1 pumping ASR credit. And when I saw that I could  
2 do that sort of thing, that created a framework  
3 in my mind where I could develop some model  
4 scenarios to help me examine what the effects  
5 are from pumping ASR credit.

6 And if I could do that, then I could  
7 actually isolate what the effect would be of  
8 lowering the water level from the current  
9 minimum index level to the proposed minimum  
10 index level. And then I could actually quantify  
11 the effect of what's being proposed to do and --  
12 and I could also examine the effect of pumping  
13 the City's water right in a framework that fits  
14 their overall plan to pump its 40,000 acre-feet  
15 water right prior to pumping credit.

16 Q. Mr. Romero, I hope you still have it in front of  
17 you, could you turn back to your expert report?

18 A. I have it.

19 Q. Could you turn with me to figure 1 in your  
20 expert report? And tell me when you're on  
21 figure 1 in your expert report.

22 A. I'm there.

23 Q. In a general sense, what -- what is figure 1?

24 A. Figure 1 was an example simulation that I did,  
25 and it's actually a simulation that

1 lowering the minimum index level. Is that a  
2 true statement?

3 A. Yes.

4 Q. And, similarly, if the aquifer maintenance  
5 credit proposal was adopted and the City models  
6 this eight-year drought and the effects of that  
7 eight-year drought, that also didn't analyze the  
8 impacts to rivers or area wells; is that true?

9 A. That analysis is not included.

10 Q. That said, you had just indicated to me that you  
11 took it upon yourself to try to modify the model  
12 and work with this MODFLOW model to see if you  
13 could analyze the impacts to both rivers and  
14 area wells, notwithstanding the fact that the  
15 City didn't do any of that work; is that right?

16 A. Yes.

17 Q. To do so, did you have to separate the model  
18 into two categories of City pumping on one hand  
19 native water rights and, number two, credits  
20 associated with the ASR?

21 A. Yes, yes. When I got the model files and I  
22 worked with the model, it became apparent to me  
23 that -- that I could do that sort of analysis,  
24 that I could actually isolate City -- pumping  
25 the City's groundwater right from the City

1 illustrates -- illustrates a -- it's a budget  
2 analysis, it's a water budget analysis of what  
3 happens if the City pumps its ASR recharge  
4 credit in the 1 percent drought scenario.

5 So the chart is really illustrating -- it's  
6 a chart, the vertical axis is -- is just a  
7 budget component, there's a positive and a  
8 negative portion. The upper half is the  
9 positive portion. And then you see some maroon  
10 blocks, that's actually the magnitude of pumping  
11 of -- of recharge credit. So the upper half,  
12 those maroon blocks represent a quantity of  
13 pumping. And the lower half of the chart has a  
14 blue area and a gray area.

15 So what's interesting about working with  
16 these models is they enable you to specify some  
17 pumping, in this case the City's recharge credit  
18 in the 1 percent drought scenario on the upper  
19 half, and then the model comes back and tells  
20 you the colors on the lower half. The blue  
21 represents water that is removed from streams,  
22 and the gray represents water that is removed  
23 from the aquifer.

24 So there's a balancing that happens. If  
25 you pump a well with certain amount, say, ten

Page 2479

1 **units of water and you're in an area like where**  
 2 **the City is where you're near rivers, a portion**  
 3 **of those ten units are going to come from the**  
 4 **aquifer, and the remaining portion is going to**  
 5 **come from the river. So there's a balancing**  
 6 **that happens. So this illustrates the balance**  
 7 **of effects to aquifer -- to water removed from**  
 8 **the aquifer and water that's removed from the**  
 9 **rivers with the blue bands and the gray bands.**  
 10 Q. And -- and just for a simple understanding of  
 11 what figure 1 is, is figure 1 an example of  
 12 using the model to isolate the hydrologic  
 13 effects of pumping recharge credits in the Burns  
 14 & McDonnell 1 percent drought simulation?  
 15 **A. Yes, that's exactly what it is. Once I found**  
 16 **that I could distinguish between pumping the**  
 17 **water right from pumping ASR credit, then I saw**  
 18 **that I could -- this is just an example of**  
 19 **showing one component here, the credit portion,**  
 20 **then that enabled me to think of some scenarios**  
 21 **that I could run to analyze the effect of the**  
 22 **proposal.**  
 23 Q. So some of this analysis that you performed as  
 24 shown in figure 1 was not performed by Burns &  
 25 McDonnell or not included in the report; is that

Page 2480

1 right?  
 2 **A. Burns & McDonnell ran the 1 percent drought**  
 3 **simulation but did not illustrate a budget**  
 4 **analysis component like this.**  
 5 Q. So when you were -- you referred earlier to  
 6 capturing both the effects of native water  
 7 rights and the credit associated with ASR  
 8 credits. When you refer to the native rights,  
 9 did you use 40,000 acre-feet, which also  
 10 represents what the City has?  
 11 **A. Yes.**  
 12 Q. I would ask that you turn in the proposal before  
 13 you to table 2-5, which is found on page 2-10 of  
 14 the City's proposal.  
 15 **A. I'm there.**  
 16 Q. To cross-reference some of the work that's shown  
 17 in figure 1 of your report, at least in some  
 18 fashion, does it cross-reference some of the  
 19 information found in table 2-5 shown on 2-10 of  
 20 the City's proposal document?  
 21 **A. Yes.**  
 22 Q. And so if we were trying to draw a comparison to  
 23 help understand where you were getting these  
 24 numbers that you were basing this extensive  
 25 modeling on, we could look at table 2-5; is that

Page 2481

1 that -- is that correct?  
 2 **A. We could. It's actually table 2-5, there's an**  
 3 **ASR credit pumping, it's the one, two, three,**  
 4 **four, five, six, seven, it's the eighth row down**  
 5 **on the table, it's City of Wichita ASR credit**  
 6 **pumping. And the -- the credit pumping that's**  
 7 **there is what's represented on figure 1.**  
 8 Q. Mr. Romero, it was already stated as part of the  
 9 record that table 2-5 contains some errors.  
 10 Based on the fact that there are errors in table  
 11 2-5, does that skew your opinions or change your  
 12 opinions as far as what's included in the City's  
 13 modeling and what's not?  
 14 **A. No, I -- well, see, I actually had the model**  
 15 **files when I ran this, and I know what error**  
 16 **you're talking about, you're talking about model**  
 17 **stress period five on that same row that I was**  
 18 **talking about where it says 15,552. I ran this**  
 19 **using the model files that were provided, and**  
 20 **the model files didn't have that 15,552. The**  
 21 **model files had the 16,000, you know, closer to**  
 22 **the 16,579, which I think is the number that was**  
 23 **reported to be corrected. So for what I ran**  
 24 **here, it doesn't include that error, from what I**  
 25 **can see.**

Page 2482

1 Q. Did Burns & McDonnell break out the components  
 2 of pumping?  
 3 **A. They broke out the amount of recharge on that**  
 4 **same row of the table that I described. On the**  
 5 **row right above it, they report total Equus**  
 6 **basin well field and ASR, so that would be the**  
 7 **sum of the well field and the credit. So this**  
 8 **table gives the ability to break it out, but**  
 9 **there -- there aren't analyses that report it**  
 10 **the way that I do.**  
 11 Q. So in other words, you were able to utilize some  
 12 of the information contained in table 2-5 and  
 13 take it a step further, is that a different way  
 14 to state this?  
 15 **A. Yes.**  
 16 Q. And in doing so, you were able to isolate the  
 17 impacts of recharge credits on both rivers as it  
 18 relates to minimum desirable streamflow and also  
 19 the impacts to water levels as it relates to  
 20 individual wells. Is that a true statement?  
 21 **A. Yes.**  
 22 Q. Once you realized that this type of analysis was  
 23 possible, what did you do?  
 24 **A. I -- I developed a set of scenarios, three**  
 25 **scenarios that would allow me to examine the**

1 **effect of the proposal. And so I came up with**  
2 **three scenarios, they're listed in my report as**  
3 **scenarios A, B, and C.**  
4 Q. Before we get there, as it relates to river  
5 depletion, as shown on figure 1 in your report,  
6 what does the figure 1 tell us about the  
7 impacts, hydrologic impacts to river depletion  
8 based on if the City is to pump their recharge  
9 credits?  
10 **A. It tells us that -- if you look at the bottom**  
11 **half of the chart, there's a gray area, and the**  
12 **gray area is labeled with 18,700 acre-feet.**  
13 **That means that according to the accounting**  
14 **model, 18,700 acre-feet of water is removed from**  
15 **the aquifer. And if you look at the blue area,**  
16 **that totals 30,000 -- 30,100 acre-feet, that**  
17 **means that that much water is removed from**  
18 **rivers. It's removed from the Little Arkansas**  
19 **and from the Arkansas combined.**  
20 Q. And -- and this is based on what the City  
21 reported in table 2-5 with regard to pumping of  
22 ASR credits; is that right?  
23 **A. That's correct. And --**  
24 Q. So --  
25 **A. And there's one other component on the chart,**

1 **it's off to the right in green labeled as ET.**  
2 **So there's also some evapotranspiration that is**  
3 **salvaged. So vegetation is consuming**  
4 **evapotranspiration, but when water levels lower,**  
5 **the vegetation consumes a little bit less.**  
6 Q. Mr. Romero, you based figure 1 on what the City  
7 reported in table 2-5 as far as the amount of  
8 ASR credits that they would be pumping based  
9 strictly on this table 2-5; is that right?  
10 **A. Yes.**  
11 Q. Does it suffice to say -- and follow with me for  
12 a moment. Let's say the City accumulated  
13 120,000 acre-feet of recharge credits, are you  
14 following me?  
15 **A. Yes.**  
16 Q. Does it suffice to say that if the City over the  
17 course of eight years were to withdraw  
18 120,000 acre-feet of recharge credits there  
19 would be a much greater effect on river  
20 depletion?  
21 **MR. OLEEN:** I object. Feel free to  
22 correct me, Mr. Stucky, my objection is  
23 whether the expert report discusses the  
24 120,000 cap or not. I'm not thinking it  
25 does. Please correct my ...

1 **MR. STUCKY:** If I really need to  
2 take some time to see if this 120,000 foot  
3 number is referenced in the report, I think  
4 that flows very logically out of this  
5 figure 1 and the research he's already  
6 done. I think it was a simple question  
7 that he can easily answer based on the work  
8 he did in figure 1. So I think it's highly  
9 irrelevant actually whether he mentions the  
10 120,000 acre-foot cap, I think he can  
11 answer these questions, it's well within  
12 the province of this witness, it's well  
13 within the scope of the modeling he already  
14 did, so I think these are questions I can  
15 ask.  
16 Actually, I don't think I need to look  
17 in the expert report to see if it's  
18 referenced; I think it's well within the  
19 scope and the understanding of this witness  
20 and what's already been outlined in the  
21 figures and models. To try and exclude him  
22 from rendering an opinion just merely based  
23 on the fact that the number 120,000 isn't  
24 in the report, I think is an irrelevant  
25 basis.

1 **PRESIDING OFFICER:** I find this  
2 question relevant and helpful so I'll allow  
3 it.  
4 **MR. STUCKY:** Thank you.  
5 **BY MR. STUCKY:**  
6 Q. Let's -- let's back up again and start that line  
7 of questioning over, Mr. Romero. Figure 1 is  
8 based on the City's predicted pumping of ASR  
9 credits as shown in figure 1; is that right?  
10 **A. Yes.**  
11 Q. I'm sorry, table 2-5.  
12 **A. As shown in table 2-5 and I examined it on**  
13 **figure 1, yes.**  
14 Q. Okay. And when Mr. Pajor was testifying and you  
15 were here, he testified that he guessed that the  
16 amount of recharge credits that the City would  
17 use in a drought would be somewhere just north  
18 of 50,000 based on table 2-5 in their proposal.  
19 Do you remember that testimony?  
20 **A. Yes.**  
21 Q. So you were analyzing a scenario where 50,000  
22 some acre-feet of credits are withdrawn over a  
23 course of time as shown by the City, and you  
24 indicated that there would be a depletion in  
25 river levels or river depletion to the tune of

Page 2487

1 30,100 acre-feet; is that right?  
 2 **A. Yes.**  
 3 Q. So now let's go back to my scenario, my scenario  
 4 is this: In the City's proposal, there is a cap  
 5 of 120,000 acre-feet of credits, is there not?  
 6 **A. Yes.**  
 7 Q. So at least from a conceptual standpoint, the  
 8 City could accumulate up to 120,000 acre-feet of  
 9 credits, could they not?  
 10 **A. Yes.**  
 11 Q. If the City -- now assume with me for a moment  
 12 the City accumulates 120,000 acre-feet of  
 13 credits, you follow me?  
 14 **A. I do.**  
 15 Q. If the City then were to withdraw 120,000  
 16 acre-feet of credits over the course of eight  
 17 years, would you agree with me that the  
 18 depletion of river levels would be much greater  
 19 than what you show in figure 1?  
 20 **MR. OLEEN:** I object because to  
 21 withdraw 120,000 acre-feet over eight  
 22 years, currently, there's an authorized  
 23 withdrawal of either 18 or 19,000 acre-feet  
 24 of recharge credits, and so I object  
 25 because I think it is outside the scope of

Page 2488

1 the proposal. No, not the -- it's outside  
 2 the scope in the sense that that's not the  
 3 current authorization. You can't withdraw  
 4 120,000 over eight years.  
 5 **PRESIDING OFFICER:** I'm kind of  
 6 confused because I think --  
 7 **MR. OLEEN:** Upon doing some math, I  
 8 withdraw my objection.  
 9 **PRESIDING OFFICER:** Is it Friday  
 10 yet?  
 11 **MR. MCLEOD:** On form of the  
 12 question, though, I'm going to ask for a  
 13 clarification, what assumption is being  
 14 made about the City's native rights in this  
 15 scenario?  
 16 **BY MR. STUCKY:**  
 17 Q. Let's back up. Mr. Romero, in figure 1, you  
 18 made some assumptions about the use of the  
 19 City's native rights in figure 1; is that right?  
 20 **A. In figure 1, this is actually an isolation of**  
 21 **the credit, but it's based on a simulation that**  
 22 **represents the City's native right as it's**  
 23 **depicted in table 2-5 of page 2-10 of the**  
 24 **proposal.**  
 25 Q. So let's back up on this hypothetical again.

Page 2489

1 Let's assume that my hypothetical assumes the  
 2 same use of native rights as shown in table 2-5  
 3 of the City's proposal, are you following?  
 4 **A. I do.**  
 5 Q. Now, going back to our question, if the City  
 6 were to withdraw 120,000 acre-feet of credits  
 7 over the course of eight years, would that have  
 8 a greater hydrologic impact on river depletion  
 9 during that time?  
 10 **A. It would. The figure 1 that I'm showing is**  
 11 **compatible with diverting about 50,300 acre-feet**  
 12 **in -- in eight years.**  
 13 Q. And so that's showing -- and that's showing a  
 14 river depletion of 30,100 acre-feet. Would you  
 15 agree with me that if we were to withdraw  
 16 120,000 acre-feet of credits over that course of  
 17 time, the impacts to river depletion would be  
 18 much greater?  
 19 **A. It would be greater. Maybe on the order of**  
 20 **twice the amount because we'd be -- a little**  
 21 **more than twice the amount because we're**  
 22 **diverting about 50,000, and 120,000 is a little**  
 23 **more than twice that. And -- and also I said**  
 24 **that the recharge was diverted over eight years,**  
 25 **but if it's actually -- there's not recharge**

Page 2490

1 **diverted every single year in this case; it's**  
 2 **only diverted in years two, three, four, five,**  
 3 **and six. So five out of the eight years the**  
 4 **credit is taken. But to answer your question,**  
 5 **if the scenario were similar but were 120,000**  
 6 **acre-feet diverted, the river depletion would be**  
 7 **greater, yes.**  
 8 Q. And, in fact, 180,000 -- again, just to clarify  
 9 the record based on math, 180,000 -- or 120,000  
 10 acre-feet of credits could be withdrawn at a  
 11 rate of 18,000 acre-feet a year in a time period  
 12 in something less than eight years; is that  
 13 right?  
 14 **A. Hypothetically, sure.**  
 15 Q. Okay. So you indicated that you did your own  
 16 analysis with respect to what Burns & McDonnell  
 17 did, and you were starting to elaborate on your  
 18 analysis and an example simulation that you  
 19 performed; is that right?  
 20 **A. Yes.**  
 21 Q. Tell me what that example simulation looked like  
 22 and what the components were.  
 23 **A. So the example simulation is -- it's got three**  
 24 **components. It's broken into scenarios A, B,**  
 25 **and C. Scenario A is a simulation that isolates**

1 the effect of the City pumping its water right,  
2 its existing water right of 40,000 acre-feet per  
3 year. Scenario B is a simulation that takes  
4 away the rest of the water remaining after  
5 considering the water right first until you  
6 lower levels down to the existing minimum index  
7 level. So scenario A diverts the water right in  
8 its entirety every year; scenario B takes the  
9 rest of the water that's remaining but only down  
10 to the level of the current minimum index level.  
11 So that's credit water that is taken.

12 Q. So there's some similarity, then, to this  
13 example, to the 1 percent drought simulation or  
14 scenario performed by the City?

15 A. There is similarity in it. In fact, if you look  
16 at table 2-5 on page 2-10 of the proposal and  
17 you look at the row that has total Equus basin  
18 well field and ASR credit and you -- if you look  
19 at the row beneath it, you can see how much  
20 credit is pumped. And if you look at both --  
21 both rows together, you can see that just about  
22 every year the City diverts almost the full  
23 40,000. It's only the first year, 34,000 is  
24 diverted. Every other year after that, 40,000  
25 is diverted except for the last two years but

1 it's 39,000. So, basically, the City's  
2 1 percent drought scenario is diverting almost  
3 40,000 acre-feet every single year. My scenario  
4 is actually diverting 40,000 acre-feet every  
5 single year.

6 Q. So turn with me, then -- well, I want to back up  
7 and just ask you one question on figure 1. Just  
8 so we're clear for the record, when the City  
9 pumps groundwater, including the recharge  
10 credits, that gray area shows a significant  
11 depletion in the aquifer storage area; is that  
12 right?

13 A. On figure 1?

14 Q. Yes, on figure 1 very quickly --

15 A. Yes.

16 Q. -- just for the record.

17 A. Yes, 18,700 acre-feet, yes.

18 Q. Okay. Let's turn to figure 2.

19 A. And I'll note that figure 1 and figure 2, the  
20 vertical axes are scaled the same. In fact,  
21 they're scaled the same on the first four  
22 figures, so that way they're visually  
23 comparative in terms of magnitude.

24 Q. I'm not exactly sure what you just said, but  
25 could you explain to me the three scenarios that

1 you were looking at as it relates to figure 2?

2 A. Yes. So figure 2 is actually scenario A, and  
3 this is how the aquifer and river system -- this  
4 is how the hydrologic system responds if the  
5 City pumps its native 40,000 acre-foot per year  
6 water right for eight years during the drought.  
7 So the maroon area is actually just a constant  
8 band of diversion, which is 40,000 acre-feet per  
9 year. And the lower half of the chart, the gray  
10 area, is the water that's removed from the  
11 aquifer. And the blue area is the water that's  
12 removed from the river. So this is what happens  
13 if the City diverts its full native water right  
14 every year during that eight-year drought.

15 Now, if you look at -- if you go from  
16 figure 2 to figure 3 --

17 Q. Let me just back up very quickly, Mr. Romero, to  
18 figure 2. So if the City is to pump their  
19 native credits during an eight-year drought,  
20 they would essentially deplete river levels to  
21 the tune of 146,300 acre-feet based on your  
22 analysis?

23 A. Yes.

24 Q. Okay. And there would also be aquifer storage  
25 depletion to the tune of 155,400 acre-feet, is

1 that what this is showing?

2 A. Yes.

3 Q. Explain, though, for the record, very quickly  
4 what that green band is.

5 A. The green band is evapotranspiration; that is  
6 water that otherwise would have gone to  
7 vegetation. That's water that would go to  
8 vegetation but for the pumping done by the City.

9 Q. As we're turning to figure 3 and everyone's  
10 flipping in their notebooks, what is the -- is  
11 this a example of a water budget analysis that  
12 you're performing?

13 A. Yes, it's completely a water budget analysis.  
14 It's showing how when you pump a well at a  
15 certain amount, the water is removed from the  
16 aquifer and from the river and from  
17 evapotranspiration to vegetation in a  
18 balancing -- in a balancing act. The system has  
19 to balance the amount of water that's removed  
20 from the wells. Part of it comes from the  
21 aquifer and part comes from the rivers.

22 Q. In figure 2, there's a lot of information shown  
23 in figure 2, if I'm to look at this left-hand  
24 column, this vertical axis. Do you follow where  
25 I'm looking?

1 **A. Yeah.**  
 2 Q. It refers to hydrologic budget components and  
 3 it's listed in terms of cfs; is that right?  
 4 **A. Yes, that's cubic feet per second.**  
 5 Q. Okay. So is what this is telling me is that in  
 6 the first year of the City's pumping as shown on  
 7 this chart that essentially there would be a  
 8 depletion to rivers after the first year to the  
 9 tune of approximately 10 cfs?  
 10 **A. Yes, that's exactly what it's saying. You just**  
 11 **take a look at the horizontal axis, the 1**  
 12 **represents one year, and if you just go up to**  
 13 **where the blue band is, the blue band is coming**  
 14 **down to about 10 cfs. If you go to the second**  
 15 **year, it's at about 20 cfs depletion.**  
 16 Q. Okay. That helps me to understand that table.  
 17 **PRESIDING OFFICER:** I'm confused  
 18 about the maroon band.  
 19 **A. The maroon band is a constant amount of pumping**  
 20 **every single year. And -- and that maroon band**  
 21 **is the total of 40,000 acre-feet per year**  
 22 **diverted from the well.**  
 23 **PRESIDING OFFICER:** For how many  
 24 years?  
 25 **A. For eight years.**

1 Q. Okay. So is what this -- does this, then, imply  
 2 that if the City diverts 40,000 acre-feet before  
 3 diverting their ASR credits, then much of the  
 4 water diverted from above the current minimum  
 5 index level is to satisfy the 40,000 acre-feet  
 6 of water rights?  
 7 **A. That's -- that's exactly what that means. That**  
 8 **means if the City diverts its water right,**  
 9 **40,000 acre-feet per year for eight years during**  
 10 **this drought condition, most of the water above**  
 11 **the current minimum index level is removed to**  
 12 **satisfy that water right. Much of the water is.**  
 13 Q. Now let's move to figure 4. Well --  
 14 **A. So -- so let me explain it like this. You take**  
 15 **out the water right and then there's some water**  
 16 **left there above the current minimum index**  
 17 **level. Figure 3 shows how much you get if you**  
 18 **lower it to the current minimum index level.**  
 19 **Then figure 4 is going to tell us how much more**  
 20 **water you get if you lower it to the proposed**  
 21 **minimum index level.**  
 22 Q. And just -- just to clarify these tables, just a  
 23 minor issue of housekeeping, the City relied on  
 24 these 1998 levels, did they not, as a starting  
 25 point?

1 **PRESIDING OFFICER:** Okay.  
 2 **BY MR. STUCKY:**  
 3 Q. Now, Mr. Romero, could you turn now with me to  
 4 figure 3? I think you wanted to turn -- turn to  
 5 that a moment ago before I had fully understood  
 6 figure 2. Now that you've turned to figure 3,  
 7 what -- what is figure 3 showing?  
 8 **A. Figure 3 shows the amount of water that's**  
 9 **produced after the City diverts its water right**  
 10 **for eight years. So in the proposal it**  
 11 **describes a goal by the City to divert the**  
 12 **40,000 acre-feet per year water right prior to**  
 13 **diverting credit. So if the City diverts its**  
 14 **40,000 acre-foot per year water right for eight**  
 15 **years during the drought, you get the picture**  
 16 **that we just looked at on figure 2. Figure 3**  
 17 **shows the amount of water that's still available**  
 18 **above the current minimum index level that could**  
 19 **be produced as credit, when you're pumping**  
 20 **credit rather than pumping the water right. So**  
 21 **it actually shows that there's not that much**  
 22 **water left to divert. There's about**  
 23 **14,900 acre-feet water that's available to**  
 24 **divert, and that's the maroon area that's right**  
 25 **there.**

1 **A. Yes.**  
 2 Q. Did you rely on the same levels as far as the  
 3 starting point for your analysis?  
 4 **A. I did, yes.**  
 5 Q. Okay. Just to clarify that. On figure 3, one  
 6 other question in that regard, this is looking  
 7 at impacts to river depletion if the minimum  
 8 index level remains at the 1993 level; is that  
 9 right?  
 10 **A. Yes.**  
 11 Q. And this is, in fact, from the scenario you just  
 12 described showing river depletion to the tune of  
 13 10,200 acre-feet based on these recharge credits  
 14 being pumped; is that right?  
 15 **A. Yes.**  
 16 Q. And it's also showing, if we are using the 1993  
 17 levels, aquifer storage depletion to the tune of  
 18 5,200 acre-feet; is that right?  
 19 **A. Yes.**  
 20 Q. And then there's a figure for  
 21 evapotranspiration, I'm not sure I said it  
 22 right, also shown in this figure?  
 23 **A. Yes. Yes. So you can -- you can really think**  
 24 **of it as the maroon portion is the volume that's**  
 25 **removed by the wells; the gray and the blue**

1 **bands are telling you where the water is**  
 2 **depleted from. The gray is it comes from the**  
 3 **aquifer, the blue is it comes from the river.**  
 4 Q. So scenario B was based on the current minimum  
 5 index levels, right?  
 6 **A. Yes.**  
 7 Q. So now let's turn to figure 4 which is based on  
 8 lowering the water levels to the proposed  
 9 minimum index levels, right?  
 10 **A. Yes.**  
 11 Q. What happens, based on your analysis shown in  
 12 figure 4, if we are to lower to the new proposed  
 13 minimum index levels?  
 14 **A. More water is produced, the -- the maroon**  
 15 **portion is a total of 79,500 acre-feet, that's**  
 16 **more water that's produced, that's credit water**  
 17 **that's produced to the -- to the wells that the**  
 18 **wells divert. And the gray portion at the**  
 19 **bottom is 30 -- out of that 79,500, 33,100 comes**  
 20 **from the aquifer, is removed from the aquifer,**  
 21 **and the blue portion is 43,800 acre-feet that's**  
 22 **removed from the Little Arkansas and the**  
 23 **Arkansas Rivers.**  
 24 Q. So what you were trying to do with figure 4 is  
 25 to isolate the impacts of pumping recharge

1 about a difference of 10,200 acre-feet versus  
 2 43,800 acre-feet. Would you agree with me that  
 3 40,800 acre-feet depicts a scenario where  
 4 there's a depletion of river levels that are  
 5 four to five times greater than if these minimum  
 6 index levels remain the same?  
 7 **A. Yes.**  
 8 Q. Would you also agree with me, Mr. Romero, that  
 9 looking at 33,100 acre-feet of aquifer storage  
 10 depletion with the new minimum index levels  
 11 versus 5,200 acre-feet of depletion with the  
 12 current minimum index levels, would you agree  
 13 with me that the depletion, then, is to the tune  
 14 of at least six times greater if we drop the  
 15 bottoms?  
 16 **A. Yes.**  
 17 Q. Now, you said earlier that the City by dropping  
 18 to a new index level, you indicated that that's  
 19 consistent with a new diversion of groundwater;  
 20 is that correct?  
 21 **A. Yes.**  
 22 Q. And does figure 4 explain the basis for that  
 23 official expert opinion that you rendered? Or  
 24 help to explain the rationale for that  
 25 conclusion?

1 credits based on when there's a new proposed  
 2 minimum index level; is that right?  
 3 **A. That's exactly right, that's exactly what I was**  
 4 **trying to do here was to isolate the effect of**  
 5 **the proposal.**  
 6 Q. And based on all the extensive, additional  
 7 modeling you performed, if we're to lower the  
 8 minimum index level to this new level, is figure  
 9 4 showing us that we can expect a depletion of  
 10 rivers to the tune of 42,800 acre-feet?  
 11 **A. Yes.**  
 12 Q. Is figure 4 also showing us that there's going  
 13 to be a depletion in the aquifer storage area to  
 14 the tune of 33,100 acre-feet?  
 15 **A. Yes.**  
 16 Q. So in other words, the impacts both to the  
 17 aquifer and to minimum desirable streamflow if  
 18 we were to lower this minimum index level is  
 19 much greater as shown in figure 4; is that  
 20 right?  
 21 **A. It's -- it's greater than if you don't lower it,**  
 22 **than if you don't lower the proposed minimum**  
 23 **index level, yes.**  
 24 Q. Well, as we're talking about the impacts to  
 25 minimum desirable streamflow, we're talking

1 **A. Figure 4 outlines a water budget analysis of**  
 2 **what that new diversion will do. I -- I**  
 3 **consider it a new diversion because it's what's**  
 4 **being applied to do.**  
 5 Q. So in other words, would the answer to the  
 6 question I just posed to you, would the answer  
 7 to that question then be yes, because this is  
 8 helping to depict or formulate your opinion,  
 9 expert opinion that there's a new diversion of  
 10 groundwater that's occurring?  
 11 **MR. OLEEN:** I think I object because  
 12 new diversion, isn't that like diversion of  
 13 groundwater is a legal concept under the  
 14 Kansas Water Appropriation Act, so is that  
 15 what you mean when you ask him is it a new  
 16 diversion?  
 17 **PRESIDING OFFICER:** Well --  
 18 **MR. OLEEN:** Like a new diversion  
 19 under the Kansas Water Appropriation Act?  
 20 **PRESIDING OFFICER:** Well, Mr. Romero  
 21 testified in his opinion earlier, as I  
 22 understand it, in however he means the  
 23 term. I took that to mean, whether he used  
 24 the word new or additional, would that  
 25 be --

Page 2503

1 **A. Yes.**  
 2 **PRESIDING OFFICER:** -- equivalent?  
 3 So if I understand this right, figure 4  
 4 shows the additional amount of water that  
 5 could be diverted under the new minimum  
 6 index levels?  
 7 **A. Yes.**  
 8 **PRESIDING OFFICER:** Okay. Does that  
 9 help?  
 10 **MR. OLEEN:** Yes, thank you, I  
 11 withdraw the objection.  
 12 **BY MR. STUCKY:**  
 13 Q. Let's move on. You describe how the water  
 14 budget analysis changes when the City wells are  
 15 pumped in the context of the native 40,000  
 16 acre-feet of credits and the ASR credits, right,  
 17 that's what we just covered?  
 18 **A. We just covered that yes.**  
 19 Q. You described that pumping the wells is balanced  
 20 by water removed from the aquifer and depleted  
 21 from the river flow; is that right?  
 22 **A. Yes.**  
 23 Q. What are the implications, then, of these -- of  
 24 these findings? Would you agree with me that  
 25 79,500 acre-feet would then be available for

Page 2504

1 additional withdrawal by the City in the form of  
 2 recharge credits if we're to lower from the  
 3 current minimum index level to the new minimum  
 4 index level?  
 5 **A. Yes.**  
 6 Q. And in other words, based on where we're at with  
 7 the 1993 levels, essentially the City could --  
 8 does your analysis help support that if we  
 9 assume the City pumps all their 40,000 acre-feet  
 10 of credits during an eight-year drought that  
 11 currently they'd be able to withdraw about  
 12 14,900 acre-feet of recharge credits?  
 13 **A. Yes, and that's from figure 3. If they were**  
 14 **just lowered to the current index level, yes.**  
 15 Q. Okay. So combined 79,500 acre-feet plus  
 16 14,900 acre-feet, that's, I'm adding it up  
 17 quickly, I think that adds up to, what,  
 18 94,400 acre-feet?  
 19 **A. 94,400 acre-feet, yes, of credit water diverted.**  
 20 Q. You were in the room when Mr. McCormick  
 21 testified that this idea of a cap of 120,000  
 22 acre-feet was based on this concept that that's  
 23 the available storage space in the basin storage  
 24 area, were you not?  
 25 **A. I was not in the room.**

Page 2505

1 Q. Okay. Let me ask you this: You looked at that  
 2 part of the McCormick testimony because we  
 3 showed that part of the testimony to you and you  
 4 now understand that to be his testimony; is that  
 5 right?  
 6 **A. I understand that to be his testimony.**  
 7 Q. But although Mr. McCormick said, yeah, we just  
 8 came up with 120,000 acre-foot cap based on the  
 9 fact that we thought that was the available  
 10 space in the aquifer, he, and I'll just proffer  
 11 for you, also testified that he didn't do any  
 12 analysis to determine if that was the available  
 13 space. You didn't see any analysis performed by  
 14 the City where they came up with numbers that  
 15 indicated that 120,000 acre-feet of water was  
 16 the available space, you didn't see that  
 17 analysis performed, right?  
 18 **A. The --**  
 19 Q. By the City?  
 20 **A. Not by the City.**  
 21 Q. But on the other hand, if we start with the 1998  
 22 levels, what your analysis is showing us is that  
 23 the available space in the aquifer is actually  
 24 closer to the tune of 94,400 acre-feet; is that  
 25 right?

Page 2506

1 **A. If -- if you divert the 40,000 acre-feet per**  
 2 **year first every year, yes.**  
 3 Q. If we're to divert the 40,000 acre-feet of water  
 4 each year first, that leaves additional  
 5 available space of 94,400 acre-feet; is that  
 6 right?  
 7 **A. Available water, yeah.**  
 8 Q. So -- and, again, just -- this answer is so  
 9 obvious but it's already been stated on the  
 10 record anyway, this available water, that's  
 11 water that's not only available potential --  
 12 well, the City's already pumped their 40,000  
 13 acre-feet of credits so this water that's still  
 14 available, that could be water that could be  
 15 used by other users in the basin storage area;  
 16 is that right?  
 17 **A. Which water could be?**  
 18 Q. That remaining 94,400 acre-feet, that's water  
 19 that would be available for appropriations by  
 20 not only the City of Wichita but other users in  
 21 the Equus Beds well field; is that right?  
 22 **A. It's -- if the City didn't divert it, it would**  
 23 **be available for others.**  
 24 Q. Yeah, that's my question.  
 25 **A. Yeah.**

1 Q. I wasn't -- I wasn't trying to trick you,  
2 Mr. Romero.  
3 **A. I was just thinking about the model simulation,**  
4 **the way that it's run, for a moment there.**  
5 Q. Okay.  
6 **A. Yeah.**  
7 Q. So, Mr. Romero, if we start with the 1998 levels  
8 and we assume, for example, that the City is to  
9 pump all their native rights consistent --  
10 consistent with what they show in table 2-5 of  
11 their proposal, are you telling me that even if  
12 we drop the bottoms to these new levels, there  
13 wouldn't be 120,000 acre-feet of space available  
14 to -- to accumulate these credits?  
15 **A. The accounting model is coming up with less,**  
16 **yeah.**  
17 Q. So at a bare minimum, if we're to cap the  
18 physical recharge credits or the ASR II credits  
19 that are accumulated by the City, would you  
20 agree with me that something closer -- if we're  
21 just looking at available space in the aquifer  
22 that's not already been diverted by the City,  
23 would you agree with me that the cap would be  
24 something closer to 94,400 acre-feet?  
25 **A. With the assumptions that I've made, yes.**

1 **on figure 4, the rivers are losing about 10 cfs**  
2 **of water. And I just assumed that half of that**  
3 **was coming from the Little Arkansas and half of**  
4 **that was coming from the Arkansas.**  
5 **And then I looked at MDS flows on the**  
6 **Little Arkansas at Valley Center. And figure 5**  
7 **has -- it's a chart that has three curves. It's**  
8 **showing -- the very top horizontal axis shows**  
9 **that this is years 2011 and 2012, so it's the**  
10 **drought period of 2011 and 2012. The gray line**  
11 **that's indicated is actual flow that was**  
12 **observed at the gage at Valley Center during**  
13 **that drought period. The blue curve is taking**  
14 **that data and making it into a duration curve.**  
15 **A duration curve is just taking the data and**  
16 **sorting it from largest flow to smallest flow**  
17 **and then plotting it as a percentage of time**  
18 **that flow is exceeded.**  
19 **So what this actually shows is if you look**  
20 **at the blue curve and you go to the very bottom**  
21 **at the .5, which is a fraction, .5 being half**  
22 **the time in those two years, the blue curve**  
23 **actually is at about 20 cfs; if you look at the**  
24 **vertical axis, it's right near the 20. 20 cfs**  
25 **happens to be the minimum desirable streamflow.**

1 Q. So based on those assumptions, a 120,000  
2 acre-foot number wouldn't even be feasible; is  
3 that right?  
4 **A. With those assumptions and considering that this**  
5 **is the accounting model, you would come -- you'd**  
6 **come up with a different number, with the**  
7 **assumptions that I made.**  
8 Q. All right. Mr. Romero, you talked in your  
9 expert report about the impacts to rivers, and  
10 we've already touched on that a little bit  
11 with -- well, actually quite a bit with respect  
12 to dropping the minimum index level. Let's now  
13 turn to figure 5. What does figure 5 show us?  
14 **A. Okay. I'll just refer to figure 4 quickly**  
15 **first. Figure 4 shows that when you lower the**  
16 **water -- when you lower the minimum index level**  
17 **and divert the water from the current index**  
18 **level to the proposed index level, then figure 4**  
19 **shows the blue area, that's water that comes**  
20 **from the Little Arkansas and the Arkansas**  
21 **Rivers. Figure 5 shows that -- oh, and I'm**  
22 **sorry, let me say also on figure 4, it shows**  
23 **that after eight years that the river loses**  
24 **about -- both rivers lose about 10 cfs of water.**  
25 **So after the eight-year simulation that's shown**

1 **So what that blue curve shows is that at the**  
2 **gage at Valley Center, the minimum desirable**  
3 **streamflow was exceeded about half the time.**  
4 **And the other half of the time the flow was less**  
5 **than 20 cfs.**  
6 **So then there's an orange curve that**  
7 **reduces that duration curve by 5 cfs. Well, 5**  
8 **cfs is what I'm estimating the depletion is to**  
9 **the Arkansas River based on the scenario where**  
10 **you lower water levels to the proposed minimum**  
11 **index level. And then what it does is it**  
12 **actually changes that curve a little bit, so**  
13 **under the drought the MDS flow at Valley Center**  
14 **is exceeded about half the time. If you lower**  
15 **water levels to the proposed minimum index**  
16 **level, it gets exceeded more of the time, about**  
17 **one month more.**  
18 Q. Okay. And so that's -- that's part of what this  
19 figure 5 is showing us that if we're to drop the  
20 minimum index level, we -- we will have a  
21 greater effect of MDS, at least one additional  
22 month out of the year; is that right?  
23 **A. Yes. Out of the two years.**  
24 Q. And, you know, you highlighted something that I  
25 should have pointed out, Mr. Romero. Based on

Page 2511

1 the current -- there's a difference between  
 2 lowering impacts to MDS and minimum desirable  
 3 streamflow and river depletion, there's a  
 4 distinction between those two; is that right?  
 5 **A. I'm sorry, a distinction between what two**  
 6 **things?**  
 7 Q. A distinction between minimum desirable  
 8 streamflow as far as that terminology is used  
 9 and acre-feet of river depletion; is that right?  
 10 **A. Yes.**  
 11 Q. In other words, river levels versus the total  
 12 acre-feet of depletion?  
 13 **A. Yes.**  
 14 Q. And I should have pointed that out, let's go  
 15 back to figure 3 real quick. Figure 3 shows the  
 16 impacts of the City's proposal if we keep the  
 17 current minimum index level?  
 18 **A. Uh-huh.**  
 19 Q. And it shows in the first year there is some  
 20 impact to minimum desirable streamflow, tell me  
 21 roughly, is that, what, about 4 cfs, a lowering  
 22 of 4 cfs in the first year and maybe a lowering  
 23 to about, I don't know, 3 to 5 cfs in the second  
 24 year, is that what that's telling me?  
 25 **A. Yes.**

Page 2512

1 Q. Okay. And, in fact, we can show, as we look at  
 2 that vertical axis and that blue line, we can  
 3 show -- we can see visually or graphically, and  
 4 I understand that your data could outline it in  
 5 much greater detail, but we can see graphically  
 6 the reduction in the cubic feet per second of  
 7 river flow as shown on this chart; is that  
 8 right?  
 9 **A. Yes.**  
 10 Q. Now, let's turn back to figure 4, contrast --  
 11 hold those thoughts. Contrast what you showed  
 12 in figure 3 with that shown in figure 4. In --  
 13 well, and I should have just asked for a clear  
 14 record. In figure 3, in that first year of  
 15 depletion, what is the lowering of the cfs of  
 16 the river?  
 17 **A. In figure 3?**  
 18 Q. Yeah, in figure 3, after the first year?  
 19 **A. It's 3 or 4 cfs.**  
 20 Q. And in the second year, what is it?  
 21 **A. About the same.**  
 22 Q. And figure 4, then, what is the lowering of cfs  
 23 in that first year as shown in figure 4?  
 24 **A. It's a little more, maybe -- maybe 4 or 5 cfs.**  
 25 Q. And year two, what does that go to, would you

Page 2513

1 say 7 or 8 just looking at this?  
 2 **A. Yeah, about that.**  
 3 Q. Now, let's say we jump all the way to year five,  
 4 for example, when we lower the minimum index  
 5 level, it looks to me like we're now talking  
 6 greater than 10 cfs most likely at that point as  
 7 far as the lowering of the river level?  
 8 **A. I think we're approaching 10. I think by the**  
 9 **time you get to year eight, it's at about 10.**  
 10 Q. Okay. And if we flip back to figure 3, let's  
 11 look at year five where we are with the lowering  
 12 of the cfs of the river levels in year five. In  
 13 year five, we're still at, and I have to squint  
 14 to look, that looks like maybe 3 or 4 cfs of  
 15 lowering --  
 16 **A. Around.**  
 17 Q. -- in year five?  
 18 **A. About that, yeah.**  
 19 Q. So the difference between minimum desirable  
 20 streamflow, or cfs as you have it in this chart,  
 21 based on the current minimum index level versus  
 22 lowering to the new minimum index level, we're  
 23 talking about a pretty significant drop in  
 24 minimum desirable streamflow, or cfs as shown in  
 25 your figures; is that true?

Page 2514

1 **A. I'd say on the order of, you know, 7 or 8 cfs.**  
 2 Q. Well, and in some cases, would you agree with me  
 3 that the impacts to cfs would be double or even  
 4 triple if we lower the minimum index level?  
 5 **A. About triple.**  
 6 Q. Now, let's go back to figure 5. I apologize to  
 7 you, Mr. Romero, I interrupt -- interrupted some  
 8 of your trains of analysis and your thoughts on  
 9 figure 5 as I jumped back to that other point,  
 10 and I apologize for that but I thought it would  
 11 help to explain what those tables show for the  
 12 record. Go back to your analysis on figure 5,  
 13 what is figure 5 showing us?  
 14 **A. Yeah, it's a -- you know, I talked about it**  
 15 **already, and there are a lot of curves on there**  
 16 **and there's some analysis, but the upshot is**  
 17 **that there are two duration curves, a blue**  
 18 **curve, which is the observed flow in years 2011**  
 19 **and 2012, and it shows that about half the time**  
 20 **the minimum desirable streamflow is exceeded,**  
 21 **about half the time it's not. But if you were**  
 22 **to lower water levels to the proposed minimum**  
 23 **index level, then there'll be -- there'll be**  
 24 **more days that you will not meet your minimum**  
 25 **desirable streamflow, and there'll be more days**

1 to the tune of about a month.  
2 Q. And would that also support your analysis  
3 essentially that there would be a new  
4 appropriation or a new diversion?  
5 **A. I see it as a new diversion, it's something that**  
6 **the City is not permitted to do; but if the**  
7 **proposal was approved, then they'll be able to**  
8 **do it.**  
9 Q. Okay. So as far as impact to the MDS flow at  
10 the Valley Center gage as shown in figure 5,  
11 under the old minimum index level, contrast for  
12 me the differences in MDS as shown on figure 5  
13 based on the old minimum index level versus the  
14 new minimum index level.  
15 **A. Figure 5 actually is not quantifying an effect**  
16 **from the current minimum index level. It's just**  
17 **quantifying an effect if you're allowed to**  
18 **divert from the current to the proposed. So**  
19 **it's really kind of like an applied for**  
20 **analysis. You're applying to do something,**  
21 **you're proposing to do something, and it's just**  
22 **characterizing what you would be allowed to do.**  
23 **Or what the effect would be if you actually went**  
24 **ahead and lowered levels to the proposed minimum**  
25 **index level.**

1 **infer that there'd be an effect from going to**  
2 **the current index level too if you diverted that**  
3 **credit.**  
4 Q. So, Mr. Romero, to sum up this part of your  
5 analysis, based on your expert analysis and  
6 based on the thousands of pages of model files  
7 and documents and inputs that you reviewed in  
8 exchange with Mr. McCormick and based on all the  
9 experience you have and the education you have,  
10 is it your expert opinion that lowering the  
11 minimum index level to a new minimum index level  
12 will have the effect of adversely impacting  
13 minimum desirable streamflow?  
14 **A. There'll be more days that you do not meet it,**  
15 **so if you consider that adverse, yes.**  
16 Q. You mentioned before to me that the model  
17 assumes that the river is -- won't dry out, the  
18 modeling performed by the City assumes that the  
19 river will not dry out; is that -- is that true?  
20 **A. Yes, that's something that's described in my**  
21 **report. The way the model rivers are set up,**  
22 **they're set up so that they always have flow in**  
23 **them. During -- during the drought of 2011 and**  
24 **2012, there's gage flow on the Arkansas and the**  
25 **Little Arkansas that shows -- that shows that**

1 I think the question is what happens if you  
2 actually lower the basin? Well, this says that  
3 at Valley Center, based on the assumptions that  
4 I've made here, you won't satisfy minimum  
5 desirable streamflows for about an extra month  
6 if you consider it in the period of the drought  
7 here. Taking all the assumptions that are in  
8 there, the 1 percent drought, the starting head  
9 condition, the diverting the water right before  
10 diverting credit, all those factors.  
11 Q. But figure 5 does help to show the impacts to  
12 minimum desirable streamflow on the Little  
13 Arkansas River; is that right?  
14 **A. It does. You know, I think that one thing that**  
15 **we could see, if we're just talking about**  
16 **credit, figure 3 shows the amount of credit that**  
17 **you divert based on the current index level and**  
18 **that's -- you know, the effect is on the order**  
19 **of a few cfs to both rivers. If I split that in**  
20 **half, I could say maybe it's about a cfs of**  
21 **effect. That would have an effect on minimum**  
22 **desirable streamflow too. It'd be less than a**  
23 **month, but -- but that -- I'm not showing it,**  
24 **but based on what I've shown on figure 5 for**  
25 **going to the proposed minimum index level, I can**

1 **on -- on the Little Arkansas, flow was less than**  
2 **1 cfs about 30 percent of the time.**  
3 Q. Let's turn to figure 69 of your -- Exhibit 69,  
4 I'm sorry, that you included along with your  
5 expert report.  
6 **A. Okay.**  
7 Q. Does Exhibit 69 help to tell some of that story?  
8 **A. It does.**  
9 Q. Tell me what Exhibit 69 tells us.  
10 **A. Exhibit 69, the first page is a map showing two**  
11 **gages; one gage is on the Little Arkansas at**  
12 **Halstead, and the other gage is on the Arkansas**  
13 **near Maize.**  
14 Q. And this is showing us the gages during the time  
15 period in 2011 and 2012. Is that a true  
16 statement?  
17 **A. Yeah, that's what pages 2 and 3 of the exhibit**  
18 **show, yes.**  
19 Q. What do -- do these two pages, do they tell us  
20 essentially based on this graphical depiction,  
21 visual depiction of these hydrographs, does it  
22 indicate to us that the river dried up in 2011  
23 and 2012?  
24 **A. The Little Arkansas, the river was dry about**  
25 **15 percent of the time during the years 2011 and**

Page 2519

1 **2012. And flow was less than 1 cfs about**  
 2 **30 percent of the time.**  
 3 Q. Wait a minute, so you're telling me that the  
 4 City's modeling doesn't account for a condition  
 5 that existed between 2011 and 2012 about  
 6 15 percent of the time?  
 7 **A. Yes, the model doesn't account for the river**  
 8 **drying up.**  
 9 Q. Yesterday you were in the room when -- when, and  
 10 I'm -- yeah, when Mr., and I guess it was  
 11 actually today also, you were in the room when  
 12 Mr. Boese testified; is that right?  
 13 **A. Yes.**  
 14 Q. Do you recall Mr. Boese showing some photographs  
 15 from back in 2012 showing that the river, the  
 16 Little Arkansas River and the Big Arkansas River  
 17 dried up?  
 18 **A. I do.**  
 19 Q. So is that what we're talking about as shown in  
 20 a much more technical sense in these hydrographs  
 21 in Exhibit 69?  
 22 **A. Yes, on the second page, I'm -- I'm actually**  
 23 **talking about gage data. So on the Little**  
 24 **Arkansas near Halstead, it was dry 15 percent of**  
 25 **the time. On the Arkansas near Maize, it did**

Page 2520

1 **not dry out; it got down to about 3 cfs, but it**  
 2 **never dried out.**  
 3 Q. So the City's modeling just assumes that the  
 4 river is not going to dry up. Is that -- is  
 5 that a true statement?  
 6 **A. It does. It comes from the USGS model. The way**  
 7 **that the USGS set it up, it doesn't allow rivers**  
 8 **to dry out. So there's a section in my report,**  
 9 **on page 7 of my report where -- where I describe**  
 10 **surface water availability. And earlier we**  
 11 **talked about the water budget analysis, you**  
 12 **might remember we were talking about that, and**  
 13 **when the City pumps its water right, in the**  
 14 **first year depletion to the river is about -- is**  
 15 **about 10 cfs, and in the second year depletion**  
 16 **to the river is about 20 cfs. So in that first**  
 17 **year of pumping, there's 10 cfs depletion to the**  
 18 **rivers. And the river, the Little Arkansas is**  
 19 **showing that about 30 percent of the time -- I'm**  
 20 **sorry. The Little Arkansas shows that flow in**  
 21 **the river was less than 1 cfs about 30 percent**  
 22 **of the time and that flow on the Arkansas was**  
 23 **less than 10 cfs over 20 percent of the time.**  
 24 **So the magnitude of flow in the river is**  
 25 **comparable to the amount of depletion that City**

Page 2521

1 **pumping can cause. So I just made a suggestion**  
 2 **or recommendation that the way the rivers are**  
 3 **modeled could be improved to actually account**  
 4 **for dry rivers because it can -- it can affect**  
 5 **the accounting.**  
 6 Q. Mr. Romero, are you familiar with how the City  
 7 came up with their drought modeling in the sense  
 8 that they simply took the years 2011 and 2012  
 9 and replicated those effects or extrapolated  
 10 them over the course of eight years, are you  
 11 familiar with that?  
 12 **A. I am familiar with that.**  
 13 Q. Would you agree with me that if we're truly in  
 14 an eight-year drought, we're truly in a  
 15 situation where the drought persists and it  
 16 continues year after year during the course of  
 17 eight years, there could be the potential for  
 18 these rivers to dry up more than 15 percent of  
 19 the time in those later years?  
 20 **A. There could -- there's that potential, yeah.**  
 21 Q. In fact, would you say it's probable, depending  
 22 on the nature of the drought?  
 23 **A. Not without assessing the probability.**  
 24 Q. Okay. So that's something -- is that something  
 25 that you believe should -- that there should be

Page 2522

1 more research and analysis with regard to that  
 2 issue?  
 3 **A. I think -- it looks to me like the City has done**  
 4 **a lot of analysis with regard to a drought.**  
 5 Q. But would you agree with me that the City could  
 6 do more analysis to determine how often the  
 7 river would dry up during their modeled  
 8 eight-year drought and the hydrologic effects of  
 9 the river drying out?  
 10 **A. I think the hydrologic effects of the river**  
 11 **drying out, I think some more work could be done**  
 12 **on that. And you could even do a sensitivity**  
 13 **analysis where you just simulate some -- remove**  
 14 **some river cells during some periods and see how**  
 15 **much that changes the accounting. Just kind of**  
 16 **a sensitivity analysis to see if it**  
 17 **significantly affects your accounting. It may**  
 18 **not significantly affect it, but I think it's**  
 19 **worth exploring just to help be comprehensive**  
 20 **with the accounting.**  
 21 Q. Okay. Mr. McCormick talked a little bit about  
 22 how difficult it would be to account for the  
 23 rivers drying up, but, Mr. Romero, you've helped  
 24 write a lot more models than Mr. McCormick has.  
 25 Based on your expert opinion, is it possible to

1 perform this sensitivity analysis that you  
2 described?  
3 **A. Yes. Yeah.**  
4 Q. And, in fact, is that something that someone  
5 with your credentials and qualifications could  
6 be asked to do?  
7 **A. Yes. Yeah.**  
8 Q. If we were to hire you, if, for example,  
9 Ms. Owen said, I'm going to order that  
10 sensitivity analysis to be performed, I want to  
11 understand what's going to happen during a  
12 drought if the river dries up and what that  
13 hydrologic effect is going to be, would you be  
14 able to perform that analysis if you were  
15 ordered to do so?  
16 **A. I could, yeah.**  
17 Q. And so even if the City and their experts are  
18 unable to perform that analysis, if that's a  
19 condition or requirement that Ms. Owen comes up  
20 with, you'd be able to do so?  
21 **A. I could do that, yeah.**  
22 Q. Turn to Exhibit 69, please.  
23 **A. Okay.**  
24 Q. Do you recall your statement that river  
25 depletion is 10 cfs in year one and 20 cfs in

1 **A. I recommend it. I -- I think it's good when**  
2 **you're doing this kind of accounting to consider**  
3 **some of those factors.**  
4 Q. Move on to a different point, Mr. Romero. Could  
5 you turn with me to Exhibit -- figure 17 in  
6 Exhibit 46? Earlier, you indicated, Mr. Romero,  
7 this concept of layering as it related to the  
8 zones in the aquifer as used in the USGS model,  
9 and you talked -- you said something about layer  
10 1 and layer 2 with regard to a deep zone. What  
11 does figure 17 show us or explain to us with  
12 respect to your concept of layering?  
13 **A. Oh, my gosh, it was in front of me.**  
14 Q. It's on page 27 for the record.  
15 **A. Can you say the page number again?**  
16 Q. Page 27.  
17 **A. Let's see.**  
18 **MR. STUCKY:** May I approach the  
19 witness?  
20 **PRESIDING OFFICER:** Yes.  
21 **A. Okay. I've got it now.**  
22 **BY MR. STUCKY:**  
23 Q. Just tell me briefly -- briefly for our purposes  
24 what figure 17 tells us to help explain your  
25 conclusion that merely all the USGS model does

1 year two when the City diverts its native water  
2 rights at the rate of 40 acre-feet per year?  
3 **A. 40,000 acre-feet?**  
4 Q. 40,000 acre-feet per year?  
5 **A. Yes.**  
6 Q. Okay. How does that relate to the figures in  
7 the hydrographs shown in Exhibit 69?  
8 **A. It's just that those depletion quantities are**  
9 **compatible with the flow that's observed in the**  
10 **river, you know, 20 to 30 percent of the time.**  
11 **At --**  
12 Q. If you were -- oh, sorry.  
13 **A. That's at the Little Arkansas -- Little Arkansas**  
14 **at Halstead, and it's compatible with the flow**  
15 **observed maybe 20 percent of the time at the**  
16 **Arkansas near Maize.**  
17 Q. And I think you answered this in your expert  
18 report and you may have indirectly stated it  
19 already, but it's your official expert opinion  
20 based on having analyzed hundreds of models and  
21 having personally written or helped write in  
22 excess of 30 models, it's your official expert  
23 opinion that the City should conduct some  
24 sensitivity analysis to account for conditions  
25 when the river dries up; is that true?

1 is come up with zones or layers to show depth of  
2 bedrock in the aquifer.  
3 **A. This is a graphical depiction of information**  
4 **that went into how the USGS describes that they**  
5 **came up with model layers. The model has three**  
6 **layers. And they describe that they looked at**  
7 **lithologic data, and they found that there's**  
8 **some low -- lower permeability sediments that**  
9 **they use to define the difference between layer**  
10 **1 and layer 2. And so what we're looking at on**  
11 **figure 17 is actually all the lithologic logs**  
12 **that went into developing the model.**  
13 Q. And figure 18 and figure 19 help to support this  
14 concept of layers that in other words,  
15 they're -- this concept of what the depth to  
16 bedrock was is a composite or an aggregate of  
17 some of this information; is that right?  
18 **A. That's right. And this lithologic data that**  
19 **they reviewed, they actually broke it into**  
20 **categories. Category 1 is a clay, category 2 is**  
21 **a silt, category 3 is a sand, and category 4 is**  
22 **a gravel. So when you look at figure 18, it has**  
23 **green tones that vary -- the tone, color tones**  
24 **that vary from green to red, and the green**  
25 **indicates a 1, or a clay, and the red indicates**

Page 2527

1 a gravel. And an orange indicates a sand.  
 2 So the model layers are -- the way the  
 3 model layers were constructed and the way that  
 4 aquifer properties were set up in the model  
 5 considers variability in lithology; it considers  
 6 some clays, some sands -- clays, silts, sands,  
 7 and gravels. And each layer takes -- takes  
 8 these categories and averages them into a  
 9 composite in each layer.  
 10 Q. But in doing so, the model doesn't -- you heard  
 11 the discussion of practical saturated thickness;  
 12 is that right?  
 13 A. I did.  
 14 Q. So in doing so, because it's just an aggregate,  
 15 the model doesn't actually come up with a  
 16 concept of practical saturated thickness. Is  
 17 that a true statement?  
 18 MR. OLEEN: I'm sorry, I'm objecting  
 19 because I can't remember whether we  
 20 resolved the last objection over this  
 21 witness testifying to that concept. I  
 22 remember we -- there was an objection, I  
 23 believe Mr. McLeod objected to this witness  
 24 testifying about practical saturated  
 25 thickness, Mr. Stucky said he would wait

Page 2528

1 and address that objection at a later time.  
 2 Am I misunderstanding?  
 3 MR. STUCKY: I'll just let you rule.  
 4 PRESIDING OFFICER: I -- I had  
 5 forgotten. So your objection is based on?  
 6 MR. OLEEN: This witness's expert  
 7 report didn't indicate that he was going to  
 8 discuss this concept. We had the similar  
 9 objection with Mr. Boese because his expert  
 10 report didn't discuss the concept and felt  
 11 that it would be outside the scope of this  
 12 expert witness's anticipated testimony as  
 13 provided to the other parties.  
 14 MR. STUCKY: And for Mr. Oleen's  
 15 benefit, I'll move on for now and we can  
 16 come back to that later.  
 17 PRESIDING OFFICER: Okay, that's  
 18 fine.  
 19 MR. STUCKY: I'll save you having to  
 20 rule on that issue.  
 21 MR. OLEEN: And I'll try to remember  
 22 once again when you do go back to it.  
 23 MR. STUCKY: All right.  
 24 BY MR. STUCKY:  
 25 Q. Let's move on to the impact to individual wells

Page 2529

1 based on the City's lowering of the minimum  
 2 index levels in conjunction with their drought  
 3 modeling. You understand where I'm going,  
 4 Mr. Romero?  
 5 A. I do.  
 6 Q. Mr. Romero, turn to figure 6 of your expert  
 7 report. What is figure 6 showing me?  
 8 A. Okay. So we just talked about impacts to rivers  
 9 and how that affected minimum desirable  
 10 streamflows, and that related to the blue areas  
 11 on the charts that we talked about earlier. Now  
 12 we're going to talk about the gray areas on  
 13 those budget charts.  
 14 The gray areas were representing water that  
 15 was removed from the aquifer. But those budget  
 16 charts on figures 2, 3, and 4 just tell you the  
 17 total volume. When you get to figure 6 here,  
 18 we're actually seeing where the volume is  
 19 removed. So what we're seeing is the chart is  
 20 laid out with -- or the map is laid out here  
 21 with three -- three columns. The first column  
 22 is scenario A, the middle one is scenario B, and  
 23 the third one to the right is scenario C.  
 24 Q. So these are essentially the same three  
 25 scenarios that you outlined before?

Page 2530

1 A. Yes. So scenario A represents the City pumping  
 2 its native water right of 40,000 acre-feet per  
 3 year for eight years. And so to the very left  
 4 under scenario A, there's a deep zone and a  
 5 water table. The deep zone is model layer 2,  
 6 the water table is model layer 1. And it's  
 7 actually showing that the drawdown caused --  
 8 when the City pumps its water right, it's pretty  
 9 comparable in the shallow and deep zones, that's  
 10 the case that we're seeing in the -- in the  
 11 simulations here. So these contours actually  
 12 show -- the contours go up to about 20 feet of  
 13 drawdown caused by the City pumping its native  
 14 water right for eight years during the drought  
 15 scenario. So it's just a depiction of drawdown  
 16 contours from scenario A.  
 17 And if you go to scenario B, you don't  
 18 really see contours. If you look, you'll see a  
 19 little -- a few little red dots that are there;  
 20 it's just because there isn't that much drawdown  
 21 that happens in scenario B 'cause there isn't  
 22 that much water removed if the City were to  
 23 lower its water level to the current minimum  
 24 index level after diverting the water right  
 25 first.

1 **And then scenario C is a breakout of what**  
2 **I'm calling a new diversion. If the City were**  
3 **to lower water levels down to the proposed**  
4 **minimum index level, you see up to -- the**  
5 **contours go up to about 5 feet more of drawdown**  
6 **that occurs. So this is a breakdown within the**  
7 **basin storage area of water level changes that**  
8 **occur under those three scenarios that I**  
9 **simulated.**

10 Q. Now, let's turn to figure 7, if you will,  
11 Mr. Romero.

12 **PRESIDING OFFICER:** Five minutes.

13 **MR. STUCKY:** Okay, yeah.

14 **BY MR. STUCKY:**

15 Q. Now, let's turn to figure 7, if you will,  
16 Mr. Romero.

17 **A. So figure 7 is the cumulative drawdown from the**  
18 **three scenarios that we saw in figure 6. So it**  
19 **includes all the drawdown, it includes the**  
20 **drawdown that occurred from the City pumping its**  
21 **water right, plus the drawdown from lowering to**  
22 **the current minimum index level, plus the**  
23 **drawdown from going to the proposed minimum**  
24 **index level.**

25 **And you can see on the map here on figure**

1 **7, one thing that I found was if the City were**  
2 **to lower water levels to its proposed minimum**  
3 **index level, then 35 wells would have potential**  
4 **to lose their well water column, 35 wells in the**  
5 **area. Out of those 35 wells, 29 of them would**  
6 **lose their water column from the City pumping**  
7 **its water right of 40,000 acre-feet per year and**  
8 **an additional six would lose their water column**  
9 **if the City were to lower to the proposed**  
10 **minimum index level.**

11 Q. Now, these results are based on well information  
12 that you obtained from KGS essentially; is that  
13 right?

14 **A. Yes, from KGS and also set of well data that was**  
15 **provided by Wendling Law, from the Intervenors.**

16 Q. So in other words, with the City's current  
17 minimum index level, if the City pumps all of  
18 their native rights, there's the potential for  
19 29 wells to go dry currently; is that right?

20 **A. Yes.**

21 Q. And if the City lowers the minimum index level,  
22 just based on how far down these wells are  
23 drilled, there would be the potential for  
24 another six wells in that area to go dry; is  
25 that right?

1 **A. Based on the assumptions that I made that are --**  
2 **that are similar to the 1 percent drought**  
3 **scenario, yeah.**

4 Q. Would you agree with me, though, that the wells  
5 you considered, these 35 wells, you only  
6 considered 35 wells, right, Mr. Romero?

7 **A. Yes.**

8 Q. Would you agree with me that there's much  
9 more -- there's many more wells in this area  
10 than what you analyzed; is that right?

11 **MR. MCLEOD:** I'm going to ask for  
12 foundation on that.

13 **MR. STUCKY:** I just asked the  
14 question for the foundation.

15 **A. I just need one moment. Okay. So I accessed**  
16 **data from the Kansas Geological Survey, and it**  
17 **was data from the water well completion records,**  
18 **or the WWC-5 database. And that database, it's**  
19 **actually on page 8 of my report, footnote 5,**  
20 **that database contains information that started**  
21 **being compiled since 1975, because in 1975**  
22 **drilling companies were mandated by state**  
23 **legislation to provide well information that**  
24 **typically includes well depth and a static**  
25 **depth. So I accessed the database that has**

1 **records that I would anticipate beginning in**  
2 **1975, so any wells that were drilled before**  
3 **that, I would -- would not expect them to be in**  
4 **the database.**

1 **records that I would anticipate beginning in**  
2 **1975, so any wells that were drilled before**  
3 **that, I would -- would not expect them to be in**  
4 **the database.**

5 **BY MR. STUCKY:**

6 Q. And so based on that -- you know, based on that,  
7 I think it stands to reason, then, that this is  
8 far from an exhaustive list of the wells in that  
9 area; is that correct?

10 **A. Considering since '75, I would suspect that,**  
11 **yeah, not exhaustive.**

12 Q. And this conclusion that six additional wells  
13 are going to lose their water column, that's  
14 based on looking at how far down those wells are  
15 drilled; is that right?

16 **A. Yes. I actually subtracted 10 feet from their**  
17 **depth because I wanted to leave some room for**  
18 **pump submergence, which is actually kind of a**  
19 **minimum amount, 10 feet isn't that much, but**  
20 **that may be enough.**

21 **MR. MCLEOD:** I think we have gone  
22 slightly past 3:00, if this is a good spot  
23 for a break.

24 **MR. STUCKY:** I say 2:59, I set a  
25 timer when you told me five minutes.

1 **PRESIDING OFFICER:** Go, go.  
 2 **BY MR. STUCKY:**  
 3 Q. Mr. Romero, would you agree with me that simply  
 4 drilling down -- well, if we define impairment  
 5 by the amount -- by the fact that water wells  
 6 lose their water column -- that the wells are  
 7 going to lose their water column based on  
 8 lowering the minimum index level, if we define  
 9 impairment in that way --  
 10 **MR. MCLEOD:** I'm going to object to  
 11 that without a showing that that's the  
 12 Kansas definition of impairment.  
 13 **PRESIDING OFFICER:** He hasn't  
 14 finished asking the question.  
 15 **BY MR. STUCKY:**  
 16 Q. Mr. Romero, if we define impairment in the sense  
 17 of wells losing their water column, would you  
 18 agree with me, then, that impairment would occur  
 19 based on dropping to a new index level?  
 20 **MR. OLEEN:** I join in the objection  
 21 because I don't think that's the definition  
 22 of impairment under Kansas water law.  
 23 **MR. STUCKY:** And they're -- they are  
 24 certainly free to cross. I phrased my  
 25 question, I think, in a clear manner.

1 **PRESIDING OFFICER:** Yeah, he  
 2 clarified if that was how impairment was  
 3 defined. So you can answer.  
 4 **A. If that's how impairment is defined, I agree.**  
 5 **MR. STUCKY:** It is now, I show five  
 6 minutes and 5 seconds, I'm prepared to stop  
 7 based on when you gave my warning so ...  
 8 **PRESIDING OFFICER:** Okay. It's  
 9 3:00 o'clock, we are required to stop, so  
 10 we will resume at 8:30 tomorrow morning.  
 11 Thank you.  
 12 (Whereupon, the proceedings were  
 13 adjourned at 3:03 p.m.)
