1 **PRESIDING OFFICER:** Okay. We're  
2 back on the record. It's about 8:34 in the  
3 morning on March 5th, 2020. We are  
4 resuming the administrative hearing for the  
5 City of Wichita's request to modify their  
6 ASR Phase II project. And Mr. Stucky is in  
7 surgery this morning, Mr. Adrian is going  
8 to represent the District. So, Mr. Adrian,  
9 please go ahead.

10 **MR. ADRIAN:** Thank you.

11  
12 **DIRECT EXAMINATION (Cont.)**

13 **BY MR. ADRIAN:**

14 Q. Mr. Romero, when we finished -- or ended  
15 yesterday, we were talking at that point about  
16 the effect in the basin storage area of the  
17 potential withdrawal under the proposal of the  
18 City. And at that point --

19 **A. Yes.**

20 Q. -- you talked about the effect on area wells  
21 within -- within that area, and I think you  
22 referenced the requirement of the 660 feet  
23 within the -- within the withdrawal wells. You  
24 recall that conversation?

25 **A. In the conversation, we didn't talk about the**

1 **660 feet, but I was about to elaborate on that.**

2 Q. Okay. Well, then why don't you proceed and  
3 explain what your findings were with regard to  
4 that.

5 **A. We were talking about figure 7 in my report,**  
6 **which shows the drawdown from the three**  
7 **scenarios that I ran, scenarios A, B, and C. So**  
8 **it's a cumulative drawdown from those three**  
9 **scenarios. And just to refresh everyone's**  
10 **memory, scenario A is the effect from the City**  
11 **pumping its full water right of 40,000 acre-feet**  
12 **per year during the 1 percent drought; scenario**  
13 **B is lowering water levels further down to the**  
14 **current minimum index level; and scenario C is**  
15 **lowering water levels to the proposed minimum**  
16 **index level.**

17 **And figure 7 shows the resulting water**  
18 **levels from those -- the drawdown that occurs to**  
19 **water levels from those three scenarios. And**  
20 **figure 7 has -- on the map, there are some black**  
21 **circles. The black circles that are in the map**  
22 **represent domestic wells that lose their water**  
23 **column from the City pumping its 40,000**  
24 **acre-foot per year water right.**

25 **There's a legend on the lower left corner**

1 **So if you are wondering about wells that are**

2 **impacted within 660 feet or wells that lose**  
3 **their water column within 660 feet of a City**  
4 **well, it would be either a black dot or a black**  
5 **square that is located inside the red circle,**  
6 **okay?**

7 Q. Okay.

8 **A. I just want to make sure everybody understands**  
9 **that, that that red circle is the 660-foot**  
10 **buffer. So anytime that you see a black dot**  
11 **that is outside of a red circle, that means that**  
12 **is a well projected to lose its water column,**  
13 **but it's more than 660 feet away from a City**  
14 **well. So the -- this -- this regulation**  
15 **intended to offer some protection to wells that**  
16 **are near City wells, what I'm saying is the**  
17 **660 feet is not an adequate distance because**  
18 **there are wells that are further than 660 feet**  
19 **away from City wells that are projected to lose**  
20 **their water column.**

21 Q. My understanding is that these were simply  
22 samples that you were able to identify, and it  
23 is -- no way do you imply that this is an  
24 exhaustive list of all the potential wells that  
25 would be affected by the drawdown?

Page 2546

1 **A. That's correct, 'cause I received the data from**  
 2 **the Kansas Geological Survey database, and that**  
 3 **database, development of that database began in**  
 4 **1975. So any wells -- any homes or areas that**  
 5 **had wells drilled before 1975 would not be**  
 6 **expected to be on that list.**  
 7 Q. So the -- the resulting need to, let's say,  
 8 withdraw -- or redrill the wells to gain water,  
 9 is there any guarantee that they will reach  
 10 water if the well is even within the 660 feet  
 11 and redrilled?  
 12 **A. It would depend on -- there is an aquifer in the**  
 13 **area; the aquifer is -- the USGS describes how**  
 14 **they came up with the layering, and in the areas**  
 15 **there are -- there are clays, silts, sands, in**  
 16 **some areas gravels. If you do drill down into**  
 17 **areas where there are clays, there -- there is a**  
 18 **question about whether or not you may be able to**  
 19 **produce enough water.**  
 20 Q. In none of the study you did nor any of the  
 21 reports that the City provided gave us any  
 22 evidence of what could be expected or the cure  
 23 for an unexpected problem; is that correct?  
 24 **A. I have not seen any information on that.**  
 25 Q. And to do that, to have any information on that,

Page 2547

1 you would have to examine individual well logs  
 2 and the resulting findings from those logs such  
 3 as clay layers, depth to shale, and so on, would  
 4 you not?  
 5 **A. Yes. And I should clarify, I didn't see any**  
 6 **information provided on that. The USGS report**  
 7 **does have a description of lithologic logs that**  
 8 **were used in development of the model. So areas**  
 9 **with lower permeability were accounted for, but**  
 10 **they were averaged into model layers. There**  
 11 **could be specific details that are not reflected**  
 12 **entirely by that average.**  
 13 Q. So in your opinion, looking at those lithologic  
 14 logs would be very important, would they not?  
 15 **A. Yes. And -- and you could do some exploratory**  
 16 **drilling in areas where you may expect a lot of**  
 17 **drawdown to occur.**  
 18 Q. All right. I'd like to turn to, I think it is  
 19 your figure 8 in your report and ask what that  
 20 tells us?  
 21 **A. Figure 8, I added this to my report because I**  
 22 **did some analysis with the USGS model, I did**  
 23 **some analysis that's compatible with the**  
 24 **analyses that the USGS did with regard to**  
 25 **examining migration of chloride. And what I**

Page 2548

1 actually did is you have a -- you have a flow  
 2 model that the USGS developed, and we've been  
 3 talking about that, I've been talking about that  
 4 quite a lot yesterday, and it's the model that  
 5 is the basis for the accounting. And that --  
 6 that is a -- an aquifer flow model.  
 7 But you can build into that model a  
 8 transport model that looks at velocity of  
 9 groundwater and then comes up with estimates of  
 10 migration of water particles, or chloride as was  
 11 done in that USGS study, or other chemical  
 12 constituents if you're interested in looking at  
 13 them. And I took that model and I ran the  
 14 scenarios that I came up with, the example  
 15 scenarios, A, B and C, and -- and I looked at  
 16 how much chloride migration there would be when  
 17 you lower water levels for each of those  
 18 scenarios. But I also specifically looked at  
 19 the migration from chloride if you were to lower  
 20 water levels from the current index level to the  
 21 proposed.  
 22 So for what I'm considering the new  
 23 diversion of groundwater, I looked to see how  
 24 much chloride migration there'd be from that.  
 25 And, actually, the results were somewhat similar

Page 2549

1 to what's depicted on figure 8 here. And figure  
 2 8 is actually a figure that I adapted from the  
 3 USGS report. It's actually figure 27 from the  
 4 USGS report that describes the -- the transport  
 5 work that was done.  
 6 And I did adapt it, I did just pull that  
 7 figure in here, and then I added wells as black  
 8 dots that are depicted on the lower one-third of  
 9 the figure. On the lower one-third of the  
 10 figure, you can see some contour lines that  
 11 illustrate displacement of chloride, and the  
 12 displacement of chloride occurs where there are  
 13 wells depicted by the black dots that I added to  
 14 the figure.  
 15 And so that is an area where there's  
 16 expected to be some degree of chloride  
 17 migration. However, I need to clarify that the  
 18 USGS did find that there was an overestimate of  
 19 some groundwater velocities in that area. So  
 20 there is some migration of chloride that occurs  
 21 there, but that's understood at this time to be  
 22 somewhat of an overestimate of chloride  
 23 migration.  
 24 When I ran the model with scenarios A, B,  
 25 and C and -- and when I looked specifically at

1 the new diversion, I saw results that were very  
2 similar to what the USGS was showing in this  
3 particular map, so I just used the USGS's map  
4 instead of mapping my results on it. What I  
5 found was most of the chloride migration does  
6 occur on the southern portion of the map near  
7 the Little Arkansas -- sorry, near the Arkansas  
8 River. And there's also some migration that  
9 occurs up in the area near the Burrton plume.  
10 And so this was a preliminary study that  
11 was done. It looked like the USGS was poised to  
12 take it to the next level and try to improve the  
13 analysis and try to improve some areas where  
14 they're representing velocities in groundwater  
15 that were a little too fast than what was  
16 observed. So when I saw the results that I ran  
17 were just -- were similar in nature and to where  
18 it was occurring but also knowing that the USGS  
19 looked like they were poised to take the  
20 analysis to the next level to try to improve it,  
21 I just came up with a recommendation that it  
22 would be good to continue that work. That work  
23 was a cooperative effort between the USGS and  
24 the City, and continuing that effort would  
25 provide some insight into areas that could

1 really be affected by lowering water levels.  
2 Q. So it would be fair to say that that is what I  
3 would characterize as a danger of the proposal  
4 that has been not quantified in any way or  
5 explored beyond what you've done?  
6 A. Beyond what I've done or beyond what the USGS  
7 did.  
8 Q. Okay.  
9 A. Yeah.  
10 Q. Now, I'd like to turn to your report, which I  
11 think is Exhibit 68, and I want to direct you to  
12 page 3 of your report.  
13 **PRESIDING OFFICER:** I'm sorry, what  
14 page?  
15 **MR. ADRIAN:** Page 3 of his report.  
16 **BY MR. ADRIAN:**  
17 Q. Are you there?  
18 A. Yes, I am.  
19 Q. All right. And I again go to line 77, and the  
20 sentence at the end begins figure 1, and would  
21 you read that for us and then explain what  
22 you're saying there?  
23 A. Figure 1 shows how the hydrologic system  
24 responds to City ASR recharge credit pumping in  
25 the 1 percent drought simulation. Initially,

1 the pumping produces most of the water from  
2 aquifer storage, but as pumping continues, the  
3 cone of depression from groundwater pumping  
4 induces or depletes flow from the Little  
5 Arkansas and Arkansas Rivers. A notable  
6 observation on figure 1 is that stream depletion  
7 continues to occur for years after groundwater  
8 pumping ceases. This lagged depletion response  
9 occurs because even though pumping has stopped,  
10 stream depletion continues to fill the cone of  
11 depression that was caused when the well was  
12 pumping.  
13 That is -- I'll actually direct us to  
14 figure 1 of my report. It's apparent in figure  
15 1 or figure 2, but let's go to figure 1. And  
16 what I was talking about there is that stream  
17 depletion continues even after the wells are  
18 turned off. So the maroon portion -- the maroon  
19 bars that are shown on the chart represent the  
20 pumping of ASR recharge, and the pumping stops  
21 actually at the end of year six where there's no  
22 more maroon bars that are present. But the  
23 lower half of that chart that shows the blue  
24 portion is stream depletion, and you'll see that  
25 stream depletion actually continues - time is

1 moving horizontally on this chart - the stream  
2 depletion continues even after the well is  
3 turned off.  
4 And that is because when you pump your  
5 wells, they create a cone of depression. When  
6 you turn off the wells, the water level starts  
7 recovering, but when the water level is  
8 recovering it's being filled in by flow from the  
9 river. So I was just clarifying that stream  
10 depletion continues even after the wells are  
11 turned off.  
12 And I described how these charts are really  
13 balancing charts, and you can see that after the  
14 wells are off, there's a blue area on the lower  
15 half of the chart and a gray area on the upper  
16 half of the chart and they're -- they're  
17 equidistant from zero. And what's happening is  
18 the river depletion is filling in aquifer  
19 storage at the same rate that the depletion is  
20 occurring. So the point is just that when you  
21 turn off the wells, that doesn't mean that the  
22 stream depletion stops immediately.  
23 Q. And then also turn to page 7 of your report, and  
24 I direct you to -- starting on line 195.  
25 A. Okay.

Page 2554

1 Q. And would you read the first two sentences  
2 there?  
3 **A. The USGS model simulates the Little Arkansas and**  
4 **Arkansas Rivers as a boundary condition that**  
5 **does not account for total streamflow. That is,**  
6 **if segments of the river near the City dry out**  
7 **or have low flow during a drought, the model**  
8 **does not account for it. Actually, I think the**  
9 **next sentence is kind of the key point. In that**  
10 **setting, there's potential for the model to**  
11 **overestimate river depletion from pumping, which**  
12 **translates to an underestimation of drawdown to**  
13 **aquifer water levels.**  
14 **The point that I was making there is I**  
15 **talked about how there is a balancing when you**  
16 **pump the wells, part of the water will be**  
17 **removed from the aquifer, and part of the water**  
18 **will come from the river. If the river dries**  
19 **out or a portion of it dries out, then the --**  
20 **then the wells cannot take as much water from**  
21 **the river, which would result in the wells**  
22 **taking more water from the aquifer. So it can**  
23 **affect the accounting of stored water and river**  
24 **effects.**  
25 **So if you're accounting for aquifer storage**

Page 2555

1 **and recovery or credit water and water that's**  
2 **diverted from your water right, whether or not**  
3 **the river is making a proper contribution to**  
4 **water can affect that accounting. So that's**  
5 **part of my reasoning for just recommending that**  
6 **some sensitivity be done to analyze how**  
7 **different the accounting would be if parts of**  
8 **the river were dry for a period of time.**  
9 Q. Again, that was not an analysis that was done in  
10 the proposal or any of the testimony in support  
11 of the proposal, was it?  
12 **A. I do not believe so.**  
13 Q. All right. I want to direct you now to the  
14 proposal itself, and that would be page -- the  
15 proposal itself and I don't have the exhibit  
16 number on that in front of me. Can you find  
17 that, Mr. Romero?  
18 **A. I have it.**  
19 Q. And page -- it's figure 16.  
20 **A. I am there.**  
21 Q. Okay. I want you to comment on that. I think  
22 you did in -- earlier in the direct, but I want  
23 to refresh my memory in that regard, to explain  
24 that figure to us as soon as the hearing officer  
25 finds her figure there.

Page 2556

1 **PRESIDING OFFICER:** Figure 16?  
2 **MR. ADRIAN:** 16.  
3 **PRESIDING OFFICER:** Of the proposal?  
4 **MR. ADRIAN:** Yes.  
5 **PRESIDING OFFICER:** Oh, sorry, yes,  
6 I have it.  
7 **A. This is something I address really in kind of**  
8 **the last section of my report, and this chart is**  
9 **illustrating current versus proposed accounting**  
10 **methods, and one of the things that you can see,**  
11 **if you look at the figure, is when you look at**  
12 **cumulative storage credits, which is the**  
13 **vertical axis, as you move higher up on the**  
14 **chart, there's a deviation between the**  
15 **accounting -- between the current accounting**  
16 **method and the proposed accounting method.**  
17 **Excuse me.**  
18 **And -- and I understand the reasoning for**  
19 **having a proposed accounting method, it's --**  
20 **it's a more simplified method than running the**  
21 **model every time, which -- which is a fine**  
22 **approach, I'm all -- I'll always be for**  
23 **simplifying things if you can, but since there**  
24 **is a deviation that occurs when you get to the**  
25 **cumulative recharge credits increasing, I'm -- I**

Page 2557

1 **have a suggestion of maybe enhancing the**  
2 **simplified method a little bit or seeing if it**  
3 **could be enhanced to account for that. And if**  
4 **that's possible, I'd just suggest making an**  
5 **adjustment to the simplification.**  
6 **BY MR. ADRIAN:**  
7 Q. So if I understand you correctly, what you're  
8 saying is that the simplified method is not as  
9 accurate as what could be done?  
10 **A. It's a little different from the current method.**  
11 Q. Yes.  
12 **A. Yes.**  
13 **MR. ADRIAN:** If I could have just a  
14 moment.  
15 (A sotto voce discussion was held  
16 between Mr. Adrian and Mr. Boese.)  
17 **BY MR. ADRIAN:**  
18 Q. Mr. Romero, you -- in terms of water quality,  
19 what you referred to was primarily chlorides.  
20 Were there any other chemicals or invasive  
21 problems that you would see occur, or  
22 potentially occur?  
23 **A. The study that I looked at focused mostly on**  
24 **chloride. Chloride is kind of an interesting**  
25 **constituent in the sense of the way that it's**

1 spatially laid out. There is high chloride  
2 along the Arkansas River and in the area of  
3 Burrton, it's generally west, southwest and --  
4 of City wells. So as the City wells pump more  
5 water or lower water levels, that tends to  
6 induce chloride migration from those areas.

7 There is -- there is a USGS study that  
8 looks at other constituents. There is arsenic  
9 in the area. Arsenic is -- in the deep portion  
10 of the aquifer, there's some arsenic that is  
11 along the Little Arkansas and also in the area  
12 of Burrton. And really any constituent that is  
13 in an area that is not so close to the City  
14 wells, if you pump the wells, it would promote  
15 inducing that constituent toward the wells.

16 Q. As I recall in the hearings we held in regard to  
17 Phase I and in the hearings we held in regard to  
18 Phase II, arsenic was an issue that was raised  
19 at that time, concern of arsenic invasion. Did  
20 you look at those -- the transcripts on those  
21 proceedings at all, have you done any study with  
22 regard to migration of arsenic?

23 A. I have not.

24 Q. So your sole source would be that USGS study  
25 that you looked at?

1 A. It does, but it depends what constituent you're  
2 looking at. If it's a constituent that makes --  
3 that is present in a lot of the area, it just  
4 displaces it; and -- and so it could degrade it  
5 to the area that it displaces it, but it could  
6 improve it in the area that it moves away from.  
7 So it's complex.

8 Q. Well, in that sense, I was referring primarily  
9 to the chloride plume around Burrton and the  
10 saltwater invasion around the Big Ark River?

11 A. I agree with you in that context.

12 Q. And, in fact, the City didn't address that at  
13 all, did they?

14 A. I did not see it in -- in the proposal.

15 Q. And also lowering the minimum index level has  
16 the -- the effect of affecting minimum desirable  
17 streamflow, does it not?

18 A. It does.

19 Q. And the City didn't address that at all, did  
20 they?

21 A. I did not see it in the proposal.

22 Q. And also it has the effect of impairing, I'm  
23 referring again to the lowering of the minimum  
24 index level, it has the effect of impairing  
25 wells within the City well field -- other users

1 A. Yes. There are other constituents as well, but  
2 it just kind of depends on where -- where these  
3 constituents are located. In some cases, you  
4 can have other constituents that kind of make up  
5 a large portion of the area. In cases like  
6 that, pumping a well can move that particular  
7 constituent closer to it, but it can also move  
8 it further away from other wells. So it's  
9 really complex when you start thinking about  
10 that sort of thing.

11 In the deep aquifer, though, chloride is in  
12 a setting such that it could be pulled toward  
13 wells that are in the basin storage area, and  
14 arsenic in the deep aquifer being near the  
15 Little Arkansas is somewhat in a similar  
16 setting.

17 Q. So it's an unknown at this point, an unknown  
18 danger?

19 A. Yeah. I mean, if it was brought up in earlier  
20 discussions, there -- that would make sense and  
21 I could see that from the setting that's there.

22 Q. So the effect of -- in summary, the effect of  
23 lowering the minimum index level has the  
24 potential of degrading water quality, does it  
25 not?

1 within the City well field?

2 MR. OLEEN: I again object to use of  
3 that legal term, impairment. If the  
4 witness understands the question to be  
5 under the previous assumption that he was  
6 given as to what impairment means --

7 MR. ADRIAN: I thought that still  
8 stood but --

9 PRESIDING OFFICER: Okay,  
10 understood.

11 A. If that still stands, I agree.

12 BY MR. ADRIAN:

13 Q. And also withdrawing the AMC credits as they  
14 propose would also have the effect of degrading  
15 water quality, would it not?

16 A. It -- diverting groundwater from the area would.  
17 Whether it's considered an ASR credit or an AMC,  
18 the effects would be the same.

19 Q. And it also, as I asked above, it has -- the  
20 City did not address that issue, did they?

21 A. I did not see that in the proposal.

22 Q. And it also, withdrawing the AMC credits, has  
23 the effect of affecting -- affecting the minimum  
24 desirable streamflow, does it not?

25 A. Yes.

Page 2562

1 Q. And using little I on the word impairment, it  
 2 has the -- the effect of impairing the wells in  
 3 the City area, that is withdrawing the AMC  
 4 credits, to an unknown extent, does it not?  
 5 **A. Yes.**  
 6 Q. And, again, the City did not address the issue,  
 7 did they?  
 8 **A. It's not present in the proposal.**  
 9 Q. Now, Mr. Romero, you've had vast experience, I  
 10 think it was mentioned and related yesterday,  
 11 really all over mostly the western United  
 12 States, have you not?  
 13 **A. Yes.**  
 14 Q. And so you've worked on numerous projects either  
 15 similar or not similar to this proposal, have  
 16 you not?  
 17 **A. Yes.**  
 18 Q. Would you be in a position to say what you feel  
 19 would be sort of the standard of care that  
 20 should be taken in a proposal of this type?  
 21 **A. I'd say generally to not cause harm from an  
 22 applied-for type of water use.**  
 23 Q. So the standard that you would see around the  
 24 United States or primarily the western United  
 25 States would at the very least address those

Page 2563

1 three issues, would it not?  
 2 **A. Which three issues?**  
 3 Q. Well, the potential for streamflow, damage to  
 4 streamflow for chloride movement, and impairment  
 5 of other wells?  
 6 **A. Yes, that -- I'm often analyzing hydrologic  
 7 effects to provide some context so decisions  
 8 could be made as to how to handle those types of  
 9 issues.**  
 10 **MR. ADRIAN:** Just a moment, please.  
 11 (A sotto voce discussion was held  
 12 between Mr. Adrian and Mr. Boese.)  
 13 **MR. ADRIAN:** All right. I think we  
 14 have no other questions.  
 15 **PRESIDING OFFICER:** Mr. McLeod.  
 16  
 17 **CROSS-EXAMINATION**  
 18 **BY MR. MCLEOD:**  
 19 Q. Good morning, Mr. Romero.  
 20 **A. Good morning.**  
 21 Q. Mr. Romero, when you were discussing your  
 22 background and qualifications, you mentioned  
 23 having a Q clearance in connection with some  
 24 work that you did on evaluating plugging  
 25 materials near Los Alamos. What is a Q

Page 2564

1 clearance?  
 2 **A. That -- that was a clearance required for doing  
 3 certain types of work at Los Alamos that related  
 4 to national security.**  
 5 Q. Was the basis of evaluating people for that  
 6 clearance related to their technical competence  
 7 or the government's belief that they could be  
 8 trusted to keep confidential information  
 9 confidential?  
 10 **A. More the latter, I under -- I understand the  
 11 qualification to be really an honest American.  
 12 The concern is that you may have some  
 13 information that you're not honest about and  
 14 then someone could blackmail you to try to get  
 15 secret information that you have. So that's  
 16 generally how I understand that.**  
 17 Q. Mr. Romero, you had mentioned that when you ran  
 18 the model you had -- you had produced results at  
 19 variance with the Burns & McDonnell results  
 20 generally by a difference of 3 feet or less. I  
 21 didn't hear whether you ever said whether the  
 22 levels that you got in your results were higher  
 23 or lower than the levels that they got in their  
 24 results?  
 25 **A. Oh, I seem to recall it was a little bit of a**

Page 2565

1 **mix.**  
 2 Q. So there were some each way?  
 3 **A. I believe so.**  
 4 Q. Do you remember if they were predominantly  
 5 higher or lower?  
 6 **A. I do not.**  
 7 Q. And you indicated that that difference did not  
 8 matter for your conclusions, and can you tell us  
 9 again why that difference of a few feet didn't  
 10 matter for your conclusions?  
 11 **A. It didn't significantly -- significantly change  
 12 the numbers that I was looking at enough to  
 13 change my conclusions. I -- I presented some  
 14 numbers that illustrate a volumetric analysis of  
 15 how much you pump and how much the river  
 16 responds and how much the aquifer responds, and  
 17 there was some difference in the numbers but not  
 18 enough to change the fact that there's still a  
 19 balance between effects to the river and to the  
 20 aquifer. And in terms of -- in terms of overall  
 21 drawdown, it was, you know, plus or minus a few  
 22 feet, it really didn't change the picture that  
 23 there was some wells that lose their water  
 24 column.**  
 25 Q. And given that your results were that close to

1 the Burns & McDonnell result, do you believe  
2 that their modeling work in connection with  
3 determining the new 1993 proposed index levels  
4 was done reasonably?

5 **A. I do.**

6 Q. And do you regard their modeling work in that  
7 respect as generally valid?

8 **A. In terms of -- there were some assumptions that  
9 are made, but in terms of the technical  
10 approach, I consider it reasonably valid, yeah.**

11 Q. And, Mr. Romero, you used the term glitch in  
12 relation to an issue that arose with respect to  
13 some differences in data files, and I think you  
14 related it to something that can happen if the  
15 files have been in contact with a particular  
16 interface. Can you explain that for us a little  
17 bit better?

18 **A. Yes. The -- the model files in their most raw  
19 form are actually in a format that's designed by  
20 the U.S. Geological Survey in terms of input  
21 files. And it used to be that when you worked  
22 with models, you know, sometime ago before these  
23 interfaces existed you had to set up those input  
24 files with your own method, you had to come up  
25 with your own method to set up the structure of**

1 **the input files.**  
2 **And when the files are set up, it's**  
3 **basically, if you can think of it almost like if**  
4 **you were looking at a Word document, you have**  
5 **spaces, you'll have -- at the beginning of a**  
6 **paragraph, you might have an indentation; then**  
7 **at the end of your paragraph you may have a**  
8 **space between your next paragraph. Well, the**  
9 **input files are set up with spaces in similar**  
10 **ways, and you can -- if you have a number that**  
11 **is an incorrect space -- that is an incorrect**  
12 **space, like let's say in one of your paragraphs**  
13 **you leave out an indent, then when the model**  
14 **reads the files, it will read that you missed**  
15 **that indent, and that will mean something**  
16 **different in the model than if you didn't have**  
17 **an indent that was there.**

18 **So there are these interfaces that have**  
19 **been developed by people to help facilitate**  
20 **working with models, and a glitch would be that**  
21 **the interface puts an indent in a place where it**  
22 **shouldn't have put an indent; and then that gets**  
23 **read into the model, but it means something**  
24 **different in the model. So it's just an error**  
25 **in the input file. And these models change all**

1 **the time, and the interface programs try to keep**  
2 **up, but sometimes they have trouble keeping up.**

3 **And so since -- since I saw that difference**  
4 **and I saw it didn't make -- it really didn't**  
5 **affect my overall conclusions, I thought it was**  
6 **okay to proceed with my analysis where I didn't**  
7 **have that glitch built into the files. And then**  
8 **when I received a copy of Mr. McCormick's**  
9 **supplemental report where he described that he**  
10 **looked at that issue and said that he did not**  
11 **have that issue on his end of working with the**  
12 **files, that's -- then I thought it just may have**  
13 **been a glitch, which sounded like a reasonable**  
14 **explanation to me.**

15 Q. And so also when Counsel -- when Counsel asked  
16 you about Mr. McCormick's statement that he had  
17 used files not affected by that glitch and you  
18 said you didn't know conclusively if he had, you  
19 don't really have any reason to doubt  
20 Mr. McCormick on that point, do you?

21 **A. I don't.**

22 Q. Did the City's proposal include an output of  
23 tables and figures that include groundwater  
24 levels by MODFLOW cell and by index well?

25 **A. Can you just repeat that?**

1 Q. Did the City's proposal include an output of  
2 tables and figures that include groundwater  
3 levels by MODFLOW cell and by index well?  
4 **A. It did.**  
5 Q. If you were reviewing what the impact of the  
6 modeling results are, is a predicted water  
7 elevation a valuable piece of information for a  
8 regulatory agency?  
9 **A. Generally, yes.**  
10 Q. If you're reviewing what the impact of the  
11 modeling results are, is a predicted saturated  
12 thickness a valuable piece of information for a  
13 regulatory agency?  
14 **A. Yes.**  
15 Q. In terms of impact of the feet difference  
16 between your results and the -- and the Burns &  
17 McDonnell results as it relates to the  
18 contingency, I think you had -- you had  
19 indicated as a general matter in your main  
20 testimony that the differences between the  
21 results could add to the variance in the  
22 contingency. My specific question, where the  
23 difference between the Burns & McDonnell results  
24 was that their level was actually higher than  
25 your results, then in that instance, is that

1 Q. Did the City's proposal include an output of  
2 tables and figures that include groundwater  
3 levels by MODFLOW cell and by index well?  
4 **A. It did.**  
5 Q. If you were reviewing what the impact of the  
6 modeling results are, is a predicted water  
7 elevation a valuable piece of information for a  
8 regulatory agency?  
9 **A. Generally, yes.**  
10 Q. If you're reviewing what the impact of the  
11 modeling results are, is a predicted saturated  
12 thickness a valuable piece of information for a  
13 regulatory agency?  
14 **A. Yes.**  
15 Q. In terms of impact of the feet difference  
16 between your results and the -- and the Burns &  
17 McDonnell results as it relates to the  
18 contingency, I think you had -- you had  
19 indicated as a general matter in your main  
20 testimony that the differences between the  
21 results could add to the variance in the  
22 contingency. My specific question, where the  
23 difference between the Burns & McDonnell results  
24 was that their level was actually higher than  
25 your results, then in that instance, is that

1 Q. Did the City's proposal include an output of  
2 tables and figures that include groundwater  
3 levels by MODFLOW cell and by index well?  
4 **A. It did.**  
5 Q. If you were reviewing what the impact of the  
6 modeling results are, is a predicted water  
7 elevation a valuable piece of information for a  
8 regulatory agency?  
9 **A. Generally, yes.**  
10 Q. If you're reviewing what the impact of the  
11 modeling results are, is a predicted saturated  
12 thickness a valuable piece of information for a  
13 regulatory agency?  
14 **A. Yes.**  
15 Q. In terms of impact of the feet difference  
16 between your results and the -- and the Burns &  
17 McDonnell results as it relates to the  
18 contingency, I think you had -- you had  
19 indicated as a general matter in your main  
20 testimony that the differences between the  
21 results could add to the variance in the  
22 contingency. My specific question, where the  
23 difference between the Burns & McDonnell results  
24 was that their level was actually higher than  
25 your results, then in that instance, is that

1 Q. Did the City's proposal include an output of  
2 tables and figures that include groundwater  
3 levels by MODFLOW cell and by index well?  
4 **A. It did.**  
5 Q. If you were reviewing what the impact of the  
6 modeling results are, is a predicted water  
7 elevation a valuable piece of information for a  
8 regulatory agency?  
9 **A. Generally, yes.**  
10 Q. If you're reviewing what the impact of the  
11 modeling results are, is a predicted saturated  
12 thickness a valuable piece of information for a  
13 regulatory agency?  
14 **A. Yes.**  
15 Q. In terms of impact of the feet difference  
16 between your results and the -- and the Burns &  
17 McDonnell results as it relates to the  
18 contingency, I think you had -- you had  
19 indicated as a general matter in your main  
20 testimony that the differences between the  
21 results could add to the variance in the  
22 contingency. My specific question, where the  
23 difference between the Burns & McDonnell results  
24 was that their level was actually higher than  
25 your results, then in that instance, is that

1 Q. In terms of impact of the feet difference  
2 between your results and the -- and the Burns &  
3 McDonnell results as it relates to the  
4 contingency, I think you had -- you had  
5 indicated as a general matter in your main  
6 testimony that the differences between the  
7 results could add to the variance in the  
8 contingency. My specific question, where the  
9 difference between the Burns & McDonnell results  
10 was that their level was actually higher than  
11 your results, then in that instance, is that

Page 2570

1 variance actually eating up part of the  
2 contingency?  
3 **A. It wouldn't.**  
4 Q. If -- if we use the level, the proposed level  
5 for the Burns & Mac model results and your  
6 results show there actually should be a lower  
7 level at that index cell, then isn't part of the  
8 contingency accounted for by that difference in  
9 the model results?  
10 **A. I think in the setting we have here, yes. The**  
11 **contingency was added, as I understand it, in**  
12 **one direction, downward. It sounds to me like**  
13 **you're describing -- if you're talking about a**  
14 **difference that is upward, then it doesn't take**  
15 **it into account. If you're accounting for a**  
16 **difference that is downward in the same**  
17 **direction as the contingency, then it does eat**  
18 **up part of that contingency.**  
19 There isn't a lot of detail described in  
20 how that contingency was come up with. You  
21 know, I think in terms of -- if I were  
22 developing a contingency, I would -- I would  
23 consider what the model is showing in comparison  
24 to what is actually shown in a calibration, and  
25 you could start to weight areas where the model

Page 2571

1 may be showing more drawdown than what's  
2 observed versus less drawdown than what's  
3 observed. And you can take all that information  
4 and build it into something that's a plus or  
5 minus type of contingency.  
6 This contingency goes in one direction. If  
7 I were looking at something like that, I would  
8 expect it to be something that would be a plus  
9 or minus type of thing. Those are my general  
10 thoughts on the contingency.  
11 Q. Mr. Romero, do you think a contingency is  
12 appropriate to account for variations in things  
13 like potential changes in pumping?  
14 **A. I -- I do think it's reasonable. There is --**  
15 **but one thing to be careful with with regard to**  
16 **contingencies is there's a whole class of study**  
17 **of -- that was done -- that's been done with**  
18 **modeling to try to figure out uncertainty in**  
19 **results and uncertainty in projections. And it**  
20 **involves running multiple simulations, thousands**  
21 **of simulations, and making changes in the**  
22 **aquifer properties within a plausible range of**  
23 **numbers.**  
24 When you do that, you could run thousands  
25 of simulations, and in each case you can get a

Page 2572

1 **projected water level that's somewhat different;**  
2 **and because you run thousands of them, you**  
3 **actually generate some statistics on the**  
4 **results. And once you have statistics on those**  
5 **results, you can come up with plus or minus**  
6 **uncertainty quantities.**  
7 And that's a very extensive process, it's  
8 very expensive, takes a lot of time and a lot of  
9 effort. Anytime that you do that, that's the  
10 most mathematical appropriate way to do that,  
11 but you can step back and say, if I just go plus  
12 or -- I've looked at this a number of times, and  
13 I've stepped back and said, if you just step  
14 back and say, here's my average number, instead  
15 of running all these multiple -- all these  
16 multiple simulations, I can just say, let's just  
17 go with plus or minus 20 percent or plus or  
18 minus 30 percent and just run three simulations,  
19 one that's plus 30, one that's minus 30, and  
20 you'd actually envelope all those thousands of  
21 simulations, rendering them unnecessary, even  
22 though they're more mathematically appropriate.  
23 So then -- so you could take that approach,  
24 the latter approach where you just run one  
25 simulation using your best planning average and

Page 2573

1 go plus or minus 20 percent or plus or minus  
2 30 percent and say, okay, we have a pretty good  
3 bandwidth that we can work with here. And --  
4 but then you can say, well, which one should we  
5 decide on? I -- I tend to say the one in the  
6 middle because then you're not going too far out  
7 of the ballpark one way or the other.  
8 So contingencies can be appropriate, but  
9 you want to be careful that your contingency  
10 doesn't pull you out of the ballpark when you've  
11 tried to stay in the ballpark for your whole  
12 analysis working with an average number that's  
13 in the middle.  
14 Q. That process of running thousands of simulations  
15 to analyze the risk probability, Mr. Romero, is  
16 there a term of art for that in analytics?  
17 **A. Yeah, it's call a stochastic approach.**  
18 Q. Thank you. And I think you had indicated even  
19 in your main testimony that you preferred,  
20 because of the expense and elaborate time  
21 commitment in that type of analysis, to use that  
22 20 percent rule of thumb?  
23 **A. Yes.**  
24 Q. Let me just ask a few more questions about  
25 factors to consider in contingencies. Would you

1 think contingency is appropriate to account for  
2 things such as variations in actual climate as  
3 compared to simulated?

4 **A. Yes.**

5 Q. Or the calibration statistics of the area of  
6 interest?

7 **A. Yes, that's another factor.**

8 Q. And then, Mr. Romero, when -- when you do  
9 stochastic analysis, and it gives you really a  
10 risk probability, doesn't it?

11 **A. Sure.**

12 Q. Isn't another factor to consider the impact  
13 if -- if you are wrong, what's going to go wrong  
14 if the number that you choose is incorrect?

15 **A. You can do that.**

16 Q. So would you want to be generally more  
17 conservative in setting a contingency in a case  
18 where, for example, the water supply of a half  
19 million people hinged on whether that  
20 contingency was adequate?

21 **A. You can make some conservative choices in a  
22 situation of planning such as that, sure.**

23 Q. It might be a really good reason not to pick the  
24 middle of the possible results, mightn't it?

25 **A. It can be, yes.**

1 Q. And also I want to ask you under the current  
2 permit conditions, which only currently provide  
3 for the presence of credits due to physical  
4 recharge, which was put in by the City and which  
5 under the accounting method is still there and  
6 has not leaked out, wouldn't that water that you  
7 term a new diversion all be water that the City  
8 actually put there?

9 **A. Can you just repeat that, it was a little long?**

10 Q. Yeah. Under the current permit conditions where  
11 the only recharge credits that the City can  
12 claim are the physical recharge credits for  
13 water that's been injected and has not leaked  
14 out and under the accounting it's still there,  
15 isn't the water that the City would be diverting  
16 by lowering the bottoms and taking those credits  
17 water that the City put there?

18 **A. To that extent, yes.**

19 **PRESIDING OFFICER:** If I'm  
20 understanding what he was describing as,  
21 quote, new diversions yesterday, I thought  
22 those were just in terms of the proposed  
23 lower index level, not the current ASR  
24 credits. Am I mistaken about that?

25 **BY MR. MCLEOD:**

1 Q. Mr. Romero, I -- I know you didn't use it in the  
2 sense of legal diverting or diversion, but you  
3 conceptualized the lowering of the 1993 index  
4 levels as a new diversion of water by the City.  
5 I wanted to ask you, do you understand that the  
6 City's not precluded from using its native  
7 rights if index levels go below those 1993  
8 levels?

9 **A. I -- I do recognize that and -- which is  
10 actually why I ran an analysis of diverting the  
11 City water right before diverting credit water  
12 in the analyses that I -- that I ran.**

13 Q. Right. For an eight-year period, though?

14 **A. Yes, for an eight-year period.**

15 Q. Conceivably, if the City reached year eight and  
16 the drought persisted and the City had to draw  
17 its full native rights in year nine and then  
18 year ten --

19 **A. Or 11 and 12.**

20 Q. -- the 1993 index levels would not preclude  
21 that, correct?

22 **A. As I understand it, it would not.**

23 Q. No matter what the hydrologic impact on the  
24 aquifer or the streambeds might be?

25 **A. It seems that way.**

1 Q. So let's clean it up. Mr. Romero, what you were  
2 referring to as a new diversion, it was the  
3 difference in volume the City would be able to  
4 withdraw if the index levels were lowered below  
5 the 1993 index levels, correct?

6 **A. Yes.**

7 Q. And that would represent, because you had  
8 already modeled the City taking its native  
9 rights, that would represent the City taking  
10 credits, correct?

11 **A. Taking credits that they're currently not  
12 permitted to take, yes.**

13 Q. Right. And so because that's volume the City  
14 can't take now, you -- you regarded it in that  
15 sense as a new diversion of water because the  
16 City could take credits below the 1993 limits if  
17 the bottoms were lower?

18 **A. Yes, in the context of credits.**

19 Q. And, currently, the only credits that the City  
20 has under current permit conditions is for water  
21 the City actually put there, correct?

22 **A. As I understand it, yes.**

23 Q. So in a sense, in the sense that the City is  
24 able to take more water if the bottoms are  
25 lowered, the City is withdrawing more water, but

Page 2578

1 it's water the City put there, correct?  
 2 **A. It is water that the City put there, but it**  
 3 **seems that it would be water that was put there**  
 4 **in the zone that's above the current minimum**  
 5 **index level.**  
 6 Q. And also, if this doesn't get us too far into  
 7 the weeds, if the AMCs were to be approved and  
 8 the City could withdraw credits that weren't  
 9 physical credits, even as to those AMCs,  
 10 wouldn't the new diversion be water that's there  
 11 because the City took water from the Little Ark  
 12 and left that water in place instead of pumping  
 13 its native rights in some prior period?  
 14 **A. I think there's a question about whether or not**  
 15 **water would be put in the zone of the aquifer**  
 16 **beneath the current minimum index level. If you**  
 17 **assume that water levels got pulled down below**  
 18 **the current minimum index level and then the**  
 19 **City put water back in, then they'd be putting**  
 20 **water back in below the current index level**  
 21 **elevation. So there's -- it seems there's a**  
 22 **question about when you put the water in what**  
 23 **elevation our water level is at when you put it**  
 24 **in.**  
 25 Q. Did you understand, Mr. Romero, from the permit

Page 2579

1 conditions that the City is allowed to recharge  
 2 and inject water in the aquifer when it's below  
 3 the 1993 minimum index levels?  
 4 **A. I'm actually not familiar with that.**  
 5 Q. Okay. If the permit conditions said that the  
 6 City was entitled to inject water, if it's got  
 7 source water, in the aquifer despite being below  
 8 that bottom index level, the 1993 limits, would  
 9 that affect your opinion?  
 10 **A. Yes.**  
 11 Q. And how would it?  
 12 **A. Well, if -- if you place water into the aquifer**  
 13 **below the current level, then that's water that**  
 14 **was put there.**  
 15 Q. Thank you. I think in your main testimony, as  
 16 you were looking at some of the figures in the  
 17 City's proposal, including, I think,  
 18 specifically figure 10, Counsel had -- had asked  
 19 you whether that showed any impacts on  
 20 individual wells, and I think you indicated that  
 21 neither of the figures you were looking at, 10  
 22 or 11, zeros in and focuses on individual  
 23 effects to individual wells, except for index  
 24 wells, I believe you said. Do those two  
 25 figures, just to be clear for the record, show

Page 2580

1 effects on individual index wells?  
 2 **A. They do. It doesn't show effects to other**  
 3 **neighboring wells in the area.**  
 4 Q. Right. And your understanding of the Burns &  
 5 McDonnell modeling, do you believe that they  
 6 determined the impact on those index wells by  
 7 the impact in the index cell in which each of  
 8 those index wells was located?  
 9 **A. Yes.**  
 10 Q. The model that Burns & McDonnell used, in fact,  
 11 it doesn't account for any area smaller than an  
 12 index cell, does it?  
 13 **A. The -- the model has cells that are smaller than**  
 14 **the index cells. The model grid itself has**  
 15 **cells that I think are 400 feet by 400 feet.**  
 16 Q. So within that 400-feet-by-400-feet precision,  
 17 the model will give you results, and if a well  
 18 is in that cell, then you can apply those  
 19 results to that well, if it's an index well,  
 20 correct?  
 21 **A. Yes.**  
 22 Q. And do you have a sense if that's what Burns &  
 23 McDonnell did in their modeling?  
 24 **A. I suspect that's what they did.**  
 25 Q. Do you agree that their modeling as far as what

Page 2581

1 they show for the index wells was appropriately  
 2 done?  
 3 **A. I think -- yes.**  
 4 Q. Mr. Romero, Counsel blew by this in your main  
 5 testimony by asking you if there wasn't some  
 6 kind of a statement in a USGA (sic) report about  
 7 shouldn't be used to look at individual wells,  
 8 and I think you said that statement sounds  
 9 familiar. And I think that was the extent of  
 10 your testimony about that statement so far,  
 11 correct?  
 12 **A. Can you repeat that?**  
 13 Q. Counsel had asked you if there was -- if there  
 14 was a reference in one of the USGS reports, I  
 15 think he called it the specifications, we were  
 16 in Exhibit 46, whether there was some statement  
 17 there about it shouldn't be used to look at  
 18 individual wells.  
 19 **A. Oh.**  
 20 Q. And he didn't want to take time for you to look  
 21 at the actual statement, and I think you  
 22 indicated that that statement sounded familiar  
 23 but that was all you ventured on that point; is  
 24 that correct?  
 25 **A. In that testimony, yes.**

1 Q. Let's go to Exhibit 46, let's turn to page 72 in  
2 that exhibit. And I think that's in Volume III.

3 **PRESIDING OFFICER:** And what page  
4 was that, please.

5 **MR. MCLEOD:** Page 72.

6 **PRESIDING OFFICER:** Thank you.

7 **A.** I'm on page 72.

8 **BY MR. MCLEOD:**

9 Q. There's a section on that page called Model  
10 Limitations, Mr. Romero, I'm looking for but not  
11 finding that statement there, but will you look  
12 on that page and see if you can find the  
13 statement --

14 **A. Yes.**

15 Q. -- that you recall Counsel was referring to?  
16 And to shorten it up now I think I have found  
17 it, if you will look at limitation number 2.

18 **A. Okay.**

19 Q. Just read that for the record.

20 **A. The groundwater flow model was discretized using  
21 a grid with cells measuring 400 feet by 400  
22 feet. Model results were evaluated on a  
23 relatively large scale and cannot be used for  
24 detailed analyses such as simulating water level  
25 drawdown near a single well. A grid with**

1 **near where that calibration was done other wells  
2 may have been doing something somewhat different  
3 than the well that was used for the calibration.**

4 **But it is certainly reasonable to take the  
5 model, evaluate drawdown based on the  
6 calibration, look at wells in the area and  
7 see -- to see whether or not drawdown exceeds  
8 water columns that are in wells in that area.**

9 Q. In point of fact, Mr. Romero, that's exactly  
10 what you did too, isn't it?

11 **A. Yes, that's what I did.**

12 Q. So -- so contrary to what an earlier witness,  
13 Dr. Akhbari, testified was possible, basically  
14 you assessed the model impact, the regional  
15 impact on these 400-by-400-foot cells, and then  
16 using the well information that you had from KGS  
17 and the Intervenors, you figured out what wells  
18 were in that 400-by-400-foot cell, and you  
19 figured out how given the depth of those wells  
20 those wells might be impacted by the regional  
21 drawdown in that 400-by-400-foot cell. Isn't  
22 all of that correct?

23 **A. That's correct.**

24 Q. And, indeed, Mr. Romero, if we were to look at  
25 that limitation in context in the USGS report,

1 **smaller cells would be needed for such detailed  
2 analysis.**

3 Q. Okay. And Burns & McDonnell, they didn't have a  
4 grid with smaller cells, did they, as we were  
5 discussing the smallest -- the smallest grid in  
6 this model is the 400 foot by 400 foot, correct?

7 **A. Yes.**

8 Q. Mr. Romero, when you ran the model, you didn't  
9 change that facet of the model that the smallest  
10 cell was 400 foot by 400 foot, did you?

11 **A. I did not.**

12 Q. And so to this -- to the extent that the  
13 District wants to suggest that this limitation  
14 means that you can't assess impacts to a well  
15 without cells smaller than 400 foot by 400 foot,  
16 would you disagree with that contention?

17 **A. I think it is suitable to use the model to  
18 understand drawdown that happens in well areas.  
19 I think this -- you want to be careful with  
20 drawing a single sentence from a entire report  
21 and saying that in every case there's not  
22 utility to using the model in this way.**

23 **This model was calibrated to water levels  
24 at individual wells, that was part of the  
25 calibration. It is certainly true that in areas**

1 isn't that limitation really more specifically  
2 about drawdown in pumping wells?

3 **A. It could be interpreted that way.**

4 Q. Do you think that the limitation is due to the  
5 point that drawdown inside a pumping well  
6 happens on a much smaller scale than the  
7 400-by-400-foot model cells and the drawdown  
8 changes so quickly in the area around the well  
9 that the 400-by-400-foot model cell, in fact,  
10 cannot capture the detail of that drawdown,  
11 correct?

12 **A. Of the drawdown in the actual well, that's  
13 correct.**

14 Q. And this limit has no impact on using the model  
15 to look at water levels at monitoring well  
16 locations, does it?

17 **A. That's correct. And a moment ago, I said in the  
18 well, I meant in the pumping well.**

19 Q. And --

20 **A. Yeah.**

21 Q. -- and in fairness to you and the method that  
22 you employed, it also, in fact, doesn't prevent  
23 you from evaluating pumping wells that are in  
24 the 400-by-400-foot cell, does it?

25 **A. It does not but there's also a particular way**

Page 2586

1 **that you can simulate wells. There's a package**  
 2 **called a Multi-Node Well package that actually**  
 3 **will estimate the pumping water level in a well.**  
 4 **And I used that package when I did that.**  
 5 Q. So -- and to be clear, Mr. Romero, when Counsel  
 6 asked you if -- when Counsel asked you about  
 7 that statement and then immediately after asked  
 8 you if you had modified your model so that you  
 9 could look at impact to individual wells, you,  
 10 in fact, didn't -- didn't modify anything to do  
 11 with the structure of the model that uses the  
 12 400-by-400-foot cell, did you?  
 13 **A. I did not, no.**  
 14 Q. Counsel referred -- referred to that part of  
 15 your work as you taking it upon yourself to do  
 16 those analyses. And for accuracy and  
 17 completeness of the record, I just want to ask,  
 18 was that really the way it was, or was that part  
 19 of what they hired you to analyze?  
 20 **A. When I was retained, I was asked questions about**  
 21 **impacts to wells in the area, I was asked about**  
 22 **that kind of detail.**  
 23 Q. So it wasn't something that you just decided  
 24 since you were in the course of the engagement  
 25 and that might be kind of cool to go do that

Page 2587

1 analysis, correct?  
 2 **A. It was -- when I was asked, I said I can look**  
 3 **in -- when I was asked to look into effects to**  
 4 **wells, I said, I'll take a look at the model,**  
 5 **I'll take a look at the analyses, and I'll see**  
 6 **what I can do. But there was an interest in**  
 7 **wells that I was asked to look at.**  
 8 Q. And, Mr. Romero, if I understand what you said  
 9 here just today, you referred to the model as  
 10 being adequately calibrated. You didn't  
 11 recalibrate the model when you used it, did you?  
 12 **A. I did not.**  
 13 Q. And you didn't personally do any well-by-well  
 14 calibration of the type that Dr. Akhbari  
 15 suggested should be necessary to evaluate  
 16 individual well impacts, did you?  
 17 **A. I did not, but that point brought up by**  
 18 **Dr. Akhbari could be addressed with some sort of**  
 19 **uncertainty assessment. I did not do that**  
 20 **either.**  
 21 Q. And was that because in your professional  
 22 opinion as a person who has much more modeling  
 23 experience than Dr. Akhbari, you didn't think  
 24 that that was necessary?  
 25 **A. For the analysis that I did, I did not think it**

Page 2588

1 **was necessary.**  
 2 Q. I will ask this additional question because I  
 3 think you've offered this in your testimony  
 4 today. My recollection is that Dr. Akhbari  
 5 testified that the USGS model was only  
 6 calibrated on a regional basis, and I thought I  
 7 heard you say a short time ago that there are,  
 8 indeed, well specific calibrations that are a  
 9 part of the USGS model; is that correct?  
 10 **A. There are. There are some zones in the model**  
 11 **where calibration was done at a smaller scale**  
 12 **than the entire model. I think the term -- it's**  
 13 **not entirely clear what -- how far you're**  
 14 **talking about when you use the term regional,**  
 15 **but there are some subareas within the model**  
 16 **that were set up by the USGS for part of the**  
 17 **calibration -- or for the calibration.**  
 18 Q. Mr. Romero, in terms of running scenarios based  
 19 on the City withdrawing 120,000 acre-feet of  
 20 water over the course of -- actually, you didn't  
 21 do that. I believe Counsel asked you in light  
 22 of the results that you did run, would it be  
 23 worse if the City withdrew 120,000 acre-feet  
 24 over the course of the eight-year simulation.  
 25 You understand that the City is not proposing to

Page 2589

1 do that, correct?  
 2 **A. That the City is not proposing to divert**  
 3 **120,000 --**  
 4 Q. Right.  
 5 **A. -- acre-feet? I understand that to be a cap, a**  
 6 **proposed cap on diversions of water if it were**  
 7 **an aquifer maintenance credit.**  
 8 Q. And -- and you've seen the table, I mean, you  
 9 used the table of the City's projected drought  
 10 needs for your figure 1 scenario, correct, to  
 11 model what the City's projected pumping actually  
 12 would be in the eight-year drought?  
 13 **A. I'm sorry, could you just repeat that?**  
 14 Q. Your figure 1, what was it based on?  
 15 **A. It was based on the amount of recharge that the**  
 16 **City pumped -- the recharge credit water that**  
 17 **the City pumped during the 1 percent drought**  
 18 **scenario.**  
 19 Q. And that was drawn from a table in the City  
 20 proposal?  
 21 **A. Yes.**  
 22 Q. And did that table propose that the City  
 23 withdraw 120,000 acre-feet of credits during the  
 24 eight-year drought?  
 25 **A. It did not.**

1 Q. And, in fact, Mr. Romero, the City's proposal  
2 doesn't propose to pump down to the new lower  
3 levels either, does it, during the eight-year  
4 drought?  
5 **A. The proposal -- the analysis in the proposal  
6 does not pull water levels down to the proposed  
7 minimum index level. That's the reason that I  
8 did an analysis that does that.**  
9 Q. And really your analysis is -- is a  
10 this-could-happen and, therefore, I'm going to  
11 model it to see what the impact would be,  
12 correct?  
13 **A. Yes, it is. And it's often a question that's  
14 asked of me in other areas where I've evaluated  
15 proposals or permits or applied-for permits is  
16 to get an understanding of what the effect is  
17 for the amount that would be permitted.**  
18 Q. I also want to ask this question, and simply --  
19 and simply pointing at the work that you did and  
20 then asking you to say, well, how much worse  
21 would it be if the City withdrew 120,000  
22 acre-feet over eight years, doesn't that  
23 question isolated simply to the withdrawal  
24 ignore the whole front end of the analysis about  
25 how those credits could be there and how they

1 **in terms of water rights, which is shown on  
2 figure 2, I would say, yeah, there's not much  
3 there.**  
4 Q. And, likewise, when we looked at scenario B on  
5 your figure 6 and -- and there wasn't much  
6 happening there, that's also because there's  
7 only about 14,900 acre-feet of water that the  
8 City can take between using its native rights  
9 and hitting the current limits, correct?  
10 **A. Yes.**  
11 Q. And so in that sense, all of that work that you  
12 did confirms the City's contention that once the  
13 City has pumped its native rights, it's only  
14 going to be able to access 14,900 acre-feet  
15 under the current limits?  
16 **A. Yes.**  
17 Q. So during the eight-year drought, any credits  
18 the City had beyond that 14,900 acre-feet, the  
19 City would not be able to recover or use during  
20 the drought?  
21 **A. Yes.**  
22 Q. So even if the City had put 50,000 acre-feet in  
23 physical recharge into the aquifer, if all of it  
24 but this 14, 9 was below the 1993 index limit,  
25 this 14, 9 is what the City could actually

1 could be available?  
2 **A. In terms of a hypothetical, it seems so.**  
3 Q. I mean, there was no consideration in that  
4 question of what had to happen for those credits  
5 to be present for the City to draw, was there?  
6 **A. It was just a question of making a larger  
7 diversion.**  
8 Q. Mr. Romero, in your figure 3, tell us again what  
9 that figure is depicting.  
10 **A. Okay. Figure 3 is a volumetric budget chart  
11 associated with my scenario B. So scenario B is  
12 looking at the amount of water that's produced  
13 if the City lowers the water level down to the  
14 current minimum index level after having taken  
15 out water already associated with the 40,000  
16 acre-foot per year water right over eight years.**  
17 Q. Okay. So this is showing -- this is showing  
18 impact with the current bottoms, and the maroon  
19 is what the City could pump after its native  
20 rights before hitting the current 1993 index  
21 limit, correct?  
22 **A. Yes.**  
23 Q. And there's not much there, is there,  
24 Mr. Romero?  
25 **A. Relative to the amount that's taken out for --**

1 recover during the drought under the current  
2 limits, correct?  
3 **A. Yes.**  
4 Q. Mr. Romero, in your figure 4, again, just  
5 refresh us on what that figure is showing.  
6 **A. So figure 4 is the next step of lowering water  
7 levels from the current minimum index level down  
8 to the proposed minimum index level. So the --  
9 the maroon area is illustrating the additional  
10 water that the wells produce in doing so. And  
11 the -- the blue band on the lower half is  
12 illustrating the amount of water that is  
13 depleted from rivers, from the Little Arkansas  
14 and the Arkansas, and the gray portion is  
15 illustrating the water that is removed from the  
16 aquifer.**  
17 Q. And in that -- with respect to that gray band,  
18 the 33,100 acre-feet that's being removed from  
19 the aquifer over that eight-year period, how  
20 would that impact the aquifer levels and the  
21 remaining saturated thickness in the aquifer?  
22 **A. That is actually depicted on my figure 6. On  
23 the right-hand side is scenario C, and that is  
24 illustrating drawdown that occurs in the upper  
25 box in the deep zone, which was model layer 2,**

Page 2594

1 **and the lower box in the shallow zone, which is**  
 2 **model layer 1, there was a water table zone.**  
 3 **But the drawdown in both zones is about the**  
 4 **same.**  
 5 Q. So I'm going to have you go into a little bit  
 6 more detail on figure 6 to just explain what  
 7 those contour lines and black numbers are about,  
 8 what are those indicating?  
 9 **A. The -- on figure 6, the red contour lines are**  
 10 **drawdown to aquifer water levels, and the**  
 11 **numbers on each line are the numbers in feet of**  
 12 **drawdown of each contour.**  
 13 Q. So, for example, the center one with the little  
 14 black 5 on that contour line, that's indicating  
 15 that the area within that contour line has been  
 16 drawn down 5 feet?  
 17 **A. Yes.**  
 18 Q. And, likewise, with the contour line that has  
 19 the 1, wells along that contour have been drawn  
 20 down 1 foot?  
 21 **A. That's correct.**  
 22 **PRESIDING OFFICER:** And if I  
 23 understand it, 'cause I'm trying to keep  
 24 up, these would be in addition to the  
 25 drawdown caused under your scenario A?

Page 2595

1 **A. Yes. Yes. So scenario A on the left-hand side**  
 2 **is the drawdown that's caused just by pumping**  
 3 **the water right. Scenario B is the drawdown**  
 4 **that's caused by draining out the remaining**  
 5 **water after the water right was taken out down**  
 6 **to the current index level. And it's not that**  
 7 **much drawdown, there are a couple small dots,**  
 8 **didn't take out very much water. And scenario C**  
 9 **is -- each one of these is additional.**  
 10 **PRESIDING OFFICER:** Gotcha, okay,  
 11 that's what I was thinking, okay.  
 12 **A. Yes. And by the time I get to figure 7, figure**  
 13 **7 is the cumulative amount of -- they're all**  
 14 **added up.**  
 15 **PRESIDING OFFICER:** Okay. Thank  
 16 you. Sorry to interrupt.  
 17 **BY MR. MCLEOD:**  
 18 Q. So as to -- as to the impact of lowering the  
 19 1993 index levels generally, that -- that  
 20 additional withdrawal that you've referred to or  
 21 additional diversions that you referred to, that  
 22 would enable the City to take -- the City could,  
 23 in fact, only take that if it had available  
 24 credits, correct?  
 25 **A. As I understand it, yes.**

Page 2596

1 Q. Mr. Romero, you had discussed in your testimony  
 2 that a feature of the USGS model is to assume  
 3 streamflow and that sometimes in very dry  
 4 periods that assumption is not tied to facts on  
 5 the ground, correct?  
 6 **A. Yes.**  
 7 Q. Do you recall that the river package in the  
 8 model is at an annual time step, meaning that  
 9 the elevations in the river are simulated based  
 10 on an average and not on a daily or seasonal  
 11 basis?  
 12 **A. I do.**  
 13 Q. And if we were to assume that the rivers were  
 14 dry and just run the model with -- with no flow  
 15 in the rivers, wouldn't the impact of that, the  
 16 model solving for new lower index levels give us  
 17 a lower index level than if we assume flow in  
 18 the rivers?  
 19 **A. It would.**  
 20 Q. And we know that without running a sensitivity  
 21 analysis, we know that general -- that general  
 22 impact, don't we?  
 23 **A. We know it would be more effect to the aquifer,**  
 24 **yes.**  
 25 Q. Lest it be -- lest it be lost in the minutia,

Page 2597

1 all of the minimum desirable streamflow impacts  
 2 were modeled by you on the premise of an  
 3 eight-year drought, correct?  
 4 **A. Yes.**  
 5 Q. And so among the root assumptions of the  
 6 modeling is that we're in that very dry period  
 7 for the entire eight years of the modeling,  
 8 correct?  
 9 **A. Yes.**  
 10 Q. And so that's -- that is modeling what would  
 11 happen in an occasional and transient scenario  
 12 that doesn't happen every year, correct?  
 13 **A. That typically does not happen every year, yeah.**  
 14 **I mean, it has happened in terms of a 1 percent**  
 15 **drought, that's how it's characterized, but it's**  
 16 **not typical.**  
 17 Q. You wouldn't expect it to happen frequently,  
 18 would you?  
 19 **A. You would not.**  
 20 Q. And I don't know if you were here for  
 21 Mr. Letourneau's testimony or part of it --  
 22 **A. I was here for the part this week. I was -- I**  
 23 **was here Tuesday.**  
 24 Q. Were you here for Mr. Letourneau's discussion of  
 25 DWR's administration of minimum desirable

1 streamflow and how they do that?  
2 **A. I don't recall him discussing that on Tuesday.**  
3 Q. Okay. I'm going to ask you to - I'll just put  
4 it as a hypothetical - to assume with me that  
5 Mr. Letourneau said that in general DWR polices  
6 minimum desirable streamflow through what he  
7 called real-time administration, that if there's  
8 a problem they will go out to the area and try  
9 to see what they can do to resolve it and to  
10 bring the streamflow back up in the river. And  
11 my question for you is doesn't it make more  
12 sense to approach and address a transient,  
13 occasional issue like minimum desirable  
14 streamflow that way than to deny every permit or  
15 every proposal that might, every 90 years or so,  
16 have some impact on minimum desirable  
17 streamflow?  
18 **A. I -- I think there's utility in assessing the**  
19 **effect and understanding it when you make a**  
20 **decision on a permit. So I -- in terms of**  
21 **presenting that information, which I typically**  
22 **do in this type of setting, it's presented so it**  
23 **can be considered. The way to handle that in**  
24 **terms of denial or administration is something**  
25 **for the Division of Water Resources to consider**

1 **aquifer, there would be more water in the**  
2 **stream, which would contribute to helping**  
3 **maintain minimum -- minimum desirable**  
4 **streamflow, yes.**  
5 Q. And looking at the two sets of issues at the  
6 planning stage as we're evaluating the proposal,  
7 would it not make sense to weigh both the  
8 benefit to minimum desirable streamflow in the  
9 long periods when the aquifer would be full  
10 against the potential adverse effects during the  
11 eight-year drought which could be policed by  
12 real-time administration if and when they occur?  
13 **A. In terms of the sensibility of making a decision**  
14 **on this permit, I'm sure that will be done in a**  
15 **sensible way. I -- I'm here to provide**  
16 **technical information that can be considered,**  
17 **whether it's considered positive or negative by**  
18 **any party.**  
19 Q. So you don't want to speak to how those benefits  
20 should be weighed?  
21 **A. Everything should be weighed, benefits and**  
22 **things that are not considered a benefit.**  
23 Q. Mr. Romero, in your figure, I think it's 7,  
24 might be 6 and 7 that show impacts on wells --  
25 let me actually back up and ask this question:

1 **in light of information, technical information**  
2 **that's presented.**  
3 Q. So they certainly could, I mean, in conjunction  
4 with their usual approach, they certainly could  
5 police what we've modeled here in the eight-year  
6 drought if and when it happens, couldn't they,  
7 by real-time administration?  
8 **A. Yes, and -- and having some information**  
9 **beforehand may provide some utility in**  
10 **considering the permit.**  
11 Q. It might help them to know what -- what the ASR  
12 contribution to the minimum desirable streamflow  
13 issue was at that point, mightn't it?  
14 **A. Absolutely.**  
15 Q. And -- and as we're -- as we're considering a  
16 proposal here at the front end, as you said, and  
17 looking at information for planning purposes,  
18 isn't it also important to consider what would  
19 be happening the majority of the time if the  
20 aquifer is managed full as a result of the City  
21 getting the changes that it wants, wouldn't  
22 minimum desirable streamflow be improved during  
23 the entire period that the aquifer is managed  
24 full?  
25 **A. If the water level is not lowered in the**

1 You -- you didn't personally verify any of the  
2 well information that you drew from the KGS  
3 database or that was provided to you by  
4 Intervenors, did you?  
5 **A. I didn't, I relied on the logs.**  
6 Q. Okay. In your figures that depict well impact,  
7 let's look at 7. If I'm understanding this  
8 correctly, of these wells that will be impacted,  
9 29 of the 36 wells would be impacted by the City  
10 pumping its full native rights, correct?  
11 **A. Yes.**  
12 Q. So that could happen now, it isn't part of the  
13 impact of the modifications requested by the  
14 proposal, is it?  
15 **A. That's correct.**  
16 Q. And, Mr. Romero, there was some discussion  
17 during your main testimony of wells losing or  
18 potentially losing their water column. When you  
19 schedule wells on this -- on this depiction as  
20 being impacted, do you mean in the case of all  
21 of them that they are potentially losing their  
22 water column?  
23 **A. I do.**  
24 Q. And because 29 of these wells would be affected  
25 by the City's -- by the City pumping its full

Page 2602

1 native water rights, isn't there potential,  
 2 Mr. Romero, that if the City did that in order  
 3 to lower aquifer levels to the 1998 levels in  
 4 order to facilitate physical recharge, that  
 5 these 29 people who don't have any problem today  
 6 when the City's not pumping its full native  
 7 rights would then have a problem when the City  
 8 did that?  
 9 **A. Yes.**  
 10 Q. A problem they would not have if the City could  
 11 leave the aquifer full, or did leave the aquifer  
 12 full and did not draw its full native rights,  
 13 correct?  
 14 **A. Yes.**  
 15 Q. And as opposed to the interest of those 29  
 16 folks, there are six wells -- let me back up and  
 17 ask this: You didn't show any wells being  
 18 impacted by the -- by the middle scenario, the  
 19 scenario B. Is that because the pumping in  
 20 scenario B is so slight that it in and of itself  
 21 doesn't affect any additional well?  
 22 **A. It does cause a degree of drawdown but not**  
 23 **enough to cross the threshold of losing a well**  
 24 **water column.**  
 25 Q. Okay. So the six additional wells potentially

Page 2603

1 impacted in scenario C, they are all impacted by  
 2 reducing the index level from the 1993 level to  
 3 the proposed index level?  
 4 **A. Yes.**  
 5 Q. Or -- or to be precise, I should say they would  
 6 be impacted if the City pumps down to that  
 7 proposed new index level, correct?  
 8 **A. Yes.**  
 9 Q. Counsel asked you a question, which was  
 10 allowed -- allowed over objection, that if we  
 11 defined impairment as a well losing its water  
 12 column, then would all of these wells be  
 13 impaired, and I think -- I think because he had  
 14 defined it so no other answer was possible you  
 15 said yes. Mr. Romero, what if we didn't define  
 16 impairment as a well losing its water column,  
 17 what if -- what if we assume that Kansas  
 18 actually had a regulation that says wells won't  
 19 be regarded as impaired unless the impacted well  
 20 fully penetrates the aquifer. Can you tell me  
 21 whether these six wells that would be impacted  
 22 by the change to the new lower index levels  
 23 fully penetrate the aquifer?  
 24 **A. Huh.**  
 25 **PRESIDING OFFICER:** I'm sorry, are

Page 2604

1 you citing to an existing reg or were you  
 2 hypothesizing?  
 3 **MR. MCLEOD:** I was hypothesizing but  
 4 let me say that behind that hypothetical,  
 5 because I'm being ethical, there is a  
 6 regulation, K.A.R. 5-4-1.  
 7 **PRESIDING OFFICER:** And are you  
 8 quoting from that?  
 9 **MR. MCLEOD:** I'm not, I'm  
 10 paraphrasing, characterizing.  
 11 **PRESIDING OFFICER:** All right.  
 12 **MR. MCLEOD:** There wasn't an  
 13 objection, so I think I probably got it  
 14 reasonably well.  
 15 **BY MR. MCLEOD:**  
 16 Q. So you've probably become lost by now,  
 17 Mr. Romero?  
 18 **MR. ADRIAN:** Well, if he isn't, I  
 19 am. Yeah, I --  
 20 **BY MR. MCLEOD:**  
 21 Q. So if instead of assuming that impairment means  
 22 a well losing its water column, we assume that  
 23 there is in actuality a Kansas reg that says  
 24 impairment won't be found unless a well fully  
 25 penetrates the aquifer, can you tell me whether

Page 2605

1 the six wells that would be impacted by lowering  
 2 the index levels fully penetrate the aquifer?  
 3 **MR. ADRIAN:** I think he's already  
 4 told us he has no knowledge of the -- of  
 5 the core drilling that was done, what the  
 6 wells look like, whether clay layers, he  
 7 has no way of knowing that, and it's --  
 8 it's well beyond his ability to even answer  
 9 that question.  
 10 **BY MR. MCLEOD:**  
 11 Q. So Counsel is suggesting that your answer would  
 12 be no. Is the answer no, you can't tell us  
 13 whether those wells fully penetrate the aquifer?  
 14 **A. If -- if legal counsel tells me let's assume**  
 15 **this definition, the definitions can be set up**  
 16 **so that I could say yes in one case and no in**  
 17 **another case.**  
 18 Q. Correct.  
 19 **A. Let me -- let me tell you how I think of this.**  
 20 **And I looked at well water columns, I compared**  
 21 **that to the amount of drawdown. In my report, I**  
 22 **did not describe impairment. I described that**  
 23 **there is potential for these wells to lose their**  
 24 **water column, and I described that as -- I think**  
 25 **of this as a statistical sample here because I**

1 **expect that there are more wells that are out**  
2 **there that were not considered in this analysis.**  
3 **I think there's potential for some wells to lose**  
4 **their water column, which would indicate some**  
5 **type of remedy would be needed, and that is --**  
6 **that's my testimony on that. And that's how I**  
7 **describe it in my report, and I think it's legal**  
8 **counsel's job to take that information and make**  
9 **your argument on impairment.**

10 Q. And, Mr. Romero, I -- I agree with you and I  
11 understand what you did in your report and I  
12 understand that you said impact in your report.  
13 But because Counsel for the District wanted you  
14 to say the wells were impaired, he defined  
15 impairment as the well losing its water column.  
16 And I'm asking you if that definition is wrong,  
17 then can you say whether these wells are  
18 impaired?

19 **A. I cannot. I can simply describe them as they**  
20 **lost their water column, I can describe the**  
21 **reason as to why the water column was lost, and**  
22 **that information should be considered.**

23 Q. And, Mr. Romero, have you been present during  
24 any of the witnesses' discussion of the topic of  
25 permit conditions?

1 modeled drawdown for the whole cell in which the  
2 well exists, right, the whole 400-by-400-foot  
3 cell, not the actual drawdown of any well?  
4 **A. Yes, the quantity in the 400-foot-by-400-foot**  
5 **cell.**

6 Q. And so, you know, if somebody's thinking about  
7 the 660-foot buffer as a protection of a nearby  
8 well from the drawdown of the City well that's  
9 in the 660-foot area, that's not really the  
10 drawdown we're concerned about here, is it?

11 **A. Can you say that again?**

12 Q. Let me try to put it this way: If the purpose  
13 of the 660-foot buffer zone around the City well  
14 was to protect other wells from the drawdown of  
15 that City well, right, that would not address  
16 the cell-wide drawdown that we're talking about  
17 here that has the potential to impact wells  
18 outside that 660-foot area, correct?

19 **A. Are you saying that if the protection -- I'm**  
20 **sorry.**

21 Q. Let me -- let me ask it this way.

22 **MR. ADRIAN:** Please.

23 **BY MR. MCLEOD:**

24 Q. If the original purpose -- I'll rephrase  
25 slightly. Does it seem likely to you that the

1 **A. I think I was present with -- for a little bit**  
2 **of discussion with -- when some City officials**  
3 **spoke a little bit about conditions, but I can't**  
4 **say that I'm completely familiar with all the**  
5 **permit conditions that are here.**

6 Q. Do you understand the general notion of permit  
7 conditions as allowing the permit to provide for  
8 some remedies for impacts, whether or not  
9 there's a legal impairment?

10 **A. Yes. Your question was, and I just want to**  
11 **clarify, your question was do I understand that**  
12 **that's something that can occur with conditions?**

13 Q. Yes.

14 **A. Yes.**

15 Q. I wasn't asking you to opine on whether the --

16 **A. Yeah.**

17 Q. -- whether the current or any proposed  
18 conditions do that, but it's a purpose of permit  
19 conditions, correct?

20 **A. Yes.**

21 Q. And I think I understand, but I want to go  
22 through briefly your testimony about the  
23 660-foot buffer area. Because you used the term  
24 drawdown with respect to impacts on the wells,  
25 and you're talking about the modeled -- the

1 original purpose of the 660-foot buffer zone  
2 around a City well, each City well was to  
3 protect other wells specifically from the  
4 drawdown of that City well?

5 **A. Oh, I'm following you. If -- if -- you're**  
6 **talking about it in terms of one well?**

7 Q. Yes.

8 **A. Yes. I understand that point, can you continue**  
9 **with your question, then?**

10 Q. And -- and if that's how those 660-foot zones  
11 were conceived, then it makes perfect sense that  
12 they don't protect wells that are -- that are  
13 affected by the cell-wide drawdown, right, which  
14 is not coming from the well in the center of the  
15 buffer zone?

16 **A. I wouldn't characterize it in terms of the**  
17 **cell-wide drawdown; I would characterize it in**  
18 **terms of additional wells, additional City wells**  
19 **in the area. I think what's happening is if --**  
20 **if that regulation was originally conceived or**  
21 **developed to think about one well having an**  
22 **impact on a well that's within 660 feet away, I**  
23 **think the thing to recognize here is that there**  
24 **are multiple City wells and the drawdown from**  
25 **each well carries out further than 660 feet.**

Page 2610

1 **And so there's interference from multiple wells**  
 2 **that are here. So if that -- if that regulation**  
 3 **was originally set up to account for a single**  
 4 **well, then there certainly is an issue that**  
 5 **there are multiple wells here and multiple wells**  
 6 **are causing interference within the basin**  
 7 **storage area.**  
 8 Q. And because it's a cumulative impact of multiple  
 9 wells, that's why the 660-foot buffer doesn't  
 10 work, correct?  
 11 **A. That -- that would be one reason. Another**  
 12 **possible reason is that that regulation may have**  
 13 **been constructed for a particular area with**  
 14 **particular aquifer properties, and the aquifer**  
 15 **properties here may be somewhat different. So**  
 16 **that may be another reason. So I don't know how**  
 17 **that regulation was -- was put together, but I**  
 18 **am familiar with similar type of regulations**  
 19 **where they'll consider aquifer properties in a**  
 20 **particular area and decide well spacing based on**  
 21 **aquifer properties and drawdown that occurs.**  
 22 **So assuming that -- that something like**  
 23 **that was done to come up with that regulation,**  
 24 **if it considered just one well, there are**  
 25 **multiple wells here that are interfering. And**

Page 2611

1 **the point that I just wanted to clarify is that**  
 2 **you can have neighboring wells in the area that**  
 3 **are further than 660 feet away that are**  
 4 **impacted.**  
 5 Q. And -- and because of the facts that you  
 6 discussed, right, in terms of figuring out what  
 7 to do with this in permit conditions, simply  
 8 drawing a bigger circle around each City well,  
 9 that would not be a rational solution, would it?  
 10 **A. That would not be rational. In fact, one thing**  
 11 **I've done in a similar sort of setting, it**  
 12 **related to wellhead protection areas, trying to**  
 13 **protect individual wells, and -- but you run**  
 14 **into a well field for a city, for example, and**  
 15 **you want to have a wellhead protection area for**  
 16 **that. One thing I've done is rather than having**  
 17 **a buffer around individual wells is I've made a**  
 18 **buffer around an entire well field. And the way**  
 19 **that you just described the buffer would be**  
 20 **analogous to that. Perhaps a buffer around an**  
 21 **entire well field, that's something that would**  
 22 **be more appropriate.**  
 23 Q. So if you were crafting a permit condition to  
 24 extend a remedy and you wanted to extend the  
 25 remedy to wells that would be impacted by

Page 2612

1 lowering the 1993 index levels, how would you  
 2 craft that condition for this well field?  
 3 **A. First off, I'd want to think about it in more**  
 4 **detail than I am just right at the moment, but**  
 5 **in terms of thinking of it right now, I think**  
 6 **having a buffer around maybe the whole well**  
 7 **field would be a more appropriate place to start**  
 8 **thinking about it.**  
 9 Q. In your chloride migration discussion, you again  
 10 looked to the -- to one of the double pumping  
 11 scenarios that the USGS study had done and you  
 12 didn't -- you indicated that you had separately  
 13 modeled but you didn't show your results in the  
 14 depiction since you thought they were very  
 15 similar to what the existing USGS graphic  
 16 showed. My question is did you -- did you  
 17 compare the volume of their double pumping  
 18 scenario to -- to the modeled volume of the City  
 19 pumping where the 1993 limits were lowered?  
 20 **A. I didn't.**  
 21 Q. So when you did your -- did your modeling, did  
 22 an interface you were using give you a graphical  
 23 representation of the result that enabled you to  
 24 conclude that it was similar to the USGS result?  
 25 **A. Yes.**

Page 2613

1 Q. Okay. In that graphical depiction, where is  
 2 most of the chloride movement occurring?  
 3 **A. Most of the chloride movement was occurring at**  
 4 **the location very similar to what we see on my**  
 5 **figure 8, and it's in the southern part of the**  
 6 **central Wichita well field, which is indicated**  
 7 **by a red polygon, but it's just north of the**  
 8 **Arkansas River; it's where you see the color**  
 9 **bands have the most displacement. I saw most of**  
 10 **the displacement occurring in the same area,**  
 11 **very similar area.**  
 12 Q. And is that -- is that suggesting to you that  
 13 the chloride source in that area would be the  
 14 river?  
 15 **A. There is a chloride -- yes, it is suggesting to**  
 16 **that, and data shows that there is elevated**  
 17 **chloride levels along the Arkansas River there.**  
 18 Q. And in terms of trying to ascertain well  
 19 impacts, the impacted wells would be those  
 20 between the baseline contour on the map and the  
 21 contour representing the double pumping with  
 22 existing irrigation contour?  
 23 **A. Generally, yes.**  
 24 Q. And did you assess how many wells were in that  
 25 area between those contours?

1 **A. I did not.**

2 Q. And, Mr. Romero, the contours on the map, they  
3 don't -- they don't show us the extent of the  
4 chloride contamination, do they, in terms of how  
5 many parts per million?

6 **A. They do not. They just show us the extent of  
7 the change associated with the pumping.**

8 Q. And the change that they're looking at is  
9 actually movement of chloride components,  
10 correct?

11 **A. That's correct.**

12 Q. It's generally true -- let me back up. I think  
13 you indicated in your main testimony that  
14 pumping by City wells could induce chlorides or  
15 other compounds toward the pumping wells?

16 **A. Yes.**

17 Q. And that could also be moving those same  
18 constituents away from pumping wells, couldn't  
19 it?

20 **A. It would depend on where the starting point of  
21 your constituents is.**

22 Q. And anybody else's pumping wells could also move  
23 sub -- subsurface constituents in the aquifer,  
24 couldn't they?

25 **A. Yes.**

1 impacts in water?

2 **A. In general. My work doesn't focus on treatment;  
3 it focuses on identifying migration.**

4 Q. Okay. I want to clean something up because I  
5 think the record was badly distorted by  
6 objection and response. Mr. Adrian had asked  
7 you a question about whether -- whether chloride  
8 migration would impair the wells depicted as  
9 impacted, I would assume he meant in that USGS  
10 exhibit we were looking at. And Counsel for DWR  
11 objected because, of course, there's a legal  
12 concept of impairment as we've discussed. And  
13 then Counsel for the District noted that he  
14 assumed that their previous definition stands,  
15 and you answered the question that it would  
16 impair the wells. But bearing in mind  
17 that their previous definition was a  
18 quantity-directed definition that the wells are  
19 losing their water column, right, that's how  
20 they define impairment?

21 **A. Ah.**

22 Q. You're not saying that these wells are going to  
23 lose their water column because of chloride  
24 migration, are you?

25 **A. I am not. I -- I didn't intend that, I just**

1 Q. Would it be reasonable for everybody to just  
2 shut off and stop using their wells because it  
3 might move subsurface constituents?

4 **A. Not in a context when people need water. I have  
5 seen some cases where an entire City well field  
6 is contaminated with -- with some very bad  
7 constituents and cases where that groundwater is  
8 pumped, treated, and actually served to  
9 customers.**

10 Q. Mr. Romero, have you had any experience on  
11 projects for chloride mitigation?

12 **A. Yes.**

13 Q. And what did those involve, what -- what did  
14 your work involve?

15 **A. It involved closing down a mine, and there was  
16 an area where there was some mine tailings that  
17 were put into a contained area and sealed and it  
18 involved tracking multiple constituents, one of  
19 which was chloride migration from there. That's  
20 one.**

21 Q. So it was -- in that instance, it was basically  
22 tracking work?

23 **A. Yes.**

24 Q. Are you aware of any types of treatment systems  
25 that can be used to actually remediate chloride

1 **thought of it -- you're quite correct, I did not  
2 intend that, yes.**

3 Q. And under that formulation, the way they  
4 actually gave it to you and with that  
5 definition, you wouldn't be able to say that  
6 these wells are impaired by chloride  
7 contamination, would you?

8 **A. I -- I could not say it in terms of impairment.  
9 I could -- I could say that water quality could  
10 be degraded.**

11 Q. And in order to know whether that water quality  
12 degradation would approach a level impacting the  
13 practical use of water, would you have to know  
14 the specific concentration of the chloride  
15 contamination and how it relates to drinking  
16 water standards for chloride contamination?

17 **A. Yes, that would be one standard way to do it.**

18 Q. Do you know those things?

19 **A. Yes, I do know them.**

20 Q. And do you know -- do you know enough of those  
21 things for this area in order to form an opinion  
22 on whether drinking water standards are going to  
23 be abrogated by the chloride migration shown in  
24 the exhibit?

25 **A. I'd say there's potential for that to occur.**

Page 2618

1 **The -- the contour lines that are illustrated**  
 2 **here are the 250 milligram per liter chloride**  
 3 **concentration, which is a secondary standard in**  
 4 **drinking water standards, and so the chloride**  
 5 **migration is occurring in areas where there are**  
 6 **wells. The analysis the USGS did was**  
 7 **preliminary, I think it identifies potential,**  
 8 **and so that is the reason that I recommend**  
 9 **continuing with that type of work to better**  
 10 **understand it in the context you're describing.**  
 11 Q. Mr. Romero, would the pumping of irrigation  
 12 wells, including wells that might be on a  
 13 five-year flex account, impact migration of  
 14 contaminants during a drought?  
 15 **A. I anticipate that it would.**  
 16 Q. Were those impacts considered in your analysis,  
 17 or did you look only at the impacts of the  
 18 City's wells?  
 19 **A. I looked only at the impacts of the City's wells**  
 20 **in the context of the proposal and my example**  
 21 **simulations.**  
 22 Q. Mr. Romero, I mean, you had indicated somewhat  
 23 in your main testimony that when a water user  
 24 turns off -- shuts off their pumping, even after  
 25 the pumping is stopped, because of the cone of

Page 2619

1 depression from the well that was made while the  
 2 well was operating, there is still going to be a  
 3 period during which the adjacent river will be  
 4 depleted as streamflow from that river will seep  
 5 into the aquifer to fill that cone of  
 6 depression, correct?  
 7 **A. That's correct.**  
 8 Q. And does the fact that that -- the stream water  
 9 is doing that, is that not recharging the  
 10 aquifer, and is that not helpful to the other  
 11 users of the aquifer that that's occurring?  
 12 **A. That -- that water is recharging the aquifer,**  
 13 **and to the extent that there are not issues with**  
 14 **quality of the water that's recharging it, it's**  
 15 **generally beneficial.**  
 16 Q. Counsel asked you about figure 16 in the City's  
 17 proposal, if you would turn back to that just to  
 18 be refreshed on what we're discussing.  
 19 **A. I'm sorry, back to which one?**  
 20 Q. Figure 16, it shows a couple of green lines  
 21 trending upwards --  
 22 **A. Oh, in the proposal.**  
 23 Q. -- and addresses the disparity between physical  
 24 and AMC recharge accounting.  
 25 **A. Yes.**

Page 2620

1 Q. Okay. And Counsel had asked you a series of  
 2 questions suggesting to you that that -- that  
 3 that variance is occurring because of some kind  
 4 of mathematical error. And I know you weren't  
 5 here during all of Mr. McCormick's testimony.  
 6 Were you here the day that Mr. McCormick was  
 7 addressing this figure and why those lines are  
 8 diverging?  
 9 **A. I was not here for any of Mr. McCormick's**  
 10 **testimony actually.**  
 11 Q. Okay. So I'm going to hopefully get this right  
 12 from the record. If Mr. McCormick testified  
 13 that the AMC accounting assumes leakage based on  
 14 1998 water levels, a time at which -- a  
 15 condition under which 95 percent of recharge  
 16 would be retained in the aquifer, and that the  
 17 purpose of assuming that for AMCs is not to  
 18 punish the City for letting the water -- letting  
 19 the aquifer be more full where actual leakage is  
 20 going to be much greater. And if Mr. McCormick  
 21 explained that that's one of the reasons, indeed  
 22 the primary reason, why those lines on the graph  
 23 are at variance with one another, would that  
 24 make sense to you that it could be due to that  
 25 and not some kind of a mathematical error that

Page 2621

1 needs to be refined?  
 2 **MR. ADRIAN:** You know, I'm going to  
 3 object to that, I -- that was a very  
 4 detailed account of testimony that came  
 5 from Mr. McCormick. Perhaps we could take  
 6 the time to find that testimony and read it  
 7 back so that he's actually responding to  
 8 what Mr. McCormick actually said, because I  
 9 have no idea that you were right or wrong  
 10 in what you said.  
 11 **PRESIDING OFFICER:** There were a lot  
 12 of dependent clauses in what you said.  
 13 **MR. ADRIAN:** Yeah.  
 14 **BY MR. MCLEOD:**  
 15 Q. Let me try to rephrase it. Mr. Romero, do you  
 16 see any explanatory text with that figure that  
 17 addresses why those lines might -- might not be  
 18 together as conditions in the aquifer are more  
 19 full?  
 20 **A. I'm sorry, I need to go back and -- and look at**  
 21 **that, it's been awhile since I've looked at**  
 22 **that.**  
 23 **PRESIDING OFFICER:** It's about  
 24 10:30. If he needs to take some time to  
 25 look at something, this might be a good

1 time for a break.  
2 **MR. MCLEOD:** That's okay with me.  
3 **PRESIDING OFFICER:** Let's take a  
4 ten-minute break.  
5 (Thereupon, a recess was taken;  
6 whereupon, the following was had.)  
7 **PRESIDING OFFICER:** Okay. We're  
8 back on the record now. Mr. McLeod.  
9 **BY MR. MCLEOD:**  
10 Q. Yes, if the witness would flip to figure 16,  
11 what we were looking at with the two lines. And  
12 I was incorrect about there being any kind of  
13 explanatory legend on that graph to serve the  
14 purpose, so I will ask the reporter to do as  
15 Mr. Adrian suggested and read back some  
16 testimony of Paul McCormick.  
17 (At this time, the reporter read  
18 from Volume V, page 1186, line 15  
19 to page 1187, line 11.)  
20 **BY MR. MCLEOD:**  
21 Q. Okay. I think that testimony from Mr. McCormick  
22 reflected that in the AMC accounting the leakage  
23 that is used is not actual leakage per the model  
24 but what leakage would be if the aquifer were at  
25 a state where the City could physically recharge

1 that 30 million gallons a day. So it's a  
2 constructive number. Mr. Romero, would the use  
3 of that constructive assumption in the AMC  
4 accounting, while the physical recharge credits  
5 are being accounted for with actual leakage via  
6 the model, explain to you the difference between  
7 where those two lines are going on that figure  
8 even if there is no mathematical error?  
9 **A. That is something that serves to explain some  
10 difference there, to my mind. One thing I will  
11 clarify, you know, I described in my report to  
12 consider looking at a way to improve that; I  
13 hadn't thought about the extent of explanations  
14 that could explain the difference, I was  
15 thinking of it as there's a simplified approach  
16 that's being proposed. If the simplification  
17 could be made just a little more rigorous to  
18 help improve that that would be something to  
19 consider. And in the section of my report where  
20 I describe that, I, you know, I indicate that I  
21 am not entirely familiar with the whole process  
22 of putting that together, so there certainly  
23 could be some explanation that I was not  
24 familiar with. And I see that testimony as a  
25 form of that explanation.**

1 Q. Thank you, Mr. Romero. In streams, indeed in  
2 aquifers and any source of water with chloride  
3 issues, do the chloride levels vary up and down?  
4 **A. Generally, in a lot of areas.**  
5 Q. And particularly in streams, would you expect  
6 chloride levels in streams to be affected by  
7 seasonal conditions such as heat evaporation and  
8 precipitation?  
9 **A. Yes. Precipitation can tend to have a diluting  
10 factor, and evaporation can have a concentrating  
11 sort of factor.**  
12 Q. And also depending on what constituents the  
13 stream may be passing through, the stream might  
14 be picking up or depositing?  
15 **A. Absolutely.**  
16 Q. And all of those things would not be constant  
17 over time, correct?  
18 **A. Correct.**  
19 Q. Do you know, Mr. Romero, if to try to deal with  
20 those issues in the USGS chloride model, did the  
21 chloride loading of the source term for the  
22 Arkansas River overestimate based on the use of  
23 annual time step versus seasonal elevated  
24 chloride concentrations in the actual system?  
25 **A. It would depend. In some cases, an annual**

1 **average could translate to a general  
2 overestimate or an underestimate. But -- but  
3 I -- I'll stress that their work was described  
4 as preliminary. One of the recommendations that  
5 they had was to -- see, I mentioned earlier that  
6 you have a flow model that represents how  
7 groundwater moves and how it's connected to  
8 rivers, but then you attach to that a component  
9 that considers transport of chloride in this  
10 case. And some calibration was done on the  
11 transport model.**  
12 The next step that the USGS wanted to do  
13 was to go back and do some additional  
14 calibration to the flow model, and that was  
15 never done. So thinking about overestimates or  
16 underestimates in their work at a pre -- it was  
17 pretty much at a preliminary level. Oftentimes  
18 you rare -- actually, you don't see preliminary  
19 work published by the USGS that often. This  
20 work actually has the term preliminary as the  
21 first word in the title. So I just -- I'll be  
22 cautious about drawing too many conclusions  
23 about it.  
24 Q. And then as far as the arsenic issue that  
25 Counsel brought up, Mr. Romero, as a general

Page 2626

1 matter, I think you recognize that arsenic could  
 2 potentially migrate as a dissolved constituent?  
 3 **A. Yes.**  
 4 Q. Did you look at absorption or any detailed  
 5 transport modeling to come to any conclusions on  
 6 how arsenic moves in this aquifer?  
 7 **A. I did not.**  
 8 Q. Would pumping agricultural wells move chloride  
 9 from the Burrton plume?  
 10 **A. Wells that -- in general, yes, wells that are**  
 11 **not right at the site, wells that are away from**  
 12 **the site, they can induce migration of chloride**  
 13 **away from the site, yes.**  
 14 Q. As I brought up with respect to the minimum  
 15 desirable streamflow, in the same way that the  
 16 District's -- the District's positions on  
 17 chloride modeling are all concentrating on the  
 18 period of drought. Did you run any analyses for  
 19 chloride migration in terms of benefits from the  
 20 proposal, such as keeping the aquifer full for  
 21 extended periods of time?  
 22 **A. I did not. I only ran scenarios A, B, and C**  
 23 **that are contingent on the drought.**  
 24 Q. And based on your experience and knowledge of  
 25 chloride migration, would keeping the aquifer

Page 2627

1 full have a tendency to slow chloride migration  
 2 in the aquifer?  
 3 **A. It would, and that's also a conclusion that's**  
 4 **drawn by the USGS.**  
 5 Q. I don't have further questions for the witness.  
 6 Thank you, Mr. Romero.  
 7 **A. Thank you.**  
 8 **PRESIDING OFFICER:** Mr. Oleen.  
 9 **MR. OLEEN:** One moment.  
 10  
 11 **CROSS-EXAMINATION**  
 12 **BY MR. OLEEN:**  
 13 Q. Mr. Romero, I believe there was a line of  
 14 questioning about to what extent your expert  
 15 report and modeled scenarios took into account  
 16 other non-Wichita pumpers in this well field  
 17 area, and I thought I wrote down that you said  
 18 that you looked only at the impact of the City's  
 19 wells in that context. Was that your testimony,  
 20 is that correct?  
 21 **A. That's correct, the -- you're talking about**  
 22 **scenarios A, B, and C in my example simulations?**  
 23 **Those simulations are isolating the effects from**  
 24 **City wells.**  
 25 Q. And just for my edification, where in your

Page 2628

1 report, I'm not saying it's not in here, but  
 2 where in your report do you write out what you  
 3 just said in the sense that your analysis  
 4 excludes pumping from non -- pumping by -- from  
 5 water right owners other than the City?  
 6 **A. Let me -- let me clarify that. The modeling**  
 7 **does include pumping from others in the**  
 8 **simulation, but the results that I present --**  
 9 **the overall analysis includes pumping from**  
 10 **others besides the City, but I ran the model in**  
 11 **a certain way so that I could isolate the effect**  
 12 **of the City's wells while other wells are also**  
 13 **pumping.**  
 14 Q. And to refresh my memory, or inculcate me in the  
 15 first instance, when you say that the modeling  
 16 you used, I think you just said assumes pump --  
 17 certain pumping from others --  
 18 **A. Uh-huh.**  
 19 Q. -- can you give me more detail of that  
 20 assumption?  
 21 **A. Yes. It's -- it's actually that pumping is as**  
 22 **it was specified in the model files that were**  
 23 **provided by Burns & McDonnell. So, actually,**  
 24 **the detail of those quantities of pumping as**  
 25 **described in the proposal, there were some**

Page 2629

1 **adjustments that were made to the model to**  
 2 **account for, you know, evapotranspiration,**  
 3 **recharge, pumping in the area, and it was based**  
 4 **on data from years 2011 and 2012. So all the**  
 5 **description that's in the proposal, that's the**  
 6 **same as -- those are the same files that I used.**  
 7 **The only thing that I did in my -- in my**  
 8 **scenarios is I changed the City pumping**  
 9 **somewhat. So in the drought -- in the 1 percent**  
 10 **drought scenario, Burns & McDonnell represents**  
 11 **the City's pumping -- pumping its native water**  
 12 **right 40,000 acre-feet, not every single year**  
 13 **but quantities that are very close to that,**  
 14 **except for the very first year, maybe it's like**  
 15 **6,000 acre-feet different the first year. I**  
 16 **changed that to just make it be 40,000 across**  
 17 **the board. And so I -- so I could see what**  
 18 **happens when -- and then I ran the model in a**  
 19 **certain way to just isolate the effect of**  
 20 **pumping that 40,000 in scenario A.**  
 21 **It actually involves running the model in a**  
 22 **case where the City is pumping 40,000 acre-feet**  
 23 **per year and then another simulation where it's**  
 24 **not, and you take the difference in the results**  
 25 **and it isolates the effect of that 40,000. But**

1 **it happens while there's other pumping and**  
2 **drought conditions that are represented in the**  
3 **model.**

4 Q. Thank you. On the issue -- on the issue of the  
5 City -- what's been referred to as the City's  
6 40,000 acre-feet of, quote, native water rights,  
7 are you familiar with what is being referred to  
8 when that has been termed that way?

9 **A. Yes.**

10 Q. Okay. So just so I understand -- I kind of want  
11 to understand what I'll call the gist of  
12 paragraph 7 in your report on page 12.

13 **A. Let's see, page 12 of my report?**

14 Q. Yes.

15 **A. Oh, yes.**

16 Q. So you say in here that, and I quote, the result  
17 indicates that up to 35 wells are identified  
18 with potential to lose capacity to produce water  
19 from the total drawdown.

20 **A. Yes.**

21 Q. Can you tell me again what you meant by the  
22 phrase potential to lose capacity?

23 **A. I mean that in the simulation that I ran, those**  
24 **35 wells did lose their water column. There was**  
25 **more drawdown than the water column in the**

1 **for wells to lose their well water, for wells to**  
2 **be impacted.**

3 **Since it did happen to some of them, and I**  
4 **say some because I may not have all the wells**  
5 **that are out there, it's looking like that**  
6 **statistical sample that I had, there was more**  
7 **drawdown in the well water columns that are**  
8 **there. So in that context, my conclusion is**  
9 **that there is potential for some wells to**  
10 **require a remedy.**

11 Q. Okay. And just to be clear for me, the phrase  
12 lose capacity or, quote, are impacted, as used  
13 in this paragraph --

14 **A. Yes.**

15 Q. -- those both mean loss of well water column --

16 **A. Yes.**

17 Q. -- right?

18 **A. Yes.**

19 Q. And that means the water level has become lower  
20 than the bottom of the well?

21 **A. Yes.**

22 Q. And so you note that of the 35 wells, the known  
23 wells as you have explained --

24 **A. Yes.**

25 Q. -- 29 are impacted from the City pumping

1 **wells. I actually reduced the water column by**  
2 **10 feet to allow 10 feet for pump submergence**  
3 **and positive suction head. So with that**  
4 **assumption, when I run this scenario, there are**  
5 **35 wells that the drawdown exceeds that water**  
6 **column.**

7 **So as I described before, I think that the**  
8 **model is useful for getting an understanding of**  
9 **what happens in well areas. I don't report that**  
10 **exactly these wells -- or something that you**  
11 **should go do something about them right now. I**  
12 **indicate that -- what my conclusion is that we**  
13 **have a sample of wells here, and I looked at how**  
14 **much drawdown results from the City pumping, and**  
15 **these wells lose their water column. That**  
16 **identifies to me that there's potential for**  
17 **wells in the area to lose their water column.**

18 **If I had run the model and maybe just 10 or**  
19 **20 percent of the drawdown -- the drawdown had**  
20 **maybe taken up 10 or 20 percent of all the well**  
21 **water columns in the area - I think of these**  
22 **wells as a sample of wells that are out there -**  
23 **and if the drawdown only eats up 10 or**  
24 **20 percent of the well water columns, then I**  
25 **would say it doesn't look like there's potential**

1 40,000 acre-feet per year?

2 **A. Yes.**

3 Q. And is it your understanding that the City  
4 already is authorized to withdraw 40,000  
5 acre-feet per year below the current minimum  
6 index cell levels?

7 **A. I'm aware of that.**

8 Q. So moving on in this sentence, then you say, six  
9 are identified to be impacted from the City  
10 diverting ASR recharge credits down to the  
11 proposed minimum index level?

12 **A. Yes.**

13 Q. I think you've been very clear in your writing  
14 here, but I just want to confirm that you are  
15 concluding in this paragraph, then, that if  
16 Ms. Owen recommends that the current minimum  
17 index levels be lowered to the new proposed  
18 bottoms and that is approved by the chief  
19 engineer and the City of Wichita withdraws  
20 accumulated recharge credits down to that newer,  
21 lower, I should say, bottoms or minimum index  
22 cell level --

23 **A. Proposed minimum index level.**

24 Q. Thank you. -- then to your knowledge, based on  
25 the known wells that you considered, there are

Page 2634

1 only six wells that have the potential to, as  
 2 you say, lose their water column?  
 3 **A. There -- there are six wells based on the wells**  
 4 **that were available in the database.**  
 5 **PRESIDING OFFICER:** But was that  
 6 after pumping the 40,000 acre-feet?  
 7 **A. That's correct.**  
 8 **PRESIDING OFFICER:** I didn't hear  
 9 that in all of your conditions of your  
 10 question.  
 11 **BY MR. OLEEN:**  
 12 Q. Yes, I'm -- I'm trying to make a distinction  
 13 between what the City already has authorization  
 14 to do, which is withdraw the 40,000 acre-feet  
 15 native water rights below --  
 16 **PRESIDING OFFICER:** So isolating  
 17 that?  
 18 **MR. OLEEN:** Yes.  
 19 **PRESIDING OFFICER:** Okay, sorry.  
 20 **A. That's actually the reason that I broke out**  
 21 **water right pumping from credit pumping so that**  
 22 **these kinds of discussions could be had.**  
 23 **BY MR. OLEEN:**  
 24 Q. You also say in the next sentence, in  
 25 paragraph 7 of your report on page 12, and you

Page 2635

1 just also orally repeated it, the phrase require  
 2 remedy, or you used the phrase remedy. And  
 3 actually the sentence says, this observation  
 4 indicates that some wells in the area can be  
 5 reasonably anticipated to require a remedy  
 6 associated with lowering water levels to the  
 7 proposed minimum index level. Did I read that  
 8 correctly?  
 9 **A. Yes. And that statement is intended to say**  
 10 **that -- it says some wells in the area. I**  
 11 **didn't explicitly say six because I just found**  
 12 **that it can happen to some wells and I don't**  
 13 **know how many because I don't have all the --**  
 14 **all -- I didn't account for all the wells that**  
 15 **are out there, is what I expect since it was a**  
 16 **database post 1975.**  
 17 Q. Understood. And -- and I think you've already  
 18 alluded to this, if not expressly said it, but I  
 19 just want to be clear that when you say  
 20 anticipated to require a remedy, you're not  
 21 giving any opinion on who, if anyone, should  
 22 provide that remedy?  
 23 **A. I did not write that up.**  
 24 Q. You're not -- it's not your opinion testimony  
 25 today that Wichita should provide that remedy?

Page 2636

1 **A. You know, I -- other situations that I've seen**  
 2 **like this, I have seen an applicant file a plan**  
 3 **of replacement because it -- I've seen other**  
 4 **areas where it's typical to identify the effects**  
 5 **of the application, and that plan of replacement**  
 6 **is usually filed by the applicant, if -- if it's**  
 7 **found that approving the application could**  
 8 **affect wells, file a plan for replacement water.**  
 9 **I've seen that sort of thing done. I'm not here**  
 10 **today to say who should do it, but this is an**  
 11 **application filed by the City and -- does that**  
 12 **answer your question?**  
 13 Q. It answers some of it, yes, and let me pose a  
 14 second one to you. You're also not, excuse me,  
 15 here to opine on what Kansas law may require, if  
 16 anything, as to such a remedy; is that correct?  
 17 **A. I'm not here to opine on that.**  
 18 Q. And you don't have an opinion on that here  
 19 today, correct?  
 20 **A. Yeah, I'm -- I'm providing technical information**  
 21 **so that that can be -- those kinds of questions**  
 22 **can be opined on by others.**  
 23 Q. I believe that Counsel for the City asked you  
 24 generally about considering this eight-year  
 25 1 percent drought scenario and water levels

Page 2637

1 claimed at that period versus the other times  
 2 when we're not in such a drought. And I think  
 3 Counsel asked you a general question of whether  
 4 keeping the aquifer levels in this area more  
 5 full would better keep river flows above MDS,  
 6 and I think you said yes; is that correct?  
 7 **A. Yes.**  
 8 Q. And I think you also said that in the same  
 9 general sense, keeping the aquifer levels fuller  
 10 would better reduce or prevent chloride  
 11 migration; is that also correct?  
 12 **A. Yes.**  
 13 Q. In terms of risks to water quality, such as  
 14 perhaps chloride migration, for example, isn't  
 15 it true that it's better to leave water at  
 16 higher levels than to have a fluctuating  
 17 withdrawal, replacement, withdrawal, replacement  
 18 of that water?  
 19 **A. If you're trying to prevent migration of**  
 20 **chloride from the area of Burrton and the area**  
 21 **of the Little Arkansas, maintaining higher water**  
 22 **levels that don't change prevents migration more**  
 23 **than if you cycle water levels up and down.**  
 24 **MR. OLEEN:** Thank you, no further  
 25 questions.

1 **A. One last thing. The USGS has concluded that**  
2 **there -- migration is occurring and not lowering**  
3 **water levels slows that process down.**

4 **MR. OLEEN:** Thank you.

5 **PRESIDING OFFICER:** Ms. Wendling.

6  
7 **CROSS-EXAMINATION**

8 **BY MS. WENDLING:**

9 Q. We've just got the two models, MODSIM and  
10 MODFLOW, did you review both of these or only  
11 one of those?

12 **A. I did not review MODSIM; I only reviewed and**  
13 **worked with MODFLOW.**

14 Q. And were you given files for both or only  
15 MODFLOW?

16 **A. Only MODFLOW.**

17 Q. You've described using, I believe, on page 4 of  
18 your report, the MNW package?

19 **A. Yes.**

20 Q. Can you tell me what that is?

21 **A. Yes, that is a -- it's a -- different components**  
22 **in MODFLOW are typically termed as packages.**  
23 **The MNW is -- stands for Multi-Node Well, and so**  
24 **it's a package that is developed for**  
25 **representing wells that penetrate multiple**

1 **that illustrates the current minimum index**  
2 **level, I took that and interpolated it into the**  
3 **model, and I put that at the City wells, I put**  
4 **that elevation at the City wells, and then I**  
5 **just turned them on. And what happens is that's**  
6 **how in scenario B I was able to drain the amount**  
7 **of water that's there to pull water levels down**  
8 **to the current minimum index level. So that**  
9 **becomes the stopping point.**

10 **And then in another simulation I took that**  
11 **level in the Multi-Node Well package and set it**  
12 **at the proposed minimum index level to see how**  
13 **you would drain the water out of that segment.**  
14 **And so that's how I did the analyses. So that's**  
15 **a modeling component that is designed for**  
16 **simulating pumping wells and figuring out how**  
17 **much water can be produced, and I used that in**  
18 **the context of the current and proposed minimum**  
19 **index levels to create those charts.**

20 Q. Okay. And in your report where you talk about  
21 well yield, that's the amount of water that can  
22 be produced?

23 **A. Yes, and in those charts, that would be the**  
24 **maroon portion, which is the water that's**  
25 **produced, or the yield from the wells, yes.**

1 **aquifers.**

2 **And it's something that actually accounts**  
3 **for the pumping water level inside of the well**  
4 **that you're simulating, so what you can do with**  
5 **that particular package is you can put a water**  
6 **level in the well that you don't allow water**  
7 **levels to drop below because you want to leave a**  
8 **section of submergence for your pump. You know,**  
9 **out in practice, if you pump your well too hard,**  
10 **more -- at a rate more than it can provide or if**  
11 **water levels decline, you'll start sucking air**  
12 **with your pump, and you get cavitation and you**  
13 **damage your pump. The Multi-Node Well package**  
14 **allows you to specify a level to prevent water**  
15 **levels from dropping that low. In practice, if**  
16 **you start getting cavitation in your pump, you**  
17 **turn the rate down. Well, the model will do the**  
18 **same sort of thing, it'll reduce the pumping**  
19 **rate when the water level gets to that**  
20 **elevation.**

21 **The reason I used that for the analysis is**  
22 **because I could take the Multi-Node Well package**  
23 **and I could specify that elevation to be the**  
24 **current minimum index level. So I went to the**  
25 **proposal, and there's a table in there that --**

1 Q. On figure 2 of your -- you talk about river  
2 depletion. From the work that you did, are you  
3 able to identify how much of this depletion  
4 occurs at the Arkansas River or to the Little  
5 Arkansas River?

6 **A. I made an estimate of about half and half**  
7 **because the wells just run on both sides of the**  
8 **well -- the rivers run on both sides of the well**  
9 **field. I didn't actually go into the simulation**  
10 **and break that out, so I was just estimating**  
11 **half and half.**

12 Q. Okay. So if we turn to figure 5, that's where  
13 you have taken the 50 percent and allocated it  
14 to the Little Arkansas?

15 **A. That's exactly right.**

16 Q. Earlier you talked about a cone of depression,  
17 can you explain to me what the cone of  
18 depression is?

19 **A. Yes. That's the lowering of water levels that**  
20 **occurs around a well. So if you've ever -- if**  
21 **you've ever gotten a milkshake and -- in a cup**  
22 **with a straw and you take the lid off and you --**  
23 **you drink some of the milkshake you'll actually**  
24 **see a little cone that goes around the straw.**  
25 **That concept applies to a well in an aquifer,**

Page 2642

1 and so the cone of depression is the drawdown  
 2 that occurs in the water level. And -- and I  
 3 actually illustrate that on figure 6 of my  
 4 report for each of the scenarios, and on figure  
 5 7 the cumulative drawdown from all of those. So  
 6 those contours are the cone of depression.  
 7 Q. Okay. And I believe that you said in the  
 8 context of a cone of depression that the  
 9 pumping, or the maroon on your figure --  
 10 **A. Yeah.**  
 11 Q. -- stops at year six, but then the depletion  
 12 continues, the stream depletion continues?  
 13 **A. Yeah, and I was talking about figure 1 --**  
 14 Q. Okay.  
 15 **A. -- when I said at year six because on figure 1,**  
 16 **the pumping stops at year six because that's how**  
 17 **the credit pumping came out in the City's**  
 18 **1 percent drought scenario.**  
 19 Q. Okay. So when I look at figure 2, that pumping  
 20 stops -- or decreases, I guess, at year eight  
 21 and continues?  
 22 **A. Yeah. At year eight -- it's 40,000 acre-feet**  
 23 **per year up till year eight, and then after**  
 24 **that, there are a couple of wetter periods, and**  
 25 **that was just -- those were two more years that**

Page 2643

1 were represented in the City's modeling; and I  
 2 just left that unaltered, so that's the pumping  
 3 that was represented for that.  
 4 Q. Did you look at how long -- if the pumping  
 5 stopped after year eight or year ten, did you do  
 6 any analysis of how long the pumping con -- or  
 7 the depletion continues?  
 8 **A. I didn't. I only ran it out to ten years. And**  
 9 **so, like, on figure 2, you can see there's**  
 10 **depletion that carries on beyond the eight**  
 11 **years, and it starts to decrease because the**  
 12 **blue band starts to get a little more narrow,**  
 13 **but I did not look further than that.**  
 14 Q. So we don't know following a 1 percent drought  
 15 scenario if the City were to resume back to its  
 16 normal patterns, we don't know how long  
 17 depletion might continue post drought?  
 18 **A. I -- I didn't quantify that here so we don't**  
 19 **know. I anticipate it would be tens of years,**  
 20 **but I haven't actually quantified it.**  
 21 Q. And the continuing depletion after pumping has  
 22 ceased, does that only impact streams, or is  
 23 there also continued depletion within the  
 24 aquifer after pumping has ceased?  
 25 **A. It continues on the streams. The depletion**

Page 2644

1 decreases in the aquifer because water levels  
 2 are rising in the aquifer, but that's at the  
 3 expense of flow from the river. So when you  
 4 turn off the wells right at the area of the  
 5 wells, water levels begin to recover  
 6 immediately, and they will continue to recover  
 7 until you turn the wells back on. But the river  
 8 will continue to deplete to fill in that cone.  
 9 Q. Can you find figure 11 of the City's proposal,  
 10 which I believe to be Exhibit 1?  
 11 **A. I've got it.**  
 12 **PRESIDING OFFICER:** I'm sorry, where  
 13 are you?  
 14 **MS. WENDLING:** Figure 11 of the  
 15 proposal.  
 16 **PRESIDING OFFICER:** 11, thank you.  
 17 **BY MS. WENDLING:**  
 18 Q. This figure represents the average aquifer  
 19 conditions by index cell at the modified minimum  
 20 index levels; is that correct?  
 21 **A. Yes.**  
 22 Q. And there was some discussion earlier and I got  
 23 confused, are these figures representing the  
 24 average for the index cell or the data at the  
 25 index well?

Page 2645

1 **A. I -- I interpret these to represent the**  
 2 **saturated thickness that is in the model layers,**  
 3 **so it's a full saturated thickness, I believe in**  
 4 **all three model layers. There is additional**  
 5 **detail that could be added to that. The -- the**  
 6 **model does have the framework for consideration**  
 7 **of clay and silt, sand and gravel, and the way**  
 8 **that the model was developed, it -- those**  
 9 **factors are taken into consideration when**  
 10 **hydraulic properties are set up in the model. I**  
 11 **interpret these thicknesses on figure 11 to**  
 12 **represent the full saturated thickness.**  
 13 **In areas where you have clays, there's**  
 14 **thickness there, but there's -- clay is more of**  
 15 **an aquitard. So this information is useful. On**  
 16 **this figure, it illustrates saturated thickness.**  
 17 **It doesn't describe the detail of regions within**  
 18 **that thickness where the aquifer would not be as**  
 19 **productive, areas where there may be clay versus**  
 20 **areas where there's sand.**  
 21 Q. Okay. Can you turn to, I think it's Exhibit 46,  
 22 and I believe you started to talk about this  
 23 yesterday with regard to the layers; is that  
 24 correct?  
 25 **A. Yes.**

1 Q. And there were charts matched with green and red  
2 and yellow?

3 **A. Yeah, it's actually at figure -- figure 17 is**  
4 **where that discussion begins.**

5 Q. Okay. Page 27?

6 **A. Yes.**

7 Q. So can you help me understand how the yellow,  
8 orange, and green correlate to what's shown on  
9 figure 11?

10 **A. Yeah, let me -- let me describe figure 17 first**  
11 **in Exhibit 46. Figure 17 illustrates all of the**  
12 **lithologic data that was used by the USGS as**  
13 **part of development of this -- of this model.**  
14 **So information was taken from all of those well**  
15 **logs, and it was categorized into four**  
16 **categories; a 1 was for clay, a 2 was for silt,**  
17 **a 3 was for sand, and a 4 was for gravel.**

18 **Now, if you turn from figure 17 to figure**  
19 **18 on page 28, you'll see a map that shows a lot**  
20 **of green tones and yellow tones and orange**  
21 **tones. The green tones represent areas where**  
22 **there's clay. And this particular figure 18 is**  
23 **model layer 1. And there's a little legend on**  
24 **the bottom that says composite lithology, so the**  
25 **green is -- goes from 1 to 1.5 and 1.6 to 2.**

1 **areas are clays, the orange and reddish areas**  
2 **are sands and gravels. There's a lot of**  
3 **variability that's taken into account in the**  
4 **model, and that variability actually is applied**  
5 **to hydraulic properties that are represented in**  
6 **the model.**

7 **So figure 11 in the proposal talks about**  
8 **saturated thickness that's remaining, and that's**  
9 **a saturated thickness that includes model layers**  
10 **1, 2, and 3, a full saturated thickness. That**  
11 **thickness does not indicate what portion of that**  
12 **thickness is a clay or is a green area that's**  
13 **depicted here. So that is -- that's some detail**  
14 **about the saturated thickness that's not**  
15 **reflected on figure 11 --**

16 Q. Okay.

17 **A. -- of the proposal.**

18 Q. And I believe you said so with model layer 1, 2,  
19 and 3, that's as you go deeper within the  
20 aquifer?

21 **A. Yes.**

22 Q. Okay. And so if I see less green on figure 20  
23 for model layer 3, I can assume there's less  
24 clay the deeper I go?

25 **A. Yes.**

1 **Well, the 1 means clay. So when it's going from**  
2 **1 to 1.5, that means it's averaging between 1 as**  
3 **a clay, 2 as a silt. So there's an averaging**  
4 **happening there between clay and silt in a green**  
5 **area.**

6 **When you go further down on that legend and**  
7 **go from, for example, you know, 2.1 to 2.5,**  
8 **which is the light green, and 2.6 to 3.0, which**  
9 **is an orange, you're talking about**  
10 **classifications 2 and 3, but all that means is**  
11 **that 2 is a silt and 3 is a sand. So the color**  
12 **tone is an averaging of silt and sand.**

13 **So the way that the USGS put this together**  
14 **was in model layer 1, they looked at lithologic**  
15 **logs and took the thickness and came up with a**  
16 **composite lithology that's an averaging between**  
17 **these different sizes of grains in the**  
18 **sediments, okay? So they did that for all the**  
19 **layers.**

20 **If you look at figure 19, the same thing is**  
21 **done, but that's for model layer 2, that's the**  
22 **deep zone. And one thing that you'll see in**  
23 **figure 19 is that there were areas where there's**  
24 **green intermixed with orange, and in some cases**  
25 **even a darker orange. Well, the dark green**

1 Q. Does that necessarily translate to more  
2 available water?

3 **A. In -- in areas where there's clay, it may not**  
4 **directly translate to more available water. In**  
5 **areas where there's sand, it would.**

6 Q. Okay.

7 **A. So the clay would impede some flow, yeah, to the**  
8 **well.**

9 Q. Okay. And within these three layers of the  
10 aquifer, are they barriers between the three  
11 layers, or does water freely move between the  
12 three layers?

13 **A. In this report, they describe a layer of finer**  
14 **grain material between layers 1 and 2, so going**  
15 **through this process of evaluating well --**  
16 **wellbore lithology, that helped them decide**  
17 **where they would put -- where they would put the**  
18 **bottom of layer 1 and start the top of layer 2.**  
19 **So there's some -- the term is actually called**  
20 **anisotropy in terms of permeability, which just**  
21 **means that in this case water can move more**  
22 **freely horizontally than vertically between**  
23 **layers, but the model accounts for that.**

24 **So there's -- so the way that water moves**  
25 **vertically, it happens generally slower than it**

Page 2650

1 does horizontally, okay, and that's reflected in  
 2 the model. And that relates to you look at the  
 3 lithologic data from each well and you see where  
 4 fine grain sediments are versus coarse grain  
 5 sediments, and that helps you make decisions on  
 6 model layering, and that's part of what was done  
 7 here. Does that make sense?  
 8 Q. Yes. I had not realized water moved faster  
 9 horizontally than vertically.  
 10 A. In this particular area it does. There's some  
 11 areas where that does -- that's not the case.  
 12 Q. Okay.  
 13 A. But that is a concept that's built into this  
 14 model here.  
 15 Q. Okay. And does this -- do these figures in  
 16 Exhibit 46 tell me the depth of the layers, of  
 17 layer 1, 2, and 3?  
 18 A. It doesn't but there are some figures before  
 19 that, if you go to figure 14 on page 23. Figure  
 20 14 on page 23 tells you the thickness for model  
 21 layer 1, and you can see it's variable. So you  
 22 can't quite see the depth here, and I don't  
 23 think there's a figure in the -- in this report  
 24 that illustrates the depth, you would have to do  
 25 some work to do it. You would take the land

Page 2651

1 surface and then you would subtract the  
 2 thickness -- I'd actually have to check and see  
 3 if it's from the land surface or the top of the  
 4 aquifer, but you would have to do some math  
 5 processing, some spatial processing in order to  
 6 get depths. But with these thicknesses you can  
 7 get an idea of the depth.  
 8 Figure 14 and figure 15 and figure 16  
 9 illustrate the thicknesses of each layer. But  
 10 those thicknesses -- I think those thicknesses  
 11 are probably more aligned with what's shown on  
 12 figure 11 in the proposal, the full thickness,  
 13 and figures, as I said earlier, figures 18, 19,  
 14 and 20 would indicate portions of the aquifer  
 15 that are permeable versus portions that are less  
 16 permeable where there are clays.  
 17 Q. Okay. So if I'm drilling a well and I want to  
 18 be in model layer 3, I can look at this figure  
 19 14 to try and help me understand how deep I need  
 20 to drill my well?  
 21 A. That gives you an idea. And what -- what I  
 22 would do is I would map out figure 17, 'cause  
 23 figure 17 shows you the data density, figure 17  
 24 shows you the wells that were actually used  
 25 for -- for doing this. So if you're in an area

Page 2652

1 where there's not a lot of data density, that  
 2 increases the uncertainty of what you'll find  
 3 there. So if -- if you happen to be right in an  
 4 area where there's a well, I would actually go  
 5 get that log and take a look at that, and that  
 6 would give you an idea of the prospect for  
 7 deepening your well in that area.  
 8 Q. Okay. So if I'm looking -- sorry. If I'm  
 9 looking back at figure 11, at we'll say index  
 10 well 2, this is showing me the average for that  
 11 two-mile-by-two-mile area, the average depth  
 12 based on the average lithography in model layers  
 13 1, 2, and 3 from the USGS report; is that  
 14 correct?  
 15 A. Yes.  
 16 MR. OLEEN: Just a point of  
 17 clarification, Ms. Wendling, when you said  
 18 figure 11, you mean of the proposal now?  
 19 MS. WENDLING: Yes, sorry.  
 20 BY MS. WENDLING:  
 21 Q. And the dots on this represent the index well  
 22 location, so if I'm close to that index well  
 23 location, can I feel comfortable with the  
 24 numbers and does that give me the certainty  
 25 similar to how you would say for figure 17 in

Page 2653

1 the USGS report?  
 2 A. What I would do is I would get the log that's  
 3 close to where you are and actually inspect that  
 4 log and see how deep it goes. Figure 17 is  
 5 showing all the logs, and I presume they've all  
 6 got different depths. So some of them may have  
 7 provided information only for layer 1, some of  
 8 them might have provided information for layers  
 9 1, 2, and 3.  
 10 But, you know, ideally, when you drill a  
 11 well, it's nice -- if there's a question, it's  
 12 nice to go out and drill an exploratory well  
 13 first and see what's there and then -- and then  
 14 proceed with your well, maybe drill a pilot hole  
 15 and see what's there. Some of these well logs  
 16 could serve as, if it's on site, right where you  
 17 want to put your well, it's something that could  
 18 have utility to help you understand the prospect  
 19 of going deeper.  
 20 But as I said, some of the wells that are  
 21 shown on this map that shows all the wells on  
 22 figure 17 of the USGS report, they may not have  
 23 gone the full depth. So you'd want to look at  
 24 how many went the full depth because they  
 25 interpolated that information to -- to create a

1 continuum.

2 **So -- so those are -- those are some**  
3 **details of what's in the model and how**  
4 **lithologic logs were used to understand what's**  
5 **there. And -- and what it means is that this**  
6 **saturated thickness on figure 11, although**  
7 **it's -- it's reporting a thickness, some of that**  
8 **thickness may not be very prospective for**  
9 **producing water if you deepen a well, or -- or**  
10 **shallower portions of it where there's clay.**

11 Q. Okay. And in the City's well field, there's  
12 numerous wells, and if they were to reallocate  
13 pumping from one index cell to another index  
14 cell, still staying within the amount reflected  
15 on proposal table 2-3 and 2-5, would that alter  
16 these numbers on proposal figure 11?

17 **A. If the pumping were distributed differently than**  
18 **what was simulated?**

19 Q. Yes.

20 **A. Yes, that would -- to some degree. Also in**  
21 **my -- in my work, I've shown a cone of**  
22 **depression; there would -- there would be some**  
23 **shifting on where the greatest amount of**  
24 **drawdown occurs. So depending on where the**  
25 **pumping is, the deepest part of the cone of**

1 Q. Okay. Did that data include the well log or  
2 lithographic data that you were referring to  
3 with the modeled layers in the USGS report?  
4 **A. I believe it includes lithologic data. I'm sort**  
5 **of forgetting right now if it does or not. But**  
6 **when I did my analysis, I considered the static**  
7 **water level in the well and the depth of the**  
8 **well. I did not evaluate the lithology.**

9 Q. Okay. So a well that is a shallower well, not  
10 going all the way to bedrock, you looked at just  
11 that -- is that what you mean by well column?

12 **A. Yes.**

13 Q. Okay.

14 **A. By well water column, I mean a static water**  
15 **level in the well and then the very bottom of**  
16 **the well. And, actually, not every single well**  
17 **had a static water level, so I made an estimate**  
18 **of what it was. And I describe that in my**  
19 **report, how I did that.**

20 Q. And static water level is something that would  
21 change over time?

22 **A. It's something that fluctuates, yes.**

23 Q. So when you found that, I believe it's footnote  
24 6 on page 8, that most of the Intervenor's wells  
25 did not have depth to water, this was based off

1 depression could shift.

2 Q. Okay.

3 **A. Yeah.**

4 Q. And so for pumping, for recharge, if there's  
5 recharge in some index cells but not others, and  
6 by recharge I mean physically injecting water,  
7 could that -- as that shifts around the basin  
8 storage area, could these numbers also change?  
9 **A. Yes.**

10 Q. Could you turn to page 7 of your report? On  
11 this -- on page 7, do you discuss comparing  
12 information on local wells to drawdown figures?

13 **A. Yes, at the bottom of page 7.**

14 Q. Yes. Can you -- the well information you looked  
15 at in this section of your report, that is the  
16 KGS -- KGS data?

17 **A. Could you repeat that?**

18 Q. Is the information on local wells that you --  
19 well, strike all that. What information on  
20 local wells did you consider?

21 **A. I considered information that I downloaded from**  
22 **a water well completion records database that's**  
23 **available from the Kansas Geological Survey, and**  
24 **I considered data that was provided by your**  
25 **office.**

1 of the limited information you had from either  
2 me or Kansas Geological Survey?

3 **A. Yes.**

4 Q. And do you have any idea if this information is  
5 regarding primarily irrigation and stock  
6 watering wells or if it was domestic well  
7 information?

8 **A. It was primarily domestic.**

9 Q. From KGS?

10 **A. From KGS.**

11 Q. Yes. I know what I provided you.

12 **A. Yeah. From KGS, yes.**

13 Q. But as you had said earlier, that's the domestic  
14 wells most likely -- more recent to 1975 when it  
15 became a requirement to submit?

16 **A. Wells that were drilled post 1975.**

17 Q. I know you've been here on and off during these  
18 hearings, but there has been commentary about  
19 after the modeled 1 percent drought the aquifer  
20 is still 80 percent full. Have you heard that  
21 at all throughout?

22 **A. Yes, and that's kind of generally reflected on**  
23 **figure 11, which -- which I think actually is**  
24 **the water level that's modeled after the drought**  
25 **plus the contingency. And there are numbers**

1 there that range from, you know, in the 60s to  
 2 the 80s, some areas are a little over 90; it's  
 3 something that just looking at there is probably  
 4 in the ballpark of around 80 percent.  
 5 Q. Okay. Is aquifer fullness the distance between  
 6 the static water level and bedrock, or is  
 7 aquifer fullness something other than that?  
 8 A. I think fullness here is referred to as -- oh,  
 9 gosh, I can't remember what year -- a particular  
 10 year when water levels were at a certain level  
 11 has kind of been designated as the full  
 12 condition. I just can't remember when that is  
 13 right now.  
 14 Q. Does that sound like the predevelopment levels?  
 15 A. Yes.  
 16 Q. Okay.  
 17 A. Yeah, predevelopment level and I consider  
 18 that -- I think that represents the  
 19 predevelopment water level in comparison to the  
 20 full thickness, which would be down to the  
 21 bedrock.  
 22 Q. And does the 80 percent full figure contemplate  
 23 the, what I like to call the orange, yellow, and  
 24 green colors on the USGS report, like the clay  
 25 and silt and sand?

1 of it is not as prospective. So thickness is  
 2 important but also considering the prospect for  
 3 sediments that produce water is -- is also  
 4 important.  
 5 Q. So the capacity to produce water would help me  
 6 as an individual well owner determine whether or  
 7 not there's available water for me?  
 8 A. It would.  
 9 Q. In reviewing some of the many reports in this,  
 10 I've seen the term storage coefficient. Can you  
 11 tell me what storage coefficient is and what, if  
 12 you know, the coefficient used in the model?  
 13 A. Storage coefficient represents the volume of  
 14 water released per volume of water level change  
 15 in a unit control volume, okay? That's --  
 16 that's actually the formal definition of a  
 17 storage coefficient. The practical definition  
 18 that would make sense to most everybody is you  
 19 could imagine that you have a bucket of sand,  
 20 and that sand, if it's completely dry, the  
 21 volume where that sand is, it's filled with sand  
 22 but it's also filled with pore spaces between  
 23 the sand granules; and those pore spaces, if  
 24 it's completely dry, there's just going to be  
 25 air space in there.

1 A. I -- I do not believe it does.  
 2 Q. When evaluating an aquifer, is fullness a  
 3 typical way of measuring an aquifer's health?  
 4 A. I've seen that done before or postulated that  
 5 way, yes.  
 6 Q. Is there another figure that you use in your  
 7 work?  
 8 A. I'd say the capacity to produce the water. You  
 9 know, there are -- in parts of New Mexico, I do  
 10 some work - well, parts of Kansas too - but in  
 11 some parts of New Mexico, the Ogallala Aquifer  
 12 reaches just -- the fringe of the aquifer  
 13 reaches parts of New Mexico, and I've done some  
 14 work in an area there where the Ogallala is  
 15 reducing in saturated thickness, as it is in  
 16 many areas, and I examined the prospect of  
 17 whether or not you can deepen your well, and it  
 18 sits atop a bedrock that is not very prospective  
 19 for producing water. So thickness is important.  
 20 There's another basin that I've looked at  
 21 where there is a basin fill type of aquifer that  
 22 sits atop bedrock, but about the lower 30 feet  
 23 of that basin fill aquifer has gotten cemented  
 24 just because of some geologic processes and  
 25 water migration processes and the lower portion

1 When you pour water into this sand bucket,  
 2 those pore spaces fill with water, and so the  
 3 water that's stored in that bucket, if there  
 4 were no sand, it'd be 100 percent storage. If  
 5 you have a sand that's all the same size,  
 6 roughly sediments sand, then it may be 25  
 7 percent or so of air space; but you pour the  
 8 water in there, then 25 percent of that volume  
 9 is filled up with water. Storage in the aquifer  
 10 is analogous to the water that's stored in those  
 11 pore spaces.  
 12 And it can get more complex because when  
 13 you pump, actually, water out of it, not all of  
 14 it drains, some of it's retained because of  
 15 surface tension, so storage that's in the model,  
 16 part of the calibration is to come up with  
 17 storage values and hydraulic conductivity values  
 18 that allow you to calibrate your model and show  
 19 water levels that change through time to see  
 20 whether or not your model can represent actual  
 21 water levels that have changed through time.  
 22 And part of that is storage drainage. And in  
 23 some cases you don't even drain it, there are  
 24 different types of storage.  
 25 But that stored water is a component that

1 you consider, and it's something that affects  
2 the way your cone of depression expands, along  
3 with the properties in the aquifer that allow it  
4 to flow. Now, I don't remember right off the  
5 top of my head the storage quantities that are  
6 used in the USGS model, but developing those  
7 numbers was part of the calibration process.

8 Q. Okay. So if I'm an individual wanting to put in  
9 a well that will yield water below the proposed  
10 minimum index level, I would need to know the  
11 storage coefficient at those aquifer levels?

12 **A. You wouldn't necessarily need to know the  
13 storage coefficient. You could drill a well and  
14 run a test and figure out what it is. But if --  
15 you know, you could do -- you could do some  
16 exploratory drilling and testing, you could --  
17 you could drill a well down to a particular  
18 depth and you could pump it, you could monitor  
19 how quickly the water level declines and how  
20 quickly it recovers, and that would provide you  
21 with information to understand the prospect of  
22 deepening your well to that zone, to that depth.**

23 Q. And are drilling all these exploratory wells,  
24 you know, if you have 100 people living in an  
25 area, is it easier for them to each go do an

1 believe? Yes.

2 **A. Yes.**

3 Q. Is drilling --

4 **MR. OLEEN:** Sorry to interrupt, and  
5 I'll quit doing this, as long as for the  
6 record anytime the witness uses impairment,  
7 right, we're talking about the previously  
8 agreed to definition that GMD2 counsel  
9 provided to him and now I assume you're  
10 wanting him to also use that definition?

11 **BY MS. WENDLING:**

12 Q. I will rephrase my question. So the - now I'm  
13 getting myself - potential impact to domestic  
14 wells on figure 7 --

15 **A. Yes.**

16 Q. -- is that impact remedied by drilling a new  
17 well?

18 **A. It could -- it could be if you drill the well  
19 into an area where the sediments are prospective  
20 for producing the amount of water that you need.**

21 Q. Okay. And that goes back to the bucket of sand  
22 concept?

23 **A. Back to the bucket of sand concept and to the  
24 grain size about whether or not you're deepening  
25 your well into some sediments that are producing**

1 exploratory well rather than try and model the  
2 detailed storage coefficient and the properties  
3 of that specific location?

4 **A. I think the modeling could provide some insight  
5 to areas where it could potentially occur, and  
6 there may be some wells that exist there already  
7 that could be tested. And if there aren't, some  
8 exploratory drilling could be done.**

9 Q. All right. Going back to water levels and  
10 MODFLOW, do you know where the water levels used  
11 in MODFLOW come from in terms of what date?

12 **A. You mean in the -- in the 1 percent drought  
13 scenario or --**

14 Q. Yes.

15 **A. There's a starting head condition that's  
16 described. I need to kind of look back, I think  
17 it might be 1998.**

18 Q. If it is 1998, do you know at what point in the  
19 year the measurements are taken?

20 **A. I seem to recall reading or hearing discussion  
21 about winter water levels, but I'm not  
22 100 percent sure.**

23 Q. Okay. Do you believe -- we talked about the  
24 potential impairment to domestic wells and how  
25 that's reflected on figure 7 of your report, I

1 **enough water for your need or whether or not you  
2 may hit sediments where you don't get the amount  
3 of water that you need.**

4 Q. Okay.

5 **A. Such as a clay.**

6 Q. Okay. And if the analysis you did -- the  
7 analysis you did to get to figure 7 is based on  
8 the 1998 starting head conditions used in the  
9 drought simulation, if -- did you look at other  
10 potential starting head conditions other than  
11 1998?

12 **A. I did in some sensitivity analyses, and I did  
13 find that it does make a difference. I think  
14 depending on what your starting head is, I think  
15 it kind of translated roughly to if your  
16 starting head was -- was -- I think I looked at  
17 a predevelopment case actually, and I don't  
18 remember how much higher it was, but I think it  
19 kind of generally translated to the amount that  
20 the starting head was higher by, the resulting  
21 head was comparably higher, not exactly but  
22 comparably higher by about the same amount.**

23 Q. So with the relatively full conditions we have  
24 today, the impact of the sample wells on figure  
25 7 could be lessened due to the higher well --

Page 2666

1 higher aquifer levels we have today?  
 2 **A. It could be lessened --**  
 3 Q. As compared to 1998?  
 4 **A. It could be lessened based on that type of**  
 5 **analysis.**  
 6 Q. Okay. Yesterday when you were talking about,  
 7 going back in time, your Arizona research  
 8 assistant role --  
 9 **A. Yeah.**  
 10 Q. -- you made a comment, and I didn't catch all of  
 11 it, about dissecting MOD -- the MODFLOW model  
 12 into different shapes as opposed to a grid.  
 13 **A. Yeah.**  
 14 Q. Why did you -- what benefit did you find to  
 15 different shapes?  
 16 **A. The model has a grid that represents aquifer**  
 17 **space, and the way that -- there are newer**  
 18 **versions of MODFLOW now, but back then the way**  
 19 **that MODFLOW worked, your grid had to be**  
 20 **constructed out of rectangular cells. So if you**  
 21 **wanted to have more detail in a particular area**  
 22 **in your grid, part of that detail would have to**  
 23 **span the entire area of your grid. There are**  
 24 **grids that are more sophisticated where you can**  
 25 **have, instead of a rectangular grid, you can**

Page 2667

1 **have a mesh, and you can go to specific areas**  
 2 **and you make your cells smaller in your mesh,**  
 3 **just at specific areas where you're interested**  
 4 **in more spatial detail.**  
 5 **So some of the work that I did was I found**  
 6 **a way to take MODFLOW in the form that it was in**  
 7 **and to change the grid so that you could add**  
 8 **more detail to specific areas. And that**  
 9 **translates -- that translates to being able to**  
 10 **run your model faster, which translates to a lot**  
 11 **of time that you don't need to spend waiting for**  
 12 **the model to run and you can develop your model**  
 13 **more quickly.**  
 14 Q. All right.  
 15 **A. So it was having to do with the shape of the**  
 16 **grid cells to optimize its use.**  
 17 Q. Is that something that's possible with the -- to  
 18 do to the USGS model you reviewed?  
 19 **A. Yes, but that would take some -- some additional**  
 20 **work and some recalibration. There are versions**  
 21 **of MODFLOW now where you can come in and adjust**  
 22 **the grid. You know, actually these days, when**  
 23 **we develop models these days, we'll actually**  
 24 **develop two or three versions in parallel and**  
 25 **they'll have different grids. And so something**

Page 2668

1 **like that could be done here, but I'm not**  
 2 **familiar with any effort that's been done with**  
 3 **that.**  
 4 Q. And why do, these days, do you use multiple  
 5 shapes?  
 6 **A. Because it's a more comprehensive approach so**  
 7 **you can get a feel for how your grid actually**  
 8 **affects your results. And -- and in the process**  
 9 **of doing that, you also find that whatever**  
 10 **problem you're working on may be better suited**  
 11 **for a particular type of grid.**  
 12 Q. Okay.  
 13 **A. So when you're developing the model, that takes**  
 14 **some time, but it actually doesn't take that**  
 15 **much more time to develop another version in**  
 16 **parallel that has a different type of grid.**  
 17 Q. Okay. You also mentioned Groundwater Vistas, is  
 18 that something that you work with?  
 19 **A. Very rarely. We have some of our own techniques**  
 20 **that we use. We do use it on occasion because**  
 21 **models that we may look at may have been**  
 22 **developed by someone who used that, so we have**  
 23 **it just for compatibility -- compatibility with**  
 24 **communication with other people who work on**  
 25 **models.**

Page 2669

1 Q. Okay. Going back to figure 3 of your expert  
 2 report, I believe, which shows us under, I  
 3 believe, the status quo the amount of credit  
 4 pumping the City -- or the amount of credits the  
 5 City would be able to recover based on the  
 6 current minimum index level? Did I say that  
 7 correctly?  
 8 **A. Yes, assuming that the 40,000 acre-feet per year**  
 9 **is prioritized in diversion.**  
 10 Q. Based on figure 3 and your review of this  
 11 project, do you view the current minimum index  
 12 level as essentially a cap on the recovery of  
 13 credits?  
 14 **A. That's how I treated it here.**  
 15 Q. You briefly mentioned arsenic in clay as it  
 16 relates to water quality, and that is not  
 17 something that you specifically looked at within  
 18 the scope of your review; is that correct?  
 19 **A. I didn't analyze it. I considered -- I**  
 20 **considered chloride. If I -- in order to**  
 21 **consider arsenic, I would have needed to add in**  
 22 **some other parameters to represent -- arsenic**  
 23 **behaves differently than chloride when it**  
 24 **migrates. I received a question about that**  
 25 **earlier today, I didn't -- there are absorption**

1 factors that are related to it because it --  
2 arsenic will essentially stick to sediments, and  
3 chloride doesn't tend to, it tends to move with  
4 the water. I did not consider that sort of  
5 thing.  
6 Q. Have you done other drought planning analysis?  
7 I don't recall from your resume.  
8 A. I have.  
9 Q. And did you take any water quality concerns in  
10 any of that work?  
11 A. Yes, I -- well, I recommended that further work  
12 be pursued and -- on particular projects that  
13 I've worked on, and in some cases it's been  
14 pursued, in some it hasn't. In a lot of the  
15 peer review work that I've done in drought,  
16 concerns were -- drought was considered and it  
17 was in situations where there's groundwater  
18 contamination. So that was explicitly accounted  
19 for. You know, because you asked about it in my  
20 resume, I started thinking about my resume and  
21 jobs, but I could have just said yes. Sorry.  
22 Q. That's okay. It's a very long resume. So is  
23 your understanding of the proposed  
24 modifications, they limit the City to only  
25 pumping reflected on tables 2-3 and 2-5 of the

1 proposal?  
2 A. I didn't catch the first part of that question.  
3 Q. Do you understand this City's proposal seeking  
4 to only pump what's reflected on tables 2-3 and  
5 2-5 of the proposal?  
6 A. No, I think -- I think that table is -- I think  
7 it's one realization of multiple model scenarios  
8 that they looked at and there -- it could be  
9 variable depending on what their needs are.  
10 Q. And if the City wanted to, they could pump more  
11 under the proposal than what's reflected on 2-3  
12 and 2-5?  
13 A. I believe so.  
14 Q. And that the analysis in the City's proposal  
15 does not reflect what happens if the aquifer is  
16 drawn down to the proposed minimum index level?  
17 A. That's correct. The analysis of the 1 percent  
18 drought scenario doesn't actually have water  
19 levels that reach down to the proposed minimum  
20 index level. The proposed index level is lower  
21 than that because of a contingency that's added.  
22 Q. In scenario A, which is figure 2 --  
23 A. Of my report?  
24 Q. Of your report, thank you. Which reflects  
25 pumping of the native -- of the City's native

1 water rights, correct?  
2 A. Yes.  
3 Q. Do you know if that draws the aquifer down to  
4 the 1998 levels?  
5 A. I believe it draws it down lower. I think the  
6 starting point was actually the 19 --  
7 Q. Oh.  
8 A. The starting point was this static 1998 level.  
9 Q. And you wouldn't know, then, if we started at  
10 the full condition, if this proposed pumping on  
11 figure 2 would draw it down from our current  
12 level to the '98 level?  
13 A. I don't. I suspect it would -- yeah, I don't  
14 know, I don't know the answer to that.  
15 MS. WENDLING: Thank you, I have no  
16 further questions.  
17 PRESIDING OFFICER: We're going to  
18 go off the record for a moment.  
19 (Discussion held off the record.)  
20 PRESIDING OFFICER: Let's go back on  
21 the record. It's 12:10, let's take a lunch  
22 break until 1:00. If we can be back  
23 earlier and start earlier, then we will.  
24 (Thereupon, a lunch recess was  
25 taken; whereupon the following was

1 had.)  
2 PRESIDING OFFICER: Okay. It's now  
3 5 till 1:00, and we are back on the record.  
4 And at this point, we're back to you,  
5 Mr. Adrian, right?  
6 MR. ADRIAN: That is my  
7 understanding.  
8 PRESIDING OFFICER: Yes.  
9  
10 REDIRECT EXAMINATION  
11 BY MR. ADRIAN:  
12 Q. Mr. Romero, Mr. McLeod had some discussion with  
13 you concerning the contingency that was put  
14 in -- or added into the City's plan, and your  
15 comment was, I think initially to quote, be  
16 careful with contingencies. Would you explain  
17 what you meant by that and what might be an  
18 alternative or possibly better approach to the  
19 contingency in the plan?  
20 A. What I -- what I meant by that was -- by to be  
21 careful with contingencies is you can take a  
22 approach in model development where - excuse  
23 me - where you could make a conservative  
24 judgment one way or another along your -- your  
25 approach. And if you do that at, you know,

Page 2674

1 multiple steps along the way, you can get to an  
 2 end point and you could be so far out of the  
 3 ballpark because you've been making conservative  
 4 choices rather than making what seemed like the  
 5 most plausible and best choice within a range of  
 6 plausible values. That's what I meant by be  
 7 careful. So -- and I also described that, you  
 8 know, you could end up with a result, and if  
 9 you're making middle-of-the-road decisions along  
 10 the way, that decision may be -- your final  
 11 solution that comes out of the model can --  
 12 could be considered a best planning estimate.  
 13 And so that's what I meant by that.  
 14 And I think the second part of your  
 15 question about something that could be done that  
 16 might be better than what's in the plan?  
 17 Q. Yes, yes.  
 18 A. That's -- that's really difficult to quantify.  
 19 I think -- I think in terms of -- I think it can  
 20 be sensible to consider a plus or minus, but I'm  
 21 often in the position where I'm determining a  
 22 planning estimate that's based on an analysis,  
 23 and then someone may take that number and add  
 24 something that's conservative to that solution  
 25 from a planning perspective; and I think as long

Page 2675

1 as everyone understands what's going on, that  
 2 can be okay.  
 3 Q. In addition, in response to Mr. McLeod's  
 4 questioning, and I put quotes around this, that  
 5 you concluded what Burns & McDonnell did in  
 6 their model work was appropriately done. Is  
 7 that a correct statement that you -- you made?  
 8 A. Yes, I think in terms of running the model and  
 9 doing the analysis, I think there's -- I think  
 10 there's some comprehensive work there that's  
 11 done, and I think -- I think it's appropriate,  
 12 yes.  
 13 Q. And I added on my notes, and it's my words, to  
 14 the extent that they did it. Would that be a  
 15 fair statement?  
 16 A. To the extent that they -- that they did it?  
 17 Q. They did not do the further analysis that you  
 18 did?  
 19 A. Oh, they -- they did not include the analysis  
 20 that I included. So I think it is important to  
 21 consider different levels of detail.  
 22 Q. Then in -- in figure 3 on your report, which was  
 23 the available -- availability of water in a  
 24 drawdown, Mr. McLeod focused on the figure of  
 25 14,900 feet, and would you explain again what

Page 2676

1 that means?  
 2 A. That 14,900 acre-feet is essentially water that  
 3 remains above the current minimum index level  
 4 after diverting -- after the City diverts 40,000  
 5 acre-feet per year for eight years.  
 6 Q. And at what level did that start? What -- the  
 7 withdrawal of the 40,000 started at what -- my  
 8 notes indicate it was 1998 was the low level?  
 9 A. The initial level was 1998, yes.  
 10 Q. At the low level, was it not?  
 11 A. It's lower than predevelopment.  
 12 Q. And if I told you that the level is higher now,  
 13 it would be -- that figure would be larger,  
 14 would it not?  
 15 A. If you -- if the aquifer is at a higher level  
 16 and you start at that point, then I anticipate  
 17 more water than the 14,900 that I described on  
 18 figure 3 could be produced, under the same  
 19 scenario.  
 20 Q. And Mr. McLeod talked about Mr. Letourneau's  
 21 account of minimum streamflow -- or minimum  
 22 desirable streamflow as sort of real-time  
 23 administration, which I took it to be as when it  
 24 happens, we went out and looked at it to see  
 25 what we could do. My assumption would be that

Page 2677

1 it would be better to prevent it in the first  
 2 place or minimize it in the first place. Is  
 3 that what you were talking about?  
 4 A. Yes, I was talking about if you can minimize  
 5 that occurrence beforehand with some technical  
 6 analysis that helps you foresee potential  
 7 impacts, there may be some planning that can be  
 8 done beforehand.  
 9 Q. And part of that planning, is it not, is knowing  
 10 what could happen under various circumstances?  
 11 A. Yes.  
 12 Q. And that's what you were attempting to provide  
 13 to the hearing officer and us?  
 14 A. That's correct.  
 15 Q. In other words, more information is better than  
 16 less?  
 17 A. Yes. In terms of decision making.  
 18 Q. You also talked about one of the possibilities  
 19 in the well field was to establish a buffer  
 20 around it, I was wondering if you could expand  
 21 on that description.  
 22 A. Ah. You can have a buffer around a single well  
 23 or a single point on a map that represents a  
 24 well, which, like, for example, on figure 7 of  
 25 my report, which is -- the red circles on that

1 map are buffers around -- 660-foot buffers  
2 around City wells. I was describing that rather  
3 than having a buffer around a single well, you  
4 could have a buffer that goes around the  
5 perimeter of the well field. And that would be  
6 something -- that'd be a possible way to  
7 consider -- probably a starting place for a  
8 consideration of maybe having some sort of  
9 protective condition, that you would consider  
10 any wells that are within the well field.  
11 Q. Do you anticipate, and I realize we're  
12 speculating at this point, but would you  
13 anticipate some rules with regard to as the  
14 water level reduced to a certain level, here's  
15 what action would be required to take?  
16 A. That seems like -- excuse me. That also seems  
17 like a possible place to be thinking about  
18 potential conditions.  
19 Q. Is that -- I mean, later on in your testimony or  
20 I think in response to questions, you talked  
21 about a replacement plan that you've seen in  
22 other circumstances. Is that -- would that be  
23 considered a part or an element in the buffer  
24 around the well field?  
25 A. It could be in terms of a buffer being a spatial

1 step, so it looked like they were right on the  
2 cusp of doing so.  
3 So to me that means that they wanted to  
4 carry the work further. It's very common for  
5 people who do science to always want to carry  
6 the work further. But when you label the work  
7 as preliminary, it makes me think you were in an  
8 earlier stage than you wanted to be. More so  
9 than even when you complete a project to a  
10 certain point. So I think what that generally  
11 means is that there are some conclusions that  
12 can be drawn from it and -- but I would -- I  
13 would just be cautious about trying to read too  
14 much into the results in some cases.  
15 MR. ADRIAN: I think I have no other  
16 questions.  
17 PRESIDING OFFICER: Okay.  
18 Mr. McLeod.  
19  
20 RE-CROSS EXAMINATION  
21 BY MR. MCLEOD:  
22 Q. I'm going to try to be short and efficient, I've  
23 only got one line of questioning. Mr. Romero,  
24 can you hear me all right without the  
25 microphone?

1 component. It's -- it's -- the concept is a  
2 remedy for a well that may lose its ability to  
3 produce water, to replace that water.  
4 Q. In other words, some preventative or remedial  
5 methods would be --  
6 A. Yes.  
7 Q. Okay.  
8 A. Yes.  
9 Q. When you were asked about the -- and responded  
10 about -- to questions about the USGS report, you  
11 emphasized that the first word in the title of  
12 that report is preliminary?  
13 A. Yes.  
14 Q. What does that mean to us?  
15 A. That means that -- well, it means to me that the  
16 USGS was still working on that, I think wanted  
17 to take it to a further place in terms of  
18 completion, but must have just reached a point  
19 where it got produced into a preliminary report.  
20 So -- and, actually, if you read through the  
21 report, they talk about some of the next steps  
22 that they want to take which are fundamental  
23 toward taking next steps, you know, making some  
24 adjustments to the actual flow model, which they  
25 never did. That would be a very obvious next

1 A. Yes.  
2 MR. ADRIAN: Oh.  
3 MR. MCLEOD: It's okay, Tom.  
4 BY MR. MCLEOD:  
5 Q. You had referred in your earlier testimony to  
6 the well data that you had as a statistical  
7 sample, and that data said -- it wasn't actually  
8 selected by any criteria you would use if you  
9 were selecting a statistical sample, was it?  
10 A. It was not, it was just available in the  
11 database.  
12 Q. You don't really know the total population of  
13 wells in the aquifer, do you?  
14 A. I do not.  
15 Q. And you don't really know that -- you didn't  
16 have the total population in that data set?  
17 A. I -- I do not know that. I did infer that  
18 people have been there since before 1975 and  
19 that wells would have been there before 1975,  
20 but that was an inference I made.  
21 Q. Wells do have limited useful lives, don't they?  
22 A. They do.  
23 Q. And so very possibly even wells drilled before  
24 1975 would have needed to be redrilled since and  
25 made the log of KGS, correct, for that reason?

Page 2682

1 **A. It's possible. But I've also seen wells that**  
 2 **have been around for 50, 60 years and continued**  
 3 **on. So there is a service life associated with**  
 4 **wells but it's variable.**  
 5 Q. Also, Mr. Romero, I know you've met and, in  
 6 fact, been engaged in part by Ms. Wendling and  
 7 her office, so you're aware that there are a  
 8 number of people, some of whom are the  
 9 Intervenors, who have been very interested in  
 10 the subject matter of this hearing, correct?  
 11 **A. I'm aware.**  
 12 Q. Did you know that there's been a tremendous  
 13 amount of publicity as well about the subject  
 14 matter of the hearing?  
 15 **A. I suspect that there would be; I have not -- I**  
 16 **haven't read any newspapers locally.**  
 17 Q. Could be just as well. I would say as  
 18 exemplified by the presence and participation of  
 19 the Intervenors, would you consider it possible  
 20 that residents of the area and users of this  
 21 well field, having seen all of that publicity  
 22 and public notice, are here if they have any  
 23 concerns?  
 24 **A. I'm sorry, the question is?**  
 25 Q. Yes, given all the publicity and as exemplified

Page 2683

1 by the presence and the participation of the  
 2 Intervenors, does it seem to you likely that any  
 3 well owners in the aquifer that are interested  
 4 in this hearing are here represented in some way  
 5 or another?  
 6 **MR. ADRIAN:** I'm going to object to  
 7 that -- those questions, I don't think he's  
 8 testified or in his report about that,  
 9 about publicity or the interest of the  
 10 local residents or anything else, and I  
 11 think it is an inappropriate question.  
 12 **PRESIDING OFFICER:** Okay. I'm  
 13 inclined to sustain that unless you can  
 14 explain the relevance.  
 15 **MR. MCLEOD:** Well, I mean, the  
 16 relevance of it is that the witness has  
 17 taken a data set as a statistical sample  
 18 and it consists of some KGS data that is --  
 19 that is post 1975 data and all of the  
 20 material that's been brought to him by the  
 21 Intervenors, right, and as exemplified by  
 22 the Intervenors being here and all of the  
 23 publicity, do we have any reason to think  
 24 that there's -- that there's anybody else  
 25 with a well that could be impacted by this

Page 2684

1 hearing that isn't here, that isn't  
 2 represented, that's my question? It goes  
 3 to the validity of taking all that data as  
 4 a somehow statistical sample for an unknown  
 5 population of data.  
 6 **PRESIDING OFFICER:** Ms. Wendling.  
 7 **MS. WENDLING:** I would say that  
 8 there is no way this witness knows the  
 9 interest of the people in this area and  
 10 whether or not their lack of attendance  
 11 would say that they're not interested in  
 12 what's happening here.  
 13 **PRESIDING OFFICER:** Yeah, I'm  
 14 inclined to agree, I'll sustain the  
 15 objection.  
 16 **BY MR. MCLEOD:**  
 17 Q. In any event, Mr. Romero, I think we've  
 18 established you don't actually know the  
 19 population of wells in the aquifer, correct?  
 20 **A. That's correct.**  
 21 Q. And you don't know if this is really a  
 22 statistical sample, correct?  
 23 **A. Not in the mathematical way that a statistical**  
 24 **sample is taken.**  
 25 Q. And so statistically there is not a basis to

Page 2685

1 imply the existence of additional impacted wells  
 2 from the six that you've identified in your  
 3 results, is there?  
 4 **A. On a purely mathematical statistical sense, no.**  
 5 **MR. MCLEOD:** Thank you.  
 6 **PRESIDING OFFICER:** Mr. Oleen.  
 7  
 8 **RE CROSS EXAMINATION**  
 9 **BY MR. OLEEN:**  
 10 Q. Just a couple questions. Mr. Romero, would you  
 11 please refer to your report on page 8, footnote  
 12 6.  
 13 **A. I'm there.**  
 14 Q. The sentence in that footnote that says, most of  
 15 the Intervenor wells did not have depth to  
 16 water. Just to clarify for my mind, does that  
 17 mean that the data on the wells that was  
 18 provided to you by the Intervenors, it did  
 19 not -- that data did not include how deep the  
 20 wells had been dug or how deep the wells were to  
 21 any water?  
 22 **A. It -- there was information as to how deep the**  
 23 **wells had been dug, the total depth was there,**  
 24 **but a depth to water was not there. You need**  
 25 **both numbers in order to create -- to calculate**

1 a water column. So what I did is I looked at a  
2 year 2016 of water level service -- surface that  
3 was created by the U.S. Geological Survey, which  
4 I interpret -- which I interpret to be pretty  
5 near a full condition, and I took that data and  
6 I cross-referenced it with the wells, and I used  
7 that as a static water level to create a water  
8 column.

9 Q. Thank you. And -- and when you say Intervenor  
10 wells there, you're referring to the data set of  
11 wells that were provided to you by the  
12 Intervenor, not wells that the Intervenor  
13 purport to have some sort of ownership interest  
14 in, right?

15 A. It relates to the data that was provided to me  
16 by the Intervenor, by Wendling Law.

17 Q. In a similar --

18 A. I'm sorry, what was the second part of your  
19 question, I didn't quite follow?

20 Q. Well, when you say Intervenor wells, that has  
21 nothing to do with ownership of particular wells  
22 by any of the Intervenor. You don't -- you  
23 don't know, or do you, whether the Intervenor  
24 own any of the wells that were in the data set  
25 you were provided with?

1 if these happened to be the party of Intervenor  
2 or partially the party of Intervenor; it's just  
3 not something I ever contemplated or discussed  
4 with her.

5 Q. Your study was trying to project into the future  
6 what might happen under certain things that are  
7 in the proposal, that's obvious, right?

8 A. Yeah, I -- I consider my analysis to be  
9 compatible with a 1 percent drought scenario,  
10 there were just some -- you know, I adjusted the  
11 City's pumping to be the full water right, and  
12 then I looked at how much water could be  
13 produced looking at the two index levels.  
14 It's -- it's -- I think of it as an example  
15 scenario with some utility for planning.

16 Q. And so because this was a -- or let me start  
17 over, strike that. In the course of your  
18 analysis, you didn't actually do any research or  
19 analysis regarding something akin to figure 7  
20 and what that area would have looked like in  
21 1993 and whether there were any wells that  
22 were -- that had lost their water column, as you  
23 said, in 1993, you didn't look into that, right?

24 A. I -- I did not look into that.

25 MR. OLEEN: No further questions,

1 A. Oh, I'd say I presumed that was the case, but I  
2 technically do not know.

3 Q. And so then on -- on figure 7 of your report  
4 where you have indicated certain domestic wells  
5 that according to your analysis will be impacted  
6 by the scenarios that you modeled, you can't say  
7 whether any of these black -- black circles that  
8 are domestic wells or squares that are domestic  
9 wells, you don't know whether any of those are  
10 owned by any of the named Intervenor or not, do  
11 you?

12 A. I never cross-referenced the list to see  
13 anything like that, I just -- the data was  
14 provided to me and -- and I used it. I -- I  
15 never contemplated the question you're asking.

16 Q. And you weren't given, to your recollection,  
17 information about any ownership that the  
18 Intervenor might have in any of the wells that  
19 were contemplated in your study?

20 A. You know -- oh, boy. It's just been awhile  
21 since I've looked at those documents, you know,  
22 there may be names that are in there. I  
23 just right now don't quite recall or even --  
24 once I got the wells, I started working with  
25 them. I never discussed with Ms. Wendling or --

1 thank you.

2 PRESIDING OFFICER: Ms. Wendling.

4 RE-CROSS EXAMINATION

5 BY MS. WENDLING:

6 Q. Mr. Romero, can I have you turn to GMD2's  
7 exhibit volume -- Volume Number I, Exhibit 16?

8 A. I'm there.

9 Q. Can you tell me what this document appears to  
10 be?

11 A. Responses to City of Wichita's first set of  
12 interrogatories to Intervenor.

13 Q. All right. Can you turn now to page 3?

14 A. I'm there.

15 Q. And on the top of that, do you see permit  
16 information?

17 A. I do. I see a table with two permit numbers.

18 Q. Okay. Does this at all seem familiar in  
19 relation to the information provided to you  
20 regarding the Intervenor well information?

21 A. It does. I -- I recall now I received a  
22 spreadsheet, and this actually looks like it  
23 might be part of that spreadsheet.

24 Q. Okay. Can you turn to page 11 of that?

25 A. I'm there.

Page 2690

1 Q. And can you tell me the name on that  
 2 verification?  
 3 **A. Bill Carp.**  
 4 Q. And to your knowledge, is he an Intervenor?  
 5 **A. I suspect he may be. He was on the telephone**  
 6 **with me once when I was talking with you.**  
 7 Q. Okay.  
 8 **A. I presume so but technically I'm not entirely**  
 9 **sure.**  
 10 Q. Okay. Would it make sense that as an Intervenor  
 11 he would sign the interrogatory response for the  
 12 Intervenor?  
 13 **A. Yes.**  
 14 Q. Okay. Now, if you can keep turning, you'll see  
 15 another page 1.  
 16 **A. Oh, I do.**  
 17 Q. And if you go now to page 3 of that  
 18 interrogatory response, can you tell me what you  
 19 see towards the middle of that page?  
 20 **A. I see a listing of four domestic wells.**  
 21 Q. Okay. And if we flip to the end of this  
 22 particular response, do you see another  
 23 signature?  
 24 **A. I do.**  
 25 Q. And does this appear to be the signature of

Page 2691

1 another Intervenor?  
 2 **A. It does, it's in a Intervenor response.**  
 3 Q. So if I told you the information -- the  
 4 Intervenor well information provided to you is  
 5 the information - or I think yours had a little  
 6 more detail - as provided in the interrogatory  
 7 responses, do you believe that to be accurate?  
 8 **A. Yes.**  
 9 Q. Do you have any reason to believe I provided you  
 10 data on anyone other than the Intervenor?  
 11 **A. I -- I don't.**  
 12 **MS. WENDLING:** Thank you, no further  
 13 questions.  
 14 **PRESIDING OFFICER:** Mr. Adrian?  
 15 **MR. ADRIAN:** I have no further  
 16 questions.  
 17 **PRESIDING OFFICER:** Okay.  
 18 Mr. Oleen?  
 19 **MR. OLEEN:** I do if Mr. McLeod does  
 20 not.  
 21 **PRESIDING OFFICER:** Okay,  
 22 Mr. McLeod?  
 23 **MR. MCLEOD:** I do not.  
 24 **PRESIDING OFFICER:** Okay.  
 25 //

Page 2692

1 **RE CROSS EXAMINATION**  
 2 **BY MR. OLEEN:**  
 3 Q. Back to some interrogatories that you were  
 4 directed to look at, Mr. Romero, which was GMD2  
 5 Exhibit 16, I presume you still have it in front  
 6 of you?  
 7 **A. I do.**  
 8 Q. I don't remember exactly what pages we looked  
 9 at, but if you turn to -- first, Exhibit -- I'm  
 10 sorry, excuse me, page 3, the first page 3.  
 11 **A. Let's see, the -- in Exhibit 16, you mean the**  
 12 **page 3 on the first document in there?**  
 13 Q. Yes. I believe that's the one that was  
 14 suggested to you was signed by Mr. Bill Carp,  
 15 who I think was suggested to you is one of the  
 16 Intervenor?  
 17 **A. I think was clarified for me that he's one of**  
 18 **the Intervenor.**  
 19 Q. So you see at the top where it says the  
 20 following individual water rights, I'm  
 21 paraphrasing somewhat, belong to me or land that  
 22 I lease and risk impairment from the proposed  
 23 modifications?  
 24 **A. I see that text.**  
 25 Q. And it gives two water -- water right permit

Page 2693

1 numbers there in that box, right?  
 2 **A. Yes.**  
 3 Q. Only -- only one of those two water permit or  
 4 water rights is given an index cell number, I  
 5 don't know why that is, but do you see where it  
 6 says index cell 31?  
 7 **A. I do.**  
 8 Q. If you could turn to figure 7 in your report.  
 9 **A. Okay.**  
 10 Q. Is there any impacted well, as you claim could  
 11 occur, shown in index cell 31 of your figure 7?  
 12 **A. There isn't but give me one moment. I just want**  
 13 **to look at how I mapped locations for the wells,**  
 14 **if you give me just a minute. Okay. Actually,**  
 15 **on page -- on my report, which is, I believe,**  
 16 **Exhibit 68, on page 8 of my report, there is a**  
 17 **footnote number 6. Okay, so I think at the time**  
 18 **I was doing this, I may have thought they were**  
 19 **Intervenor wells because of the way that I wrote**  
 20 **footnote 6, but I think I had just forgotten**  
 21 **because it wasn't something that really mattered**  
 22 **in my analysis, but -- or at least didn't matter**  
 23 **with regard to conducting a technical analysis.**  
 24 **So what I describe on footnote 6 is that**  
 25 **for those wells, we cross-referenced water**

1 **rights numbers with water -- with the Water**  
 2 **Information Management and Analysis System, or**  
 3 **WIMAS, to determine well location. So one thing**  
 4 **I would point out, although that well does not**  
 5 **come out in index cell 31, I used locations that**  
 6 **were based on what was in the WIMAS database,**  
 7 **and oftentimes there's interpretations that are**  
 8 **made or you have wells down to -- maybe down to**  
 9 **a section or a half section or a quarter quarter**  
 10 **section that can affect the location of the**  
 11 **well. So I did the analysis with a level of**  
 12 **detail that was in the database for locations.**  
 13 **So that can affect whether or not it falls right**  
 14 **within an index cell or not. So I just wanted**  
 15 **to clarify that point.**  
 16 Q. Similar on the subsequent page 3, in GMD  
 17 Exhibit 15 (sic), which I believe Ms. Wendling  
 18 represented to you or clarified to you was an  
 19 interrogatory response provided by a purported  
 20 Intervenor whose name I don't recall, but if you  
 21 would just turn to that second page number 3  
 22 where there's another table that purports to  
 23 list domestic wells --  
 24 **A. Yes.**  
 25 Q. -- in a box. Do you see that?

1 thank you, sir.  
 2 **PRESIDING OFFICER:** Any other  
 3 questions? Ms. Wendling?  
 4 **MS. WENDLING:** No.  
 5 **PRESIDING OFFICER:** Okay. That  
 6 being the case, Mr. Romero, you're excused.  
 7 Thank you.  
 8 **A. Thank you.**  
 9 **MR. ADRIAN:** Ms. Owen, could we have  
 10 about five minutes to clean up so we can  
 11 move Mr. Rolfs in here and we're going to  
 12 call Mr. Pope?  
 13 **PRESIDING OFFICER:** Okay. A real  
 14 quick functional break.  
 15 (Thereupon, a recess was taken,  
 16 after which Mr. Leland Rolfs was  
 17 present in the hearing room.)  
 18 **PRESIDING OFFICER:** Okay. Now we're  
 19 back on the record.  
 20  
 21 DAVID L. POPE,  
 22 having been first duly sworn, was  
 23 examined and testified as follows:  
 24  
 25 **MR. ROLFS:** And for the record, I'm

1 **A. I do.**  
 2 Q. And it gives index cell number 30 as the  
 3 purported location of these various domestic  
 4 wells that this person supposedly owns or  
 5 leases. Is that a fair characterization?  
 6 **A. It -- that characterization sounds reasonable.**  
 7 Q. And, similarly, if we turn to figure 7 where you  
 8 have provided this graph that purports to show  
 9 certain wells that you think -- certain known  
 10 wells that you think potentially could be  
 11 impacted under the scenarios that you modeled,  
 12 there's similarly not any black square or circle  
 13 indicating any impacted well in index cell 30 of  
 14 your figure 7 graph, correct?  
 15 **A. That's correct.**  
 16 Q. Would you think it odd if the people who  
 17 retained you were concerned about effects to  
 18 their well if they did not ensure that their  
 19 well, if it were to be impacted by your  
 20 analysis, would be shown in the results of your  
 21 analysis?  
 22 **A. On the latter part of your question, I just got**  
 23 **a little lost, can you repeat it?**  
 24 **MR. OLEEN:** I'll actually withdraw  
 25 the question. I have no further questions,

1 Leland D. Rolfs representing the Equus Beds  
 2 Groundwater Management District.  
 3  
 4 **DIRECT EXAMINATION**  
 5 **BY MR. ROLFS:**  
 6 Q. For the record, I'm Leland D. Rolfs representing  
 7 the Equus Beds Groundwater Management District  
 8 No. 2.  
 9 Would you just state your name for the  
 10 record?  
 11 **A. David L. Pope.**  
 12 Q. And what city do you reside in?  
 13 **A. Topeka, Kansas.**  
 14 **MR. ROLFS:** I had understood that  
 15 Mr. Pope's resume or CV was supposed to be  
 16 copied and included with his expert report,  
 17 but it is not in the book, as I understand  
 18 it. I have copies here. Apparently, I'm  
 19 in error, it was actually in Exhibit  
 20 Number 1 - and which book is this - Volume  
 21 I, Exhibit 1.  
 22 **BY MR. ROLFS:**  
 23 Q. Mr. Pope, could you generally describe your  
 24 education?  
 25 **A. Yes, I have BS and MS degrees from Oklahoma**

Page 2698

1 **State University in agricultural engineering,**  
 2 **with emphasis in water resources and irrigation.**  
 3 Q. Okay. So after you graduated from Oklahoma  
 4 State University, where did you begin employment  
 5 at that time?  
 6 **A. After the service, my first employment was with**  
 7 **Kansas State University. I served as an**  
 8 **extension irrigation engineer for a period of**  
 9 **about five years, both in Manhattan and then**  
 10 **Garden City. I was an assistant professor and**  
 11 **extension irrigation engineer.**  
 12 Q. Okay. And where did you go from there?  
 13 **A. My next position starting in 1976 was working as**  
 14 **the manager of the Southwest Kansas Groundwater**  
 15 **Management District No. 3, that was**  
 16 **headquartered in Garden City, Kansas.**  
 17 Q. What -- what was your position there?  
 18 **A. I was manager of the District, I was responsible**  
 19 **to report to the Board of Directors and handled**  
 20 **all of the activities related to the District.**  
 21 **I was the first manager, and this was early in**  
 22 **the establishment of groundwater management**  
 23 **districts in the state, and so developed the**  
 24 **first management program, all of the records and**  
 25 **activities associated with dealing with the use**

Page 2699

1 **of water in southwest Kansas.**  
 2 Q. Okay. And what was your next place of  
 3 employment?  
 4 **A. In 1978, I went to work for the Division of**  
 5 **Water Resources, at that time the Kansas Board**  
 6 **of Agriculture, since the Kansas Department of**  
 7 **Agriculture, and I served as assistant chief**  
 8 **engineer for a period of about five years.**  
 9 Q. Okay. And then what was your next job title?  
 10 **A. In 1983, I was selected as chief engineer and**  
 11 **director of the Division of Water Resources**  
 12 **there in the Department of Agriculture and, of**  
 13 **course, carried all of the duties and**  
 14 **responsibilities for that position. I -- I**  
 15 **served in that role until I retired from state**  
 16 **service in 2007.**  
 17 Q. Okay. I guess this might be a good place to  
 18 have you describe generally what your duties  
 19 were as chief engineer.  
 20 **A. As chief engineer, there's a wide range of**  
 21 **responsibilities, I think at that time some 26**  
 22 **or 27 different statutes, to which duties are**  
 23 **explicitly assigned to the position of chief**  
 24 **engineer by the Kansas legislature. Those range**  
 25 **from the ones that are probably more applicable**

Page 2700

1 here to administration and enforcement of the  
 2 **Kansas Water Appropriation Act but also duties**  
 3 **and responsibilities related to the parts of the**  
 4 **Groundwater Management District Act. I might**  
 5 **just say generally, and come back to those more,**  
 6 **that of the responsibilities of the office,**  
 7 **they're the ones that relate to water use and**  
 8 **water appropriation, et cetera.**  
 9 **Another category is interstate water**  
 10 **issues. The chief engineer serves, by virtue of**  
 11 **his responsibility to administer water rights in**  
 12 **the state, as the state representative to each**  
 13 **of the four interstate river compacts to which**  
 14 **Kansas is a party, along with other members that**  
 15 **are appointed. And as well as represented the**  
 16 **governor on Missouri River issues and other**  
 17 **issues of an interstate nature.**  
 18 **Finally, without dwelling on it, there's a**  
 19 **series of statutes that relate to dams,**  
 20 **reservoirs, levies, flood control works,**  
 21 **drainage, a whole range of duties and**  
 22 **responsibilities related to -- to that for which**  
 23 **the chief engineer is responsible for safety of**  
 24 **dams, et cetera, et cetera. So in total,**  
 25 **there's sort of three major categories of duties**

Page 2701

1 **and responsibilities of which we're talking**  
 2 **primarily about the water appropriation here**  
 3 **today.**  
 4 Q. In the course of this employment as chief  
 5 engineer, did you ever testify in any cases  
 6 before the United States Supreme Court?  
 7 **A. Yes, I did, several times. I served as an**  
 8 **expert witness in agricultural engineering and**  
 9 **water administration before the Special Masters**  
 10 **appointed by the U.S. Supreme Court in both the**  
 11 **long-running Kansas v. Colorado lawsuit, I think**  
 12 **it's original action No. 105, and testified**  
 13 **several times in that case, which went on for a**  
 14 **number of years, as chief engineer, in those**  
 15 **capacities.**  
 16 **I also had a similar role in regard to the**  
 17 **Kansas v. Nebraska and Colorado case, original**  
 18 **No. 126, again testified in that case and also**  
 19 **was the lead member of a negotiating team that**  
 20 **ultimately led to the settlement of that case**  
 21 **that ended up being a decree of the Supreme**  
 22 **Court.**  
 23 **Unfortunately, due to later violations of**  
 24 **the final settlement stipulation, I was retained**  
 25 **by the State of Kansas to come back and testify**

1 **again in several arbitrations and then two trial**  
2 **segments before a different Special Master of**  
3 **the U.S. Supreme Court to obtain enforcement in**  
4 **that case.**

5 **MR. ROLFS:** I think at this point I  
6 would ask that Mr. Pope be accepted as a  
7 qualified expert in agricultural  
8 engineering and water administration.

9 **PRESIDING OFFICER:** Any objections?  
10 Okay, he's so accepted.

11 **BY MR. ROLFS:**

12 Q. Okay. Mr. Pope, did you create the Aquifer  
13 Storage and Recovery Program for the State of  
14 Kansas?

15 **A. Yes, from a regulatory standpoint.**

16 Q. Okay. I assume we're all referring to it here  
17 as ASR, but I haven't been part of these  
18 hearings so refer to it as the ASR program --

19 **A. Okay.**

20 Q. -- in the future here to shorten the hearing.

21 And how did this program come about, what raised  
22 interest in having this program?

23 **A. I was contacted by representatives of the City**  
24 **of Wichita expressing an interest in**  
25 **establishing an artificial recharge program in**

1 Q. And so was this regulation the authority that's  
2 used to create the ASR program?

3 **A. That's correct.**

4 Q. Could you briefly describe the process in  
5 adopting rules and regulations in the State of  
6 Kansas?

7 **A. Yes. The process essentially begins when a need**  
8 **arises to promulgate a rule in a certain area.**

9 **There are staff discussions and discussions with**  
10 **legal counsel about how to proceed. That**  
11 **results in the drafting of a proposed rule or**  
12 **rules or regulations. During that informal**  
13 **process, at least when I was in office, we**  
14 **tended to also reach out to stakeholders and**  
15 **have informal public meetings as deemed**  
16 **necessary, depending on the scope of the rules,**  
17 **to get input. After that, additional drafting**  
18 **and refinements are made, and the rules are --**  
19 **try to put those in final form.**

20 **There's a economic analysis that's required**  
21 **to take place, we would do that. Then next the**  
22 **proposed rules are submitted to the Office of**  
23 **the Attorney General for approval and to -- for**  
24 **approval of the Secretary of Administration.**  
25 **After those steps are completed, then the -- a**

1 **the Equus Beds Aquifer, and so discussions began**  
2 **in regard to that. It became apparent that we**  
3 **needed to establish some standards, and that**  
4 **led, then, to promulgation of rules and**  
5 **regulations that related to artificial recharge.**  
6 **But it was really precipitated by that interest**  
7 **that we proceeded with.**

8 Q. This program was established in regulation, not  
9 by statute?

10 **A. That's correct.**

11 Q. Okay. If you turn to K.S.A. 82-706(a), the  
12 Water Appropriation Act, be Volume II, item 21.

13 **A. Yeah, I have a copy here.**

14 Q. And could you please read the statute.

15 **A. Yes, you said 82a-706?**

16 Q. 706(a).

17 **A. Oh, 706(a). Yes, that's entitled Rules,**  
18 **Regulations, and Standards, the chief engineer**  
19 **shall adopt, amend, promulgate, and enforce such**  
20 **reasonable rules, regulations, and standards**  
21 **necessary for the discharge of his or her duties**  
22 **and for the achievement of the purposes of this**  
23 **act pertaining to the control, conservation,**  
24 **regulation, allotment, and distribution of the**  
25 **water resources of the state.**

1 **public hearing is scheduled, and there's -- we**  
2 **often did that, depending on the scope of the**  
3 **rules, at one or more locations in the state.**  
4 **And, of course, there are notices of those**  
5 **things.**

6 **After the hearing and considering the**  
7 **testimony and feedback, then the rules are**  
8 **adopted. There is an additional step required**  
9 **in that agency rules and regulations are**  
10 **required to be reviewed with the Committee on**  
11 **Rules and Regulations of the Kansas legislature.**  
12 **And after that has been completed and**  
13 **considering all of the feedback, unless there's**  
14 **changes, then the rules are published in the**  
15 **Kansas Register and become final.**

16 Q. Okay. In Kansas what is the effect of a  
17 lawfully adopted rule and regulation?

18 **A. A lawfully adopted rule and regulation has the**  
19 **force and effect of law by statute.**

20 Q. So as an administrator, once you adopt a rule  
21 and regulation, then you must follow that rule  
22 and regulation until such time as it's changed  
23 or amended?

24 **A. That's correct.**

25 Q. What was your involvement -- did you have any

Page 2706

1 involvement with the ASR program as proposed by  
 2 the City of Wichita?  
 3 **A. Yes, I did. There was interactions with the**  
 4 **City in the -- in very early parts of the**  
 5 **process, especially, but my actual role**  
 6 **ultimately was to review the proposal, and I did**  
 7 **that and approved Phase I of the ASR.**  
 8 Q. And you were general -- were you supportive of  
 9 having an ASR program in the State of Kansas?  
 10 **A. Yes, I think that's a fair statement. I was**  
 11 **aware of the City's interest in an artificial**  
 12 **recharge program and felt that there was merit**  
 13 **in considering that proposal, recognizing it was**  
 14 **a part of the City's long-term water supply**  
 15 **planning effort, and it appeared that there was**  
 16 **some merit to consider it.**  
 17 Q. During the process of considering this  
 18 application with the City of Wichita, did the  
 19 City of Wichita propose using the concept of  
 20 passive recharge credits?  
 21 **A. No, they did not.**  
 22 Q. They did not propose --  
 23 **A. Oh, I'm sorry, I misunderstood. Yes, they did**  
 24 **propose the concept of passive recharge in those**  
 25 **early stages.**

Page 2707

1 Q. So was that idea discussed and considered at  
 2 length or ...  
 3 **A. Yes, it actually was. From an internal**  
 4 **standpoint, we had extensive review of that**  
 5 **concept, that issue at the staff level and with**  
 6 **legal counsel and myself. And both at the time**  
 7 **we were promulgating the rules and regulations**  
 8 **that were ultimately adopted and in**  
 9 **consideration of Phase I of the ASR, we**  
 10 **considered it carefully and ultimately**  
 11 **determined that passive -- the passive recharge**  
 12 **concept was not consistent with the law because**  
 13 **no physical recharge actually occurred using**  
 14 **that method.**  
 15 Q. So what -- I guess maybe I should have you  
 16 describe what is -- what did you understand the  
 17 passive recharge credit to be?  
 18 **A. Well, I think the general description that I**  
 19 **understood, and I believe is correct, is that it**  
 20 **would result in recharge credits being accrued**  
 21 **as a result of not pumping water from the City's**  
 22 **existing wells, their well field.**  
 23 Q. So as a result of all this discussion and after  
 24 the City's proposal, did you ultimately approve  
 25 the concept of passive recharge credits in Phase

Page 2708

1 I?  
 2 **A. No, I did not.**  
 3 Q. And could you point to any specific language in  
 4 your order approving the ASR program dealing  
 5 with that topic?  
 6 **A. Yes. Let me see.**  
 7 Q. Item 26 of Volume II and page 11.  
 8 **A. I -- I think I have it here but I --**  
 9 Q. Okay.  
 10 **A. Basically, in the August 8th, 2005 approval of**  
 11 **the applications for artificial recharge in**  
 12 **Phase I, that order was a findings, conclusions**  
 13 **and order, and included within that was**  
 14 **conclusion number 3, the chief engineer**  
 15 **indicated, quote, that passive recharge credits**  
 16 **should not be allowed because they are not,**  
 17 **quote, artificial recharge, end of quote, as**  
 18 **defined in Kansas Administrative Regulation, or**  
 19 **K.A.R., 5-1-1 because no source water is being**  
 20 **artificially recharged to create those credits.**  
 21 **In addition, paragraph number 2 of the order**  
 22 **says, quote, that passive recharge credits shall**  
 23 **not be allowed, end of quote.**  
 24 Q. So, ultimately, you approved the concept -- or  
 25 you approved Wichita's ASR project while

Page 2709

1 specifically denying the concept of passive  
 2 recharge credit; is that correct?  
 3 **A. That's correct.**  
 4 Q. Did you have any involvement with Phase II of  
 5 Wichita's ASR project?  
 6 **A. Yes, I did. My involvement with Phase II was**  
 7 **more limited. The application for Phase II was**  
 8 **filed while I was chief engineer, shortly**  
 9 **before -- I think in late 2006 but -- so I**  
 10 **received the application and there was some**  
 11 **initial processing, but I retired in 2007; and**  
 12 **at that point in time, the application was not**  
 13 **ready for action, and so it -- it did not get**  
 14 **acted on during my tenure.**  
 15 Q. Okay. Was the application -- do you know if the  
 16 application was ultimately approved?  
 17 **A. Yes.**  
 18 Q. And who would have approved that?  
 19 **A. The Phase II application was approved by David**  
 20 **Barfield, my successor as chief engineer.**  
 21 Q. And in that order approving Phase II, was the  
 22 topic of artificial recharge -- passive recharge  
 23 credits discussed in that order?  
 24 **A. Yes, it was. That order, which I believe was**  
 25 **approved September 18, 2009, included paragraph**

1 **number 11(a) of the findings and also paragraph**  
2 **number 2 of the order, which both provide,**  
3 **quote, that passive recharge credits shall not**  
4 **be allowed, end of quote.**

5 Q. Okay. Sorry, we're trying to find the exhibit  
6 number here.

7 **A. Okay.**

8 Q. Do you have -- happen to have it, Mr. Pope?

9 **A. Well --**

10 **PRESIDING OFFICER:** Phase II?

11 **MR. ROLFS:** Yes.

12 **BY MR. ROLFS:**

13 Q. It's Volume II, Exhibit 28.

14 **A. Let's see. I haven't gotten real familiar with**  
15 **this system, let me --**

16 Q. 28.

17 **PRESIDING OFFICER:** 28.

18 **BY MR. ROLFS:**

19 Q. I'm sorry.

20 **A. It's 28?**

21 Q. Page 5. It's in Volume II. Could you briefly  
22 describe what you understand the City of  
23 Wichita's current proposal to be?

24 **A. I think in general terms it proposes two main**  
25 **things, the first is to lower the index water**

1 room.)

2 **A. Let me get to the right place here, but I -- I**  
3 **think it's important first when we're describing**  
4 **the regulations related to ASR to look at the**  
5 **definitions --**

6 **BY MR. ROLFS:**

7 Q. Okay.

8 **A. -- of terms in K.A.R. 5-1-1, the definitions of**  
9 **these rules and regulations for the Water**  
10 **Appropriation Act. And in that regard, K.A.R.**  
11 **5-1-1 definition (e) says that aquifer storage**  
12 **means the act of storing water in an aquifer by**  
13 **artificial recharge for subsequent diversion and**  
14 **beneficial use. Item (f) says, aquifer storage**  
15 **and recovery system means the physical**  
16 **infrastructure that meets the following**  
17 **conditions. And (f)(1) under that is, is**  
18 **constructed and operated for artificial**  
19 **recharge, storage, and recovery of source water,**  
20 **and number 2, consists of apparatus for**  
21 **diversion, treatment, recharge, storage,**  
22 **extraction and distribution. Next I want to**  
23 **mention that item (g) just after that defines**  
24 **artificial recharge means the use of source**  
25 **water to artificially replenish the water supply**

1 **levels in the recharge area; secondly is to --**  
2 **it proposes a concept of aquifer maintenance**  
3 **credits, or AMCs, I guess, is the acronym we**  
4 **use.**

5 Q. And what do you understand AMCs to be?

6 **A. The concept appears to be one of proposing to**  
7 **receive credit for not pumping water from the**  
8 **City's well field normally associated with the**  
9 **diversion and treatment of water provided from**  
10 **the Little Arkansas River, but that happens**  
11 **whenever recharge capacity is -- physical**  
12 **recharge capacity is not available.**

13 Q. Okay. Do any of the regulations that you  
14 adopted creating the program expressly authorize  
15 AMCs?

16 **A. No.**

17 Q. What regulations -- what would the regulations  
18 ultimately provide for in terms of approving or  
19 disapproving of AMCs, what regulations would you  
20 point to? And the regulations are --

21 **A. Well, I think it might be helpful --**

22 Q. This would be found in Volume II, Exhibit 22 in  
23 terms of where the regulations are in the  
24 record.

25 (Mr. Stucky entered the hearing

1 in an aquifer.

2 There's two other definitions I think that  
3 are particularly relevant here, the first of  
4 those is still in K.A.R. 5-1-1, and it's (mmm),  
5 recharge credit means the quantity of water that  
6 is stored in the basin storage area and that is  
7 available for subsequent appropriation for  
8 beneficial use by the operator of the aquifer  
9 storage and recovery system. And, finally, in  
10 the definitions, I would refer to (yyy),  
11 entitled source water means water used for  
12 artificial recharge that meets the following  
13 conditions, then there's a list of four items.  
14 Number 1, is available for appropriation for  
15 beneficial use; is above base flow stage in the  
16 stream; 3, is not needed to satisfy minimum  
17 desirable streamflow requirements; and, 4, will  
18 not degrade the ambient groundwater quality in  
19 the basin storage area.

20 So those terms, I think, are important as  
21 one looks at what an artificial recharge project  
22 is and how that needs to occur to be in  
23 compliance with the rules and regs.

24 Q. Do you think that the AMCs as proposed by the  
25 City of Wichita meet the criteria of those

Page 2714

1 regulations?  
 2 **A. No, I do not believe it does.**  
 3 Q. Shifting topics here, can changes be made to  
 4 water rights in the State of Kansas?  
 5 **A. Yes.**  
 6 Q. And how is that done?  
 7 **A. Yes, there's a process followed and basically --**  
 8 **let me get here.**  
 9 Q. Are we in statutes or regulations here?  
 10 **A. Yeah, I wanted to go to the statutes first and I**  
 11 **was --**  
 12 Q. Let's go to Exhibit 21, Kansas Water  
 13 Appropriation Act.  
 14 **A. Yes, we're at K.S.A. 82a-708(b), and in essence,**  
 15 **to paraphrase, this statute authorizes**  
 16 **applications to be filed for a change in the**  
 17 **place of use, the point of diversion, or the use**  
 18 **made of water. And, basically, it says that an**  
 19 **owner of a water right may -- may change any one**  
 20 **of those three, any one or more of those three**  
 21 **attributes of the water right if it meets the**  
 22 **criteria in the statutes and the rules.**  
 23 Q. Do the statutes expressly authorize any other  
 24 types of changes to existing water rights?  
 25 **A. No, just those three things, point of diversion,**

Page 2715

1 **place of use, and use made of water.**  
 2 Q. In practice, are there any exceptions to that,  
 3 making changes to water rights?  
 4 **A. Well, I would say there's -- if you go back into**  
 5 **history a number of years, there was a period**  
 6 **when the Division of Water Resources issued**  
 7 **findings and orders and sometimes correction**  
 8 **orders that were done for the purpose of tying**  
 9 **down more specifically the actual location of**  
 10 **authorized wells or points of diversion.**  
 11 **I might just say in general that prior to**  
 12 **the time that that started occurring, which was**  
 13 **about whenever I went to work for the Division**  
 14 **of Water Resources, points of diversion were**  
 15 **described very generally, typically something**  
 16 **like well or wells within, say, a 40-acre tract**  
 17 **or even a larger tract of land. And it was**  
 18 **determined that in order to be able to better**  
 19 **consider things like applications for changes in**  
 20 **a point of diversion or to actually better**  
 21 **administer and enforce the law that it was**  
 22 **necessary to more specifically define those**  
 23 **points of diversion. And so there was a process**  
 24 **of going through the records and looking at**  
 25 **field inspection information and issue -- orders**

Page 2716

1 **were then issued to essentially better define**  
 2 **those.**  
 3 Q. Okay. So other than the three things you  
 4 pointed out in 708(b) and the minor corrections,  
 5 no other changes are authorized to existing  
 6 water rights under the statute; is that correct?  
 7 **A. Yes. I think I understood your question, yeah.**  
 8 Q. Okay. Follow up a little bit further, in  
 9 Kansas, can a water right ever be expanded after  
 10 it's created?  
 11 **A. No, it's been long-standing practice, both in**  
 12 **Kansas and elsewhere in the states in general**  
 13 **that follow the appropriation doctrine, that**  
 14 **once a permit is issued and the time to perfect**  
 15 **that water right has occurred, and in the case**  
 16 **of vested rights, once the vested rights were**  
 17 **determined, that the extent of the use cannot be**  
 18 **enlarged. In general, as the years went by, the**  
 19 **consumptive use could not be increased under**  
 20 **that water right.**  
 21 Q. Okay. Can the maximum annual quantity  
 22 authorized by that right ever be increased under  
 23 that existing right?  
 24 **A. No, it could not. Once that water right that**  
 25 **has that priority date has gone through that**

Page 2717

1 **perfection process it could not be increased.**  
 2 Q. And can the maximum instantaneous diversion rate  
 3 ever -- authorized rate ever be increased?  
 4 **A. No.**  
 5 Q. I believe you mentioned that the consumptive use  
 6 could not be increased after the water right was  
 7 established, what is the basis for that? Is  
 8 that a regulation?  
 9 **A. It is a regulation. It's a -- let me see. I**  
 10 **believe it's 5-5-3, if I recall. Let me**  
 11 **double-check that.**  
 12 Q. This would be Volume II, Exhibit 22. 21 is the  
 13 Water Appropriation Act, I'm sorry.  
 14 **A. That's correct. And Kansas Administrative**  
 15 **Regulation 5-5-3, entitled Change in Consumptive**  
 16 **Use says that the extent of consumptive use**  
 17 **shall not be increased substantially after a**  
 18 **vested right has been determined or the time**  
 19 **allowed in which to perfect the water right has**  
 20 **expired, including any authorized extension of**  
 21 **time to perfect the water right.**  
 22 Q. Okay. Are there any other examples in  
 23 regulation that restrict expansion of water  
 24 rights?  
 25 **A. Yes, there's an additional regulation related to**

1 this that deals explicitly with irrigation  
2 issues and that by analogy, and that regulation  
3 was promulgated, I believe that's 5-5-11. Let  
4 me verify that. Yes. That regulation basically  
5 limits an increase in the irrigated acreage  
6 under an existing water right when considering a  
7 application for a change in place of use.

8 And, again, the concept that we were  
9 dealing with then was if an existing water right  
10 covered certain number of acres, let's say  
11 160 acres, and if that applicant wanted to  
12 expand the acreage under the water right, he  
13 could file an application for a change in place  
14 of use, but the rules were set up so that that  
15 process would not result in an increase in  
16 consumptive use. So some changes can be made  
17 and increases occurred, but there's an  
18 adjustment or a condition of the water right  
19 instituted that prevents an increase in  
20 beneficial consumptive use.

21 Q. So in your opinion, would approval of the AMC  
22 concept increase consumptive use of existing  
23 water rights in violation of those regulations?

24 A. It's my understanding from the application that  
25 that is a likely result.

1 Q. Do you have any other thing you would like to  
2 add as to why you feel that would be the case?  
3 A. Well, I think the fundamental issue is that  
4 the -- under the operation of the ASR in Phase I  
5 and Phase II there's physical -- there's  
6 diversion of water from the source, treatment,  
7 and actual physical recharge of source water  
8 through artificial recharge.

9 With the AMC proposal, that's not the case.  
10 There would be -- there's not that physical  
11 artificial recharge of source water that occurs  
12 and, therefore, there's credits that are --  
13 would be proposed under the AMC process that --  
14 one way to look at it would be that if you --  
15 when there's not physical recharge capacity  
16 available and water's available from the source  
17 and it's provided at the place of the recharge  
18 facilities, then that typically occurs in a  
19 wetter period of time, when streamflow is  
20 available, water levels are high in the aquifer;  
21 but when those credits would be proposed to be  
22 withdrawn typically occur during a much drier  
23 period of drought, you know, the City's planning  
24 related to 1 percent drought, for example, and  
25 so I think that has a significant effect when

1 there is not that physical recharge component.

2 Q. Do you think that the lowering of the minimum  
3 index levels could also have that same effect in  
4 terms of increasing consumptive use?

5 A. Well, it certainly provides an opportunity for  
6 recharge credits to be withdrawn at a lower  
7 level in the aquifer, and so the combination of  
8 lowering those index levels and then not  
9 requiring the physical recharge of water has  
10 that problem.

11 Q. Okay. Is the City -- what the City is proposing  
12 to do would -- fundamentally different than  
13 other water users simply wanting to get credit  
14 for not pumping an alternate supply or a standby  
15 source?

16 A. No, I think in -- in general terms that the  
17 proposal is not that different than what other  
18 water users would like to do in some cases.

19 Q. Could you give an example of that?

20 A. Yes, I -- many water users in the State of  
21 Kansas have both surface water and groundwater  
22 rights, in some cases they have access to  
23 storage, surface water storage. And it's a --  
24 kind of a normal situation to where water users,  
25 whether they be a city or a irrigator or

1 whatever, tend to want to use their surface  
2 water first when it is available because during  
3 droughts or dry periods it may not be available.  
4 So during those periods, again, where they have  
5 surface water and groundwater rights, that would  
6 occur, and during that time period, often they  
7 would not pump all or most of their groundwater  
8 right that's authorized for the same purpose and  
9 often on the same place of use.

10 If a methodology like is proposed by the  
11 City to use AMCs would be allowed in the  
12 situation I'm trying to describe, it would be  
13 pretty easy for people to manipulate the system  
14 to where they again use that surface or not pump  
15 the groundwater, but then when you get into a  
16 dry period or other circumstances, they would  
17 then want to pump their full groundwater right,  
18 plus credits accrued from not pumping those  
19 groundwater rights during those wetter periods;  
20 and, again, they would double up and be able to  
21 pump a lot more water from the groundwater  
22 source. And that's where you run into the  
23 problem because that can have an adverse effect  
24 on the aquifer, it can cause more stream  
25 depletion, potential impairment between users,

Page 2722

1 matters of that nature.  
 2 So this -- I should mention, I guess you  
 3 asked by way of example, I'm aware of  
 4 circumstances like this where there's surface  
 5 water, groundwater rights and some storage in  
 6 the upper part of the Arkansas River Basin,  
 7 essentially state line to Garden City, you have  
 8 the Solomon River Basin in north central --  
 9 northwest, north central, the Smoky Hill River  
 10 Basin, the Republican River Basin, all of these  
 11 are examples where you have surface water and --  
 12 rights and groundwater rights. You also have,  
 13 in most of the ones I referred to, reservoirs;  
 14 often reservoirs by the -- constructed by the  
 15 Bureau of Reclamation, some cases the Corps of  
 16 Engineers, where users have -- can participate  
 17 in an irrigation district which provides for  
 18 release of water from storage. And, again,  
 19 that's going to mean an opportunity to not use  
 20 the groundwater every year.  
 21 And so those are the kinds of other  
 22 situations in the state where getting credit for  
 23 not pumping a well can really lead to unintended  
 24 consequences.  
 25 Q. Okay. Has the Kansas legislature passed laws

Page 2723

1 specifically allowing certain flexibility in how  
 2 water right holders can use their water?  
 3 Sorry, I apologize, between my eyeglasses  
 4 and being unable to read and get to the  
 5 microphone.  
 6 A. Yes, to answer your question, there -- there has  
 7 been an interest by water right holders to -- to  
 8 have more flexibility in their use of water  
 9 because there are wet years and dry years; and,  
 10 normally, water rights are sufficient for most  
 11 dry years, but you can have extremes. And so in  
 12 response to that, in addition to a second goal  
 13 of -- while giving more flexibility but also to  
 14 save water, to have a conservation goal, those  
 15 two factors led to the Kansas legislature  
 16 enacting two different statutes that relate to  
 17 that.  
 18 The first example I would use is K.S.A.  
 19 82a-745, and that statute basically allows one  
 20 or more water right holders to - these are  
 21 groundwater rights now - to enter into a consent  
 22 agreement with the chief engineer and agree to  
 23 develop a management program that will give them  
 24 some extra flexibility, them being the water  
 25 right holder, but also requiring it to have a

Page 2724

1 conservation, in other words a reduction in use,  
 2 which these things get a little complicated in  
 3 terms of looking at historic use of water  
 4 compared to authorized and these various  
 5 factors, but there's -- that's why you have this  
 6 consent order to spell that out in the  
 7 management program. And the goal there again is  
 8 to conserve water, that's the real motivation of  
 9 this statute, but also to give some flexibility  
 10 to the water users. And this particular program  
 11 has been used with pretty considerable success  
 12 in southwest Kansas in particular and some other  
 13 areas where a number of these water conservation  
 14 areas have been established.  
 15 A second program, I think was actually  
 16 adopted earlier, was under K.S.A. 82a-736, and  
 17 it establishes what's known as multi-year flex  
 18 accounts. And this -- the motivation for this  
 19 program, as I recall, was during a very serious  
 20 drought period, users were, particularly  
 21 irrigators were trying to - I think it happened  
 22 with cities too - but were trying to meet their  
 23 needs -- meet the needs of their beneficial use  
 24 while staying within the limits of their annual  
 25 water rights. Water rights are based on a

Page 2725

1 certain number of acre-feet per calendar year.  
 2 And so there was some efforts through term  
 3 permits and various things to help deal with  
 4 this extreme drought, but this program then was  
 5 put into place to allow a user to voluntarily  
 6 enter into a flex account arrangement where  
 7 they'd have a multi-year period but again also  
 8 would have to limit their water use. So it  
 9 wasn't just a license to use more water; it was  
 10 by the other -- the other goal was what was to  
 11 be achieved.  
 12 Q. Okay. In your opinion, what do you think is the  
 13 ultimate result of allowing AMCs?  
 14 A. Well, my concern is that by allowing AMCs where  
 15 actual source water is not physically recharged  
 16 that the AMC methodology would allow recharge  
 17 credits to be accrued without physically  
 18 recharging water. And -- and I think as I  
 19 alluded to earlier, I believe this could, and  
 20 most likely would, essentially allow the City to  
 21 develop recharge credits, again, without  
 22 physical recharge, but then withdraw those  
 23 during a drought period; and this then could  
 24 result in substantially more water use and  
 25 effect on the aquifer during that period, which

1 might go on for seven or eight years.  
 2 Q. In terms of priority, what's your understanding  
 3 about when AMCs could be exercised as proposed?  
 4 **A. When -- under a traditional physical recharge**  
 5 **operation, the understanding, I think, I had at**  
 6 **the time, at least, was sort of analogous to**  
 7 **storage in reservoir. And so physical recharge**  
 8 **would occur into the aquifer under the Phase I**  
 9 **and Phase II and the physical recharge option**  
 10 **currently, and once that water is lawfully**  
 11 **stored, then it's really the City's water. It's**  
 12 **really -- and, again, using the analogy of a**  
 13 **surface water reservoir, once water is lawfully**  
 14 **diverted under a water right, stored in that**  
 15 **reservoir, it's considered property of the water**  
 16 **right owner.**  
 17 If that same thing is true for artificial  
 18 recharge, then that's -- that's fine because the  
 19 City would have control over the water they  
 20 physically recharged. But under the AMC  
 21 proposal where they're not physically recharging  
 22 water, arguably they could claim ownership of  
 23 that amount of credits that they would have  
 24 accrued under AMCs and that's water they never  
 25 physically put there. And so they have to be

1 taking water, since they didn't physically put  
 2 it there, they have to be taking water, then,  
 3 that the water right holders were entitled to  
 4 pump because that's their source of supply. And  
 5 that's where you would get into this injury  
 6 issue of adversely affecting other water right  
 7 holders in that area.  
 8 Q. Is it your understanding the water -- the  
 9 aquifer is fully appropriated or not?  
 10 **A. Well, yes, we're operating in the presumption**  
 11 **here, and I guess it should be said, is that the**  
 12 **area where the City's municipal well field is,**  
 13 **and other areas, for which more appropriations**  
 14 **exist than what the current safe yield rules and**  
 15 **regulations of the Equus Beds Groundwater**  
 16 **Management District No. 2 allow, that's an area**  
 17 **we consider fully appropriated, if not**  
 18 **over-appropriated. And so if -- if that's the**  
 19 **case, then, of course, new permits wouldn't be**  
 20 **allowed except for minor exceptions and all of**  
 21 **those other implications. I don't know whether**  
 22 **I understood fully your full question.**  
 23 Q. Yes, I think that answers the question.  
 24 **A. Okay.**  
 25 Q. Based on your over 40 years of experience with

1 water rights and water issues, being a chief  
 2 engineer, and your review of the documents in  
 3 this case, what were the conclusions in your  
 4 expert report, then?  
 5 **A. Yes, I have --**  
 6 Q. Now, this would be Volume I, Exhibit 2, your  
 7 expert report.  
 8 **A. Yeah, I think I drew six different conclusions**  
 9 **and opinions, they're in my expert report. And**  
 10 **the first of those is simply just saying that**  
 11 **based on my experience with administration of**  
 12 **Kansas water law and regulations that the City's**  
 13 **proposed ASR aquifer maintenance credit, or AMC,**  
 14 **proposal does not -- well, it's not consistent**  
 15 **with the provisions of the Water Appropriation**  
 16 **Act, K.S.A. 82a-701 et seq., nor the regulations**  
 17 **promulgated thereunder, which I've been**  
 18 **discussing here today during my testimony, most**  
 19 **specifically K.A.R. 5-1-1, 5-12-1 through**  
 20 **5-12-4, as well as K.A.R. 5-22-1, 5-22-10, and**  
 21 **5-22-17. Those last three cites are the rules**  
 22 **adopted for the Groundwater Management District**  
 23 **No. 2.**  
 24 Q. And did you adopt those regulations on behalf of  
 25 the District?

1 **A. Yes, I did.**  
 2 Q. Please continue.  
 3 **A. My second item was that the proposed use of AMCs**  
 4 **is a form of passive recharge credits, which are**  
 5 **not authorized by the Kansas Water Appropriation**  
 6 **Act, they are not allowed by the chief**  
 7 **engineer's ASR rules and regulations, and that's**  
 8 **because of the definitions that I referred to**  
 9 **earlier, but I'm going to mention specifically**  
 10 **K.A.R. 5-12-1(a) provides that an operator may**  
 11 **store water in an aquifer storage and recovery**  
 12 **system under a permit to appropriate water for**  
 13 **artificial recharge if the water appropriated is**  
 14 **source water. And source water is defined by**  
 15 **the definitions, K.A.R. 5-1-1(yyy), as I said**  
 16 **earlier in my testimony.**  
 17 **Also, K.A.R. 5-1-1(g) defines artificial**  
 18 **recharge as, quote, the use of source water to**  
 19 **artificially replenish the water supply in the**  
 20 **aquifer, so that source water being available is**  
 21 **very important. And, finally, I've noted in my**  
 22 **report the definitions of recharge credit and**  
 23 **noted that AMCs do not meet this definition of**  
 24 **source water. In particular, the definition of**  
 25 **source water does not include an offset for**

Page 2730

1 water not pumped from the aquifer as proposed by  
 2 the Wichita ASR.  
 3 And, finally, on the next item, I've noted  
 4 that passive recharge credits are prohibited by  
 5 orders issued by the chief engineer during Phase  
 6 I and Phase II. If the ASR project is not  
 7 adding physical recharge, then AMCs that allow  
 8 credits for not pumping City wells in the basin  
 9 storage area are passive recharge credits that  
 10 should not be allowed.  
 11 And, finally, I guess I would -- I noted in  
 12 my report, we didn't spell out a lot of detail  
 13 in my testimony so far, but the Burns &  
 14 McDonnell report, which I know is right here  
 15 as --  
 16 Q. It's in the black volume.  
 17 A. Black volume. So I can't read from here,  
 18 it's -- whether there's an exhibit number, but  
 19 this is the report dated March 12, 2018,  
 20 entitled ASR Permit Modification Proposal,  
 21 Revised Minimum Index Levels and Aquifer  
 22 Maintenance Credits, that report.  
 23 It illustrates that the City demand  
 24 assigned to the Equus Beds well field and ASR  
 25 during a 1 percent simulated drought could reach

Page 2731

1 as high as 59,907 acre-feet in some years,  
 2 which, of course, is significantly more than the  
 3 40,000 acre-feet per year authorized by the  
 4 City's well field. And if you total the well  
 5 field and ASR demands for the eight years  
 6 drought simulated in table 2.3 of the report I  
 7 just cited, that would result in 363,850  
 8 acre-feet, or 43,850 acre-feet more for that  
 9 eight-year period than the water rights  
 10 authorized by the City's Equus Beds well field.  
 11 Of course, in an eight-year period, ordinarily  
 12 their well field would allow 320,000 acre-feet  
 13 to be diverted.  
 14 So my conclusion here was if ASR credits  
 15 are not based on physical recharge credits, over  
 16 time, and especially during an extended drought,  
 17 the accumulation of recharge credits by the City  
 18 through the proposed ASR by both physical  
 19 recharge credits and the AMC could reach an  
 20 amount that would adversely affect the ability  
 21 of other water users to exercise their rights  
 22 and certainly would be water -- more water taken  
 23 from the system.  
 24 And so finally, I -- my final conclusion  
 25 was that the Wichita ASR proposal should not be

Page 2732

1 approved in its current form.  
 2 MR. ROLFS: At this point, I'd like  
 3 to move admission of District Exhibits 1,  
 4 2, 23 through 35 and 38, which are  
 5 Mr. Pope's resume, expert report, and the  
 6 documents listed at the end of his report.  
 7 MR. MCLEOD: Cumulative as to the  
 8 report, it's an objection.  
 9 MR. OLEEN: I am not objecting, I'm  
 10 just asking, Mr. Rolfs, that you give that  
 11 list one more time of the tabbed documents  
 12 that you are moving to admit.  
 13 MR. ROLFS: I believe it's District  
 14 Exhibits Numbered 1, 2, 21 through 35, and  
 15 38. And the rules and regulations and the  
 16 statutes, I believe, were to be judicially  
 17 noticed.  
 18 PRESIDING OFFICER: Yeah, the rules  
 19 and regs and the MOUs, the memorandums of  
 20 understanding, have all been  
 21 administratively noticed. So the items in  
 22 addition to that, the 1 and 2, would be?  
 23 MR. ROLFS: His resume and --  
 24 PRESIDING OFFICER: The resume and  
 25 the expert report.

Page 2733

1 MR. ROLFS: -- his expert report?  
 2 PRESIDING OFFICER: Okay. Any  
 3 objection?  
 4 MR. OLEEN: No.  
 5 PRESIDING OFFICER: Okay. Then  
 6 Exhibit 1 and 2 will be admitted. The  
 7 other items are already included in the  
 8 record and administratively noticed.  
 9 MR. ROLFS: The items listed at the  
 10 end of Mr. Pope's report include -- include  
 11 Exhibits 21 through 35 and 38 which are not  
 12 rules and regulations.  
 13 PRESIDING OFFICER: Oh, I'm sorry.  
 14 MR. ROLFS: The Water Appropriation  
 15 Act is 21. 25 through 35, I guess, and  
 16 30 -- 25 through 35 and 38. I'm sorry.  
 17 Sorry about the confusion. I feel like  
 18 I've jumped into the middle of this  
 19 hearing, having trouble catching up.  
 20 A. And I would note that item numbers 10 and 11  
 21 that I referred to in my report are the two  
 22 items in the black book.  
 23 PRESIDING OFFICER: The proposal?  
 24 A. Yes.  
 25 PRESIDING OFFICER: And?

1 **A. The letter March 12th, 2018 to the Chief**  
2 **Engineer Barfield. And 11 was the March 12th**  
3 **Burns & McDonnell report.**

4 **PRESIDING OFFICER:** I know the  
5 proposal is in.

6 **MR. OLEEN:** I wonder if we might go  
7 off the record to confer about what items  
8 have not already been admitted and taken  
9 judicial notice of.

10 **PRESIDING OFFICER:** Okay. Let's go  
11 off the record for a minute.

12 (Thereupon, a recess was taken;  
13 whereupon, the following was had.)

14 **PRESIDING OFFICER:** Let's go back on  
15 the record. Mr. Rolfs.

16 **MR. ROLFS:** Yes, we were previously  
17 discussing which exhibits we wanted to move  
18 admittance to, and during the break we had  
19 a discussion to try to resolve which ones  
20 had been admitted. As I said earlier, we  
21 wanted to admit Mr. Pope's resume, his  
22 expert report, and then the documents  
23 listed at the end of his expert report. To  
24 the extent that those are not admitted, I  
25 would like to move admittance. At this

1 they're already in?

2 **MR. MCLEOD:** No, I think that the  
3 expert report would be cumulative. No  
4 objection to the others.

5 **PRESIDING OFFICER:** Oh, okay. Noted  
6 but 1, 2, 30, 31, 34, 35 will be -- and 38  
7 will be admitted. Yes.

8 **MR. ROLFS:** Thank you, that's all  
9 the questions I have at this time, I  
10 reserve the right to do redirect.

11 **PRESIDING OFFICER:** Okay, thank you.  
12 Mr. McLeod.

13 **MR. MCLEOD:** Thank you.  
14

15 **CROSS-EXAMINATION**  
16 **BY MR. MCLEOD:**

17 Q. Mr. Pope, in the days when you were chief  
18 engineer and you were reviewing, making  
19 decisions on the ASR Phase I application, do you  
20 recall whether Groundwater Management District 2  
21 made any recommendation to the chief engineer as  
22 far as what should happen with the passive  
23 recharge credit concept?

24 **A. I don't explicitly -- explicitly recall. I am**  
25 **aware of the memorandum of understanding, the**

1 point, we believe those numbers are  
2 Groundwater Management District Exhibits  
3 Number 1, 2, 30, 31, 34, 35, and 38.

4 **PRESIDING OFFICER:** Okay.

5 **MR. ROLFS:** If it turns out later  
6 that other ones have not been admitted that  
7 were -- if it turns out later that we've  
8 made an error and not gotten all the ones  
9 from Mr. Pope's report admitted, I would  
10 like to have them admitted.

11 **PRESIDING OFFICER:** So it's your  
12 impression that the ones that you're not  
13 listing have already been admitted?

14 **MR. ROLFS:** That is correct. After  
15 lengthy discussion.

16 **PRESIDING OFFICER:** Okay. I'm going  
17 to have to leave it to your legal team to  
18 keep an eye on that.

19 **MR. ROLFS:** That's fine.

20 **PRESIDING OFFICER:** As to 1, 2, 30,  
21 31, 34, 35, and 38, are there objections to  
22 their admission?

23 **MR. MCLEOD:** Cumulative as to the  
24 report.

25 **PRESIDING OFFICER:** So you think

1 **first one, as well as the second one later. I**  
2 **would have to look at it to see if there was any**  
3 **reference to that. But I -- I think we did**  
4 **receive recommendations from GMD2, I just don't**  
5 **recall the detail of that.**

6 Q. And, Mr. Pope, I think you indicated that when  
7 the -- when the permit was approved for ASR  
8 Phase II, you had already moved on, and it was  
9 David Barfield who approved that Phase II  
10 permit, correct?

11 **A. That's correct.**

12 Q. And the Phase II permit that Mr. Barfield  
13 approved, it also had language in it saying that  
14 the passive recharge credits would not be  
15 permitted, didn't it?

16 **A. Yes, it did.**

17 Q. Mr. Pope, just to fill in the record, and I will  
18 admit to some degree of curiosity on my part,  
19 you referenced K.A.R. 5-5-3, which speaks to  
20 consumptive use not being increased  
21 substantially. And for purposes of that  
22 regulation, at least when you were chief  
23 engineer, what did substantially mean?

24 **A. It was recognizing that -- it's hard to be**  
25 **absolute given the science and the computations**

Page 2738

1 that are available, but, and the records in some  
 2 cases, but the -- the best example I guess I can  
 3 cite, because it is spelled out in the rule, is  
 4 that portion of the matter related to  
 5 irrigation, and I think I cited K.A.R. 5-5-11.  
 6 And in that regard, in terms of irrigated  
 7 acreage being expanded, I think we used the term  
 8 10 percent. Now, that's not an end all in all  
 9 respects; I'm just saying I'd have to  
 10 double-check that. But the idea is it's not  
 11 absolute, but you're really not wanting  
 12 something that's measurable or significant.  
 13 Q. But in the instance of somebody expanding the  
 14 area subject to agricultural use permit, it  
 15 might be as much as 10 percent?  
 16 A. Yes. I want to take another look at that as we  
 17 speak here since you're asking a very explicit  
 18 question. And, again, this relates to  
 19 irrigation, but it was the -- there's a  
 20 reference in K.A.R. 5-5-11(b) that says, an  
 21 application to change the authorized place of  
 22 use for irrigation purposes which would permit  
 23 the applicant to exceed base acreage by 10 acres  
 24 or 10 percent, whichever is greater -- whichever  
 25 is less, I'm sorry, shall not be approved

Page 2739

1 because it would result in a substantial  
 2 increase in the net consumptive use in violation  
 3 of K.A.R. 5-5-3.  
 4 And there is some additional language here  
 5 that one would actually look at in terms of a  
 6 few things like when you have identical places  
 7 of use and not and all those things. But I  
 8 don't believe that same language is explicitly  
 9 set forth in rules related to artificial  
 10 recharge or municipal use in terms of spelling  
 11 it out in that much detail.  
 12 Q. Mr. Pope, you answered some questions about your  
 13 understanding of the City's proposal. Have you  
 14 read the City's proposal?  
 15 A. I've looked at it in some detail,  
 16 particularly -- but really focusing on just  
 17 certain parts of the Burns & McDonnell report  
 18 that was attached, the letter. I have read the,  
 19 I think it was March 12th, 2018 letter from the  
 20 City and -- and at least certain aspects of the  
 21 Burns & McDonnell report.  
 22 Q. Do you understand that, from reading the  
 23 proposal, that one of the motivations in putting  
 24 it forward is that with the current relatively  
 25 full state of the aquifer, there's not room for

Page 2740

1 the City to do physical recharge without pumping  
 2 the aquifer down first to accommodate that?  
 3 A. Yes, I do.  
 4 Q. And, Mr. Pope, would you agree with me that  
 5 under the existing ASR Phase I permits that you  
 6 approved, the City has the ability to pump the  
 7 aquifer down using its native rights and then  
 8 could recharge the hole, if you will, left in  
 9 the aquifer by that pumping and receive a credit  
 10 for that recharge?  
 11 A. Yes, I do understand that. I would note that  
 12 intuitively I think one would first think that's  
 13 a bad idea, but it's more complicated than that  
 14 in the broader sense, from my perspective. I  
 15 understand the City has a day-to-day operational  
 16 responsibility to deal with these issues. I  
 17 think it goes -- the reason I've testified as I  
 18 have today and in my report is that those  
 19 circumstances when the aquifer is full, if you  
 20 want to use that term, and there's no recharge  
 21 capacity, together with when water's available  
 22 for diversion from the Little Arkansas River,  
 23 tend to be -- those are not periods of shortage.  
 24 So it tends to be more water available in  
 25 relative terms. But yet if credit is given as

Page 2741

1 proposed in your proposal, you're going to  
 2 withdraw those credits that wasn't based on  
 3 physical recharge during a drought, as  
 4 illustrated in the Burns & Mac report and the  
 5 table I referred to, and so you're taking a  
 6 period of plenty and transferring those credits  
 7 to a period of drought or shortage.  
 8 Q. And, Mr. Pope, do you not think the City's going  
 9 to do that exact same thing with the physical  
 10 recharge credits?  
 11 A. It seems to me like operationally there's lots  
 12 of factors involved in this, and, yes, I do  
 13 understand that, you know, you can -- the City  
 14 obviously has multiple sources, Cheney, you have  
 15 the well field, it -- this is not an  
 16 all-or-nothing proposal with regard to physical  
 17 recharge. I think it's a matter of degrees in  
 18 terms of what might -- if you want to look at a  
 19 comparison of those two, I'm trying to look at  
 20 the big picture of end result, if -- AMCs  
 21 compared to long-term drought, and I think  
 22 that's significant. The full aquifer conditions  
 23 where there's no recharge capacity versus some  
 24 lowering which allows some physical recharge is  
 25 an in between.

1 Q. Mr. Pope, your discussion of the existing  
2 physical recharge credit, in your discussion,  
3 you indicated your concept of the existing  
4 physical recharge credit is once the City has  
5 reduced that water to its possession, treated  
6 it, and injected it in the aquifer, the City  
7 essentially owns that water?

8 **A. As a practical matter, yes.**

9 Q. And so my question with respect to that,  
10 Mr. Pope, is that with the existing bottoms, the  
11 lower, the 1993 lower index levels, isn't it the  
12 case that when drought conditions persist and  
13 index levels go below the 1993 index levels,  
14 even though the City has physical recharge  
15 credits in the aquifer, which under your concept  
16 the City owns, the City would not be able to  
17 access that water to withdraw during the  
18 drought, correct?

19 **A. I think if the index levels are not lowered,  
20 then of course they would not have access to  
21 those recharge credits. I -- I didn't really  
22 opine in regard to that issue in my report, so  
23 it's not a part of this where I've analyzed the  
24 broader aspect of that explicit point. But I  
25 think it's a fair question to raise about the**

1 below those index levels. And the current  
2 question is doesn't that mean that other users  
3 in the aquifer are going to draw the City's  
4 water and they, rather than the City, will be  
5 able to use those -- those recharge credits  
6 through the drought?  
7 **A. I'm not sure it's quite that simple, but I would  
8 agree that holders of existing water rights to  
9 appropriate water in the area in question can  
10 exercise their water rights to the extent of  
11 Kansas water law. Whether or not that in and of  
12 itself causes the City to not be able to  
13 withdraw their credits is a slightly different  
14 analysis.**

15 **MR. MCLEOD:** I don't have further  
16 questions for the witness.

17 **PRESIDING OFFICER:** Mr. Oleen.

18  
19 **CROSS-EXAMINATION**

20 **BY MR. OLEEN:**

21 Q. Good afternoon, Mr. Pope.

22 **A. Good afternoon.**

23 Q. Sir, we heard your extensive experience involved  
24 in Kansas water administration as reflected in  
25 your resume, and you have significant experience

1 **index water levels being looked at carefully so  
2 that the recharge project can function, I think,  
3 as intended, in terms of being able to  
4 physically recharge water under the  
5 circumstances that were originally approved, at  
6 least, and -- and being able to access those  
7 credits. That water level, again, was I think  
8 the lowest point we had at that time, as I  
9 recall, and that is the point at which the index  
10 levels were established back when I was dealing  
11 with them.**

12 Q. So in the scenario that I have just described,  
13 would you agree with me that in that scenario,  
14 the existing 1993 low index levels would  
15 function to prevent the City drawing the credits  
16 that it had put in the aquifer and to  
17 effectively let other users in the aquifer draw  
18 the City's water during the persistence of that  
19 drought?

20 **A. I'm not sure I understand the difference between  
21 that question and the previous one.**

22 Q. So in the previous question, I was asking you if  
23 the 1993 levels would prevent the City drawing  
24 the credits, and I think you agreed with me that  
25 they would if the -- if the water levels were

1 and educational -- educational degrees, but you  
2 do not have a law degree, correct?

3 **A. That's correct.**

4 Q. And so you're not claiming here today, are you,  
5 that any particular legal significance should be  
6 given to the fact that you were the one who was  
7 the chief engineer at the time the Phase I  
8 approval and associated orders were issued; is  
9 that correct?

10 **MR. ROLFS:** Object.

11 **PRESIDING OFFICER:** Can you clarify  
12 your objection? I'm sorry, was that you  
13 Dave, I didn't see who said it?

14 **MR. STUCKY:** Well, I think -- I  
15 mean, the objection is this witness is  
16 testifying as to what these rules and  
17 regulations mean and what the importance of  
18 those rules and regulations mean. He's not  
19 testifying as far as what implications in  
20 general that means as far as whether or not  
21 his opinions -- I'll let Mr. Rolfs explain  
22 it. I guess I'm still being affected by  
23 some anesthesia here, I'll let Mr. Rolfs  
24 explain.

25 **PRESIDING OFFICER:** A valiant

Page 2746

1 effort, though, I must say.  
 2 **MR. ROLFS:** Sorry, I've lost my  
 3 train of thought, could you repeat what you  
 4 were saying?  
 5 **MR. OLEEN:** The question, I believe,  
 6 was that I wanted to confirm whether  
 7 Mr. Pope was claiming that any particular  
 8 legal significance should be given to the  
 9 fact that he was the former chief engineer  
 10 who actually signed and issued the Phase I  
 11 approval and associated Phase I orders?  
 12 **MR. ROLFS:** Well, I think he clearly  
 13 testified that he was the one that created  
 14 this program, created the -- or made the  
 15 original approval of Phase I, and that  
 16 certainly has legal significance, and I  
 17 think that's entirely appropriate. Are you  
 18 saying you -- are you trying to take it  
 19 beyond that?  
 20 **MR. OLEEN:** Well, I am -- I don't  
 21 personally think, and it's a matter perhaps  
 22 that the attorneys put in some subsequent  
 23 briefing, I don't think the fact that we  
 24 have a former chief engineer testifying  
 25 here today about orders that are still in

Page 2747

1 force, I don't think that there's  
 2 particular legal significance due to the  
 3 fact that we have him in the room  
 4 testifying, the person who issued those  
 5 orders, because he's no longer acting --  
 6 he's not testifying in the capacity in  
 7 which he issued these orders previously.  
 8 That's my --  
 9 **MR. ROLFS:** He's clearly not  
 10 testifying that he's the current chief  
 11 engineer here; he's testifying as to what  
 12 he did at that time and the legal  
 13 significance at that time.  
 14 **MR. OLEEN:** Well, then he can give  
 15 that answer, I would say.  
 16 **PRESIDING OFFICER:** Well, that's  
 17 what I thought was taking place. So,  
 18 Mr. Pope, you're testifying --  
 19 **A. My testimony, and I believe Mr. Rolfs stated it**  
 20 **correctly, is simply based on what I did at the**  
 21 **time as chief engineer and my understanding of**  
 22 **the rules that I adopted when I was chief**  
 23 **engineer. I'm not suggesting anything different**  
 24 **for the current chief engineer. I'm simply, I**  
 25 **guess, offering what the thought process was and**

Page 2748

1 **my understanding of why these rules were adopted**  
 2 **and what they were -- how they related to the**  
 3 **ASR program, Phases I and -- particularly Phase**  
 4 **I but to some extent into II.**  
 5 **BY MR. OLEEN:**  
 6 Q. Okay. And maybe you, as part of that  
 7 explanation, also answered my next question, but  
 8 you're not claiming any particular legal  
 9 significance as it pertains to the ASR  
 10 regulations that we have discussed and the  
 11 regulations that you testified you were involved  
 12 in the enactment of them, you're not claiming  
 13 that there's particular legal significance by  
 14 virtue of the fact that you were, in your  
 15 previous capacity, involved in the creation of  
 16 them?  
 17 **MR. ROLFS:** Object, I'm not quite  
 18 sure --  
 19 **PRESIDING OFFICER:** I -- I'm going  
 20 to step in on this one.  
 21 **MR. ROLFS:** -- the point of this  
 22 objection.  
 23 **PRESIDING OFFICER:** As has been  
 24 discussed previously with motions and my  
 25 resolution of those motions, with

Page 2749

1 Mr. Pope's previous role as chief engineer,  
 2 which is what he's testifying about, it is  
 3 impossible to extricate facts and legal  
 4 applications and conclusions and  
 5 interpretations. That was an integral part  
 6 of his job.  
 7 And so to the extent that he is  
 8 describing what the thought processes were,  
 9 what took place, what he was involved with  
 10 and what he knows from that experience, it  
 11 is a mix of fact and law. And I find them  
 12 both relevant, and I don't believe that  
 13 there is any risk of legal confusion on my  
 14 part.  
 15 So I'm going to overrule your objections  
 16 because I think they go to the heart of  
 17 what Mr. Pope is trying to say today. And  
 18 I find that, as I said, his -- his role is  
 19 necessarily a mixed one of fact and law in  
 20 his testimony. And trying to parse out  
 21 what he might believe is legally  
 22 significant is not his role anyway, that's  
 23 mine. So I think we should move on.  
 24 **MR. OLEEN:** I didn't mean to suggest  
 25 that Mr. Pope could not opine about his

1 interpretations of these legal matters,  
2 that has been done by many other witnesses  
3 already. I guess I was getting at I want  
4 it to be clear whether he thinks that as a  
5 matter of law his -- his testimony is to be  
6 given particular legally persuasive  
7 authority above and beyond factual  
8 testimony?

9 **PRESIDING OFFICER:** And I think  
10 that's a question for me.

11 **MR. STUCKY:** Yeah, objection, it's  
12 been answered in the motions in limine,  
13 it's argumentative, it calls for legal  
14 conclusions, and as to relevance, all four  
15 objections lodged for the record.

16 **PRESIDING OFFICER:** So the level of  
17 legal significance to grant it is mine, not  
18 Mr. Pope's.

19 **MR. OLEEN:** Okay, thank you. And to  
20 be clear, multiple counsel will be making  
21 objections from GMD2's table henceforth,  
22 Mr. Stucky and Mr. Rolfs and Mr. Adrian as  
23 well?

24 **PRESIDING OFFICER:** I'm sorry, what?

25 **MR. OLEEN:** All attorneys at the

1 concerning, and I quote, after a vested right  
2 has been determined or the time allowed in which  
3 to perfect the water right has expired,  
4 including any authorized extension of time to  
5 perfect the water right? Is that correct?

6 **A. That's correct.**

7 Q. And the ASR water rights that are authorized to  
8 accumulate and withdraw recharge credits, is it  
9 your understanding as to whether or not those  
10 have yet been perfected?

11 **A. I didn't look into the individual status of  
12 those particular water rights, so this was more  
13 of a generic description of a concern that I  
14 wanted to bring to the attention of the  
15 presiding officer.**

16 Q. Would you agree with me that K.A.R. 5-5-3, to  
17 the extent it includes some sort of prohibition  
18 concerning consumptive use, that that only  
19 applies to vested rights or water rights that  
20 have been perfected?

21 **A. Yes, I think that's a fair interpretation.**

22 Q. Turning to some other definitions and  
23 regulations, if you would turn to, please,  
24 5-1-1, subsection (mmm), which is a definition  
25 of a recharge credit.

1 table will be authorized to be making  
2 objections? Never mind, I'll move on,  
3 Ms. Owen. He said he had some problems  
4 with some medications, so I didn't know if  
5 that -- maybe his team doesn't want him to  
6 be allowed to object.

7 **MR. STUCKY:** You have to give me  
8 credit, I gave four valid objections in a  
9 row, give me some credit here. I saved a  
10 little face.

11 **MR. OLEEN:** Okay. I will move on.

12 **BY MR. OLEEN:**

13 Q. Mr. Pope, I will direct your attention to K.A.R.  
14 5-5-3, in what I think has been labeled GMD  
15 Exhibit 22 perhaps. It is the regulation that  
16 you previously discussed regarding change in  
17 consumptive use.

18 **A. Yes. Yes.**

19 Q. Okay. Mr. McLeod had asked you some questions  
20 regarding the phrase increased substantially in  
21 that regulation, but I want to direct your  
22 attention to a subsequent clause. Isn't it true  
23 that this K.A.R. 5-5-3, to the extent it is  
24 prohibiting the substantial increase of  
25 consumptive use, that applies to -- or is

1 **A. Okay.**

2 Q. Before we get into some regulatory analysis,  
3 Mr. Pope, would it be fair to say that  
4 throughout your report, or at least your  
5 testimony today, it's your position that  
6 recharge credits can only be lawfully  
7 accumulated if water is physically put into the  
8 basin storage area of the ASR system?

9 **A. I think that's generally consistent with the  
10 thrust of my testimony, yes. Under the current  
11 law and rules.**

12 Q. Well, and now let's turn to some of those  
13 current laws and rules. And if you would please  
14 look at that definition of a recharge credit in  
15 5-1-1(mmm), there's no phrase physical injection  
16 or physically put. There's nothing in there  
17 that uses the word physical, is there?

18 **A. There is not that I see in the definition of  
19 recharge credit in and of by itself. I think  
20 you have to look at the -- all the definitions.**

21 Q. And let's look at some of those other  
22 definitions. If you would please turn to 5-1-1,  
23 subsection (e). I believe earlier in your  
24 testimony you started by reciting subsection  
25 (e), and you went on to mention subsections (f)

Page 2754

1 and (g). And my question to you, and I believe  
 2 these are -- some of these that I just recited  
 3 are also listed in your expert report on page 10  
 4 where you list some ASR regulations. But my  
 5 question to you is in those subsections (e),  
 6 (f), and (g) of 5-1-1, can you agree with me  
 7 that there is never the phrase physically inject  
 8 or physically put in the context of referring to  
 9 water in the ASR concept?  
 10 **A. No, I think it's there.**  
 11 Q. Okay.  
 12 **A. Maybe not those -- your exact phraseology of**  
 13 **those words, but I think it's very clear in**  
 14 **regard to these definitions. For example, item**  
 15 **(g), artificial recharge means the use of source**  
 16 **water to artificially replenish the water supply**  
 17 **in the aquifer; or aquifer storage means the act**  
 18 **of storing water in an aquifer by artificial**  
 19 **recharge for subsequent diversion and beneficial**  
 20 **use. You can go through each one of these,**  
 21 **including the definition of source water, as**  
 22 **well as the -- you know, (f)(1) is, is**  
 23 **constructed and operated for artificial**  
 24 **recharge, again as defined, storage, and**  
 25 **recovery of source water. Those seem very clear**

Page 2755

1 **to me.**  
 2 Q. Notwithstanding how clear they may seem to you,  
 3 can you agree with me that there is never the  
 4 word -- or the phrase physical injection or  
 5 physically put in any of those regulations?  
 6 **A. You're using terms that are not used in the**  
 7 **rules. If you use the proper terms, it's clear.**  
 8 **Physical injection -- the rules speak in terms**  
 9 **of artificial recharge, and it's defined. The**  
 10 **rules speak in terms of source water, and it's**  
 11 **defined. The rules speak in terms of, you know,**  
 12 **these other definitions that we've talked**  
 13 **about -- I won't go on at this point in time,**  
 14 **but I don't agree with your characterization is**  
 15 **my point.**  
 16 Q. Well, Mr. Pope, I understand that we may  
 17 disagree about legal interpretations, but yes or  
 18 no, at least, is the words physically injected  
 19 or physically put in any of these regulations  
 20 that I have listed or that you have referenced?  
 21 **A. I will agree that the term you have used,**  
 22 **physical injection, I do not see those -- that**  
 23 **term in the rules.**  
 24 Q. Thank you.  
 25 **MR. OLEEN:** Permission to approach

Page 2756

1 the witness, please.  
 2 **PRESIDING OFFICER:** Okay.  
 3 **BY MR. OLEEN:**  
 4 Q. Mr. Pope, I'm handing you what I will submit to  
 5 you is a printout from a definition from  
 6 Merriam-Webster online, and I could pull it up  
 7 on my phone, sir, or with Madam Hearing  
 8 Officer's permission, you could pull it up on  
 9 your phone, we've looked at some phones here  
 10 during this hearing, but I would ask if you  
 11 agree with me whether this appears to be a  
 12 definition of the transitive verb store, at  
 13 least as it is defined by Merriam-Webster  
 14 online?  
 15 **MR. STUCKY:** Madam Hearing Officer,  
 16 I was going to object to this definition,  
 17 but now having read it, I withdraw my  
 18 objection because I see it's actually going  
 19 to help us.  
 20 **MR. OLEEN:** Mr. Stucky's been  
 21 through a lot, so he could use some help.  
 22 **BY MR. OLEEN:**  
 23 Q. Sir, do you agree that that purports to be an  
 24 online definition of the transitive verb store,  
 25 at least as it is defined by Merriam-Webster

Page 2757

1 online as of March 3rd, 2020?  
 2 **A. And you're referring to this upper part where it**  
 3 **says transitive verb?**  
 4 Q. Yes, sir. And in a minute I'm about -- I'm  
 5 going to ask you to read one of those  
 6 definitions, but I just wondered if you would  
 7 agree with me whether this appears to be a  
 8 definition as provided by this source?  
 9 **A. I mean, in general terms, I -- I understand the**  
 10 **way it's being used here in this example. You**  
 11 **know, down below under definition of store, 1a**  
 12 **says, something that is stored or kept for**  
 13 **future use. I --**  
 14 Q. Okay.  
 15 **A. That's a common -- my common understanding of**  
 16 **that, as well as how it's really used in these**  
 17 **rules.**  
 18 Q. Yes, sir. Well, actually there -- there are at  
 19 least three definitions contained on this page,  
 20 I'll submit to you. One it says a definition  
 21 for the transitive verb, one it says definitions  
 22 for the noun, and then one it says definitions  
 23 for the adjective. And what I would like you to  
 24 do is please read the definition number 3 in the  
 25 first set of definitions for the transitive

1 verb.

2 **A. In the transitive verb portion of this document,**  
3 **number 3 says, to place or leave in a location,**  
4 **parentheses, such as a warehouse, library, or**  
5 **computer memory, closed parentheses, for**  
6 **preservation or later use or disposal.**

7 Q. Thank you, sir. Turning now to the Phase I  
8 approval that I believe has been admitted as GMD  
9 Exhibit 26.

10 **A. Okay.**

11 Q. Are you aware, sir, that regarding the concept  
12 of AMCs -- before I direct you to a particular  
13 portion of that Exhibit 26, are you aware that  
14 in the proposal, Wichita characterizes the  
15 concept of AMCs as an accounting concept? Are  
16 you aware of that?

17 **A. I think in general terms, yes.**

18 Q. And are you aware whether that is currently the  
19 position of DWR as well?

20 **A. Just in very general terms. I have not, you**  
21 **know, probably read every brief or every**  
22 **document, you know, but -- well, go ahead with**  
23 **your question, I guess.**

24 Q. Well, I guess I will direct your attention to  
25 page 15 of 21 of that Exhibit 26.

1 **would not be.**

2 Q. But if -- if it were and if it also constituted  
3 accounting methodology, do you believe that this  
4 paragraph 5 in the Phase I approval, which I'll  
5 submit to you is repeated verbatim in the Phase  
6 II approval, would you agree with me then that  
7 it would be appropriate for the chief engineer  
8 to modify that accounting methodology?

9 **A. I think it's within the authority of the chief**  
10 **engineer to modify accounting, but, again, I**  
11 **don't believe one can take that out of context**  
12 **and say you can ignore everything else in the**  
13 **rules related to the criteria for ASR. It's**  
14 **just not an accounting issue here. You can't**  
15 **just say, AMCs, hey, we got a proposal here,**  
16 **let's change the accounting. That is very**  
17 **inconsistent with the Phase I and Phase II**  
18 **orders.**

19 Q. Thank you, sir, I understand that's your  
20 opinion. Your -- I believe you already  
21 mentioned this, sir, but you didn't do any  
22 modeling work as part of your -- as part of the  
23 reasons for which you were hired for your  
24 expertise for this matter, correct?

25 **A. That's correct.**

1 **A. Okay.**

2 Q. And I'd like to direct your attention to  
3 paragraph 5 and ask you to read that, please.

4 **A. On page 15 of 21 of this document, number 5**  
5 **says, that the model and accounting methodology**  
6 **is approved as submitted, until otherwise**  
7 **modified by formal written approval of the chief**  
8 **engineer.**

9 Q. Thank you. So would you agree with me that to  
10 the extent something constitutes accounting  
11 methodology, to that extent, the chief engineer  
12 has authority under this paragraph 5 of the  
13 order that you issued at the time when you were  
14 chief engineer, that an acting chief engineer  
15 would have authority to modify the -- well, let  
16 me rephrase. Wouldn't you agree with me that  
17 given that paragraph 5 that you just read, the  
18 current chief engineer would have the authority  
19 to modify accounting methodology of the ASR  
20 order to the extent something constitutes  
21 accounting methodology?

22 **A. I think your question's out of context. I would**  
23 **say only to the extent that the underlying**  
24 **process that you're speaking of is consistent**  
25 **with the adopted rules and regulations. And it**

1 Q. And I don't recall how long you may have been  
2 witnessing these proceedings, sir, but because  
3 you haven't done any modeling work and I think  
4 you said you focused on the AMC portion of the  
5 City's proposal, you're not prepared to give  
6 expert opinion as to the other aspect of the  
7 City's proposal, which is lowering the minimum  
8 index levels?

9 **A. That's not an issue -- I certainly have in my**  
10 **report and am aware of the proposed changes that**  
11 **include lowering the index levels, but I was not**  
12 **retained in order to do modeling work or**  
13 **assessment of impacts, for example, of that.**

14 Q. So if you turn to your expert report, page 11,  
15 when you refer in item 6, and I quote, the  
16 Wichita ASR proposal should not be approved in  
17 its current form, is it fair to say that that  
18 recommendation is limited to the concept of  
19 AMCs?

20 **A. Well, I think this statement is accurate in its**  
21 **current form.**

22 **MR. STUCKY:** I'm going to object,  
23 the question misstates the witness's  
24 testimony. He testified both to the  
25 effects of minimum index levels and to

Page 2762

1 AMCs. He testified as to both concepts in  
 2 the City's proposal already, and so to that  
 3 extent it's asked and answered. And I'm  
 4 also objecting to the extent it misstates  
 5 the witness's testimony.  
 6 **MR. OLEEN:** I asked the witness to  
 7 read a line, and I believe he also just  
 8 told me that he's not retained, did not  
 9 have an expert opinion on the first of the  
 10 two components of the City's proposal. I  
 11 don't understand Mr. Stucky's objection.  
 12 **PRESIDING OFFICER:** Well, and  
 13 perhaps I don't understand the distinctions  
 14 because I thought Mr. Pope said that he  
 15 wasn't hired to do modeling on the lower  
 16 index levels.  
 17 **MR. OLEEN:** Okay.  
 18 **A. That's correct.**  
 19 **BY MR. OLEEN:**  
 20 Q. And me understanding that, now having that  
 21 confirmed, I'm asking for confirmation of  
 22 whether in number 6 of his report, he's  
 23 limiting -- he would agree with me that he  
 24 limits his recommendation of disapproval to the  
 25 concept of AMCs?

Page 2763

1 **A. Well, item 6 there simply says the proposal**  
 2 **should not be approved in its current form. It**  
 3 **does not distinguish this particular item in**  
 4 **that level of detail. I've already testified in**  
 5 **regard to the modeling aspect that I've not**  
 6 **looked at, and I think I did make some comments**  
 7 **in earlier testimony that the question of index**  
 8 **levels is -- is one that -- well, I won't try to**  
 9 **restate what I said, but I did -- I did testify**  
 10 **to some degree about that issue.**  
 11 Q. Sir, I'm not -- I'm not trying to trick you or  
 12 be difficult, let me see if I can ask it in a  
 13 different way. If the current form of the  
 14 proposal did not include AMCs but only included  
 15 a request to have the lowering of the minimum  
 16 index levels, you would not have a  
 17 recommendation one way or the other based on the  
 18 extent of the review that you told me you have  
 19 conducted?  
 20 **A. Well, I've provided some testimony regarding --**  
 21 **in response to questions about index levels. I**  
 22 **would agree that my -- the thrust of my expert**  
 23 **report is largely about response to AMCs and**  
 24 **physical recharge of source water and the like.**  
 25 **I -- I just really don't feel that I have --**

Page 2764

1 **would want to take it further in regard to this**  
 2 **more complicated -- this additional other issue**  
 3 **of index levels because I've not been involved,**  
 4 **again, in the modeling and the studies that have**  
 5 **been done regarding that.**  
 6 Q. Thank you. I'll ask you to think back to the  
 7 Phase I formulation, back in those years when  
 8 Phase I was being contemplated. There was a  
 9 discussion, Mr. Rolfs had asked you some  
 10 questions about when passive recharge credits  
 11 were first proposed in the context of Phase I --  
 12 **A. Yes.**  
 13 Q. -- it was that line of questioning. Do you  
 14 recall, sir, at the time that that said  
 15 discussion of passive recharge credits was being  
 16 discussed, do you recall what water the City at  
 17 that time was proposing would be used for the  
 18 accumulation of what was eventually called  
 19 passive recharge credits?  
 20 **A. I'm not sure I understand the question, but if**  
 21 **it is -- I do recall, and I think there's some**  
 22 **reference in obviously these documents, but**  
 23 **Phase I of the artificial recharge project**  
 24 **involved originally a series of bank storage**  
 25 **wells from the Little Arkansas River. That was**

Page 2765

1 **modified to include a surface diversion and a**  
 2 **different mix of bank storage wells. And that**  
 3 **water again, then, was transported to -- to the**  
 4 **recharge facilities for treatment and artificial**  
 5 **recharge.**  
 6 **I'm not sure whether I fully understood**  
 7 **your question, but that's the nature of the**  
 8 **facilities. There was, you know, some -- some**  
 9 **pits that were involved, I think, for recharge**  
 10 **facilities, as well as recharge wells. I toured**  
 11 **the facilities, as I recall, back in that era, I**  
 12 **don't remember exactly when, so ...**  
 13 Q. Thank you, I'll ask -- I'll ask another question  
 14 that may refresh your recollection, may not. Do  
 15 you recall, was the concept of using water from  
 16 Cheney Reservoir ever a part of the discussion  
 17 about what then or later was referred to as  
 18 passive recharge credits?  
 19 **A. Not to my knowledge. I certainly am aware in**  
 20 **general terms of Cheney being one of the**  
 21 **components of the City of Wichita water supply.**  
 22 Q. And -- and you don't recall it ever being  
 23 proposed to use water -- diversions from Cheney  
 24 as water which would form the basis for some  
 25 sort of in lieu of credit or passive recharge

1 credit or something along those lines?  
2 **A. Not in the context of passive recharge credits.**  
3 **Certainly aware of the fact that there's the**  
4 **Cheney Reservoir source, there's the Equus Beds**  
5 **well field, there's artificial recharge. And,**  
6 **you know -- you know, I understand that the City**  
7 **as it manages its sources of water considers how**  
8 **to make decisions about which source to use at**  
9 **any given time.**

10 Q. Thank you. Do you have an opinion, and I think  
11 maybe you were asked this question or maybe you  
12 came close to answering it, so I apologize if  
13 I'm asking you to repeat yourself, but do you  
14 have an opinion of whether it is preferable in  
15 terms of water quantity and quality of the Equus  
16 Beds Aquifer to pump down high water levels in  
17 order to physically recharge that space and  
18 accumulate physical recharge credits, which are  
19 currently allowed, or is it preferable to keep  
20 the water generally more full and not pump down  
21 and refill and pump down and refill in order to  
22 accumulate physical recharge credits but to  
23 instead allow this concept of AMCs?

24 **MR. ROLFS:** Object, I need  
25 clarification here, are you talking -- you

1 are you aware that they claim that they have  
2 looked at different options?  
3 **A. I'm not aware of the detail of that. I have --**  
4 **I have some general knowledge just from hearing**  
5 **presentations from the City at conferences, and**  
6 **I think Joe Pajor had referred to some of the**  
7 **alternatives that had been considered in his**  
8 **report. I didn't hear his testimony, per se.**  
9 **So in a general sense, I know the City has been,**  
10 **for a number of years, has had water planning**  
11 **efforts and water supply alternatives**  
12 **considered.**

13 Q. And I'm not going to ask you to agree with me  
14 that the City only has two options, but what I  
15 want to know is if, as I think the City has  
16 stated, there are two most feasible options to  
17 achieve their long-term drought planning goals,  
18 one of which is pump down the current full state  
19 of the aquifer in order to create space in it in  
20 which to physically inject recharge credits  
21 under the current ASR system or not pump down  
22 the aquifer and leave it at higher levels and  
23 instead be allowed to accumulate this concept of  
24 AMCs that they have proposed, if those are the  
25 two options, assuming that Wichita is correct

1 say better or something like that, in what  
2 respect?  
3 **MR. OLEEN:** And I said in terms of  
4 aquifer quantity and quality.  
5 **MR. ROLFS:** Well, I object, Mr. Pope  
6 never testified anything about quality.  
7 **MR. OLEEN:** If he doesn't have an  
8 opinion on quality and tells me that, then  
9 I'll take quality out of the equation.

10 **A. No, I -- I don't have a view in regard to water**  
11 **quality. The -- I think my testimony and my**  
12 **report provide about all I can say in regard to**  
13 **the rest of your question. I think I've already**  
14 **addressed that in the context of assessing the**  
15 **rules and regulations and what they provide for**  
16 **and how the physical recharge process is**  
17 **outlined in the rules. I -- I don't know what**  
18 **to say beyond that to your question, I think**  
19 **I've already covered that.**

20 **BY MR. OLEEN:**  
21 Q. Well, let me try again, see if I can do better.  
22 I don't know, are you aware that Wichita has --  
23 Wichita officials have testified that they have  
24 looked at various options to provide proper  
25 drought planning as they think they should plan,

1 that those are the only two options, which do  
2 you believe is preferable?  
3 **A. I think my testimony was geared to providing**  
4 **background about the statutes and the rules and**  
5 **regulations and the history of how Phases I and**  
6 **II have evolved, and I believe it's not just a**  
7 **question of me in abstract trying to do water**  
8 **planning for the City of Wichita but focusing on**  
9 **the law and on the rules. And I believe under**  
10 **that circumstance, the current rules opt for,**  
11 **they allow for the physical recharge of water,**  
12 **source water into the aquifer and do not allow**  
13 **AMCs.**

14 **I'm not suggesting that rules can't ever be**  
15 **changed. I'm just saying I believe that's what**  
16 **they say and what they mean. So I don't want to**  
17 **answer this in a context of trying to give the**  
18 **City advice in terms of their water planning.**  
19 **That's not my purpose here.**

20 Q. And I'm not asking you to give advice. I'm just  
21 saying that -- I guess do I understand your  
22 testimony, then, if those are the only two  
23 options that Wichita makes -- says there are,  
24 and you don't have to agree with me that those  
25 are the only two, but if those are the only two,

Page 2770

1 you have said that you believe AMCs are not  
 2 allowed under the law, so that would leave one  
 3 other -- that would leave one remaining option  
 4 between the two that I have presented?  
 5 **A. That -- that would be my view. I just -- I just**  
 6 **don't see -- you know, separate and apart from**  
 7 **pro and cons that might otherwise be considered,**  
 8 **I don't see it as being in compliance with the**  
 9 **law and the rules.**  
 10 Q. And just to be clear, when you say it, you're  
 11 referring to?  
 12 **A. AMCs.**  
 13 **MR. OLEEN:** No further questions.  
 14 Thank you, sir.  
 15 **PRESIDING OFFICER:** Ms. Wendling.  
 16  
 17 **CROSS-EXAMINATION**  
 18 **BY MS. WENDLING:**  
 19 Q. Mr. Pope, as chief engineer, you were involved  
 20 in issuing orders regarding new and change  
 21 applications; is that correct?  
 22 **A. I'm sorry, can you --**  
 23 Q. Did you -- as chief engineer, were you issuing  
 24 orders regarding new and/or change applications?  
 25 **A. Yes.**

Page 2771

1 Q. In your role, did you have the opportunity to  
 2 determine whether an applicant's use was a  
 3 beneficial use?  
 4 **A. Yes, part of the determination in terms of**  
 5 **whether to approve an application was looking at**  
 6 **the beneficial use of the water, whether it was**  
 7 **beneficial, whether it complied with the law and**  
 8 **the rules.**  
 9 Q. And are you familiar with the list of items that  
 10 constitute a beneficial use?  
 11 **A. Yes, you're referring to the types of uses?**  
 12 Q. Yes. K.A.R. 5-1-1(o), Exhibit 22.  
 13 **A. Let me go to 22 just so I'll have it in front of**  
 14 **me. Can you give me a specific --**  
 15 Q. I believe in the definition side 5-1-1 --  
 16 **A. Oh, in the definitions, okay.**  
 17 Q. -- (o) and the definition of beneficial use.  
 18 **A. Yes.**  
 19 Q. Okay.  
 20 **A. I'm sorry.**  
 21 Q. Oh, that's okay.  
 22 **A. I was reading right over the other one.**  
 23 Q. Is artificial recharge listed as a beneficial  
 24 use?  
 25 **A. Yes.**

Page 2772

1 Q. Is storage listed as a beneficial use?  
 2 **A. No, I don't believe so.**  
 3 Q. Is nonuse listed as a beneficial use?  
 4 **A. No.**  
 5 Q. Now can I have you turn to Exhibit 21 in this  
 6 same binder, can you find K.S.A. 82a-707(e)?  
 7 **A. Let's see, you're -- you're referring to the law**  
 8 **now, right?**  
 9 Q. Yes. It should be just in front of the --  
 10 **A. Yeah. For some reason, I was looking at the**  
 11 **rules, just a second. Okay, 707?**  
 12 Q. Yes. Can you read 707(e) for us?  
 13 **A. Yes. Appropriation rights in excess of the**  
 14 **reasonable needs of the appropriators shall not**  
 15 **be allowed.**  
 16 Q. Can you recall how you might have applied that  
 17 during your role as chief engineer?  
 18 **A. I'm going to give two circumstances where that**  
 19 **was applied while I was chief engineer. The**  
 20 **first of those is sort of the more traditional**  
 21 **determination at the time an application, a new**  
 22 **application for a permit to appropriate water**  
 23 **was being considered. And there are rules and**  
 24 **regulations and various determinations made to**  
 25 **look at the -- the application and how much**

Page 2773

1 **water is proposed to be used, and then that**  
 2 **would be compared to the rules and, of course,**  
 3 **professional judgment based on facts.**  
 4 **And the -- for example, in the case of**  
 5 **irrigation, historically, the procedure with the**  
 6 **Division was to allow 1 acre-foot per acre in**  
 7 **the eastern part of the state, 1 1/2 in the**  
 8 **central part of the state, and 2 acre-foot per**  
 9 **acre for each irrigated acre, determined to be a**  
 10 **reasonable amount. Other processes were used**  
 11 **for municipal use in terms of looking at**  
 12 **population and projected growth over a period of**  
 13 **time and all kinds of other things that come**  
 14 **into play, like conservation plans and whatnot.**  
 15 **So that's the first traditional use of -- of the**  
 16 **term reasonable needs of the appropriator.**  
 17 **In a more complex and more recent sense,**  
 18 **and I don't know whether this is relevant to**  
 19 **this particular -- to your question, but when**  
 20 **shortages of water exist, oftentimes there is**  
 21 **then action needed by the Division of Water**  
 22 **Resources to deal with that shortage of water.**  
 23 **If senior water rights are being impaired or if**  
 24 **there's a broader, more regional problem,**  
 25 **there's various tools available to deal with**

1 that.

2 I'll cite as an example that when we had a

3 complaint and a shortage of water to meet all

4 needs in the Walnut Creek area back in the late

5 '80s, early '90s, that led to consideration of

6 establishing an Intensive Groundwater Use

7 Control Area. And that resulted in some pretty

8 significant regulation in terms of water. And

9 in that particular example restrictions on how

10 much water could be diverted in the IGUCA, the

11 acronym for that, were based on a combination of

12 priority date for the water right, and,

13 secondly, because of the nature of the severe

14 reductions, I also, I think for the first time,

15 applied the term reasonable use when determining

16 allocations for how much water could be diverted

17 by the various rights in the priority scheme.

18 The idea was to prevent waste and to require the

19 most efficient use as possible, recognizing that

20 severe reductions were being required by the

21 most junior water rights, and some seniors down

22 through the pecking order.

23 I don't know whether I've gone beyond your

24 question or not, but if you apply that

25 rationale, that's how we did it at least then

1 and in some other cases.

2 Q. So speaking about waste and the waste of

3 water --

4 A. Yes.

5 Q. -- what would be your opinion of having water

6 spill out from Cheney Reservoir while pumping

7 from the Equus Beds, would that be considered a

8 waste of water in your experience?

9 A. It's probably not. The -- you'd have to be fact

10 specific --

11 Q. Okay.

12 A. -- in terms of, you know, any given set of

13 circumstances. But if a user has multiple

14 sources and it happens to be that a high runoff

15 event results in a spill of water from one of

16 those sources, in this case Cheney, does not

17 necessarily mean that it's waste to exercise

18 their other water rights as long as they're

19 within the terms and conditions of the water

20 right.

21 I mean, in a -- I want to be a little

22 careful about making judgments, you know, based

23 on a hypothetical because I don't know all the

24 circumstances involved of what can be physically

25 operated and things like that under those

1 particular conditions. But I think in general,

2 obviously we sought to achieve as efficient a

3 water use as we could and people making good

4 choices in terms of how they used their water

5 and how they compared those.

6 Q. Okay. Are you familiar with a concept of an

7 unsaturated zone within an aquifer?

8 A. I'm aware of the term, yes.

9 Q. Would you be able to describe what the

10 unsaturated zone is?

11 A. Well, in a -- at least in a generic situation, I

12 think of it as the -- you have your aquifer,

13 which is bounded on the top by the water level,

14 and the bottom typically is bedrock or some

15 zone, the bottom of a certain zone, wherever

16 that well happens to be completed to. And there

17 can be, you know - I hope I'm understanding your

18 question right here - there can be -- I'm aware

19 of situations where water level declines have

20 occurred or during dry periods, you know, you

21 have lowering of the water level because of the

22 pumping effects and you end up with a portion of

23 the aquifer that is unsaturated.

24 Q. All right.

25 MS. WENDLING: May I approach the

1 witness?

2 PRESIDING OFFICER: Yes.

3 BY MS. WENDLING:

4 Q. Mr. Pope, I realize you may have never seen this

5 before, can you briefly look at it and tell me

6 what you believe it to be?

7 A. Well, at first glance here, of course, this is a

8 certificate -- a certificate of adoption of

9 certain rules and regulations that were

10 promulgated, either in terms of amendments or

11 new, by Chief Engineer David Barfield in 2016.

12 And it includes the, you know, impact statement

13 and then the actual text of the rules. In this

14 case, one of those is amendments to the

15 definitions, K.A.R. 5-1-1, and then I think the

16 other one goes to K.A.R. 5-12-1. So that's the

17 content in general.

18 Q. Okay. And as you flip through the pages, if you

19 go to the end, you'll see that all of the

20 changes attached to this are actually for 5-1-1?

21 A. Yes.

22 Q. 5-12-1 is not attached, would you agree with

23 that?

24 A. Oh, okay, yeah, I was flipping through that, I

25 hadn't gotten to that yet. So I agree, it looks

Page 2778

1 like it's the definitions.  
 2 Q. In your role as chief engineer when you were  
 3 making regulatory changes, is this the type of  
 4 document you would have prepared, or had  
 5 prepared?  
 6 **A. Yes, this or something very analogous to it.**  
 7 **There was -- there was an actual formal adoption**  
 8 **of the rules, and I depended on Mr. Rolfs and**  
 9 **others to prepare that part of the submittal.**  
 10 Q. Okay. If you turn to, I believe the third page,  
 11 do you see a regulation 5-1 -- or, sorry, 5-1-1?  
 12 **A. 5-1-1 and which letter?**  
 13 Q. Can you flip to letter (k) for the definition of  
 14 basin storage area?  
 15 **A. Yes.**  
 16 Q. And in looking at this, can you tell what the  
 17 proposed change was to the definition of basin  
 18 storage area?  
 19 **A. Yes, give me a minute. Well, my --**  
 20 Q. And I can rephrase my question. Can you tell  
 21 how the definition of basin storage area was  
 22 changed with regard to the unsaturated zone?  
 23 **A. Well, in essence, of course the term aquifer's**  
 24 **unsaturated zone is -- has been stricken and**  
 25 **they set -- he substituted just the term**

Page 2779

1 **aquifer. So the basin storage area now would**  
 2 **mean the portion of the aquifer used for aquifer**  
 3 **storage, et cetera, et cetera. And the second**  
 4 **change is instead of saying the highest and the**  
 5 **lowest index level, that then became a maximum**  
 6 **index level and a minimum index level.**  
 7 Q. And can you tell from these documents when this  
 8 change was filed or approved by the Department  
 9 of Administration? There are several stamps.  
 10 **A. Well, the stamps for the Office of the Attorney**  
 11 **General was October 19th, 2015 and for**  
 12 **Department of Administration September 29 of**  
 13 **2015.**  
 14 Q. Would you -- do you believe that this change was  
 15 made after the approval of Phase I?  
 16 **A. It would have been after the approval of Phase**  
 17 **I, that's correct.**  
 18 Q. And so when you approved Phase I, did the  
 19 definition of basin storage area include the  
 20 unsaturated zone language?  
 21 **A. It would have, yes.**  
 22 **MS. WENDLING:** Madam Hearing  
 23 Officer, I'm unclear from the judicial  
 24 notice of regulations if it includes the  
 25 historical versions or only the current

Page 2780

1 versions?  
 2 **PRESIDING OFFICER:** Actually, I  
 3 didn't contemplate the historical versions,  
 4 so are you requesting that?  
 5 **MS. WENDLING:** Well, I would either  
 6 like to admit this to reflect the change or  
 7 take notice of the historical version.  
 8 **PRESIDING OFFICER:** Any comment on  
 9 that?  
 10 **MR. MCLEOD:** Relevance?  
 11 **MS. WENDLING:** I believe the rules  
 12 in place at the time ASR Phase I was  
 13 approved and Phase II was approved is very  
 14 relevant to this matter directly because  
 15 we're continuing the ASR program and making  
 16 modifications to the ASR program, and so I  
 17 think the rules and regulations in place at  
 18 the time it was approved are relevant.  
 19 **PRESIDING OFFICER:** Okay. I would  
 20 agree, I find them relevant. Just because  
 21 it's harder to access historical versions,  
 22 I'd like to admit this as a separate  
 23 document. So we'll have to come up with  
 24 your numbering for that.  
 25 **MS. WENDLING:** I have 23,

Page 2781

1 Intervenor's 23, if there's no objection to  
 2 using that.  
 3 **PRESIDING OFFICER:** So this would be  
 4 Intervenor's 23?  
 5 **MS. WENDLING:** Yes.  
 6 **PRESIDING OFFICER:** Okay  
 7 Intervenor's 23 is admitted.  
 8 **MR. OLEEN:** I guess if I may, I --  
 9 how do we know that this is -- there's  
 10 several -- if you look at the end,  
 11 obviously there was several iterations of  
 12 this regulation, one of which was amended  
 13 on October 31, 2008, prior to this, which  
 14 appears to be an amendment of 2016. So I  
 15 guess I object to the extent we're claiming  
 16 that this was, in fact, in effect at the  
 17 time Phase I was approved, if that's what  
 18 you're claiming it is.  
 19 **MS. WENDLING:** Okay.  
 20 **MR. OLEEN:** But I don't -- I don't  
 21 have an objection if -- whatever was in  
 22 effect at the time, I don't have an  
 23 objection if that is made part of the  
 24 record. I just don't know whether this is  
 25 because there seems to have been a

1 potentially intervening set of amendments.  
2 **MR. STUCKY:** Madam Hearing Officer,  
3 I understand Mr. Oleen's position and I  
4 respect it. My suggestion here in light of  
5 what Mr. Oleen just said is that we admit  
6 this for the purpose under which  
7 Ms. Wendling says it is, but we take  
8 judicial notice of the prior versions of  
9 these statutes and regulations. And so if  
10 in later briefing, you've given us an  
11 opportunity to do later briefing, if the  
12 Division of Water Resources or the City of  
13 Wichita or, indeed, the District wants to  
14 reference a prior regulation in our  
15 briefing we be allowed to do so. So my  
16 suggestion is that you take judicial notice  
17 of prior iterations of these rules and  
18 regulations.

19 **PRESIDING OFFICER:** I think that's a  
20 good way to cover that, so I will take  
21 administrative notice of the prior  
22 iterations of 5-1-1.

23 **MS. WENDLING:** Thank you.

24 **BY MS. WENDLING:**

25 Q. Mr. Pope, based on your knowledge of the ASR

1 conclusion 13.

2 **A. Yes.**

3 Q. And I'll have you go ahead and read conclusion  
4 13 for us, please.

5 **A. 13, you say this is part of the conclusions?**

6 Q. Yes.

7 **A. That if the project is operated so that recharge  
8 credits cannot be withdrawn if the static water  
9 level in the index well is below the lowest  
10 index water level for that index well, comma,  
11 the public interest in not diverting Equus Beds  
12 groundwater will be protected.**

13 Q. Now I realize this was quite sometime ago, do  
14 you recall what was meant by the public interest  
15 of not diverting Equus Beds groundwater will be  
16 protected?

17 **A. I'm going to read this one more time to myself.  
18 As I read this and think about the broader  
19 question there, this was one of the conclusions  
20 that related to the question of where the index  
21 water level was set, and this goes to the point  
22 at that time that by setting the index water  
23 there, it was apparently my determination at the  
24 time that that would then protect the public  
25 interest such that people with other water**

1 program, do you believe a change in definition  
2 from being the unsaturated zone to removing  
3 unsaturated zone would potentially enlarge the  
4 basin storage area?

5 **A. I haven't examined that question until now when  
6 you've asked it. It's not something I really,  
7 you know, dealt with in my report. It would  
8 appear at first blush that, yes, by removing the  
9 unsaturated portion that it could enlarge the  
10 basin storage area. That seems to be the plain  
11 reading, if I understand it. You have a second  
12 point here about the index levels that I'm not  
13 sure which way that plays out.**

14 Q. Okay. Switching gears again, if you can find  
15 Exhibit 26 in the District's binder, which I  
16 believe is Volume II.

17 **A. Okay. It's in the -- all right. So which --**

18 Q. Behind the rules and regs, there should be a tab  
19 for 26.

20 **A. 26, okay. Wait a minute, am I in the right one?  
21 You're looking for rules?**

22 Q. No, this would be the Phase I findings and  
23 orders.

24 **A. Okay, right, I have it.**

25 Q. Okay. If you can go to page 12 of 21 and find

1 **rights diverting from the Equus Beds Aquifer  
2 would be protected. I think that's my general  
3 interpretation reading this now in a broader  
4 sense thinking about the index water level from  
5 that era so many years ago.**

6 Q. Okay. If you will turn ahead to tab 25 in that  
7 same binder.

8 **A. Yes.**

9 Q. And this is the memorandum of understanding  
10 between Equus Beds Groundwater Management  
11 District and the City of Wichita?

12 **A. Yes.**

13 Q. Do you -- are you familiar with this document?

14 **A. Well, I haven't studied it recently, but, yes,  
15 I'm -- I know about it, I recall it from the  
16 time period I -- now, this is the first one or  
17 the second one?**

18 Q. This is for Phase I.

19 **A. Okay, yeah. Yes.**

20 Q. Can you tell us what role this MOU played in the  
21 Phase I process?

22 **A. Well, I was certainly well aware of the efforts  
23 made at that time by GMD2 and the City to work  
24 cooperatively towards the implementation of  
25 Phase I of the recharge project, of the ASR, and**

Page 2786

1 this document, I think, was to reduce to writing  
 2 the cooperative effort, if you want to use that  
 3 term, between the parties. And it was then --  
 4 and it was submitted to us as well and referred  
 5 to in the order in consideration.  
 6 And so, yes, it played a, I would say a  
 7 significant role in regard to the processing, I  
 8 guess, of applications for Phase I. You know,  
 9 beyond that, it's -- I'd have to look at the  
 10 specific provisions in terms of, you know, what  
 11 explicitly related to any given provision.  
 12 Q. Okay. If you can flip back, I think, to page 5,  
 13 an attachment A to this memorandum of  
 14 understanding.  
 15 A. Yes.  
 16 Q. And on the bottom two lines, do you see  
 17 references to regulations?  
 18 A. Yes. On the -- we're still -- at the first  
 19 page, I take it, under the category aquifer  
 20 storage and recovery application number 45,567,  
 21 there's --  
 22 Q. Do you see a reference to the basin storage  
 23 area?  
 24 A. Yes, there's a -- item 2, basin storage area  
 25 shall be defined as compliance with K.A.R.

Page 2787

1 5-1-1(k), dot, dot, dot. Then there's the  
 2 number 6 below that.  
 3 Q. Do you believe from your involvement in this  
 4 process that the definitions were an important  
 5 part of this agreement?  
 6 A. Well, apparently so. I wasn't a party to the  
 7 agreement, but I was certainly familiar with it,  
 8 and we considered it at the time, and, yes, I  
 9 would have to say yes to that.  
 10 Q. Okay. Do you recall with Phase I what the  
 11 purpose of ASR Phase I was?  
 12 A. Well, I guess in a broader sense it was to  
 13 simply implement the artificial recharge program  
 14 at that time. You say the purpose of the  
 15 agreement or the purpose of the --  
 16 Q. Purpose of the overall project?  
 17 A. Of the project. Well, it was -- yes, it was to  
 18 implement an artificial recharge program for the  
 19 Equus Beds in the vicinity of the City's well  
 20 field, based on a source and treatment and the  
 21 other steps in the process.  
 22 Q. Do you recall anything about it being used to  
 23 retard the movement of the chloride plume from  
 24 Burrton?  
 25 A. I do. I was actually involved in the Intensive

Page 2788

1 Groundwater Use Control Area process related to  
 2 the Burrton plume.  
 3 Q. So you're very familiar with --  
 4 A. It's been a while, but, yes, I remember.  
 5 Q. All right. To help you flip through more  
 6 binders, in Volume VI of the District's binders,  
 7 and you might not need to refer to this --  
 8 A. Okay.  
 9 Q. -- is the transcript of Phase I.  
 10 A. I'm sorry, the what?  
 11 Q. The transcript from the Phase I hearing.  
 12 A. Really? Okay.  
 13 Q. I am sure you want to read that this evening to  
 14 walk down memory lane.  
 15 A. Okay. This is a history lesson.  
 16 Q. And maybe it will be helpful because you  
 17 referred to some specific language in that. So  
 18 in Volume VI, the sixth binder, there is an  
 19 Exhibit 78.  
 20 A. Did you say Volume VI?  
 21 Q. Yes.  
 22 A. I have the volume now.  
 23 Q. Okay. The first exhibit in that volume should  
 24 be 78.  
 25 A. Okay.

Page 2789

1 Q. And if you could find page 10 of the transcript.  
 2 A. Yes, I have it.  
 3 Q. And there is the first full paragraph that I  
 4 draw your attention to and have you read the  
 5 first six lines or so. The first sentence.  
 6 A. First full paragraph says, I might note that the  
 7 Division of Water Resources' staff will not be  
 8 providing testimony for or against these  
 9 applications, but Mr. Rolfs here, Mr. Rolfs --  
 10 Mr. Leland Rolfs located to my right, as legal  
 11 counsel for me as chief engineer, will be  
 12 allowed to call witnesses for the limited  
 13 purpose of introducing documentation from the  
 14 agency files pertaining to these applications.  
 15 And I might also note that to my left is Mr. Jim  
 16 Bagley. And during the course of the  
 17 proceedings I will allow them also to ask  
 18 questions of the witnesses.  
 19 Q. Do you recall, sorry it was so long ago, why the  
 20 DWR staff was not providing testimony for or  
 21 against the application?  
 22 A. In this particular proceeding, based on this and  
 23 general recollection, I guess, we were simply  
 24 there to hold the hearing and take testimony  
 25 from the parties, as we basically always do.

1 **We, the Division of Water Resources, at least**  
2 **during my tenure, and I think that's still true,**  
3 **weren't there with a position advocating or**  
4 **opposing the application, simply there to hear**  
5 **the testimony from the applicant and any**  
6 **objectors.**  
7 **I -- I would note that there have been**  
8 **times that I recall, probably during my tenure**  
9 **and I think since, where based on the complexity**  
10 **of an issue and documentation from the files and**  
11 **any review that had been done, there were times**  
12 **whenever essentially the staff and Division of**  
13 **Water Resources were bifurcated between one**  
14 **group that provided staff assistance to the**  
15 **hearing officer, which let's assume it was the**  
16 **chief engineer at the time, and a different**  
17 **separate number of staff members, one or more,**  
18 **were acting as essentially a separate party.**  
19 **And I recall that being done in some very**  
20 **big complex cases where it seemed to make sense**  
21 **for someone to be allowed to present relevant**  
22 **evidence from the records of the Division of**  
23 **Water Resources as well as the expertise from**  
24 **staff members. So we took care, in the ones I'm**  
25 **thinking of - there's various ways of handling**

1 **hearings and stuff - to have a wall, firewall**  
2 **between the chief engineer hearing the case and**  
3 **those two categories, the separate party versus**  
4 **people that were assisting me as chief engineer.**  
5 **So it got a little complicated, but we were**  
6 **really trying to be very fair, very open, and**  
7 **trying to ensure that the information that**  
8 **needed to be considered was available.**  
9 Q. Okay. Thank you. That's my only question for  
10 the transcript.  
11 **A. That went way beyond it, I'm sorry.**  
12 Q. No, you can stash it away, read it at your  
13 leisure.  
14 **A. Okay.**  
15 Q. Going back to the findings and order for Phase  
16 I, which is in the binder with the rules and  
17 regs, Exhibit 26.  
18 **A. Let me see, which volume is that in?**  
19 Q. II, Volume II.  
20 **A. Yeah. Binder II, okay.**  
21 Q. So Exhibit 26 is the findings and order for  
22 Phase I.  
23 **A. That's item 26? Yeah, findings and order for**  
24 **Phase I.**  
25 Q. And on page 11 of 21 is conclusion number 3 --

1 **A. Yes.**  
2 Q. -- regarding passive recharge?  
3 **A. Yes.**  
4 Q. Do you recall why you felt it was important to  
5 include language regarding passive recharge  
6 credits in your conclusions?  
7 **A. Well, yes, in the sense that the process was to**  
8 **prepare an order normally of this nature with**  
9 **findings of fact and then conclusions and then**  
10 **ultimately the order itself. And so this**  
11 **section of the order were those conclusions, and**  
12 **one of the significant issues was passive**  
13 **recharge, passive recharge credits. And so this**  
14 **item was included because, you know, based on**  
15 **the findings and everything that led up to this,**  
16 **I concluded that -- what item number 3 says**  
17 **here.**  
18 Q. Okay.  
19 **A. This is how that was determined at that point.**  
20 Q. Do you recall passive recharge being a  
21 significant issue with Phase I?  
22 **A. Yes, it was.**  
23 Q. Okay. There's been some discussion, and I'm not  
24 sure I followed the answer, on the chief  
25 engineer's ability to modify water permits after

1 a final order has been issued. Could you  
2 clarify your understanding of the -- of the  
3 chief engineer's ability and authority to modify  
4 his final order?  
5 **A. Yes, and I think previously I testified and**  
6 **tried to distinguish between some ministerial**  
7 **type changes to correct errors or to, more**  
8 **specifically to find, an example I gave,**  
9 **locations of points of diversion versus a**  
10 **substantive modification to an order. Now --**  
11 **and I spoke to that in my earlier testimony, and**  
12 **so the -- the substantive change, then, my point**  
13 **of that testimony was, I think, at least in**  
14 **part, was, you know, looking at the law, looking**  
15 **at the regulations and the substance of the**  
16 **matter and determining that a modification may**  
17 **not be allowed if it changes that substance. So**  
18 **I think in general, that's the way I would**  
19 **characterize that.**  
20 **There's all kinds of -- I mean, if you're**  
21 **talking explicitly about this, I think that**  
22 **would be my answer. You know, there can be**  
23 **examples of other orders where, you know, they**  
24 **retain jurisdiction or something like that, you**  
25 **know, that might affect that decision.**

Page 2794

1 Q. Okay. And with Phase I, do you recall any  
2 discussion about the City accumulating recharge  
3 credits?  
4 **A. Well, yes, I think in a general sense, uh-huh --**  
5 Q. Okay.  
6 **A. -- that that's provided for in the order. If I**  
7 **understand right.**  
8 Q. No, that was -- yes. Did you consider factors  
9 such as changing water levels in the City's  
10 ability to accumulate recharge credits?  
11 **A. Well, there are some parameters, as I recall,**  
12 **listed in the Phase I order that did affect when**  
13 **recharge credits could be accumulated; the index**  
14 **levels, for example, would be the primary one.**  
15 Q. Do you recall if there was a specific goal in  
16 terms of quantity of recharge credits the City  
17 was trying to accumulate?  
18 **A. I believe there is some language in the Phase I**  
19 **order. It runs my mind that there was -- I'm**  
20 **trying to dig through the details. Approval of**  
21 **certain -- maybe in the amendment or something,**  
22 **recharge credit permits, and there's a limit --**  
23 **I'm not sure whether I'm -- I don't want to**  
24 **confuse Phase I and II, but I believe a specific**  
25 **quantification of how many recharge credits**

Page 2795

1 **could be accumulated. It seems like there was a**  
2 **number, 18 or 19,000 acre-feet or something like**  
3 **that.**  
4 Q. With the -- one of the reasons or -- that we've  
5 been given for this, need for this proposal is  
6 the City's ability to access recharge credits  
7 below the minimum index level.  
8 **A. Okay.**  
9 Q. They refer to it as the credits being  
10 stranded --  
11 **A. Yes.**  
12 Q. -- they would have accumulated the credits but  
13 not be able to access them. Do you recall if  
14 that was contemplated?  
15 **A. Well, I -- what I primarily recall about that**  
16 **off the top of my head is that we set that lower**  
17 **index level at the point -- the lowest level**  
18 **that I think we had records for at that time, if**  
19 **I recall, and thinking that that would then**  
20 **provide the zone from which recharge credits**  
21 **could be accumulated.**  
22 Q. It's okay if you don't --  
23 **A. You know, we were working with the -- sort of**  
24 **the records we had and the circumstances that we**  
25 **had, I don't think I -- other than what I**

Page 2796

1 **earlier testified to, I don't know that I have**  
2 **much to add in regard to this issue of stranded**  
3 **credits.**  
4 Q. Okay.  
5 **A. And I think I commented on that earlier to some**  
6 **degree that I think that's a legitimate issue.**  
7 Q. Okay. It's been identified a few times  
8 throughout this hearing that there was never a  
9 cap placed on the accumulation of recharge  
10 credits. Do you recall if there was ever a cap  
11 discussed?  
12 **A. Like I said a minute ago, I think only in the**  
13 **context of what applications were permitted for**  
14 **recharge, I forget the official term now,**  
15 **recharge credit, referred to as recharge credit**  
16 **permits and that sort of thing. And I don't --**  
17 **I don't remember any details, you know, beyond**  
18 **that.**  
19 Q. Okay.  
20 **A. I think -- I'm not sure that there's -- I don't**  
21 **recall any other overarching, explicit provision**  
22 **other than that.**  
23 **MS. WENDLING:** Well, thank you for  
24 putting up with all of my historical  
25 questions. I have no further questions.

Page 2797

1 **PRESIDING OFFICER:** It's about 5  
2 after 5:00. I suggest we take a break  
3 until 8:30 tomorrow morning. Thank you.  
4 (Whereupon, the proceedings were  
5 adjourned at 5:08 p.m.)

1 **PRESIDING OFFICER:** We're now on the  
2 record. It is just before 9:00 a.m. on  
3 Friday, March 6th, 2020, and we are  
4 resuming the hearing of the City of  
5 Wichita's request to modify their ASR Phase  
6 II project.

7 Before we begin with proceedings,  
8 we're -- a few housekeeping details. Since  
9 we did not get finished during this week,  
10 we are looking at potential days for the  
11 future to resume, and we are going to  
12 explore the dates of April 6 and 7, 27 and  
13 28, and May 27 and 28. And we will try to  
14 work out finishing this up during that time  
15 frame. Any other preliminaries before we  
16 start?

17 Okay. Mr. Pope, you are back on the  
18 stand. You are still under oath.

19 **MR. STUCKY:** And actually to save  
20 him the steps, we have no further questions  
21 for Mr. Pope.

22 **PRESIDING OFFICER:** Okay. So that  
23 was Mr. Stucky for the District.  
24 Mr. McLeod.

25 **MR. MCLEOD:** I think I have only

1 one.

2 **MR. STUCKY:** Well --

3 **PRESIDING OFFICER:** I'm confused.

4 **MR. STUCKY:** Yeah, hold on, if -- is  
5 he allowed to do further cross if we don't  
6 do any more direct, that's my question?

7 **PRESIDING OFFICER:** Honestly, I have  
8 not been considering limiting things quite  
9 that strictly in the interest of a complete  
10 record. So assuming this won't be  
11 extensive, he said one question, let's go  
12 forward.

13 **MR. STUCKY:** Then I may have more  
14 questions, I'm going to reserve my right to  
15 ask more questions.

16 **PRESIDING OFFICER:** That's quite all  
17 right.

18 **MR. STUCKY:** Okay.

19 **CROSS-EXAMINATION**

20 **BY MR. MCLEOD:**

21 Q. Good morning, Mr. Pope.

22 **A. Good morning.**

23 Q. You may remember yesterday I'd asked you a  
24 question about whether the District had made any  
25

1 recommendation on passive recharge credits and  
2 you couldn't remember. Would you look with us  
3 again at Exhibit 25, the Phase I MOU that  
4 Ms. Wendling was asking you about yesterday?

5 **A. Let's see, which book is that in?**

6 Q. I'm going to guess Volume I of the District.

7 **PRESIDING OFFICER:** 25? Volume II.

8 **BY MR. MCLEOD:**

9 Q. Volume II of the District.

10 **A. Excuse me just a second here. Exhibit 25, was  
11 it?**

12 Q. Yes.

13 **A. I think I have it now.**

14 Q. And as an attachment to that exhibit, which  
15 Ms. Wendling also discussed, there is an exhibit  
16 or attachment A which reflected negotiated  
17 recommendations that the District was making on  
18 the ASR Phase I permit application, correct?

19 **A. I'm sorry, where are you now in that document?**

20 Q. Attachment A to that document.

21 **A. Yes.**

22 Q. The recommendations that Ms. Wendling was  
23 talking about when she was discussing that  
24 document with you.

25 **A. Okay, there's -- I see staff recommendations**

1 **there on the first page, is that where you are?**

2 Q. Yes, that's where it begins, I think it carries  
3 over as well to the next page.

4 **A. Yes.**

5 Q. And, Mr. Pope, just to refresh your  
6 recollection, would you review that and let us  
7 know if you see in those District  
8 recommendations any recommendation one way or  
9 the other on passive recharge credits?

10 **A. Okay, give me a minute to look at that.**

11 **MR. STUCKY:** Can you clarify where  
12 you are at, Mr. McLeod?

13 **MR. MCLEOD:** Attachment A to the  
14 Phase I MOU.

15 **A. Mr. McLeod, I -- I reviewed the attachment A to  
16 the memorandum of understanding between the GMD  
17 and the City of Wichita, I do not see in the MOU  
18 a reference to passive recharge credits on those  
19 two pages you asked me to review.**

20 **BY MR. MCLEOD:**

21 Q. And that includes on that attachment A?

22 **A. Yes, I'm referring to attachment A, those first  
23 two pages you asked me to look at.**

24 Q. So does that refresh your recollection,  
25 Mr. Pope, that the District did not make a

Page 2807

1 recommendation on passive recharge credits one  
 2 way or the other?  
 3 **A. Well, I don't see anything in the MOU regarding**  
 4 **that. I -- my recollection is that the District**  
 5 **would have submitted actual recommendations as**  
 6 **is normally the case on any proposed**  
 7 **applications for permit to appropriate water.**  
 8 **And there may be a separate document for that, I**  
 9 **do not recall, and so I -- all I can say from**  
 10 **this is it's not in here.**  
 11 Q. Okay. Thank you.  
 12 **PRESIDING OFFICER:** Okay.  
 13 Mr. Oleen.  
 14  
 15 **CROSS-EXAMINATION**  
 16 **BY MR. OLEEN:**  
 17 Q. Good morning, Mr. Pope.  
 18 **A. Good morning.**  
 19 Q. I'm losing my voice. Some might say it's Karma  
 20 from too many objections.  
 21 **A. No comment.**  
 22 Q. Back -- back to the discussion of what at some  
 23 point was called passive recharge credits in  
 24 terms of the ASR Phase I proceedings. At the  
 25 time ASR Phase I was being worked out,

Page 2808

1 discussed, and there were proceedings associated  
 2 with that, the full ASR infrastructure had not  
 3 yet been constructed; is that correct?  
 4 **A. No, if you -- if you're asking about the**  
 5 **discussions prior to the approval of Phase I?**  
 6 Q. Yes.  
 7 **A. No, I don't believe any facilities would have**  
 8 **been constructed at that point in time.**  
 9 Q. Okay. And so I'm just trying to understand,  
 10 because obviously as you pointed out in your  
 11 Phase I approval order, the initial approval  
 12 order, you did expressly prohibit passive  
 13 recharge credits, right?  
 14 **A. Yes.**  
 15 Q. And so I'm just -- I want to go back to the  
 16 context under which that prohibition was  
 17 ultimately imposed a condition by you, and so at  
 18 the time, we didn't have ASR infrastructure that  
 19 was yet constructed, right?  
 20 **A. That's correct.**  
 21 Q. Okay. And so then what again was the context  
 22 that caused you -- what was the -- what was the  
 23 suggestion or proposal by Wichita or anyone else  
 24 that caused you to specifically say passive  
 25 recharge credits would be prohibited in your

Page 2809

1 Phase I approval order?  
 2 **A. Well, prior to the issuance of the order**  
 3 **approving Phase I, there was a period of time in**  
 4 **which the City had began discussions,**  
 5 **particularly with GMD No. 2 but also with the**  
 6 **Division of Water Resources, and I think as I**  
 7 **testified yesterday, prior to consideration of**  
 8 **the application for Phase I, we had already gone**  
 9 **through the rule making process. So there had**  
 10 **been extensive discussions in -- in our office**  
 11 **with staff and legal counsel, myself as we were**  
 12 **developing the rules for the artificial recharge**  
 13 **program.**  
 14 **And -- and so on one hand you had the**  
 15 **City's endeavor being considered, the**  
 16 **discussions that we just alluded to, in fact, a**  
 17 **minute ago about -- that led to the MOU, the**  
 18 **first MOU. And so I was well aware from the**  
 19 **early discussions by the City of the proposal**  
 20 **for passive recharge credits.**  
 21 Q. Okay. And so those initial discussions, can you  
 22 elaborate on what was discussed, what the  
 23 proposal was that ultimately you decided to not  
 24 allow as specifically saying passive recharge  
 25 credits are not allowed?

Page 2810

1 **A. I think it was in the rule making process as we**  
 2 **at the Division went about looking at how would**  
 3 **such a project work, what are the issues and**  
 4 **what should be considered. And -- and so early**  
 5 **on, the question of passive recharge was a part**  
 6 **of that because of the nature of the proposal as**  
 7 **we understood it. The -- I'm trying to think**  
 8 **as -- as I think about your question.**  
 9 Q. I know it's been a long time and let me see if I  
 10 can help you understand my confusion.  
 11 **A. Okay.**  
 12 Q. So here today in the context of the proposal  
 13 before us, we're in a situation where the  
 14 aquifer is basically full, right?  
 15 **A. Yes. Okay.**  
 16 Q. But back when Phase I was being considered, that  
 17 was not really the case, right? That was the  
 18 point of trying to come up with this Phase I  
 19 framework, correct?  
 20 **A. Well, I think as I indicated earlier in my**  
 21 **testimony, the concept of artificial recharge**  
 22 **was being explored by the City, and I think we**  
 23 **also know from the record, and I think it's**  
 24 **certainly my expert report, that the -- there**  
 25 **was the development of the City's well field**

1 over time, and after that occurred and after  
2 those water rights had been established, then  
3 the Equus Beds Groundwater Management District  
4 No. 2 came into being and promulgated its rules;  
5 and amongst those things was the rules related  
6 to safe yield based on studies and information  
7 and -- and the various things that were  
8 available at that time.

9 And so if you look at the rules that were  
10 in -- the City's water rights and their  
11 development, then the rules that were developed  
12 based on studies that occurred by U.S.  
13 Geological Survey and others about recharge and  
14 then looking at water levels, I think, yes,  
15 there was an issue. And I think as I also  
16 testified, when I was approached by the City, I  
17 was willing to consider the concept of  
18 artificial recharge because, again, there was an  
19 issue.

20 And so -- so then you had the -- the  
21 proposal for artificial recharge being  
22 considered as a part of a planning process for  
23 water supply by the City, and then that led the  
24 Division of Water Resources to start working on  
25 the rules and regulations that would be needed

1 to allow such a project to be considered from a  
2 regulatory standpoint. And it was a part of  
3 that process, together with what they had  
4 suggested to start with, that led us to focus on  
5 the passive recharge credit issue. It was an  
6 important issue, and that's why as a part of the  
7 development of the rules that we came to the  
8 conclusions we did.

9 Q. But what was being -- what concept or proposal  
10 was being considered that caused you to deem it  
11 necessary to specifically prohibit passive  
12 recharge credits? It would seem odd if it's  
13 just going to be addressed without the concern  
14 originating from some -- some proposal that was  
15 proffered by the City? You know, here today,  
16 right, the proposal that some claim amounts to a  
17 passive recharge credit is this concept of AMCs,  
18 so -- so what was being proposed back in Phase I  
19 that led people to say, no, that's passive  
20 recharge credits and we need to specifically  
21 prohibit those?

22 A. It was a front-and-center issue that was a part  
23 of the conceptual proposal by the City because  
24 they said we'd like to do -- we have this  
25 artificial recharge project we'd like to

1 put recharge credits in at the time?  
2 A. No, that's not what I've said. They wanted to  
3 do both. They -- yes, the original proposal was  
4 to -- you know, started with bank storage wells  
5 originally, that evolved into direct surface  
6 diversion, combination of things, and that --  
7 that involved diversion of water from the Little  
8 Arkansas River system, take the water over to  
9 allow artificial recharge, both physical  
10 recharge but also that same time they asked,  
11 could we get credit if we don't pump our wells.  
12 So it was a part of that early evolution of  
13 the -- both the project and our regulatory  
14 framework that we developed.

15 Q. Okay. So you said that back then it was, you  
16 think maybe the proposal was -- would be both  
17 credits from Wichita's proposal, with a lower  
18 case P, not the one we're dealing with today,  
19 back then it was maybe discussed that Wichita  
20 would get some sort of recharge credit for  
21 physical recharge credits and a recharge credit  
22 for not pumping wells, right?

23 A. Yeah, the thrust of the project was a  
24 traditional artificial recharge project which  
25 involved diverting water from the source,

1 consider and could we get credit for recharge  
2 by not pumping our wells? It was a  
3 front-and-center question, and so it was very --  
4 it was central to the development of the project  
5 and what concept would have been allowed.

6 And so we just didn't pick this up out of  
7 the air and say, oh, by the way, because -- and  
8 we tried to develop an understanding of how an  
9 artificial recharge project should be regulated  
10 and what are the issues. We knew what was being  
11 proposed. And so lots of discussions during the  
12 course of the rule making process, including,  
13 you know, public discussions, the hearing, all  
14 of those things that led me ultimately to decide  
15 to address that issue in the rules. I thought  
16 it was a very logical thing, to be up front so  
17 people knew what the rules of the road would be.

18 Q. So you're saying back then, the -- the concept  
19 that was proposed that led to your prohibition  
20 on passive recharge credits was that Wichita,  
21 they didn't want to physically put water into  
22 the aquifer then, they wanted to take it from  
23 somewhere, take it straight to town, and get a  
24 credit that you ultimately determined was to be  
25 passive; they didn't want to actually physically

1 put recharge credits in at the time?  
2 A. No, that's not what I've said. They wanted to  
3 do both. They -- yes, the original proposal was  
4 to -- you know, started with bank storage wells  
5 originally, that evolved into direct surface  
6 diversion, combination of things, and that --  
7 that involved diversion of water from the Little  
8 Arkansas River system, take the water over to  
9 allow artificial recharge, both physical  
10 recharge but also that same time they asked,  
11 could we get credit if we don't pump our wells.  
12 So it was a part of that early evolution of  
13 the -- both the project and our regulatory  
14 framework that we developed.

15 Q. Okay. So you said that back then it was, you  
16 think maybe the proposal was -- would be both  
17 credits from Wichita's proposal, with a lower  
18 case P, not the one we're dealing with today,  
19 back then it was maybe discussed that Wichita  
20 would get some sort of recharge credit for  
21 physical recharge credits and a recharge credit  
22 for not pumping wells, right?

23 A. Yeah, the thrust of the project was a  
24 traditional artificial recharge project which  
25 involved diverting water from the source,

Page 2815

1 treating it, I think initially there was  
 2 recharge basins, one or more of those, and as  
 3 well as the evolution of the recharge through  
 4 wells. But I'm just saying that they did early  
 5 on also ask and raise the question, if we don't  
 6 pump our municipal wells X amount, can we get a  
 7 recharge credit for not pumping the wells. So  
 8 that issue -- I'm not saying that was the  
 9 dominant, only thing that happened out of the  
 10 gate; I'm just saying there was the proposal to  
 11 do actual artificial recharge, and then they  
 12 asked about this other possibility.  
 13 Q. And that other possibility, when they were  
 14 asking about not pumping their wells in the well  
 15 field, what other source of water of theirs, if  
 16 you recall, were they saying they would use  
 17 instead?  
 18 A. Well, of course, they have Cheney Reservoir as  
 19 a -- you know, they had contracted with the  
 20 Bureau of Reclamation for water storage in it  
 21 going back a long time, I don't know the exact  
 22 dates on that, so that was one of their sources,  
 23 and the Equus Beds was their other, Equus Beds  
 24 well field.  
 25 And so then -- and I think by that time

Page 2816

1 period, water level declines were being  
 2 experienced, the safe yield rules were adopted,  
 3 all these things evolved over time. I don't  
 4 remember exactly, you know, every detail, but  
 5 that's what led to the project being proposed,  
 6 Phase I being proposed; our rules were developed  
 7 before we -- we considered the application for  
 8 Phase I. So it ...  
 9 Q. So --  
 10 A. I don't know what else to say, I'm not sure ...  
 11 Q. Well, I'm probably not being as clear as I  
 12 should, but I think I understand now. So back  
 13 when they were asking about this concept of what  
 14 at some point came to be called passive recharge  
 15 credits, they were asking about not pumping the  
 16 well field --  
 17 A. Right.  
 18 Q. -- and they were asking not pumping that but  
 19 using some other source to -- in lieu of the  
 20 well field, and that other source might have  
 21 been Cheney to use in lieu of not pumping the  
 22 well field?  
 23 A. Yeah, I think at that point, they had Cheney and  
 24 Equus Beds well field, originally maybe the City  
 25 had some wells closer in to the City; if I

Page 2817

1 vaguely recall, there was some -- some wells in  
 2 the Ark River or alluvial system, or something.  
 3 So -- but I think there were some water quality  
 4 issues, and I don't know what all on that but  
 5 I -- I don't want to -- I don't want to try to  
 6 go further than what I have the detail on there.  
 7 But -- so it was basically Cheney and the well  
 8 field, Equus Beds well field, those two things,  
 9 and -- well, I think that answered the question.  
 10 Q. Okay. Shifting gears here and this is my last  
 11 line of questioning, if you would please turn to  
 12 Exhibit 26, which is -- I don't recall what  
 13 volume it's in. It is the Phase I approval.  
 14 A. Yes, I have it.  
 15 Q. And I want to direct your attention to  
 16 paragraph 13 on page 12 of 21.  
 17 A. Page 12 of 21?  
 18 Q. Yes.  
 19 A. Okay.  
 20 Q. Do you see that paragraph 13 that starts with,  
 21 that if the project is operated?  
 22 A. Yes, I see it.  
 23 Q. I believe that this paragraph has been discussed  
 24 a couple times in these proceedings, I think  
 25 once by you. My question is -- it's related to

Page 2818

1 this paragraph 13. So at the time the Phase I  
 2 project approval was approved by you, it  
 3 established what we've been calling the current  
 4 bottoms, the minimum index levels, right?  
 5 A. I think that's correct.  
 6 Q. Okay. And those bottoms that we call the  
 7 current bottoms of the minimum index cell  
 8 levels, they also happen to be the water levels  
 9 in 19 -- on or around 1993. Is that your  
 10 understanding?  
 11 A. I -- I believe that's correct, that sounds  
 12 right.  
 13 Q. And so at the time that Phase I was being  
 14 considered and you were -- and you issued this  
 15 approval, those 1993 water levels were the worst  
 16 on record post development, is that your  
 17 understanding, the lowest on record post  
 18 development?  
 19 A. Yes. As I recall, that level was selected  
 20 because it had -- it was the lowest level that  
 21 had thus far occurred, with the record we had in  
 22 the past.  
 23 Q. And so I don't know if -- are you aware in the  
 24 current proposal that we're having these  
 25 proceedings about that the City has done some

1 modeling about average saturated thickness in  
2 all these index cells, if their proposal is  
3 approved, as far as lowering the current  
4 bottoms, are you aware that they've done that?  
5 **A. I'm aware that modeling has been done. I have**  
6 **not been involved in that or examined the**  
7 **modeling or the results. I'm just aware of it.**  
8 Q. Okay. And so my question, then, is isn't it  
9 true that at the time Phase I was approved there  
10 hadn't -- modeling hadn't been done that  
11 assessed the average saturated thickness of the  
12 index cells at those '93 levels, but rather  
13 those levels were just picked basically because  
14 that was the worst -- those are the worst levels  
15 on record at the time?  
16 **A. I think your last statement, I would agree in**  
17 **regard to the worst levels, or the lowest levels**  
18 **to date at that time. I can't say this for**  
19 **certain, but I do know that I believe it was the**  
20 **U.S. Geological Survey had done modeling of the**  
21 **Equus Beds area pretty early on. I don't**  
22 **remember the exact sequence of really when that**  
23 **occurred relative to when we were considering**  
24 **the rules in Phase I and, you know, that sort of**  
25 **thing. So just because I -- I don't remember**

1 **withdraw credits that that would protect the**  
2 **ability to divert water from the aquifer by**  
3 **other users, I think is what we were trying to**  
4 **get to there --**  
5 Q. So essentially --  
6 **A. -- at that point in time.**  
7 Q. Okay. So essentially -- and these, the bottoms  
8 that were established by this Phase I approval,  
9 that establishes the bottom of the basin storage  
10 area, correct?  
11 **A. That's correct.**  
12 Q. And so essentially it's kind of been referred to  
13 as a bathtub or a box --  
14 **A. Okay.**  
15 Q. -- but the basin storage area is space in the  
16 aquifer that Wichita is allowed to operate the  
17 ASR system and they can -- they're allowed to  
18 legally withdraw credits so long as it's within  
19 that box, right?  
20 **A. That's correct.**  
21 Q. And below that box, though, is deemed to not be  
22 a portion within the aquifer from which Wichita  
23 may operate the ASR -- their ASR withdrawal  
24 credits, correct?  
25 **A. Yes.**

1 **the sequence of those things, but I know some of**  
2 **the studies and modeling in the observation**  
3 **would go back a long time.**  
4 Q. So isn't it true that this paragraph 13, it's  
5 talking about the City not being able to  
6 withdraw recharge credits below the minimum  
7 index levels that -- that are contemplated at  
8 the time this Phase I was approved?  
9 **A. Give me just a second here.**  
10 Q. Sure. Let me, if I may, ask you a different  
11 way.  
12 **A. Okay.**  
13 Q. As a result of the -- of this Phase I approval  
14 and even really as reinforced, continued under  
15 the Phase II approval, Wichita cannot withdraw  
16 recharge credits below the established minimum  
17 index cell levels, which happen to be also  
18 levels of 19 -- around 1993, correct?  
19 **A. Yes, that's correct, and I -- after your**  
20 **paragraph 13 here, I was trying to reread this**  
21 **and put this in context to what was going on**  
22 **then. But, yes, I think given those water**  
23 **levels that had occurred at that point in time,**  
24 **this conclusion was simply trying to say if that**  
25 **is the lowest level from which they could then**

1 Q. So this paragraph 13, isn't it true it says you  
2 can't -- you can't operate the system and  
3 withdraw recharge credits below the bottom of  
4 the box that was established by this Phase I  
5 approval?  
6 **A. Well, I -- if I understand your question, I -- I**  
7 **would simply say based on the information we had**  
8 **at that time and based on the understanding of**  
9 **the aquifer, what was being proposed, all of**  
10 **that, this was simply a conclusion that said**  
11 **this would allow them to operate, you know,**  
12 **recharge in, withdrawal, you know, recovery of**  
13 **credits within the box as you've described it.**  
14 **So that was the information we had at that time,**  
15 **this was a conclusion that we drew.**  
16 Q. Right. And they can only withdraw --  
17 **A. Yeah.**  
18 Q. -- credits when water levels are within the box,  
19 right?  
20 **A. Yeah, I think that's the way it was structured.**  
21 Q. Right. And so -- 'cause if they go below the  
22 box, they're deemed to be operating in an area  
23 which they're not authorized to operate as far  
24 as withdrawal of credits?  
25 **A. As far as withdrawing credits, that's correct,**

Page 2823

1 **yeah.**  
 2 Q. But if -- if the box were to be lowered --  
 3 **A. Uh-huh.**  
 4 Q. -- then they can withdraw credits so long as  
 5 they don't withdraw them below whatever the new  
 6 bottom of the box is?  
 7 **A. Yes, I think that's the issue, that's one of the**  
 8 **two issues that's been raised in this proceeding**  
 9 **is -- one of those is AMCs, the other is index**  
 10 **water levels.**  
 11 Q. So as long as they're operating -- as long as  
 12 they're withdrawing the ASR credits within the  
 13 box, whatever the box is determined to be,  
 14 they're lawfully withdrawing credits, right?  
 15 **A. I guess that's a fair statement, yeah.**  
 16 **MR. OLEEN:** No further questions,  
 17 thank you.  
 18 **A. Uh-huh, thank you.**  
 19 **PRESIDING OFFICER:** Ms. Wendling.  
 20  
 21 **CROSS-EXAMINATION**  
 22 **BY MS. WENDLING:**  
 23 Q. Good morning. Could I have you look at, I  
 24 believe it might still be there, the findings  
 25 and order for Phase I, Exhibit 26 in the GMD2

Page 2824

1 Volume II binder on page 15 of 21?  
 2 **A. Yes, I think that's the same document we --**  
 3 Q. Where we just were?  
 4 **A. -- we were in, so you say page 15?**  
 5 Q. Yeah, page 15 of 21. And I believe that I  
 6 understood correctly Mr. Oleen was asking you if  
 7 you recall looking at the saturated thickness  
 8 when considering the 1993 levels, the minimum  
 9 index levels?  
 10 **A. Okay, I'm sorry, what's your question then?**  
 11 Q. I was just trying to make sure I was  
 12 understanding the previous testimony.  
 13 **A. We were discussing the selection of the lower**  
 14 **index levels, and, of course, implicitly in that**  
 15 **is you basically have the saturated thickness**  
 16 **above and below that.**  
 17 Q. Okay. Can you -- on page 15, can you read  
 18 number 4 for us?  
 19 **A. Yes, on page 15 of 21, number 4 says, that the**  
 20 **locations of the index wells and the index water**  
 21 **levels for the basin storage area shall be as**  
 22 **set forth in attachments 3 and 4 to this order.**  
 23 Q. If you flip back, oh, roughly ten pages to find  
 24 attachment 4.  
 25 **A. Yes, I think I have it.**

Page 2825

1 Q. So this is the attachment referred to as being  
 2 used in setting of minimum index levels?  
 3 **A. That appears to be the case. I -- I haven't**  
 4 **studied that detail, but it's -- it's entitled**  
 5 **City of Wichita Aquifer Storage and Recovery**  
 6 **Project Water Levels and Storage Capacities.**  
 7 Q. I know it's been awhile, but does this document  
 8 look at all familiar to you?  
 9 **A. No. I don't recall it specifically but --**  
 10 Q. Okay.  
 11 **A. -- but I think I still recall the concept in**  
 12 **general.**  
 13 Q. Okay. Do you, in the one, two, three, four,  
 14 fifth column over, do you see the column for  
 15 index cell storage coefficient?  
 16 **A. Index cell storage coefficient, yes.**  
 17 Q. Do you recall how that storage coefficient was  
 18 used or considered in the minimum index level  
 19 determination?  
 20 **A. Actually, I really don't, I'm sorry, I -- you**  
 21 **know, there was a lot of technical detail, and I**  
 22 **probably tended to rely on staff that was**  
 23 **working with me on this level of detail more**  
 24 **than what I personally probably -- I'm sure we**  
 25 **discussed it and I was aware of it at the time.**

Page 2826

1 Q. Okay.  
 2 **A. I just don't recall --**  
 3 Q. Okay.  
 4 **A. -- too many of the specifics about that.**  
 5 Q. Are you able to tell me what the storage  
 6 coefficient means, what is the significance of  
 7 that number?  
 8 **A. Well, I think so. I believe it's the fun --**  
 9 **unless I'm misunderstanding here, I believe it's**  
 10 **the -- you know, basically in any aquifer you**  
 11 **have a combination of the sands and silts and**  
 12 **gravels or whatever material is in the**  
 13 **particular type of aquifer - in this case, I**  
 14 **think we're talking about a, you know, kind of a**  
 15 **traditional aquifer with those materials - and**  
 16 **then you have the water that's stored within**  
 17 **those materials.**  
 18 **And so this, I think, is related to the**  
 19 **fundamental concept that in the saturated**  
 20 **thickness, you have -- you know, typically in**  
 21 **aquifers we used to think of 15 or 20 percent of**  
 22 **those materials is actual water, and the rest of**  
 23 **it is the sands and silts and gravels. So I**  
 24 **think this is using that same concept -- now,**  
 25 **again, remember, I haven't looked at this for a**

1 long, long time, so I'm kind of making a  
2 presumption here that they, we, at the time had  
3 information about, based on probably well logs  
4 and all the information that was looked at, what  
5 that storage coefficient was at each incremental  
6 level of a -- if you look at a column, if you  
7 think in terms of a column, like from a -- we  
8 typically get these from well logs and  
9 information that had been used for studies up to  
10 that point.

11 Q. Okay. And then looking at the first row of data  
12 for cell number 1 and we see an index cell  
13 storage coefficient of 0.05?

14 A. Yes.

15 Q. As a layperson, can I translate that to 5  
16 percent water on average in that cell?

17 A. I think that's what it's referring to again, but  
18 I hope I'm not assuming too much when I look at  
19 this, in all fairness. Yeah, and you see some  
20 that say .25, you see others at .22, et cetera,  
21 et cetera, so ...

22 MS. WENDLING: Thank you, I don't  
23 have any further questions.

24 PRESIDING OFFICER: Mr. Stucky.

25 MR. STUCKY: I actually wasn't going

1 was being developed, the primary source of water  
2 for the City of Wichita was Cheney Reservoir; is  
3 that correct? Other than the Equus Beds  
4 Aquifer?

5 A. Oh, other than the Equus Beds Aquifer, I think  
6 that's correct.

7 Q. So there may have been some discussions about  
8 Cheney Reservoir in the context of passive  
9 recharge credits because that was the other  
10 known source of water other than the Equus Beds,  
11 is that what you were saying?

12 A. I'm not sure that's exactly what I was saying.  
13 The City had available to it the surface water  
14 source at Cheney and then their well field. And  
15 we were really focusing on the well field in the  
16 proposed artificial recharge project, but in the  
17 context of that, the reason that relates back to  
18 passive recharge credits is that because they  
19 have these two very different sources of supply,  
20 they would have the capability to when water was  
21 available at Cheney to use it and not pump their  
22 Equus Beds wells.

23 So that opened up the possibility, then,  
24 that if you're using Cheney during a certain  
25 time period, based on water availability,

1 to ask further questions but I will at this  
2 point. And I also have lost my voice  
3 partially, and I apologize but it's 'cause  
4 I had a tube rammed down my throat  
5 yesterday so ...

6  
7 REDIRECT EXAMINATION  
8 BY MR. STUCKY:

9 Q. You were asked just a moment ago some questions  
10 about passive recharge credits by both  
11 Mr. McLeod and Mr. Oleen. Do you recall those  
12 questions, Mr. Pope?

13 A. Just this morning?

14 Q. Yeah, this morning?

15 A. Yes, I think so.

16 Q. And I am just going to ask you two very brief  
17 lines of questioning. First of all, you were  
18 asked the question about the sources of water  
19 that the City had available to them --

20 A. Yes.

21 Q. -- back at the time that ASR Phase I was being  
22 contemplated. Do you recall that question?

23 A. Yes.

24 Q. And, in fact, you indicated that as -- when ASR  
25 Phase I was being developed, this whole concept

1 et cetera, et cetera, then you wouldn't have to  
2 pump your well field as much. And that opened  
3 up, then, the possibility of, well, if we don't  
4 pump the wells, can we get credit for not  
5 pumping them because we've got this other  
6 alternative, and, you know, goes through this  
7 whole line of discussion that we've had  
8 yesterday and today. I think that's the context  
9 in which maybe Cheney might be involved but ...

10 Q. So just to clarify the record, though, as far as  
11 the source, Cheney Reservoir, this concept of  
12 passive recharge credits wasn't limited to  
13 Cheney Reservoir being the source. Is that a  
14 true statement?

15 A. Yes, I think that's true. No, that really -- it  
16 wasn't -- really wasn't involved other than just  
17 the fact that it might indirectly relate to how  
18 much you would choose to pump or not pump.

19 Q. So in other words, if the City had a source of  
20 water from El Dorado Reservoir --

21 A. Uh-huh.

22 Q. -- and they pumped water from El Dorado  
23 Reservoir in lieu of pumping from the aquifer --

24 A. Uh-huh.

25 Q. -- and they asked for a credit for that, that

Page 2831

1 would also be a passive recharge credit? It's  
 2 the same concept, right?  
 3 **A. I guess it's the same concept. It's not so**  
 4 **important in terms of where it comes from, it's**  
 5 **a question of -- it's really a question of if**  
 6 **you divert water from your approved source for**  
 7 **Phase I or Phase II, in this case the Little**  
 8 **Arkansas River, it's varied a little bit over**  
 9 **the years in terms of exactly how that was set**  
 10 **up and structured, so that's your approved**  
 11 **source for artificial recharge, and then if that**  
 12 **water is diverted, made available, treated,**  
 13 **whatnot, and on one hand goes directly -- for**  
 14 **direct use, it's approved for that as well,**  
 15 **versus is it used for artificial recharge.**  
 16 **That's -- that's really how that dynamic works.**  
 17 **It's not so important in terms of what other**  
 18 **sources one might have, whether it be El Dorado**  
 19 **or Cheney or whatever.**  
 20 Q. So you've already, I think, answered my next  
 21 question, you said it doesn't matter really what  
 22 the source is. That's the basis of your  
 23 testimony that if the water is taken from the  
 24 Little Arkansas River and sent directly to the  
 25 City and then somehow the City is also asking

Page 2832

1 for a credit for that --  
 2 **A. That's the issue.**  
 3 Q. Exactly, and that is still a passive recharge  
 4 credit under that scenario, correct?  
 5 **A. That's the heart of the issue of passive**  
 6 **recharge credits, that's right. So if you**  
 7 **either take that source water and physically**  
 8 **recharge it versus diverting that water and**  
 9 **taking it directly to the City for its use,**  
 10 **that's -- that's the fundamental difference in**  
 11 **what we're talking about here, and that's what I**  
 12 **have testified about in my report and yesterday.**  
 13 Q. I would ask that you, in that notebook that's  
 14 already before you, it's Exhibit 26, I'd ask  
 15 that you turn to page 2 out of 21.  
 16 **A. Okay.**  
 17 Q. I'm sorry, it's a ASR order, I might have  
 18 misspoken. It's a ASR order that's shown in  
 19 Exhibit 26 --  
 20 **A. Yes.**  
 21 Q. -- before you.  
 22 **A. That's the -- that's the Phase I order, I**  
 23 **believe.**  
 24 Q. And I apologize for the misstatement, I'm still  
 25 waking up a little bit; my honorary, learned

Page 2833

1 co-counsel brought me some coffee a moment ago.  
 2 And for the record, I had to kick him out of my  
 3 house after midnight last night so I could get a  
 4 little sleep.  
 5 **A. Okay.**  
 6 Q. At any rate, as we look at that order, which my  
 7 honorary co-counsel just covered up with his  
 8 notebook, there is a definition found on the  
 9 bottom of page 2 of 21 on 10b. Could you read  
 10 that for the record?  
 11 **A. Okay. We're on page 2 of 21, item 10.**  
 12 Q. 10b, could you read that for the record?  
 13 **A. Item 10b says, will the City be considered to be**  
 14 **recharging water into the Equus Beds by the**  
 15 **concept of passive recharge, question mark,**  
 16 **i.e., water which the City could have legally**  
 17 **pumped but did not pump.**  
 18 Q. And I listened to your testimony yesterday, I  
 19 believe that's exactly how you defined a passive  
 20 recharge credit yesterday; is that true?  
 21 **A. I believe that's correct. I think this is**  
 22 **finding -- or this is a part of the findings for**  
 23 **the Phase I order, and these were questions that**  
 24 **I had posed in the prehearing order to be**  
 25 **considered as a part of the proceeding, if I**

Page 2834

1 **recall.**  
 2 Q. And this definition, as you stated it, is not in  
 3 the context of Cheney Reservoir, in fact, it's  
 4 not limited to Cheney Reservoir; is that  
 5 correct?  
 6 **A. I think that's correct, yeah.**  
 7 Q. And, in fact, when this definition was  
 8 constructed, the idea was to make it broad and  
 9 not limit it to one source like you just stated  
 10 before, correct?  
 11 **A. I think that's correct too.**  
 12 Q. I'd ask that you now turn to the City's proposal  
 13 in the black notebook before you. Tell me when  
 14 you're in that notebook.  
 15 **A. Yes, I think I have the notebook.**  
 16 Q. Could you turn with me to page 1-2 of the City's  
 17 proposal document, and it's also represented as  
 18 Exhibit 1?  
 19 **A. Is this the March 12th, 2018 letter or --**  
 20 **MR. STUCKY:** Your Honor -- Your  
 21 Honor?  
 22 **PRESIDING OFFICER:** Yes.  
 23 **MR. STUCKY:** May Mr. Boese approach  
 24 the witness --  
 25 **PRESIDING OFFICER:** Yes.

1 **MR. STUCKY:** -- under this scenario?  
2 **PRESIDING OFFICER:** To help him find  
3 it, yes.  
4 **MR. STUCKY:** And help him find it?  
5 **BY MR. STUCKY:**  
6 Q. Are you on that page --  
7 **A. Yes, I believe so.**  
8 Q. -- Mr. Pope? And you've had a chance to drink  
9 some water now?  
10 **A. Yeah, I just didn't bring it up, I should have**  
11 **earlier.**  
12 Q. Okay. Well, I wasn't going to ask you further  
13 questions, but since you're my -- been my  
14 favorite witness so far, I am going to ask you  
15 just a few more questions.  
16 **A. Okay.**  
17 Q. At the bottom of page 1-2 of the City's  
18 proposal, it's the second sentence from the  
19 bottom, could you read that aloud for the  
20 record?  
21 **A. Second sentence from the bottom?**  
22 Q. On page 1-2, it starts with the water left.  
23 **A. Yes. The water left in storage as a result of**  
24 **utilizing Little Arkansas River flows rather**  
25 **than groundwater from the EBWF would be**

1 I'm sorry, you say this would be 84?  
2 **MR. STUCKY:** Well, I think it should  
3 be DWR's exhibit since they brought it up,  
4 but I'm -- I'll include it as my exhibit.  
5 **MR. OLEEN:** He wants it, it can be  
6 his label.  
7 **MR. STUCKY:** Okay.  
8 **PRESIDING OFFICER:** Okay. So --  
9 **MR. STUCKY:** It will be the  
10 District's exhibit then, that's fine.  
11 **PRESIDING OFFICER:** -- hearing no  
12 objections, the District's Exhibit 84 will  
13 be admitted.  
14 **BY MR. STUCKY:**  
15 Q. Mr. Pope, do you still have Exhibit 84 in front  
16 of you, the definition of the word store?  
17 **A. I don't believe so, let me see if I ended up**  
18 **with that.**  
19 **MR. OLEEN:** I have another copy.  
20 **A. No, I don't think I ended up with one. Okay. I**  
21 **have it now.**  
22 **BY MR. STUCKY:**  
23 Q. Mr. Pope, do you now have that definition of the  
24 word store in front of you?  
25 **A. Yes.**

1 **considered as an ASR aquifer maintenance credit,**  
2 **or AMC, with similar characteristics to the**  
3 **current ASR recharge credits.**  
4 Q. So now having read that sentence, I'd ask that  
5 you cross-reference back to the definition that  
6 you placed in this ASR Phase I order. The  
7 definition you put of passive recharge credits  
8 in that order says, water which the City could  
9 have legally pumped but did not pump. Now,  
10 compare that to me -- with me to the language in  
11 that proposal where it says, the water left in  
12 storage will be considered an AMC. Isn't that  
13 essentially the exact same thing that was  
14 prohibited as a passive recharge credit?  
15 **A. Yes.**  
16 **MR. STUCKY:** Just so we have a clear  
17 record here, I would like to introduce the  
18 definition of the word store that was  
19 brought up by Mr. Oleen yesterday, I would  
20 like to introduce it as an exhibit.  
21 Whether it be DWR's exhibit, since  
22 Mr. Oleen brought it up, or if it's the  
23 District's Exhibit 84, I would ask that it  
24 be introduced into evidence.  
25 **PRESIDING OFFICER:** Any objection?

1 Q. Okay. You were asked about one aspect of this  
2 definition yesterday, were you not?  
3 **A. I think that's correct.**  
4 Q. Okay. I just want to walk through this  
5 definition just a little bit because I think it  
6 does provide context for our discussion here  
7 today. In entry 1 of 3, and I assume you're  
8 familiar with -- with dictionary entries, a lot  
9 of times there's entry 1, there's entry 2,  
10 there's entry 3, are you familiar with that?  
11 **A. Oh, I think in general terms, yeah.**  
12 Q. Okay. In entry 1, the first item there, it  
13 says, to lay away, accumulate, store vegetables  
14 for winter use, et cetera.  
15 **A. Uh-huh.**  
16 Q. What does the concept of laying away or  
17 accumulate mean in your view -- in your view, is  
18 that an action that would be taken by a human to  
19 essentially accumulate something, what does that  
20 mean?  
21 **A. Yes, it's -- I think of it as taking something**  
22 **and accumulating it, as the word is, essentially**  
23 **storing it so they have it in their possession.**  
24 Q. Likewise, for entry number 2 there, it says to  
25 furnish, to supply, is that what it says in

Page 2839

1 entry number 2?  
 2 **A. Yes.**  
 3 Q. Same kind of concept, a human is furnishing, is  
 4 creating a supply, is that what it's talking  
 5 about there?  
 6 **A. That's correct.**  
 7 Q. Item number 3 there is the one that Mr. Oleen  
 8 keyed in on yesterday, and he keyed in on the  
 9 terminology to place or leave in a location.  
 10 **A. Uh-huh.**  
 11 Q. But then the definition goes on and it mentions  
 12 what those locations are, it says, such as a  
 13 warehouse, library, or computer memory. Have I  
 14 read that accurately?  
 15 **A. Yes.**  
 16 Q. With respect to a warehouse, if something's left  
 17 in a warehouse, as this definition implies,  
 18 would a human have had to put that item in the  
 19 warehouse in the first place?  
 20 **A. Yes.**  
 21 Q. With respect to a library, if there's books in  
 22 the library, would a human had to have put those  
 23 books in the library in the first place?  
 24 **A. Yes.**  
 25 Q. Same question with respect to computer memory,

Page 2840

1 if there's documents on a computer, would a  
 2 human have had to put those documents on the  
 3 computer in the first place?  
 4 **A. Yes.**  
 5 Q. And it says in here that those items that are  
 6 put there by humans are available, then, for  
 7 later use, is that what it says?  
 8 **A. That's correct.**  
 9 Q. So in other words, whether it's books in the  
 10 library or it's memory on a computer, those  
 11 aren't things that just naturally exist on a  
 12 computer or in a library; is that right?  
 13 **A. Yeah, somebody has to put them there or create**  
 14 **it.**  
 15 Q. Okay. And same with item number 4 in entry 1,  
 16 it talks about storing surplus wheat. If you're  
 17 storing surplus wheat in an elevator, someone  
 18 has to put, there's a put where you have to put  
 19 that wheat in the elevator; is that right?  
 20 **A. That's correct, as a farm kid, I can tell you**  
 21 **I've done that.**  
 22 Q. And, in fact, last night when we were visiting,  
 23 you told me about growing up on a farm and how  
 24 you worked hard on a farm growing up and you had  
 25 a graduating class of ten --

Page 2841

1 **A. Yes.**  
 2 Q. -- growing up, and so I assume that you worked  
 3 hard on the farm growing up; is that right?  
 4 **A. That's a fair statement.**  
 5 Q. And I assume that you put grain in a grain bin  
 6 before; is that right?  
 7 **A. Many times.**  
 8 Q. And let me just ask, the grain you put in that  
 9 bin, did you just wake up one morning and it  
 10 just showed up in the bin, or did you have to  
 11 put it there?  
 12 **A. No, we put it there.**  
 13 Q. Okay. I assumed so. So let's move on to entry  
 14 2 of 3 in the definition of -- of store.  
 15 **A. Uh-huh.**  
 16 Q. Number 1 says, something that is stored for  
 17 future use; number 2 also talks about this  
 18 concept of accumulated, right?  
 19 **A. Yes.**  
 20 Q. You have to accumulate something to store it; is  
 21 that right?  
 22 **A. Yes.**  
 23 Q. And number C, I guess, verbatim again, something  
 24 that is accumulated, you have to put it there,  
 25 right, there's a put again; is that right?

Page 2842

1 **A. That's correct.**  
 2 Q. Now let's go to number D, it talks about a  
 3 reserve fund, is that what it talks about, at  
 4 the end of number D?  
 5 **A. Yes.**  
 6 Q. It's talking about in the context of a reserve  
 7 fund, so in other words we're talking a savings  
 8 account at a bank, is that what we're talking  
 9 about?  
 10 **A. I think that would be a good analogy.**  
 11 Q. Okay. If there's money in a bank that someone's  
 12 placed in their savings account, does that money  
 13 just magically get in the bank, or does the  
 14 human have to put it in the bank to save it?  
 15 **A. It's been my experience a human has to put it**  
 16 **in.**  
 17 Q. Okay. Let me ask you this, follow me with an  
 18 analogy for just a moment to help me understand  
 19 something. If I put money -- two banks, okay,  
 20 bank A, bank B, all right?  
 21 **A. Okay.**  
 22 Q. You follow me?  
 23 **A. Yes.**  
 24 Q. I put money in savings in bank A --  
 25 **A. Yes.**

1 Q. -- all right?  
2 **A. Yes.**  
3 Q. Okay. And I could withdraw that money; is that  
4 right?  
5 **A. Yes.**  
6 Q. Bank B also is a bank where I put no money,  
7 okay?  
8 **A. Put no money?**  
9 Q. I haven't put any money in bank B yet --  
10 **A. Okay.**  
11 Q. -- okay? If I choose not to withdraw my money  
12 from bank A, will bank B just give me some money  
13 just because?  
14 **A. I've never had that happen, I don't think so.**  
15 Q. Okay. So similar to if you don't put water in  
16 an aquifer, you're not just going to magically  
17 accrue a credit generally, is that the case too?  
18 **A. That would be the normal situation.**  
19 Q. Okay. So let's go on to the next one, entry  
20 number 2 there, it talks about placing eggs in a  
21 store. Once again, a human has to put those  
22 eggs in the store; is that right?  
23 **A. Yes.**  
24 Q. They didn't just magically show up in the store  
25 in their natural state; is that right?

1 Q. And so they're put in the store by an employee,  
2 and then they're available for a subsequent  
3 purchase; is that right?  
4 **A. Yes.**  
5 Q. Likewise, let's move on to number 2 of this  
6 definition that Mr. Oleen presented. In the  
7 final definition, it talks about purchased from  
8 a store as opposed to being natural, is that  
9 what it says there?  
10 **A. Let's see, now which line are you --**  
11 Q. I'm in line number 2, it says purchased from a  
12 store as opposed to being natural, is that what  
13 it says there?  
14 **A. Yes.**  
15 Q. So in other words, we're not talking about items  
16 that just naturally exist or naturally appear,  
17 is that what we're talking about here?  
18 **MR. OLEEN:** I object, I think you're  
19 definitely misconstruing that definition.  
20 But if you want to continue your line of  
21 questioning about the noun, go ahead. I  
22 withdraw it.  
23 **MR. STUCKY:** I don't think I'm  
24 misconstruing at all, I'm reading --  
25 **PRESIDING OFFICER:** He withdrew.

1 **A. That's correct.**  
2 Q. Speed this up a little bit, let's go on to entry  
3 3 of 3.  
4 **A. Okay.**  
5 Q. It talks about, in that final one, it says, or  
6 stores of -- of, relating to, kept in, or used  
7 for a store. You see where I'm at in that final  
8 entry?  
9 **A. Yes, I do.**  
10 Q. So in this sense, we're talking about Wal-Mart,  
11 or something, as an example of a store, is that  
12 what it's talking about in this context?  
13 **A. I presume so, yes.**  
14 Q. Okay. Let me ask you this: There's items you  
15 can buy in Wal-Mart, are there not?  
16 **A. Yes.**  
17 Q. How do those items that you can -- if I'm going  
18 to Wal-Mart and I'm shopping with my cart, how  
19 do those items arrive in Wal-Mart in the first  
20 place?  
21 **A. Well, I presume that employees or staff restock  
22 the shelves.**  
23 Q. So someone had to put those items in Wal-Mart in  
24 the first place; is that right?  
25 **A. That's right.**

1 **MR. STUCKY:** Okay. Exactly what it  
2 says.  
3 **BY MR. STUCKY:**  
4 Q. We're distinguishing between -- what we're  
5 talking about is items that are purchased from a  
6 store that didn't just naturally exist there, is  
7 that what we're talking about?  
8 **A. It says, purchased from a store as opposed to  
9 being natural.**  
10 Q. So would you agree that my characterization  
11 might be a fair characterization?  
12 **A. Seems so to me.**  
13 Q. So now let's sum this up as -- all these  
14 definitions presented -- this definition  
15 presented by Mr. Oleen, let's sum it up in the  
16 context of the City's proposal. We talked a lot  
17 about how this definition throughout relates to  
18 a put, you're putting something in a store or  
19 you're putting something in an elevator or  
20 you're putting something in the library, that's  
21 what these definitions are talking about, we  
22 walked through that in great detail; is that  
23 right?  
24 **A. Yes.**  
25 Q. And in all of the contexts we've talked about,

Page 2847

1 we talked about a human putting those items  
 2 there; is that right?  
 3 **A. That's correct.**  
 4 Q. Mr. Pope, we also -- when we visited last night,  
 5 you told me a little bit about your storied  
 6 career, did you not?  
 7 **A. I guess I must have talked some, yes.**  
 8 Q. And, in fact, I could ask you a question to  
 9 outline all the many accomplishments you made in  
 10 your career, and I believe I could actually  
 11 effectively take a nap at that point; is that  
 12 right?  
 13 **A. Probably so.**  
 14 Q. It's an -- it's an impressive list that goes on  
 15 and on and on, and through that impressive list,  
 16 I think you would understand just in a basic  
 17 sense how water would first arrive at an  
 18 aquifer. Would you not understand -- you would  
 19 understand how water first gets in an aquifer  
 20 before humans -- before humans, you would  
 21 understand that, right?  
 22 **A. Yeah, I think so.**  
 23 Q. So in other words, let's talk about the Equus  
 24 Beds Aquifer and we're talking about a time  
 25 period before humans may have even been in this

Page 2848

1 area, would there have been water in the Equus  
 2 Beds Aquifer?  
 3 **A. As the geological history evolved and materials**  
 4 **were deposited and then filled with water over**  
 5 **time from natural processes, why, yes.**  
 6 Q. So in other words, as the water first existed in  
 7 the Equus Beds Aquifer, humans didn't put it  
 8 there, did they?  
 9 **A. No, under that -- under that situation, we're**  
 10 **talking about the natural occurrence of the**  
 11 **creation of those formations and then the**  
 12 **filling of the aquifer by -- by recharge,**  
 13 **natural recharge.**  
 14 Q. Yes. So humans did not put water in the Equus  
 15 Beds Aquifer, it naturally existed, is that what  
 16 you just told me?  
 17 **A. Yes.**  
 18 Q. Now, let's talk about the City's proposal. If  
 19 there's ASR II physical recharge, a human is  
 20 putting water in the aquifer; is that right?  
 21 **A. Yes. Source water and physically recharging**  
 22 **into the aquifer.**  
 23 Q. And because of that, under these definitions,  
 24 that's storage; is that right?  
 25 **A. Yes.**

Page 2849

1 Q. Now, with respect to the AMC proposal --  
 2 **A. Uh-huh.**  
 3 Q. -- have humans put any water in the aquifer?  
 4 **A. Not from artificial recharge, no.**  
 5 Q. So in other words, no storage has occurred based  
 6 on all these definitions we just talked about;  
 7 is that correct?  
 8 **A. I think that's correct.**  
 9 Q. One final thing, Mr. Pope, could you take the  
 10 microphone and slam it down and say, the Pope  
 11 has spoken, for me?  
 12 **A. That's a little overdramatic for me. But thank**  
 13 **you.**  
 14 **PRESIDING OFFICER:** You're excused  
 15 from having to do that.  
 16 **A. Okay. Thanks.**  
 17 **PRESIDING OFFICER:** So I assume you  
 18 are finished at this point?  
 19 **MR. STUCKY:** I'm done.  
 20 **PRESIDING OFFICER:** Okay. At  
 21 this -- any further questions? I'm  
 22 inclined to -- I see a hand, Mr. Oleen?  
 23 Okay.  
 24 **MR. OLEEN:** I promise no more  
 25 English lessons.

Page 2850

1 **RE CROSS EXAMINATION**  
 2 **BY MR. OLEEN:**  
 3 Q. Mr. Pope --  
 4 **A. Yes.**  
 5 Q. -- we had talked about back when the concept of  
 6 passive recharge credits, I don't know if it was  
 7 called that initially, but back when Phase I was  
 8 being discussed, you said that this concept  
 9 originated or came to the forefront at some  
 10 point, and at that time Wichita had their wells  
 11 in the well field, water rights there --  
 12 **A. Yes.**  
 13 Q. -- and they had Cheney Reservoir, right?  
 14 **A. Before any of the artificial recharge project**  
 15 **was developed, yes.**  
 16 Q. Right, right. And so in these nascent, or  
 17 nascent, I don't know how it's pronounced,  
 18 stages when the City was asking, can we get a  
 19 credit for not pumping something --  
 20 **A. Yes.**  
 21 Q. -- you mentioned that that alternate source that  
 22 they were contemplating was Cheney, right? If  
 23 they could get a credit -- or, I'm sorry, if  
 24 they could get a -- for not pumping their wells  
 25 in the well field, if they could get a credit

1 for instead using water from Cheney, right?  
2 **A. I'm -- I don't think that's -- referring to my**  
3 **testimony yesterday?**  
4 Q. Your testimony today --  
5 **A. Oh.**  
6 Q. -- because we talked about their only available  
7 sources at the time was the well field and  
8 Cheney, and I thought you said that --  
9 **A. I don't think I ever said they would get a**  
10 **credit for using Cheney water. I think what I**  
11 **said, they had, in the traditional physical**  
12 **recharge, a credit for recharging water from the**  
13 **Little Arkansas River system, physically**  
14 **recharging that. And then the other discussion,**  
15 **I believe, related to simply the question of the**  
16 **request for a credit or an AMC for not pumping**  
17 **their Equus Beds wells.**  
18 Q. Right. And instead using an alternate source of  
19 water such as Cheney Reservoir?  
20 **A. Well, the presumption is if they're not pumping**  
21 **their wells, there's another source of water**  
22 **being used; in this case as Phase I and then**  
23 **Phase II, actually, Cheney was not really a part**  
24 **of the discussion. It's lurking in the**  
25 **background, of course, as water they can use,**

1 saying that the proposal was not to get  
2 recharge credits for using Cheney instead  
3 of groundwater, but regardless of where it  
4 came from that the triggering of the credit  
5 request came with the not pumping  
6 groundwater?  
7 **A. I think that's correct. Yeah, that's -- that's**  
8 **what I was trying to say.**  
9 **PRESIDING OFFICER:** So does that --  
10 **MR. OLEEN:** Well, I was confused by  
11 his prior testimony, but I'll move on from  
12 this point.  
13 **BY MR. OLEEN:**  
14 Q. At the time that Phase I was being discussed and  
15 contemplated, Cheney Reservoir was not  
16 authorized for aquifer recharge, correct?  
17 **A. I'm not aware that it's ever been authorized for**  
18 **recharge.**  
19 Q. Right, it's not a trick question, I just wanted  
20 to confirm that its beneficial use was not  
21 aquifer recharge?  
22 **A. No, no, I think it's -- it's authorized for**  
23 **municipal use for the City of Wichita but not**  
24 **for artificial recharge, to my knowledge.**  
25 Q. But the water right, and I don't, I guess,

1 **but it's the -- the actual proposal was divert**  
2 **water from the Little Arkansas system within the**  
3 **restrictions of diverting high flows, et cetera,**  
4 **et cetera, transporting the water, and treating**  
5 **it and then directly delivering that water to**  
6 **the City instead of pumping wells. So the**  
7 **concept is can we get artificial recharge credit**  
8 **for not pumping our wells, that was the context.**  
9 Q. I'm not asking you about the current proposal  
10 today.  
11 **A. Okay.**  
12 Q. Let me ask -- I mean, I'm not --  
13 **PRESIDING OFFICER:** If I could step  
14 in, I think you're talking past each other  
15 a little bit.  
16 **MR. OLEEN:** Okay, I'll start over.  
17 **PRESIDING OFFICER:** Well, I -- what  
18 I'm -- what I think I'm hearing you say,  
19 Mr. Pope, is that the passive recharge  
20 credit that you rejected under the Phase I  
21 project, you saw that as a request for  
22 getting credits for not pumping  
23 groundwater, but it seems like you're not  
24 linking that to the alternative use of  
25 something else? In other words, are you

1 expect you to remember the particular number,  
2 and I said water right, I should say water  
3 permit, but --  
4 **A. Okay.**  
5 Q. -- if I told you that permit 46,627 -- well,  
6 actually, it doesn't matter what the number is.  
7 There is a permit to appropriate that is  
8 essentially the genesis of the ASR recharge  
9 project which allows water to be diverted from  
10 excess flows in the Little Ark?  
11 **A. That's correct, yeah.**  
12 Q. Looks like my battery's gone dead so I'll have  
13 to speak up louder. So that water permit, that  
14 is authorized for aquifer recharge, correct?  
15 **A. Yes. The -- the permits for Phase I, I think**  
16 **the beneficial use was, as per the definitions**  
17 **of Water Appropriation Act, was artificial**  
18 **recharge. Now, I have to think about the**  
19 **sequence of things here, but the -- when the**  
20 **surface diversion was added in, there was --**  
21 **there was an amendment, I think, that added in a**  
22 **surface diversion before Phase I was approved,**  
23 **and that was a -- I believe that was approved**  
24 **for artificial recharge and municipal use in the**  
25 **City of Wichita, which is why the -- and I think**

Page 2855

1 this was a larger application and permit for  
 2 Phase II, you know, the 45,000 acre-foot range,  
 3 something like that, and that could either be  
 4 used for direct use in the City of Wichita or  
 5 for artificial recharge.  
 6 MR. OLEEN: Okay. Thank you, I  
 7 don't have any further questions.  
 8 PRESIDING OFFICER: Any other  
 9 questions for Mr. Pope?  
 10 MR. ROLFS: No, no questions, Your  
 11 Honor.  
 12 PRESIDING OFFICER: Okay. Hearing  
 13 none, Mr. Pope, you are excused.  
 14 A. Thank you very much. That's what I was waiting  
 15 for.  
 16 MR. STUCKY: Your Honor, may we have  
 17 a five-minute break for me to thank my  
 18 witness and also to take some Tylenol?  
 19 PRESIDING OFFICER: Yeah, let's take  
 20 about a ten-minute break.  
 21 (Thereupon, a recess was taken,  
 22 after which Mr. Rolfs was no  
 23 longer present in the hearing  
 24 room.)  
 25 PRESIDING OFFICER: Okay. We're

Page 2856

1 back on the record now. It is 10:30 and I  
 2 believe we're going to jump back in time  
 3 and continue with Tim Boese's testimony.  
 4 And, Mr. Stucky, you were questioning him  
 5 at that time?  
 6 MR. STUCKY: No, it was Mr. McLeod.  
 7 PRESIDING OFFICER: McLeod, I'm  
 8 sorry, Mr. McLeod.  
 9 MR. STUCKY: And I would offer to  
 10 bring the mic to him but I'm going to have  
 11 Mr. Boese do so.  
 12 PRESIDING OFFICER: Okay.  
 13  
 14 TIM BOESE,  
 15 having been previously sworn, was  
 16 examined and testified as follows:  
 17  
 18 A. Before we start, Ms. Owen, you had asked me to  
 19 do some research relating to an ASR order.  
 20 Would you like for me to discuss that while we  
 21 have the opportunity?  
 22 PRESIDING OFFICER: Yeah, let's just  
 23 review that, please.  
 24 A. You had asked about an August 1st, 2006 order  
 25 that modified the conditions of the ASR Phase I

Page 2857

1 original order dated August 5th, 2005. In  
 2 particular, you'd asked about some references to  
 3 some change applications, I believe, and you can  
 4 correct me if I'm mischaracterizing.  
 5 PRESIDING OFFICER: Uh-huh.  
 6 A. So I did do some research a couple nights ago  
 7 because I couldn't quite remember what happened  
 8 to those change applications that were noted in  
 9 that August 6, 2006 order that modified the  
 10 original 2005 order.  
 11 Just for some reference, that August 6th,  
 12 2006 order referenced a series of ASR-related  
 13 water permit applications. And, in fact, there  
 14 was four recharge and recovery well permits,  
 15 which are 45,567 and 45,568 and 45,576 and  
 16 46,081, and it also referenced seven bank  
 17 storage diversion well permits; those were for  
 18 the diversion at the Little Arkansas River bank  
 19 during high flows. And those were 45,569  
 20 through 45,575. So there was seven of those.  
 21 That August 1st, 2006 order that we're --  
 22 that we're discussing, that was to modify the  
 23 original 2005 ASR order to include surface water  
 24 pump sites in certain conditions in that  
 25 original order, which were conditions number 9,

Page 2858

1 12, 14, 17, 20, and 23, because there were  
 2 pending change applications filed, excuse me,  
 3 filed on four of the bank storage diversion well  
 4 applications, which were 45,572, 45,573, 45,574,  
 5 and 45,575. Those pending change applications  
 6 were point of diversion applications to change  
 7 the four bank storage wells to a surface water  
 8 pump site on the Little Arkansas River.  
 9 And maybe a little bit of background, I'll  
 10 go off the -- off on a tangent slightly, there  
 11 was originally planned to have seven bank  
 12 storage wells, the permits were approved;  
 13 however, I think upon some further research by  
 14 the City and their consultant, they came to the  
 15 conclusion that the area that they were looking  
 16 at would really just support three bank storage  
 17 wells. So at that time, they decided to change  
 18 from seven bank storage wells to three bank  
 19 storage wells and a surface water intake. So  
 20 those changes were pending when that order was  
 21 issued.  
 22 At the same time that order was issued, the  
 23 Division of Water Resources approved the change  
 24 in point of diversion applications to convert  
 25 those four files into a surface water pump site,

1 so they were done at the same day. And I think  
2 there was a specific reason for that, and we can  
3 go into details, but obviously it would be  
4 fairly hard to approve the change application  
5 first because the order didn't reference -- the  
6 original order didn't reference a surface water  
7 intake, so it really had to be done at the same  
8 time. Is that clear --

9 **PRESIDING OFFICER:** Okay.

10 A. -- Ms. Owen, why that would have been done that  
11 way? So those change applications were approved  
12 converting four of those bank storage permits  
13 for wells to one single surface water intake for  
14 Phase I. On that same date in August 1st, 2006.

15 After that, on February 19th, 2007, those  
16 four formerly bank storage permits that were  
17 changed to a surface water intake, and, again,  
18 that's 45,572 through 45,575, were all four  
19 dismissed by the Division of Water Resources  
20 essentially at the request of the City because  
21 the City had filed a new surface water  
22 application, which was 46,578, to replace those  
23 four bank storage wells, original applications.

24 And the reason that the City did that is  
25 because of the rate limitation that was involved

1 that research, I couldn't follow  
2 everything, but if we need to get you more  
3 copies of operable orders, we'll get them  
4 to you.

5 **PRESIDING OFFICER:** Okay. Thank  
6 you. I will request them if I need them.  
7 I don't see a need to request that right  
8 now. Thank you. Thank you, Mr. Boese.  
9 And, Mr. McLeod.

10 A. I may tell Mr. McLeod, he asked me to do some  
11 homework in relationship to if there was  
12 anything in the Water Appropriation Act or the  
13 rules and regulations associated therewith that  
14 talks about changes that can be made to permits  
15 or orders of the chief engineer outside of  
16 K.S.A. 82-708(b) about change applications, and  
17 I did that research and I am prepared to present  
18 my findings to you, Mr. McLeod.

19  
20 **CROSS-EXAMINATION (Cont.)**  
21 **BY MR. MCLEOD:**

22 Q. Yes, please, that was going to be my first  
23 question.

24 A. We're -- we're on the same wave, thank you. I'd  
25 like to clear that up because I've got kind of a

1 with those four bank storage previous permits.  
2 They were 1,000 gallons per minute each, and  
3 then when they were changed to a single surface  
4 water intake site, that would only allow for the  
5 City to divert at 4,000 gallons per minute.  
6 Each one was 1,000, 1,000 times 4 would allow  
7 4,000 gallons per minute. The surface water  
8 intake was designed for 6,000 gallons per  
9 minute, from my understanding. So that's why  
10 that new surface water intake or pump site was  
11 filed by the City to replace those four  
12 individual permits. And that was subsequently  
13 approved, and that's the current Phase I surface  
14 water pump site.

15 That was a lot and I hope that was clear,  
16 but I can certainly try to answer any questions.

17 **PRESIDING OFFICER:** No, I -- I

18 appreciate that. As long as we're on that,  
19 does anyone have any questions about what  
20 Mr. Boese just explained? Mr. Oleen?

21 **MR. OLEEN:** I don't have any  
22 questions other than to say, you know, we  
23 obviously want you to have access to all  
24 the universe of operable Phase I and Phase  
25 II orders. I appreciate Mr. Boese doing

1 mess scribbled here on my notebook, which I  
2 intended to put into a better form. But I  
3 believe -- I'll try to be somewhat concise and  
4 quick, although it may take a little longer than  
5 we had hoped.

6 But we did already talk about K.A.R.  
7 5-5-6(b), and we may have already talked about  
8 5-5-6(c), I can't remember which one we talked  
9 about, but let's go ahead and turn to those.  
10 Those are in the exhibit notebook under the DWR  
11 rules and regulations, 22, Exhibit 22. And I  
12 believe we're talking about page 78.

13 So under -- on page 78, under K.A.R.  
14 5-5-6(b), it talks about if the diversion works  
15 were not constructed at the location originally  
16 authorized -- or authorized for the point of  
17 diversion and the chief engineer (sic) can  
18 demonstrate to the chief engineer that there's  
19 some criteria met, the authorized location shall  
20 be corrected to the actual location by  
21 correctional order by the chief engineer. So  
22 there's the first case where a correction or a  
23 correctional order, a findings and order,  
24 whatever we want to call it, can be issued by  
25 DWR to correct a location.

Page 2863

1 And now let's go ahead and go to K.A.R.  
 2 5-5-6(c), which starts on page 79 but then  
 3 actually turns into page -- most of it's on  
 4 page 80. This one talks about authorized point  
 5 of diversion and place of use, and without going  
 6 into an excessive amount of detail, let's see if  
 7 I can find it here real quick, it talks about  
 8 the chief engineer being able to correct those  
 9 locations. Oh, there it is, it goes from one  
 10 page to the next, I'm sorry. Says, if a point  
 11 of diversion or place of use meets the following  
 12 conditions, the authorized location shall be  
 13 administratively corrected by the chief  
 14 engineer. I don't think we need to go into  
 15 details under what circumstances those can be  
 16 done unless we want to, but, again, there's a  
 17 correction that can be made to a water right by  
 18 the chief engineer. And I'm looking at my notes  
 19 on that particular regulation, and I think we  
 20 can move on.  
 21 We then talked about, last time about  
 22 82a-710, which would be in Exhibit 21, and that  
 23 is on page 11. This doesn't speak directly to  
 24 the chief engineer issuing an order; this is for  
 25 the return or correction of an application while

Page 2864

1 it's pending to the applicant to provide that  
 2 additional information or correction.  
 3 And I can probably summarize it easier than  
 4 trying to read it. Essentially, if the  
 5 application is found not to be complete or  
 6 there's information missing or needs a  
 7 correction, the applicant has the opportunity to  
 8 correct that application or provide that  
 9 additional information. So the chief engineer  
 10 necessarily would not issue an order because  
 11 it's still a pending application, but they -- at  
 12 the request of the applicant, those corrections  
 13 or additions can be made. So I think we'll move  
 14 on from that one.  
 15 Let's go ahead and move to K.S.A.  
 16 82a-733(d), I believe, which is, again, in 21  
 17 and found on page 21, I believe. Unfortunately,  
 18 my notes are not as clear as I had hoped; I  
 19 intended on doing that last night, but as you  
 20 know, I was assisting Mr. Stucky at his house  
 21 last night for a little while.  
 22 MR. ADRIAN: What was the statute  
 23 cite, Tim?  
 24 A. Let me turn to it real quick, that's K.S.A.  
 25 82a-733. And if we go to section (d) on

Page 2865

1 page 22, it talks about before any state agency  
 2 makes any loan or grant, or provides any  
 3 cost-share funds, I'm going to kind of skip over  
 4 that, it says, a state agency may require the  
 5 person or entity to submit to, and have approved  
 6 by, the chief engineer a water conservation plan  
 7 consistent with, and then I'll probably end  
 8 there. But, again, that is an implication that  
 9 the chief engineer can approve a water  
 10 conservation plan for a particular water right.  
 11 And let's go to (f) in that same -- same  
 12 statute, it says, the chief engineer may approve  
 13 the conservation plans and practices as required  
 14 pursuant to the provisions of this section on  
 15 such terms, conditions, and limitations as  
 16 deemed necessary to carry out the provision of  
 17 this section. So, again, the chief engineer can  
 18 approve a conservation plan under -- under that  
 19 scenario. And I think that covered that. Let  
 20 me look here real quick. Yes, I think I covered  
 21 everything on that.  
 22 Related to the conservation plan, let's go  
 23 ahead and skip forward back to Exhibit 22, under  
 24 5-3-5(l), which is on page 33. And about middle  
 25 of the page or bottom of the -- about a third of

Page 2866

1 the page, changes in a water conservation plan.  
 2 This is, if a person required to implement a  
 3 water conservation plan desires to make a  
 4 material change in the plan, that person shall  
 5 submit a request to make the change to the chief  
 6 engineer on a form prescribed by the chief  
 7 engineer.  
 8 So, again, there's a way to make a change  
 9 to a conservation plan by submitting a -- a  
 10 request to the chief engineer. I don't think it  
 11 necessarily says that the chief engineer would  
 12 then -- how he would approve that, but I think  
 13 there's an implication that he could then  
 14 approve that change in the water conservation  
 15 plan based on that submittal as discussed in  
 16 this regulation.  
 17 PRESIDING OFFICER: It refers to the  
 18 written approval.  
 19 A. I'm sorry, you're absolutely right. Again, I  
 20 missed that in my notes so thank you. So I  
 21 think that's fairly clear that a change in a  
 22 water conservation plan can -- can occur.  
 23 I think one of the ones that I discussed  
 24 was reduction of a water right, which can be  
 25 found in K.A.R. 5-7-5, and my notes say

1 specifically subsection (f), and that's on  
2 page 119 of this same exhibit, which is 22. And  
3 I was off a page, it looks like, should be,  
4 yeah, page 118 is where it starts.

5 Again, this is -- talks about what can be  
6 reduced by -- by an applicant requesting to the  
7 chief engineer different items that can be  
8 reduced on a water right, authorized maximum  
9 annual quantity of water, authorized maximum  
10 rate of diversion, place of use, point of  
11 diversion, and so forth. I think maybe I'll  
12 just leave it at that in discussion of time.

13 Again, that's -- these are reductions;  
14 these are not necessarily -- well, they are  
15 changes, but they're not asking for something  
16 new. So we're talking about reducing the place  
17 of use; that isn't someone that can say, well, I  
18 have 100 acres over here in this quarter and I  
19 want to reduce it to 80 acres over here in this  
20 other quarter section. That's a change  
21 application under K.S.A. 82-708(b). This is  
22 talking about someone that says, I have 100  
23 acres, I'm going to use this as an example, and  
24 on that authorized place of use 100 acres, I  
25 want to shrink it down to 80 without any new --

1 new acres being irrigated, that would be a type  
2 of reduction. So that's a distinction between a  
3 reduction and a change.

4 And if we go over to subsection (f), again,  
5 this is the reduction that could occur at the  
6 request of the applicant, chief engineer can --  
7 can approve that request. And I think of  
8 particular note, it says, under (f), a request  
9 to reduce an existing water right shall not be  
10 considered to be an application for a change  
11 pursuant to K.S.A. 82a-708(b) and amendments  
12 thereto, so no application fee shall be  
13 required. I think it's purposely making the  
14 distinction that you don't have to file a change  
15 under 82a-708(b) to have that reduction. Any  
16 particular questions about that, Ms. Owen? Or  
17 Mr. McLeod?

18 BY MR. MCLEOD:

19 Q. No.

20 A. Hearing none, I'm going to move on. I believe I  
21 may have mentioned flowmeter requirements or  
22 flow -- order to require a flowmeter or  
23 requirement of the chief engineer to require a  
24 flowmeter, which can be found in K.A.R. 5-1-7.  
25 Again, we're still in Exhibit 22, and my notes

1 say we're on page 14. Let's go ahead and flip  
2 to page 14. And, I'm sorry, I'm beginning to  
3 lose my voice too, apparently it's contagious,  
4 although I did not have surgery as Mr. Stucky  
5 did.

6 MR. STUCKY: No excuse.

7 MR. ADRIAN: What page was that?

8 A. That's on page 14. And I'm going to look here  
9 and see if I can find it just real quick.

10 Again, this talks about the requirement to  
11 install a flowmeter. Oh, I found it, I'm sorry,  
12 I was looking at -- my notes had a big (F)  
13 instead of a small (f) is why I couldn't find  
14 it.

15 It says, the owner of a water right,  
16 including a domestic water right, or an approval  
17 of an application, shall also be required by the  
18 chief engineer to install a flowmeter or other  
19 suitable water measurement device that meets the  
20 requirements of these regulations on each  
21 authorized point of diversion if it is necessary  
22 for the chief engineer to effectively administer  
23 water rights to prevent impairment, to protect  
24 minimum desirable streamflow, to conserve water,  
25 or to otherwise carry out the duties of the

1 chief engineer set out -- set forth in the  
2 Kansas Water Appropriation Act.

3 And then the next -- well, I don't think I  
4 need to read the next one, but this obviously  
5 has the implication that the chief engineer can  
6 require a flowmeter to be installed. It doesn't  
7 particularly say, I don't know, in this order --  
8 in this regulation, it says he'll issue an  
9 order, but obviously it can require a flowmeter  
10 in that sense, and I think that was one of  
11 the -- one of the ones that I mentioned that can  
12 be done by the chief engineer.

13 Let's go back and, I'm sorry, I wish I  
14 would have had time to -- so we didn't have to  
15 flip back and forth, but so I don't lose my  
16 place let's go back to Exhibit 21, 82a-742(c).  
17 And I have in my note that's on page -- starts  
18 on page 28, but I think the section I want to  
19 look at is on page 29.

20 And I should have said 82a-742 and the  
21 subsection we can get to, but this is Division  
22 of Water Right, semicolon, Application,  
23 semicolon, Fee is the title of the -- of the  
24 statute. Again, this is specifying that an  
25 owner of a water right that has not been

Page 2871

1 abandoned may divide the water right into two or  
 2 more distinct water rights without losing  
 3 priority; and then it lists some steps that that  
 4 applicant has to do, notify the chief engineer  
 5 in writing, they have to designate some things  
 6 on the application and -- probably don't need to  
 7 go into great detail.

8 But if we go to -- let me make sure where  
 9 I'm at here. There it is, it's under (c), on  
 10 page 29, if the chief engineer finds the request  
 11 complies with subsections (a) and (b), the chief  
 12 engineer shall issue an order dividing the water  
 13 right and describing the terms and conditions of  
 14 each water right. Again, there's an order by  
 15 the chief engineer that did not file -- fall  
 16 under K.S.A. 82a-708(b).

17 And let's go ahead and go on to -- and I  
 18 know no one wants me to do this, I'm going to  
 19 flip back to 22 because that's the order I have  
 20 them written down. And we go to K.A.R.  
 21 5-4-1(e), and that is on page 71. And, again,  
 22 we should probably start actually on the  
 23 previous page -- pages. It's a fairly long  
 24 regulation, this is, I guess what we'll call the  
 25 impairment, one of the impairment regulations

Page 2872

1 before they were bifurcated into two separate  
 2 impairment regulations.

3 This actually starts on page 69, and I  
 4 think we could spend an hour or two talking  
 5 about impairment, and, I don't know, perhaps we  
 6 will later, but let's just go ahead and skip to  
 7 (e) where it says notice of order, which is on  
 8 page 71 near the top. Basically says, the chief  
 9 engineer shall given a written notice and  
 10 directive to those water right holders whose use  
 11 of water must be curtailed to secure water to  
 12 satisfy the complainant's prior right. So,  
 13 again, the chief engineer can issue an order  
 14 related to this regulation to, at least, in this  
 15 sense, modify the permit, whether that's  
 16 temporarily, or whatever, to satisfy another  
 17 user's rights.

18 Let move to K.A.R. 5-7-4(b), which is the  
 19 Water Rights Conservation Program, we call that  
 20 the WRCP, which is on page 117. And, again, I  
 21 don't know if I misspoke, but it was K.A.R.  
 22 5-7-4(b), and which is Water Rights Conservation  
 23 Program, semicolon, Tier 2. We probably could  
 24 spend some detail talking about why you have  
 25 tier 1 and tier 2, but let's just talk about

Page 2873

1 this particular one. If we skip down partway,  
 2 it says, the owner or owners of a water right  
 3 shall submit an application to the chief  
 4 engineer, or the chief engineer's authorized  
 5 representative, requesting that the water right  
 6 be enrolled into that water rights conservation  
 7 program.

8 My notes are not entirely clear, but I  
 9 think there's an implication that then the chief  
 10 engineer could approve that application. Yes, I  
 11 found it, I'm sorry, under (d), close to the  
 12 bottom of page 117, requirements of any order  
 13 enrolling a water right into the WRCP shall  
 14 include, and then it lists some -- some items.  
 15 So, again, there's another sort of modification  
 16 or an order that can be issued by the chief  
 17 engineer related to a water right outside of  
 18 82a-708(b).

19 And if we flip back then to 21, Exhibit 21,  
 20 particularly K.S.A. 82a-717(a), which is on  
 21 page 15, this is talking about diversions by  
 22 common-law claimants and others and injunctions.  
 23 And if we go to little (b) to big (B) about  
 24 close to the bottom of page 15, it says,  
 25 following the investigation, the chief engineer

Page 2874

1 may issue an order, consistent with K.S.A.  
 2 82a-706(b), and amendments thereto, and rules  
 3 and regulations of the chief engineer, that  
 4 limits, curtails, or prevents a diversion and  
 5 use of water by any person without a prior right  
 6 to the same water or that otherwise disposes of  
 7 the complaint. Again, another order that can be  
 8 issued by the chief engineer related to water  
 9 rights.

10 And let's go ahead and move to K.S.A.  
 11 82a-745, which is on page 30 of that same  
 12 exhibit, which is 21. And I'll let everybody  
 13 catch up for a minute. And we're looking at,  
 14 again, 82a-745, this deals with Water  
 15 Conservation Areas, Establishment Procedures,  
 16 Duties of a Chief Engineer, Notice, Orders,  
 17 Consent Agreement, Review is the title. And if  
 18 we go to --

19 **BY MR. MCLEOD:**  
 20 Q. Sorry, Mr. Boese, can you pause for a moment?  
 21 In our copy of the exhibit book, we lapse out of  
 22 the KWAA into a series of statutes in K.S.A. 42.  
 23 **MR. MCLEOD:** May I approach the  
 24 witness to see what he is looking at?  
 25 **A.** I'm sorry.

1 **PRESIDING OFFICER:** Yes.  
2 **A.** I'm in 82a-745, and the next page should be  
3 page 31, is that not how it is in your notebook?  
4 **BY MR. MCLEOD:**  
5 Q. Somehow the notebooks are a little different.  
6 Go ahead, Mr. Boese.  
7 **A.** Okay. Well, let me -- while you're doing that,  
8 I temporarily lost my spot so if you would give  
9 me one minute to reorganize myself where I was  
10 at. I'll wait on you, Mr. McLeod. I think we  
11 may have possibly another exhibit notebook if  
12 you'd like to look at --  
13 Q. No, we're fine, I found a page in this book that  
14 has that statute.  
15 **A.** Okay, I apologize for that. So, again, we're  
16 talking about water conservation areas, excuse  
17 me, and on page 30, about two-thirds of the way  
18 down, under subsection little (b), it says, a  
19 consent agreement and order of designation of a  
20 water conservation area pursuant to this section  
21 shall -- shall define the boundaries of a water  
22 conservation area and may include any of the  
23 following corrective control provisions. And  
24 I'm not going to waste our time, I think,  
25 reading that in, but there again is a consent

1 agreement and order that can be issued by the  
2 chief engineer related to water conservation  
3 areas, which obviously would have water rights  
4 involved.  
5 And I believe I may have only one more  
6 specific one to reference. We're still in  
7 Exhibit 21, 82a-718, which is abandonment, which  
8 is located on page 16. It's titled Abandonment  
9 of Water Rights, Notices, Hearing, Review of  
10 Action Exceptions. And then page 16, this  
11 describes the steps that the chief engineer  
12 would make in determining if a water right is  
13 abandoned.  
14 I don't think it uses the word order, but  
15 it talks about the chief engineer terminating a  
16 water right, which I've seen dismissals by the  
17 chief engineer, I believe they're generally done  
18 by an order so I -- maybe the word order is in  
19 here, but I -- I didn't find it but I think  
20 there is an implication there if the chief  
21 engineer would -- would terminate or dismiss a  
22 water right, it would obviously take a -- an  
23 order.  
24 There's some other orders that a chief  
25 engineer can issue, and I think we could -- we

1 could spend most of the day talking about all  
2 these, there's penalty orders, civil penalties  
3 for violations, overpumping, those kind of  
4 things.  
5 I do want to talk a little bit about, I  
6 think I mentioned orders that we generally would  
7 call -- the Division of Water Resources would  
8 call correctional orders. And those are for  
9 things like typos and omissions. I do not  
10 believe there's a specific regulation or statute  
11 related to an agency issuing an order to correct  
12 a typo or a -- or an omission in an approval of  
13 an application or something like that.  
14 I want to talk just a little bit about what  
15 occurred in 1999. And there was a -- some  
16 legislation, ended up being called the House  
17 Substitute for Senate Bill 287, which was passed  
18 by the Kansas legislation in 1999. Essentially  
19 became K.S.A. 82a-1903, I believe, I may  
20 actually have that. I do.  
21 K.S.A. 82a-1903, and this has a long --  
22 somewhat of a long and storied history, but that  
23 essentially required the Division of Water  
24 Resources and the groundwater management  
25 districts to convert any standards and policies

1 that they had that had general application and  
2 effective law into rules and regulations.  
3 You had to request those to be done by a  
4 certain time, and we don't need to go into the  
5 detail, but -- and the reason I remember this is  
6 because it was sort of a frantic time, I think,  
7 at the GMD2 office 'cause we were required to  
8 submit any standards and policies that we had  
9 into rules and regulations. And it ended up  
10 being also with other agencies 'cause we also  
11 have some standard -- had some standards and  
12 policies with the Kansas Corporation Commission  
13 and the Kansas Department of Health and  
14 Environment, they've all had to be converted to  
15 rules and regulations.  
16 And I don't know, I think if Mr. Rolfs was  
17 probably here, I think he could say DWR was  
18 probably in a frantic state too, and that's  
19 probably why we have this gigantic document of  
20 rules and regulations related to DWR because I  
21 would imagine some of these were in standards  
22 and policies and had to be converted to rules  
23 and regulations.  
24 So suffice it to say -- and there's  
25 actually an attorney general's opinion related

Page 2879

1 to groundwater management districts, and that  
 2 is -- I don't know if I have the -- I don't know  
 3 if I have the attorney general's opinion with  
 4 me, and I could -- I'd be glad to provide that  
 5 because there was some -- there was some  
 6 question on how that limited the power of a GMD,  
 7 if we had standards and policies and they had to  
 8 be converted. But the crux of it, I think,  
 9 ended up being that the groundwater management  
 10 districts and, I think by -- by probably  
 11 extension, the Division of Water Resources could  
 12 have administrative policies as long as they  
 13 didn't have general application and force and  
 14 effect of law.  
 15 So obviously things like how you run your  
 16 office, I don't know, personnel things, those  
 17 didn't have to be in rules and regs. And I  
 18 think that -- sort of that how do you correct  
 19 typos, omissions would probably fall under that.  
 20 I'm not an attorney so -- but I think that would  
 21 have been our take. Obviously if I send out  
 22 something to an individual and it has a typo on  
 23 it, I can resend it. I don't think I have to  
 24 have a regulation.  
 25 And I believe probably Division of Water

Page 2880

1 Resources, I would anticipate, operates under  
 2 that sort of principle that if there's a typo or  
 3 an omission in an approval or an order by the  
 4 chief engineer it can just be administratively  
 5 corrected. I think that probably falls out  
 6 of -- out of that scope of that 82a-1903, that  
 7 would be my interpretation. But the lawyers in  
 8 the -- in the room might be able to tell me  
 9 different.  
 10 But as far as correcting a simple typo or  
 11 omission, again, maybe DWR has an internal  
 12 policy on how to do that, maybe they have a  
 13 standard on how to do that, maybe it's buried  
 14 somewhere in these -- in these statutes and  
 15 regulations, I -- I did not find it. I did a  
 16 fairly extensive research.  
 17 So, again, Mr. McLeod, you had asked me to  
 18 do that research, it took a little bit of time,  
 19 I'm not complaining at all, but there are a  
 20 number of items that I think I've identified  
 21 that can be changed or modified under a water  
 22 right without filing a change application that  
 23 is required in 82a-708(b). The thing I did not  
 24 find is -- is that the chief engineer can modify  
 25 permits in the respect that the City's proposal

Page 2881

1 is asking for.  
 2 **MR. STUCKY:** Madam Hearing Officer,  
 3 I wasn't actually listening that carefully,  
 4 did the witness ask for us to brief whether  
 5 or not an agency can, in fact, correct a  
 6 typo, because I think there is case law on  
 7 that, is that what was being suggested?  
 8 **PRESIDING OFFICER:** Well, my  
 9 understanding was that Mr. McLeod had asked  
 10 Mr. Boese for an exhaust -- for are there  
 11 any regs that allow for modifications that  
 12 do not involve change applications, and  
 13 Mr. Boese was responding to that request  
 14 for information.  
 15 **MR. STUCKY:** Yeah.  
 16 **PRESIDING OFFICER:** Is that a fair  
 17 assumption, is that a fair description?  
 18 **MR. MCLEOD:** That's how I understand  
 19 it.  
 20 **MR. STUCKY:** Yeah.  
 21 **A.** And I guess I would note, the only reason I went  
 22 to the typos and omissions is because I believe  
 23 I -- I believe I mentioned that in my testimony  
 24 of things that could be corrected, so I thought  
 25 that was a point worth making, although I -- my

Page 2882

1 take would be a typo or an omission doesn't need  
 2 a regulation to have to be corrected. That  
 3 was -- that was my -- that was my discovery.  
 4 And I'd be glad to -- I went over those  
 5 very fast. If we want to delve into any of  
 6 those, we can certainly discuss them. Like I  
 7 say, there's other penalties, violation orders,  
 8 I mean, I don't know, we could probably -- we  
 9 could probably -- you know, I don't know that we  
 10 want to go through the, I don't know, I think  
 11 we're close to 200 pages of rules and  
 12 regulations, statutes, I don't think -- I don't  
 13 think anybody wants to do that, including  
 14 myself, but we can if we would like to.  
 15 **PRESIDING OFFICER:** Mr. McLeod.  
 16 **BY MR. MCLEOD:**  
 17 **Q.** Let's go instead, Mr. Boese, to Exhibit 25.  
 18 **A.** Okay. Can I clarify one -- one thing that was  
 19 in my testimony earlier as far as my salary that  
 20 Mr. McLeod had asked me?  
 21 **PRESIDING OFFICER:** Oh.  
 22 **A.** Could I do that now at this time or later?  
 23 **PRESIDING OFFICER:** Well, go ahead.  
 24 **A.** Okay. You had asked me what my salary was, and  
 25 quite frankly, I didn't know the number when you

1 asked me, and I think I said it was a little  
2 more than 90,000, which would have been true  
3 prior to January 1st of this year. And my  
4 salary is, indeed, today 93,104 -- \$144.50 per  
5 year. I just recently signed a new contract, so  
6 I think I was still on my old number, which was  
7 just north of 90,000. So I wanted to go ahead  
8 and correct that for the record since you had  
9 asked me that and I may have not provided a  
10 detail in my answer that I intended.

11 **BY MR. MCLEOD:**

12 Q. Thank you, Mr. Boese. I don't know that we  
13 needed that degree of minutia because I think  
14 the over -- the overarching question is do you  
15 consider yourself to have independence from the  
16 District, are you an independent expert?

17 **A. What exhibit did you ask me to turn to?**

18 Q. Let's interject that last question --

19 **A. Oh.**

20 Q. -- that I asked before we turn to it. Do you  
21 consider yourself to be an independent expert?

22 **A. In relationship to?**

23 Q. The District?

24 **A. I was -- I'm not following your question, I  
25 don't think. Yes, I -- for this -- for this --**

1 **PRESIDING OFFICER:** Well, and the  
2 purpose of that question was, because I'm  
3 not real clear on that?

4 **MR. MCLEOD:** To get the witness's  
5 answer, which I think he provided.

6 **PRESIDING OFFICER:** Mr. Oleen.

7 **MR. OLEEN:** Well, I would weigh in,  
8 I do think there's a difference.

9 Mr. Stucky is trying to suggest that the  
10 situation between the two entities are the  
11 same, but Wichita's -- Wichita's agents,  
12 you know, they clearly have Wichita's  
13 interests solely -- Wichita's interests as  
14 their forefront, that's what they're trying  
15 to do is make beneficial changes for the  
16 City.

17 Mr. Boese has testified that he  
18 represents and is interested in groundwater  
19 for all water right owners, not just one or  
20 the other but all of them. I think as to  
21 his position, where he's supposed to have a  
22 broader scope of people in mind, I think,  
23 I'm not making insinuation myself but I  
24 think more of a question as to whether or  
25 not he's independent.

1 my testimony is related to my independent  
2 thoughts, not my board directing me to say  
3 something, is that where you were going with  
4 that?

5 Q. You can answer it that way.

6 **A. Yeah, these are -- these are my independent  
7 research and opinions based on the proposal and  
8 my knowledge and research --**

9 **MR. STUCKY:** I guess I'm going to  
10 object to the question, perhaps I don't  
11 understand it, but is there a distinction  
12 being drawn between a paid consultant for  
13 the City and a paid employee of the  
14 District and some insinuation that just  
15 merely because he's a paid employee of the  
16 District that he can't be an independent  
17 expert and opine in this case, is that what  
18 the insinuation is? And if that's the  
19 insinuation, then I'm going to object as to  
20 the form of the question.

21 **MR. MCLEOD:** I don't think there was  
22 any insinuation. It was just simply a  
23 question to the witness, whether he  
24 considered himself to be an independent  
25 expert.

1 **PRESIDING OFFICER:** Mr. Stucky.

2 **MR. STUCKY:** Before we proceed with  
3 this line of questioning, may I voir dire  
4 Mr. Henry as far as how many hundreds of  
5 thousands of dollars the City has spent on  
6 their consultants in this case, or if it  
7 approaches a million, whatever that number  
8 is, can I go ahead and voir dire one of the  
9 City's consultants on how much they've  
10 spent, one of the City's experts on how  
11 much they've spent on consultants in this  
12 case under that same line?

13 **PRESIDING OFFICER:** I think --  
14 Mr. Oleen.

15 **MR. OLEEN:** Mr. Boese is not a paid  
16 consultant. He listed a dollar figure in  
17 his expert report, but he's on salary to  
18 represent a certain global group of people.

19 **MR. STUCKY:** That's -- okay, I see  
20 the distinction. Whereas, the City's  
21 consultants are being paid to testify with  
22 a certain opinion, Mr. Boese is not being  
23 paid to testify. In fact, in that sense,  
24 he is giving an independent opinion. I see  
25 what's being said. I understand the

Page 2887

1 distinction.  
 2 **PRESIDING OFFICER:** Okay. So was an  
 3 objection withdrawn?  
 4 **MR. STUCKY:** Yeah, objection  
 5 withdrawn.  
 6 **PRESIDING OFFICER:** Thank you.  
 7 **BY MR. MCLEOD:**  
 8 Q. And now, Mr. Boese, let's turn to that  
 9 Exhibit 25.  
 10 **A. Just so I'm clear, we're at the memorandum of**  
 11 **understanding between the District and the City**  
 12 **for ASR Phase I?**  
 13 Q. Right.  
 14 **A. Thank you.**  
 15 Q. And when you were testifying last, I'd asked you  
 16 about the District's position on passive  
 17 recharge credit, and since then Ms. Wendling and  
 18 I have both asked Mr. Pope about this same  
 19 document. And if you will look back to the  
 20 attachment A, do you see that that is kind of an  
 21 agreed list of recommendations that the District  
 22 would make to the DWR for purposes of the Phase  
 23 I permit adjudication in connection with the  
 24 Phase I MOU?  
 25 **A. Can you show me in the MOU where it references**

Page 2888

1 **that attachment A so I can see under what**  
 2 **context attachment A was attached? Okay, I**  
 3 **think I actually found it, it's on page 4 of 4**  
 4 **under item 12, it said, it is agreed by the**  
 5 **parties that in addition to the above terms,**  
 6 **conditions, and commitments, the recommendations**  
 7 **of GMD2 on the project will be modified to**  
 8 **include the changes in attachment A, which is**  
 9 **part of -- hereof by reference. So I'm not sure**  
 10 **what your question was. These look like they**  
 11 **were modifications to the City's recommendation**  
 12 **of approval, because they're not an exhaustive**  
 13 **list. It starts with number 7, what it should**  
 14 **be worded as; 8, it says delete.**  
 15 **These look like they are modifications to**  
 16 **the City's original recommendation of approval**  
 17 **of the ASR Phase II applications that are**  
 18 **referenced above. That's the way I read that.**  
 19 **This is not an exhaustive list of the GMD's**  
 20 **recommendations that I -- the way I read it.**  
 21 **This was modifications to the recommendations**  
 22 **that were made by the Division of Water -- or by**  
 23 **the Groundwater Management District.**  
 24 Q. So would you agree, as Mr. Pope suggested, that  
 25 there was likely another separate document in

Page 2889

1 which the District also had set forth some  
 2 recommendations?  
 3 **A. It would appear that that's what's intended**  
 4 **under this -- under this scenario that I think**  
 5 **most -- I would believe so. I mean, I don't**  
 6 **know why there would be modifications if there**  
 7 **wasn't an original list of conditions**  
 8 **recommended.**  
 9 Q. And have you seen the District's recommendations  
 10 on the Phase I permits, Mr. Boese, have you seen  
 11 and reviewed those?  
 12 **A. I have -- yeah, certainly, I've seen them, I**  
 13 **haven't reviewed them recently. But I -- I have**  
 14 **seen them.**  
 15 Q. Do you know in that -- in that larger set, in  
 16 that document of recommendations, was there any  
 17 recommendation from the District one way or the  
 18 other on passive recharge credits?  
 19 **A. I -- I don't recall, I'd have to retrieve that**  
 20 **document and review it to answer that question.**  
 21 **I'd be glad to do that if you would -- if you**  
 22 **want me to, but I don't have that document in**  
 23 **front of me. If you have the document in front**  
 24 **of me, I'd be glad to look at it.**  
 25 Q. I also don't. But if you would be willing to

Page 2890

1 retrieve that document and provide that answer  
 2 to us, that would also be great. Mr. Boese --  
 3 **A. Can you hold on? I want to make a note or I'll**  
 4 **very likely forget what you just asked me to do.**  
 5 **And then I'll obviously want to consult with our**  
 6 **legal counsel, but I don't see a reason why I**  
 7 **couldn't. You're talking about the original**  
 8 **District recommendations?**  
 9 Q. On Phase I.  
 10 **A. I'm going to see if there happened to be a date**  
 11 **reference in the MOU as far as the date of**  
 12 **those, but I do not -- I don't see a date. But**  
 13 **I -- obviously there was probably a lot of --**  
 14 **the files are rather large, but I will do my**  
 15 **best to find that original --**  
 16 **MR. STUCKY:** Your Honor, I just  
 17 would like to speak to this briefly. At  
 18 some point asking Mr. Boese to do the  
 19 City's research for them is badgering this  
 20 witness. And at some point, I'm going to  
 21 object to that. Now, Mr. Boese in my view,  
 22 is as sharp as they come and is as  
 23 knowledgeable on these topics as they  
 24 possibly come, but to ask him to do all  
 25 kinds of additional research, I think

1 starts to cross the line.  
2 But with -- so to the extent it takes a  
3 ton of work on his part, he's already put  
4 tons of work into this case, he's gone  
5 above and beyond the call of duty. If it  
6 takes a limited amount of time, I'm not  
7 going to object, but anything that requires  
8 serious, serious research on Mr. Boese's  
9 part, I don't think is fair.  
10 **PRESIDING OFFICER:** I would tend to  
11 agree. I think in this case it sounds like  
12 it's good of you to be willing to find  
13 these things and it could be helpful and  
14 useful, but if it is an extensive  
15 investment of your time, then I don't think  
16 you're required to provide additional  
17 exhibits on behalf of the City. So let's  
18 be mindful of that going forward.  
19 **A. I would just go ahead and add to that, I'd be  
20 glad to look for it, I do believe -- well, I'm  
21 very, very confident that the City was copied on  
22 that letter, so I guess I would offer if the  
23 City cannot find that letter, I would be glad to  
24 do that for them. That original condition  
25 letter, I believe, I'm very, very confident the**

1 Q. I'll just ask the question generally. As far as  
2 you know, the District didn't make a  
3 recommendation on passive recharge credits one  
4 way or the other in the Phase I permit  
5 application; is that correct?  
6 **A. You're talking about a recommendation to the  
7 chief engineer in this respect?**  
8 Q. Yes.  
9 **A. I am unaware if they did or did not. But I  
10 would -- I would be glad to look.**  
11 Q. Thank you.  
12 **MR. MCLEOD:** And I will also say for  
13 the record at this point, Madam Chair, I  
14 don't believe that Counsel understands the  
15 concept of badgering a witness, and I have  
16 not been badgering any witness in these  
17 proceedings.  
18 **PRESIDING OFFICER:** Well, I'm not  
19 suggesting that anybody's been badgering,  
20 but I think we're relieving that now is  
21 you're no longer requesting him to find  
22 this and you're moving on?  
23 **MR. MCLEOD:** Correct.  
24 **BY MR. MCLEOD:**  
25 Q. Mr. Boese, does the District have a rule or

1 **City would have a copy of that -- that letter  
2 that Mr. McLeod is referring to.**  
3 **PRESIDING OFFICER:** So do you wish  
4 to have your people look for that, he's  
5 pretty confident that you have it?  
6 **A. Either -- either way.**  
7 **MR. STUCKY:** Yes, it's in their  
8 possession. Why -- why does my witness  
9 have to do their research for them? I  
10 don't understand that.  
11 **MR. MCLEOD:** I would have to say  
12 that really I fully expected the witness  
13 would know the answer to the question given  
14 everything else that he does seem to know  
15 about the ASR Phase I and Phase II projects  
16 and what he said about his level of  
17 participation in both projects. But I can  
18 just ask the question this way.  
19 **BY MR. MCLEOD:**  
20 Q. Mr. Boese, as far as you know, the District  
21 didn't make a recommendation either way on  
22 passive recharge credits in the Phase I permit  
23 application process, did it?  
24 **A. Are we still talking about in relationship to  
25 this original recommendation letter?**

1 regulation that requires that its staff approve  
2 groundwater modeling results prior to  
3 consideration of an application or proposal?  
4 **A. A specific regulation related to approving of a  
5 model?**  
6 Q. Yes.  
7 **A. Not -- no, not that I'm aware of.**  
8 Q. Does the District even have any rule or  
9 regulation that requires groundwater modeling  
10 for consideration of an application or proposal?  
11 **A. Again, specific just to a groundwater model?**  
12 Q. Yes.  
13 **A. No.**  
14 Q. In the District's past practice, has the  
15 District generally required applicants who come  
16 with a permit application or a change  
17 application to submit groundwater modeling in  
18 support of their application?  
19 **A. Generally, no, although we have requested on  
20 large, complex applications and projects to have  
21 modeling work done for review by the District in  
22 considering those applications. I think I  
23 already pointed out to the McPherson Board of  
24 Public Utility application, I think we, on a  
25 staff level, specifically requested some**

Page 2895

1 groundwater modeling on that.  
 2 Q. For chlorides?  
 3 **A. I think that was at least one of the scopes. I**  
 4 **think we were also looking at sustainability of**  
 5 **that pumping in that area 'cause it was a very**  
 6 **large application. Mostly for chloride**  
 7 **movement, I believe, but I think there was**  
 8 **some -- at least some of the modeling was --**  
 9 **also included could the aquifer sustain that**  
 10 **amount of pumping, that focused pumping 2900**  
 11 **acre-feet in a very small area.**  
 12 Q. Have there been any approved multi-year flex  
 13 accounts within the District?  
 14 **A. Yes.**  
 15 Q. And did the District favorably recommend  
 16 approval on those?  
 17 **A. We have.**  
 18 Q. Are any of those within the areas that have been  
 19 identified as over-appropriated?  
 20 **A. Are you talking about just the Wichita well**  
 21 **field or we talking about any area in the Equus**  
 22 **Beds Aquifer that's over-appropriated?**  
 23 Q. Any area in the Equus Beds Aquifer that's  
 24 over-appropriated?  
 25 **A. I'm -- I'm sure there have been.**

Page 2896

1 Q. Did the District evaluate domestic and  
 2 non-domestic well spacing for those multi-year  
 3 flex account applications?  
 4 **A. I believe at least on some or maybe all of them**  
 5 **I evaluated and run spacing evaluations, but I**  
 6 **would have to go back and look at those. But**  
 7 **the Board has waived, I believe, both spacing**  
 8 **and safe yield for the multi-year flex account**  
 9 **applications. And I'd have to, again, research**  
 10 **my notes on that. That was a board decision to**  
 11 **waive -- waive our regulations related, I**  
 12 **believe, to safe yield and spacing. Again,**  
 13 **I'm -- I'm going to preface by saying I believe;**  
 14 **I would have to go back and do some additional**  
 15 **research.**  
 16 **But also in that board motion, and I'm**  
 17 **going to again probably paraphrase it, I don't**  
 18 **want to be exact, the Board agreed to waivers on**  
 19 **those but also have an additional staff review**  
 20 **to determine if we saw any issues related to**  
 21 **that, that's why I paused slightly on the**  
 22 **spacing.**  
 23 **Obviously, if there's a -- a large pumping**  
 24 **well and a domestic well very close, I think we**  
 25 **would -- you know, on a staff level, we would**

Page 2897

1 look at that and maybe raise some concerns.  
 2 **Perhaps a domestic well was drilled right next**  
 3 **to a large pumping well and then they had filed**  
 4 **a multi-year flex, term permit application, and**  
 5 **maybe it's, you know, a matter of feet away from**  
 6 **each other, we would -- we would review that.**  
 7 **We do review -- it's not a cursory, rubber**  
 8 **stamp, we're going to approve it because someone**  
 9 **filed a multi-year flex account. I do look at**  
 10 **every one of them, and I can't comment if I run**  
 11 **spacing evaluations on all of them, but I'm sure**  
 12 **I did on some of them that I had concerns about.**  
 13 Q. Were any of those -- of those permit approval  
 14 recommendations and waiver recommendations made  
 15 in the 2011 to 2012 drought period when the  
 16 streambeds were drying up?  
 17 **A. Boy, you're asking me to remember a long time**  
 18 **ago. The original concept of the drought term**  
 19 **permits, I don't remember what the staff level**  
 20 **of review of those was. I think the chief**  
 21 **engineer was -- was issuing those as sort of a**  
 22 **one-time issue. I don't necessarily recall**  
 23 **reviewing the drought term permits. Flex**  
 24 **accounts were being followed -- filed more**  
 25 **toward the end of 2012 when -- particularly when**

Page 2898

1 **the drought extended.**  
 2 **When staff would have actually reviewed**  
 3 **those in relationship to the streamflow, I -- I**  
 4 **do not know. I mean, I think you're well aware**  
 5 **in 2013 we had a tremendous rainfall event and**  
 6 **the Big Ark and Little Ark went from very low or**  
 7 **no flow to extreme flooding situation. At what**  
 8 **time did the District receive those multi-year**  
 9 **flex account applications to actually review? I**  
 10 **would have to look. I anticipate some of those**  
 11 **would have come in after the summer, maybe all**  
 12 **of them, because as you know there was a huge**  
 13 **number of flex accounts filed throughout the**  
 14 **state so there was a backlog in DWR processing.**  
 15 **Most likely, I may have reviewed a lot of**  
 16 **those after, potentially after that rainfall**  
 17 **event. I -- you're asking me -- you know, I**  
 18 **reviewed -- I reviewed hundreds or perhaps a**  
 19 **thousand applications or more, and at what point**  
 20 **did I review a certain multi-year flex account**  
 21 **in relationship to streamflow is probably almost**  
 22 **an impossible question for me to answer at this**  
 23 **time.**  
 24 Q. Okay. As the District was recommending approval  
 25 of those multi-year flex accounts with spacing

1 waivers, did the District require that the  
2 applicants provide an MOU to guarantee that  
3 nearby domestic well owners would not be  
4 adversely impacted by those multi-year flex  
5 accounts?  
6 **A. No, they did not, but in the context of an MOU,**  
7 **they operate under a term permit with a much**  
8 **lower -- a much junior priority of their**  
9 **existing water right, so they would be obviously**  
10 **junior to anything else that's out there. In a**  
11 **multi-year flex account, the base water right is**  
12 **set aside and anything over the quantity of the**  
13 **authorized base right is then junior. So that**  
14 **additional withdraw would be junior, anything**  
15 **over the annual authorized quantity of the base**  
16 **water right.**  
17 Q. Did the District evaluate how any of those  
18 approved multi-year flex accounts might impact  
19 minimum desirable streamflow?  
20 **A. Not to my recollection.**  
21 Q. Mr. Boese, do you consider yourself to be an  
22 expert on water supply planning?  
23 **A. In what regard?**  
24 Q. Well, in, for example, the water supply planning  
25 needs of a city the size of the City of Wichita,

1 City's existing rights, I mean, the District's  
2 role in that respect passed when those rights  
3 were initially under consideration, didn't it?  
4 **A. Yes.**  
5 **MR. MCLEOD:** I don't have further  
6 questions for the witness.  
7 **A. Would it be possible for me to get a drink, a**  
8 **bottled water?**  
9 **PRESIDING OFFICER:** Yeah, sure.  
10 Mr. Oleen.  
11  
12 **CROSS-EXAMINATION**  
13 **BY MR. OLEEN:**  
14 Q. Mr. Boese, I believe the Phase II MOU that's  
15 previously been admitted or judicially noticed  
16 was GMD2 Exhibit 27, can you find that, please.  
17 **A. I'm there.**  
18 Q. My question to you is whether or not this Phase  
19 II MOU is still in force or whether or not it's  
20 expired? And I'll just ask you that question  
21 whether you know, and if not, I can direct you  
22 to some, perhaps, relevant language within it.  
23 But do you know whether or not this ASR Phase II  
24 MOU between Wichita and GMD2 has expired by its  
25 terms or not?

1 do you consider yourself an expert in water  
2 supply planning for a large municipality?  
3 **A. No.**  
4 Q. Do you know, Mr. Boese, does the District have  
5 any responsibility to define water supply  
6 planning and drought planning goals for the City  
7 of Wichita or its customers?  
8 **A. Any responsibility, is that what you said?**  
9 Q. Right.  
10 **A. No, we're on the -- we're on the supply side, I**  
11 **mean, we're reviewing applications based on**  
12 **their -- our rules and regulations in impact to**  
13 **the aquifer.**  
14 Q. And do your rules and regulations even give the  
15 Board any role in the City's water supply and  
16 drought planning exercises?  
17 **A. The District's maximum reasonable for beneficial**  
18 **use would apply to that, which basically**  
19 **describes how much a municipality can request on**  
20 **an application, the maximum quantity, so in that**  
21 **regard that would be the affirmative in that**  
22 **regard. But as far as determining how much the**  
23 **City needs, the City has to supply that**  
24 **information to the District for review.**  
25 Q. And in that context as to -- as to all of the

1 **A. I don't believe it's expired, but I haven't**  
2 **researched that extensively.**  
3 Q. So is it your belief that the MOU -- that the  
4 parties are still operating under this MOU?  
5 **A. That would be my -- that would be my take on it.**  
6 Q. I'll -- excuse me. I'll turn your attention to  
7 the very last page, and number 5 near the top,  
8 do you see where there's a reference to five  
9 years?  
10 **A. I do see that.**  
11 Q. So --  
12 **PRESIDING OFFICER:** I'm sorry, I'm  
13 not seeing what you're looking at?  
14 **MR. OLEEN:** Paragraph 5 on the last  
15 page of Exhibit GMD2 --  
16 **PRESIDING OFFICER:** I found it,  
17 sorry.  
18 **BY MR. OLEEN:**  
19 Q. So --  
20 **MR. STUCKY:** Can you give us a  
21 moment to get there?  
22 **MR. OLEEN:** Paragraph 5, Counsel, on  
23 the last page of GMD2 Exhibit 27.  
24 **A. May I help Mr. Stucky?**  
25 **PRESIDING OFFICER:** Yes, you can

Page 2903

1 help him.  
 2 **BY MR. OLEEN:**  
 3 Q. So I guess my question to you, Mr. Boese, if  
 4 you'd read that number 5 to yourself, and my  
 5 question is just do you still believe that this  
 6 MOU is in force between the GMD and the City of  
 7 Wichita?  
 8 **A. Well, I do but I would note that I'm an expert**  
 9 **in water law and regulations, I'm not an expert**  
 10 **in contracts and MOUs, so I would probably need**  
 11 **to defer to our attorney to answer that. And I**  
 12 **think we could -- if you want to request that he**  
 13 **come answer that.**  
 14 **MR. STUCKY:** Yeah, I --  
 15 **A. I'm not an expert in contracts and MOUs as far**  
 16 **as law.**  
 17 **MR. STUCKY:** I guess I'll lodge an  
 18 objection for the record. I think my  
 19 witness is as qualified as they come as far  
 20 as rendering opinions on interpretation of  
 21 language in contracts and statutes and  
 22 regulations, so I'm going to allow my  
 23 witness to answer, but I'll just lodge an  
 24 objection for the record that it does call  
 25 for a legal conclusion that would be well

Page 2904

1 within the province of lawyers to be  
 2 briefing in this case.  
 3 **MR. OLEEN:** I note Counsel's  
 4 interesting objection on the issue of legal  
 5 conclusions. I also note Mr. Boese's  
 6 expert report where he said he provides  
 7 legal advice.  
 8 **BY MR. OLEEN:**  
 9 Q. But my question --  
 10 **A. I guess I'll answer the question, I believe it's**  
 11 **still in effect because I don't see anything on**  
 12 **number 5 that says if the review is not done,**  
 13 **this MOU terminates.**  
 14 Q. Okay.  
 15 **A. So I don't -- I mean, unless you can show me**  
 16 **something that says if number 5 is not performed**  
 17 **that the MOU automatically terminates, I**  
 18 **would -- my take would be it's still in effect.**  
 19 Q. Okay, thank you. And is it your nonlegal  
 20 opinion, notwithstanding what legal advice you  
 21 may or may not give, is it your nonlegal opinion  
 22 that this MOU and the conditions therein,  
 23 assuming it is still in force, that these terms  
 24 are as enforceable as conditions that are made  
 25 part of some water permit?

Page 2905

1 **A. Yes, to the extent that an MOU can be -- can be**  
 2 **enforced, I think probably only by suitable**  
 3 **action, but, yes, in that respect.**  
 4 Q. Turning back to the issue of MDS, when you were  
 5 first cross-examined by Mr. McLeod, and I know  
 6 we've had some intervening witnesses since then,  
 7 but I wrote down that he had asked you whether  
 8 in the course of your extensive review for GMD2  
 9 of applications, which you said were in the  
 10 hundreds and perhaps a thousand or so, right?  
 11 **A. Yes.**  
 12 Q. He asked you if you had ever -- if the GMD2 had  
 13 ever made an MDS analysis with respect to such  
 14 applications that you would review and provide  
 15 recommendations for; is that correct?  
 16 **A. I believe there was a line of questioning to**  
 17 **that. And if -- are you going to tell me what**  
 18 **my answer was?**  
 19 Q. Well, yeah, I wrote down, not that I ever  
 20 recall, that's what I wrote down in response to  
 21 the question.  
 22 **A. Yeah, and now that you have reread that, if that**  
 23 **was my response, I would like to correct the**  
 24 **record in that regard if I could.**  
 25 Q. So now you do recall making some MDS analyses in

Page 2906

1 conjunction with change or new permit  
 2 applications --  
 3 **A. Well --**  
 4 Q. -- that you had reviewed?  
 5 **A. Yes, actually. And -- and as far as I think**  
 6 **maybe Mr. McLeod's question was did we consider**  
 7 **it in review, I don't know if he used the word**  
 8 **analysis, but I would like to correct the record**  
 9 **on that, I think, if that is okay with you,**  
 10 **Ms. Owen.**  
 11 Q. Yes, I want you --  
 12 **A. So --**  
 13 Q. -- to provide accurate information, please.  
 14 **A. So I'm thinking about the Bentley reserve well**  
 15 **field for the City of Wichita, and four of those**  
 16 **are bank storage wells; and this is not related**  
 17 **to this project just so we're clear, I don't**  
 18 **recall the file numbers. Anyway, they're very**  
 19 **similar to the ASR Phase I file is why I don't**  
 20 **remember, I think they're -- well, anyway,**  
 21 **maybe -- maybe I shouldn't go there. I think**  
 22 **they're 45,296 through 45,301, but I could be**  
 23 **wrong.**  
 24 **There was an MDS consideration on what the**  
 25 **flow triggers would be on the Big Arkansas River**

1 for operation of bank storage wells, and we did  
2 review that on a staff level and make some  
3 suggestions and recommendations. There was a  
4 lot of, I think, back and forth, I wouldn't say  
5 adversarial at all, with the City of Wichita and  
6 DWR and figuring out what the MDS -- or what the  
7 minimum flow trigger should be in the Big  
8 Arkansas River to operate those bank storage  
9 wells. And if memory serves me right, the City  
10 had suggested an 80 percent exceedance rate,  
11 DWR, I think had went to a 90 percent exceedance  
12 rate, and then eventually the flow trigger for  
13 the Big Arkansas River, I believe, ended up  
14 being 165 cubic feet per second.

15 Again, this was ten -- this was awhile ago,  
16 but that certainly had a minimum desirable  
17 streamflow. And I want to clarify while I'm  
18 having some memory now of why that was  
19 considered because --

20 Q. I thank you for your clarification, Mr. Boese --  
21 A. Okay.

22 Q. -- and for purposes of my questioning, that's  
23 sufficient.

24 A. Well, I --

25 Q. To be clear, your previous -- to your

1 that could be probably plus or minus five years  
2 or more, the Groundwater Management District  
3 No. 2 established base flow nodes on the Little  
4 Arkansas River, as well as the north fork of the  
5 Ninnescah and certain tributaries, to account  
6 for the loss from the aquifer into those streams  
7 and rivers. So there was a base flow allocation  
8 established.

9 I vividly remember doing streamflow  
10 measurements with Kansas Water Office, DWR, and  
11 the reason I remember is because it was very  
12 cold standing in the north fork of the Ninnescah  
13 doing streamflow measurements by hand. So we  
14 established base flow nodes on the Little  
15 Arkansas River, since that's the area we're  
16 taking about, to account for that loss from the  
17 aquifer into the river. And we can go into  
18 detail how that's done, it's in our safe yield  
19 regulation. And we also note spacing to those  
20 river nodes, they're part of our well spacing  
21 regulation.

22 So any application that is near the Little  
23 Arkansas River, or if you remember the safe  
24 yield two-mile-radius circle that intersects  
25 Little Arkansas River, those river nodes are

1 recollection, your previous consideration of an  
2 MDS issue in conjunction with a new or change  
3 app was also with the City of Wichita, correct?  
4 A. Yes, but, you know, I'd like to maybe expand  
5 maybe on my answer outside of the Bentley  
6 reserve field.

7 Q. Well, and I'm only cutting you off because I'm  
8 more interested in for whom you are considering  
9 this issue so --

10 A. Well, my other ones were not with the City of  
11 Wichita is why -- you made that point, and I  
12 wanted to also discuss other ones.

13 Q. Other non-municipalities -- other owners of --  
14 let me rephrase that better. Other owners of  
15 water rights -- or water permits, I should say,  
16 that are not municipal permits, have you ever  
17 considered the MDS issue in the context of  
18 irrigation water permits, for example? That's  
19 my question.

20 A. And this is going to take me a little while to  
21 answer, but I think it's an important -- an  
22 important point. The Groundwater Management  
23 District - and I can't point to the date; if I  
24 had some time to do some research, I could do  
25 it - I would say roughly 20 years ago, again,

1 accounted for in the safe yield. And also,  
2 likewise, the spacing evaluation, they must  
3 maintain -- new applications or a change in  
4 point of diversion greater than 300 feet must  
5 maintain a quarter mile spacing to the Little  
6 Arkansas River. So in that regard, any  
7 application that is near the river has a  
8 component of MDS in it, of streamflow in it, so  
9 there is some -- some certain review and  
10 protection for that streamflow.

11 Q. So a component, I heard you say, but here today  
12 we're talking about the City's proposal, and let  
13 me find out where it says it in your expert  
14 report. I'm going to read from page 5 of your  
15 expert report, the bottom of the -- of the page,  
16 the last sentence of the first full paragraph,  
17 most certainly, MDS would be negatively impacted  
18 by the proposal and this should be further  
19 evaluated. And isn't it true that you're  
20 claiming that some sort of detailed MDS analysis  
21 should be done with respect to the City's  
22 proposal, correct?

23 A. I believe the City should evaluate the impact of  
24 their proposal both to the aquifer maintenance  
25 credits that would allow additional withdrawal

Page 2911

1 and the lowering of the minimum index level, it  
 2 should be evaluated what the impact is on  
 3 minimum desirable streamflow. We have made  
 4 steps to protect the streamflow with those base  
 5 flow nodes and spacing. Likewise, this should  
 6 also protect that streamflow.  
 7 Q. You've -- you have these nodes, which I don't  
 8 fully understand, but I know that nodes aren't a  
 9 dedicated analysis like I understand you're  
 10 saying needs to be done here. But my question  
 11 to you, then, is the next time an irrigator  
 12 comes to your office and says, I need help with  
 13 this new or change application, Mr. Boese, you  
 14 testified that you sometimes assist people  
 15 within the District with initially getting this  
 16 application process started and sent to DWR,  
 17 eventually you're given the opportunity to make  
 18 a recommendation on that new application or  
 19 change application, right?  
 20 **A. Yes.**  
 21 Q. And so the next time an irrigator comes into  
 22 your office and you know that they're getting  
 23 ready to apply for a new appropriation or  
 24 they're going to submit a change application,  
 25 ultimately when that comes to you for the GMD2's

Page 2912

1 review and this is some application in the Equus  
 2 Beds Aquifer, you're going to be asking DWR or  
 3 recommending to DWR that an MDS analysis be  
 4 conducted. Is that your testimony?  
 5 **A. Well, I think you're really mixing two different**  
 6 **sort of -- two sort of issues. And I take a**  
 7 **little bit of exception to you referencing an**  
 8 **irrigator because we help other folks too, but**  
 9 **I'll -- I'll let that pass, I mean --**  
 10 Q. I'll say another one, a recreation --  
 11 **A. Sure.**  
 12 Q. -- applicant or thermal exchange.  
 13 **A. Right.**  
 14 Q. What I want to know is you're apparently asking  
 15 for a further full-blown -- a significant  
 16 analysis, as I understand it, and -- would you  
 17 agree you're asking for some sort of dedicated  
 18 MDS analysis that Wichita perform regarding MDS  
 19 impacts?  
 20 **A. Yes.**  
 21 Q. Right?  
 22 **A. Yes, because this area is over -- very**  
 23 **over-appropriated, and if you'd let me finish --**  
 24 Q. Well --  
 25 **A. -- when an irrigator or someone else files an**

Page 2913

1 application, I review it. That safe yield,  
 2 which includes those river nodes and that  
 3 spacing, is setting aside that water for  
 4 streamflow, it's being done through our  
 5 regulation. My safe yield doesn't apply to  
 6 aquifer storage and recovery wells, although  
 7 strongly in my opinion it does for AMCs. That  
 8 base flow node would be considered in a safe  
 9 yield evaluation for an irrigator, a  
 10 recreational, or the City in respect to these  
 11 **AMCs also. That component is in there.**  
 12 Q. So as I understand your testimony, you are  
 13 saying that in my question about the next time  
 14 DWR is presented with a review of an application  
 15 for a new appropriation or change application  
 16 and it's some other type of beneficial use other  
 17 than municipal, you're saying you do not think  
 18 DWR should be performing the type of MDS  
 19 analysis that you think today should be  
 20 performed with respect to Wichita's proposal?  
 21 **A. I didn't follow your question. My**  
 22 **recommendation was that MDS be evaluated, and**  
 23 **you just said DWR. I -- I didn't follow the**  
 24 **question, can you -- can you rephrase it?**  
 25 **MR. STUCKY:** At the very least, I am

Page 2914

1 going to object as misstates the witness's  
 2 testimony, I think at the very least.  
 3 **A. Perhaps it -- well, I'm not going to say**  
 4 **anything.**  
 5 **BY MR. OLEEN:**  
 6 Q. I will try to rephrase.  
 7 **PRESIDING OFFICER:** Can you try?  
 8 **MR. OLEEN:** Yeah.  
 9 **BY MR. OLEEN:**  
 10 Q. Here today, the Wichita proposal, you think --  
 11 do you think some sort of MDS analysis needs to  
 12 be done?  
 13 **A. I think the impacts to many things, including**  
 14 **MDS --**  
 15 Q. Yes or no, do you think MDS analysis should be  
 16 done, am I not understanding your report  
 17 correct?  
 18 **A. An impact to minimum desirable streamflow, an**  
 19 **evaluation should be done for this proposal,**  
 20 **absolutely, I -- that is my statement.**  
 21 Q. Okay. But you are not saying that the same type  
 22 of analysis should be done if there is in the  
 23 future some other applicant for some other  
 24 beneficial use in this area and you're  
 25 presented -- well, yeah, that's it, you're not

1 saying that that similar type of analysis should  
2 be done with respect to a future different type  
3 of beneficial use application in this area?  
4 **A. I believe our safe yield and our spacing**  
5 **regulation takes care of that. And I would do**  
6 **that same for the City if they filed an**  
7 **application, I would do that same safe yield and**  
8 **spacing evaluation for anybody, if that's your**  
9 **question. That -- that eliminates the need for**  
10 **the -- this detailed MDS because the safe yield**  
11 **and the spacing helps protect that. If you're**  
12 **implying that I should perform a safe yield and**  
13 **spacing for the City's AMCs, I kind of did that**  
14 **already, and none of them meet safe yield.**  
15 Q. Okay. I'll move on away from MDS. You say in  
16 your expert report, also on the bottom of  
17 page 5, it says, certainly - there's a lot of  
18 certainlies in here - this says, certainly, the  
19 lowering of the minimum index levels and  
20 allowing the City to pump the aquifer below the  
21 current minimum index levels will increase the  
22 hydraulic gradient and increase the migration of  
23 the salt contamination.  
24 **A. I believe there's studies that have shown that,**  
25 **both USGS, Mr. Romero's showed that, increasing**

1 **the hydraulic gradient, lowering the water table**  
2 **causes chloride movement, and I believe an**  
3 **evaluation should be performed in regard to this**  
4 **application.**  
5 Q. Okay.  
6 **A. Or this proposal.**  
7 Q. And my question for you is one that I think I  
8 also asked of Mr. Romero, and that is isn't it  
9 true that any reduction of the water level  
10 beyond de minimis technically increases the  
11 hydraulic gradient, can you agree with me that  
12 that's a generally fair statement?  
13 **A. A reduction at one location compared to another,**  
14 **yes; if -- if the entire aquifer in the area**  
15 **drops, there is no change in hydraulic gradient.**  
16 **If one area drops more than the other, then**  
17 **there is a change in hydraulic gradient.**  
18 Q. Thank you, yes, I understand, I should have --  
19 **A. That's okay.**  
20 Q. That's a good point. So currently, Wichita, if  
21 they're pumping in the aquifer, whether it's  
22 their native water rights or it is -- they're  
23 withdrawing recharge credits, and in relation to  
24 nearby areas that may not be pumping, if Wichita  
25 is exercising their current water rights in the

1 well field, it is going to increase the  
2 hydraulic gradient, correct?  
3 **A. Yes, if they're lowering the water table more**  
4 **than it's being lowered adjacent to it, the**  
5 **hydraulic gradient will change.**  
6 Q. And back to your report, you say that, and I'll  
7 paraphrase, lowering the minimum index levels,  
8 allowing Wichita to pump the aquifer below the  
9 current minimum index levels, below the current  
10 bottoms, will increase the hydraulic gradient,  
11 right?  
12 **A. Yes.**  
13 Q. Okay.  
14 **A. Yeah, I mean, unless -- unless every adjacent**  
15 **area is also pumping that additional quantity,**  
16 **which obviously cannot occur, I don't think,**  
17 **so ...**  
18 Q. Okay. Well, if water levels -- so you're saying  
19 if Wichita pumps below the current bottoms, that  
20 has the potential, in relation to other areas,  
21 to increase the hydraulic gradient, right?  
22 **A. If the water table is lowered below the current**  
23 **1993 levels, whether it's the City pumping or**  
24 **anybody else's pumping, the hydraulic gradient**  
25 **will --**

1 Q. Thank you, that was the next question I wanted  
2 to flush out. So if irrigators or any other  
3 water right owners in the well field, if they're  
4 pumping below the current bottoms, that's going  
5 to increase the hydraulic gradient too, isn't  
6 it?  
7 **A. As I think I previously stated if the water**  
8 **table drops in relationship to the area**  
9 **adjacent, the hydraulic gradient will -- will**  
10 **change.**  
11 Q. Right, and so those -- those -- let's assume  
12 with me that Wichita is not withdrawing water  
13 below the current bottoms but other users are,  
14 they will be increasing the hydraulic gradient,  
15 as you said, and isn't it true that they are --  
16 their activity could increase the migration of  
17 the salt contamination?  
18 **A. I think I previously stated if the water level**  
19 **drops, whatever causes it, then the hydraulic**  
20 **gradient will change, so whether it's cumulative**  
21 **pumping of the City and irrigation, if it's the**  
22 **City by itself. However, the -- the City**  
23 **pumping recharge credits would also lower that**  
24 **water table, and particularly if we're pumping**  
25 **AMCs where water was not added to the system,**

Page 2919

1 **that would certainly change the hydraulic**  
 2 **gradient.**  
 3 Q. But -- so you argue saying that there is some  
 4 additional hydraulic gradient, chloride  
 5 migration concern for the City to be able to  
 6 withdraw water below the current bottoms. Is  
 7 that what you're saying?  
 8 **A. Is there some additional? Did you say -- did**  
 9 **you say the word additional?**  
 10 Q. Yes. Because that's -- they're currently not  
 11 allowed to withdraw credits below the current  
 12 bottoms, right?  
 13 **A. Yes.**  
 14 Q. They want to be able to withdraw credits --  
 15 **A. Right.**  
 16 Q. -- from the lower bottom, right?  
 17 **A. Yes.**  
 18 Q. And you're saying allowing them to withdraw  
 19 credits from a lower bottom has this hydraulic  
 20 gradient, chloride migration risk, right?  
 21 **A. Yes.**  
 22 Q. And so you don't want Wichita to be able to  
 23 withdraw recharge credits from lowered bottoms,  
 24 right?  
 25 **A. Well, the -- the ASR project, when it was**

Page 2920

1 **established, establishes this area that the City**  
 2 **could place water into and use.**  
 3 Q. Right, and you don't want that area to be  
 4 lowered because of concerns you have about  
 5 increased hydraulic gradient and chloride  
 6 migration risks, correct?  
 7 **A. Well, I want to make it clear, me not wanting**  
 8 **something, I think you've said I don't want them**  
 9 **to.**  
 10 Q. When I say that, I mean it's your, I guess -- I  
 11 guess it would be the GMD's recommendation that  
 12 that not be permitted, right?  
 13 **A. Not without a thorough evaluation of the impacts**  
 14 **to other users, MDS, and water quality.**  
 15 Q. Okay. But you're not advocating that somehow  
 16 other water right owners that might want to pump  
 17 below current bottoms -- let's say the water  
 18 level gets down to the current bottom.  
 19 **A. Uh-huh.**  
 20 Q. You're not advocating that those other water  
 21 right owners should somehow be prevented from  
 22 being able to withdraw water when the water  
 23 level is at the current bottoms?  
 24 **A. It wasn't a condition of their original**  
 25 **approval, unlike the ASR Phase II and Phase I**

Page 2921

1 **where it was a condition of their original**  
 2 **approvals. So that's a distinction to make**  
 3 **there.**  
 4 Q. Okay. But -- so you're saying because they're  
 5 not subject to a condition, you think it's okay  
 6 for them to withdraw water if water levels are  
 7 at the 1993 levels, right?  
 8 **A. Unless they're causing impairment, yes.**  
 9 Q. Okay. But we talked before about some chloride  
 10 concerns?  
 11 **A. Uh-huh.**  
 12 Q. And so you're saying you have -- you have  
 13 chloride concerns if Wichita withdraws water  
 14 below the bottom, but you don't have chloride  
 15 concerns if other water right owners are  
 16 withdrawing water when the water level is at the  
 17 1993 levels?  
 18 **A. Well, I have concerns for all the water quality**  
 19 **in the District. If -- if we see that there's a**  
 20 **special management area needed to address that,**  
 21 **then I will take that to my board. We did that**  
 22 **with the Burrton Intensive Groundwater Use**  
 23 **Control Area. So if I see a need because of**  
 24 **this saltwater intrusion from the Burrton area**  
 25 **or from the Arkansas River, then we're going to**

Page 2922

1 **have to evaluate how we deal with that, whether**  
 2 **it's an Intensive Groundwater Use Control Area,**  
 3 **a local enhanced management area, a special**  
 4 **water quality use area, anything is on the table**  
 5 **of that, which -- which could, you know, include**  
 6 **some recommendations or corrective control**  
 7 **provisions to deal with that issue.**  
 8 **You're getting way out on a hypothetical, I**  
 9 **mean, we haven't evaluated that. Will we have**  
 10 **to some day? If the chlorides continue to**  
 11 **advance, then we've already got a recommendation**  
 12 **out there to expand the IGUCA boundaries on the**  
 13 **table right now. We haven't -- we haven't gone**  
 14 **any further, but there's already the discussion**  
 15 **of expanding the Burrton IGUCA boundaries. And,**  
 16 **actually, the chief engineer recently -- recent**  
 17 **order on the IGUCA hearing for the Burrton area**  
 18 **also included that recommendation that the IGUCA**  
 19 **boundaries be expanded.**  
 20 **So as those chlorides advance, you know,**  
 21 **there's corrective control provisions that may**  
 22 **have to be considered. We're not there -- you**  
 23 **know, we're not at that point yet today, but**  
 24 **those might have to be considered. Those could**  
 25 **include anything on the table.**

1 Q. Do I understand correctly that under the current  
2 ASR permits there are conditions that require  
3 water quality -- water quality monitoring for  
4 purposes of chloride contaminations?

5 **A. There's water quality monitoring required. I  
6 don't know that it was necessarily specific to  
7 chloride movement, but it was also to look at  
8 the impacts of injecting this different source  
9 of water into the aquifer, how that changed the  
10 geochemistry of the aquifer. You put in -- I'm  
11 not a geochemist, but you put in oxygenated  
12 water, it does certain things, so you have to  
13 look at all -- all that.**

14 Q. Do the other -- do the other -- the other water  
15 right permits, certified water rights or permits  
16 that are in the well field, do they generally  
17 also have water quality monitoring conditions on  
18 those permits or water right certifications?

19 **A. There are many that do. And I can describe  
20 those in detail if you'd like. We just talked  
21 about the Burrton Intensive Groundwater Use  
22 Control Area, all permits that have been  
23 approved since the IGUCA went into effect do  
24 have a water quality monitoring requirement as  
25 recommended by the -- by the GMD, including also**

1 **A. Okay.**

2 Q. If the aquifer is kept full, would you agree  
3 with me that generally there's less chance for  
4 impairment?

5 **A. Well, a full aquifer generally would -- would  
6 there be less chance of impairment, although I'm  
7 a little concerned with the term full because  
8 you can't have an unreasonable lowering and  
9 raising of the water table so --**

10 **MR. STUCKY:** Can I just ask for one  
11 clarification? Mr. Oleen did this to me a  
12 lot, so I'm going to ask for one  
13 clarification, impairment in the context of  
14 what, what kind of impairment are we  
15 referring to here?

16 **MR. OLEEN:** Well, I would like it to  
17 be the legal -- the legal version.

18 **MR. STUCKY:** Yeah, but the testimony  
19 from the -- testimony prior was that  
20 there's impairment to individual wells and  
21 there's also impairment to water levels in  
22 the aquifer, there's two different  
23 regulations that this witness has  
24 identified, so --

25 **MR. OLEEN:** So he can tell me

1 **in the special water quality area to the north;  
2 the Hollow-Nikkel also has those requirements.  
3 We require that on a number of permit  
4 applications in the Pretty Prairie and Partridge  
5 area, have water level and water quality  
6 monitoring. So there are -- there are many.**

7 **Most of those are irrigation, some are --  
8 there's at least one other municipal. There's  
9 some recreational permits. So there are many, I  
10 don't have the number in front of me, that have  
11 water quality monitoring component to their  
12 permit conditions as recommended by the GMD.**

13 Q. Switching gears now, I believe Mr. McLeod also  
14 had asked you if the aquifer is kept full, are  
15 there no or less MDS concerns and are there no  
16 or less chloride concerns. Do you remember that  
17 line of questioning?

18 **A. Are there no or less, what -- what did you mean  
19 by no or ...**

20 Q. Well, I don't remember exactly --

21 **A. Okay.**

22 Q. -- whether he said there would be no such  
23 concerns. I'll -- I don't -- I'll forget

24 whatever he asked you, I'll ask you what I want  
25 to ask you.

1 which -- either one.

2 **MR. STUCKY:** Okay.

3 **BY MR. OLEEN:**

4 Q. If the aquifer is kept the fullest that it  
5 reasonably is, pick a percentage, 90 something,  
6 and it's intended to be a simple question, is  
7 there generally less concern for impairment, and  
8 I mean the legal impairment as you understand it  
9 and use it within your world, GMD2 world, legal  
10 impairment of any kind, is there less concern  
11 for that?

12 **A. In the case of when the aquifer is maintained in  
13 a fuller -- fuller state?**

14 Q. Yes.

15 **A. We're talking about always maintained in a  
16 fuller state or when the -- also included when  
17 the aquifer has been drawn down by pumping of --  
18 by the City or anyone else? When it's -- when  
19 it's fuller, I agree; when it's not fuller, I --  
20 you said maintained, so by maintain, I assume  
21 you meant always. If it always stays full,  
22 sure, but I don't -- I don't think that's a  
23 possible situation in this scenario.**

24 **MR. STUCKY:** I'm sorry, I apologize,  
25 Madam Hearing Officer, is the question

Page 2927

1 whether or not it would be beneficial if  
 2 the City never pumps any of their water  
 3 rights in the future and there's a benefit  
 4 in always keeping the aquifer full in that  
 5 context, is that the question? I'm trying  
 6 to understand.  
 7 **MR. OLEEN:** That's not my question,  
 8 Mr. Stucky can ask his questions.  
 9 **BY MR. OLEEN:**  
 10 Q. My question, which I'll try again, it's intended  
 11 to be simple, which it is, again, if the aquifer  
 12 is full and it is not being -- no water is being  
 13 withdrawn from it, is there less chance for  
 14 impairment in all the legal senses?  
 15 **A. If there was no water being impaired, there's no**  
 16 **chance anybody can be impaired, but I'll -- I'll**  
 17 **maybe skip over that because you said if there's**  
 18 **no water being withdrawn, I don't -- there**  
 19 **couldn't be impairment because there's no water**  
 20 **being withdrawn but -- by anybody else; there**  
 21 **would be no -- there would be no one claiming**  
 22 **water.**  
 23 **But if the water table would -- our goal at**  
 24 **the Groundwater Management District is to keep**  
 25 **the aquifer at a sustainable level, so in that**

Page 2928

1 **regard, if the aquifer is full or near full, or**  
 2 **whatever term you use, and it stays there, that**  
 3 **would be a good thing, if it stays there.**  
 4 **And -- yeah, I'll leave it at that.**  
 5 Q. I only got one more question and I think  
 6 Mr. McLeod asked -- excuse me, I'm sorry, my  
 7 voice. I think Mr. McLeod asked this question,  
 8 I don't recall you actually answering it,  
 9 though, and it's similar to -- well, I'll just  
 10 ask it. So you -- you're familiar with the  
 11 City's proposal, and I understand you may  
 12 disagree as to whether they have considered all  
 13 the reasonable options for the drought planning  
 14 that they are wanting to undertake, okay, I  
 15 understand that. My question to you is if, as  
 16 Wichita says, the choice is to pump water levels  
 17 down from the aquifer in order to create space  
 18 in which to physically inject water to  
 19 accumulate recharge credits, if that's option  
 20 one, and option two is for Wichita to generally  
 21 leave the aquifer full but accumulate AMCs in a  
 22 manner in which they're requesting under the  
 23 proposal, which is preferable to you?  
 24 **A. What's preferable to me is what's allowed under**  
 25 **the Kansas Water Appropriation Act and the rules**

Page 2929

1 **and regulations of the Groundwater Management**  
 2 **District and the Division of Water Resources.**  
 3 Q. And so using those qualifications that you just  
 4 stated, which scenario is more preferable to  
 5 you, scenario one or scenario two?  
 6 **A. Well, I don't support, and my board and myself**  
 7 **have made that clear, I don't support the City**  
 8 **purposely pumping down the aquifer, but if**  
 9 **that's their choice, that's what's allowed by**  
 10 **law, then that's -- that's what they can do.**  
 11 **MR. OLEEN:** Thank you, I don't have  
 12 any further questions.  
 13 **PRESIDING OFFICER:** Ms. Wendling.  
 14  
 15 **CROSS-EXAMINATION**  
 16 **BY MS. WENDLING:**  
 17 Q. I lost track of what day it was, but when you  
 18 started your direct, we went through your CV, as  
 19 you recall, which is 80 -- I'm sorry, I forgot  
 20 to write it down, is it 83, I think, District  
 21 Exhibit 83, and if you need to refer to it.  
 22 **A. It is labeled as 83.**  
 23 Q. Okay. You mentioned on the back side, it talks  
 24 about your committees, and you said City of  
 25 Wichita committee, could you touch on a couple

Page 2930

1 of your -- your experience and some of the other  
 2 committees you served on outside of working with  
 3 the City?  
 4 **A. Oh, yeah, I guess maybe we didn't discuss those**  
 5 **now that you say that. Well, I've got the CV in**  
 6 **front of me, so maybe we'll just -- I can run**  
 7 **through them. I'm currently on the Kansas**  
 8 **Corporation Commission Oil & Gas Advisory**  
 9 **Committee. Been on that committee for -- oh, my**  
 10 **gosh, I'm going to say probably since 2000 or --**  
 11 **2007 or 2008, but I'm not -- I don't recall**  
 12 **entirely.**  
 13 **That's a -- that's an advisory committee to**  
 14 **the Kansas Corporation Commission Conservation**  
 15 **Division. We meet roughly quarterly or so, or**  
 16 **more as needed, to discuss issues with the oil**  
 17 **and gas industry and the conservation. I'm on**  
 18 **that because I'm the Groundwater Management**  
 19 **District representative. So we -- we discuss --**  
 20 **my role in that would be to ensure that any**  
 21 **activities, new rules and regulations, new**  
 22 **things that are coming down the pike, or I guess**  
 23 **old rules and regulations dealing with oil and**  
 24 **gas, protect the groundwater quality.**  
 25 Q. Is that so we can avoid more chloride plumes?

1 A. Well, I mean, that's certainly -- I mean, that's  
2 certainly some of the things we look at.  
3 Q. Okay.  
4 A. I mean, I -- we're actively involved in that  
5 committee about making sure that abandoned oil  
6 and gas wells are properly plugged. We just  
7 went through a review process of the rules and  
8 regulations dealing with the funding program for  
9 abandoning -- or for properly plugging some of  
10 these, I guess I'll call them orphaned,  
11 abandoned oil and gas wells that are out there.  
12 So served on that committee for a long time.  
13 There's other agencies and other folks involved  
14 on that committee, KDHE, I believe DWR has a  
15 representative, the oil and gas industry has a  
16 representative.  
17 I'll move on down to the NRCS Kansas  
18 Technical Committee, I've been on that for -- I  
19 think, at least, since I've been -- probably  
20 since I've been manager. That advises the NRCS.  
21 I'm on their technical committee, so when we're  
22 looking at things like federal funding and what  
23 qualifications have to be met for, let's say,  
24 EQIP funding and those kind of things, making  
25 recommendations to the local NRCS folks.

1 They're headquartered in Salina, so we meet a  
2 few times a year on that. Been involved with  
3 that for -- for sometime.  
4 The District had a special program that got  
5 approved from NRCS years ago, which is not  
6 necessarily related to my time on the technical  
7 committee, but we had a -- some federal dollars  
8 involved to help convert irrigation from less  
9 efficient to more efficient. That was all sort  
10 of the component of that technical committee  
11 on -- on setting those standards and  
12 stipulations on how that money gets -- gets  
13 funneled to appropriate producers.  
14 We already talked about the two -- or the  
15 Wichita Water ASR Executive Oversight Committee  
16 and the Water Utilities Advisory Committee so  
17 I'll skip over those.  
18 I served on the Sedgwick County Stormwater  
19 Technical Advisory Committee. That committee is  
20 no longer in place. Sedgwick County was looking  
21 at stormwater regulations. I served on that  
22 committee as the local groundwater management  
23 expert, I guess, so to speak. That looked at --  
24 as they were drafting those rules and  
25 regulations dealing with stormwater management.

1 Of course, in Sedgwick County, we've seen a lot  
2 of development, housing developments and such,  
3 and what do you do with the stormwater runoff  
4 when you're -- when you are building new  
5 subdivisions or housing divisions or business --  
6 business areas. My role on that was advisory,  
7 with our concern of -- primarily of discharging  
8 into groundwater pits of stormwater runoff; that  
9 was my main focus on that committee.  
10 I think I -- I have to think back on that,  
11 one of the interesting things was that the  
12 committee or the Sedgwick County folks wanted to  
13 include being able to allow runoff, stormwater  
14 runoff into groundwater pits as part of the  
15 treatment practice. It doesn't take too long to  
16 realize that's not a treatment practice, that's  
17 polluting the groundwater. So I think I was  
18 successful in steering that without proper  
19 treatment to make sure that stormwater is not  
20 injected into the aquifer. That's a -- that's a  
21 legacy issue we have been dealing with at the  
22 District for a long time is runoff into  
23 groundwater pits.  
24 I'm currently on the Kansas Geological  
25 Survey Advisory Council that advises, obviously,

1 KGS. We meet, I believe, quarterly, I'm trying  
2 to remember. I've got a meeting coming up  
3 actually on that. Been on that for -- oh, my  
4 goodness. You serve on so many committees you  
5 forget, but for a few years, five or six years  
6 probably. That advises, again, KGS so we meet  
7 and discuss what's going on at the KGS, we talk  
8 about funding KGS programs, staffing, projects  
9 that they're working on. It's -- it's a really  
10 fun committee, I get to learn about things that  
11 KGS is working on usually before the public  
12 does. Looking at seismic activity and studies  
13 related to that so that's a pretty -- pretty  
14 small group. I consider that to be an honor to  
15 be on that -- that advisory council.  
16 I'm also on the Kansas Groundwater  
17 Management Districts Association, that's an  
18 association of the five groundwater management  
19 districts. I recently got elected, I guess, or  
20 appointed as president of that. We had not done  
21 a real good job of meeting regularly, and we're  
22 really working on getting that association back  
23 running full force. That's the Groundwater  
24 Management District managers getting together  
25 and meeting and also generally having other

Page 2935

1 state agencies to discuss issues that we're  
 2 dealing with and coordination and those kind of  
 3 topics.  
 4 I am on the Groundwater Management  
 5 Districts Association, that's a multistate  
 6 association, I'm a board member on that. So  
 7 generally have two conferences a year, although  
 8 obviously with my work schedule I don't make  
 9 it to every one of those. But went to  
 10 Ft. Lauderdale, Florida a couple months ago and  
 11 met there.  
 12 That's, again, multistate, we meet, we --  
 13 we generally have presentations for the area  
 14 that we meet in and what issues they're having.  
 15 It's a good way to get out of your little world  
 16 about -- you know, we're dealing with Burrton  
 17 chloride. We met in Ft. Lauderdale, and they're  
 18 dealing with saltwater intrusion from the ocean.  
 19 It made the Burrton pale in comparison to -- to  
 20 what they're dealing with; we're talking  
 21 millions and millions, and I think one of the  
 22 estimates on what they are dealing with was over  
 23 a billion dollars. So it gets you out of your  
 24 little world and get to see other issues and how  
 25 they deal with them and spur ideas that you can

Page 2936

1 take back home. So, again, I've been on that  
 2 board for, oh, my goodness, I don't know, five  
 3 or six years probably.  
 4 Q. Okay. Thank you for that. We also -- you also  
 5 talked about production wells, index wells, and  
 6 monitoring wells, and can you help me make sure  
 7 I understand the difference between the three of  
 8 those?  
 9 A. Okay. Production wells would be -- generally, I  
 10 would consider those the non-domestic type  
 11 wells, although I guess you could say a domestic  
 12 well produces water. So, generally, we're  
 13 talking about production, we're talking about  
 14 larger scale municipal wells, irrigation wells,  
 15 domestic wells. And I think you asked about  
 16 index -- index wells?  
 17 Q. Index and monitoring wells, I wasn't sure if  
 18 they were the same thing?  
 19 A. Well, the index are -- or index wells are the  
 20 monitoring wells, the regulatory monitoring  
 21 wells for the ASR project. There is a cluster  
 22 of two wells, a deep and a shallow, in each  
 23 index cell. So 38 clusters of two wells, 76  
 24 index wells. Those are the index wells that my  
 25 staff measures quarterly, and, of course, the

Page 2937

1 January measurement would be considered the  
 2 regulatory measurement for whether or not the  
 3 cities could withdraw recharge credits from that  
 4 particular cell that had that monitoring well  
 5 located in it.  
 6 There's -- there's sampling that is done  
 7 from those. My staff does not do those  
 8 samplings, didn't have the specialized  
 9 equipment. These -- these wells are tried to  
 10 maintain on a very high level as far as any  
 11 chances of cross-contamination when they're  
 12 doing sampling, and it takes equipment that I  
 13 didn't have and really cleaning that equipment  
 14 from -- from well to well, which we also do when  
 15 we're measuring, we have a dedicated water level  
 16 measurement device only for those index wells.  
 17 And it is maintained in a clean state, so when  
 18 my staff, based on the training that I provided  
 19 to my staff, we clean our measuring device, take  
 20 the measurement, reel it back out, clean it, go  
 21 on to the next well, even the one right beside  
 22 it, measure, we want to avoid any sort of  
 23 cross-contamination.  
 24 I have not visited one of those sites  
 25 recently, but my hydrologic technician advises

Page 2938

1 that the -- I believe the City has installed  
 2 some sampling equipment. I think they're called  
 3 a HydraSleeve, and I won't go into details into  
 4 those. USGS used to do the sampling out of  
 5 those wells, and I now believe that the City of  
 6 Wichita is doing their own, although I do not  
 7 know the details.  
 8 We were kind of unaware of that; he told me  
 9 there was equipment installed, but I think  
 10 through some information I've gathered from the  
 11 City, they or maybe one of their consultants  
 12 installed that equipment in those index wells,  
 13 and they're now taking their own samples.  
 14 Samples have to be collected from those wells  
 15 annually, I believe.  
 16 Q. Okay.  
 17 A. And then monitoring wells are, again -- the  
 18 index wells are monitoring wells, but there's  
 19 different levels of monitoring wells. The  
 20 District owns and maintains around 550  
 21 monitoring wells. So we have monitoring wells  
 22 of our own that we also collect data from, water  
 23 level measurements and water quality.  
 24 Q. And that 550 is across the GMD, it's not limited  
 25 to the Wichita well field?

1 **A. That's correct, yeah, we have -- we have**  
2 **monitoring wells throughout the District, some**  
3 **have more -- more focused monitoring wells. For**  
4 **instance, in the Burrton Intensive Groundwater**  
5 **Use Control Area, it has, I don't remember the**  
6 **number, probably close to 100 monitoring wells**  
7 **in it. We use some other wells too that aren't**  
8 **ours.**

9 **So if we have a need, we'll install a --**  
10 **you know, a higher density of monitoring wells.**  
11 **We have a lot down by Pretty Prairie for**  
12 **nitrate tracking. We have a lot in these**  
13 **chloride contaminated areas, Burrton,**  
14 **Hollow-Nikkel to the north, Voshell to the north**  
15 **of that, Johnson Field to the north of that.**  
16 **Then we have cross sections along the Arkansas**  
17 **River; those would generally be in a north-south**  
18 **line, so they're sort of perpendicular to the**  
19 **river flow at distances from the Arkansas River,**  
20 **all the way from Nickerson down to -- to Wichita**  
21 **or the Maize area, we have a cluster of those.**  
22 **So they've been installed throughout time based**  
23 **on the needs of the District for data**  
24 **collection.**

25 Q. And some -- we've referenced several USGS

1 determination of whether there is room in the  
2 aquifer for recharge purposes?  
3 **A. Yes, to determine the recharge capacity, that's**  
4 **in their proposal, in relationship to whether or**  
5 **not the City should either physical recharge,**  
6 **gain AMCs, or a mixture of both based on that**  
7 **January water level measurement.**

8 Q. All right. Based on the quarterly information  
9 being available, is it practical to make the  
10 determination of recharge capacity on a  
11 quarterly basis, or does that -- is that limited  
12 to an annual determination?

13 **A. Well, I think the calculation would be -- the**  
14 **same method would be used for the calculation.**  
15 **If I remember right, I'd have to go back and**  
16 **look at the proposal, was sort of a table, I**  
17 **think, that the City had proposed based on this**  
18 **water level, they would have sort of this table**  
19 **to say this is the recharge capacity of each --**  
20 **each well. So that would seem like a fairly**  
21 **straightforward calculation, that you could do**  
22 **that anytime you took a water level measurement**  
23 **at those index wells.**

24 Q. Okay. And do water levels typically vary from  
25 January to, say, August within a year?

1 reports and the KGS reports throughout this  
2 hearing. Are they using the monitoring wells  
3 and more specifically the index wells to obtain  
4 that data?

5 **A. I --**

6 Q. Or do you know?

7 **A. No, it would probably depend on the report. I**  
8 **think USGS will use any data they -- they can**  
9 **get their hands on. I'm sure they've used the**  
10 **index wells in some of their data, they use our**  
11 **data all the time. We provide data to both USGS**  
12 **and KGS. Whether it be water level or water**  
13 **quality, they use, like I say, I think any data**  
14 **they can get their hands on that they can verify**  
15 **is good data, so they do rely on the District**  
16 **for a lot of that data. And I'm sure they get**  
17 **data from the City of Wichita or from anybody**  
18 **else that can have good, sound data.**

19 Q. And I believe you just said you do -- you or  
20 your staff do quarterly measurements at the  
21 index well locations?

22 **A. Yes, we do.**

23 Q. Are you familiar with the proposal and the  
24 operations plan proposed by the City of Wichita  
25 to use the January measurements as a

1 **A. Yeah, they -- they can, particularly in their**  
2 **relationship to how far they are away from**  
3 **pumping wells. So if you've got large capacity**  
4 **wells nearby pumping that impacts water levels,**  
5 **you can have an overall lowering during -- I**  
6 **mean, generally, you'll see a lowering of the**  
7 **water table during summer because the demand is**  
8 **higher in the summer for both irrigation, City,**  
9 **recreational, the demand is obviously higher in**  
10 **the summertime.**

11 Q. Can you find the Intervenor's exhibit book,  
12 binder? And I'd like you to turn to 21.

13 **A. 21?**

14 Q. Yes.

15 **A. Okay.**

16 Q. And, earlier, we looked at the second  
17 paragraph -- well, can you tell me what this  
18 letter is?

19 **A. This is a letter dated March 8th, 2016 to the --**  
20 **to the District, attention to -- to me, and it**  
21 **is from the chief engineer at the time, David**  
22 **Barfield. And I would have to maybe review this**  
23 **letter real quick if you want me to go into**  
24 **details about it 'cause I'm trying to remember**  
25 **what it was.**

Page 2943

1 **Okay. I've looked at the letter, it looks**  
 2 **like it's a letter to -- to the District, myself**  
 3 **and the GMD Board, informing the District of the**  
 4 **chief engineer's decision regarding**  
 5 **modifications to certain ASR regulations,**  
 6 **particularly K.A.R. 5-1-1 and K.A.R. 5-12-1.**  
 7 **And my quick review is the chief engineer**  
 8 **advising he's going to go ahead and proceed with**  
 9 **adopting those proposed rules with some changes**  
 10 **to some of those initial draft regulations, the**  
 11 **definition of minimum index level.**  
 12 Q. Do you recall it being said during these  
 13 hearings that the hearing regarding the City's  
 14 proposal was not required?  
 15 A. **Okay, I'm sorry, we're not talking about this**  
 16 **reg change anymore, we're talking about the --**  
 17 Q. We're talking generally throughout the course of  
 18 this hearing --  
 19 A. **Oh.**  
 20 Q. -- you can remember the various different dates,  
 21 at one point in time or another, has it been  
 22 said a hearing regarding the City of Wichita's  
 23 proposal, a public hearing regarding the  
 24 proposal, whether or not it was required?  
 25 A. **I think I've heard Division of Water -- I'm**

Page 2944

1 **sorry, let me start over. I have heard the**  
 2 **Division of Water Resources' staff, and I**  
 3 **believe there is some documentation in a letter**  
 4 **from Mr. Barfield and I can't point to it but we**  
 5 **could find it, that I think essentially says a**  
 6 **hearing for the City's proposal was not required**  
 7 **but they decided to go ahead and have one.**  
 8 Q. Okay. Can you read the second paragraph of this  
 9 letter for us?  
 10 A. **The one that starts with while?**  
 11 Q. Yes.  
 12 A. **While I have heard the Board's and others'**  
 13 **concern that the proposed rule change could**  
 14 **allow changes in the Wichita ASR that may be**  
 15 **detrimental to the area, such concerns can only**  
 16 **receive full and due consideration when the**  
 17 **issue is ripe, comma, that is, comma, in the**  
 18 **context of a specific project proposal or**  
 19 **request for change. Do you want me to go ahead?**  
 20 Q. No, that's -- oh, yeah, read the last sentence.  
 21 A. **Okay, I'm sorry. If a new project or a change**  
 22 **to the Wichita ASR project is proposed pursuant**  
 23 **to these rule modifications, a full hearing will**  
 24 **be held and a record of facts and concerns will**  
 25 **be made and acted upon.**

Page 2945

1 Q. We've discussed that there's knowledge of the  
 2 City's discussing this proposal prior to the  
 3 rule change being made. When you received this  
 4 letter, what -- how did you interpret or  
 5 understand that paragraph as it relates to this  
 6 proposal?  
 7 A. **I believe -- I'm getting into the mind of**  
 8 **Mr. Barfield here, but I believe he was saying**  
 9 **that he was going to go ahead and adopt the**  
 10 **rules and regulations, and once the City**  
 11 **submitted a proposal, then I think he said the**  
 12 **concern would be considered when the issue was**  
 13 **ripe, in other words when a proposal was -- was**  
 14 **submitted. I guess, I think that's my take on**  
 15 **that. Is that your question, I'm sorry?**  
 16 Q. Yes.  
 17 A. **Thanks.**  
 18 Q. Okay. Switching gears to safe yield, which was  
 19 talked about today, and you mentioned that it's  
 20 in your duties to do a safe yield analysis for  
 21 permit applications. Do I understand that  
 22 right?  
 23 A. **Yes. We have a rule and regulation, K.A.R.**  
 24 **5-22-7, which specifies under what circumstances**  
 25 **safe yield is applicable and then pretty**

Page 2946

1 **detailed on how -- how we do safe yields.**  
 2 Q. Okay. And I understand that you have reviewed  
 3 safe yield calculations for the ASR wells  
 4 subject to being changed by this proposal?  
 5 A. **I did perform a safe yield evaluation on all 30**  
 6 **of the water permits that the City is proposing**  
 7 **to have modifications made to.**  
 8 Q. And I believe that's District Exhibit 59.  
 9 A. **Can you tell me which book that's in by chance?**  
 10 Q. Looks like it's Volume IV.  
 11 A. **And I hate to interrupt, I was wondering if this**  
 12 **is going to be a very long line of discussion, I**  
 13 **could use a break. I actually don't mind**  
 14 **continuing to work, I don't -- I don't need to**  
 15 **stop for lunch, but if it's going to be a very**  
 16 **long discussion, I could use maybe a five-minute**  
 17 **break.**  
 18 **MR. ADRIAN:** How about a lunch  
 19 break?  
 20 **MS. WENDLING:** That's fine.  
 21 A. **I mean, I don't want to interrupt you. If it's**  
 22 **something short, I'm glad to move forward**  
 23 **but ...**  
 24 **BY MS. WENDLING:**  
 25 Q. I'll just go ahead and state I don't know how

1 much longer --

2 **A. Okay.**

3 Q. -- but before we get into safe yield, this is  
4 a --

5 **PRESIDING OFFICER:** This might be a  
6 good time for a lunch break. It's 12:30,  
7 let's try to be back by 1:20. Thank you.  
8 (Thereupon, a lunch recess was  
9 taken; whereupon the following was  
10 had.)

11 **PRESIDING OFFICER:** We're now back  
12 on the record, it's 1:30 and, Ms. Wendling,  
13 back to you.

14 **BY MS. WENDLING:**

15 Q. Okay. We were on the topic of safe yield, if  
16 you recall.

17 **A. Yes.**

18 Q. Do you recall testimony regarding the proposed  
19 permit conditions? This would be DWR Exhibit  
20 Number 1, the proposed conditions 12 and 13  
21 regarding domestic wells. You only need to flip  
22 to it if you need to refresh your memory.

23 **A. I probably should -- are you talking about the  
24 660 -- wells within 660 and -- I should probably  
25 flip to it, you know.**

1 question -- there was a question on whether or  
2 not there were wells within the 660 feet other  
3 than domestic wells, meaning would there be  
4 other beneficial uses within that 660 feet. Do  
5 you recall that question?

6 **A. Yeah, I think in that context, I think we were  
7 talking about maybe what I would call  
8 non-domestic wells that may be within -- the  
9 spacing requirement is actually 6 -- or  
10 1320 feet for that, but there might have been  
11 some confusion during that previous testimony by  
12 someone else about 660 and 1320. It's 660 --  
13 660 feet is the spacing requirement for  
14 domestic, 1320 for non-domestic, so I think -- I  
15 think that's what we were discussing.**

16 Q. Okay. And that would be if you were to perform  
17 a well spacing analysis, that's where you would  
18 use those figures?

19 **A. Yes, that's when we were reviewing new  
20 applications or certain change applications that  
21 fall under the spacing regulations, myself or  
22 District staff would perform a spacing  
23 evaluation looking at both domestic and  
24 non-domestic requirements to see if any of  
25 those, either domestic or non-domestic wells,**

1 Q. DWR Exhibit Number 1.

2 **A. Okay.**

3 Q. It's the draft permit conditions. I'm not sure  
4 where the DWR --

5 **A. Well, if you're looking for the draft conditions  
6 that Mr. Barfield wrote?**

7 Q. Yes.

8 **A. Okay. I think -- I think I know where it is,  
9 give me one second. I think it is GMD**

10 **Exhibit 30. It's a letter to GMD2, it says,  
11 with attached initial draft for review, proposed  
12 replacement findings and order in ASR Phase II,  
13 it's probably that one?**

14 Q. That --

15 **A. You're talking about the original -- you're  
16 talking about the draft conditions that  
17 Mr. Barfield submitted for review?**

18 Q. Yes.

19 **A. Okay. Let me -- let me look here. Sorry, I  
20 got -- I got a little confused.**

21 Q. Tim, I don't think it's the same as Exhibit 30.

22 **A. Okay. Anyway, why don't you ask me -- I think I  
23 can ...**

24 Q. When we were discussing the proposed permit  
25 conditions to protect domestic well owners, the

1 **were within that distance and would violate the  
2 well spacing regulation.**

3 Q. Okay. And a safe yield analysis, did that  
4 similarly use a 660-foot measurement?

5 **A. Well, the safe yield looks at a two-mile-radius  
6 circle drawn around the proposed point of  
7 diversion, or in this case a well, but those  
8 permitted wells are shown on the map. The  
9 non -- the domestic wells -- pardon me, the  
10 non-domestic wells are shown, the domestic wells  
11 are not shown in that safe yield evaluation.**

12 Q. Can you find the safe yield analysis that you  
13 did that we marked as District 59?

14 **A. I'm there.**

15 Q. Okay. And it'll be easier if I have this in  
16 front of me. So if you flip a couple pages in  
17 to permit 46,720, those permit numbers being on  
18 the top left.

19 **A. Okay. And just for everybody's ease, these are  
20 in -- these are in sequential order, so  
21 they're -- 46,720, which should be about six or  
22 seven pages back, I think we start at 46,714.  
23 So, okay, 46,720.**

24 Q. And to answer the question of whether there are  
25 non-domestic wells within 660 feet of a Wichita

Page 2951

1 ASR well --  
 2 **A. Uh-huh.**  
 3 Q. -- will this safe yield analysis help us  
 4 determine whether or not that is the case?  
 5 **A. The safe yield doesn't have the specific spacing**  
 6 **evaluation; however, you know, you could look at**  
 7 **this, and if it's obvious that a non-domestic**  
 8 **well, and I'm going to go back to the 1320**  
 9 **because that's the -- the 1320, you can tell, I**  
 10 **think, pretty easily if there was a well**  
 11 **obviously within 1320 feet by looking at this --**  
 12 **this safe yield, because the red dot that's in**  
 13 **the middle is the proposed well location, and**  
 14 **then those are sections. So it's pretty --**  
 15 **well, it's pretty easy for me because I've seen**  
 16 **thousands of these, it's pretty easy for me to**  
 17 **tell where the quarter mile and the half line**  
 18 **would be. If you want a detailed analysis, I'd**  
 19 **have to do a spacing evaluation, but if**  
 20 **you're --**  
 21 Q. For the triangle that's touching the red  
 22 circle --  
 23 **A. Yes.**  
 24 Q. -- we can assume that's within the 13?  
 25 **A. That one definitely looks to be within the**

Page 2952

1 **1320 feet. And although I review -- have**  
 2 **reviewed hundreds or thousands of applications,**  
 3 **I can recall this one in particular, I think,**  
 4 **because this one did require a waiver from the**  
 5 **Board, I think for both of those red triangles**  
 6 **that are -- that are to the south and southwest.**  
 7 **I know for sure the red triangle that is to the**  
 8 **south is obviously within 1320 feet; and if**  
 9 **memory serves me correct, the red triangle then**  
 10 **that is a little bit further to the left, or in**  
 11 **this case to the west, I believe was also within**  
 12 **1320 feet, but I would have to -- I would have**  
 13 **to check that. It looks really close, and I do**  
 14 **remember this particular application did -- did**  
 15 **have to have spacing waivers from the Board.**  
 16 Q. Okay. And so can you explain to us the data in  
 17 the table on the right and what that tells us  
 18 about those two triangles we just talked about?  
 19 **A. Sure. The -- the output from the spreadsheet,**  
 20 **so our safe yield evaluation picks up every one**  
 21 **of these red triangles and puts them into a**  
 22 **spreadsheet, along with certain attributes of**  
 23 **what that red triangle means.**  
 24 **The first column is the file ID or the**  
 25 **water permit number. The second one is just an**

Page 2953

1 **internal well ID from our access database, so we**  
 2 **can ignore that next column. Third one is the**  
 3 **township. Fourth one is the range. Fifth one**  
 4 **is the section number. The sixth is the**  
 5 **qualifier, and by that, we mean footage**  
 6 **measurements from the southeast corner of the**  
 7 **section that it's located in. And those are**  
 8 **measurements that identify the well or the point**  
 9 **of diversion based on the authorized location**  
 10 **from the water right or water permit.**  
 11 **The next is the type of use, and it's**  
 12 **abbreviated, so MUN would mean municipal, IRR**  
 13 **would be irrigation. Let's see if there's**  
 14 **another one. Okay, there's an STK, which is**  
 15 **stock watering. This -- this is all from an**  
 16 **internal database, I should mention, from the**  
 17 **Groundwater Management District that we maintain**  
 18 **ourselves that gets updated regularly. If**  
 19 **there's a new application or new permit, a**  
 20 **change, move the location, a quantity, whatever,**  
 21 **it gets updated; this is something we update all**  
 22 **the time.**  
 23 **And then the last column would be the**  
 24 **authorized quantity of that particular water**  
 25 **right, or if there's multiple wells involved**

Page 2954

1 **with the water right, then -- of that particular**  
 2 **well. For instance -- well, down at the bottom**  
 3 **where it says Harvey County 6, those are City**  
 4 **wells. But there are a number of wells**  
 5 **authorized by Harvey County 6, so that's why**  
 6 **it's listed multiple times because in this case**  
 7 **there are, looks like about ten City wells all**  
 8 **identified under the water right, vested right**  
 9 **Harvey County 6.**  
 10 **The top is just a description of what this**  
 11 **was, safe yield evaluation for this particular**  
 12 **application, with a little more detail on what**  
 13 **the City well is called. The location, the**  
 14 **legal description, and the footage measurements**  
 15 **for that -- for that well that the evaluation is**  
 16 **being performed on. Whether it's in a special**  
 17 **use area or not; in this case, this is in a**  
 18 **special use area so it says none. And then the**  
 19 **date the evaluation was done.**  
 20 **The next line, which is in pretty small**  
 21 **print, says total area; that means how many**  
 22 **acres are in that two-mile circle. A normal**  
 23 **two-mile circle contains 8,042 acres. It says**  
 24 **area in 3-inch discharge zone, zero areas in**  
 25 **6-inch discharge; we could say discharge or**

1 recharge, I guess, in this case. It's the  
2 entire circle as a recharge rate for this  
3 calculation of 8,042 acres.

4 Now let's move to the bottom of the  
5 spreadsheet. On the left, in the text box, it  
6 says allowable appropriation, that's the 4,021  
7 acre-feet area that we would allow in a two-mile  
8 circle of appropriations. The small user  
9 quantity that could be allowed in that two-mile  
10 circle is 45 acre-feet. And we can get way  
11 involved on what a small use permit is, and  
12 perhaps we'll save that for another time, but in  
13 this case, it appears that all the small use  
14 quantity has been used.

15 In this case, there's been three  
16 15 acre-foot small use permits approved, why  
17 there's none left. So if someone was looking  
18 for a small use permit in this area, there  
19 wouldn't be any left. That's an exception to  
20 our safe yield regulation, and, again, I think  
21 we'll get into the minutia if I get too far.

22 The total existing appropriation is  
23 20,240.56 acre-feet, that's adding up all those  
24 authorized quantities above it. What I'm  
25 calling nonconsumptive appropriation is

1 6500 acre-feet. That in this case is the City's  
2 ASR Phase II recharge recovery permits that are  
3 identified above as -- as either 500 or 1,000  
4 acre-feet. We don't count those in the safe  
5 yield regulation because they're exempt. And  
6 then consumptive appropriation in this example  
7 is 13,740.56 acre-feet. I know I went way into  
8 detail, but I -- anyway, what was your question?

9 Q. I'm sure everyone appreciates that right after  
10 lunch. If we go back to the red circle --

11 A. Uh-huh.

12 Q. -- and the City well in the middle of the larger  
13 red circle --

14 A. Uh-huh.

15 Q. -- we see 15-24 south, 2 west?

16 A. Yep.

17 Q. And that -- can we correlate that to section 16  
18 in your table --

19 A. Yeah.

20 Q. -- to find information regarding those specific  
21 wells?

22 A. Yes.

23 Q. Okay.

24 A. So that particular one, if we go to the section  
25 we'll see there's about -- there's three of them

1 that are listed in section 16 that are clustered  
2 together, about not quite halfway down. And  
3 beside those is the footage measurement. So the  
4 first one is water right 32857D1, this is a  
5 divided water right. The footage measurements  
6 for that one are 20 feet north and 1320 feet  
7 west. So if we go back to section 16, that is  
8 the red triangle that is at the bottom of  
9 section 16 kind of by itself in the bottom of  
10 the southeast quarter. So that's not the  
11 triangle we were looking for.

12 So the triangle that we're looking for  
13 that's close is actually two -- two more down  
14 from there where it says 2100 feet north and  
15 400 feet west. That would then be the red  
16 triangle that's closest to the City well.

17 Q. Okay.

18 A. And it is authorized for by water right 32857D3,  
19 its authorized use is stock watering, and the  
20 authorized quantity for that particular well or  
21 permit is 17 acre-feet per year.

22 Q. So is that a very long way of saying, to your  
23 knowledge, there are irrigation and stock  
24 watering wells within 660 feet of Wichita ASR  
25 wells?

1 A. On this particular one, I'm not sure about 660.  
2 It definitely looks like 660. I'm absolutely  
3 confident that it's within 1320 feet, which  
4 would be the regulatory requirement.

5 Q. Okay.

6 A. The well could be sited as, I believe, also  
7 authorized by that water permit, because I saw  
8 it, it's close. I am sure I did a spacing  
9 evaluation at the time, but they're not in the  
10 notebook. That one -- I believe that one  
11 violated well spacing and had to get a waiver,  
12 I'm just -- from my memory.

13 Q. Okay.

14 A. I remember that file in particular. And I think  
15 there's a house, you can't really see it,  
16 there's a house nearby there too that was  
17 probably within 660 feet. It's kind of  
18 underneath the red triangle.

19 Q. Your eyes are better than mine.

20 A. I'm -- I'm familiar with this evaluation and  
21 this location.

22 Q. With the well spacing, rather than safe yield,  
23 do you know if well spacing was done with regard  
24 to ASR Phase II when these wells were put in?

25 A. Yeah, there was a spacing evaluation that would

Page 2959

1 have been ran for every one of these. Those  
 2 that didn't meet had to receive a waiver from  
 3 either the owner for a domestic well, an owner  
 4 cannot consent on a non-domestic well, there is  
 5 no stipulation for that, that has to go in front  
 6 of the Board. An owner of a non-domestic well  
 7 cannot say, it's okay for this other  
 8 non-domestic well to be within 1320 feet, that  
 9 has to have a board waiver. A domestic owner  
 10 can sign a consent form allowing that well to be  
 11 too close. So this particular one would have  
 12 had to have had either a -- well, in this case,  
 13 this would have had to take a board waiver  
 14 because those are non-domestic wells within  
 15 1320 feet.  
 16 Q. And those board waivers are records you keep in  
 17 the ordinary course of business of GMD2?  
 18 A. Yeah, we should have an evaluation of that.  
 19 Q. That has not been introduced as an exhibit, to  
 20 your knowledge?  
 21 A. I don't believe it has been. I believe, and it  
 22 wasn't -- it wasn't admitted, I believe the  
 23 evaluation that was done on the 30 pending  
 24 applications that the City eventually withdrew,  
 25 there is an evaluation of every one of those in

Page 2960

1 the exhibit notebooks. There is not a  
 2 full-blown evaluation of these existing Phase II  
 3 that are subject to this proposal, although they  
 4 will be in my water right files in the office.  
 5 Q. But that would have been done at the time of  
 6 Phase II, not updated as far as this proposal?  
 7 A. That's correct, it would have been done at the  
 8 time the applications were filed back in,  
 9 whenever they were filed, 2007. I believe the  
 10 reason these are dated December 5th, 2019, I did  
 11 them specifically for this hearing because we  
 12 did not do safe yield evaluations for the ASR  
 13 Phase II applications when they were originally  
 14 applied for and reviewed because they weren't  
 15 subject to safe yield. At least to my  
 16 knowledge, I don't think we did. So there was  
 17 really no sense in -- I mean, they were exempt  
 18 so we didn't run a safe yield at the time  
 19 because our regulation didn't apply to those 30  
 20 applications.  
 21 Q. Okay. All right. Can you find the black binder  
 22 with the City's proposal?  
 23 A. Are we done with the safe yield so I can put  
 24 that book away?  
 25 Q. I believe I am.

Page 2961

1 A. Thank you.  
 2 Q. With that detailed explanation, I don't know how  
 3 there could be more questions.  
 4 A. You can limit my answers to 30 seconds or less,  
 5 I'd be okay with that. All right, the black  
 6 notebook.  
 7 Q. Table 2-5 in the proposal, which is on  
 8 page 2-10, we've referred to it several times.  
 9 A. Okay.  
 10 Q. I believe it was yesterday that you clarified  
 11 the City's current ability for recharge  
 12 credits --  
 13 A. I'm sorry, can you turn off your microphone?  
 14 I'm having some feedback from some other folks  
 15 talking, I can't hear two people. Can you turn  
 16 the microphone up maybe, or something? Is it  
 17 on?  
 18 Q. It's on.  
 19 A. Okay.  
 20 Q. I could yell at you but --  
 21 A. It's okay.  
 22 Q. So yesterday --  
 23 A. I'm sorry, can we go off the record for one  
 24 second?  
 25 PRESIDING OFFICER: Yes.

Page 2962

1 (Discussion held off the record.)  
 2 PRESIDING OFFICER: Yes, back on the  
 3 record.  
 4 A. Thank you.  
 5 BY MS. WENDLING:  
 6 Q. Yesterday you -- I think it was yesterday  
 7 anyway. Earlier, you corrected the 19,000  
 8 figure, which I believe is the number of  
 9 credits -- or acre-feet the City can withdraw  
 10 from ASR Phase II. We had been referring to it  
 11 as 19,000, you did some math and said it's  
 12 actually 18,000 acre-feet. Does that ring any  
 13 bells?  
 14 A. Yes, the 30 ASR Phase II applications that are  
 15 subject to this proposal, I am very confident  
 16 they total 18,000 acre-feet of recharge credits  
 17 that could be pumped per year if recharge  
 18 credits are available.  
 19 Q. So when I look at table 2-5 --  
 20 A. Uh-huh.  
 21 Q. -- under City of Wichita credit pumping --  
 22 A. Uh-huh.  
 23 Q. -- in year three --  
 24 A. Yes.  
 25 Q. -- and I see 19,000 and change --

1 **A. Uh-huh.**  
2 Q. -- would that actually, to your knowledge, be  
3 limited to 18,000?  
4 **A. They could not pump more than 18,000 acre-feet**  
5 **per year of recharge credits under their**  
6 **existing 30 permits, so, yes, that -- to be able**  
7 **to pump 19,907 would either require usage of ASR**  
8 **Phase I, because they do have some quantities**  
9 **available, or new applications. And since we're**  
10 **talking about ASR Phase II, I believe it would**  
11 **probably just take new applications to exceed**  
12 **the 18,000 acre-feet.**  
13 Q. Such as the 30 that were withdrawn?  
14 **A. Yes, yes.**  
15 Q. Okay. We've talked about the aquifer being  
16 80 percent full following the 1 percent modeled  
17 drought. And when my clients hear that after a  
18 1 percent drought the aquifer is still  
19 80 percent full, or if they look at the figure,  
20 figure 11 in the proposal, they say, if all of  
21 this water is available, why can I not get an  
22 appropriation, how do you answer that? And have  
23 you needed to answer that to any water users in  
24 the District?  
25 **A. Yes, I have answered that. I mean, I get that**

1 **question more than just related just to this --**  
2 **this project also. I mean, I get that question,**  
3 **for instance, you know, there's -- there's water**  
4 **so close to groundwater level surface right now**  
5 **in the City of Hutchinson, they're dewatering**  
6 **wells, pumping to keep them out of basements, so**  
7 **I get that question, why -- why can't a new**  
8 **permit be approved, water table is high?**  
9 **And the simple answer is we manage the**  
10 **aquifer on a safe yield basis. So we're not**  
11 **going to react to the ups and downs of the**  
12 **aquifer, I guess, I was looking for the right**  
13 **term, but for the -- the variation. So we**  
14 **manage on the safe yield, and I think we talked**  
15 **about the safe yield regulation. That is a**  
16 **mathematical calculation based on discharge and**  
17 **recharge.**  
18 **If we tried to evaluate every application**  
19 **on what the water level is doing, that would be,**  
20 **I think, an inappropriate way to do it, and it**  
21 **would be almost impossible because we'd be**  
22 **reacting on the whims of which way the water**  
23 **level went from year to year. So we're doing a**  
24 **safe yield calculation which it seeks to balance**  
25 **discharge and recharge. Now, some areas are**

1 **over-appropriated and we're well aware of that**  
2 **because they were put in before the safe yield**  
3 **regulation. But any new applications would be**  
4 **subject to that. And the simple answer is all**  
5 **the water that's available, according to the**  
6 **safe yield, is already dedicated to other users,**  
7 **and that's why someone can't get a new permit in**  
8 **an over-appropriated aquifer.**  
9 Q. And do you recall when safe yield went into  
10 effect?  
11 **A. It was either 1979 or 1980. And, actually, if I**  
12 **turn to our regulations, the footnote may**  
13 **provide that answer depending on if it was a**  
14 **policy or a regulation.**  
15 Q. That's okay.  
16 **A. It was '79 or '80.**  
17 Q. I think that's close enough.  
18 **A. To be honest, I've been saying 1980, I think,**  
19 **for most of my career, but there may be some**  
20 **indication it may have been 1979 so ...**  
21 Q. So when an application is filed and the safe  
22 yield analysis says that an aquifer in that area  
23 is over-appropriated, what does your office do?  
24 **A. We would recommend denial of that application to**  
25 **the chief engineer.**

1 Q. Okay. Can you find tab number 5 in the  
2 Intervenor's binder?  
3 **A. I guess I should clarify my answer, we would**  
4 **recommend denial unless it was exempt from safe**  
5 **yield.**  
6 Q. Okay.  
7 **A. Just to be clear. I didn't want -- didn't want**  
8 **to say just because it's over-appropriated it's**  
9 **automatically recommended for denial.**  
10 **Okay. This is Number 5.**  
11 Q. Yes. Can you describe what that appears to be?  
12 **A. Can I have a minute to review it?**  
13 Q. Yeah.  
14 **A. This is a letter from the Groundwater Management**  
15 **District in 1980, which was signed by Thomas**  
16 **Bell, which I believe was the GMD2 first**  
17 **manager, to an individual named Floyd Holle,**  
18 **advising Mr. Holle that the GMD2 performed an**  
19 **evaluation to determine if a permit for a new**  
20 **well could be approved, and it is advising**  
21 **Mr. Holle that the area is over-appropriated and**  
22 **it would mean that a new permit could not be**  
23 **approved because of the -- I don't see the words**  
24 **safe yield in here, but that is quite obvious**  
25 **that there was a safe yield evaluation ran that**

Page 2967

1 showed 14,507 acre-feet presently appropriated,  
 2 and according to the GMD management program at  
 3 that time, no more than 4,025 acre-feet could be  
 4 appropriated in that two-mile circle. Looks  
 5 like they were originally using 4,025, which was  
 6 real close to the 4,021 that we actually use  
 7 today.  
 8 Q. Okay. And can you turn to the next -- well, is  
 9 this the type of letter that would go to an  
 10 applicant who does not meet safe yield  
 11 requirements?  
 12 A. This is the type of letter that would go to a  
 13 potential applicant. I don't think that this  
 14 indicates that an application was filed. I  
 15 think they were asking, before they would file  
 16 an application, for the District to perform what  
 17 I would now call nowadays a preliminary  
 18 evaluation, which we do frequently for people.  
 19 So I don't think an application was filed. If  
 20 an application was filed, the recommendation of  
 21 denial would have been to the chief engineer.  
 22 This looks like a -- a individual's request for  
 23 a preliminary evaluation to me.  
 24 Q. Okay. And if you turn the page and take a brief  
 25 look at the next document.

Page 2968

1 A. Okay. I've looked at it.  
 2 Q. All right. And can you tell us what this is?  
 3 A. This is a dismissal of an application signed by  
 4 Lane Letourneau with the Division of Water  
 5 Resources, and the date of the order is  
 6 October 24, 2016. This is a dismissal of an  
 7 application, 49,566, for failure to meet the  
 8 District's, the GMD2's safe yield regulation.  
 9 Q. And does this look a little bit more familiar to  
 10 you as to what would be sent to an applicant  
 11 that does not meet safe yield today?  
 12 A. This looks like what would be sent from the  
 13 Division of Water Resources. It was different  
 14 from the letter that I would send to the -- to  
 15 the Division of Water Resources, but it looks  
 16 like -- looks like the District submitted a  
 17 recommendation of denial to the Division of  
 18 Water Resources by letter dated September 14th,  
 19 2016 advising that the application didn't comply  
 20 with the safe yield regulation.  
 21 Q. So procedurally you, your office would get the  
 22 application, conduct a safe yield analysis, and  
 23 make a recommendation to approve or deny, and  
 24 then that goes to DWR?  
 25 A. Yes, we would review an application, not just

Page 2969

1 for safe yield but all of our other regulations,  
 2 which would be spacing and any other regulation  
 3 that would be applicable to that application.  
 4 So that is a normal procedure, we receive the  
 5 application from the Division of Water Resources  
 6 with a request to review, perform that review,  
 7 provide a recommendation, and then the chief  
 8 engineer acts on that recommendation.  
 9 Q. Okay.  
 10 A. And I should say there is an appeal process, but  
 11 I don't know if we want to go into that, they  
 12 can -- an applicant can appeal to the District  
 13 Board of Directors asking for an exception. So  
 14 this -- our letter isn't the end, they do have  
 15 some potential for both appeal and even a  
 16 reconsideration of an appeal.  
 17 Q. Okay. So if we find ourselves in a place where  
 18 after a 1 percent drought the aquifer is  
 19 80 percent full, yet when you do safe yield  
 20 analysis in the same area it's over-appropriated  
 21 for safe yield, how can we balance -- how can my  
 22 clients understand, is there water available  
 23 when the aquifer is only 80 percent full?  
 24 A. There's still water available or there could  
 25 still be water available for those that already

Page 2970

1 have a claim to that water, a right to use that  
 2 water. There would not be any water available  
 3 for anybody that wanted a new application, other  
 4 than domestic, temporary, and certain small use  
 5 or applications of that nature.  
 6 Q. Okay. Have you -- proposal figure 11, yeah.  
 7 Have you had reason to use this figure in  
 8 talking to any water users in the District to  
 9 help them become comfortable that with this  
 10 proposal water is still available for their use?  
 11 A. I think I've discussed the proposal and some of  
 12 the figures in the proposal, and most likely  
 13 figure 10 and 11 I've discussed, I think, with  
 14 people who have asked questions regarding the  
 15 proposal and what the impacts are.  
 16 Q. Do you believe figure 11 should give comfort to  
 17 water users that if water table -- the water  
 18 levels were lowered to the modified minimum  
 19 index levels they would still have adequate  
 20 water available as their authorized quantities?  
 21 A. I -- I don't think it should give them automatic  
 22 comfort, I mean, everything is site specific to  
 23 both their well and the wells that are nearby  
 24 and the saturated thickness, the depth of the  
 25 aquifer, how much clay is in the aquifer, how

1 much sand, so this is too broad of a scale for  
2 me to be able to advise someone that -- should  
3 they be concerned or not.  
4 Q. Earlier, in these hearings, we referred -- well,  
5 in the proposal, I believe attachment I is the  
6 hydrograph prepared by Burns & McDonnell.  
7 A. These are -- yeah, these are hydrographs based  
8 on the modeled results; I don't think these  
9 are -- yeah, these indicate stress periods of  
10 the aquifer. So these are modeled, these appear  
11 to be modeled results that would show the  
12 groundwater elevation based on the ten years of  
13 stress periods that are identified on the  
14 bottom. So these are modeled results, not  
15 actual water levels, the way I'm reading these.  
16 Q. So my understanding from an earlier discussion  
17 was that a well owner, and I'm on the first one,  
18 so index cell 1, could use this as a way to  
19 identify whether their particular well might be  
20 impacted by the proposed modifications. Do you  
21 see how a well owner would use this hydrograph  
22 for that purpose?  
23 A. Well, the hydrograph demonstrates the modeled  
24 results, so you could gain some knowledge by  
25 if -- if the model is accurate for this

1 particular cell or close to accurate, you could  
2 gain some -- some knowledge on what the expected  
3 water level could be during a drought at that  
4 particular index well. So it's a little  
5 confusing because the tables -- or figures 10  
6 and 11 are averages of the cells. This is site  
7 specific modeled results, at least that's what  
8 the legend indicates, for the particular index  
9 well that is in that cell.  
10 So we're looking at IW1 here on this first  
11 one, that is showing both the upper aquifer and  
12 the lower, the shallow and the lower modeled  
13 results from the -- from the groundwater flow  
14 model that was run. So you could gain -- I  
15 think you could gain some -- some knowledge. I  
16 mean, it really comes down to how -- how  
17 accurately does this represent the actual index  
18 well water levels that would be physically  
19 measured, actual measurements. And without  
20 comparing the two side by side, I don't -- I  
21 mean, that would be a good exercise to do.  
22 Again, these are modeled results and I have  
23 real-time data so somewhat hard to compare, but  
24 I think you could look at both and say, well,  
25 this looks like it's reasonable or, no, this

1 doesn't look reasonable.  
2 Q. Okay. And when you talk about comparing, is  
3 that -- previously Counsel had used District  
4 Exhibit 60 as a comparison.  
5 A. Are those the water level hydrographs that we  
6 provided --  
7 Q. Yes.  
8 A. -- do you know?  
9 Q. That's how I understand them.  
10 A. Why don't I look at them. Volume IV, I think,  
11 if everybody's looking for them. If that's  
12 helpful.  
13 Q. So 'cause I don't look at these often, can you  
14 help me understand the difference between -- I'm  
15 on the first page of both which appears to be  
16 for index cell 1.  
17 A. I want to apologize, I wasn't laughing at you, I  
18 was laughing at Mr. Stucky over there. I was  
19 not laughing at you, I want to be clear for the  
20 record. I'm sorry, go ahead.  
21 Q. Can you help me understand the difference, you  
22 talked about -- you can do it better than I can,  
23 help me understand the difference between the  
24 hydrographs attached to the proposal and the  
25 hydrographs in item 60.

1 A. Okay. I'm going to take just a minute to look  
2 at them --  
3 Q. Okay.  
4 A. -- so I can maybe get my thoughts together as I  
5 look at these. Okay. So the -- the hydrograph  
6 that's in the City's proposal, and if you look  
7 real close, it actually has two hydrographs,  
8 they happen to be on top of each other for this  
9 particular modeled results of IW1A and C, which  
10 is the green and blue line; you can see they're  
11 basically, I would say, on top of each other.  
12 That's showing the modeled results through the  
13 eight years of drought and the two years of  
14 recovery, so ten years total.  
15 The red line on that hydrograph is the --  
16 the 1990 minimum index level, they call it the  
17 1993 -- well, actually, I'm not sure -- I'm not  
18 sure, but I believe the red line is the minimum  
19 index level because it's identified as the  
20 lower, and we use the lower for the regulatory  
21 1993 minimum index level.  
22 Q. The current minimum index level?  
23 A. The current -- yeah, and it's a little confusing  
24 because they have an upper and a lower, which is  
25 a blue clear at the top, and we picked sort of a

Page 2975

1 **bad one to look at because there is a extreme**  
 2 **head difference in index cell number 1 between**  
 3 **the upper and --**  
 4 Q. Would it be easier if we flip the page?  
 5 **A. It could, although while we're here it would**  
 6 **demonstrate the model has some issues in the**  
 7 **northern part of the basin storage area, which**  
 8 **is well -- well known and been recommended to be**  
 9 **fixed by the District more than once.**  
 10 Q. Okay.  
 11 **A. This has a huge head difference between the blue**  
 12 **and the red, but you can see the modeled**  
 13 **results, they overlay each other.**  
 14 Q. Well, let's do -- I think you guys have  
 15 discussed that before. So let's try cell 2 and  
 16 see if that --  
 17 **A. Cell -- cell 2 would be -- would be better, I**  
 18 **think, to use.**  
 19 Q. Okay.  
 20 **A. Just because of the head differences that are**  
 21 **identified by the model and the reality of the**  
 22 **head difference is so huge in IW1.**  
 23 Q. Okay. Now, when I flip through --  
 24 **A. I'm sorry, let's -- IW2 has the same problem,**  
 25 **let's -- I thought we were on 2, let's do IW3.**

Page 2976

1 Q. 3?  
 2 **A. IW1 and 2 both have extreme issues with wellhead**  
 3 **differences --**  
 4 Q. Okay.  
 5 **A. -- between model and reality, which, again, have**  
 6 **been identified that need refinement. Let's do**  
 7 **IW3, I think IW3 is --**  
 8 Q. More typical?  
 9 **A. Would you mind if I found one that would be the**  
 10 **most easiest one to look at?**  
 11 Q. Yes, please.  
 12 **A. IW3 has some problems too.**  
 13 Q. The least confusing preferably.  
 14 **A. I'm trying to find one that has sort of the**  
 15 **most -- the most spread in the lines so it's**  
 16 **easier to look at, because the lines get so**  
 17 **close together that -- let's do IW10 maybe,**  
 18 **might be the -- I don't know, I'm just trying to**  
 19 **find one that is less confusing than the others.**  
 20 Q. Okay.  
 21 **A. Is that one okay to look at?**  
 22 Q. I have to admit, this is all very foreign to me.  
 23 **A. That's okay.**  
 24 Q. There is divergence in the lines and they're all  
 25 in the purple bars, that's all I know.

Page 2977

1 **A. Yeah, we can go over them. You want me to go**  
 2 **ahead?**  
 3 Q. Yes.  
 4 **A. Okay. So we're looking at IW10, and I**  
 5 **apologize, I think this one maybe is a little**  
 6 **bit easier to understand. The black line on**  
 7 **IW10A and 10C in the City's report shows the**  
 8 **groundwater level elevation approximately. The**  
 9 **blue line shows the upper 1993 levels; I think**  
 10 **we should ignore those because they're not the**  
 11 **right regulatory. The red is the 1993 lower**  
 12 **elevation, that should be the regulatory number.**  
 13 **And then the blue and green lines, which are**  
 14 **overlying each other, are the modeled results**  
 15 **during the drought stress period and two years**  
 16 **of recovery.**  
 17 Q. And am I correct that the proposed minimum index  
 18 level is not depicted on this hydrograph?  
 19 **A. The proposed minimum index level is not shown on**  
 20 **this hydrograph.**  
 21 Q. Okay.  
 22 **A. And if you want to contrast that with what is**  
 23 **shown on the GMD2-made hydrograph, it is only**  
 24 **for the IW10C, only for the deep well, so I**  
 25 **think that -- that's of note. Just so we're**

Page 2978

1 **clear, we're only looking at IW10C. The red**  
 2 **line -- let me start over. The top is the**  
 3 **approximate land surface elevation that's**  
 4 **labeled right below the label. The red line is**  
 5 **the existing minimum index level; that's the**  
 6 **elevation that's the regulatory number of**  
 7 **1375.09 feet above sea level. The blue line**  
 8 **demonstrates the minimum drought model**  
 9 **elevation, that is from the City's proposal.**  
 10 Q. And how does the minimum drought model  
 11 elevation, the blue line on the District's  
 12 hydrograph, that would be the green line on the  
 13 proposal hydrograph?  
 14 **A. Right, so the minimum drought model elevation on**  
 15 **the District's, in the blue, is what the City**  
 16 **modeled results show as the lowest point that**  
 17 **occurred during the model runs.**  
 18 Q. Okay.  
 19 **A. So it would be the lowest model run probably in**  
 20 **year eight, which looks like about right. We**  
 21 **said it was 1368 feet, and the -- the model run**  
 22 **looks like it's about 1368, so that would**  
 23 **probably be where that came from.**  
 24 Q. Okay.  
 25 **A. Because we got to remember the minimum drought**

1 elevation that's listed in the tables, in the  
2 proposal is the lowest that it achieved during  
3 the drought --  
4 Q. Okay.  
5 A. -- run. And then the green is the proposed --  
6 I'm sorry, the green on the GMD2 hydrograph is  
7 the proposed minimum index level that's proposed  
8 by the City's proposal. And you can see it's a  
9 10-foot difference between the blue and the  
10 green, so they're proposing to lower the minimum  
11 index level 10 feet below the modeled drought  
12 results and about 17 feet, if I'm doing the math  
13 right, and I believe I am, 17 feet below the  
14 current minimum index level.

15 Q. So if I -- my domestic well is in index well --  
16 or index cell 10 --

17 A. Uh-huh.

18 Q. -- I want to make sure that my well is deep  
19 enough that it goes below both the minimum  
20 drought and the proposed minimum index levels,  
21 and that's what this will show me?

22 A. At the specific IW well location, this would be  
23 specific to that. And I really glossed way over  
24 something -- two items on here. One is the  
25 approximate bedrock elevation at the bottom, and

1 from January, because that's the regulatory date  
2 when the water levels are measured.

3 Q. Okay.

4 A. So you were asking -- at this IW -- if you had a  
5 well right by IW10C, you would want to make sure  
6 your well had enough water column of available  
7 aquifer, sands and gravels in particular, well  
8 below -- well below, for sure, the proposed  
9 minimum index level because you can't just have  
10 your well right there, you got to have -- you  
11 got to have room for pumps and those kind of  
12 things; so you would want to have a well deeper  
13 than the proposed minimum index level, or at  
14 least I would. If I was installing a well, I'd  
15 say, well, if the City is going to go down to  
16 1358 feet, or roughly 74 feet below land  
17 surface, I better get my well, you know, farther  
18 than that.

19 Q. Okay. And is that how you would recommend well  
20 owners in the area use these hydrographs? Or is  
21 there further work they should do?

22 A. Well, yeah, I think further work. This is  
23 one -- one point in a two-by-two-square-mile  
24 area so it would certainly give you some  
25 insight. You know, if -- we have the -- we have

1 those -- we would have made that based on the  
2 drill logs that we had from the IW wells, we've  
3 talked about those drill logs before.

4 Q. So that's an actual data point?

5 A. It is a -- yeah, the elevation's calculated  
6 based on the depth of bedrock that was shown in  
7 the hydrograph; it simply is taking the land  
8 surface elevation and subtracting the depth of  
9 the bedrock. So if the bedrock was 200 -- 200  
10 feet from the top of land surface, it's just the  
11 land surface elevation minus 200 feet, which is  
12 about what it is on this one; actually it's  
13 about 189 or so.

14 And then the gray or blackish line is the  
15 actual water level measurements, quarterly  
16 measurements that primarily was taken by GMD2  
17 staff. Some of the early ones, I think, may  
18 have been done by USGS; I'd have to look at the  
19 record on this particular site. Every one of  
20 those black triangles are actual measurements  
21 that we took at the index wells from land  
22 surface. And the bigger triangles are the  
23 January ones.

24 Q. Okay.

25 A. So -- and the reason the bigger triangle are

1 the proposed minimum index level so we kind of  
2 know where the elevation is. I mean, the water  
3 ends up being sort of flat, it depends on how  
4 much ground is above it as far as how far you  
5 got to get down to the water table.

6 And I generalize that, it's not exactly  
7 true, but we know about the water level is about  
8 1358 feet, so if I knew my land surface  
9 elevation, I could calculate probably how deep I  
10 wanted my well. With the caveat that you would  
11 have to look at -- either drill a test well,  
12 drill the well, or if you had a nearby log to  
13 see -- if it's all clay below that well, that's  
14 a problem. I could drill a deeper well, but if  
15 I'm going to put it in clay -- I mean, I'd have  
16 to make sure there was productive sand zones. I  
17 think that's where we got into that term  
18 practical saturated thickness that's been such a  
19 controversy. But drilling a well, just saying I  
20 want to be 20 feet deeper, well, you know, I  
21 don't know what's below me, and then there's  
22 also potential quality issues you'd want to look  
23 at.

24 Q. Okay. Thank you for that. Hopefully, some of  
25 my clients were taking copious notes.

Page 2983

1 **A. I'd be glad to meet with anybody from the City**  
 2 **to the irrigators to discuss if they wanted --**  
 3 **if they want to go over it.**  
 4 Q. In your work and in your duties, do you have an  
 5 obligation to work with all water users  
 6 regardless of beneficial use?  
 7 **A. Yes. I mean, I had to think about it, all users**  
 8 **of the District obviously. I didn't want to**  
 9 **sound like I paused because I had to think about**  
 10 **it, yes, all users of any groundwater in the**  
 11 **District. I mean, I help surface water owners**  
 12 **too just because they -- because I can, if they**  
 13 **need some help, but --**  
 14 Q. And you do that -- and no bias between one  
 15 beneficial use to the next?  
 16 **A. Oh, absolutely not. I mean, we are -- anybody**  
 17 **that has a need or a request, we'll treat the --**  
 18 **treat the same.**  
 19 **MS. WENDLING:** Okay. And I have no  
 20 further questions.  
 21 **PRESIDING OFFICER:** Okay.  
 22 **MR. STUCKY:** Can I confer with  
 23 co-counsel for a second?  
 24 **PRESIDING OFFICER:** Let's go off the  
 25 record for just a moment.

Page 2984

1 (Discussion held off the record.)  
 2 **PRESIDING OFFICER:** I'm sorry, back  
 3 on the record.  
 4 **MR. STUCKY:** As a housekeeping  
 5 matter, at this point, we're moving to  
 6 admit Exhibit 60.  
 7 **PRESIDING OFFICER:** Okay. Any  
 8 objections?  
 9 **MR. OLEEN:** Let me just see what  
 10 that is again, sorry.  
 11 **MR. MCLEOD:** I think these were the  
 12 hydrographs, and maybe the witness could go  
 13 into a little more detail about how and by  
 14 whom the different aspects of the  
 15 hydrographs were produced.  
 16 **MR. STUCKY:** Mr. Boese, did you help  
 17 create these hydrographs?  
 18 **A. Yes, and it's mostly in the sense that I**  
 19 **reviewed those. But -- well, I collected a lot**  
 20 **of the data for these hydrographs, I'm sorry,**  
 21 **yes.**  
 22 **MR. STUCKY:** In fact, all the data  
 23 shown in these hydrographs is either  
 24 collected by you or Mr. Randolph, in  
 25 addition to numbers that were pulled out of

Page 2985

1 the City proposal; is that right?  
 2 **A. Yeah. I -- I do believe that maybe some of the**  
 3 **early on water levels were actually compiled**  
 4 **from the USGS, which would obviously be a**  
 5 **respectable entity to receive water level data**  
 6 **from. I think when they were first put in, USGS**  
 7 **might have taken some water level measurements**  
 8 **that are included in this data.**  
 9 **So other than that, I started measuring**  
 10 **these when they were installed, shortly after**  
 11 **they were installed. I measured them myself**  
 12 **until Mr. Randolph took over, I believe -- took**  
 13 **over for me in October of 2005, he would have**  
 14 **started. Every point of data collection from**  
 15 **2005 in October would have been his. Prior to**  
 16 **that would have been mine, with maybe USGS at**  
 17 **the beginning, so the data is good.**  
 18 **MR. STUCKY:** And Mr. Randolph is  
 19 available, we can call him in if we need to  
 20 lay any further foundation on these  
 21 hydrographs as far as any data he  
 22 collected, he is in the office today, he is  
 23 available to call. We listed him as one of  
 24 our witnesses, we're prepared to call him  
 25 if there's any question as to the

Page 2986

1 foundation of these hydrographs. But,  
 2 again, I move to admit these hydrographs  
 3 into evidence.  
 4 **MR. MCLEOD:** And one more question,  
 5 the witness may have said but the  
 6 bedrock --  
 7 **A. Uh-huh.**  
 8 **MR. MCLEOD:** -- line, where is that  
 9 being derived from?  
 10 **A. So the bedrock elevation, and I want to note we**  
 11 **put approximate, were based on the drill logs**  
 12 **for the index monitoring wells, and we've looked**  
 13 **at some of those. We have drilling logs that**  
 14 **indicate at what depth below land surface**  
 15 **bedrock was encountered. Those are made by**  
 16 **subtracting the land surface elevation, which is**  
 17 **identified at the top, and I'm almost certain**  
 18 **those are all surveyed elevations because when**  
 19 **those index wells are put in, I believe USGS**  
 20 **came out and did a survey for elevation, so it's**  
 21 **simple as taking the land surface elevation and**  
 22 **subtracting the bedrock that's indicated on the**  
 23 **IW drilling log.**  
 24 **I can say my former hydrogeologist**  
 25 **researched those and also looked at the**

1 individual notes from the City's consultant,  
2 which was a licensed geologist, to verify those,  
3 just to ensure that what was on the drill log  
4 was an accurate representation of what the drill  
5 notes were. I think he may have found, you  
6 know, a foot or two variance here and there  
7 because the geologist would say, you know,  
8 beginning to encounter bedrock and the driller  
9 might have counted a little bit of material  
10 below that. That's why we put approximate. I  
11 mean, of course, when you're drilling with a  
12 drill rig, it's -- can be approximate by a foot  
13 or two based on where the kelly table is set and  
14 where the drill stem sets.

15 So I'm confident the data is good as far as  
16 the -- our data that we collected. The other  
17 figures that are on there, the lines of the  
18 minimum drought elevation, existing minimum  
19 index level, and the proposed come from the  
20 City's proposal; they're just represented there  
21 on what's in the City's table as far as  
22 elevation. So ...

23 MR. MCLEOD: City has no objection  
24 to admission of the exhibit.

25 PRESIDING OFFICER: Okay, thank you.

1 So Exhibit 60, District 60 will be  
2 admitted.  
3 MR. STUCKY: Mr. Boese, as another  
4 housekeeping matter, I think sometime  
5 before I started icing my shoulder, you  
6 mentioned something about some safe yield  
7 calculations you performed on the withdrawn  
8 permits of the City, you stated something  
9 about that; is that correct?

10 A. We were reviewing the ASR Phase II safe yield  
11 calculations that I ran on, I believe, on  
12 December 5th of 2019 for each of the 30 ASR  
13 permits that are subject to this proposal.

14 MR. STUCKY: Which exhibit was that?

15 A. 59, I believe. But if you'll give me a second,  
16 I'll verify it. It is Exhibit 59. It's  
17 Exhibit 59.

18 MR. STUCKY: Mr. Boese, I think  
19 before I faded out of consciousness, I  
20 heard a question asked about the fact that  
21 in the proposal the City is articulating or  
22 arguing that they can withdraw more than  
23 18,000 acre-feet of recharge credits per  
24 year in their proposal. Is that what part  
25 of your testimony was?

1 the connection of the two.

2 A. Can I -- can I speak?

3 MR. STUCKY: Yes.

4 PRESIDING OFFICER: Yes.

5 A. We may have to have the court reporter check, 59  
6 may have been admitted, but there was another  
7 set of evaluations that was based on the City's  
8 applications that have been withdrawn that are  
9 also an exhibit, and I think that was objected  
10 to --

11 MR. STUCKY: That's what I'm trying  
12 to ask you about.

13 A. -- based on relevance.

14 MR. STUCKY: Yeah, that's the  
15 exhibit I asked you to find.

16 A. Okay, yeah, 59 was the safe yield that I just  
17 reviewed with Ms. Wendling.

18 PRESIDING OFFICER: That's what I  
19 thought. I thought that was already in.

20 A. I believe 59 is, but I think Mr. Stucky is  
21 referring to another set of evaluations that are  
22 also in our exhibit notebook for the 30  
23 existing --

24 MR. STUCKY: Yeah.

25 A. -- the 30 applications that were withdrawn and I

Page 2991

1 think we're --

2 **MR. STUCKY:** Please find that

3 exhibit --

4 **A. Okay.**

5 **MR. STUCKY:** -- for me, Mr. Boese.

6 **A. Yeah. I don't have the advantage of having our**

7 **table of contents, but I will find it here.**

8 **MR. STUCKY:** Can we go off the

9 record --

10 **PRESIDING OFFICER:** Yes.

11 **MR. STUCKY:** -- very briefly?

12 **PRESIDING OFFICER:** Yes.

13 (Thereupon, a recess was taken;

14 whereupon, the following was had.)

15 **PRESIDING OFFICER:** Okay. Back on

16 the record.

17 **MR. STUCKY:** At this point, now that

18 we've located Exhibit 41, which I would

19 proffer for the record is what Mr. Boese

20 testified as to earlier as being safe yield

21 calculations on the permits that were

22 applied for by the City and then withdrawn

23 shortly before this hearing, that's what

24 that exhibit entails, I ask that that

25 exhibit now be admitted.

Page 2992

1 **MR. MCLEOD:** Same objection as

2 before, I think.

3 **MR. STUCKY:** Can I -- are you

4 objecting? Okay. Speaking to that

5 objection, Ms. Owen --

6 **PRESIDING OFFICER:** I'm sorry, I'm

7 not sure I'm looking at the right exhibit.

8 **A. Can I -- can I speak?**

9 **PRESIDING OFFICER:** Please do, yes.

10 **A. Okay.**

11 **PRESIDING OFFICER:** Describe --

12 describe Exhibit 41 just so we all know.

13 **A. So Mr. Stucky said that these were safe yield**

14 **analysis for the 30 ASR Phase II applications**

15 **that were withdrawn, which were file 48,704**

16 **through 48,733. They include safe yield**

17 **evaluations. They are a more somewhat thorough**

18 **review of the ASR Phase II applications that**

19 **were subsequently dismissed by the applicant.**

20 **They also include spacing evaluations, as well**

21 **as safe yield, with essentially a description of**

22 **each application as far as how much the**

23 **application is requesting, the rate, how much**

24 **quantity is requesting, the rate, again, the**

25 **location and then a summary of the safe yield**

Page 2993

1 **evaluation and the spacing evaluation. And if I**

2 **could help you look at what I'm talking about,**

3 **if you would turn back --**

4 **PRESIDING OFFICER:** That would be

5 great.

6 **A. So the first page is just a summary, this was**

7 **provided to my board of directors of those 30**

8 **applications while they were still pending. The**

9 **next page is a map that shows both the existing**

10 **ASR Phase I and Phase II permits in blue dots,**

11 **as well as the surface intakes and bank storage**

12 **well locations. And then the red dots were the**

13 **proposed new well locations.**

14 **PRESIDING OFFICER:** Okay.

15 **A. The next one is also a map with some more detail**

16 **on it, which just basically has the file numbers**

17 **of the proposed applications. The next page,**

18 **then, is the safe yield evaluation, a map,**

19 **followed by the spreadsheet of that safe yield,**

20 **followed by the spacing evaluation, which would**

21 **again show the 660- and 1320-foot radiuses**

22 **around that proposed well, with a, I would say**

23 **an abbreviated short summary of the application**

24 **right below that map where it says appropriation**

25 **application and lists the file number, the**

Page 2994

1 **location, the safe yield results, and the**

2 **spacing results. There is one of those sets of**

3 **documents for all 30 applications, so it does**

4 **include the safe yield evaluation and also the**

5 **spacing, I think, would be the crux of it.**

6 **PRESIDING OFFICER:** Okay. And these

7 are being offered in connection to what,

8 I'm sorry, I'm not following?

9 **MR. STUCKY:** The position is, Your

10 Honor, that the City's proposal presupposes

11 that these applications were applied for

12 based on the fact that they're seeking

13 credits greater than 18,000 per year. So

14 right now only 18,000 of credits are

15 allowed per year, their proposal is

16 predicated on the notion that they're

17 actually going to get more each year than

18 that 18,000.

19 And so because their proposal is

20 predicated on that notion and presupposes

21 that these additional permits will be

22 applied for, they're relevant now to

23 demonstrate the further nature of the

24 over-appropriation of the aquifer, to

25 demonstrate that new safe yield would not

1 be met if these assumed permits that the  
2 proposal assumes would be applied for were  
3 actually applied for, and so I think  
4 they're relevant now.  
5 **MR. MCLEOD:** And I think Counsel is  
6 in error, Madam Presiding Officer, because  
7 he's premising all of that line of stuff on  
8 having found a 1,907 acre-foot variance  
9 between a number in a table and the  
10 18,000 acre-foot total that Mr. Boese came  
11 to from the credits in the ASR permits, the  
12 annual -- the annual diversion limit,  
13 counting only the ASR Phase II permits.  
14 Now, the ASR Phase I withdrawal rights  
15 would, I think -- and I believe the witness  
16 has recognized, would account for more than  
17 that 1,907 acre-foot variance. And I want  
18 to be -- I want to be clear about  
19 something, although the City has said in  
20 its proposal that it does not intend to  
21 modify the 1993 levels for Phase I and will  
22 not withdraw AMCs from Phase I, that  
23 doesn't mean the City won't use existing  
24 authority to withdraw physical recharge  
25 credits from Phase I. And so the

1 Mr. Boese, I think, is saying is that if we  
2 used only authority to withdraw under the  
3 Phase II permits, we could only get to  
4 18,000 acre-feet. But we have not said  
5 that we'll only use authority to withdraw  
6 under the Phase II permits.  
7 **PRESIDING OFFICER:** Is that  
8 applicable to everything else in your  
9 proposal, that that might include pumping  
10 from Phase I in some respect?  
11 **MR. MCLEOD:** I'm not sure as to the  
12 scope of that question.  
13 **PRESIDING OFFICER:** Because up until  
14 this time, my understanding was the  
15 proposal only discussed Phase II and in no  
16 way whatsoever included any change to or  
17 usage of Phase I.  
18 **MR. MCLEOD:** It includes no change  
19 to Phase I. But I don't think that we have  
20 said at any point that we're just not going  
21 to use any of the rights in Phase I that  
22 are existing rights. And that's what  
23 his -- that's what his postulate assumes.  
24 The road that he's trying to take you down  
25 is to say that, well, if we only look at

1 conclusion that Counsel has put together,  
2 it doesn't have a basis, he can't get where  
3 he's going by virtue of that 1,907  
4 acre-foot variance.  
5 **PRESIDING OFFICER:** So are you  
6 saying that, I think it's table 2-5, this  
7 value that was over 19,000 acre-feet  
8 should -- are you saying that that would  
9 include Phase I pumping?  
10 **MR. MCLEOD:** It could include Phase  
11 I authority to withdraw credits. Would  
12 include Phase I authority to withdraw  
13 credits.  
14 **PRESIDING OFFICER:** But is that what  
15 the table is set out to depict because I  
16 thought that was only for Phase II?  
17 **MR. MCLEOD:** The table is set out to  
18 depict City pumping needs and demands, and  
19 that's what that -- that's what that figure  
20 is showing is what the City would need from  
21 credits, in addition to its water from  
22 Cheney, in that year in order to get past  
23 with meeting its demand. So the City would  
24 need, according to that space on the table,  
25 that 19,907 acre-feet, and what -- what

1 the annual withdrawals that could be done  
2 strictly under the Phase II withdrawal  
3 authority, the City would be 1,907  
4 acre-feet short here and, therefore, let's  
5 resurrect all the material about these 30  
6 permit applications that have been  
7 withdrawn, assuming that the City must  
8 really mean to make all 30 of those  
9 applications, because I guess he thinks we  
10 would need those 30 applications to get  
11 another 1,907 acre-feet --  
12 **PRESIDING OFFICER:** Okay.  
13 **MR. MCLEOD:** -- which I will tell  
14 you is also -- the math doesn't come up.  
15 **PRESIDING OFFICER:** That's not my  
16 understanding of the way he's described  
17 what he wants to do with these. But,  
18 again, it's a different matter if you're  
19 now saying that something in this proposal  
20 might reflect usage under Phase I because  
21 that has not been my understanding up to  
22 this point.  
23 **MR. MCLEOD:** Well, that -- that  
24 19,907 acre-feet would need 1,907 acre-feet  
25 of credits from Phase I, that number in

Page 2999

1 that table would.  
 2 **PRESIDING OFFICER:** Mr. Oleen, are  
 3 you --  
 4 **MR. STUCKY:** At this point --  
 5 **MR. OLEEN:** Well, I'm just weighing  
 6 in, I don't know that it matters, the cover  
 7 letter to the proposal says, the City's not  
 8 requesting any modification to the permits  
 9 associated with ASR Phase I infrastructure.  
 10 But I guess I wondered if that spoke to  
 11 Mr. McLeod's point, that's not saying they  
 12 won't take any recharge credits that they  
 13 may currently be allowed to --  
 14 **PRESIDING OFFICER:** Well, and I'm  
 15 not trying to read into this any commitment  
 16 that the City would not pump Phase I, I'm  
 17 not trying to read that into it. I'm just  
 18 saying my understanding that the  
 19 reflections in the proposal, I have not yet  
 20 heard someone describe any of the  
 21 calculations or modeling or anything  
 22 include use under Phase I, other than the  
 23 kind of things that Mr. Romero was talking  
 24 to us about in some of his -- or, no,  
 25 anyway that wasn't Phase I, that was still

Page 3000

1 Phase II. So to me, this raises a whole  
 2 new factual issue, if that might be  
 3 included in the proposal, because that's  
 4 not been my understanding so far.  
 5 **MR. MCLEOD:** So, again, I think that  
 6 the presence of that 1,907 acre-feet  
 7 that -- that wouldn't be covered by the  
 8 18,000 acre-feet in the Phase II permits  
 9 would have to be acre-feet withdrawal  
 10 authority of Phase I, it would have to be,  
 11 so -- so, yes, there's that involvement,  
 12 over that eight-year period, there would  
 13 need to be 1,907 acre-feet of credits  
 14 from -- from Phase I credits.  
 15 **PRESIDING OFFICER:** Mr. Stucky.  
 16 **MR. STUCKY:** Thank you, Your Honor.  
 17 So either at best, Mr. McLeod has become a  
 18 witness in this -- a witness in his own  
 19 case and disqualifies him as an attorney  
 20 with this new testimony based on becoming a  
 21 witness --  
 22 **MR. MCLEOD:** I object to that, I  
 23 have not testified to a blame thing.  
 24 **PRESIDING OFFICER:** Okay. Let's  
 25 settle down.

Page 3001

1 **MR. STUCKY:** Okay. That was not --  
 2 **PRESIDING OFFICER:** Settle down.  
 3 **MR. STUCKY:** -- trying to be  
 4 inflammatory, I'll get to the point here.  
 5 **PRESIDING OFFICER:** Get to the  
 6 point.  
 7 **MR. STUCKY:** The point is, well, at  
 8 best -- this would be of limited relevance  
 9 at best. I still think it's relevant  
 10 because this is speculative now whether or  
 11 not even from the City's standpoint this  
 12 variance, and to me, 1900 acre-feet is of  
 13 significance, this perspective of whether  
 14 this variance is due to ASR II credits or  
 15 ASR I credits, I think is free for argument  
 16 at this point, obviously, and so even if  
 17 this exhibit is of limited relevance, I ask  
 18 that it be admitted so ...  
 19 **PRESIDING OFFICER:** Well, I'm still  
 20 trying to figure out the relevance that it  
 21 does have. I -- I can see that it's  
 22 further documentation establishing  
 23 over-appropriation of the area, but I'm  
 24 kind of missing what else it might be  
 25 relevant to. And I'm sorry if I'm not

Page 3002

1 following.  
 2 **MR. ADRIAN:** Well, these  
 3 applications, as was mentioned earlier,  
 4 were filed all at the same time when this  
 5 proposal was filed, it was all one filing  
 6 by the City. And then I think the City  
 7 recognized, if I will repeat what I heard  
 8 Mr. Pajor say, the City recognized that  
 9 these applications would further complicate  
 10 the hearing, and so in order to simplify  
 11 this hearing process, which didn't really  
 12 happen, but in order to simplify this  
 13 hearing process, they simply withdrew those  
 14 30 applications to focus in on the two  
 15 issues that are really here.  
 16 But what that says is that this is a  
 17 normal and natural result of what we're  
 18 going to face if -- if the approval -- if  
 19 the proposal is approved, then these  
 20 applications become highly relevant. And  
 21 so that's why -- and I think Mr. Boese did  
 22 the analysis before they were withdrawn,  
 23 but that's why he did all the work on the  
 24 analysis of those. But they are a normal  
 25 and natural result of -- of this proposal

1 being adopted.  
2 **PRESIDING OFFICER:** So bear with me  
3 and tell me if I have misunderstood. There  
4 are in my mind two groups of, well, of  
5 files that Mr. Boese has done safe yield  
6 evaluations for in regards to this proposal  
7 as a general concept. One group were these  
8 applications that we're talking about with  
9 Exhibit 41 that were new applications that  
10 were filed that were subsequently  
11 withdrawn. The other group of safe yield  
12 evaluations that he did, if I understand  
13 this correctly, and I hope you're  
14 listening.

15 **A. I'm listening. I'm sorry, I'm listening.**

16 **PRESIDING OFFICER:** The other group  
17 of safe yield evaluations were on the  
18 actual Phase II recharge recovery wells  
19 that are the subject of the Phase II  
20 approval. Am I following that correctly?

21 **A. Yes, I -- can I be a little more -- a little  
22 more detail?**

23 **PRESIDING OFFICER:** Yes, because I  
24 need to understand exactly what documents  
25 we're talking about in order to rule on

1 **area that I did not have any safe yield**  
2 **calculations in, and those are all the red dots**  
3 **particularly on the southern one-third or**  
4 **one-fourth or so. The ones that are asked to be**  
5 **admitted would then show what the safe yield is**  
6 **in that area also.**

7 **We didn't have much there because most of**  
8 **the original 30 applications we were looking at**  
9 **today were the -- more to the northern portion;**  
10 **a lot of these are to the southern, which we**  
11 **didn't have any data. If you just look at the**  
12 **safe yields we have today, there is no data in**  
13 **50 -- Exhibit 59 for the southern portion of the**  
14 **basin storage area.**

15 **MR. STUCKY:** Mr. Boese, could you  
16 turn to page 3-6 of the City's proposal?

17 **A. Page 3-6?**

18 **MR. STUCKY:** Yeah, page 3-6 of the  
19 City's proposal. Is it missing from your  
20 notebook?

21 **A. There is -- I go from 3-12 to 4-1. What am I**  
22 **missing here?**

23 **MR. STUCKY:** The exhibit is missing  
24 a bunch of the proposal, I guess. There's  
25 a page 3-6.

1 these objections.  
2 **A. Well, I think they're relevant for a number of**  
3 **reasons, one, that I don't think the City has,**  
4 **and I'm trying to -- that's what I was trying to**  
5 **do and I wasn't not paying attention to, I don't**  
6 **think the City has very many recharge credits**  
7 **available in the Phase I, what we consider the**  
8 **Phase I cells. We can maybe evaluate that if we**  
9 **had a little bit of time.**

10 **But also this proposal is -- is obviously**  
11 **related to the ASR Phase II applications, but**  
12 **it's clear in the proposal that if these**  
13 **concepts are approved, they would be applicable**  
14 **to new applications also. The lowering of the**  
15 **minimum index level wouldn't be just per permit,**  
16 **it would be for cell. And the AMC concept would**  
17 **then be allowed for future ASR application. I**  
18 **think there's some statements that have been**  
19 **made to that, that this -- we're looking at**  
20 **these 30 today, but these concepts would be**  
21 **applicable to future applications also.**

22 **And then I'd make one more point if you**  
23 **look at the map that is with 41, on the second**  
24 **page, I think these are relevant because they --**  
25 **there was an area that -- in the basin storage**

1 **A. Oh, I thought you said 3-16.**

2 **MR. STUCKY:** No, 3-6.

3 **A. I'm sorry. Boy, it's getting late. Okay.**  
4 **Okay, I'm sorry, Dave, where are you at?**

5 **MR. STUCKY:** Page 3-6 of the City's  
6 proposal at the top, it refers to future  
7 wells, is that part of what you were  
8 talking about?

9 **A. What -- what number are you looking at?**

10 **MR. ADRIAN:** Number 2.

11 **A. Okay. Yes. That's talking about future bank**  
12 **storage wells. It's in --**

13 **MR. STUCKY:** I'll find the cite, but  
14 there's a cite in here, is there not,  
15 Mr. Boese, where it talks about how this  
16 proposal applies to future --

17 **A. That's my recollection, and I'm trying to --**

18 **MR. STUCKY:** We'll find the cite.

19 **MR. MCLEOD:** Madam Hearing Officer,  
20 I just feel the need to point out as well,  
21 these applications as to -- I mean, these  
22 30 applications that were withdrawn and the  
23 safe yield calculations concerning them,  
24 even if we were to posit that those  
25 applications would be refiled with a

Page 3007

1 favorable decision in this case, any such  
 2 favorable decision would mean that those  
 3 new applications would not be subject to  
 4 safe yield. And so I'm not seeing what --  
 5 what, other than a rabbit hole in the  
 6 record, we're doing admitting safe yield  
 7 calculations on 30 dismissed applications  
 8 on the theory that they might be refiled  
 9 someday not subject to safe yield. I see  
 10 no possible relevance in any of that, it's  
 11 just more fog and confusion.  
 12 **MR. STUCKY:** I think we've made a  
 13 pretty strong argument why safe yield would  
 14 apply to this proposal.  
 15 **MR. MCLEOD:** But if -- if the City's  
 16 position wins out here, it won't. I mean,  
 17 that is an inherent facet of what we're  
 18 discussing here. And if the City's  
 19 position doesn't win out here, those  
 20 applications can't -- can't be approved if  
 21 they're refiled. The City doesn't contest  
 22 that those applications could be approved  
 23 if they were subject to safe yield; we know  
 24 they wouldn't be approved if they're  
 25 subject to safe yield. And they won't be

Page 3008

1 refiled if -- if you find that AMCs are not  
 2 recharge credits and are subject to safe  
 3 yield.  
 4 **PRESIDING OFFICER:** Well, something  
 5 Mr. Boese said is of concern to me, and I  
 6 do recall at least the implication, if not  
 7 the actual obvious testimony, that the  
 8 applications were dismissed to simplify  
 9 this process and to let the principles of  
 10 the proposal be resolved first. And if,  
 11 indeed, approval of this proposal approves  
 12 these principles for future applications,  
 13 that is relevant, and that's something that  
 14 matters to me and that I think bears on  
 15 whether this is -- this particular exhibit  
 16 should be admitted. So there seems to be  
 17 some vague -- maybe not even vague but  
 18 memory that provision is included in the  
 19 proposal that this would apply to future  
 20 applications. I need that question  
 21 resolved.  
 22 **MR. MCLEOD:** Well, I mean, obviously  
 23 if a decision is made about lowering the  
 24 bottoms for ASR Phase II, that would apply  
 25 to future ASR II applications; and if a

Page 3009

1 decision is made about AMCs one way or the  
 2 other, that decision will apply to future  
 3 ASR Phase II applications.  
 4 And for the record, to fill the point  
 5 out since Mr. Pajor is not here to do it,  
 6 my understanding of his comments on the  
 7 complication issue was simply that it  
 8 looked like the case would never get out of  
 9 the clutches of the District if those 30  
 10 applications were not withdrawn because  
 11 there was no way to make the District  
 12 actually issue its recommendations on  
 13 those -- on those applications in order to  
 14 ever move this case. And that was my  
 15 understanding of why those 30 applications  
 16 were dismissed in order to be able to ever  
 17 get to this hearing at all.  
 18 **MR. ADRIAN:** Well, I certainly  
 19 disagree with the characterization of the  
 20 clutches of the District. What I recited  
 21 earlier was what I recall him saying, and  
 22 that was to simplify the process and focus  
 23 in on these two issues.  
 24 **PRESIDING OFFICER:** Okay. Well, I  
 25 don't recall the -- I don't recall having

Page 3010

1 the impression that you described, but I  
 2 don't have the transcript available to me  
 3 to review. But nonetheless, if resolving  
 4 this proposal resolves future applications  
 5 that may get filed under Phase II proposal,  
 6 then I find potential safe yield --  
 7 evaluations of -- some safe yield  
 8 evaluations done by Mr. Boese at other  
 9 locations within the well field to be  
 10 relevant. And I understand your  
 11 objections, but I am going to admit GMD 41.  
 12 Thank you for allowing me time to make  
 13 notes, Mr. Stucky.  
 14 **MR. STUCKY:** We don't -- Mr. Adrian  
 15 was standing up behind me, and that's  
 16 always a bad time when the mighty Tom  
 17 Adrian is standing behind me at my  
 18 shoulder, but we've conferred and I think I  
 19 can speak for both of us that we don't see  
 20 the need to ask this witness further  
 21 questions. However, I reserve the right to  
 22 ask additional questions in the event other  
 23 parties are allowed to ask additional  
 24 questions, notwithstanding the fact that we  
 25 have not.

1 **PRESIDING OFFICER:** Mr. McLeod, I  
2 think that brings us back to you.  
3  
4 **CROSS-EXAMINATION**  
5 **BY MR. MCLEOD:**  
6 Q. Mr. Boese, would you turn to page 3-6 in the  
7 City's proposal?  
8 **A. Okay.**  
9 Q. And on that page, Mr. Boese, will you please  
10 read into the record the paragraph, which is  
11 also a sentence, number 3.  
12 **A. The rate of accrual of all recharge credits --**  
13 **I'm sorry, was it number 2 or 3? Am I on the**  
14 **right one?**  
15 Q. Number 3, please.  
16 **A. I'm sorry. ASR Phase I RRW's are not eligible**  
17 **to receive AMCs, only physical recharge at**  
18 **Phase I RRW's or recharge basins will result in**  
19 **the development of an ASR credit.**  
20 Q. Okay. So that part of the proposal, do you  
21 understand that as saying that the City's not  
22 asking for AMCs in the phase -- in respect to  
23 the Phase I recharge facilities?  
24 **A. Is there a legend that describe what RRW is? I**  
25 **think I know what that means but ...**

1 Q. So if I were to suggest to you that RRW meant  
2 recharge and recovery well, would that assist  
3 you in responding?  
4 **A. Well, yeah, I think there's a -- I think there's**  
5 **a list of abbreviations - there is, recharge and**  
6 **recovery well - I would agree with your**  
7 **statement that under these proposal -- or**  
8 **proposal conditions that are listed that ASR**  
9 **Phase I would not be eligible to receive AMCs**  
10 **with both recharge and recovery wells or**  
11 **recharge basins.**  
12 Q. But the last -- the last clause, the second half  
13 or so of the sentence, if you will, does say --  
14 it does -- does evidence the physical recharge  
15 of the Phase I recharge and recovery wells or  
16 recharge basins will result in the development  
17 of ASR recharge credits, correct?  
18 **A. That's what it states, yes.**  
19 Q. So part of the proposal has never been giving up  
20 physical recharge credits from the ASR I  
21 facilities, has it?  
22 **A. Giving up, you mean cease -- what do you mean by**  
23 **giving up? Giving up would mean --**  
24 Q. Getting rid of?  
25 **A. Giving -- not being able -- I'm sorry.**

1 Q. Not being able to accumulate a withdrawal,  
2 that's never been part of the proposal, has it,  
3 as to physical recharge credits in Phase I?  
4 **A. I think that sentence might have been a little**  
5 **confusing. This means to me that they can --**  
6 **the City can only obtain physical -- or recharge**  
7 **credit by physical injection in the Phase I**  
8 **facilities, is that what you meant?**  
9 Q. Right, but it doesn't say the City is giving up  
10 that ability, does it?  
11 **A. Oh, no, it doesn't say that -- yeah, no, the**  
12 **City can do physical recharge all they want**  
13 **under the existing permit conditions as long as**  
14 **they don't violate any permit conditions on --**  
15 **on Phase I.**  
16 Q. Now, Mr. Boese, there was some discussion in  
17 DWR's questioning with respect to any other  
18 minimum desirable streamflow analyses that you  
19 had ever done, or other applications or  
20 proposals, and one of the things that you  
21 identified was the Bentley well field reserve  
22 where I believe you testified that some cfs  
23 triggers were developed based on minimum  
24 desirable streamflow. And my question for you,  
25 Mr. Boese, weren't the wells in that Bentley

1 reserve, weren't those bank storage wells?  
2 **A. Four out of six of them are bank storage, two**  
3 **are groundwater.**  
4 Q. And as to the ones that weren't bank storage  
5 wells, were there any considerations of cfs  
6 triggers for the ones that weren't bank storage  
7 wells?  
8 **A. I -- I do not believe that there were any MDS**  
9 **considerations for the groundwater ones, but,**  
10 **again, that was, boy, I have to think, 14 years**  
11 **ago or so. But I -- I specifically remember the**  
12 **four bank storage wells -- let me back up.**  
13 **Originally, they were all planned to be bank**  
14 **storage, and I think as time moved on, the City**  
15 **decided four of them would be bank storage, they**  
16 **had to be within, I believe, 300 feet of the**  
17 **centerline of the Arkansas River, and two of**  
18 **them ended up being groundwater, and they**  
19 **were -- ended up being, I believe, a quarter of**  
20 **a mile or more from the Arkansas River. So that**  
21 **was a distinction in the relationship of**  
22 **proximity to the Arkansas River. So four bank**  
23 **storage with flow triggers on the Big Ark, two**  
24 **groundwater and I don't believe they have any**  
25 **flow triggers on those.**

Page 3015

1 Q. And the bank storage wells, Mr. Boese, they  
 2 needed to be in proximity to the river because  
 3 that is critical to their ability to function as  
 4 bank storage wells, isn't it?  
 5 **A. Yes, absolutely.**  
 6 Q. And the reason the bank storage wells needed cfs  
 7 triggers is the bank storage wells are supposed  
 8 to take water above base flow; isn't that  
 9 correct, Mr. Boese?  
 10 **A. That's the general concept of a bank storage**  
 11 **well. There's a definition we can read, but I**  
 12 **would agree with your characterization.**  
 13 Q. And so the purpose of those cubic feet per  
 14 second triggers that were derived in the whole  
 15 analysis of the Bentley well field reserve, the  
 16 purpose of that was to help define and protect  
 17 base flow, and it had nothing to do with the  
 18 minimum desirable streamflow analysis, did it,  
 19 sir?  
 20 **A. Well, you lost me there, can you break that into**  
 21 **one or more sentences?**  
 22 Q. The purpose of those cfs triggers was to define  
 23 and protect base flow, correct, because the  
 24 Bentley well field bank storage wells were not  
 25 supposed to take water unless it was above base

Page 3016

1 flow, correct?  
 2 **A. I think that's a general statement, it was to**  
 3 **determine what the minimum base flow had to**  
 4 **be -- or minimum streamflow had to be so that it**  
 5 **was only taking bank storage water.**  
 6 Q. So that was -- that was a base flow analysis; it  
 7 wasn't a minimum desirable streamflow analysis,  
 8 was it?  
 9 **A. Well, I would disagree with that because I**  
 10 **think, as maybe some in the audience know, and**  
 11 **what I believe is there is not a regulatory MDS**  
 12 **on the Big Arkansas River at Bentley. So that**  
 13 **was what was trying to be determined is what**  
 14 **that should be set at as MDS; it was not**  
 15 **official, but the reason behind that was being**  
 16 **considered was to protect MDS, flow had to be**  
 17 **above MDS.**  
 18 **So I think there's two components to that.**  
 19 **You don't want pumping from bank storage when**  
 20 **it's at MDS or below because that would impact**  
 21 **MDS. At the same time, you don't want pumping**  
 22 **below MDS because then you're not getting bank**  
 23 **storage water. So I think there's two**  
 24 **components to that, making sure that you're**  
 25 **getting bank storage above MDS and also**

Page 3017

1 **protecting MDS so you can't pump it below what**  
 2 **was established. And there was a lot of**  
 3 **discussion about 80 percent exceedance or**  
 4 **90 percent exceedance, and DWR settled on**  
 5 **90 percent exceedance. I think it does two**  
 6 **things.**  
 7 Q. So in earlier testimony, another witness --  
 8 another witness referred to above base flow as  
 9 basically flood stage. Do you share that  
 10 understanding?  
 11 **A. No, not necessarily. It can -- flood stage is**  
 12 **obviously above base flow, but base flow is**  
 13 **based on a minimum cubic feet per second.**  
 14 **Anything above that is above base flow.**  
 15 Q. And are you meaning to testify that you think  
 16 that base flow and minimum desirable streamflow  
 17 are the same concept for purposes of the Bentley  
 18 well field reserve, do you think that's the same  
 19 thing there?  
 20 **A. I guess I'd have to give that some -- some**  
 21 **thought. Again, you're asking for something**  
 22 **that was 14 years ago. I believe we were trying**  
 23 **to figure out what minimum desirable**  
 24 **streamflow -- if it was established, and it's**  
 25 **not at the Bentley gage, if it was established,**

Page 3018

1 **what would minimum desirable streamflow be.**  
 2 **Same way on the Little Ark, Little Ark**  
 3 **minimum desirable streamflow was 20 cubic feet**  
 4 **per second, and that's what is used for the**  
 5 **trigger for the ASR Phase I applications from --**  
 6 **during the spring, fall, and winter months; it's**  
 7 **higher in the summer because there's other users**  
 8 **that have to be accounted for. So the MDS is**  
 9 **what's used for the trigger flow on the Little**  
 10 **Ark, it's the trigger that's used on the Little**  
 11 **Ark for Phase II at the Valley Center gage, plus**  
 12 **those other users that are between the intake**  
 13 **and the Valley Center gage.**  
 14 Q. And so you're saying you think that it's also  
 15 what was used for determining the trigger points  
 16 on the Bentley reserve bank storage wells?  
 17 **A. The MDS?**  
 18 Q. Is that what you think, Mr. Boese?  
 19 **A. I do think that's what it was, but, again, I'm**  
 20 **going to caveat that was 14 years ago, I'd have**  
 21 **to go back and look at the files. I think you'd**  
 22 **be surprised I might have hit the trigger right**  
 23 **on the nose at 165, and I haven't looked at it**  
 24 **for quite sometime, but I think it's 165 cubic**  
 25 **feet per second.**

1 Q. Mr. Boese, let's talk about river nodes a little  
2 bit since those came up. I believe you thought  
3 that the river nodes were the other means by  
4 which you effectively do an MDS component of  
5 analysis for applications in the District. The  
6 safe yield regulations, did they always include  
7 the concept of base flow nodes?  
8 **A. Have they always?**  
9 Q. Have they always?  
10 **A. No.**  
11 Q. And, Mr. Boese, at some point, somebody figured  
12 out that if you had a well proximate to the  
13 river, a pumping well, groundwater well and the  
14 river was actually regularly taking water from  
15 that area of the aquifer that there was an  
16 impact on the well, right, the same as if some  
17 other competing well user was taking that water  
18 that's going off into the river?  
19 **A. An impact on the well?**  
20 Q. An impact on safe yield because there's water  
21 going out into the aquifer in the proximity of  
22 the well that's applying for -- for permit?  
23 **A. I -- I'm not -- I'm really not trying to be**  
24 **difficult, I didn't understand your question.**  
25 **We talked about safe yield and all the sudden we**

1 **went to impact to a well, can you --**  
2 Q. Okay.  
3 **A. -- can you help me out there a little bit?**  
4 Q. Trying to help you develop the concept of river  
5 nodes, there are folks here that don't deal with  
6 them all the time.  
7 **A. Okay.**  
8 Q. So under the old safe yield regulations, if you  
9 had a well, a well site, a place where somebody  
10 is applying for a permit and it's proximate to  
11 the river and the river there is a gaining  
12 stream, it's taking water from the aquifer on a  
13 regular basis. Now, if you don't account for  
14 that water that the river is taking from the  
15 aquifer there and if you just draw your circle  
16 and look at the wells that are taking water in  
17 that circle and you compete your -- you compute  
18 your safe yield based on that, then what's going  
19 to be the result of that for the well that -- if  
20 the well gets permitted based on simply what the  
21 other wells are taking and without accounting  
22 for what's going out into the river?  
23 **A. Well, if the river -- if you added in the water**  
24 **that you're losing to the river and then that**  
25 **would exceed safe yield and combined with all**

1 **the other users, that would not have met our**  
2 **current safe yield, so there could be an impact**  
3 **to that well.**  
4 Q. So in the old days before you had river nodes  
5 and people weren't accounting for the water  
6 going out into the river, that well would have  
7 met safe yield, would it not?  
8 **A. It depends on the rest of the area of**  
9 **consideration. It's a full two-mile circle so**  
10 **it depends. If the river is the only thing in**  
11 **the circle, probably not. If it's the river and**  
12 **some other permitted wells, you got to do an**  
13 **evaluation on every single point. I can't -- I**  
14 **can't give you a general answer to that.**  
15 Q. Was the point of adding river nodes to the  
16 calculation to make sure that you accounted for  
17 that water that's going out of the aquifer into  
18 the river so that you don't inadvertently  
19 approve a well that if you -- that if you were  
20 to account for the water going out into the  
21 river is not meeting safe yield?  
22 **A. I think it was two purposes, one is I think what**  
23 **you described, to make sure you're accounting**  
24 **for that in a safe yield, and it's also to**  
25 **protect that streamflow from too much**

1 **development, 'cause conversely what you said if**  
2 **we allowed too many permits in there without**  
3 **accounting for that, it would impact streamflow.**  
4 Q. So it could impact streamflow, correct?  
5 **A. What could impact streamflow?**  
6 Q. If -- if you permitted a well without taking  
7 into account what it normally loses to the  
8 stream, that could impact streamflow, couldn't  
9 it?  
10 **A. Yeah, your sentences are really messing me up**  
11 **because you say the well taking from the water,**  
12 **you're talking about the aquifer losing water to**  
13 **the stream?**  
14 Q. Yes.  
15 **A. Yes.**  
16 Q. And even though -- even though, maybe arguably,  
17 the river nodes produce some collateral  
18 protection of streamflow, that wasn't their  
19 purpose, was it, Mr. Boese?  
20 **A. It was such a long time ago and I wasn't the one**  
21 **that developed the regulations for that, I don't**  
22 **know if that was a purpose, the purpose, not a**  
23 **purpose. It was definitely to account for water**  
24 **that is lost from the aquifer into the river**  
25 **that protects the safe yield of the area which**

Page 3023

1 **impacts streamflow.**  
 2 Q. So would you agree with me that there is -- that  
 3 there is not a mathematical tie between how base  
 4 nodes are used in a calculation and minimum  
 5 desirable streamflow?  
 6 **A. There's certainly a component of that because**  
 7 **you're accounting for that water that leaves the**  
 8 **aquifer, into the stream, with -- it's part of**  
 9 **minimum desirable streamflow. The water that's**  
 10 **being discharged from the aquifer into the river**  
 11 **is part of minimum desirable streamflow. If**  
 12 **there was no water being discharged from the**  
 13 **aquifer into the river during a dry period, the**  
 14 **river wouldn't flow at all.**  
 15 Q. So, Mr. Boese, let's back up and will you just  
 16 describe for us how river base nodes work?  
 17 **A. I'm sorry, was that a question?**  
 18 Q. Yes.  
 19 **A. I thought it was a statement.**  
 20 Q. No, it was would you, listen carefully for the  
 21 words, would you please describe for us --  
 22 **A. Can we have a break?**  
 23 Q. -- how river base nodes work.  
 24 **A. Could I ask for a break?**  
 25 **PRESIDING OFFICER:** Do you need

Page 3024

1 another restroom break?  
 2 **A. I do.**  
 3 **PRESIDING OFFICER:** Oh. Let's take  
 4 a quick break, thank you.  
 5 (Thereupon, a recess was taken;  
 6 whereupon, the following was had.)  
 7 **PRESIDING OFFICER:** Okay. We are  
 8 now back on the record.  
 9 **A. Could you repeat the question before we went to**  
 10 **break, Mr. McLeod?**  
 11 **BY MR. MCLEOD:**  
 12 Q. Yes, would you please explain for us how river  
 13 base nodes work.  
 14 **A. As related to our safe yield regulation?**  
 15 Q. Yes.  
 16 **A. Okay.**  
 17 Q. That's the only thing they do, isn't it?  
 18 **A. I don't know, maybe there's base flow nodes**  
 19 **somewhere else. I think we should first turn to**  
 20 **the definitions in the GMD2 regulations under**  
 21 **Exhibit 24, in particular K.A.R. 5-22-1. So**  
 22 **under 5-22-1(i), the definition of base flow**  
 23 **means groundwater that seeps, flows, or is**  
 24 **otherwise naturally discharged from an aquifer**  
 25 **into a stream. (J) is base flow allocation**

Page 3025

1 **means the annual quantity of water assigned to a**  
 2 **base flow node expressed in acre-feet per**  
 3 **calendar year. The natural discharge to the**  
 4 **stream shall be assumed to be the equivalent to**  
 5 **the rate of flow in the stream that is equaled**  
 6 **or exceeded 90 percent of the time. (K), you**  
 7 **want me to wait for you to catch up, Mr. McLeod?**  
 8 Q. What page are you on, Mr. Boese?  
 9 **A. I'm on the first page of Exhibit 24 under**  
 10 **definitions for the GMD.**  
 11 Q. Okay.  
 12 **A. You want me to start over?**  
 13 Q. I think I got base flow.  
 14 **A. Okay, I was on base flow allocation. I'll start**  
 15 **over on that.**  
 16 Q. Okay.  
 17 **A. Means the annual quantity of water assigned to a**  
 18 **base flow node expressed in acre-feet per**  
 19 **calendar year. The natural discharge to the**  
 20 **stream shall be assumed to be the equivalent to**  
 21 **the rate of flow in the stream that is equaled**  
 22 **or exceeded 90 percent of the time. (K), base**  
 23 **flow node means an artificial point located in**  
 24 **the channel of a watercourse for the purpose of**  
 25 **allocating a proportional amount of the base**

Page 3026

1 **flow. I think those are the three main**  
 2 **definitions that we need to look at, with the**  
 3 **focus probably on base flow allocation, which is**  
 4 **equaled or exceeded 90 percent of the time, the**  
 5 **rate of flow of the stream.**  
 6 Q. Okay. So let's -- let's look back first to the  
 7 definition of base flow, which here means  
 8 groundwater that seeps, flows, or is otherwise  
 9 naturally discharged from an aquifer into a  
 10 stream. And when you look at that definition,  
 11 Mr. Boese, do you still think that base flow  
 12 would be the same as minimum desirable  
 13 streamflow?  
 14 **A. I think it could be because of the next line of**  
 15 **base flow allocation, it says, the natural**  
 16 **discharge to a stream shall be assumed to be the**  
 17 **equivalent of flow in a stream that is equaled**  
 18 **or exceeded 90 percent of the time. Now, I**  
 19 **can't comment on how DWR determines base flow,**  
 20 **but I believe those sort of calculations are**  
 21 **determined to determine minimum desirable**  
 22 **streamflow.**  
 23 **And I could be wrong, that's not something**  
 24 **I've determined, but I thought DWR used**  
 25 **80 percent exceedance, but I've also seen some**

1 **90 percent exceedance rates to determine minimum**  
2 **desirable streamflow. It's probably something**  
3 **DWR should testify to, but I believe that is**  
4 **the -- that is how they calculate base flow.**  
5 **Again, if I'm wrong, then that is something they**  
6 **should testify to. 'Cause that is not something**  
7 **that -- that I do necessarily, determine minimum**  
8 **desirable streamflow.**

9 **But I believe that in my past work on the**  
10 **Bentley reserve field, I think that was how DWR,**  
11 **and obviously if you -- if DWR wants to call a**  
12 **witness and explain how they determine MDS, how**  
13 **they set those values, I believe they were --**  
14 **they were based on exceedance of a streamflow at**  
15 **either 80 or 90 percent of the time, and that's**  
16 **how -- what the base flow allocation is based on**  
17 **is 90 percent exceedance flow.**

18 Q. And let's go on now to base flow node.

19 A. Okay.

20 Q. And what do you do with this artificial point  
21 located in the channel of the watercourse for  
22 the purpose of allocating a proportional amount  
23 of the base flow?

24 A. What do we do with it?

25 Q. What do you do with it?

1 Q. So out of the -- out of the total safe yield  
2 that's in the area that you're looking at, some  
3 of that number is eaten up or given to the base  
4 flow node in the calculation, correct?  
5 A. That is correct, if it -- if that  
6 two-mile-radius circle includes any stretch of a  
7 stream that is subject to base flow allocation.  
8 And we can actually look at one of those, if you  
9 want to, on Exhibit 59. It had some river  
10 stretch of the Little Arkansas in some of those  
11 safe yield calculations, if we want to see  
12 visually what that looks like. And I think that  
13 may be -- that may be good for --

14 Q. Let's do that.

15 A. Okay. That would be Exhibit 59 --  
16 **PRESIDING OFFICER: 59.**

17 A. -- would be the easiest one to look at, I think.

18 **BY MR. MCLEOD:**

19 Q. What volume is that, Mr. Boese?

20 A. I'm sorry, Volume IV. If you want to look at  
21 the very first one, and we were lucky, the very  
22 first one has some base flow nodes in it. And  
23 if we're looking at that two-mile circle, that  
24 would be that -- that red bigger circle that  
25 encompasses almost the entire area of

1 A. That's used in the safe yield calculation.

2 Q. And how is it used in a safe yield calculation?

3 A. You want to turn to the safe yield calculation  
4 and discuss, because this is going to take  
5 awhile, I'm just warning you. So let's go to  
6 K.A.R. 5-22-7(a), and under (a), it is  
7 everything that is included in the calculation  
8 for safe yield.

9 **PRESIDING OFFICER: I'm sorry, where**  
10 **are you?**

11 A. I'm on K.A.R. 5-22-7(a). So listed under  
12 5-22-7(a)(1), (A) through (F) is what is  
13 included in the safe yield calculation of what  
14 we would call existing appropriations, if you  
15 look at that spreadsheet. So you have to  
16 include under the sum of all prior  
17 appropriations the proposed application  
18 quantity, vested rights, appropriation rights,  
19 term permits, earlier priority applications, and  
20 the base flow nodes, and that was the one I  
21 wanted to key in on, so base flow nodes are  
22 included in that two-mile-radius circle as a  
23 base flow node, or nodes, depending on how many  
24 intersect in the streamflow.

25 **BY MR. MCLEOD:**

1 consideration of the map. You see where I'm at,  
2 Mr. McLeod?

3 Q. Yes.

4 A. Okay. So in the northeastern portion of that  
5 circle, or I'll say to the right and to the  
6 upper portion of that circle, do you see the  
7 Little Arkansas River flowing into the circle  
8 and then out of the circle? And if you want me  
9 to, I'd be glad to come point it out or --

10 Q. I think I do.

11 A. Okay. You see the red triangles that are  
12 located essentially in the stream --

13 Q. Yes.

14 A. -- and they're located about a quarter of a mile  
15 apart from each other?

16 Q. About six or seven of them, maybe eight?

17 A. Looks like seven.

18 Q. Yes.

19 A. So those are in the area of consideration, and  
20 the way you can tell if it's in the area of  
21 consideration is that red triangle has a circle  
22 drawn around it. So if you look outside the  
23 circle, there is -- outside the bigger circle,  
24 the red triangles don't have circles around  
25 them. So that's just really the -- the

Page 3031

1 software, the program picking up what's inside  
 2 the two-mile-radius circle.  
 3 So there are eight -- I'm sorry, there are  
 4 seven base flow nodes in that area of  
 5 consideration, in that two-mile circle. If you  
 6 go over to the spreadsheet and they are listed  
 7 as VC026, 27, 29, 30, 31, 32, 28. That is the  
 8 seven base flow nodes that are located in the  
 9 area of consideration.  
 10 Q. And you also impute to each one of them a well  
 11 ID, correct, even though they're not actual  
 12 wells?  
 13 A. That's correct, that's in our -- that's in our  
 14 database, it doesn't mean it's a well. If it's  
 15 a groundwater pit, if it's a well, if it's a  
 16 base flow node, they are in a access database  
 17 table with -- in the column of well ID. That's  
 18 just -- that's just a -- that's just a number in  
 19 the database, it means absolutely nothing to  
 20 this respect.  
 21 Q. And then in the far right-hand column, is each  
 22 one of those base flow nodes being allocated  
 23 104 acre-feet?  
 24 A. That's correct. Did that help sort of visualize  
 25 how we do that?

Page 3032

1 Q. And is the reason that you do that, Mr. Boese,  
 2 so that -- so that -- let me back up. Is that  
 3 104 acre-feet an approximation of what each one  
 4 of those segments in the aquifer is thought to  
 5 be -- excuse me, segments in the river is  
 6 thought to be receiving from the aquifer?  
 7 A. Yes, it's a little more -- a little more  
 8 complicated. It shows up as sort of a pumping  
 9 well, although there's obviously not a well  
 10 there in the stretch of the river, but if we  
 11 want to go back to the safe yield, it  
 12 essentially said they're based on a quarter mile  
 13 apart from each other, the entire base flow  
 14 allocation was determined for the stretch, and  
 15 then you had to do a computation to convert cfs  
 16 into acre-feet per year by using a factor of 724  
 17 to get the acre-feet per year. And then there  
 18 was a quarter mile arc drawn one after another,  
 19 and each one of those got that allocation of how  
 20 many -- divided that total by how many base flow  
 21 nodes were in that entire river stretch.  
 22 Q. And if you didn't take those base flow nodes  
 23 into account and you just evaluated safe yield  
 24 based on other wells in the area, there would be  
 25 728 acre-feet going out to the river that would

Page 3033

1 not be accounted for in the calculation,  
 2 correct?  
 3 A. If -- if they weren't in -- if they weren't in  
 4 the calculation?  
 5 Q. Right.  
 6 A. That's correct.  
 7 Q. And so the real point of the base flow nodes is  
 8 that you're protecting the aquifer from  
 9 accidentally being over-appropriated by missing  
 10 that 728 acre-feet in this example in your  
 11 calculation, correct?  
 12 A. Yes, and it has the secondary of protecting that  
 13 streamflow because you accounted for it. Now,  
 14 in this one it didn't matter, it's too far  
 15 over-appropriated to begin with, but I can  
 16 guarantee you I have run lots of safe yield for  
 17 folks, and because those river nodes are in the  
 18 safe yield, it kicked them over. So this one  
 19 was an extreme example because it was already,  
 20 what, 5,000 acre-feet, 7 -- 5 or 6,000 acre-feet  
 21 already over-appropriated.  
 22 Q. So -- and let's go through two examples. So you  
 23 account for it and if the result is that you  
 24 approve the well, then the river there is still  
 25 receiving at each of those nodes that 104

Page 3034

1 acre-feet, correct?  
 2 A. Well, it doesn't exactly receive 104 acre-feet  
 3 physically at that -- there's not -- there's not  
 4 a geyser at the -- in the river every quarter of  
 5 a mile, if that's what you meant. It's the  
 6 entire stretch is receiving some flow.  
 7 Q. So if you approve the well, I mean, the well is  
 8 drawing down the aquifer to some extent, does  
 9 that have an impact on the streamflow in the  
 10 adjacent river?  
 11 A. Not if it met the safe yield, that's why we do  
 12 that calculation, that's why we account for it  
 13 so it doesn't impact the streamflow.  
 14 Q. And if you don't approve the well, then that  
 15 protects everything, right, the river and safe  
 16 yield in the aquifer?  
 17 A. If it meets safe yield, why wouldn't I approve  
 18 it? You lost me a little bit.  
 19 Q. I'm saying if you don't approve the well?  
 20 A. Oh, if it's already over-appropriated?  
 21 Q. If it's already over-appropriated and you don't  
 22 approve the well, then the well obviously has no  
 23 impact, right?  
 24 A. Well, yeah, obviously, it would -- it would  
 25 protect the aquifer and the streamflow to that

1 extent.

2 Q. But, Mr. Boese, in terms of minimum desirable  
3 streamflow, isn't -- isn't that just numbers  
4 that DWR has identified for points on the river  
5 need to be met for minimum desirable streamflow  
6 to exist?

7 **A. I believe so, I believe it's that very similar**  
8 **calculation under the base flow allocation of**  
9 **90 percent exceedance. I don't know if DWR**  
10 **uses -- I remember during the Bentley reserve,**  
11 **there was a discussion that was it 80 percent or**  
12 **90 percent exceedance for minimum desirable**  
13 **streamflow. I don't know which one DWR uses,**  
14 **that would be a question for DWR. But it ends**  
15 **up representing the minimum desirable streamflow**  
16 **'cause we use 90 percent exceedance.**

17 Q. So although these -- although these allocations  
18 to the base node do have some effect in  
19 accounting for and protecting streamflow  
20 generally, do they have any mathematical tie to  
21 the number that's been determined by DWR as  
22 minimum desirable streamflow?

23 **A. Well, if they were calculated the same way, I**  
24 **guess there would be a mathematical connection**  
25 **between the two, is that your question?**

1 Q. I mean, minimum desirable streamflow can be  
2 impacted by weather conditions, can't it?

3 **A. Yes, if it rains, then that makes the flow in**  
4 **the river go up.**

5 Q. And I don't think I'm making enough progress to  
6 justify continuing the line of questioning.

7 Mr. Boese, a couple of times during  
8 Ms. Wendling's questioning -- I want to ask  
9 about one other thing first. It was actually  
10 your counsel's phraseology and not yours, but in  
11 some of the back and forth, Mr. Stucky referred  
12 to impairment of the aquifer. Is there such a  
13 thing as impairment to the aquifer?

14 **A. A legal definition of that?**

15 Q. Yes.

16 **A. Not that I'm aware of. I don't think there's a**  
17 **legal definition of impairment in the DWR rules**  
18 **and regulations or statutes.**

19 Q. The aquifer as such doesn't hold any water  
20 rights, does it?

21 **A. No.**

22 Q. And the aquifer as such can't submit an  
23 impairment complaint, can it?

24 **A. No, I think -- I think you should ask Mr. Stucky**  
25 **what he meant by impairment; I assume he meant**

1 impact.

2 Q. I think --

3 **A. But that's a question for him, not for me.**

4 Q. I think he was attempting to differentiate two  
5 kinds of impairment analysis, and maybe we can  
6 clear it up with an additional question. There  
7 is a kind of impairment that relates to a  
8 general decrease in the water table, correct?

9 **A. It's called an overall lowering of the water**  
10 **table, it's in 5-4-1(a) when the -- when the**  
11 **impairment regs were bifurcated.**

12 Q. Yes. And that still is an impairment to a user,  
13 right? A user brings the complaint and the user  
14 says I'm impaired, and then there's a  
15 determination whether that's due to the general  
16 reduction of the water table, correct?

17 **A. When an -- when someone submits an impairment**  
18 **complaint to the Division of Water Resources,**  
19 **and, again, you should ask DWR, but the way the**  
20 **rules and regs are bifurcated, DWR does an**  
21 **investigation, they can ask for GMD assistance.**  
22 **If it's determined that it's an overall lowering**  
23 **of the water table, that impairment complaint is**  
24 **then submitted to the GMD, if there's a GMD in**  
25 **the area, for a remedy. And I think the GMD has**

1 Q. I mean, minimum desirable streamflow can be  
2 impacted by weather conditions, can't it?

3 **A. Yes, if it rains, then that makes the flow in**  
4 **the river go up.**

5 Q. And I don't think I'm making enough progress to  
6 justify continuing the line of questioning.

7 Mr. Boese, a couple of times during  
8 Ms. Wendling's questioning -- I want to ask  
9 about one other thing first. It was actually  
10 your counsel's phraseology and not yours, but in  
11 some of the back and forth, Mr. Stucky referred  
12 to impairment of the aquifer. Is there such a  
13 thing as impairment to the aquifer?

14 **A. A legal definition of that?**

15 Q. Yes.

16 **A. Not that I'm aware of. I don't think there's a**  
17 **legal definition of impairment in the DWR rules**  
18 **and regulations or statutes.**

19 Q. The aquifer as such doesn't hold any water  
20 rights, does it?

21 **A. No.**

22 Q. And the aquifer as such can't submit an  
23 impairment complaint, can it?

24 **A. No, I think -- I think you should ask Mr. Stucky**  
25 **what he meant by impairment; I assume he meant**

1 **six months, I'm going to need to pull the regs,**  
2 **six months to provide a plan to remedy the**  
3 **situation. If it's direct well to well, then**  
4 **that is a DWR determination, but, again, the GMD**  
5 **can assist in that. Does that characterize what**  
6 **you ask?**

7 Q. So there may be a lowering of the water table,  
8 but the impairment or -- I mean, the impairment  
9 issue is with respect to a rights holder or  
10 rights holders within the aquifer, correct?

11 **A. Yes. Yeah, I don't think the aquifer can file**  
12 **an impairment complaint, if that's what your**  
13 **question was.**

14 Q. Thank you.

15 **A. And, again, I think it's notable that there's**  
16 **not a definition of impairment in the DWR**  
17 **statutes and regulations, although the Court in**  
18 **Garetson versus American Warrior, Inc. went to**  
19 **the -- went to the legal definition of**  
20 **impairment, and we can discuss that if you'd**  
21 **like.**

22 Q. Mr. Boese, during Ms. Wendling's question --  
23 questions, she asked you about using quarterly  
24 measurements as opposed to annual measurements  
25 for different purposes. And currently it is the

Page 3039

1 case that the -- I mean, you've indicated this,  
 2 I think, with some -- some map symbols are drawn  
 3 larger in hydrographs because they're the annual  
 4 and hence official January numbers that  
 5 determine, for example, the low index levels  
 6 currently?  
 7 **A. They used to not -- they used to not be**  
 8 **specified in the permit conditions as far as**  
 9 **what measurement was used. When the 1993**  
 10 **levels, the technical correction was made to the**  
 11 **1993 levels, there was also a clarification that**  
 12 **the static water level is measured in January to**  
 13 **determine if the City can withdraw recharge**  
 14 **credits.**  
 15 Q. And so if we do that annually and -- and for  
 16 that reason, doesn't it make sense that the  
 17 operational plan in the City's proposal would  
 18 also evaluate recharge capacity annually rather  
 19 than quarterly?  
 20 **A. No. 'Cause conditions change throughout the**  
 21 **year. So, therefore, physical recharge capacity**  
 22 **would change throughout the year.**  
 23 Q. For that same reason, do you think that it would  
 24 make sense to evaluate the index levels  
 25 quarterly?

Page 3040

1 **A. No.**  
 2 Q. And why?  
 3 **A. Because the January measurements are static, it**  
 4 **reduces -- eliminates the effects of pumping, so**  
 5 **you really want a static water level, I think**  
 6 **the City would really water a static water level**  
 7 **measured in January because that's as probably**  
 8 **as high as it's going to be. It would -- it**  
 9 **would be in the best interest of everybody, I**  
 10 **think, to use the static because that's when the**  
 11 **aquifer is under the least amount of stress to**  
 12 **determine what that static water level is.**  
 13 **Recharge capacity for whether the City should**  
 14 **inject or not has nothing to do with that.**  
 15 **That's a day to day, if the water level drops**  
 16 **10 feet because everybody pumped hard in the**  
 17 **summertime, there might be room in the aquifer,**  
 18 **why wouldn't the City be able to inject?**  
 19 Q. So you think there's more potential for a  
 20 meaningful quarterly fluctuation in recharge  
 21 capacity than there -- than there would be in  
 22 evaluating the index levels on that basis?  
 23 **A. Can you rephrase that?**  
 24 Q. Do you think that temporary changes could have  
 25 greater significance for purposes of evaluating

Page 3041

1 recharge capacity than they do for evaluating  
 2 whether we're above or below the 1993 index  
 3 levels?  
 4 **A. They're -- they're two different things, I'm not**  
 5 **sure I want to compare them.**  
 6 Q. Okay. We'll leave it at that. A couple of  
 7 times during your comments in response to  
 8 Ms. Wendling's questions, you noted that there  
 9 were issues in the north part of the District in  
 10 the modeling where you felt that refinement was  
 11 needed. And, Mr. Boese, I'm just going to ask  
 12 the question this way, did Mr. Romero adjust his  
 13 modeling for those issues that you thought  
 14 needed refinement?  
 15 **A. Not that I am aware of, but I didn't look in**  
 16 **detail to Mr. Romero's modeling.**  
 17 Q. Didn't matter to you whether he had refined  
 18 those issues that you thought were important?  
 19 **A. His results matter to me, I don't know if he did**  
 20 **or didn't do it.**  
 21 Q. Given his results, you didn't see any need to  
 22 inquire into the bases of his modeling?  
 23 **A. I don't recall if Mr. Romero and I had any**  
 24 **conversations about the water level heads to the**  
 25 **north. I believe I had those conversations with**

Page 3042

1 **Mr. Akhbari. Mr. Romero, I cannot recall if I**  
 2 **had those discussions about -- I think he was**  
 3 **aware of the discrepancy between actual water**  
 4 **level heads and modeled water level heads. I**  
 5 **think we can go back and look at those**  
 6 **hydrographs and it's way off.**  
 7 Q. And Dr. Akhbari, I mean, he didn't produce any  
 8 modeling showing individual well impacts, did  
 9 he?  
 10 **A. No.**  
 11 Q. You're relying on Mr. Romero's modeling for all  
 12 of that, aren't you?  
 13 **A. Yes.**  
 14 **MR. MCLEOD:** I don't have any  
 15 further questions for the witness.  
 16 **PRESIDING OFFICER:** Mr. Oleen?  
 17 **MR. OLEEN:** None from DWR.  
 18 **PRESIDING OFFICER:** Ms. Wendling?  
 19 **MS. WENDLING:** None here.  
 20 **PRESIDING OFFICER:** Mr. Stucky?  
 21 **MR. STUCKY:** That raised just a few  
 22 additional questions. I had passed on the  
 23 questioning before for the record, but I do  
 24 have just a couple additional questions,  
 25 lines of questioning.

1 **REDIRECT EXAMINATION**

2 **BY MR. STUCKY:**

3 Q. Mr. Boese, since you are -- you mentioned that  
4 there was no definition of impairment in the  
5 Kansas Water Appropriation Act, is that what you  
6 stated?

7 **A. There's no explicit definition listed in --**  
8 **listed under definitions in the Water**  
9 **Appropriation Act or the rules and regulations**  
10 **thereof.**

11 Q. But I believe you mentioned that K.S.A.  
12 82a-711(c) is discussed regarding impairment in  
13 the Garetson versus American Warrior,  
14 Incorporated case; is that right?

15 **A. Well, 711(c) gives -- gives some sort of, I**  
16 **think, insight, and we should probably turn to**  
17 **that. When I referred to the Garetson versus**  
18 **American Warrior, Inc. case in -- I guess just**  
19 **for relevance, that's not in GMD2, that's in**  
20 **southwest Kansas, the Court lended a definition**  
21 **based on the legal definition of impairment of**  
22 **what they ruled on. So 711(c), and we can talk**  
23 **about it if you want to turn to it.**

24 Q. Yeah. In that case --

25 **A. That case and 711(c) aren't necessarily related**

1 **to each other but --**

2 Q. Well, tell me about 711(c), I don't mean to cut  
3 you off.

4 **A. Okay. And I think it's 711(c), let me**  
5 **double-check. Yes, so 711(c), and I can wait**  
6 **for you to catch up, everybody.**

7 **PRESIDING OFFICER:** Yes.

8 **A. Okay. 82a-711(c), it says, with regard to**  
9 **whether a proposed use will impair a use under**  
10 **an existing water right, impairment shall**  
11 **include the unreasonable raising or lowering of**  
12 **the static water level or the unreasonable**  
13 **increase or decrease of the streamflow or the**  
14 **unreasonable deterioration of the water quality**  
15 **at the water user's point of diversion beyond a**  
16 **reasonable economic limit. So it says with**  
17 **regard whether a proposed use will impair,**  
18 **impairment shall include, I mean, you could make**  
19 **some -- some reasonable conclusions it's lending**  
20 **some definitions to impairment or at least what**  
21 **impairment is. Or -- or can include.**

22 **BY MR. STUCKY:**

23 Q. Okay. Well, let's go back to that case, and  
24 incredibly, I was actually watching American  
25 Ninja Warrior with my son last night,

1 incredibly, but that's not quite the name of  
2 this case. What was the name of that case  
3 again?

4 **A. Garetson v. American Warrior, Inc. and I think**  
5 **it changed some names through time because there**  
6 **was some -- well, it's too complicated. It**  
7 **ended up being Garetson versus American Warrior,**  
8 **Inc., I think, when it got to appellate court.**

9 Q. Tell me what that case stated with regard to  
10 impairment or a definition of impairment.

11 **A. It uses words like diminish, injure.**

12 Q. Weakens?

13 **A. Weakened, yeah. I mean, you may have it pulled**  
14 **up, I'm trying to remember the exact -- exact**  
15 **phraseology, but it was -- it talked about**  
16 **diminishing, injuring, weakens the --**

17 Q. Does it say something to the effect that  
18 impairment means when a diversion diminishes,  
19 weakens, or injures the diversion of water under  
20 a prior right?

21 **A. That -- that sounds like what was in -- in the**  
22 **Court decision.**

23 Q. Do you have to fully penetrate the aquifer to be  
24 impaired, especially with respect to domestic  
25 wells? And you're free to reference K.A.R.

1 5-4-1 to answer that question.

1 5-4-1 to answer that question.

2 Q. Well, tell me about 711(c), I don't mean to cut  
3 you off.

4 **A. Okay. And I think it's 711(c), let me**  
5 **double-check. Yes, so 711(c), and I can wait**  
6 **for you to catch up, everybody.**

7 **PRESIDING OFFICER:** Yes.

8 **A. Okay. 82a-711(c), it says, with regard to**  
9 **whether a proposed use will impair a use under**  
10 **an existing water right, impairment shall**  
11 **include the unreasonable raising or lowering of**  
12 **the static water level or the unreasonable**  
13 **increase or decrease of the streamflow or the**  
14 **unreasonable deterioration of the water quality**  
15 **at the water user's point of diversion beyond a**  
16 **reasonable economic limit. So it says with**  
17 **regard whether a proposed use will impair,**  
18 **impairment shall include, I mean, you could make**  
19 **some -- some reasonable conclusions it's lending**  
20 **some definitions to impairment or at least what**  
21 **impairment is. Or -- or can include.**

22 **BY MR. STUCKY:**

23 Q. Okay. Well, let's go back to that case, and  
24 incredibly, I was actually watching American  
25 Ninja Warrior with my son last night,

2 **A. I don't -- I don't believe so. I mean, I think**  
3 **there's -- in K.A.R. 5-4-1, and maybe I should**  
4 **turn to it, but I'm just going to speak from**  
5 **memory until -- until I need to, it says when**

6 **someone files an impairment complaint, they have**  
7 **to submit a report to the chief engineer for**  
8 **a -- if it's a non-domestic well that the owner**  
9 **is claiming is impaired, has to submit a report**  
10 **describing whether or not they fully penetrated**  
11 **the usable portion of the aquifer. Domestic**  
12 **well owners do not have to do that, although the**  
13 **chief engineer can require it. But by**  
14 **extension, that doesn't mean that they have to**  
15 **fully penetrate the aquifer to be able to**  
16 **complain -- claim impairment.**

17 Q. Just to clarify the record, there was a question  
18 with respect to what form of impairment I may  
19 have been referring to. Mr. Boese, would you  
20 agree with me that there is a bifurcation of the  
21 impairment regulations?

22 **A. There is, that was done a few years back.**

23 Q. And explain what is meant by bifurcation of the  
24 impairment regulations.

25 **A. So I'm going to turn to it probably here in a**

Page 3047

1 minute before I -- before I misspeak, but the  
 2 impairment regulation, and we're calling it  
 3 that, it actually has a longer title than that,  
 4 was bifurcated, and, of course, the GMDs were  
 5 involved in that language development; we had a  
 6 lot of discussion with DWR and the chief  
 7 engineer, and it was very -- very productive on  
 8 what that language should look like. But it  
 9 bifurcated into direct well-to-well impairment  
 10 and impairment caused by regionally -- regional  
 11 lowering of the water table. And, again, that's  
 12 K.A.R. 5-4-1 and then (1)(a).  
 13 Q. And (1)(a) is a regional drawdown of sorts; is  
 14 that right?  
 15 A. Yes, I'm turning to it, but that is correct.  
 16 That's the -- the regional lowering of the water  
 17 table.  
 18 Q. And to clarify the record again, that's the one  
 19 where a groundwater management district would  
 20 recommend an action to remedy the impairment; is  
 21 that right?  
 22 A. Yes, it's identified under (b)(1), and we can  
 23 read it if you would -- if you would like me to.  
 24 Q. I think the record is clear in that regard, you  
 25 don't need to read that particular regulation,

Page 3048

1 Mr. Boese.  
 2 I'm going to move on to one other final  
 3 line of questioning that I'm going to circle  
 4 back to now. Mr. McLeod asked you just a moment  
 5 ago about measurements of -- in January. Do you  
 6 recall that line of questions?  
 7 A. I do.  
 8 Q. Okay. And earlier there was a discussion about  
 9 how that regulation was changed and there was a  
 10 measurement that occurred during a different  
 11 time period; is that right?  
 12 A. Well, yeah, the permit conditions were changed  
 13 to clarify because it was not clear in the  
 14 original ASR permit approvals for both, I think,  
 15 Phase I and Phase II, it was not clear when that  
 16 water level should -- measurement should be  
 17 taken at the index well. And that condition was  
 18 then clarified to state the January static water  
 19 level.  
 20 Q. And, in fact, through the City's proposal --  
 21 well, let's talk about the proposal document.  
 22 Mr. Boese, turn to page 3-7, actually starting  
 23 on 3-6 of the City's proposal document, if you  
 24 will.  
 25 A. Okay.

Page 3049

1 Q. Tell me what 3-6 and 3-7 tell us about when the  
 2 water levels would be considered for purposes of  
 3 accumulating aquifer maintenance credits.  
 4 A. January of each year.  
 5 Q. And tell me the basis for that conclusion.  
 6 A. It's stated actually in -- on page 3-7, looks  
 7 like the -- about the second para -- or second  
 8 sentence from the bottom, it says, during  
 9 January of each year, the City will measure the  
 10 doc -- and document the static groundwater  
 11 levels at each existing ASR index wells and at  
 12 each of the City's ASR recharge wells. Do you  
 13 want me to continue?  
 14 Q. If -- if you need to for your explanation.  
 15 A. Well, those water level measurements would then  
 16 be used to generate the annual operation table  
 17 that would calculate the available recharge  
 18 capacity for each -- each of the ASR recharge  
 19 wells to determine if it's an AMC or a  
 20 physical -- if they have to physically inject  
 21 with an AMC or a combination thereof.  
 22 Q. So in other words, as the City is allowed to  
 23 determine whether or not they can accumulate  
 24 these aquifer maintenance credits, those water  
 25 levels are measured in January, and if the water

Page 3050

1 levels are high enough in January, the City then  
 2 can accumulate aquifer maintenance credits  
 3 throughout the year. Is that a true statement?  
 4 A. That's what the proposal is putting forth --  
 5 Q. Okay.  
 6 A. -- of the operational plan, yes.  
 7 Q. Now, Mr. Boese, yesterday I believe it was, or  
 8 as Ms. Wendling noted in her cross-examination,  
 9 the days have gone by and become a blur, one day  
 10 in the last few days, Mr. McLeod asked you about  
 11 two different scenarios, a scenario where  
 12 aquifer maintenance credits are being utilized  
 13 and a scenario where there's physical injection  
 14 into the aquifer but the aquifer is pumped down  
 15 first. I could ask -- I could restate those two  
 16 scenarios in greater detail, or I could ask the  
 17 court reporter to read them back, but do you  
 18 recall the two scenarios I'm referring to?  
 19 A. I believe so.  
 20 Q. So in one -- well, let me back up as far as the  
 21 basis of those scenarios. In one of the  
 22 scenarios, it was assumed that the City would  
 23 pump the aquifer down first. Is that what was  
 24 stated in the scenario?  
 25 A. I think -- I think that's correct.

1 Q. And in the other scenario with respect to  
2 aquifer maintenance credits, it was assumed that  
3 the aquifer would -- would be kept full, is  
4 that -- is that right --  
5 **A. Yes, I think --**  
6 Q. -- the other scenario?  
7 **A. -- I think so. Yes, that sounds correct.**  
8 Q. And you also recall the testimony and discussion  
9 in this case about the benefits of the aquifer  
10 maintenance proposal made in the context of the  
11 predicated notion that the aquifer will be kept  
12 full. Do you recall all that discussion?  
13 **A. Yes.**  
14 Q. Does it appear to you that all of the purported  
15 benefits of the City's AMC proposal are  
16 predicated on the assumption that the City will  
17 not first pump down the aquifer?  
18 **A. Yes.**  
19 Q. But, in fact, isn't it a flawed assumption in  
20 the sense that it is assumed the City will not  
21 pump down the aquifer first with respect to AMCs  
22 or be forced to do so to accumulate physical  
23 recharge credits?  
24 **A. It certainly could be because the City could, in**  
25 **fact, based on that January water level**

1 **measurement, they could be able to claim AMCs**  
2 **all year long while at the same time**  
3 **simultaneously pumping the aquifer as hard as**  
4 **they wanted to.**  
5 Q. Now let's turn back to what you told me a minute  
6 ago, keep those hypotheticals in mind,  
7 Mr. Boese.  
8 **A. Okay.**  
9 Q. Let's turn back now to what you told me before  
10 about a January water level measurement, okay?  
11 **A. Uh-huh.**  
12 Q. And Ms. Wendling triggered this thought in my  
13 mind as she was asking questions, she asked  
14 about, what about quarterly measurements, but  
15 the answer is we're looking at a January  
16 measurement and a January measurement only with  
17 respect to determining whether AMCs can be  
18 accumulated. So let's apply that to the  
19 scenarios identified by Mr. McLeod. Assume for  
20 a moment we live in a world where both AMC  
21 credits are allowed and ASR Phase II physical  
22 recharge credits are allowed. Are you with me?  
23 **A. Okay.**  
24 Q. Since it is proposed that recharge capacity for  
25 an entire year will be based on the January

1 water level measurements, couldn't the City pump  
2 the aquifer down to create storage the entire  
3 year and get a two for one on water and credits  
4 through the AMC proposal?  
5 **A. Yeah, yes, absolutely.**  
6 Q. Then the next year gain recharge credits from  
7 physical injection and then repeat this year's  
8 scenario over and over?  
9 **A. That could -- that could occur depending on the**  
10 **water levels, if the City was getting AMC credit**  
11 **for the entire year, pumping the aquifer down,**  
12 **it made enough storage room, then the next**  
13 **January measurement said they had to be**  
14 **physical, then they could do physical and then**  
15 **repeat this every couple of years. It may take**  
16 **longer -- it may not quite work out as a**  
17 **two-year scenario because it may take a couple**  
18 **years of pumping hard to get -- get below that**  
19 **AMC trigger level, but, yeah, I mean, that's**  
20 **a -- that's a proposal, it could happen.**  
21 Q. In other words, if we're only predicting whether  
22 or not the City can get AMC credits based on the  
23 January water levels, the City may even have an  
24 incentive to pump the aquifer down if AMCs are  
25 allowed; is that true? Is that a possibility?

1 **A. Well, yeah, 'cause they could be -- I mean, I**  
2 **should say yes, they could because they could be**  
3 **taking Little Arkansas River water to town,**  
4 **getting a beneficial use, getting a credit at**  
5 **the same time in the aquifer, and at that same**  
6 **time pumping the aquifer hard with their native**  
7 **water rights for that entire year.**  
8 Q. Okay.  
9 **A. I mean, there -- yeah.**  
10 Q. Now, Mr. Boese, I understand that the City might  
11 want to keep the aquifer full with respect to  
12 the AMC proposal because the City would get a  
13 two for one on water and credits through the AMC  
14 proposal, but setting that double benefit to the  
15 City aside, to answer my question the best you  
16 can, there's a possibility that even with  
17 respect to the AMC proposal they would still  
18 pump the aquifer down because we're only looking  
19 at the January levels; is that true?  
20 **A. They certainly could during that entire year or**  
21 **years until they hit that -- that index level,**  
22 **then it would require physical recharge credit,**  
23 **it could take more than a year, it could be a**  
24 **couple years that could happen, I suppose,**  
25 **depending on how full the aquifer was to begin**

Page 3055

1 **with. So, yes, to your answer -- or to your**  
 2 **question.**  
 3 Q. One final question related to that point, water  
 4 levels tend to recover in January, is that true  
 5 from your experience having been a manager of  
 6 the Equus Beds Aquifer?  
 7 **A. Generally, you're seeing recovery from the time**  
 8 **the summer ends until pumping starts again, so**  
 9 **January is -- is the best time to take the**  
 10 **static water level measurements 'cause they**  
 11 **generally recovered fully and the static water**  
 12 **level is -- is static, it's not moving around.**  
 13 Q. In other words, in the summer, the static water  
 14 levels would be lower, is that generally a true  
 15 statement? In the summer months when there's  
 16 heavy pumping?  
 17 **A. Yeah, if there's heavy pumping, I mean, we've**  
 18 **had some scenarios where -- but, yes, generally**  
 19 **the aquifer drops during the summertime where**  
 20 **there is pumping occurring.**  
 21 Q. So that's why choosing a January date to measure  
 22 water levels to predict whether the City can  
 23 accumulate AMC credits is beneficial for the  
 24 City; is that right?  
 25 **A. For being able to collect -- accumulate AMCs,**

Page 3056

1 **absolutely, yes.**  
 2 **MR. STUCKY:** No further questions.  
 3 **PRESIDING OFFICER:** Mr. McLeod.  
 4 **MR. MCLEOD:** I don't have further  
 5 questions for the witness.  
 6 **MR. OLEEN:** I do. If you'd like a  
 7 break, I can wait.  
 8 **PRESIDING OFFICER:** No, that's fine.  
 9  
 10 **RE CROSS EXAMINATION**  
 11 **BY MR. OLEEN:**  
 12 Q. Mr. Boese, I'd like to go back to K.A.R. 5-4-1  
 13 and revisit some things that you testified to  
 14 regarding your attorney's line of questioning  
 15 involving impairment.  
 16 **A. 5-4-1 or (1)(a)?**  
 17 Q. 5-4-1.  
 18 **A. Okay. So the direct well-to-well impairment?**  
 19 Q. Yes.  
 20 **A. Okay. I'm there.**  
 21 Q. I believe you were -- you had a discussion of  
 22 5-4-1(a) and you mentioned something about what  
 23 the chief engineer might require on the  
 24 complaint, impairment complaint report, right?  
 25 **A. Yes, I think -- yeah, we did.**

Page 3057

1 Q. And I think you pointed out that there -- on  
 2 5-4-1, subsection (b) talks about investigation  
 3 and subsection (1) refers to domestic water  
 4 right owners complaining of impairment and  
 5 subsection (b)(2) talks about non-domestic water  
 6 right owners complaining about impairment,  
 7 right?  
 8 **A. Yes.**  
 9 Q. And I thought I heard you say something about --  
 10 did I hear you acknowledge the chief engineer  
 11 may require a domestic impairment complainant to  
 12 provide the requirements of (b)(2) that are  
 13 normally -- that are definitively required by  
 14 the regulation of non-domestic water right  
 15 impairment complainants?  
 16 **A. I believe I testified, and if I didn't, I'll**  
 17 **clarify the record, that the chief engineer may**  
 18 **require it. It's not automatically required as**  
 19 **it is for a non-domestic. A non-domestic -- a**  
 20 **domestic, the chief engineer may require that**  
 21 **similar type report, I agree with that**  
 22 **100 percent.**  
 23 Q. Okay. And so I wrote down where you said, I  
 24 believe, in the context of impairment as is  
 25 discussed in 5-4-1, you said, domestic users

Page 3058

1 don't have to fully penetrate the aquifer to  
 2 claim impairment. Is that what you said?  
 3 **A. Can you -- a domestic --**  
 4 Q. I wrote down --  
 5 **A. Okay.**  
 6 Q. -- I thought in the context of your discussion  
 7 of 5-4-1 --  
 8 **A. Uh-huh.**  
 9 Q. -- domestic users don't have to fully penetrate  
 10 the aquifer to claim impairment. Did you say  
 11 that, did I understand that?  
 12 **A. Yeah, I think I prob -- I think I did.**  
 13 Q. Okay.  
 14 **A. I think that's a true statement. I mean, that**  
 15 **was my opinion of that -- of that, yes.**  
 16 Q. Okay. And so I would like you to expound,  
 17 please, because as you and I can acknowledge,  
 18 5-4-1(b)(2), subsection (C) --  
 19 **A. Uh-huh.**  
 20 Q. -- talks about providing data to show the extent  
 21 to which the complainant's well has fully  
 22 penetrated the productive portions of the  
 23 aquifer with water of acceptable quality for the  
 24 authorized use, right?  
 25 **A. It does.**

1 Q. Okay. So I'm just -- I want to make sure I  
2 understand your understanding of this subsection  
3 versus your earlier claim that domestic users  
4 don't have to fully penetrate the aquifer to  
5 claim impairment.

6 **A. Well, it says, provide data to show to the  
7 extent; I don't see where it says it must fully  
8 penetrate the aquifer to claim impairment. It  
9 says the extent. And then it also talks about  
10 an acceptable water quality. So there's two  
11 components; it doesn't say require.**

12 Q. Why do you think it's asking for the data if it  
13 doesn't have a consequence to the investigation?

14 **A. It could have -- it does have a consequence, but  
15 it doesn't say it's required to fully penetrate  
16 the aquifer. They want -- the chief engineer  
17 wants to know to what extent it does. I mean, I  
18 helped develop these regulations, I know what  
19 the intent was of that. And we also made sure  
20 we put in the water quality component because  
21 just because they didn't go deep, the deep might  
22 not be usable water.**

23 Q. So I'm trying to understand why -- you said you  
24 were involved in this -- in the formulation of  
25 this regulation?

1 **A. Yes.**

2 Q. So -- so presumably the data requested is  
3 relevant to determination of whether impairment  
4 has occurred, correct?

5 **A. Yes.**

6 Q. So why did you or the GMD2 Board assist in the  
7 development of a regulation concerning  
8 impairment investigation that asks for data  
9 which you are now saying is not relevant to a  
10 determination of impairment?

11 **A. Well, I did not say it wasn't relevant; it is  
12 relevant information. I'm just saying that  
13 there is nothing in this language, and it's  
14 perfect -- purposely, in my consideration,  
15 because we've had this discussion, from what I  
16 can remember, it was purposely left that way so  
17 that it was not absolutely required that a well  
18 had to fully penetrate the aquifer to be  
19 considered impaired. That's just not for  
20 domestic, I mean, that -- it doesn't say that  
21 for non-domestic either, that it has to fully --**

22 Q. Right.

23 **A. This report is part of the investigation,  
24 absolutely it has to be part of the  
25 investigation; if the well is 20 feet deep and**

1 **A. Certainly, the groundwater management districts  
2 were consulted with many times, we had lots of  
3 back-and-forth discussions with DWR. Very, very  
4 good discussions, I might add, with -- I think  
5 Mr. Barfield did these, if I remember right.  
6 Yeah, 2010.**

7 Q. Okay. And so I'm just trying to understand  
8 why require something if that something doesn't  
9 have an effect on the investigation of  
10 impairment?

11 **A. I don't think I stated it didn't have an effect  
12 on the investigation; it's part of the  
13 investigation. I do not see language in here  
14 that says if the well does not fully penetrate  
15 the aquifer that there cannot be an impairment  
16 complaint. If you can show that to me, I  
17 will -- I will read it and see if I can  
18 understand. It says the report must provide  
19 that data to what extent it fully penetrates the  
20 aquifer. I don't see the language that says the  
21 well must fully penetrate the aquifer to be  
22 considered impaired. Do you see that anywhere  
23 in that regulation?**

24 Q. I don't but this regulation is about the  
25 investigation of impairment complaints, correct?

1 **there's 400 feet of water, well, that should  
2 probably be considered. But it doesn't say it  
3 had to fully penetrate. The chief engineer, in  
4 my opinion, wanted to know what the well that's  
5 claiming to be impaired looks like, depth,  
6 construction, pump, all those things.**

7 Q. But you're telling me that depth doesn't matter  
8 to the --

9 **A. I didn't --**

10 Q. -- ultimate conclusion?

11 **A. You're -- you are totally mischaracterizing, I  
12 did not say depth didn't matter. I am saying --**

13 Q. Okay. Then you please tell me how it's  
14 relevant. You -- you please tell me how this  
15 request to provide data showing the extent to  
16 which a well has fully penetrated the aquifer --

17 **MR. STUCKY: Um --**

18 **BY MR. OLEEN:**

19 Q. -- please show me how it's --

20 **PRESIDING OFFICER: I think maybe I  
21 can -- at least what I'm hearing, and,  
22 Mr. Boese, please tell me if --**

23 **A. Uh-huh.**

24 **PRESIDING OFFICER: -- I'm not  
25 understanding you correctly. I think -- I**

Page 3063

1 think the way you're reading this data to  
 2 show the extent to which the well is fully  
 3 penetrated means if it has, how much has  
 4 it?  
 5 **A. Absolutely, I think it's a part of the**  
 6 **investigation of knowing how deep and what sort**  
 7 **of construction the well that is claiming to be**  
 8 **impaired is absolutely critical to the**  
 9 **impairment complaint.**  
 10 **PRESIDING OFFICER:** And what I'm  
 11 hearing Mr. Oleen's questions based on does  
 12 not include an interpretation of if?  
 13 **MR. OLEEN:** That's correct.  
 14 **PRESIDING OFFICER:** So you're just  
 15 going to be butting heads unless you  
 16 understand that you're both reading this --  
 17 you're each reading this differently.  
 18 That's where you're not making any progress  
 19 because he is seeing an if interpretation  
 20 in here and you are not.  
 21 **A. Who's seeing the if?**  
 22 **MR. OLEEN:** But --  
 23 **PRESIDING OFFICER:** Am I -- and  
 24 maybe that's your point.  
 25 **MR. OLEEN:** I guess my point is if

Page 3064

1 the if doesn't matter, then how does the  
 2 extent matter? If it doesn't matter about  
 3 whether or not it's even penetrating the  
 4 aquifer, then why does it matter the extent  
 5 to which it is, if it is?  
 6 **PRESIDING OFFICER:** And I -- I'm not  
 7 trying to answer for the witness, I'm just  
 8 trying to move forward.  
 9 **A. I -- can I say one more thing --**  
 10 **PRESIDING OFFICER:** Please.  
 11 **A. -- and I think I'm going to be done with this**  
 12 **line of questioning, I think? I think there's**  
 13 **been sort of a misunderstanding between you and**  
 14 **me, and that's absolutely fine. The report is**  
 15 **important, the chief engineer needs to know; if**  
 16 **this comes through the GMD, we need to know**  
 17 **where these wells are set. We had that**  
 18 **discussion earlier about practical saturated**  
 19 **thickness; I don't know if I want to go there.**  
 20 **If the bottom 80 feet is clay, does it matter if**  
 21 **the applicant -- or if the well was fully**  
 22 **penetrated or not? Yeah, you bet -- you bet it**  
 23 **does because fully penetrated into clay doesn't**  
 24 **mean anything. It's got to be in a sand zone.**  
 25 **So I think the chief engineer needs to know**

Page 3065

1 **where that well is set at, if it's in a**  
 2 **productive part of the aquifer. I am just**  
 3 **merely stating that this does not say if the**  
 4 **well does not fully penetrate the aquifer, they**  
 5 **can't claim impairment. It doesn't say that.**  
 6 **It just says what -- to what extent is it done,**  
 7 **and then the chief engineer can take that. If**  
 8 **the chief engineer determines it has to fully**  
 9 **penetrate the aquifer, that's part of the**  
 10 **determination by the chief engineer.**  
 11 **BY MR. OLEEN:**  
 12 Q. Maybe -- maybe the confusion is when I was  
 13 saying -- or when we were having the discussion  
 14 about whether or not they can claim impairment,  
 15 I don't mean -- I wasn't talking about whether  
 16 or not they are precluded from ever filing the  
 17 piece of paper making that claim. I meant  
 18 whether they can make a valid claim for  
 19 impairment?  
 20 **A. I think that report is part of that**  
 21 **investigation.**  
 22 Q. So if we have a domestic well, or even a  
 23 non-domestic well as you pointed out because  
 24 this request for this certain type of data can  
 25 apply to both types of wells, if we have a -- a

Page 3066

1 well that is 20 feet deep and it does penetrate  
 2 the aquifer, but then for whatever reason the  
 3 water level is lowered to where it is now 3 feet  
 4 or 5 feet below this existing well and  
 5 someone -- and the owner of the well that now  
 6 cannot reach the water thinks that it is because  
 7 of someone or some person's pumping activity  
 8 that is junior to them, are you saying it is --  
 9 it doesn't -- it's not required before the  
 10 person -- the person's well that can't reach the  
 11 water, it's not required that they extend the  
 12 depth of their well by 3 to 5 feet to now reach  
 13 the lower water level, are you saying that they  
 14 can claim impairment without having to first  
 15 drill down to reach that water that's not very  
 16 far below?  
 17 **A. I didn't say that at all. I'm just saying that**  
 18 **there's a report that's required by this**  
 19 **regulation to what extent does that well**  
 20 **penetrate. And it's up to the Division of Water**  
 21 **Resources' investigation or if it goes to the**  
 22 **GMD as a remedy for the chief engineer to decide**  
 23 **upon.**  
 24 Q. So you think the chief engineer could decide  
 25 that in that situation that I just presented,

1 and I know it doesn't have a lot of facts, but  
 2 in that situation the chief engineer could say,  
 3 I'm not going to find impairment until you first  
 4 drill your well down another 3 to 5 feet to  
 5 reach the water?  
 6 **A. Sure, the chief engineer could find that. I'm**  
 7 **just saying it's not an automatic requirement in**  
 8 **this regulation that it fully has to penetrate**  
 9 **the aquifer. It's up to the chief engineer to**  
 10 **decide that.**

11 **MR. STUCKY:** I'm going to object as  
 12 to this. I tried to be very, very patient,  
 13 but I'm finally going to object as to asked  
 14 and answered with this line of questioning.

15 **PRESIDING OFFICER:** Yeah, I -- we're  
 16 not making any progress on this.

17 **MR. OLEEN:** Well, it doesn't matter  
 18 what I think about Mr. Stucky's  
 19 characterization, you agree with it, so  
 20 I'll end my line of questioning. Thank  
 21 you, I have no further questions.

22 **PRESIDING OFFICER:** Okay.  
 23 Ms. Wendling.

24 **MS. WENDLING:** I have no further  
 25 questions.

1 Thank you to everyone.  
 2 (Whereupon, the proceedings were  
 3 adjourned at 4:15 p.m.)

1 **PRESIDING OFFICER:** Mr. Boese, you  
 2 are excused.  
 3 **A. I thought you were going to ask me a question**  
 4 **the way you were looking at me.**

5 **PRESIDING OFFICER:** Mr. Stucky?

6 **MR. STUCKY:** Madam Hearing Officer,  
 7 as much as I would like to put a very dear  
 8 mentor of mine on the stand since he formed  
 9 the Groundwater Management District, as  
 10 much as I would like to put him in the hot  
 11 seat as a former partner of mine, the  
 12 District rests.

13 **PRESIDING OFFICER:** Ms. Wendling.

14 **MS. WENDLING:** All right. The  
 15 Intervenors call George Austin. I will  
 16 offer that if we want to start fresh next  
 17 time with the Intervenors, I will not be  
 18 upset at all. I know it's been a very long  
 19 week, and Mr. Austin is perfectly willing  
 20 to come back.

21 **PRESIDING OFFICER:** I've thought  
 22 about that. Everybody's ready to go, okay.  
 23 This is a good time to take a break. So  
 24 we'll pick it up with the Intervenors' case  
 25 next time. We are in recess, it's 4:15.

1 **PRESIDING OFFICER:** Okay. We are  
2 now on the record. My name is Constance C.  
3 Owen, and I am serving as presiding officer  
4 in these proceedings. The title of the  
5 matter before us today is In the Matter of  
6 the City of Wichita's Phase II Aquifer  
7 Storage and Recovery Project in Harvey and  
8 Sedgwick Counties, Kansas, Case Number 18  
9 WATER 14014.

10 It is February 3rd, 2021, we are located  
11 at the Kansas Learning Center for Health in  
12 Halstead, Kansas. This is a continuation  
13 of a hearing that last recessed in March of  
14 2020. We were unable to reconvene due to  
15 the COVID-19 pandemic, and that pandemic  
16 still requires significant restrictions,  
17 and so we will have masks on to the extent  
18 that we can, and the witnesses may be  
19 allowed to remove those for the court  
20 reporter's purposes.

21 We also have a hybrid format that is  
22 taking place. In this particular in-person  
23 location, we have our court reporter, we  
24 have Tessa Wendling, who's the attorney for  
25 the Intervenor, her witnesses, and me, and

1 a couple of technical assistants and no one  
2 else is participating in person. Remotely,  
3 by electronic means, we have the other  
4 attorneys and parties, and I think at this  
5 time, we'll have them state appearances,  
6 followed up by our in-person lawyer. So  
7 let's start with the City.

8 **MR. MCLEOD:** Brian McLeod, deputy  
9 city attorney appearing for the City of  
10 Wichita, Kansas.

11 **PRESIDING OFFICER:** And for DWR?

12 **MS. MURRAY:** Stephanie Murray for  
13 DWR.

14 **PRESIDING OFFICER:** And for  
15 Groundwater Management District No. 2?

16 **MR. ADRIAN:** I'm Tom Adrian and Dave  
17 Stucky appear on behalf of Equus Beds  
18 Groundwater Management District No. 2.

19 **PRESIDING OFFICER:** And for the  
20 Intervenor?

21 **MS. WENDLING:** Tessa Wendling.

22 **PRESIDING OFFICER:** Okay. Thank you  
23 very much. Also this hearing is required  
24 to be accessible to the public, so the  
25 Division of Water Resources has kindly set

1 up a YouTube link, which is posted on the  
2 DWR website. If anyone is joining by the  
3 Zoom or GoTo link, please mute your  
4 microphones. We are endeavoring to have a  
5 very delicate balance of how our audio is  
6 working, so it will simplify things  
7 tremendously if -- if you are muted, and  
8 then the attorneys can un-mute when it's  
9 appropriate for them to speak.

10 The public is encouraged, allowed,  
11 welcome to provide written comments. All  
12 written comments should be emailed or  
13 mailed to Ronda Hutton at the Division of  
14 Water Resources, and her contact  
15 information is also posted on the Division  
16 of Water Resources' web page, the page for  
17 the Wichita ASR project. The deadline for  
18 submitting public comments is 5:00 p.m. on  
19 February 26, 2021. We have held the dates  
20 of February 18 -- February 18 and 19, 2021  
21 to finish this hearing, if necessary, after  
22 this week.

23 For the record, I'll also note on  
24 January 4, 2021, DWR issued a news release  
25 regarding the details of this resumed

1 hearing. On November 2, 2020, the new  
2 chief engineer, Earl Lewis, issued a notice  
3 affirming the continued delegation to me to  
4 preside over this matter. Previously, this  
5 authority had been delegated to me by  
6 former Chief Engineer David Barfield and  
7 former Acting Chief Engineer Chris  
8 Beightel.

9 On December 30, 2020, Chief Engineer  
10 Lewis issued an agreed waiver of Kansas  
11 Administrative Regulation 5-12-3. In  
12 short, that regulation required this  
13 hearing to take place physically within the  
14 geographic boundaries of GMD2. However,  
15 the COVID-19 virus made that impractical.

16 The parties agreed to a waiver of that  
17 regulation to achieve as timely a  
18 conclusion of this matter as practical.  
19 Generally, the parties agreed to the  
20 proceedings being conducted fully or  
21 partially in a visual -- in a virtual  
22 format and that any in-person proceedings  
23 take place within a 30-mile radius of the  
24 boundaries of GMD2.

25 I would like to thank the parties, all

Page 3079

1 of whom cooperated most professionally to  
 2 achieve this waiver. I also want to thank  
 3 Stephanie Murray who the took the labor in  
 4 order to get it drafted and executed. I  
 5 would also like to note the extraordinary  
 6 level of professionalism, cooperation, and  
 7 patience shown by all counsel and their  
 8 clients as we dealt with the unforeseen and  
 9 unavoidable delays caused by this pandemic.  
 10 I also thank each of you in person today  
 11 for compliance with public safety measures,  
 12 including wearing masks and social  
 13 distancing. In addition, all parties have  
 14 agreed it is appropriate for me to take  
 15 administrative notice of the Wichita ASR  
 16 annual accounting reports for 2013, 2014,  
 17 2015, and 2016, which are located on DWR's  
 18 website on the Wichita ASR page.  
 19 And now we are ready to resume  
 20 testimony, and at this time I will turn the  
 21 case over to Tessa Wendling who will  
 22 present her witnesses.  
 23 (Reporter requests clarification  
 24 of Mr. McLeod.)  
 25 **PRESIDING OFFICER:** Pardon me just a

Page 3080

1 moment, Brian, the court reporter was  
 2 unable to hear you.  
 3 **MR. MCLEOD:** I'm sorry. I have a  
 4 couple of housekeeping matters that I think  
 5 we should take up before starting  
 6 testimony.  
 7 **PRESIDING OFFICER:** I'm sorry, I  
 8 should have asked. Please go ahead.  
 9 **MR. MCLEOD:** When we were last  
 10 together, everybody may remember that  
 11 Mr. Pope and Mr. Boese both had difficulty  
 12 remembering whether the -- whether the  
 13 Groundwater Management District had in the  
 14 ASR prior proceedings opposed the concept  
 15 of passive recharge credit, and I -- I  
 16 think I pressed that line of questioning  
 17 perhaps too aggressively, but coming back  
 18 and checking through documents, we  
 19 discovered that, indeed, the Groundwater  
 20 Management District did in its  
 21 recommendation on the ASR permits oppose  
 22 the concept of passive recharge credits,  
 23 and I wanted to -- I believe I mentioned it  
 24 in an email and you asked me to put that on  
 25 record. And so to dispel any -- any

Page 3081

1 unwarranted implication from my last  
 2 questioning, we -- we will stipulate that  
 3 we know, in fact, the Groundwater  
 4 Management District did recommend against  
 5 passive recharge credits in those prior  
 6 proceedings.  
 7 **PRESIDING OFFICER:** Thank you.  
 8 **MR. MCLEOD:** The other thing that --  
 9 **PRESIDING OFFICER:** Are there any  
 10 other preliminary matters before we begin  
 11 with testimony?  
 12 **MR. MCLEOD:** One other and this --  
 13 (Reporter requests clarification  
 14 of Mr. McLeod.)  
 15 **PRESIDING OFFICER:** Brian, I'm  
 16 sorry, I think you're going to need to  
 17 speak a little louder for our court  
 18 reporter.  
 19 **MR. MCLEOD:** Okay. There is one  
 20 other matter, and it has to do with the  
 21 exhibits that came from counsel for  
 22 Intervenors yesterday, which exhibits  
 23 included some excerpts from accounting  
 24 reports on ASR, and as to those the City  
 25 has no objection. I think all the parties

Page 3082

1 have said those full documents can be  
 2 admitted, and so the excerpts can as well.  
 3 The other documents that came with that  
 4 email are all somewhat problematic, and  
 5 I've had a very short span of time to  
 6 review these issues, so if -- if any other  
 7 counsel think that I'm wrong about salient  
 8 facts, feel free to point out to me where  
 9 these things were provided in discovery.  
 10 But I think the state of facts to be in  
 11 the Intervenors' interrogatory responses, I  
 12 believe the words minimum desirable  
 13 streamflow are not mentioned. The study on  
 14 minimum desirable streamflow, I believe,  
 15 was not provided in discovery. A prior  
 16 version of it appeared as Exhibit 4 when  
 17 the Intervenors' notebooks were prepared,  
 18 but I don't think that the City had it  
 19 during discovery or was advised of the  
 20 issues during discovery or that it was  
 21 going to be an area of contention by the  
 22 Intervenors or that they were going to  
 23 offer either testimony or exhibits to that  
 24 set of issues.  
 25 Also, the graph that appears to depict

1 1930's streamflow and modeled streamflow,  
2 we have not seen that document previously  
3 in discovery. We have not seen the CV of  
4 Mr. Richard Basore in discovery, and to the  
5 extent that that is being provided in an  
6 attempt to qualify Mr. Basore as some kind  
7 of an expert or witness with special  
8 knowledge, that's extremely untimely.  
9 And so as to -- as to all of the  
10 exhibits that came yesterday, other than  
11 the excerpts from accounting reports, the  
12 City objects and will object to their  
13 submission and admissibility and will  
14 object to the Intervenor's offering  
15 testimony, expert or otherwise, to the  
16 subject matter area of minimum desirable  
17 streamflow.

18 **PRESIDING OFFICER:** Okay.  
19 Ms. Wendling, would you like to respond?  
20 **MS. WENDLING:** Sure. Exhibit 4, the  
21 article provided, is the same article  
22 merely indicating the website where it is  
23 available. There's nothing different about  
24 it, it's been in our exhibit notebook the  
25 entire time; I thought providing the actual

1 hadn't necessarily planned to admit it as  
2 an exhibit.  
3 And the final graph provided is part of  
4 Mr. Austin's analysis that he has done and  
5 is a visual representation of oral  
6 testimony that he plans to give. For me,  
7 it's helpful to see the visual; if the  
8 document itself is not admitted as an  
9 exhibit, it's not material to me. I think  
10 the visual representation is helpful as he  
11 provides his testimony.  
12 And as to whether or not in discovery or  
13 in our brief I used the words minimum  
14 desirable streamflow, I would need some  
15 time to go back and look, it's been two  
16 years, and I simply don't recall. Minimum  
17 desirable streamflow, as counsel has  
18 indicated, and the impacts to that are  
19 significant, and I think it's in the public  
20 interest that we consider any available  
21 testimony on minimum desirable streamflow  
22 due to the importance and due to the mutual  
23 desire of everyone to protect both the  
24 aquifer and the stream.  
25 **PRESIDING OFFICER:** Mr. McLeod.

1 location of the document would be helpful.  
2 With regards to Mr. Basore's resume --  
3 **MR. ADRIAN:** We are -- we're not  
4 hearing her.  
5 **MR. STUCKY:** Yeah, we're not hearing  
6 a word Tessa's saying if she's talking.  
7 **MS. WENDLING:** I'll start over,  
8 forgot to un-mute. I will probably do that  
9 a lot.  
10 Exhibit 4 that I provided yesterday was  
11 a reprint of an article including the web  
12 address or site that the document is  
13 available on. It is the same article,  
14 nothing changed, I thought as a convenience  
15 it would be helpful for everyone to know  
16 where the document came from based on  
17 comments made in previous rounds of  
18 hearings asking that specific question.  
19 The resume for Mr. Basore is not an  
20 attempt to qualify him as an expert; it is  
21 a document that I thought helpful to show  
22 his background. Mr. Basore will testify to  
23 his background and experience. However,  
24 the document was for information purposes.  
25 I planned to admit it for identification,

1 **MR. MCLEOD:** And to reiterate about  
2 the document that was Exhibit 4, we  
3 recognize that it's closely similar to a  
4 document that is Exhibit 4 in the  
5 Intervenor's exhibit book, but we don't  
6 believe that it was ever provided in  
7 discovery while discovery for the case was  
8 open, so the City has never had any  
9 opportunity to explore the Intervenor's  
10 position on minimum desirable streamflow  
11 when discovery was actually open in the  
12 case.  
13 **PRESIDING OFFICER:** Ms. Wendling.  
14 **MS. WENDLING:** The report of the  
15 report that Mr. Austin had used in his  
16 analysis, and I don't recall if it was -- I  
17 don't recall if it was provided so I  
18 will -- if Brian says it wasn't provided,  
19 then it might not have been provided in  
20 discovery, but it's been in the binder  
21 since last -- or December of, whenever we  
22 started this, '19.  
23 **MR. MCLEOD:** I would add I'm not  
24 seeing the document referenced in  
25 Mr. Austin's report where he gives a list

Page 3087

1 of documents that he -- that he reviewed,  
 2 and at the end of his report, a list  
 3 of links to documents, references, and  
 4 their hyperlinks, I'm -- I'm not seeing the  
 5 one that's Exhibit 4.  
 6 **PRESIDING OFFICER:** I'm going to  
 7 take a minute to take a look at this  
 8 exhibit. We're going to go off the record  
 9 for a minute and do some technical  
 10 adjustments while I review these.  
 11 (Thereupon, a recess was taken;  
 12 whereupon, the following was had.)  
 13 **PRESIDING OFFICER:** We are now back  
 14 on the record, thank you everyone for your  
 15 patience.  
 16 Taking Mr. McLeod's objections out of  
 17 order, the CV of Richard Basore,  
 18 Ms. Wendling makes clear that he's not --  
 19 there's no attempt to qualify him as an  
 20 expert and he will not be questioned as  
 21 such. So I see his CV as -- as -- it's  
 22 harmless to have it in the record, so  
 23 I'm -- I think that's fine to include that.  
 24 The minimum desirable streamflow  
 25 exhibit, the, apparently, reprint,

Page 3088

1 smaller-typed version in Exhibit 4 that was  
 2 recently offered, that appears to be the  
 3 same as Exhibit 4 that has been in the  
 4 Intervenors' exhibits for sometime, the  
 5 parties have had access to that exhibit,  
 6 and minimum desirable streamflow has had a  
 7 significant amount of testimony, I believe,  
 8 by all the other parties, at least by many  
 9 witnesses before today, and it is a  
 10 significant and relevant aspect of what  
 11 needs to be decided, so I'm going to allow  
 12 that exhibit to remain.  
 13 The graphic illustration, which I think  
 14 is Exhibit 25, Ms. Wendling describes that  
 15 that's just an illustration that Mr. Austin  
 16 will be using to explain his testimony,  
 17 that she does not intend to offer it as an  
 18 exhibit to be admitted, so I will allow him  
 19 to use that to demonstrate and help me  
 20 understand his testimony.  
 21 Have I reviewed all of your objections,  
 22 Mr. McLeod?  
 23 **MR. MCLEOD:** I -- I note one more,  
 24 as we were looking through documents,  
 25 minimum desirable streamflow is actually

Page 3089

1 not mentioned in Mr. Austin's report as a  
 2 subject that he's going to address, so  
 3 that -- that entire major subject has been  
 4 completely excluded from his expert  
 5 disclosure. Given the amount of flack that  
 6 the City has consistently had in the case  
 7 over expert reports and disclosures, I  
 8 think it would be tremendously unfair to  
 9 let Mr. Austin testify as an expert to an  
 10 issue that's a major issue but was  
 11 completely excluded from his expert  
 12 disclosure and report.  
 13 **MR. STUCKY:** I'm going to go ahead  
 14 and weigh in here just because I have his  
 15 expert report right in front of me. I'm on  
 16 the third page of his expert report, and I  
 17 don't know if he uses the term minimum  
 18 desirable streamflow or not, I need to read  
 19 through that again, but that second full  
 20 paragraph on the third page, he talks about  
 21 river flows and how recharge, artificial  
 22 recharge impacts river flows. Does he say  
 23 minimum desirable streamflow? I don't  
 24 know, but he talks about river flows,  
 25 quote, infiltrating into the basin storage

Page 3090

1 area index cell -- cells or outflowing to  
 2 the river.  
 3 Likewise, in his conclusions, I'm  
 4 quoting his report, increasing recharge  
 5 either increases flow from the aquifer to  
 6 the Arkansas and Little Arkansas Rivers or  
 7 decreases flow from the rivers to the  
 8 aquifer, that's on the fourth page of his  
 9 report. I mean, there's a number of places  
 10 where he talks about river flow. Does --  
 11 you know, again, does he use the term  
 12 minimum desirable streamflow, I don't know,  
 13 but there's -- there's different ways to  
 14 explain the concept, and I don't think the  
 15 mere fact that he doesn't use that term is  
 16 prohibitive for him to be able to testify  
 17 to it.  
 18 **MR. MCLEOD:** In response to that, I  
 19 would say that everywhere that Mr. Austin  
 20 is discussing those flow issues in his  
 21 report, it is part of his criticism of the  
 22 accounting method for the AMCs; it is not  
 23 part of any analysis that there's any  
 24 impairment of minimum desirable streamflow,  
 25 there's no analysis in the report of

1 minimum desirable streamflow or -- or what  
2 it is for these reaches of the river that  
3 are adjacent to the aquifer. It's been  
4 completely left out of his expert report  
5 and disclosures.  
6 **PRESIDING OFFICER:** Ms. Wendling?  
7 **MS. WENDLING:** Mr. Stucky explained  
8 it very clearly, I don't believe the words  
9 minimum desirable streamflow are in  
10 Mr. Austin's report. He testifies -- or  
11 his report talks about the interchange and  
12 flow between the river and the aquifer.  
13 The testimony he has is regarding  
14 factual gage data of actual streamflow  
15 during drought conditions. It's not -- he  
16 did not do independent analysis of whether  
17 or not there will be an impact to  
18 streamflow. He speaks merely on what has  
19 happened during past drought scenarios.  
20 **PRESIDING OFFICER:** Keeping in mind  
21 the latitude that there exists for  
22 administrative hearings versus strict civil  
23 litigation, we're not tied directly to  
24 otherwise applicable rules of evidence, and  
25 as I glance over this, and if this needs to

1 be revisited during Mr. Austin's testimony,  
2 then we could revisit it, but at this time,  
3 I see that what appears to be in Exhibit 4  
4 is consistent with what Ms. Wendling is  
5 describing and that since Mr. Austin  
6 addressed the inter -- interplay of  
7 streamflow and aquifer levels that this  
8 appears to be related to his report and his  
9 anticipated testimony, so I'm going to  
10 allow it for now. If a further objection  
11 needs to be lodged later, then I'm sure we  
12 can address that at that time.  
13 Any other preliminary matters before we  
14 start testimony?  
15 **MR. MCLEOD:** Not from the City.  
16 **PRESIDING OFFICER:** Okay. Hearing  
17 none, Ms. Wendling, you may present your  
18 first witness, and we will need to have him  
19 sworn in to begin with.  
20 **MS. WENDLING:** The Intervenors call  
21 George -- the Intervenors call George  
22 Austin.  
23 //  
24 //  
25 //

1 GEORGE AUSTIN, P.E.,  
2 having been first duly sworn, was  
3 examined and testified as follows:  
4

5 **DIRECT EXAMINATION**  
6 **BY MS. WENDLING:**

7 Q. All right. For all parties involved, I'll draw  
8 your attention to what I'd like to mark for  
9 identification as Intervenors' Exhibit 2, which  
10 is Mr. Austin's expert report and CV.

11 Mr. Austin, will you give us a overview of  
12 your background, education, work history, and  
13 any certifications?

14 **A. Yes. My education background is, from a college**  
15 **standpoint, is I have a degree in civil**  
16 **engineering from Kansas State University and a**  
17 **degree from Emporia State in physics.**

18 **I began my work career as an assistant**  
19 **county engineer in Finney County, Kansas, Garden**  
20 **City, and the remainder of my career was with**  
21 **the Kansas Department of Agriculture and the**  
22 **Division of Water Resources, mainly in the water**  
23 **structures section, first as a dam safety**  
24 **engineer, then as section head overseeing the**  
25 **section that was in charge of the obstruction of**

1 **streams. And during that tenure, I also served**  
2 **as an administrative hearing officer in**  
3 **connection with abandonment of water rights,**  
4 **termination of water rights.**

5 **And after that assignment, I entered the**  
6 **interstate litigation team position, worked with**  
7 **the attorneys associated with the Compact,**  
8 **violations or enforcement on the Arkansas River**  
9 **and then also on the Republican River. In those**  
10 **two situations, much of that effort was in**  
11 **connection with -- the Compact is on surface**  
12 **water distribution, and inasmuch as groundwater**  
13 **affected the delivery of surface water to -- to**  
14 **the state boundary in both cases, the Supreme**  
15 **Court ruled that groundwater needed to be**  
16 **regulated to prevent depletion of streamflow**  
17 **that was owed Kansas. So in some respects that**  
18 **was a direct effect on what I -- how I viewed**  
19 **water rights, groundwater pumping in connection**  
20 **with streamflow.**

21 **And since retiring from the Division of**  
22 **Water Resources, I've had clients that I worked**  
23 **for to try to assess the delivery of water on**  
24 **the Arkansas River at various points to**  
25 **irrigation districts. The model that I used was**

Page 3095

1 one I developed in the Ark River lawsuit that  
 2 became the settlement agreement method of  
 3 accounting for water at state line. And further  
 4 extended it from the state line to Garden City,  
 5 Kansas for my clients to try to make sure that  
 6 there's a fair apportionment among the  
 7 irrigation districts along the Arkansas River to  
 8 Garden City.

9 Q. Do you hold any licenses or certifications?

10 A. I have a professional engineer's license with  
 11 the -- with Kansas, and I have had a license on  
 12 land surveying, which I went inactive this past  
 13 year on, mainly because I don't practice it much  
 14 any -- anymore; and, secondly, of course,  
 15 continuing education is required to maintain  
 16 your license, and that was just a step too much  
 17 for -- for me to handle since I didn't have any  
 18 income on land surveying.

19 Q. You mentioned that you worked on a settlement  
 20 accounting model, can you elaborate more on what  
 21 your role was with that?

22 A. Well, one of the disputed issues in that  
 23 interstate original lawsuit was the fact that  
 24 water released from John Martin Reservoir, which  
 25 is about 60 miles upstream of the

Page 3096

1 Kansas-Colorado state line, was reaching Kansas  
 2 in a altered state from what the release would  
 3 be. In other words, the ditches along that  
 4 60-miles reach would step on Kansas' release  
 5 from John Martin, divert it onto their lands,  
 6 and then whatever we got was the return flows  
 7 from those canals. And, you know, a four-day  
 8 release of fairly high discharge would end up  
 9 reaching the state line at a almost unusable  
 10 rate of discharge and greatly diminished, unless  
 11 you counted for 20 days or something like that.

12 So in looking at the Compact, it addressed  
 13 the John Martin release and said that the state  
 14 line -- water at the state line should be viewed  
 15 as if it were being discharged from the dam, and  
 16 so I developed a model that would take into  
 17 account normal losses of transport through that  
 18 60-mile reach and identified what the  
 19 hydrograph, what that release would look like at  
 20 the state line if not interfered with by  
 21 Colorado ditches and groundwater appropriated.

22 And after some negotiation, that was  
 23 accepted by Kansas and Colorado, with some  
 24 modifications, it's part of the negotiation,  
 25 and -- and was then recommended by the special

Page 3097

1 master in the case to the U.S. Supreme Court and  
 2 in 2009 was accepted as part of the accounting  
 3 process that is used by the Compact to make sure  
 4 Colorado is not diverting Kansas water  
 5 inappropriately.

6 And since that time, I don't believe  
 7 they've had to -- well, they may have had one  
 8 time where they had to place water in John  
 9 Martin on account to -- to basically pay for  
 10 depriving Kansas of some water. But it's  
 11 basically the law of the river from the  
 12 standpoint of delivering releases from John  
 13 Martin Reservoir.

14 Q. Okay. And have you, other than that model, have  
 15 you worked with or reviewed other models -- oh,  
 16 sorry. Other than this model, have you worked  
 17 with or reviewed other models as part of your  
 18 career?

19 A. Yes, part -- part of my role in the lawsuit  
 20 was -- was to review and be familiar with what  
 21 was also accepted as part of the case, it's  
 22 called the hydrologic-institutional model, which  
 23 at its root base looks at groundwater  
 24 diversions. It's basically a MODFLOW type model  
 25 that Steve Larson, who developed it, developed

Page 3098

1 the predecessor for USGS to the MODFLOW model.  
 2 And in addition looking at diversions and --  
 3 surface water diversions and other -- other  
 4 impacts to river flow.

5 And so as part of that effort, I was  
 6 trained by -- attended training by USGS on the  
 7 MODFLOW model, not so much to operate it as a  
 8 model, though I have done simple models, nothing  
 9 as complex as the Equus Beds, but in order to  
 10 familiarize myself with the inputs, what the  
 11 outputs should look like, how the model  
 12 operates.

13 Q. As you've been to continuing education, what --  
 14 and what courses or conferences have you taken  
 15 or attended to maintain your expertise in this  
 16 area?

17 A. In regard to groundwater modeling, I attended a  
 18 course in Denver, Colorado at the Federal Center  
 19 with USGS to -- it's a multiday course to  
 20 develop MODFLOW models, operate them, look at  
 21 things such as boundary conditions, typical  
 22 aquifer characteristics, and -- and produce a  
 23 report of how that model operated.

24 And each team within that course developed  
 25 models on different scenarios. The team I

1 worked on actually had a aquifer that  
2 boundary -- main boundary was a stream, a river,  
3 and so we had to develop boundary conditions for  
4 that river and also test the pumping and model  
5 that and its effect not only on the river but  
6 on -- on the aquifer as a whole.

7 In addition, I've attended several U.S.  
8 Corps of Engineers' courses and training in  
9 regard to surface water models, such as  
10 Hydrologic Engineering Center RAS, River  
11 Analysis System, and -- HEC-RAS. And so some of  
12 that goes way back to attending corps training  
13 in Tulsa regarding dam breaks because as noted  
14 in my CV I spent a lot of time on safety of dams  
15 and -- and the way rivers operate when bridges,  
16 dikes, and dams are placed on them.

17 Q. And what have you been doing since leaving DWR?

18 A. Since leaving DWR, initially, I continued  
19 working on some of the interstate things under  
20 private contract with the -- with the State of  
21 Kansas, and then otherwise I've been working on  
22 some groundwater user applications, water  
23 rights, mostly in connection with sand and  
24 gravel operations, and -- and then as I  
25 mentioned earlier on the Arkansas River in

1 connection with the streamflows and distribution  
2 to ditches. And several small projects  
3 regarding -- for instance, one in Scott County  
4 where the County put in an inadequate culvert,  
5 and so there was a action, a civil action  
6 against the County in regards to flooding  
7 farmers' homesteads. So some -- some projects  
8 such as that.

9 Q. And how would you describe, based on your  
10 experience, the relationship between groundwater  
11 and surface water?

12 A. Well, they are -- they are an integrated,  
13 connected system inasmuch as -- and in  
14 connection with those lawsuits that I -- the  
15 interstate lawsuits, even though those were  
16 surface water Compacts, inasmuch as the  
17 groundwater pumping affected the responsibility  
18 of the upstream states that deliver water to  
19 Kansas, that was considered to be a direct  
20 impact -- impact on surface water flow and it  
21 can be modeled and accounted for.

22 In DWR, when I began, it was clear that  
23 from the standpoint administratively, the  
24 groundwater and surface water were separate  
25 inasmuch as how they were administered and water

1 rights. And so until certain legislative  
2 actions were taken, such as an Environmental  
3 Coordination Act, state water planning statutes,  
4 from a water rights standpoint, they tended to  
5 be separate.

6 I remember Warren Lutz, who was a  
7 predecessor to Lane Letourneau in water rights,  
8 explained to me that for the City of Florence,  
9 the water right was a surface water right even  
10 though it would flow from -- from a spring  
11 because once it was out of the ground, it was a  
12 surface water right. If they had put the -- had  
13 put a well into the spring while it was still  
14 groundwater, it would have been a groundwater  
15 right. So, you know, so that physical  
16 separation was clearly, administratively, what  
17 DWR historically looked at water rights.

18 I think with the lawsuits, the Ark River  
19 Original Number 105, we -- we clearly saw from  
20 the standpoint of interstate actions that they  
21 were connected, and I -- I think if you look at  
22 statutory and regulatory efforts by the agency,  
23 it reflects that trend. So I think clearly when  
24 you look at groundwater, especially things that  
25 are close to the river or a stream, then you

1 have to take in some consideration of what  
2 amount of that diversion, groundwater diversion  
3 is actually withdrawing water from the stream.

4 Q. And it's your understanding that modeling can  
5 help you understand what groundwater diversion  
6 is actually coming from the stream?

7 A. Well, if you're going to account for quantities  
8 and have a measurement of how much is either  
9 being lost to the stream or is -- the stream is  
10 contributing to the aquifer in terms of  
11 recharge, the model is the only way you can  
12 quantify it beyond doing some base flow  
13 analysis.

14 Streamflow is really kind of two  
15 components. The main component is what we call  
16 runoff component, it's water that -- or excess  
17 precipitation, it is water that runs off the  
18 surface of the land and enters the river, and  
19 that's when you oftentimes see the peaks, which  
20 may be flooding or -- but in addition to that,  
21 there is a base flow component, and base flow is  
22 groundwater discharge into the river or stream.

23 And you can do a detailed analysis. In  
24 fact, in looking at the USGS modeling report,  
25 2013-5042, I believe it is, it -- as some of the

Page 3103

1 boundary areas, they had to -- it appears they  
 2 had to look at that, there may actually be a  
 3 report on -- on that base flow study, but I have  
 4 not reviewed that or did not review that before  
 5 performing my expert report and analysis related  
 6 to that. But just as I mentioned in the -- in  
 7 the MODFLOW courses that I took, we had to do  
 8 that sort of thing or make a flat assumption of  
 9 what the flows were and the interaction was.  
 10 So base flow is really the -- the element  
 11 of flow that the minimum desirable streamflow is  
 12 part of. So -- and in some of the process of  
 13 developing minimum desirable streamflow, it  
 14 appears the base flow and MDS are used  
 15 interchangeably to a certain extent. But it is  
 16 a lower limit of base flow that is regulatory --  
 17 well, actually statutory on streams.  
 18 Q. So if I heard you correctly, the base flow is  
 19 lower or greater than minimum desirable  
 20 streamflow?  
 21 A. Base flow is a variable depending on groundwater  
 22 levels, the amount of discharge from  
 23 groundwater. There's a part of it that I recall  
 24 is the bank storage element that is transitory,  
 25 transient and temporary where when high flows of

Page 3104

1 runoff come down a stream, they, at that higher  
 2 stream level, they go into the bank and raise  
 3 the ground -- the groundwater level immediately  
 4 adjacent to the bank. And then as that stream  
 5 goes back to a lower flow, that water comes out  
 6 and reenters the stream at --  
 7 (Reporter requests clarification  
 8 of the witness.)  
 9 A. -- reenters the stream at a later time.  
 10 And another aspect is -- is the main  
 11 aquifer, depending on its level, discharges base  
 12 flow at different levels. So base flow is  
 13 variable. Minimum desirable streamflow, some  
 14 streams have seasonal ones established, and  
 15 other streams have just a single minimum  
 16 desirable streamflow. But those are based upon  
 17 in-stream uses that need to be met that are  
 18 normally addressed by base flow. And so they're  
 19 a portion of base flow, MDS is a portion of base  
 20 flow developed by study, the State of Kansas  
 21 through the Kansas Geological Survey, Kansas  
 22 Water Office, and the Division of Water  
 23 Resources participating.  
 24 BY MS. WENDLING:  
 25 Q. And what are some of those in-stream uses?

Page 3105

1 A. Well, some of those can be recreation, can be  
 2 water quality issues, can be -- much of it has  
 3 to do with the biota of the stream, the fishes  
 4 and -- and plants and things that are in the  
 5 stream and protecting their ability to exist.  
 6 Other in-stream uses may be appropriators on  
 7 that streams, surface water appropriators on  
 8 that stream.  
 9 Q. You mentioned that following the Compact there  
 10 was some legislative actions that were put in  
 11 place, was minimum desirable streamflow one of  
 12 those?  
 13 A. Minimum desirable streamflow, I think, was first  
 14 statutorily identified in about 1980, which was  
 15 prior to the filing of lawsuits in regards to  
 16 Compact. The quantification of what that issue  
 17 was, what minimum streamflow was came later and  
 18 was towards the late '90s where it came into  
 19 effect.  
 20 I think the lawsuits provided the impetus  
 21 to quantify the term, but minimum desirable  
 22 streamflow as it's statutorily been identified  
 23 from a state planning standpoint and identified  
 24 goal was first put in law in 1980. So one can  
 25 see that by '85, we were already identifying how

Page 3106

1 groundwater affected streamflow to the Compact  
 2 basin, and I think that's where a lot of the  
 3 language for minimum desirable streamflow was  
 4 already groundwater usage.  
 5 Q. While you were at -- employed at DWR, were you  
 6 involved in any of the phases of the ASR  
 7 project?  
 8 A. No, I was -- I was not involved in ARS (sic).  
 9 Q. And what were you engaged to do as -- for this  
 10 hearing, what did I engage you to do?  
 11 A. Well, initially, you asked me to review the  
 12 model in detail, and at the time I thought that  
 13 I might rerun the model. However, I think I  
 14 had, like, 13 days to process and review things,  
 15 so after looking at the things identified in the  
 16 model, how they -- the approach that was used,  
 17 the values that were used, I didn't feel like I  
 18 could add anything regarding the appropriateness  
 19 or the use of the model by doing a modeling run.  
 20 So I -- in talking to you and receiving  
 21 instruction, I then reviewed reports associated  
 22 with the ARS, the modeling for the ARS, the  
 23 account models, and other -- other aspects that  
 24 were related to the Equus Beds and the Wichita  
 25 ARS.

1 Q. Now, looking at Intervenor's Exhibit 2, is this  
2 the report that you prepared?  
3 **A. Yes.**  
4 Q. Okay. In the latter half of this exhibit, is  
5 this your CV?  
6 **A. Yes.**  
7 Q. And did you prepare the CV?  
8 **A. Yes, I did.**  
9 Q. And do you know approximately when you prepared  
10 this?  
11 **A. I would say just prior to the December 2019**  
12 **hearing.**  
13 Q. And was this document accurate at the time you  
14 prepared it?  
15 **A. Yes.**  
16 Q. Have there been any major changes or additions  
17 to this document?  
18 **A. Well, the only change that I -- I say might be**  
19 **on memberships in connection with the Boy Scouts**  
20 **of America Jayhawk Area Council, I am no longer**  
21 **on the executive board as of February 2020.**  
22 Q. Would you like to briefly tell us about the  
23 publications and papers that you've referenced  
24 on page 2 of your CV?  
25 **A. The Kansas Disaster Report, FEMA Disaster Report**

1 **flows and releases from John Martin.**  
2 **The River Routing Model, Upper Arkansas**  
3 **River, Kansas, it's a report I prepared for the**  
4 **Frontier irrigation ditch, which is the furthest**  
5 **upstream Kansas irrigation ditch on the Arkansas**  
6 **River, basically at state line, and is**  
7 **essentially a continuation of the model used for**  
8 **the John Martin releases, to model the movement**  
9 **of those releases from state line down to Garden**  
10 **City and at each diversion point provide the**  
11 **predictive flow. At current, it's still subject**  
12 **to some investigation and -- and Division of**  
13 **Water Resources has it under advisement for**  
14 **their administration of water rights, but it's**  
15 **still an ongoing matter.**  
16 Q. All right. If you would find the -- there  
17 should be a black binder up there, it is  
18 Exhibit 1, in the black binder is the City's  
19 proposal. And I believe it's in section 4-ish,  
20 4-3 where they talk about the -- I think you had  
21 it. It's a thick --  
22 **A. I had it?**  
23 Q. Yeah.  
24 **A. Okay. Two black binders.**  
25 Q. Section 4.0 on page 4-1 of City's Exhibit 1 is

1 **1000, that report was in connection with the**  
2 **1993 flood. The most severe portion was in the**  
3 **Kansas River Basin, but there was -- there were**  
4 **also other parts of the state affected by that.**  
5 **I, in conjunction with FEMA officials, White**  
6 **House appointments, did a inspection and review**  
7 **of the conditions along the Missouri and Kansas**  
8 **Rivers in Kansas, prepared -- my portion of it**  
9 **was providing information as to levy failures,**  
10 **mostly agricultural levies in Kansas. It also**  
11 **included some municipal ones such as at Silver**  
12 **Lake, Kansas and up in Doniphan County, Kansas.**  
13 **So that was kind of the report that each state**  
14 **prepared as -- in conjunction with the 1993**  
15 **flood and -- and the basis for which certain**  
16 **funding was assigned to the various states.**  
17 **Appendix - excuse me, this mask is a little**  
18 **hard to see through - Appendix F.2 Agreement**  
19 **Concerning the Offset Account of John Martin,**  
20 **and it was part of the Fifth and Final Report of**  
21 **Arthur L. Littleworth, Special Master for U.S.**  
22 **Supreme Court in connection with the Kansas v.**  
23 **Colorado Original Number 105. This was the**  
24 **write-up of the model which I prepared in**  
25 **connection with the county for the state line**

1 where the City discusses the proposed ASR  
2 accounting methodology.  
3 **A. I'm not seeing that exhibit. Proposal cover**  
4 **letter and proposal?**  
5 Q. Yes.  
6 **A. Okay, thank you. And page?**  
7 Q. 4-1. Now, as part of your work and review, you  
8 spent a lot of time on the accounting  
9 methodology, and you had some concerns after  
10 reviewing the City's proposed accounting  
11 methodology. Can you walk us through what some  
12 of those concerns were?  
13 **A. Well, my -- my concerns on the accounting**  
14 **methodology was the switch from a model-driven**  
15 **accounting process looking at the various cells**  
16 **to something that was a, appeared to be a**  
17 **percentage loss or percentage effect methodology**  
18 **that when I compared it to the accounting models**  
19 **that had been run 2013, '14, '15, and '16, it**  
20 **appeared that those percentages were less than**  
21 **what seemed to be experienced in the previous**  
22 **modeling efforts, both from the standpoint of**  
23 **initial losses, through the recharge process,**  
24 **the diversion and recharge process, and also**  
25 **from the migration of recharge credits through**

Page 3111

1 the cells and some cases lost to the streams, to  
 2 the river, Arkansas River. Well, they only --  
 3 they only showed losses to the Little Arkansas  
 4 River. The Arkansas River is normally a  
 5 recharge, and they don't show through their  
 6 accounting method any -- any losses to the  
 7 Arkansas River.

8 Q. On page 4-3, in the last paragraph of that page,  
 9 it says, loss rates of 5 percent initially and  
 10 3 percent annually are supported by the historic  
 11 accounting process modeling. Is it this  
 12 5 percent initial loss and 3 percent recurring  
 13 loss that you said you found to be less than  
 14 what was actually reflected in the accounting  
 15 report?

16 A. Well, when I was looking at it, it appeared to  
 17 me that in their tabulations and summary of  
 18 their tabulations that -- that the initial  
 19 losses were as much as 8 percent; in other  
 20 words, up to 8 percent of the water that was  
 21 diverted, and this was metered, and the amount  
 22 that was metered recharge, went back that was  
 23 used, that that seemed to be closer to 8 or  
 24 9 percent rather than 5 percent that initial  
 25 loss.

Page 3112

1 And -- and then the 3 percent annually  
 2 seemed to be generally higher when you looked at  
 3 the beginning recharge value or what the  
 4 recharge credits existed, what the new recharge  
 5 was, how much was -- of the credits were  
 6 withdrawn through pumping, how much moved  
 7 between cells, and then how much was lost to the  
 8 river, it -- it appeared that cumulatively that  
 9 it was something more than 10 percent. So --  
 10 and that was based on each annual account --  
 11 (Reporter requests clarification  
 12 of the witness.)

13 A. -- each modeled accounting for the recharge  
 14 accounting.

15 So in looking at that, it appeared that the  
 16 numbers I was looking at, which were the numbers  
 17 provided by the reports by the City to Division  
 18 of Water Resources, did not support the  
 19 percentages that they were using in their  
 20 proposed accounting methodology.

21 BY MS. WENDLING:

22 Q. For the recurring losses, do you know what the  
 23 recurring loss is meant to represent?

24 A. Well, they're losses that occur on an annual  
 25 basis, and it's -- basically symbolizes the

Page 3113

1 movement of recharge credits from one cell to  
 2 another and -- till you get to cells that the  
 3 loss is to the stream. And that loss affects  
 4 the -- the -- that loss -- that reoccurring loss  
 5 affects all the recharge that is -- credits that  
 6 are in that cell.

7 Q. And for the cells, index cells located along the  
 8 river, is that a loss of water downstream?

9 A. Yes, generally, the -- the slope or grade of the  
 10 groundwater surface elevation is downstream  
 11 towards the Little Arkansas River, at least from  
 12 the standpoint of the basin storage. So it  
 13 just -- in looking at that reoccurring loss and  
 14 then looking at the previous accounting, it  
 15 appeared to me like the annual loss was --  
 16 was -- to the stream was higher than what you  
 17 would get through the -- through the methodology  
 18 being proposed.

19 Q. So with the strategy of managing the aquifer  
 20 full, how does that impact losses from the  
 21 aquifer downstream?

22 A. Well, the last model, accounting model that I  
 23 reviewed was 2016, and so most of that change in  
 24 operation, I think, occurred prior to that or at  
 25 least the effects probably had not yet shown up.

Page 3114

1 But generally speaking, if your groundwater  
 2 level goes up, it means more water is discharged  
 3 into the stream, and so if more water is now  
 4 being discharged to the stream, I think  
 5 physically you would have a higher recharge  
 6 credit going to the stream.

7 Q. And do you know where the 3 percent recurring  
 8 loss, what data that's based on? I'll refer you  
 9 to figure 15 of the proposal.

10 A. The 3 percent is the central --  
 11 (Reporter requests clarification  
 12 of the witness.)

13 A. -- central EBWF area, Equus Beds, and then you  
 14 have to help me with WF.

15 BY MS. WENDLING:

16 Q. Well field.

17 A. Well field, oh.

18 Q. All right. Shifting back to your expert report,  
 19 you referenced USGS 2103-5042 (sic), which is  
 20 also an exhibit to the City's proposal, and I  
 21 believe your comment was increasing recharge  
 22 either increases flow from the aquifer or  
 23 decreases flow from the rivers to the aquifer.  
 24 Why do you believe that is significant in the  
 25 concept -- in relation to the City's proposal?

1 **A. Well, because maintaining base flow is**  
2 **important. If you increase that base flow, then**  
3 **you've created a situation where there's more**  
4 **surface water available, that's potentially a**  
5 **positive, but then if -- if you go into drought**  
6 **operation, then if you have a tendency to pump**  
7 **much deeper than historically has occurred, then**  
8 **there's going to be much less base flow**  
9 **available, in other words groundwater discharge**  
10 **into the stream.**

11 Q. Okay.

12 **A. So -- so that can affect those in-stream uses**  
13 **that -- that you're wanting to try to protect.**  
14 **It's not saying that during a drought that**  
15 **streamflow won't go to zero, but it is saying**  
16 **that it can be an impact; sometimes it's a**  
17 **temporary impact, sometimes it can be a**  
18 **permanent impact. But if you look at the**  
19 **streams that currently have minimum desirable**  
20 **streamflow identified by the State of Kansas,**  
21 **you'll -- you'll note that many of those streams**  
22 **tend to be streams that are not heavily affected**  
23 **by groundwater pumping where we have significant**  
24 **groundwater level depletion. It is -- and part**  
25 **of that reason is that because of that earlier**

1 **have runoff or -- or have base flow. That's a**  
2 **gaining stream. And a losing stream is that the**  
3 **flow decreases as you go downstream.**

4 **And so if you look at the modeling, you**  
5 **will see that there is, I think it's -- for 2015**  
6 **you will see that there's about 4,000, maybe**  
7 **5,000 acre-feet being modeled as infiltrating**  
8 **from streamflow to groundwater, and where that**  
9 **happens is typically in a losing stream reach of**  
10 **the -- of the stream. And you'll see that**  
11 **there's, like, 38,000 acre-feet for that year**  
12 **being accounted for going into the Little**  
13 **Arkansas River, from groundwater to streamflow.**  
14 **And that would indicate that that -- where that**  
15 **occurs that that's a gaining stream.**

16 **And so as your groundwater levels go up and**  
17 **down, the reach of which you have either losing**  
18 **or gaining will vary, and the lower the**  
19 **groundwater level gets, the less gaining stream**  
20 **you have and the more losing stream you have.**  
21 **And so the higher the streamflow going to**  
22 **groundwater, infiltrating to groundwater will be**  
23 **and the less your flow from groundwater to**  
24 **stream will be. So --**

25 Q. So --

1 **pumping, before we recognized base flow**  
2 **potentials, base flow was removed through**  
3 **pumping. So -- so there was no MDS, for**  
4 **instance, to establish on some streams because**  
5 **they'd already gone past the point of being able**  
6 **to address or maintain a minimum desirable**  
7 **streamflow.**

8 Q. And am I understanding correctly that currently  
9 for the past accounting reports that you were  
10 able to look at for 2016 and previous does take  
11 into account and perform an accounting of the  
12 gain and loss from the streams to the aquifer?

13 **A. I'm sorry, I didn't understand your question.**

14 Q. Is it -- did I understand correctly that you  
15 believe the 2016 accounting report reflects the  
16 gain and loss from the Little Arkansas River  
17 into the aquifer and that it's a back-and-forth  
18 flow?

19 **A. Well, basically you would have to look at -- you**  
20 **would have to look at certain reaches for one**  
21 **thing, and then, secondly, you would -- you**  
22 **would need to decide whether or not the stream**  
23 **was gaining or losing. And a gaining stream**  
24 **basically is as you go down the stream, you have**  
25 **more and more flow, and this is true whether you**

1 **A. -- it's not an absolute switch --**

2 Q. Uh-huh.

3 **A. -- but it's a switch based upon what's occurring**  
4 **along the various river adjacent cells.**

5 Q. So in the full -- with a full aquifer state, the  
6 basin storage area is leaking more downstream  
7 than it would if the aquifer were at a lower  
8 state; is that correct?

9 **A. Yes, that's correct.**

10 Q. In your previous -- when you were talking about  
11 your previous experience, you said that a  
12 groundwater -- groundwater pumping can impair  
13 surface water rights; is that correct?

14 **A. Yes.**

15 Q. And do you know what's done when that happens?

16 **A. The groundwater right could be administered by**  
17 **the Division of Water Resources to limit how**  
18 **much they can withdraw, and potentially that**  
19 **area would be modeled to determine what that**  
20 **difference in operation would be.**

21 **On the Wet Walnut Creek, which is a major**  
22 **contribute to the Cheyenne Bottoms, many years**  
23 **ago the chief engineer established a intensive**  
24 **groundwater use area upstream from the Cheyenne**  
25 **Bottoms area, and certain limitations were**

Page 3119

1 placed, reductions in groundwater pumping were  
 2 placed on -- on the groundwater users.  
 3 Primarily would have been to junior users but  
 4 because of the -- the process we went through  
 5 that they were able to voluntarily get some  
 6 reduction even -- even from folks that might  
 7 have been senior users with senior water rights.  
 8 Q. Do you believe that's a -- is that a similar  
 9 process if the impairment is to minimum  
 10 desirable streamflow versus another user's  
 11 surface water rights?  
 12 A. Recently, the Division of Water Resources, and  
 13 this is after my tenure there, but they did some  
 14 minimum desirable streamflow administration on  
 15 the Republican River, and this is just based on  
 16 newsletters so I don't have any actual knowledge  
 17 as to how they administered it or what -- what  
 18 that administration looks like, and I think a  
 19 very recent newsletter, Kansas Rural Water  
 20 Association Newsletter, they also are talking  
 21 about Rattlesnake Creek which is affecting a  
 22 federal water right.  
 23 Q. In reviewing the City of Wichita's proposal and  
 24 the proposed modifications, did you see any  
 25 consideration of whether the proposed

Page 3120

1 modifications would impact minimum desirable  
 2 streamflow?  
 3 A. I didn't really see anything that addressed it.  
 4 I think that -- well, I'm pretty sure that the  
 5 Division of Water Resources, the chief engineer,  
 6 his orders indicate that MDS has to be taken  
 7 into consideration and -- and kind of standard  
 8 language in that regard, I think. But it -- I  
 9 don't see any part of the proposal that  
 10 necessarily addresses or -- or the modeling  
 11 initially addresses minimum desirable  
 12 streamflow.  
 13 One part of the chief's order, chief  
 14 engineer's order is related to the -- setting a  
 15 limit, which is above minimum desirable  
 16 streamflow, below which the City can't divert.  
 17 So, I mean, from that aspect, there is an  
 18 administrative address to that issue, but I  
 19 didn't really see where there was any modeling  
 20 that really addressed MDS impacts.  
 21 Q. In the Intervenor's exhibit book behind your  
 22 expert report and CV, under tab 3 -- it's the  
 23 thin white book, yes. And under tab 3 is a  
 24 document, can you tell me what this document is?  
 25 A. Yes, it -- it is -- it is a document that I

Page 3121

1 basically tabulated work that was done by  
 2 members of the three agencies I mentioned  
 3 earlier, the Division of Water Resources, Kansas  
 4 Water Office, and the Kansas Geological Survey,  
 5 that were retrospectively looking at MDS  
 6 achievement based on ten-year increments.  
 7 So, for instance, the first one -- the  
 8 first part of the table says 1969 to 1978, that  
 9 was the decade that they looked at achieving  
 10 minimum desirable streamflow, and they achieved  
 11 it 98.3 percent of the time. In other words,  
 12 almost -- over 98 percent of the time there was  
 13 more streamflow than minimum desirable  
 14 streamflow. Or the other way to look at it,  
 15 1.7 percent of the time it fell below MDS. And  
 16 this was on the Little Ark River and at the  
 17 Valley Center gage. And so if you look at the  
 18 asterisks, the single asterisk, those are ones  
 19 that were -- decades that were done in the  
 20 retrospective study; I'll call it the Young  
 21 study since Young is the first person named on  
 22 it, first author name.  
 23 Q. Will you turn to tab 4 and tell me what that is?  
 24 A. That's the -- the study which I was -- or  
 25 write-up of the study that I was referring to.

Page 3122

1 Q. So if the data with the asterisks are taken from  
 2 that report, can you tell us what the other  
 3 columns where that data is from?  
 4 A. Well, 1999 to 2008 was not in that report  
 5 because of the gap and because of the time that  
 6 it was issued. The ones with the upward arrow,  
 7 or caret, the 2009 to 2018 was an update that I  
 8 did, the computation along the lines, and you  
 9 will note that for that decade it was 83.8  
 10 percent achieved; and if you go back to the '89  
 11 to '98, that was 89.6, so at least for this  
 12 data, it -- it shows a decline.  
 13 And then the final one was just looking at  
 14 the model, the drought years that the model uses  
 15 four times, the drought model, it shows that  
 16 achievement is 63.4 percent. And -- and so  
 17 while that is -- like I said, normally, they --  
 18 they look at -- at least retrospectively the  
 19 State has looked at it from the standpoint of  
 20 decades. I looked at that piece of the 2009 to  
 21 2018 decade that's represented by those two  
 22 drought years, just to see what impact it had  
 23 within that -- that time frame, and so there  
 24 was -- and that's based on the streamflows that  
 25 were gaged at Valley Center on the Little Ark

1 **River.**  
 2 Q. Now, I believe you and Mr. Romero had a  
 3 discussion of the drought year achievement and  
 4 had some different figures or something was a  
 5 little bit different between your analysis?  
 6 A. Yes. Dave Romero in doing his modeling, looking  
 7 at -- at the drought, came up with about 10 cfs  
 8 of streamflow decline that he had modeled from  
 9 the standpoint of pumping and all those -- and  
 10 that effect. And he indicated that about -- he  
 11 felt that about 5 percent would be -- or about  
 12 one-half, or 5 cfs, he would assign to the  
 13 Little Ark River.  
 14 As I mentioned in the accounting models,  
 15 they don't -- those models don't show any  
 16 discharge to the Ark River, so this deficit is  
 17 really the reduction of discharge to the river.  
 18 So I would have thought the 10 was wholly going  
 19 on the Little Ark, but as a modeler and knowing  
 20 the limitations of his model, he felt that  
 21 50 percent of that 10, or 5 cfs, was an  
 22 appropriate level of -- of assignment to that.  
 23 And so, yeah, that's what he did.  
 24 Q. All right.  
 25 A. And he -- okay.

1 Q. Did you have anything further to add, I didn't  
 2 want to interrupt you?  
 3 A. Well, in looking at that draft model and -- and  
 4 finding an additional 5 cfs of flow occurring,  
 5 you would probably find the 63.4 percent to be  
 6 lower. How much lower, maybe 5 or 10 percent  
 7 lower, but at least from the predictive sense of  
 8 that drought model, it would -- it would  
 9 indicate compliance would be -- or achievement  
 10 of minimum desirable streamflow would be lower  
 11 than what the actual streamflow showed.  
 12 Q. All right. Will you also turn to what is tab 25  
 13 in the Intervenor's binder, which is, as you  
 14 were very kindly and patiently explaining MDS to  
 15 me prior to this and your figures regarding past  
 16 streamflow, will you tell us what this -- the  
 17 graph is on -- under tab 25?  
 18 A. Your tab?  
 19 Q. 20 -- 25.  
 20 A. 25, okay.  
 21 Q. Be almost the last one.  
 22 A. Oh. I was looking at 5, I'm sorry. That graph  
 23 is --  
 24 MR. STUCKY: Hold on, can you hold  
 25 up the exhibit, we want to make sure we

1 have the right one?  
 2 A. -- of flows at Valley Center for the drought  
 3 model and for the 1930's -- the historical  
 4 1930's drought, which was considered the  
 5 100-year drought history. The orange line is  
 6 the 1930's graph, and all this is is a graph --  
 7 graphic of what the gage readings were at that  
 8 time. And the blue is the actual streamflows  
 9 for the 2011 and 2012, repeated four times to  
 10 look at the model.  
 11 And in addition, I put a 20 cfs line, which  
 12 is the MDS standard on there, and so that  
 13 graphically you can look at and -- and see how  
 14 often flows are above or below MDS, which is  
 15 kind of a -- a visual of that achievement level.  
 16 It's also representative, if you look, you  
 17 notice the 2007 and '12 tend to be much lower  
 18 than the 1930's streamflows, and I think one  
 19 could probably say that the '30s were a  
 20 pre-irrigation streamflow, and obviously 2011  
 21 and '12 were a irrigation and municipal use or a  
 22 groundwater pumping scenario and so they had a  
 23 greater impact on -- or that impact on  
 24 streamflows is represented by the lower levels,  
 25 the less achievement of MDS. So this is just a

1 graphical representation of the actual  
 2 streamflows.  
 3 Now, I will mention that the -- the date  
 4 axis, the horizontal axis is -- is really on  
 5 just time, but they're not the exact dates  
 6 because 2011 and 2012 were repeated four times,  
 7 but I could find no way of cleaning that up,  
 8 that date up. And also the -- so those are both  
 9 eight-year graphs, but they're not necessarily  
 10 representative of the dates listed on that axis.  
 11 It's more for reference that you know which year  
 12 is -- or that you know that a year is occurring,  
 13 it occurs during that year.  
 14 BY MS. WENDLING:  
 15 Q. And as we consider the proposed modifications,  
 16 modeling a drought based on 2011 and 2012, do  
 17 you believe the actual MDS achievement in 2011  
 18 and 2012 is an important consideration?  
 19 A. I think -- I think it's an indicator of the  
 20 importance of MDS achievement. As you saw  
 21 through the decade of 2009 to 2018 in my table,  
 22 the dec -- the decade of -- of the MDS  
 23 achievement wasn't tremendously different than  
 24 what had proceeded it. So it was --  
 25 (Reporter requests clarification)

Page 3127

1 of the witness.)  
 2 **A. -- it was smaller than the next smallest one of**  
 3 **achievement rates. But it would -- if you had**  
 4 **an eight-year drought instead of a two-year**  
 5 **drought, it clearly would be even more**  
 6 **impactful. However, those -- I didn't have that**  
 7 **information. If you look at Dave Romero's**  
 8 **report and his graphics, you would probably add**  
 9 **additional -- or subtract more flow from -- from**  
 10 **each preceding year from the -- from the actual**  
 11 **streamflow or gage streamflow. I did not do**  
 12 **that, I just repeated it four times, the same**  
 13 **streamflow.**  
 14 **MS. WENDLING:** I would like to admit  
 15 Exhibit -- Intervenors' Exhibit Number 2,  
 16 which is Mr. Austin's expert report and CV.  
 17 **PRESIDING OFFICER:** Are there any  
 18 objections to Exhibit 2? Okay. Hearing  
 19 none, Exhibit 2 will be admitted.  
 20 **MS. WENDLING:** I would also like to  
 21 admit Intervenors' Exhibit 3, which is the  
 22 percent of achievement of MDS chart?  
 23 **PRESIDING OFFICER:** Any objections  
 24 to Exhibit 3? Is someone speaking?  
 25 **THE REPORTER:** Brian is.

Page 3128

1 **MR. MCLEOD:** I'm sorry, I just  
 2 reiterate for the record the objection that  
 3 was already raised previously by the City  
 4 because the document was not produced in  
 5 discovery or with the original expert  
 6 disclosure.  
 7 **PRESIDING OFFICER:** Okay. That's  
 8 noted. Exhibit 3 will be admitted.  
 9 **MS. WENDLING:** And, finally, I'd  
 10 like to admit Exhibit 4, which is the Young  
 11 article.  
 12 **PRESIDING OFFICER:** I'm sorry, I did  
 13 not hear what you just said?  
 14 **MS. WENDLING:** I'd like to admit  
 15 Intervenors' Exhibit 4 --  
 16 **PRESIDING OFFICER:** 4.  
 17 **MS. WENDLING:** -- which is the Young  
 18 article we also spoke about earlier.  
 19 **PRESIDING OFFICER:** Objections to  
 20 Exhibit 4?  
 21 **MR. MCLEOD:** Reiterating for the  
 22 City the same objection previously made,  
 23 the article wasn't -- was not produced in  
 24 discovery.  
 25 **PRESIDING OFFICER:** And for the same

Page 3129

1 reasons that I cited earlier, that  
 2 objection will be overruled, Exhibit 4 will  
 3 be admitted.  
 4 **MS. WENDLING:** And I have no further  
 5 questions at this point.  
 6 **PRESIDING OFFICER:** Okay. This  
 7 might be a good time to take about a  
 8 ten-minute break, so we're going to go off  
 9 the record and we will be back on in about  
 10 ten minutes. Thank you.  
 11 (Thereupon, a recess was taken;  
 12 whereupon, the following was had.)  
 13 **PRESIDING OFFICER:** Okay. We're now  
 14 back on the record after a short break, and  
 15 I believe at this point we move to  
 16 cross-examination of George Austin,  
 17 Mr. McLeod.  
 18 **MR. MCLEOD:** Thank you.  
 19  
 20 **CROSS-EXAMINATION**  
 21 **BY MR. MCLEOD:**  
 22 Q. Good morning, Mr. Austin. Looking at your  
 23 expert report, page 1 under the heading  
 24 background, you said, the main purpose of my  
 25 examination would be to review any aspects of

Page 3130

1 the input and output data of the models used to  
 2 simulate the effects of the groundwater pumping  
 3 and recharge elements and account for the City  
 4 of Wichita's administration of the Equus Beds  
 5 Aquifer Storage and Recovery Project, ASR. Is  
 6 reviewing aspects of the input and output data  
 7 of the models, is that a fair statement of what  
 8 you did in your work?  
 9 **A. In -- in looking at the groundwater model, yes.**  
 10 Q. Did you do any actual modeling of pumping  
 11 scenarios?  
 12 **A. Of the -- the -- in connection with the -- the**  
 13 **development of the groundwater model, accounting**  
 14 **models, I did not look at that, the pumping**  
 15 **aspects of that.**  
 16 Q. On the first page of your report under the  
 17 heading Procedure, you say, excerpts from the  
 18 various publications were excerpted regarding  
 19 the various concerns. This suggests that your  
 20 review procedure may have been limited to  
 21 excerpting excerpts of documents that you  
 22 identified in your report; is that correct?  
 23 **A. My -- I did have data files, but I did not**  
 24 **include those in any comments regarding that**  
 25 **data as I found it to be sufficient and adequate**

1 **and reasonable, so the remainder of my report**  
2 **was more of a document review of the reports**  
3 **made by the City's, their experts and other**  
4 **experts involved in this.**

5 Q. So to the extent that you looked at the data  
6 sets, you concluded that the data sets used in  
7 the modeling were reasonable?

8 **A. Yes.**

9 Q. In looking at the reports that you analyzed, did  
10 you begin with whole documents, or did you begin  
11 only with excerpts of documents that  
12 Ms. Wendling had furnished to you from which you  
13 selected more limited excerpts for your report?

14 **A. I -- I reviewed the whole documents. These**  
15 **documents, as indicated in the last page, were**  
16 **housed on the Division of Water Resources'**  
17 **website concerning the City of Wichita ARS**  
18 **project.**

19 Q. On the first page of your report, under the  
20 heading Model Data Files, you say, originally it  
21 was believed comparison the data sets used in  
22 different model runs would be of value. Who  
23 believed that, Mr. Austin?

24 **A. Initially, that was what I felt was a reasonable**  
25 **thing to look at.**

1 **about that.**

2 Q. Okay. Backing up, after review of the data  
3 sets, it was determined that further comparisons  
4 would be better served based on the reported  
5 results in the various report, and then  
6 referring to the various reports, are -- are you  
7 talking about the reports that are identified  
8 under your heading Review of Reports which spans  
9 portions of pages 1 through 4 of your expert  
10 report?

11 **A. I looked at more reports than I referenced in**  
12 **the -- in my report. I only reported on items**  
13 **that I found within those reports that raised a**  
14 **concern with me, and I did not report in general**  
15 **on all reports that were available to me or --**  
16 **and had a review.**

17 Q. Do you remember what other reports you looked  
18 at?

19 **A. I have a notebook that I recorded those in, but**  
20 **I don't have a specific memory of each -- each**  
21 **one that I looked at.**

22 Q. How many groundwater models have you personally  
23 built?

24 **A. I have built two. One was with MODFLOW, the**  
25 **other was a simplified model because it didn't**

1 Q. And then you say, after review of the data sets,  
2 it was determined that further comparisons would  
3 be better served based on the reported results  
4 in the various reports. Who made that  
5 determination?

6 **A. That was my determination.**

7 Q. What was the extent of your actual comparison of  
8 the data sets used in the modeling? Inputs and  
9 outputs?

10 **A. My -- the extent of my review of those were to**  
11 **look at the values, for instance, the various**  
12 **aquifer characteristics and things that were**  
13 **used in the model to address the transport of**  
14 **water, the pumping effects, and that sort of**  
15 **thing. And what I found was those inputs were**  
16 **of a reasonable nature, they were calibrated by**  
17 **the USGS through their modeling effort and their**  
18 **report of 2013-5042, and so I didn't feel like**  
19 **further exploration of that data was required.**

20 Q. And then the reports that you went on to review,  
21 those would be the reports that are identified  
22 in your Review of Reports section spanning  
23 portions of pages 1 through 4 of your report,  
24 correct?

25 **A. I'm not sure I understand your question, sorry**

1 **require the complexity of MODFLOW.**

2 Q. Please explain what a MODFLOW model is and how  
3 it works.

4 **A. MODFLOW model is a groundwater model which**  
5 **originally was set up, was built to look at**  
6 **groundwater contamination transport, but it was**  
7 **also found to be applicable to groundwater**  
8 **pumping effects and their impacts based on**  
9 **certain boundary conditions. It -- it, in**  
10 **simplified terms, is a model that looks at**  
11 **inflows, subtracts outflows, and comes with --**  
12 **up with a change in storage, whether positive or**  
13 **negative, which is related to how water,**  
14 **groundwater moves through the aquifers and the**  
15 **characteristics of that aquifer, which are**  
16 **generally produced in a -- through a calibration**  
17 **process where those factors are -- are -- are**  
18 **looked at, results are compared to actual data,**  
19 **and then modifications or calibration is made to**  
20 **help fit that data to a reasonable and**  
21 **acceptable level.**

22 Q. Are you familiar with an MMW-2 package that is  
23 sometimes used with MODFLOW models?

24 **A. I am not.**

25 Q. Did you notice in -- in reviewing the model that

Page 3135

1 had been run for the City's proposal in this  
 2 case whether that model had utilized the  
 3 streamflow package or the river package?  
 4 **A. I don't know that.**  
 5 Q. Are you familiar with the concept of  
 6 conductance?  
 7 **A. Yes.**  
 8 Q. And can you explain to us what is conductance?  
 9 **A. Conduct -- conductance is a principle of how**  
 10 **water travels or transports through the aquifer**  
 11 **as defined by its physical characteristics.**  
 12 Q. Are you familiar with the streamflow package and  
 13 the river package that are sometimes used with  
 14 the MODFLOW model?  
 15 **A. I have used it, but as I stated earlier, it was**  
 16 **only used once. So -- and that was sometime**  
 17 **ago, so I can't say that I'm currently familiar**  
 18 **with it.**  
 19 Q. And would it follow equally that -- that you  
 20 wouldn't be familiar with any differences  
 21 between how the streamflow package or the river  
 22 package would work in the model?  
 23 **A. I don't know the answer to that question.**  
 24 Q. How does riverbed conductance work as a factor  
 25 for determining head within the MODFLOW code?

Page 3136

1 **A. Well, certainly the riverbed -- riverbed head is**  
 2 **part of the process that pushes water either in**  
 3 **or receives water out of the aquifer, depending**  
 4 **on that head relative to the groundwater head.**  
 5 **And the conductance is due to how fine or how**  
 6 **coarse materials are and -- and the makeup of**  
 7 **that -- that material and how it transfers**  
 8 **the -- or transports the water through the**  
 9 **groundwater.**  
 10 Q. And so information concerning that material has  
 11 to have been put into the model for the model to  
 12 run correctly?  
 13 **A. It would -- since the river is a boundary on the**  
 14 **model, certain values would have to be put into**  
 15 **the model to -- to operate that boundary**  
 16 **properly. It -- and it is generally a, once**  
 17 **again, a calibrated effect that is looking at**  
 18 **what actually occurs and how the stream behaves**  
 19 **and how the ground -- groundwater adjacent to**  
 20 **the stream behaves.**  
 21 Q. Can you explain how heads are calculated and  
 22 assigned to the river within the model?  
 23 **A. The heads generally assigned in rivers are**  
 24 **assigned based upon the depth of flow, which is**  
 25 **usually a gage flow, but because gages aren't at**

Page 3137

1 **every point along the river, some interpolation**  
 2 **or -- or -- well, I would say some interpolation**  
 3 **is generally required to review the amount of**  
 4 **flow, the cross section of the stream, and the**  
 5 **depth of which it would flow at any point along**  
 6 **that stream.**  
 7 Q. What is the time step of the model?  
 8 **A. The time step as I was looking at it appeared to**  
 9 **be on an annual basis.**  
 10 Q. How many ASR accounting reports have you  
 11 assembled for clients?  
 12 **A. ASR accounting reports, did you say? Could you**  
 13 **repeat the question, please.**  
 14 Q. Yes, how many ASR accounting reports have you  
 15 assembled for clients?  
 16 **A. None.**  
 17 Q. Would it be true that -- that all the accounting  
 18 work that you have done has been with respect to  
 19 less complex systems than the Equus Beds  
 20 Aquifer?  
 21 **MR. STUCKY: I'm -- I'm going to**  
 22 **object to the form of the question, less**  
 23 **complex than what?**  
 24 **BY MR. MCLEOD:**  
 25 Q. Than the Equus Beds Aquifer?

Page 3138

1 **A. The accounting forms they have done as far as to**  
 2 **surface water have as part of the criteria are**  
 3 **losses or gains based upon groundwater models.**  
 4 **Those, however, were not independently done**  
 5 **through the accounting model. So the accounting**  
 6 **models I have done are taking in account surface**  
 7 **water transport and their ability, so they are**  
 8 **not the same as the groundwater accounting**  
 9 **method.**  
 10 Q. Can you tell us, Mr. Austin, how the MODFLOW  
 11 model that's currently used to assemble the ASR  
 12 annual accounting reports that document the  
 13 physical recharge credit?  
 14 **A. Well, as I stated in my report, I did not**  
 15 **evaluate the models individually, I looked at**  
 16 **the output from the models, so I can't explain**  
 17 **how the ASR accounting models or how MODFLOW**  
 18 **operates within that.**  
 19 Q. And in your evaluation of the Burns & McDonnell  
 20 proposed AMC accounting numbers, you didn't run  
 21 the MODFLOW model, did you?  
 22 **A. No, I was looking at the outputs of the reports**  
 23 **that were --**  
 24 **(Reporter requests clarification**  
 25 **of the witness.)**

1 **A. -- of the reports that were provided, or I had**  
2 **access to.**

3 **BY MR. MCLEOD:**

4 Q. So, Mr. Austin, I think you've already indicated  
5 that -- that you reviewed the data sets used in  
6 the model, you concluded that the data sets were  
7 appropriately used in the model, you didn't have  
8 criticisms of the data sets, you didn't run the  
9 model to check Burns & McDonnell's numbers on  
10 the AMC credits, how can you have a basis to  
11 assert that the numbers that they reached are  
12 wrong?

13 **A. I did not assert that the accounting model and**  
14 **the output from them were in error. In fact, I**  
15 **used those as the basis for me to look at the**  
16 **proposed accounting methodology, the non-model**  
17 **methodology to express some concern about the**  
18 **values being used in that accounting process,**  
19 **that proposed accounting process.**

20 Q. In the work that you did with respect to the Ark  
21 River Compact models, did you personally create  
22 or develop the models that were used during the  
23 Compact development?

24 **A. The Compact was signed by the two states, Kansas**  
25 **and Colorado, back in the 1940s, so there was no**

1 **it was through negotiation, in some cases**  
2 **compromise, to get a model that was acceptable**  
3 **to both parties. Inasmuch as it produced a**  
4 **settlement and completed the litigation, it**  
5 **definitely was a useful tool.**

6 Q. And you had mentioned during your direct  
7 testimony, Mr. Austin, that there were some  
8 modifications to the model that were negotiated.  
9 Do you recall what those modifications were?

10 **A. Well, in connection with the river model, which**  
11 **is the accounting model for the state line**  
12 **flows, the main changes were that a factor of**  
13 **channel loss, or transit loss as I call it, was**  
14 **added. This was based upon a scientific report,**  
15 **I think it was USGS, in Colorado that for the**  
16 **reach of the river from John Martin state line**  
17 **had calculated some factors as to what that**  
18 **transit loss would look like.**

19 **So the model which I had had kind of a --**  
20 **had a built-in channel and bank storage factor,**  
21 **but it did not include losses such as**  
22 **evaporation and transpiration and -- and those**  
23 **sorts of things. And so by using the model --**  
24 **or the study that the USGS had developed on that**  
25 **reach and inputting -- creating that as a**

1 **model developed on the Compact. With the**  
2 **litigation which began in 1985, outside**  
3 **consultants worked on models for both Kansas and**  
4 **Colorado, and part of the litigation ended up**  
5 **that the states were headed in parallel**  
6 **directions and that the Kansas consultant**  
7 **developed model, the HIM, was the one that was**  
8 **chosen to represent the Compact conditions that**  
9 **were in existence at that point in time.**

10 **And, of course, this litigation went from**  
11 **1985 to 2009 when the Supreme Court finally**  
12 **ruled on it. So I had no input or relationship**  
13 **with the origination of that model. I came in**  
14 **at a later time frame in 2000 and began to work**  
15 **with the interstate team in connection with what**  
16 **was already a developed model.**

17 Q. And during that work, did you think -- we're  
18 getting a lot of feedback, I'm not sure from  
19 where. During the work on the Ark River  
20 Compact, Mr. Austin, when you were working with  
21 DWR, do you think that models were a useful tool  
22 for the chief engineer for solving the issues in  
23 that project?

24 **A. Models was really the only tool that could**  
25 **settle the issues that the two states had, and**

1 **function within my model, it produced a result**  
2 **that was compatible with the viewpoints of both**  
3 **Colorado and Kansas.**

4 Q. As modifications were discussed between the  
5 parties, did you agree that they were  
6 appropriate modifications to make?

7 **A. I'm sorry, I did not hear you.**

8 Q. There was feedback, I'll try again. The  
9 question, Mr. Austin, was after the parties  
10 discussed those issues with the model, did you  
11 agree that the modifications that were made were  
12 appropriate?

13 **PRESIDING OFFICER:** Brian, I'm  
14 sorry, I'm going to jump in here, there's  
15 some technical adjustments being made on  
16 this end and the previous questions you  
17 asked did not get heard, so if you'll give  
18 us a moment, please.

19 (Discussion held off the record.)

20 **PRESIDING OFFICER:** Okay. Thank  
21 you, everyone, for your patience, we're  
22 back on the record, and, Mr. McLeod, I  
23 think you need to go back two questions.

24 **BY MR. MCLEOD:**

25 Q. Okay. For -- for an attempt at continuity, I

Page 3143

1 think we were -- Mr. Austin had described some  
 2 modifications that were made to the model on --  
 3 on the project when he was working on the  
 4 dispute between Kansas and Colorado, and my --  
 5 my question for him was after the parties had --  
 6 had discussed those modifications, did he agree  
 7 that the modifications were appropriate  
 8 modifications to the model?  
 9 **A. The modifications were a change that improved**  
 10 **the model in its performance. It also provided**  
 11 **a, I'll call it an error margin that was**  
 12 **acceptable to both states since streamflow data**  
 13 **that we were using had a plus or minus error**  
 14 **potential. So it incorporated things that were**  
 15 **physically appropriate and -- and now totally**  
 16 **acceptable, in fact, some of that was suggested**  
 17 **by myself. So it -- in a negotiation, you don't**  
 18 **always get 100 percent of what you want, and**  
 19 **neither does the other party, so it was an**  
 20 **appropriate compromise and effective and**  
 21 **accurate from my perspective.**  
 22 Q. Thank you. Going back to your expert report on  
 23 page 1, under the heading U.S. Geological Survey  
 24 Scientific Investigation Report 2013-5042, that  
 25 is one of the documents that you found to -- to

Page 3144

1 raise concerns to the point that you took some  
 2 excerpts from it, correct?  
 3 **A. That I -- that I commented on and -- and**  
 4 **excerpted it, yes.**  
 5 Q. And your report reflects that this is a report  
 6 on the MODFLOW model itself, correct?  
 7 **A. I was quoting what in that report they said were**  
 8 **the limitations as to the MODFLOW -- MODFLOW**  
 9 **model and the assumptions that they had made,**  
 10 **particularly in terms of cell size and -- yeah,**  
 11 **in -- in cell size or grid size.**  
 12 Q. And dating from 2013, this is not a report that  
 13 was derived from the simulations modeled by  
 14 Burns & McDonnell in support of the proposal,  
 15 was it?  
 16 **A. Could you repeat that question?**  
 17 Q. Yes. Dating from 2013, this report is not a  
 18 report that's derived from the simulations  
 19 modeled by Burns & McDonnell in support of the  
 20 City's proposal, is it?  
 21 **A. It is the USGS model which was the basis for**  
 22 **Burns & McDonnell building upon it.**  
 23 Q. Do you know if there were differences in the  
 24 data sets between the -- the simulation that was  
 25 the subject of this 2013 report and the data

Page 3145

1 sets used in the simulations modeled by Burns &  
 2 McDonnell in support of the City's proposal?  
 3 **A. I did not see any major differences in those**  
 4 **data sets. Now, if there were data that was**  
 5 **different or refined, I could have missed some**  
 6 **of that, but in general I felt like they were**  
 7 **consistent with each other.**  
 8 Q. And, Mr. Austin, I'll -- I'll ask you as an  
 9 aside, you've been present for a lot of the  
 10 hearings prior to today, haven't you?  
 11 **A. I think I've been present for about 60 percent**  
 12 **of the hearings.**  
 13 Q. You were present the day that Mr. Romero  
 14 testified about the modeling results of Balleau  
 15 Groundwater, Inc., weren't you?  
 16 **A. Excuse me. Yes, I was.**  
 17 Q. And did -- did Mr. Romero indicate in his  
 18 testimony that Balleau Groundwater had also used  
 19 the MODFLOW model for their work?  
 20 **A. I believe so.**  
 21 Q. Looking at your conclusions from the U.S.  
 22 Geological Survey Scientific Investigation  
 23 Report 2013-5042, you note that the groundwater  
 24 flow model was discretized using a grid with  
 25 cells measuring 400 feet by 400 feet. Model

Page 3146

1 results were evaluated on a relatively large  
 2 scale and cannot be used for detailed analyses  
 3 such as simulating water level drawdown near a  
 4 single well. And that's a quote from -- from  
 5 the U.S. Geological Survey Scientific  
 6 Investigation Report, isn't it?  
 7 **A. It is.**  
 8 Q. Can model results be used for simulating impacts  
 9 on water levels in a 400-foot-by-400-foot cell  
 10 and thereby water levels in a well site within  
 11 that cell?  
 12 **A. The -- the water level can be determined**  
 13 **according to that, depending on the data in**  
 14 **which they're trying to affect. I would point**  
 15 **out that impairments of individual wells**  
 16 **oftentimes is at the time of greatest --**  
 17 **greatest pumping, and those levels, groundwater**  
 18 **levels are not represented in the model. The**  
 19 **model generally is reflecting a -- with static**  
 20 **water level, which is after recovery from the**  
 21 **pumping. So any specific impact on an adjacent**  
 22 **well might be understated by -- by the model**  
 23 **and, in fact, may be misleading as to what the**  
 24 **impact is during the maximum pumping time rather**  
 25 **than -- during the maximum pumping.**

1 Q. Wasn't a major point of the Balleau Groundwater  
2 modeling to simulate impacts at individual wells  
3 in order to determine whether any might be  
4 impacted by pumping to the proposed lower index  
5 line?

6 **A. He did state that.**

7 Q. Do you think Mr. Romero was wrong about  
8 Balleau's ability to simulate those impacts with  
9 the MODFLOW model?

10 **A. I believe that he was looking at the model and**  
11 **the change in groundwater level, that is a**  
12 **static groundwater level, as an indicator of**  
13 **what the impact is. I don't think that his**  
14 **levels necessarily reflect the actual potential**  
15 **for impairment. It only reflects the potential**  
16 **for impairment.**

17 Q. In your report, you also refer to the model  
18 cells used by Spinazola and others for stress  
19 period from 1935 through 1979 being a mile on  
20 each side, with pumping assigned to the center  
21 of each cell. Do you mean to imply by that  
22 observation that the 400-foot-by-400-foot grid  
23 of the current model is somehow limited in  
24 resolution because of Spinazola's use of the  
25 1935 to 1979 pumping data discussed in the 2013

1 **that does not limit the applicability of the**  
2 **data used later and the locations used later**  
3 **within a 400-foot grid. But all I'm saying is I**  
4 **think the model is looking at a different thing,**  
5 **a potential of impairment based on a change in**  
6 **storage or the change in groundwater level and**  
7 **not the impact of active pumping at its peak**  
8 **pumping -- pumping time for a short period of**  
9 **time that may have a much greater impact. So**  
10 **it's not -- it's not a complaint about the model**  
11 **or what the model shows; it's just that I**  
12 **believe it's showing the wrong thing.**

13 Q. Going to page 2 of your report where you  
14 reference USGS Scientific Investigation Report  
15 2010-5023 pertaining to water quality in the  
16 Equus Beds Aquifer and Little Arkansas River  
17 before implementation of large-scale artificial  
18 recharge, south central Kansas, that report  
19 relates to the time period 1995 to 2005,  
20 correct?

21 **A. Yes.**

22 Q. And you cite some language from the page 1 study  
23 abstract of that report, did you review the  
24 study beyond the language that was in the page 1  
25 study abstract?

1 USGS report?

2 **A. It would be affected only if you were going back**  
3 **and calibrating or modeling to that information.**  
4 **I don't believe that's what's done in the**  
5 **current models done by Burns & McDonnell.**

6 Q. Okay. And that's actually my next question, you  
7 weren't under the impression that any of the  
8 forward scenarios modeled for ASR used any  
9 boundary conditions or packages, including  
10 pumping or stress period information from 1935  
11 to 1979, were you?

12 **A. No, I only believed that they were using a**  
13 **calibrated model that did use that information.**

14 Q. If in the period's model by Burns & McDonnell,  
15 and for that matter Balleau Groundwater, the  
16 MODFLOW model uses pumping values with the  
17 Universal Transverse Mercator coordinates  
18 reported by DWR for the represented well  
19 locations, how would Spinazola's use of one-mile  
20 cells and centralized pumping assumptions for  
21 the 1935 to 1979 period in any way limit the  
22 resolution of the later simulations that are not  
23 one-mile cells and not using the 1935 to 1979  
24 pumping data?

25 **A. The -- the calibration used that information;**

1 **A. Yes, I did. The abstract language was only**  
2 **adopted in -- inasmuch as it, I guess I would**  
3 **say, summarized or highlighted the issue that I**  
4 **was looking at.**

5 Q. Following your citation of the language from the  
6 study abstract, you conclude, the rise of  
7 groundwater elevations in the basin storage area  
8 would lessen the hydraulic gradient and,  
9 therefore, movement of the chloride would be  
10 slowed. Can you explain why that is?

11 **A. Essentially it would change the slope, the -- of**  
12 **the groundwater level, and if you raise it**  
13 **enough, it would reverse the direction of**  
14 **general groundwater flow. So that's, I think,**  
15 **what I was trying to report there.**

16 **I would also note that saltwater is a**  
17 **greater density than fresh water, so the**  
18 **consequence is that it may be less affected by**  
19 **changes in groundwater level than -- than fresh**  
20 **water is, but nonetheless the hydraulic gradient**  
21 **would tend to be, from its aspect, negative to**  
22 **that flow and, therefore, would retard or slow**  
23 **the -- the groundwater flow, including the**  
24 **saltwater.**

25 Q. To the extent that the aquifer were maintained

Page 3151

1 at predevelopment water levels or near  
 2 predevelopment water levels, very full, would  
 3 you expect that to slow chloride migration more  
 4 than a scenario where levels were drawn down to  
 5 lower levels such as 1998 water levels?  
 6 **A. I think the difference would be how those**  
 7 **processes would affect the groundwater gradient.**  
 8 **If the aquifer were raised uniformly or without,**  
 9 **you know, specific areas, it would no longer be**  
 10 **a barrier necessarily to the saltwater, even if**  
 11 **it's flattened the gradient and slowed it. But**  
 12 **if -- but if you draw down, then certainly you**  
 13 **can steepen the barrier but once -- or steepen**  
 14 **the gradient, and if you pump it down enough,**  
 15 **you can remove any groundwater barrier that**  
 16 **there might be by the higher heads, which, I**  
 17 **think, by recharge wells and other means can be**  
 18 **maintained.**  
 19 Q. You note that the studies, studies plural as is  
 20 expressed in your report, do not address the  
 21 lowering of the index elevation the 1993 levels  
 22 which were historic lows. Are you referring  
 23 there to the USGS Scientific Investigation  
 24 Report 2010-5023, or were there other studies as  
 25 well that you felt did not address that?

Page 3152

1 **A. I guess I'm not seeing that particular language.**  
 2 Q. If you look at the bottom of the second page  
 3 after the cover page, under the heading ASR  
 4 Permit Modification Proposal Revised Minimum  
 5 Index Levels & Aquifer Maintenance Credits by  
 6 Burns & McDonnell.  
 7 **A. I see that now, and I see the language. As far**  
 8 **as this study, I presume I -- let me look real**  
 9 **quick. I'm certainly referring in part to**  
 10 **Report 2010-5023. I do not know what other**  
 11 **studies I'm referring to in that sentence unless**  
 12 **I report or mention those later in the -- in the**  
 13 **report.**  
 14 Q. Did you review or consider USGS Report  
 15 2014-1162, Simulation of Chloride Transport 1990  
 16 through 2008?  
 17 **A. I don't know without referring to the notes I**  
 18 **previously mentioned, which I do not have with**  
 19 **me on the witness stand.**  
 20 Q. Do you know if that was one of the documents  
 21 that Ms. Wendling would have provided to you?  
 22 **A. Generally speaking, the documents which I had**  
 23 **were referred to me through the link to the**  
 24 **DWR ASR website. I don't actually remember her**  
 25 **giving me any specific link, though she may have**

Page 3153

1 **said you should look at this report or that**  
 2 **report, and so those certainly were looked at.**  
 3 **But it -- she provided me no -- nothing but**  
 4 **specifically the link. And I also did**  
 5 **independent research as to what reports might be**  
 6 **applicable to -- to the matter that were either**  
 7 **not on the DWR website or were -- but were**  
 8 **listed on USGS database.**  
 9 Q. Thank you. That anticipated my next question  
 10 actually.  
 11 Were you present for the discussion by  
 12 other witnesses of model pumping scenarios that  
 13 compared baseline pumping in the aquifer with  
 14 scenarios involving increased pumping by the  
 15 City for defined periods?  
 16 **A. I'm not aware of those discussions by the**  
 17 **witnesses.**  
 18 Q. Do you have any recollection of -- of any of the  
 19 witnesses being asked questions about pumping  
 20 scenarios where the City pumping in the aquifer  
 21 would be doubled, with some other assumptions,  
 22 and they were looking at a report that projected  
 23 chloride impact?  
 24 **A. Just most of my input on the -- on those -- on**  
 25 **discussions with other witnesses was regards to**

Page 3154

1 **surface water impacts. I don't remember ever**  
 2 **discussing scenarios as to pumping and -- and**  
 3 **putting those into models. I basically was**  
 4 **talking about the outputs that I was seeing and**  
 5 **how those might be represented in the models to**  
 6 **get a better understanding, but I -- I was not**  
 7 **involved in any pumping scenarios or anything**  
 8 **like that beyond the reports that I reported**  
 9 **here.**  
 10 Q. Do you remember ever seeing a USGS document that  
 11 involved that kind of pumping simulation in the  
 12 course of your independent research?  
 13 **A. I have no memory of seeing anything like that.**  
 14 Q. If the exhibits are all present, if it's  
 15 possible to put City Exhibit 11 before the  
 16 witness, I think it may be the document, I would  
 17 like to ask the witness if he has seen that  
 18 document before?  
 19 **A. Black notebook?**  
 20 **MS. WENDLING:** I don't know. Brian,  
 21 because the exhibits are in your various  
 22 binders not numerical, could you direct us  
 23 to the appropriate binder?  
 24 **MR. MCLEOD:** Black binder, I think.  
 25 **MS. WENDLING:** Is it an exhibit to

1 the proposal or something else?  
2 **A. Brian, I'm seeing attachments, but I'm not**  
3 **really seeing exhibit numbers, could you give me**  
4 **a little better idea of what the title or -- of**  
5 **the report is that you're referring to?**

6 **BY MR. MCLEOD:**  
7 Q. Well, it would be in the actual record of the --  
8 of the hearing as City Exhibit 11, and it is  
9 that USGS Report 2014-1162, Simulation of  
10 Chloride Transport 1990 through 2008. Purple  
11 binder, I think, upon reflection. And probably  
12 behind the fifth tab there.

13 **A. I have a tab that says chloride simulation, and**  
14 **it has a report that says Open File Report**  
15 **2014-1162, Preliminary Simulation of Chloride**  
16 **Transport in Equus Beds Aquifer and Simulated**  
17 **Effects of Well Pumping, Artificial Recharge on**  
18 **Groundwater Flow and Chloride Transport near the**  
19 **City of Wichita, Kansas, 1990 through 2008. Is**  
20 **that the report?**

21 Q. Okay. Had you seen that report before or used  
22 that in the course of your analysis of  
23 chlorides?

24 **A. Brian, the title sounds familiar in looking at**  
25 **it, but as I look through the body of the**

1 **report, I really don't recognize this report as**  
2 **being something that I relied on.**

3 Q. Okay. In your report, you note that pumping to  
4 the lower levels would increase hydraulic  
5 gradient and potentially accelerate the movement  
6 of chloride. Do you use potentially there  
7 because you aren't sure whether it would or  
8 wouldn't accelerate the movement of chlorides?

9 **A. I use potentially as -- because I did not**  
10 **calculate or make any calculation that -- that**  
11 **would say one way or the other, I didn't do a**  
12 **transport -- a chloride transport model or**  
13 **anything along that line. So I was looking at**  
14 **the report I referred to simply from the aspect**  
15 **of what it was reporting and how the aquifer and**  
16 **the chloride transport would act.**

17 Q. Okay. Let's -- let's look at that study and  
18 specifically we can still stay with the study  
19 abstract that you cited in your report, which  
20 mentions that the chlorides in the Burrton plume  
21 moved about three miles during the past 40 or  
22 45 years. So if we did the math on that, for  
23 the average per year movement, that would be  
24 about .75 to point -- excuse me, .075 to  
25 .066 miles per year on average in those 40 or

1 45 years, wouldn't it?

2 **A. That would indicate the transport speed is --**  
3 **per year is -- is approximately that, yes.**

4 Q. And then in the decade 1995 to 2005, in that  
5 decade, the total movement was only about half a  
6 mile, or if we did the math about .05 per year  
7 on average, correct?

8 **A. I haven't -- I haven't done the math, but I**  
9 **accept your estimation.**

10 Q. And the study attributes this to decrease in the  
11 hydraulic gradient after 1992, correct?

12 **A. It -- it contribute -- attributes it to that and**  
13 **the actions that were taken in connection with**  
14 **the -- the chloride plume.**

15 Q. If -- if we look at the fractions of miles and  
16 convert to feet in terms of feet of movement, do  
17 you agree that for the 45 -- the 40- to 45-year  
18 period it would come to about 396 to 348 feet  
19 per year on average and for the 1995 to 2005  
20 period about 264 feet per year on average?

21 **A. Those would be comparable, yes.**

22 Q. So if -- if we were to compare the two periods  
23 and subtract to discover the reduction in  
24 movement from the annual average in the 40- to  
25 45-year period to the annual average for 1995 to

1 2005, the difference would be about 132 to  
2 84 feet per year, wouldn't it?

3 **A. Yes.**

4 Q. Given those figures from the study abstract,  
5 if -- if we suddenly flipped back to pre-1992  
6 water level and hence to the pre-1992 rates of  
7 migration for a year or two years, would you  
8 expect the impact to be more than a few hundred  
9 feet of additional chloride migration?

10 **A. Well, if it's only for a short period of time,**  
11 **yes, I would agree with you there on that. I**  
12 **don't know if it's only a short period of time,**  
13 **depends on the recovery rate and things like**  
14 **that.**

15 Q. Right. And to some extent, the question was a  
16 hypothetical, that if assuming that it was just  
17 that for a year or two. By contrast, if water  
18 levels in the aquifer were drawn down from  
19 current levels to 1998 levels and that persisted  
20 for a period of 20 years, would you expect that  
21 to increase the groundwater hydraulic gradient  
22 and increase chloride migration as a result?

23 **A. I don't know the answer to that question. I**  
24 **don't know what I would expect because I'm not**  
25 **sure relative to any other period of time what**

Page 3159

1 **1998 would entail.**  
 2 Q. So if we were to assume that 1998, since it's in  
 3 that 1995 to 2005 time frame, that if the  
 4 movement of chlorides would be at that reduced  
 5 rate of about .5 miles a year for the years in  
 6 that time frame and it persisted for a 20-year  
 7 period, would you end up with a greater or  
 8 lesser impact than the -- the impact of pre-1992  
 9 levels for only a two-year period?  
 10 **A. I -- I don't know the answer to that question.**  
 11 **The -- the impact that -- '98 within a period**  
 12 **average, I don't know where it sat as far as --**  
 13 **you know, an average is done over that period of**  
 14 **time; 1998 might have been a high travel time or**  
 15 **it might have been a low travel time, I don't**  
 16 **know where it sits in relative to the average.**  
 17 **However, if it did agree with that average, then**  
 18 **20 years versus two years at the other, you know**  
 19 **that's a -- kind of framed in a way that, yeah,**  
 20 **two years is not going to be as drastic as**  
 21 **20 years at another level.**  
 22 Q. And, indeed, if we -- if we just used the  
 23 average numbers for the two periods as -- as  
 24 they are calculable from the USGS report, we'd  
 25 be looking using 264 feet per year for 1998 at a

Page 3160

1 mile of chloride migration over a 20-year  
 2 period, wouldn't we?  
 3 **A. If it's the .05 feet -- or miles per year**  
 4 **average, yes, it would be -- you would be right**  
 5 **as to the number of miles that it would occur**  
 6 **over 20 years.**  
 7 Q. And by contrast, the higher pre-1992 average  
 8 rate of migration, if confined to only two  
 9 years, we would expect around 792 or 696 feet of  
 10 chloride migration during those two years, even  
 11 though it's moving at a much higher annual rate,  
 12 correct?  
 13 **A. Using those averages, you would get exactly as**  
 14 **you had calculated.**  
 15 Q. Mr. Austin, I -- I know you were present when  
 16 counsel were debating it and the hearing officer  
 17 had to make a ruling, but in that you are the  
 18 witness testifying today and you wrote your  
 19 expert report, I will just ask you, is there a  
 20 discussion of minimum desirable streamflow in  
 21 this expert report?  
 22 **A. On streamflows in general and -- and when you're**  
 23 **dealing with ground -- groundwater flow, either**  
 24 **in or out, it is related to base flow, which**  
 25 **minimum desirable streamflow is part of. But**

Page 3161

1 **the term min -- minimum desirable streamflow was**  
 2 **not part of my report.**  
 3 Q. And is there discussion in your report about the  
 4 impact of diversion for -- for the ASR works on  
 5 minimum desirable streamflow or on base flow?  
 6 **A. Actually there is. When I talk of groundwater**  
 7 **impact -- groundwater pumping impacts and how**  
 8 **they can be -- groundwater levels impacts on**  
 9 **streamflow, that is talking about base flow**  
 10 **because base flow is that portion of streamflow**  
 11 **that is produced by groundwater infiltration**  
 12 **into the stream.**  
 13 Q. Okay. And to clarify, I was asking about  
 14 diversion from the river for ASR works, is -- is  
 15 there anyplace in your expert report where you  
 16 discuss the impact of diversion from the river  
 17 for ASR works on either base flow or minimum  
 18 desirable streamflow?  
 19 **A. The only place I talk about diversions from the**  
 20 **river is in connection with the accounting**  
 21 **process in the assignment of credits to that --**  
 22 **the AMCs to that pumping, and so I don't talk**  
 23 **about the diversion's effect on streamflow. I**  
 24 **was looking at the AMCs and whether or not**  
 25 **100 percent, or whatever the percentage assigned**

Page 3162

1 **for AMC purposes to streamflow -- to streamflow**  
 2 **diversions, was appropriate or not or what the**  
 3 **value might be appropriate. So I would say my**  
 4 **answer is I did not look at diversion streamflow**  
 5 **in regard to base flow, per se.**  
 6 Q. Would you agree with me, Mr. Austin, that, in  
 7 fact, under the terms of the existing ASR  
 8 permits, which would not change on -- if the  
 9 permit modifications were approved, the City  
 10 can't divert water from the river unless the  
 11 river is above base flow; isn't that true?  
 12 **A. I think -- I think the value I saw was 30 cfs as**  
 13 **the standard, and that may or may not be base --**  
 14 **wholly base flow depending on what's happening**  
 15 **in the river. But if -- if your accounting**  
 16 **model is showing 38,000 acre-feet of flow going**  
 17 **to the stream, that's 38,000 acre-feet of base**  
 18 **flow. So if you couldn't pump -- if you weren't**  
 19 **able to pump base flow, there'd be 38,000**  
 20 **acre-foot in that stream that you could not**  
 21 **pump. So as a consequence, I'd say that it's**  
 22 **30 cfs is what I thought I read in the**  
 23 **conditions and -- and not base flow because it**  
 24 **would almost eliminate you ever pumping from the**  
 25 **river.**

1 Q. Mr. Austin, when -- in the years when you were  
 2 with DWR, how many permit applications did you  
 3 analyze for minimum desirable streamflow  
 4 compliance?  
 5 **A. I did not analyze permit applications for**  
 6 **minimum desirable streamflows because that was a**  
 7 **water appropriations right. However, in**  
 8 **connection with structures, water structures and**  
 9 **obstruction to the streams, 82a-301 through**  
 10 **305(a), I did review dams, levies, bridges,**  
 11 **other obstructions in streams as to their**  
 12 **impairment of surface water rights. But that**  
 13 **did not -- that did not at that time include**  
 14 **MDS. I moved to interstate efforts in 2000.**  
 15 **MDS was, I believe, estab -- actual flows for**  
 16 **MDS were established in, what, 1999, or**  
 17 **somewhere along that, '94, so I was not involved**  
 18 **with that particular review.**  
 19 Q. Do you know --  
 20 **A. I would point out that surface -- surface**  
 21 **water -- impairment of surface water diversions**  
 22 **is in some respects the same potential issue,**  
 23 **it's just that it is a water appropriation**  
 24 **right, stream, and not a MDS. But MDS is an**  
 25 **appropriation essentially. So the analysis**

1 **would be similar.**  
 2 Q. Do you know whether any of the Intervenor's claim  
 3 surface rights in the river adjacent to the  
 4 aquifer?  
 5 **A. I only heard about a third of what you said**  
 6 **based upon the movement of your mask?**  
 7 Q. I'll -- I'll repeat the question and try to  
 8 speak a little louder. Do you know whether any  
 9 of the Intervenor's involved in this case claim  
 10 surface water rights in the river adjacent to  
 11 the aquifer?  
 12 **A. I don't know that. That was not part of my**  
 13 **study.**  
 14 Q. Do you know if there's any party other than the  
 15 City of Wichita that claims surface rights in  
 16 the river adjacent to the aquifer?  
 17 **A. I don't know that either, whether it was only**  
 18 **the City of Wichita or there are other folks**  
 19 **either upstream or downstream of Wichita.**  
 20 Q. Mr. Austin, were you present when Paul McCormick  
 21 testified about the AMC accounting model?  
 22 **A. I believe I missed one -- one day of**  
 23 **Mr. McCormick's testimony, so I don't know -- I**  
 24 **believe he did talk about things he modeled in**  
 25 **part during the part that I heard, but I don't**

1 **remember --**  
 2 **MR. STUCKY:** We're not hearing  
 3 Mr. Austin's answer.  
 4 **A. Sorry, I had it on mute.**  
 5 **BY MR. MCLEOD:**  
 6 Q. I don't think it was Mr. Austin, suddenly we  
 7 just seemed to lose audio.  
 8 **A. I hit mute instead of un-mute, so I was giving**  
 9 **you an answer and it wasn't transmitting to**  
 10 **anybody. So unless you could read -- read my**  
 11 **lips.**  
 12 **In connection with Mr. McCormick's**  
 13 **testimony, I believe I missed part of that, but**  
 14 **I do remember that he, at least the part I**  
 15 **listened to, that he did talk about AMC, but I**  
 16 **don't know whether that was the whole discussion**  
 17 **or not.**  
 18 Q. So in your review of the AMC credits, you were  
 19 looking chiefly at accounting reports from  
 20 actual physical recharge from years from 2012  
 21 through 2016, weren't you?  
 22 **A. I thought it was 2013, '14, '15, and '16 that I**  
 23 **reviewed, but, yes, that -- that would be**  
 24 **correct.**  
 25 Q. And all of those years, the aquifer has been

1 pretty full, wasn't it?  
 2 **A. It was fairly full, yes.**  
 3 Q. I mean, would -- would it be true that over the  
 4 course of that time span and coming back from  
 5 the drought of 2011 and '12 that generally those  
 6 water levels would be trending upward for that  
 7 whole period?  
 8 **A. Trending upward for that whole period, it**  
 9 **appears from an accounting information that it**  
 10 **was trending upward, but there's no guarantee**  
 11 **that it would. I mean, nature is nature and --**  
 12 **and so physically occurs -- what occurs occurs,**  
 13 **and if pumping would -- changed or something**  
 14 **like that, it certainly would also add to it.**  
 15 **But, yes, the accounting information indicates**  
 16 **that it was moving upwards.**  
 17 Q. And I think that you recognized in your earlier  
 18 testimony on direct that when the City goes and  
 19 puts recharge in the aquifer in its -- in its,  
 20 say, 2015 condition when the aquifer is  
 21 relatively full, a lot of that is just going to  
 22 leak out into the adjacent streams, correct?  
 23 **A. It's a little bit like filling a cup and then**  
 24 **adding more to the cup and it goes -- it goes**  
 25 **over the rim maybe. So, yes, it would tend to**

Page 3167

1 **send more water to it, it would increase the**  
 2 **loss rate, I would presume, of the recharge**  
 3 **credits to the stream, as well as other water to**  
 4 **the stream.**  
 5 Q. And because of that, the retention rate of  
 6 recharge in a year like 2015, it's going to be  
 7 much lower than if the City based an AMC credit  
 8 on, say, the year 1998 and its retention  
 9 percentage?  
 10 **A. Yes, it -- yes, it would, but also it would be a**  
 11 **reflection of the actual conditions under which**  
 12 **recharge would have occurred. So in some**  
 13 **respects, regardless of how you compute what**  
 14 **artificial recharge might look like on a**  
 15 **specific date, the conditions of the aquifer**  
 16 **would dictate what the losses would look like,**  
 17 **and if they are high, the losses would be high.**  
 18 Q. So isn't the effect of that, Mr. Austin, if  
 19 you -- if you base the AMC recharge credit on  
 20 the leakage that would occur from physical  
 21 recharge, aren't you really then punishing the  
 22 City for keeping the aquifer at a full level by  
 23 imputing that same leakage rate as if the City  
 24 were trying to physically recharge that full  
 25 aquifer?

Page 3168

1 **A. I think -- I don't think it's a penalty, I think**  
 2 **it is simply reflecting the actual conditions of**  
 3 **the aquifer and -- rather than trying to**  
 4 **artificially find a aquifer level that minimizes**  
 5 **that effect. If you're going to store water,**  
 6 **recharge water or by theory put recharge water**  
 7 **in there, then the losses should be reflected --**  
 8 **reflective of the actual conditions, not some**  
 9 **other condition.**  
 10 Q. And I understand that that's your opinion,  
 11 Mr. Austin, and you weren't present for the part  
 12 of Paul McCormick's testimony where he discussed  
 13 rather more conservative leakage assumptions  
 14 were used, were you?  
 15 **A. The leakage assumptions were part of my review**  
 16 **for my expert report. However, I did not**  
 17 **tabulate them -- or I did not find the summary**  
 18 **of those results until after I had written those**  
 19 **reports. I didn't tabulate it at all, I just**  
 20 **read the summary I ran from 2009 through 2018.**  
 21 Q. Do you recall if the proposal itself contains  
 22 some statements acknowledging that the leakage  
 23 rates used in the proposed AMC accounting method  
 24 are not as great as the leak -- leakage rates  
 25 that would have pertained if the City were

Page 3169

1 recharging the full aquifer?  
 2 **A. The leakage rate is higher in the actual**  
 3 **conditions than it would be under the proposed**  
 4 **accounting method, yes.**  
 5 Q. So -- so, Mr. Austin, if there is no -- if the  
 6 AMC credits are not approved and the only credit  
 7 available to the City is the existing physical  
 8 recharge credit, would you agree with me that in  
 9 order to achieve a better retention of recharge  
 10 credits in the aquifer, the City would have to  
 11 lower the water levels to a point where recharge  
 12 credits are retained better than they can be at  
 13 the full aquifer level?  
 14 **A. As I said, they would have to balance their**  
 15 **operation so that they maximize their recharge**  
 16 **rate and minimize their leakage rate.**  
 17 Q. Do you know, Mr. Austin, during the 2011, 2012  
 18 drought when you were showing us that the -- the  
 19 achievement of minimum desirable streamflow was  
 20 only 60 something percent, during that period,  
 21 did DWR administer groundwater users' rights in  
 22 order to protect minimum desirable streamflow?  
 23 **A. I don't know that they did, I'm not aware of**  
 24 **that.**  
 25 Q. Do you believe that that's what should happen, I

Page 3170

1 mean, if we're treating minimum -- minimum  
 2 desirable streamflow as a senior right, a senior  
 3 surface right in the river, in times of drought  
 4 when minimum desirable streamflow is threatened,  
 5 should DWR shut down junior groundwater users,  
 6 starting with the most junior groundwater users,  
 7 to protect that minimum desirable streamflow?  
 8 **A. The MDS administration is done in connection**  
 9 **with long-term declines in MD -- in the MDS**  
 10 **achievement, so I would not expect that during a**  
 11 **drought as long as normal pumping -- or pumping**  
 12 **in reaction to the drought occurred, I would not**  
 13 **expect DWR to jump in and do that type of**  
 14 **administration. They might but that would not**  
 15 **be my suspicion. The ones that I know about are**  
 16 **systemic problems that they're addressing, not**  
 17 **transient problems that may be related to the**  
 18 **drought.**  
 19 Q. If you would look at figure 16 to the City's  
 20 proposal?  
 21 **A. I found it.**  
 22 Q. Mr. Austin, if you would look at that figure,  
 23 does it appear to you to be graphically  
 24 comparing results of the proposed AMC accounting  
 25 methodology with the existing physical recharge

1 methodology?  
 2 **A. Let's see, it's a graphical representation of**  
 3 **the table 4-2 below?**  
 4 Q. Yes, that is a graphical representation of  
 5 figure 4-2. Looking at that graphical  
 6 representation, does it appear to you that the  
 7 accounting methodology proposed for the AMCs  
 8 follows pretty closely along the same path as  
 9 the accounting methodology for the existing  
 10 physical recharge credit?  
 11 **A. It appears to do a better job in early years and**  
 12 **starts to deviate to the greater much more in**  
 13 **the -- during the years of the accounting which**  
 14 **I reviewed, 2013, '14, '15, and '16.**  
 15 Q. And that would be attributable to the difference  
 16 in the leakage rates that are being used,  
 17 wouldn't it?  
 18 **A. I believe so.**  
 19 Q. Mr. Austin, I -- I don't know if you remember  
 20 the details of the -- the reporting and  
 21 evaluation that Mr. Romero testified about, but  
 22 in presenting their view of -- of the impact if  
 23 the City pumped its 40,000 acre-feet water  
 24 rights plus what it could draw with existing  
 25 limits if it had all the AMCs that it could

1 done, I mean, not that we have a ton of  
 2 questions but we do have some questions.  
 3 **PRESIDING OFFICER:** Okay. We'll --  
 4 we'll take those up after lunch, we'll  
 5 take -- we'll go off the record and take a  
 6 break for an hour, thank you.  
 7 (Thereupon, a lunch recess was  
 8 taken; whereupon the following was  
 9 had.)  
 10 **PRESIDING OFFICER:** So we're back on  
 11 the record, and direct examination for  
 12 George Austin had just concluded -- or, no,  
 13 I'm sorry, cross-examination by the City of  
 14 George Austin had just concluded, so now we  
 15 turn to GMD2 and I will hand this over  
 16 either to Dave or Tom, whichever one of you  
 17 is going to handle that.  
 18 **MR. STUCKY:** I'll -- I'll be asking  
 19 the questions. But just to clarify,  
 20 historically we've had --  
 21 **PRESIDING OFFICER:** Oh, I'm sorry,  
 22 Dave?  
 23 **MR. STUCKY:** Yes.  
 24 **PRESIDING OFFICER:** Forgive me, I  
 25 think I took this out of order.

1 accumulate, they came up with, I believe, a  
 2 drawdown of 5 feet as the impact from that in  
 3 the most affected part of the well field, and my  
 4 question is have you calculated the impact of  
 5 streamflow of a 5-foot-lower water level?  
 6 **A. I have not. However, I don't know if it was the**  
 7 **scenario that you described, but Mr. Romero did**  
 8 **present information that there was a 10 cfs**  
 9 **reduction in streamflow in his -- in his work**  
 10 **and -- of which half of that, 5 cfs, he assigned**  
 11 **to the Little Ark River.**  
 12 **MR. MCLEOD:** I don't have further  
 13 questions for the witness.  
 14 **PRESIDING OFFICER:** Okay, thank you.  
 15 We'll move on to GMD, Dave or Tom, do you  
 16 have questions?  
 17 **MR. STUCKY:** Can we have a short  
 18 break for lunch and just reconvene after  
 19 lunch? Yeah, we have a -- a series of  
 20 questions.  
 21 **PRESIDING OFFICER:** I think that's a  
 22 fair request. So it's about noon, let's  
 23 resume at 1:00. Thank you.  
 24 **MR. STUCKY:** Yeah, I think people  
 25 will get pretty hungry by the time we're

1 **MR. STUCKY:** Yeah, I think it was  
 2 DWR historically, is what I was going to  
 3 say, that's gone next. If you wondered why  
 4 there was a long delay from us when you  
 5 asked if we were ready to go, that was why  
 6 so ...  
 7 **PRESIDING OFFICER:** Well, I'm sorry,  
 8 you probably should have pointed that out.  
 9 And not to disadvantage anyone, Stephanie,  
 10 would you be ready if DWR goes next, or did  
 11 I mess that up?  
 12 **MS. MURRAY:** I actually don't -- oh,  
 13 my gosh, that's so loud. I actually don't  
 14 have any questions for Mr. Austin so Dave  
 15 can go next.  
 16 **PRESIDING OFFICER:** That makes it  
 17 easy. Okay. So then, Mr. Stucky, please  
 18 go ahead.  
 19 **MR. STUCKY:** Let -- let the record  
 20 reflect that Stephanie gave the wrong  
 21 answer as far as what I was expecting.  
 22 But -- so we'll proceed.  
 23 //  
 24 //  
 25 //

Page 3175

1 **CROSS-EXAMINATION**  
 2 **BY MR. STUCKY:**  
 3 Q. First of all, on -- Mr. Austin, I'm not seeing  
 4 you on my screen, are you still there?  
 5 **A. I am.**  
 6 Q. And, Mr. Austin, you talked in your resume, your  
 7 CV about your years working at DWR, and I was  
 8 trying to add that up, would you say, was it  
 9 roughly 22 years that you worked for DWR? Is  
 10 that correct?  
 11 **A. It was 30 years.**  
 12 Q. 30 years, okay. And so in your 30 years of  
 13 working for DWR, what I heard you testify to is  
 14 that you had built or helped build a couple of  
 15 models; is that correct?  
 16 **A. I'm sorry, I hit mute. Yes, that is correct.**  
 17 **It's not all the models I had built but the ones**  
 18 **that were pertinent to this discussion, yes.**  
 19 Q. Okay. So -- so you said you helped build a  
 20 couple models, but just to clarify the record,  
 21 you helped work on -- on other models, like  
 22 where you would -- when I say worked on them,  
 23 you would have analyzed them, you would have  
 24 provided insight on them, you would have looked  
 25 at the inputs. Is it true that in -- aside from

Page 3176

1 the two that you built, you would have worked on  
 2 other models?  
 3 **A. That's true, and I also built other models.**  
 4 Q. Okay. Okay. So just to clarify the record,  
 5 when you said originally you meant -- what you  
 6 meant by building two models, can you clarify  
 7 the record? You just said that you also built  
 8 other ones, so can you clarify that?  
 9 **A. Well, I built models regarding dams. For**  
 10 **instance, one of the first ones I built, we**  
 11 **didn't even have computers to do the programming**  
 12 **on, so I actually did it on a magnetic strip**  
 13 **that went into a programmable hand calculator.**  
 14 **And what that did was route -- what we call**  
 15 **flood routing, route flood through a dam**  
 16 **structure, spillways, and that sort of thing to**  
 17 **determine if it was adequate. And that -- that**  
 18 **later developed into a standard, a model that**  
 19 **did a lot more than that but -- such as checking**  
 20 **erosion and -- and things like that, but that --**  
 21 **that was built and utilized by DWR for quite**  
 22 **sometime.**  
 23 **Specifically, in the regulatory role,**  
 24 **oftentimes we reviewed models that were used for**  
 25 **floodplain zoning, flood insurance, stream**

Page 3177

1 **operations, and those sorts of things. But we**  
 2 **developed models with which to review those that**  
 3 **were independent. You know, if it was MODFLOW,**  
 4 **maybe a simplified model that would see if the**  
 5 **results were within the neighborhood as an**  
 6 **independent review. I did not do that in this**  
 7 **case but just to let you know that model**  
 8 **building was part of our regulatory**  
 9 **responsibility in the way we reviewed various**  
 10 **regulations and review and issuance of permits.**  
 11 Q. So how many dam models would you say you built?  
 12 **A. Well, the base model, I built, let's see, built**  
 13 **it on the calcu -- well, first I built it**  
 14 **graphically on a cal -- that programmable**  
 15 **calculator, then basic, and later on two**  
 16 **different spreadsheet-type programs like Excel,**  
 17 **and so, you know, probably seven or eight**  
 18 **models, but at the same time those were part of**  
 19 **that regulatory process. And as far as DWR was**  
 20 **concerned, some of those continue on, but I**  
 21 **imagine most of them have -- have now gone to**  
 22 **models developed by federal agencies like USGS**  
 23 **or -- or that sort of thing. But, yeah.**  
 24 Q. So to clarify the record and the testimony, in  
 25 your career, you've -- you've probably built

Page 3178

1 somewhere north of ten models, give or take. Is  
 2 that -- is that a true statement?  
 3 **A. Well, as a base model, probably used them on**  
 4 **close to 700 dams, for instance, on the**  
 5 **assessment of dam safety; dam breach analysis,**  
 6 **probably, oh, about 125 dams. And so, yeah,**  
 7 **there -- built multiple models but they were the**  
 8 **same model, just being applied to different**  
 9 **situations.**  
 10 Q. And -- and help me out here, just -- just to try  
 11 and quantify for someone that's, you know, a  
 12 layperson like myself, how impressive that is, I  
 13 mean, isn't it true that many engineers that may  
 14 be involved in water resources and water  
 15 allocation, isn't it true that many engineers  
 16 may never build a model in their entire career?  
 17 Is that a true statement?  
 18 **A. Well, it's probably true. A lot of models have,**  
 19 **in general, become so numerous that a lot of the**  
 20 **stuff I was doing because they didn't exist at**  
 21 **the time was -- is now a plug-and-play type**  
 22 **program that you can purchase commercially or --**  
 23 **or you can get free from the federal government.**  
 24 Q. Right. And so that's -- that's my question, I  
 25 mean, we're not talking about, you know,

1 building a set of Legos, looking at some  
2 instructions and building a set of Legos? When  
3 we build a model, it's a very involved process  
4 and a -- and a very impressive set of steps that  
5 one has to go through; is that correct?  
6 **A. Yes, one -- and that's prob -- probably where**  
7 **also being a physicist comes in because when we**  
8 **talk boundary conditions, most physics problems**  
9 **are solved by understanding what the boundaries**  
10 **of the -- the thing that you're interested in.**  
11 **For instance, if you're looking at planetary**  
12 **movements, you might have to under -- in order**  
13 **to solve it, you might have to understand what**  
14 **the boundaries in infinity or zero, what those**  
15 **boundaries look like.**  
16 Q. And so just -- just to clarify, over the years  
17 because of the various models you -- you have  
18 built, you would consider yourself an expert  
19 in -- in modeling and building models and things  
20 of that nature, correct?  
21 **A. Yes, as far as the modeling process is**  
22 **concerned.**  
23 Q. Okay. You mentioned in some of your prior  
24 testimony that you were involved in helping with  
25 litigation between Kansas -- Kansas and Colorado

1 and Kansas as the accounting method for state  
2 line river flow deliveries. So when you talked  
3 about this river modeling you did, it was  
4 referring to this model that you would have  
5 created, helped with that process; is that  
6 right?  
7 **A. Yeah, I -- I created it and the initial model**  
8 **was reviewed by David Barfield at the time; he**  
9 **was not chief engineer, he was the head of the**  
10 **interstate section. And then based upon his**  
11 **comments, essentially caught an error, a**  
12 **mathematical error I had in it, and we submitted**  
13 **that to Colorado and through negotiation came up**  
14 **with the final form and format that is now, for**  
15 **the Compact, the law of the river as far as**  
16 **delivery from John -- John Martin to state line.**  
17 Q. And that -- that river modeling, is -- is that  
18 similar, just to make sure I understand, come  
19 full circle here, is the river modeling you did  
20 there, does it have a similar applicability? I  
21 get that we're talking about a different river,  
22 we're talking about a different location, but  
23 would the applicability of the modeling you did  
24 there be similar to what City of Wichita would  
25 be looking at if the City of Wichita had,

1 and some of that interstate litigation. Do you  
2 recall that testimony?  
3 **A. Yes.**  
4 Q. And I think I saw in some of your notes in, I  
5 believe, in your CV that you helped prepare  
6 arguments for the Supreme Court; is that  
7 correct?  
8 **A. Well, I wouldn't say that because I'm not an**  
9 **attorney, but I -- I did prepare -- prepare**  
10 **engineering analyses that were used by the**  
11 **attorneys in -- in the action which ended up in**  
12 **the Supreme Court.**  
13 Q. Okay. So if you could turn to your CV, if you  
14 would, which was admitted into evidence, if you  
15 could turn to your CV, bottom page of your CV,  
16 are you -- are you there, Mr. Austin, bottom of  
17 your CV?  
18 **A. Yes.**  
19 Q. Okay. And for the record, I'm sorry, it's the  
20 first page at the very bottom of his CV, and I'm  
21 reading from it, it says, participated in  
22 preparation for oral arguments before the  
23 U.S. Supreme Court, participated in settlement  
24 conferences with Colorado, and then it says,  
25 created Arkansas River model adopted by Colorado

1 indeed, analyzed minimum desirable streamflow,  
2 would it be similar concepts?  
3 **A. It -- it could be. It is more or less a river**  
4 **operations model, which it -- it takes flow from**  
5 **one point in the river to another, and in the**  
6 **case on the Ark River downstream of state line,**  
7 **there are seven different nodes that it**  
8 **basically is computing a river flow. But that**  
9 **is -- that's not analyzing the impact of**  
10 **groundwater diversions, but it is anticipating**  
11 **surface water diversions of the various ditch**  
12 **irrigators on -- on the Arkansas River.**  
13 Q. And -- and also just explain to me the impact of  
14 having created this model in this situation in  
15 the sense of whether or not others would then  
16 base their future work off of what you did.  
17 And, for example, my familiarity is in the  
18 practice of law, Tom Adrian has several  
19 published articles on water law, and it's very  
20 possible that someone else who's arguing in a  
21 court may cite Tom Adrian's arguments that he  
22 has published on water law as a basis for their  
23 argument, and so is the same true here, in other  
24 words, would other individuals look at the  
25 modeling you did for this Arkansas River model

Page 3183

1 and base some of their work off of what you did  
2 or expand upon it in the future?  
3 **A. It is possible. I am aware that Colorado State**  
4 **University now teaches the Muskingum Method,**  
5 **which is the basis of what I modeled, in their**  
6 **college of engineering, and -- and so the**  
7 **methodology, at least, is -- is alive and well**  
8 **in the engineering field.**  
9 Q. So in that sense, others that followed you in  
10 the modeling you did, it appears, base some of  
11 their work on -- on what you had already done or  
12 built upon what you had already done; is that  
13 correct?  
14 **A. Well, I don't know of any specific instances**  
15 **outside the fact that the same methodology is**  
16 **being used by others.**  
17 Q. Okay. And so if I were to ask you if the  
18 MODFLOW model would have -- have built off of  
19 any of the modeling you did or anything of that  
20 nature, you wouldn't know the answer to that?  
21 **A. That's correct. In fact, as far as I know, the**  
22 **MODFLOW model was pretty much brought into**  
23 **existence by Marios Sophocleous of USGS, he's**  
24 **the primary modeler, but he actually built on a**  
25 **model previously done by Steve Larson, who is**

Page 3184

1 **with Sophocleous' firm now, and they both worked**  
2 **for the USGS at the time. So, you know, it --**  
3 **it is true that these models do tend to have a**  
4 **evolution based upon how they're applied and who**  
5 **applies it. Like I said, the original MODFLOW**  
6 **concept was to track pollutant transport, and --**  
7 **and it was found to be expanded to groundwater**  
8 **pumping in general, or groundwater types of**  
9 **diversions.**  
10 Q. Okay. And just to be clear, what you did with  
11 the Arkansas River model, that would have  
12 incorporated the concept of minimum desirable  
13 streamflow in concept, at least; is that  
14 correct?  
15 **A. No, I don't think so.**  
16 Q. Okay. What -- what subsequent modeling did you  
17 do that would have incorporated the concept of  
18 minimum desirable streamflow?  
19 **A. The -- it would have introduced the concept of**  
20 **base flow, which minimum desirable streamflow is**  
21 **a subset of. So I was not working in an**  
22 **environment where minimum desirable streamflow**  
23 **was actually something we were seeking to**  
24 **achieve at -- at that time, and so I -- I don't**  
25 **think any of my knowledge really were utilized**

Page 3185

1 **for that -- that effect.**  
2 Q. Yeah, I apologize, I did listen to your  
3 testimony carefully where you said that minimum  
4 desirable streamflow earlier this morning was --  
5 was a subset of base flow, so I am correct in --  
6 in my statement that you did, in fact, analyze  
7 base flows in -- in your prior modeling. Is  
8 that a true statement?  
9 **A. Yes, it's a boundary condition. So once again,**  
10 **when you're trying to resolve a model or resolve**  
11 **the conditions in which it operates, you have to**  
12 **look at boundary conditions.**  
13 Q. You said in your prior testimony, and I don't  
14 have the exact quote, I think -- I think what  
15 you said is that the MODFLOW model was designed  
16 to look at contaminated transports, I think was  
17 your quote. Do you recall making that  
18 statement?  
19 **A. Yes.**  
20 Q. What did you mean by that statement?  
21 **A. Well, the pollutants that -- such as petroleum**  
22 **products, arsenic, heavy metals, chlorides,**  
23 **other salts are -- were of interest to the**  
24 **environmental community under the Environmental**  
25 **Protection Act and -- well, mercury, so a lot of**

Page 3186

1 **indus -- industrial contaminants had gotten into**  
2 **groundwater, and in order to clean it up, you**  
3 **had to understand how it was being transported,**  
4 **where it was going, perhaps even run the model**  
5 **and find out what its original source was and**  
6 **those sorts of things.**  
7 **So that -- it's my understanding, at least**  
8 **as I was taught, that contaminant transport was**  
9 **the original concept that the MODFLOW model was**  
10 **intended to address. And -- and it is a, I**  
11 **guess, a separate module of the MODFLOW model**  
12 **at -- at this point as it has broadened in scope**  
13 **and applicability to other things.**  
14 Q. But to clarify, and it's an important point,  
15 initially when the MODFLOW model was created,  
16 the idea of looking at contamination and --  
17 and -- and things of that nature, that was a big  
18 focus of the model at that early iteration of  
19 the model; is that true?  
20 **A. Yes, sir.**  
21 Q. You mentioned that there's a significant  
22 interplay between surface water and groundwater  
23 early on in your testimony; is that correct?  
24 **A. Yes.**  
25 Q. And so your testimony where you were indicating

1 that -- Mr. McLeod actually asked you a series  
2 of hypotheticals and he would ask you if the  
3 aquifer was kept full, for example, if that  
4 would improve minimum desirable streamflow, he  
5 asked you a series of questions like that, so  
6 does that speak to the interplay between surface  
7 water and groundwater?

8 **A. Yes, it does.**

9 Q. Mr. McLeod asked you specifically that --  
10 whether or not if the aquifer was kept full,  
11 let's just assume the aquifer is at 100 percent  
12 versus at 50 percent full, if it's at  
13 100 percent full, minimum desirable streamflow  
14 would be less impacted. Do you recall that  
15 question?

16 **A. Yes. Yes.**

17 Q. Let me -- let me take that a step further. In  
18 the event, let's say, that the aquifer is  
19 relatively full or 100 percent full, however we  
20 want to look at it, and at that point the City  
21 decides to withdraw its aquifer maintenance  
22 credits, at that point it's withdrawing the  
23 credits, it's taking water out of the aquifer,  
24 as the City takes that water back out of the  
25 aquifer, how would that impact minimum desirable

1 of the City's proposal is to lower the minimum  
2 index level, in other words allow the City to  
3 withdraw water below a current minimum. If they  
4 were to lower that current minimum index level  
5 and -- and drop that current minimum index  
6 level, from what you told Mr. McLeod and  
7 testified to Mr. McLeod, wouldn't dropping that  
8 minimum index level also adversely impact  
9 minimum desirable streamflow?

10 **A. Yes, it would, it would affect it greater than  
11 historically it has been affected by pumping  
12 because they're going below historic low levels.  
13 So the base flow would be affected, and,  
14 therefore, if it's affected enough, MDS would be  
15 hard to achieve at the lower level.**

16 Q. Now, let me ask you this: Did the City, in your  
17 view, adequately model or demonstrate what the  
18 impact to minimum desirable streamflow would be  
19 based on lowering the minimum index level, did  
20 they model that?

21 **A. I'm not aware of any of their models actually  
22 addressing the minimum index -- that minimum  
23 index level because that was established not  
24 through modeling but by a contingency amount,  
25 which --**

1 streamflow?

2 **A. Well, initially, it would not necessarily have a  
3 large effect, but if it's a large quantity that  
4 they're withdrawing, dropping the groundwater  
5 levels, then they would reduce the amount of  
6 base flow that's occurring, the groundwater  
7 that's infiltrating into the stream. And in  
8 doing so, it's possible that they would affect  
9 the achievement of MDS in that stream.**

10 Q. So in other words, over a longer period of time,  
11 if they continue to withdraw aquifer maintenance  
12 credits and -- and the corresponding water from  
13 the aquifer, over time it could adversely impact  
14 minimum desirable streamflow; is that true?

15 **A. It -- it could do that. Of course, it's  
16 dependent on how much they're withdrawing and --  
17 and for what period of time.**

18 Q. Let me ask you the -- the same question by  
19 extension, Mr. McLeod asked you if the aquifer  
20 was completely full, minimum desirable  
21 streamflow would be less affected than if the  
22 aquifer wasn't as full. Do you recall that  
23 question again?

24 **A. Yes.**

25 Q. Let me take that a step further. Another part

1 Q. In fact -- in fact, they didn't model at all how  
2 lowering the minimum level would impact --

3 **A. -- doesn't, you know, doesn't -- isn't reflected  
4 in the modeling they've done thus far.**

5 Q. I apologize, we -- we spoke over each other. In  
6 fact, they didn't model at all how lowering  
7 minimum desirable -- or lowering the minimum  
8 index level would impact minimum desirable  
9 streamflow, is that correct, they didn't model  
10 that at all, true?

11 **A. I didn't see that the models addressed any issue  
12 at that level, including MDS.**

13 Q. Did the City's model address how later  
14 withdrawing aquifer maintenance credits, did the  
15 City address how that would impact minimum  
16 desirable streamflow through its modeling?

17 **A. I don't believe so.**

18 Q. And once again, this is an example of an area  
19 where there's debate about the extent to which  
20 you talked about it in your report, even though  
21 you talk about the flow of the river in and out  
22 of the aquifer and you talk about a variety of  
23 those different concepts, but, in fact, even  
24 though you were chastised for not fully  
25 mentioning that in your report, given -- the

Page 3191

1 City didn't address that at all; is that  
 2 correct?  
 3 **A. I don't see it addressed except in the -- the**  
 4 **orders of the chief engineer as far as setting a**  
 5 **limit to the surface water diversions, how --**  
 6 **how low the river could get, which was, as I**  
 7 **remember, 30 cfs.**  
 8 Q. Right. And that was a poorly worded question,  
 9 the City didn't address it at all in their  
 10 expert reports or in their modeling; is that  
 11 correct?  
 12 **A. Not that I could tell.**  
 13 Q. In your opinion from having worked at the  
 14 Division of Water Resources for 30 years, you  
 15 said you served a prior time as a hearing  
 16 officer and you served in a variety of different  
 17 capacities at the Division of Water Resources,  
 18 from all -- and you've also done a lot of  
 19 modeling, in your extensive experience, from  
 20 your understanding of statutes involving minimum  
 21 desirable streamflow and also your history  
 22 working for DWR, do you feel like, in your  
 23 expert opinion, the City of Wichita should have  
 24 done that type of modeling?  
 25 **A. I think they should have been expected to do**

Page 3192

1 **that type of modeling and -- because that is one**  
 2 **of the standards that the Division of Water**  
 3 **Resources needs to assess its effect, MDS is one**  
 4 **of those standards, so failing to do so, I**  
 5 **think, leaves a big question mark as to if that**  
 6 **water right is approvable -- or the new**  
 7 **operation is approvable in the manner it's**  
 8 **presented currently.**  
 9 Q. I would ask that you flip to the first written  
 10 page of your report and let me know when you're  
 11 there.  
 12 **A. I'm there.**  
 13 Q. All right. Mr. Austin, I'm looking at the last  
 14 paragraph of that page, the paragraph that  
 15 starts, there are scale and time distributions  
 16 that limits the model. Can you follow with --  
 17 follow me to that paragraph?  
 18 **A. Yes.**  
 19 Q. In the fourth line of that paragraph, there's a  
 20 quote and it says, although irrigation pumpage  
 21 was assumed to occur only in May through August,  
 22 annual irrigation rates were calculated and used  
 23 in the simulation, end quote.  
 24 **A. That is correct.**  
 25 Q. Can you explain what that quote means?

Page 3193

1 **A. Well, if you look at it as an annual rate and**  
 2 **the irrigation season is only four or five**  
 3 **months, then if you look at it as an annual**  
 4 **rate, it's maybe half or to a fourth of the --**  
 5 **the actual peak rate of diversion. And that has**  
 6 **a markedly different impact on water right**  
 7 **impairments of nearby wells.**  
 8 Q. So in other words, drawdowns would actually be  
 9 higher during peak periods. Is that a true  
 10 statement, is that what you're saying?  
 11 **A. Yes, during the operation of the -- of the**  
 12 **pumping, it would be what's known as a cone of**  
 13 **depression, it's being drawn down to the well;**  
 14 **and it's much deeper, and it also reaches out**  
 15 **from that cone in a parabolic manner to top of**  
 16 **the groundwater surface. When water well**  
 17 **measurements are done, they're done on --**  
 18 **generally on an annual basis and they're done**  
 19 **after pumping has ceased for several months; so**  
 20 **at that point, that cone of depression refills,**  
 21 **and if they pumped out more water than -- than**  
 22 **natural recharge or other recharge provided,**  
 23 **then that -- then it's lower. Well, that lower**  
 24 **level is re -- was recovered, and that lower**  
 25 **level doesn't necessarily show what the maximum**

Page 3194

1 **impairment might have been.**  
 2 **In the middle of the summer, it might have**  
 3 **been quite -- quite a few feet deeper than what**  
 4 **the recovery is because typically after a**  
 5 **pumping season and when you measure in January**  
 6 **or February, you find maybe 1 or 2 feet of**  
 7 **change in the groundwater surface. It's not**  
 8 **always negative either, but you'll find a**  
 9 **limited amount of difference, and that doesn't**  
 10 **reflect what maybe for six months was many more**  
 11 **feet worth of impairment.**  
 12 Q. So in other words, the model aggregates the  
 13 pumping over the course of an entire year  
 14 instead of taking into account the peak pumping  
 15 periods and accounting for that in -- in the  
 16 model, is that essentially what you're saying?  
 17 **A. It tends to skim over that issue. When -- when**  
 18 **you're evaluating water right impairment, it is**  
 19 **a matter of whether you can use it or not for**  
 20 **its intended purposes, and just because you**  
 21 **could perhaps use it in February when its**  
 22 **intended purpose was in August when the**  
 23 **depression was at its peak, then, you know,**  
 24 **you've been impaired, even though it doesn't**  
 25 **show that in -- in the annual water measurement**

1 program.

2 Q. So as it relates to the City's modeling  
3 performed in correspondence with its proposal,  
4 tell me what this all means, how does that  
5 impact what it is the City did?

6 **A. Well, it -- it -- I think the difference is that**  
7 **a more specific model, not necessarily MODFLOW,**  
8 **that's based on peak discharge rates or pumping**  
9 **rates and relative to specific wells would show**  
10 **impairment and to how large the impairment may**  
11 **have been. If you do it according to the annual**  
12 **average -- average rates or to what it shows in**  
13 **depth the change in storage after that pumping,**  
14 **then you might get an indicator that it could**  
15 **be -- that an adjacent well could have been**  
16 **affected, but you have no information that tells**  
17 **you whether or not it actually was impaired and**  
18 **to what extent it was impaired.**

19 Q. So in other words, I asked you the question  
20 earlier based on your 30 years of experience in  
21 DWR and all the different hats you wore during  
22 that time if you thought something should be  
23 done. Again, based on all your experience, do  
24 you feel like this is work that the City should  
25 analyze in the future?

1 occurs or what have you. If you can anticipate  
2 it, then you can remedy it before it becomes a  
3 problem.

4 **So like I said, I think MODFLOW probably**  
5 **provides an indicator of those wells that are**  
6 **close to being -- have a potential for**  
7 **impairment; it just doesn't tell you whether or**  
8 **not it actually is being impaired, and if it is**  
9 **what the extent of the impairment is, and you**  
10 **need to do a much more -- a different study to**  
11 **look at that. Not look at the regional water**  
12 **levels but look at the -- the specific local**  
13 **water levels adjacent to their well.**

14 Q. And -- and to focus you in further, you said  
15 this is work the City could do. In -- in your  
16 experience as a hearing officer and your -- your  
17 years of experience in DWR, in an ideal world,  
18 is that something the City should do?

19 **A. I would recommend it to them that they should do**  
20 **it, yes.**

21 Q. Okay. I'd like to now have you turn to your  
22 Exhibit 3. It's a table, are you there?

23 **A. Yes.**

24 Q. Now, what we see on this table is that during  
25 years of a drought where the aquifer had -- had

1 **A. Well, I think the model had provided indicator**  
2 **of what potential conflicts there are to**  
3 **individual wells, and what would be needed is**  
4 **a -- a detailed study of those wells at peak**  
5 **pumping times and how much impact would actually**  
6 **occur. If it's a domestic well, which many of**  
7 **them older domestic wells don't go the full**  
8 **depth of the aquifer, you know, and at peak**  
9 **pumping times the groundwater is dropped below**  
10 **the bottom of that well, in other words the well**  
11 **becomes dry, then if you do a detailed analysis,**  
12 **you'll know ahead of time that that's a**  
13 **possibility and maybe someone goes out and**  
14 **drills the well deeper so that it wouldn't be**  
15 **impaired or dried out.**

16 Q. I think you answered my question, but I'm  
17 actually not 100 percent sure, so in other  
18 words, do you recommend this as future work that  
19 could or should be done by the City to analyze  
20 those peak areas and drawdowns to individual  
21 wells?

22 **A. I think there -- yes, I think they could -- they**  
23 **could do it. I think that's better than saying**  
24 **if a problem occurs, we'll take care of it, you**  
25 **know, or we'll -- we'll look at it when it**

1 dropped significantly, what we see in this table  
2 is that minimum desirable streamflow also  
3 decreased; is that right?

4 **A. The frequency in which it's met decreased.**

5 Q. Thanks for that clarification. So the frequency  
6 in which minimum desirable stream -- streamflow  
7 is met decreased at the points where the aquifer  
8 was lower; is that right?

9 **A. Yes.**

10 Q. And in other words, in 2011 to 2012, it was only  
11 met 63.4 percent of the time; is that true?

12 **A. Based on my calculations, yes.**

13 Q. So by extension, if the City were to pump down  
14 the aquifer past the current minimum index level  
15 and pump it down, draw down the aquifer even  
16 further, would it stand to reason that minimum  
17 desirable streamflow would be met half the time  
18 or less than half the time if that were to  
19 occur?

20 **A. Yes, I think based upon Dave Romero's work where**  
21 **he estimated as much as 10 cfs of streamflow was**  
22 **reduced. If you apply 5 cfs to -- or a**  
23 **reduction of 5 cfs to the 2011, 2012**  
24 **streamflows, you're looking at something**  
25 **substantially less than 63 percent.**

Page 3199

1 Q. And -- and did you quantify that exact number,  
 2 or is it just by extension of -- of what you did  
 3 calculate and what you looked at, you believe  
 4 that it would drop to something much less  
 5 than -- than 63 percent?  
 6 **A. Well, I believe that Dave actually had in his**  
 7 **report an estimation of 54 percent achievement,**  
 8 **so I would refer you to that.**  
 9 Q. Well, and, again --  
 10 **A. Using a slightly different methodology would**  
 11 **probably get it to some -- some close range like**  
 12 **that, yes.**  
 13 Q. And once again, this -- this isn't the  
 14 Intervenor's burden of proof or the District's  
 15 burden of proof, is this work that the City  
 16 should have modeled in your view?  
 17 **A. Well, in terms of its long-term effects,**  
 18 **definitely. The MDS is an attempt to prevent**  
 19 **pumping from excessively, is I think the**  
 20 **language that's actually used, affect excessive**  
 21 **pumping to lower MDS achievement, and that's not**  
 22 **to say that during a drought you're not going to**  
 23 **have a pretty hard effect on -- on MDS but it's**  
 24 **what the long-term result it.**  
 25 Q. And this table also tells us that if we were to

Page 3200

1 withdraw a significant amount of aquifer  
 2 maintenance credits in the future, if the City  
 3 were to able -- let say, for example, the City  
 4 were to accumulate its full authorized amount of  
 5 aquifer maintenance credits, and that number is  
 6 eluding me, 18,000, if they were to -- if they  
 7 were to accumulate their full amount of aquifer  
 8 maintenance credits as they're -- as they're  
 9 trying to put in their proposal, and they  
 10 withdrew all those in the future, it would stand  
 11 to reason that minimum desirable streamflow  
 12 would be significantly, adversely impacted; is  
 13 that right?  
 14 **A. I'm not sure that's obvious to me. I think if**  
 15 **recharge credits were recovered from above the**  
 16 **current index level, that is generally**  
 17 **considered unsaturated, and so that unsaturated**  
 18 **isn't normally -- that unsaturated is not**  
 19 **normally contributing to the achievement of MDS**  
 20 **or not. But if you go below that level with**  
 21 **pumping to a new lower level, then, yes, I think**  
 22 **it would have an adverse effect on MDS because**  
 23 **you're going lower than historically it had ever**  
 24 **been, and MDS is based in part on history of**  
 25 **base flows and -- and what level needs to be**

Page 3201

1 **maintained in that stream.**  
 2 Q. So in other words, there's a combined effect  
 3 that if they were to lower the minimum index  
 4 level and then also withdraw a significant  
 5 amount of aquifer maintenance credits in the  
 6 future, that combined action by the City would,  
 7 indeed, adversely impact minimum desirable  
 8 streamflow, is that what you just said?  
 9 **A. I think -- I think that's what it has -- yeah,**  
 10 **that's the combination that has to be. If they**  
 11 **had 18,000 stored above the current index level,**  
 12 **that was considered un -- unsaturated, and it**  
 13 **probably, quite frankly, historically is not**  
 14 **part of base flow and MDS achievement, so you --**  
 15 **you essentially have to be pumping that below**  
 16 **the 1993 index level.**  
 17 Q. I want to now circle back to what you said  
 18 originally, that the MODFLOW model was  
 19 originally designed to look at water quality, in  
 20 essence, water contamination, water quality, I  
 21 want to circle back to that point because you  
 22 spent quite a bit of time in your report talking  
 23 about chloride movement and water quality; is  
 24 that correct?  
 25 **A. That's correct.**

Page 3202

1 Q. And once again during your time with the  
 2 Division of Water Resources, you had the  
 3 occasion to look at issues involving water  
 4 quality; is that right?  
 5 **A. That's right, generally not very frequently**  
 6 **because many water quality issues were addressed**  
 7 **by the Kansas Department of Health and**  
 8 **Environment.**  
 9 Q. But when they were addressed by the Division of  
 10 Water Resources, would you have been one of the  
 11 main employees of the Division of Water  
 12 Resources that would have been involved?  
 13 **A. Only if it was primarily a surface water issue.**  
 14 **For -- for instance, I can think of a very small**  
 15 **sampling but where the chief engineer required**  
 16 **releases from reservoirs to help with the salt**  
 17 **content, the chloride content in surface water.**  
 18 **But I was not really involved with that except**  
 19 **in -- in connection with the reservoir and what**  
 20 **it would take to get a sufficient volume of**  
 21 **cleaner water to dilute the -- the chloride**  
 22 **issue.**  
 23 Q. You mentioned a moment ago that as you look at  
 24 water quality, I heard you use the term arsenic  
 25 as -- as something that may be analyzed, and

1 there are some other contaminants that you  
2 mentioned; is that correct? Was arsenic one of  
3 them you mentioned?  
4 **A. I don't remember at this -- this point, though**  
5 **arsenic and other heavy metals could be part --**  
6 **could be a contaminant that -- that would be**  
7 **looked at. Some poisons are naturally**  
8 **occurring, but if they get concentrated because**  
9 **of some activity, then -- then they can also be**  
10 **a hazard.**  
11 Q. In the cross-examination by Mr. McLeod, he keyed  
12 in on the word possibly, and he asked you if  
13 you're saying it was only possible that lowering  
14 the minimum index level and/or withdrawing AMCs  
15 would adversely impact chloride movement. Do  
16 you recall him keying in on that word possibly?  
17 **A. Yes.**  
18 Q. I'd like you to turn to the last page of your  
19 report under conclusions and findings.  
20 **A. Okay.**  
21 Q. I want you to read the very last sentence of  
22 your conclusions and findings.  
23 **A. The studies --**  
24 Q. For the record.  
25 **A. -- do not forecast future movement, though**

1 **pumping the aquifer to levels below historical**  
2 **levels would certainly accelerate movement**  
3 **towards the pumping source.**  
4 Q. So in other words, in your conclusion, you don't  
5 use the word possibly, do you? You use the word  
6 certainly, don't you?  
7 **A. That's correct.**  
8 Q. So as far as your conclusions go, you're saying  
9 with a degree of certainty here that if we lower  
10 below the minimum index levels, chloride  
11 movement will be accelerated, correct?  
12 **A. That's correct.**  
13 Q. I want you now to flip to the second page of  
14 your report when we're talking about the topic  
15 of chloride movement. In the third full  
16 paragraph, the paragraph that starts with the  
17 larger font that says U.S. Geological Survey, in  
18 the third line from the bottom, there's a  
19 sentence that reads, there's no forecast as to  
20 whether the chloride plume will move in a  
21 different direction nor if that movement would  
22 be accelerated. Is what you're referring to by  
23 that sentence the fact that the City did not  
24 forecast chloride movement and did not analyze  
25 that particular subject at all?

1 **A. That would be what I was talking about was that**  
2 **it did not appear that there was any forecast**  
3 **that -- or prediction of what direction it would**  
4 **move or -- or what gradient it would move at.**  
5 Q. So in other words, once again, you're saying  
6 with a degree of certainty here that the City's  
7 proposal would accelerate the movement of the  
8 chloride in the aquifer and the contaminants in  
9 the aquifer, but on the other hand, the City  
10 didn't model this at all. Is that a correct  
11 statement?  
12 **A. I'm not -- I'm not sure that they didn't model**  
13 **it at all 'cause as I've said MODFLOW can look**  
14 **at contaminants, but I'm not aware of their**  
15 **modeling of that --**  
16 Q. In other words, as you read through their  
17 proposal and you looked at the inputs in their  
18 modeling and things of that nature, you didn't  
19 see anywhere where they had addressed chloride  
20 movement or addressed contaminants and how their  
21 proposal would impact those contaminants, you  
22 didn't see it addressed, correct?  
23 **A. No, I didn't see it addressed.**  
24 Q. Again, based on your 30 years of experience  
25 working for DWR, do you think that's something

1 that the City could have modeled?  
2 **A. It -- it seems like to me it should be**  
3 **something, and I only state that from the**  
4 **standpoint that their own -- their own**  
5 **justification for looking at recharge and -- and**  
6 **pumping from a different source was -- was to**  
7 **slow down and prevent the salt plume from**  
8 **contaminating their own wells. So it would seem**  
9 **like that if you're going to change your process**  
10 **that you -- you still want to look at that**  
11 **primary issue to you, that is the potential for**  
12 **chloride contamination of the wells which you**  
13 **use.**  
14 Q. I want to also expand upon that point. Is it  
15 true, am I -- am I correct in my limited  
16 knowledge of water law and hydrogeology, or  
17 whatever the terminology would be, that it's  
18 possible for a contaminant such as arsenic to be  
19 locked in the clay layers, is that a  
20 possibility?  
21 **A. Yes, it -- it has happened.**  
22 Q. So in other words, is it also possible that if  
23 we lower the water level below the current  
24 minimum index level, is it possible that some of  
25 those arsenics and some of those other

Page 3207

1 contaminants would be released out of those clay  
 2 layers and into the aquifer, is that possible?  
 3 **A. I -- I think the reason why it's locked in the**  
 4 **clay layers is -- is a chemical situation, so**  
 5 **I'm not sure dewatering them would necessarily**  
 6 **cause them to move out of that clay. They're --**  
 7 **they're somewhat concentrated as a natural**  
 8 **process, and I'm not specifically sure that --**  
 9 **whether the water involved would leach it out**  
 10 **or -- or leave it in place. So the fact that**  
 11 **it's combined with clay, it would tend to -- I**  
 12 **would say it would tend to be fairly stable**  
 13 **location, but a geologist might tell you**  
 14 **differently.**  
 15 Q. Well, let me ask you this: I mean, arsenic, if  
 16 it leaches into our water supply, you know,  
 17 that's even a greater concern than having, in  
 18 some ways, than having salty water? I  
 19 understand that salty water will kill crops and  
 20 that's a big concern, I'm not minimizing it, but  
 21 having arsenic leach into our water supply, I  
 22 mean, that's something that could be life or  
 23 death as we actually consume the water as  
 24 humans; is that right?  
 25 **A. It -- it could because arsenic tends to be a**

Page 3208

1 **poison that you accumulate over time, you don't**  
 2 **just flush it out of your system. So it can**  
 3 **build into a problem.**  
 4 Q. And so let me ask you this: There -- there's  
 5 arsenics known to be locked in the clays of the  
 6 Equus Beds Aquifer, correct?  
 7 **A. Yes.**  
 8 Q. I don't think anyone expect -- expected you to  
 9 have the burden of proof as to whether or not  
 10 these arsenics would be released -- sorry about  
 11 the feedback. There we go. I don't think  
 12 anyone expected you to analyze whether or not  
 13 these -- these arsenics would be released, but  
 14 is it a true statement that the City of Wichita  
 15 didn't do that analysis or research as it  
 16 relates to their proposal?  
 17 **A. I don't see any reference to arsenic at all in**  
 18 **their proposal.**  
 19 Q. And, in fact, there's no reference to any other  
 20 contaminants in their proposal beyond what I've  
 21 already mentioned, chlorides and arsenic. Is  
 22 that a true statement?  
 23 **A. Yes.**  
 24 Q. And so given that some of these contaminants  
 25 such as arsenic could be -- have a drastic

Page 3209

1 impact on our public health, in all your  
 2 experience having worked for the Division of  
 3 Water Resources, do you think that's  
 4 something -- those water quality issues and  
 5 those water quality metrics are something the  
 6 City of Wichita should look into as they're  
 7 impacted by the City's proposal?  
 8 **A. I think that would have to be examined to see**  
 9 **what those effects could be. It, of course,**  
 10 **depends on location and -- and some things like**  
 11 **that, but, yes, it should at least be looked at**  
 12 **to see if they -- their new operation or their**  
 13 **operation affects that movement of that**  
 14 **contaminant.**  
 15 **MR. STUCKY:** No further questions.  
 16 **PRESIDING OFFICER:** Thank you.  
 17 Ms. Wendling.  
 18 **MS. WENDLING:** I have no further  
 19 questions.  
 20 **PRESIDING OFFICER:** Okay. Are there  
 21 any further questions for Mr. Austin while  
 22 he is testifying?  
 23 **MR. MCLEOD:** I have a couple  
 24 follow-up questions I would like to ask  
 25 him.

Page 3210

1 **MR. STUCKY:** Just very quickly for  
 2 the record, because Ms. Wendling -- this is  
 3 Ms. Wendling's witness and she didn't do  
 4 any further direct of this witness, any  
 5 redirect of this witness, are we allowing  
 6 for further cross? And I guess I'm just  
 7 going to object to further cross on that  
 8 basis and lodge an objection in that  
 9 regard.  
 10 **PRESIDING OFFICER:** That's a fair  
 11 question, and I don't think with any of our  
 12 witnesses we've quite had this sequence of  
 13 events. But, again, in the interest of a  
 14 full record and what may be helpful to me,  
 15 then I will allow Mr. McLeod to proceed in  
 16 a reasonable vein. So -- and, Mr. McLeod,  
 17 it's also a little hard to hear you, so  
 18 please keep that in mind.  
 19 **MR. MCLEOD:** Thank you.  
 20  
 21 CROSS-EXAMINATION (Cont.)  
 22 **BY MR. MCLEOD:**  
 23 Q. Mr. Austin, in -- in terms of the City pumping  
 24 out large quantities of credits that would  
 25 affect minimum desirable streamflow potentially,

1 I think there was some -- some reference by  
2 counsel to there being an 18,000 acre-foot limit  
3 on annual withdrawal of credits under the  
4 current permits, which would still be the annual  
5 limit on withdrawal under the new permit. And  
6 did you understand that to be the case from  
7 hearing testimony of prior witnesses in this  
8 matter?  
9 **A. I understood that that limitation existed in**  
10 **either case.**  
11 Q. And if that were a concern for minimum desirable  
12 streamflow, should that not have been a concern  
13 investigated by DWR in the permitting process  
14 for ASR I and II?  
15 **A. Well, as I stated, it is not a concern to me**  
16 **that the existing index level, I think that**  
17 **index level tended to address the issue of**  
18 **excessive diversions, but if the -- the new**  
19 **proposal would mean that the 18,000 would be**  
20 **drawn even below the existing index level, then**  
21 **I think it does have a poten -- a much greater**  
22 **potential for affecting MDS.**  
23 Q. And so I want to follow up, then, with this  
24 question: Do you understand, Mr. Austin, that  
25 the 1993 index level only applies as a limit to

1 **still sitting in there.**  
2 **MR. MCLEOD:** I don't have further  
3 questions.  
4 **PRESIDING OFFICER:** Any other  
5 follow-ups?  
6 **MR. STUCKY:** No, none for the  
7 District.  
8 **PRESIDING OFFICER:** Hearing none,  
9 Mr. Austin, thank you, and you are excused.  
10 **A. Thank you, Your Honor.**  
11 **PRESIDING OFFICER:** And,  
12 Ms. Wendling, your next witness?  
13 **MS. WENDLING:** We call Richard  
14 Basore.  
15 **PRESIDING OFFICER:** We'll go off the  
16 record for just a moment.  
17 (Discussion held off the record.)  
18 **PRESIDING OFFICER:** Okay. We are  
19 back on the record and, Ms. Wendling -- oh,  
20 I think we need to swear in our new  
21 witness.  
22  
23 RICHARD BASORE,  
24 having been first duly sworn, was  
25 examined and testified as follows:

1 withdrawal of credits, that is that the City  
2 could withdraw its 40,000 acre-feet year after  
3 year after year, and if it went below that 1993  
4 index level, there would be no trigger that  
5 would stop the City from exercising its native  
6 rights below that level?  
7 **A. I understand that the index level was -- was set**  
8 **as being the floor of where the credits could be**  
9 **applied, and that -- that the proposal of**  
10 **lowering that flow, you would have much greater**  
11 **index -- a much lower index level that would**  
12 **affect MDS and also would allow the pumping of**  
13 **credits. What you do with your native right, I**  
14 **think that's between you and the Division of**  
15 **Water Resources and other water users in the**  
16 **Equus Beds.**  
17 Q. I guess what I'm getting at, Mr. Austin, is if  
18 pumping below the 1993 index level would  
19 adversely affect minimum desirable streamflow,  
20 isn't that true already under the City's  
21 40,000 dollar (sic) acre-feet native right  
22 permit?  
23 **A. I presume so. I also don't know whether at some**  
24 **point that would trigger MDS administration by**  
25 **the Division of Water Resources, 'cause that's**

1 **DIRECT EXAMINATION**  
2 **BY MS. WENDLING:**  
3 Q. All right. Will you state your name for the  
4 record?  
5 **A. Richard Basore, that's B-A-S-O-R-E.**  
6 Q. And I'll direct you to the Intervenors'  
7 notebook, tab 26.  
8 **A. I'm sorry, which --**  
9 Q. That one you have your hand on. Yep.  
10 **A. Okay. Did you say 26?**  
11 Q. Yeah, should be the very last document.  
12 **A. Okay. Yes.**  
13 Q. All right. And will you tell us what that  
14 document is?  
15 **A. Pardon?**  
16 Q. Can you tell us what that document is?  
17 **A. It is a resume of myself.**  
18 Q. Okay. Will you go ahead and tell us a little  
19 bit about your background and work experience?  
20 **A. Sure.**  
21 (Discussion held off the record.)  
22 **A. Yes, that is essentially my resume. I am a**  
23 **lifetime resident of the Equus Beds, fourth**  
24 **generation living in the Equus Beds, if you**  
25 **will. Been around water issues my entire life,**

Page 3215

1 'cause living three-quarters of a mile from the  
 2 river that floods on occasion, you grow up  
 3 understanding that water is a part of your life  
 4 for good and sometimes for not so much good.  
 5 Was a full-time farmer, rancher, and  
 6 irrigator after I finished college for -- well,  
 7 1967 to 1992. I own four water rights for  
 8 irrigation, the first one from about 1977, and  
 9 we currently utilize five pivots. Currently  
 10 have three domestic wells and two livestock  
 11 wells, or two of them are livestock.  
 12 Served on the county conservation district  
 13 as a board member, I've been on and off of the  
 14 Eagle Drainage District board, which is a --  
 15 well, today would be considered a storm water  
 16 utility, but when it was created in 1950 was a  
 17 drainage district. It covers 30,000 acres in  
 18 northwest Sedgwick County, into Reno and Harvey  
 19 County, and we have about 19 mile of river levy  
 20 and currently serve as chairman of that again.  
 21 Been a longtime member of the Wichita  
 22 Chamber of Commerce water resources, now  
 23 environmental resources committee, and actually  
 24 am probably the longest serving member on that  
 25 committee. Involved with Wichita State's

Page 3216

1 Economic Development & Research Center for a  
 2 long, long time, since 1986. Served on various  
 3 local boards of -- of Farm Bureau Wheat Growers  
 4 Co-Ops, et cetera.  
 5 I'm a past member of the Old Cowtown Museum  
 6 board in Wichita where I served for ten years  
 7 and a couple years as chairman of it. And I'm  
 8 probably the lead person that was responsible  
 9 for them getting ahold of the old Bentley wooden  
 10 grain elevator before it was demolished by the  
 11 railroad and getting it moved to Cowtown and  
 12 reconstructed to where it's the -- people can  
 13 understand the only working, vintage, wooden  
 14 grain elevator in a museum setting in the United  
 15 States, where you can actually see grain loaded  
 16 and unloaded as it was back in the day.  
 17 Was a member of the initial class of  
 18 Wichita Chamber of Commerce Leadership Wichita  
 19 Program, I was Leadership Kansas, 1985, and am a  
 20 35-year member of the Downtown Rotary Club.  
 21 And after a career of farming and ranching,  
 22 I moved on. Had kids ready for college and a  
 23 father whose health was beginning to  
 24 deteriorate, so took a job with Intrust Bank in  
 25 Wichita as assistant vice-president in the trust

Page 3217

1 department and was responsible for all of the  
 2 management activities related to all the real  
 3 estate properties held in all the trust accounts  
 4 that the bank was trustee for, which meant we  
 5 had hundreds of houses, we had people who had  
 6 their granddad's farm in Sumner County, I dealt  
 7 with little shotgun houses in very bad  
 8 neighborhoods, I dealt with empty cemetery lots,  
 9 I dealt with 35,000-acre ranches in Oklahoma,  
 10 million dollar houses, was responsible for all  
 11 of the farm leasing and oil and mineral and gas  
 12 leasing on all rural properties, negotiation of  
 13 those terms, had commercial properties, ended up  
 14 having to do -- there was an incident in  
 15 California in the early '90s where the Bank of  
 16 America got stuck with, like, a million dollar  
 17 cleanup bill from the EPA because they were a  
 18 long-term trustee on a ranch that turned out to  
 19 have a very specific pollution problem. And  
 20 that went through the financial world, and so  
 21 they backed off and said we're not taking --  
 22 banks everywhere refused to take any properties  
 23 in trust without a Phase I environmental  
 24 investigation.  
 25 And that became one of my duties was to

Page 3218

1 investigate any property that was coming into  
 2 trust to see if it had environmental risks that  
 3 were not acceptable. As a result of that same  
 4 thing, we reviewed all the trust accounts that  
 5 existed, and I found myself dealing with  
 6 abandoned gas stations, with dry cleaners, with  
 7 industrial properties that had various aspects  
 8 to them.  
 9 At the same time, the downtown area had  
 10 suffered economically very bad because of the  
 11 flight to the suburbs of downtown businesses, of  
 12 professional people, lawyers, doctors,  
 13 accountants and everybody had moved to the big  
 14 shopping centers, they had moved out on Rock  
 15 Road, and downtown real estate was in very dire  
 16 straits. And then the financial institutions  
 17 looked around and said, we're not doing any  
 18 mortgages, any loans, you can't buy land in  
 19 downtown Wichita, we're not going to loan you  
 20 money to do real estate improvement, and it  
 21 killed the real estate market.  
 22 The City, with some vision, looked at that  
 23 and said, all right, here's the deal. They were  
 24 dealing with the Gilbert and Mosley downtown  
 25 pollution plume, mainly attributable to the

1 Coleman Company and several other associated  
2 industrial users, and that if you could  
3 demonstrate that the property that you held was  
4 not a potential responsible party, the City  
5 would issue a certificate of release from the  
6 liability for that cleanup, and the banks and  
7 financial institutions agreed that if you had a  
8 certificate of release, they would then make the  
9 property eligible for mortgages, loans, and  
10 improvements.

11 And so a part of my job at the bank was I  
12 had to investigate, do Phase I investigations  
13 and demonstrate the properties were not a  
14 potential party. And I think I did that on 35  
15 different properties and got certificates of  
16 release and went through the work on several  
17 more properties that ended up not being eligible  
18 for a certificate of release.

19 So I was dealing with the downtown plume  
20 and having to understand how all that stuff  
21 works, having already had an understanding  
22 somewhat from growing up over the Equus Beds and  
23 understanding the strata, going to the sandpit  
24 as a kid, and you can look at the shear wall on  
25 the sandpit and you were looking at a cross

1 sources do not have permits, for the most part.  
2 Exceptions to that is construction storm water  
3 activities have to have a permit, and usually  
4 your on-site septic systems and private water  
5 wells need a permit from the county level. So I  
6 dealt in that world. A lot of it was education,  
7 a lot of it was outreach since I didn't have the  
8 power of regulation to entice people to be doing  
9 the right thing.

10 I ended up doing a wide variety of work.  
11 When I first took the job, I had 64 counties in  
12 the state; the south half of the state was my  
13 territory. That later changed when we hired  
14 some additional people, and I ended up with 26  
15 counties in south central and southeast Kansas.  
16 I had the lower half of the Ark River basin, I  
17 had all the Walnut, all the Verdigris, and the  
18 lower half of Neosho. So from south central  
19 Kansas to the Missouri line, I was responsible  
20 for dealing with all the county codes, dealing  
21 with storm water construction complaints, and  
22 anything else that came my way.

23 I was a bit of a generalist, and as a  
24 result of that, I had a friend in California a  
25 number of years ago who asked me what I really

1 section of the soil, and when you look at the  
2 water, you knew you were looking at the top of  
3 the groundwater, the Equus Beds. So I was  
4 familiar with that.

5 I did that for ten years, and then I moved  
6 on to Kansas Department of Health and  
7 Environment where I was assigned a role  
8 specifically to look at nonpoint source water  
9 pollution, and in the world of water pollution,  
10 or even air pollution, there's two kinds,  
11 there's point source, meaning you can go  
12 actually point to the pipe it's coming out of,  
13 out of a factory, out of a city sewer plant, out  
14 of a feedlot. But the world of nonpoint source  
15 is what's generated -- this pollution that's  
16 generated all around us in our everyday  
17 activities, fertilizer running off a farm field,  
18 fertilizer running off your yard, leaking septic  
19 systems, construction storm water, dirt  
20 sediment, if you will.

21 And so I was tasked in working in that  
22 world of nonpoint source, which point sources of  
23 pollution have to have a permit from the State  
24 or the EPA, and it regulates how much they can  
25 release in the form of pollutants. Nonpoint

1 did, and I said, I guess I'm the guy at the end  
2 of the hall, because they would come in with a  
3 question or a complaint or an issue, and the  
4 district administrator would look at it and say,  
5 well, it really doesn't quite fit public water  
6 wastewater, doesn't really quite fit confined  
7 animal feeding, it doesn't really quite fit  
8 solid waste, it doesn't really quite fit the  
9 environmental remediation and spills, it's got  
10 several different aspects; and my office was the  
11 end of the hall, I was the last one they'd get  
12 to, and they'd say, Basore, can you figure this  
13 out? So ask me what I did, it's whatever they  
14 handed me is what I did.

15 I ended up working with EPA, with the Corps  
16 of Engineers, with extension service, with DWR.  
17 I had a good relationship with the DWR district  
18 engineer out of the Stafford office, and we  
19 worked together often on dredge and fill  
20 permits, on complaints on drainage issues and  
21 that sort of thing. Worked a lot with  
22 conservation districts, with the water office.

23 I was tasked with working with county  
24 sanitary codes and private water wells and  
25 having to understand the influence of one upon

Page 3223

1 the other. And one of the things you learn in  
 2 there is that people in the country are  
 3 basically on a septic system. 25 percent of  
 4 Kansans live and exist with a private well and a  
 5 private septic system. In southeast Kansas,  
 6 they tend to be lagoons because the clay is so  
 7 heavy that it will not let water percolate.  
 8 And a septic system works on the principle  
 9 that the effluent coming out of the septic tank  
 10 goes out into lateral lines with holes in them,  
 11 and that water then percolates down through the  
 12 soil, and the air spaces in the soil hold  
 13 aerobic bacteria and other protozoa and all  
 14 sorts of biota in there that will break down the  
 15 organic matter into its basic nitrogen,  
 16 phosphorous, make it available to the plant  
 17 roots, but they will also kill the pathogens.  
 18 And so if you have a good 3-foot layer of soil  
 19 under your lateral lines at the time the water  
 20 has percolated through it, given some time, some  
 21 hang time in there, the water coming out the  
 22 bottom is really fairly acceptable. You  
 23 wouldn't drink it, but it's been purified a  
 24 great deal, and if you're above the water table,  
 25 the water then goes back into the water table.

Page 3224

1 The national association for companies and  
 2 people involved with -- with septic systems,  
 3 it's called the National On-Site Recycle  
 4 Association, because in point of fact water  
 5 coming out of a septic tank gets recycled. So  
 6 when you flush a toilet out here somewhere in  
 7 the Equus Beds, it's going in the septic system,  
 8 it's going to end up back in the Equus Beds;  
 9 when you flush a toilet in Wichita, it goes to a  
 10 sewer plant, goes into the river, and it heads  
 11 for Oklahoma. So it is being recycled. And so  
 12 I did a lot of work and training in that.  
 13 I did soil profile work. You dig a trench  
 14 5 feet deep and you get in there and you look at  
 15 the layer cake of the soil, and you figure out  
 16 what is the most restrictive layer to  
 17 percolation; and that could be a clay lens, it  
 18 could be caliche, it could be changes in the  
 19 absorptive rate of the different levels of  
 20 material and strata. In my own personal case,  
 21 living down here three-quarters of a mile from  
 22 the river, it's a high water table is my  
 23 restrictive layer because it's hard to always  
 24 guarantee 3 feet of separation from the top of  
 25 the groundwater.

Page 3225

1 So in those cases where there is a problem,  
 2 there are some much more expensive,  
 3 sophisticated, enhanced wastewater treatment  
 4 systems that can be utilized. In my case, we  
 5 went on top of the ground, put chambers on  
 6 there, covered them up with dirt, and I have a  
 7 pump tank that pumps the effluent up out of the  
 8 septic tank and distributes it at ground level,  
 9 which then gives you a chance to have that  
 10 3 feet of separation before you hit the high  
 11 water table. So I did a lot of education in  
 12 that way.  
 13 Taught classes in it, I responded a lot to  
 14 complaints on spills. I was the first  
 15 inspector, if you will, for KDHE on site at the  
 16 big Barton Solvent plant in Valley Center ten  
 17 years ago or so when it exploded into fire. And  
 18 it was one of those multifaceted things that  
 19 they evacuated part of the town because of air  
 20 quality, the runoff from all of the firefighting  
 21 and the chemicals they used ran off into the  
 22 City sewer treatment plant, put it out of kilter  
 23 and knocked it offline and then ran into Little  
 24 Arkansas River and everybody was worrying about  
 25 a fish kill. So I ended up out there, and it

Page 3226

1 had to do with air quality, it had to do with  
 2 the municipal sewer system, and it had to do  
 3 with the, you know, fish kill in the river. So,  
 4 again, one of those multifaceted things that  
 5 you -- you learn to deal with.  
 6 I dealt with train wrecks, trash truck  
 7 wrecks, fertilizer spills, drainage complaints  
 8 coming in from DWR where one of the tenets  
 9 underlying Kansas water law tends to be that you  
 10 can't withhold water from a neighbor who wants  
 11 it and may need it to water livestock, or  
 12 something, but you can't also change your land  
 13 surface around to where you're flooding your  
 14 neighbor downstream with water that he doesn't  
 15 want. So those issues we kind of had to deal  
 16 with.  
 17 In 2011, I was the lead inspector sampler,  
 18 if you will, for the harmful blue-green algae  
 19 blooms that were occurring in area lakes and  
 20 reservoirs. We started inspecting in first of  
 21 April, and we weren't through till October due  
 22 to the drought conditions. And I probably  
 23 inspected Cheney Lake a dozen times, 15, 20  
 24 times. Every Monday we were on the road  
 25 inspecting any number of locations and then

1 advising folks on the safety and the problems  
2 that were occurring in the stream or in the lake  
3 regarding those algae blooms. And the problem,  
4 of course, is the blue-green algae -- there's  
5 lots of algae that occur in everything. A city  
6 wastewater lagoon is supposed to be green  
7 because it has good algae in it to digest all  
8 sewage material, but the blue-green stuff that  
9 looks like the old Bell telephone trucks or the  
10 bottom half of your grade school hallway wall,  
11 that sagey green, it smells bad, looks bad, and  
12 is bad because that algae produces a neurotoxin,  
13 and it will make you sick and it will kill your  
14 dog in about ten minutes. So when they post a  
15 lake for algae to stay out of it, they mean what  
16 they say.

17 I did a lot of inspection on construction  
18 storm water, everything from single houses to  
19 large housing developments, from Wal-Marts to I  
20 was the environmental inspector on the south  
21 half of the Keystone Pipeline when it was built  
22 through Kansas, and I inspected from Marion  
23 County to the Oklahoma line two or three times.  
24 And I can't tell you how it's operated, but I  
25 can tell you it was built with every possible

1 consideration for protecting the environment,  
2 which was interesting because technically under  
3 the Clean Water Act, petroleum and agriculture  
4 has an exclusion, and since this is a petroleum  
5 type thing and they technically didn't have to  
6 have an EPA or a state construction storm water  
7 permit, but they went over and above, literally,  
8 every requirement that they would have had if  
9 they had to have a permit. They bored under  
10 every wetlands, under every road, railroad,  
11 creek, and -- and had two wildlife specialists  
12 on the job every day on top of their  
13 environmental people. So I got to see and do a  
14 lot of interesting things.

15 I was a -- was not the lead inspector but I  
16 was -- helped out the district water engineer.  
17 And the Wichita district had nine counties; even  
18 though my territory was 26, it included the nine  
19 of the Wichita district office, and I often  
20 helped out the lead water engineer in the  
21 Wichita office doing his inspections on public  
22 water treatment plants, public sewage treatment  
23 plants, industrial storm water permit holders,  
24 so helped him inspect, you know, concrete  
25 plants, sewer -- sewer plants, water plants,

1 including helped him inspect Cheney Lake when  
2 the City of Wichita put in their ozone treatment  
3 plant out there to clean up the taste and odor  
4 issues they were getting from Cheney Lake to  
5 make the water more palatable. It was not a  
6 health or safety issue, strictly an aesthetic  
7 one.  
8 Helped him do the -- a couple of different  
9 inspections on the ASR treatment plant when it  
10 was under construction and put into operation.  
11 I performed the construction storm water  
12 inspection permit on the river intake for the  
13 ASR plant near Sedgwick. So did a lot of that.  
14 I was also very involved with what is  
15 called WRAPS, the Watershed Restoration and  
16 Protection Strategies, through KDHE, which these  
17 are generally locally generated interests by  
18 people wanting to clean up their watershed and  
19 remove pollutants and diminish pollutants in it,  
20 and mainly it's sediment. The biggest sediment  
21 in the United -- the biggest pollutant in the  
22 United States in watercourses is sediment. It's  
23 not a health and safety issue, but it is a water  
24 quality issue nonetheless, and there are cities  
25 and towns who have -- their public water supply

1 intakes are on streams and lakes and they have  
2 to spend a lot of money removing sediment  
3 sometimes in order to get potable water.  
4 And so worked with up to 30 of those over  
5 the years. One of them that I worked with  
6 considerable was the Little Ark WRAPS, which is  
7 in Harvey County and a little bit into Marion  
8 County north of Wichita. Was put together by  
9 locals. It is, in fact, partly -- it receives  
10 some subsidy money from the City of Wichita  
11 because one of its objectives early on and  
12 always has been is the removal or diminution of  
13 the use of atrazine that shows up in the water  
14 column of the Little River at the water intake  
15 site for the ASR. And this improves the ASR's  
16 ability to put potable water back into the  
17 aquifer when they -- when they are activating  
18 and using the ASR facility.  
19 So -- and in working with that, I was also  
20 serving on the city-county technical advisory  
21 committee to rewrite local construction storm  
22 water permit ordinances, and that morphed into  
23 them creating a -- basically a city technical  
24 advisory committee for storm water advisory  
25 board it's called, and I was appointed to that

Page 3231

1 and served on it until my retirement and was one  
 2 of the leaders in getting the K-State extension  
 3 people who run the WRAPS, one of the  
 4 facilitators for the WRAPS project involved to  
 5 where the City saw their way clear to set up a  
 6 new program, an innovative one where people in  
 7 town, say you're doing an acre and a half  
 8 QuikTrip and it's going to be all hard surface  
 9 runoff. Well, you have to have a storm water  
 10 permit and you have to control any sediment that  
 11 might come off of there, and even though it's  
 12 not raw dirt, there were vehicles tracking in  
 13 various pollutants, including dirt and stuff,  
 14 and you may have to put in what's called a  
 15 hydrodynamic separator, which is a great big  
 16 swirl chamber that all the storm water runs  
 17 into, and the solid matter is supposed to kick  
 18 out.  
 19 And it may cost you 25 to \$45,000 to do it  
 20 and you have to maintain it every year. For a  
 21 much lower amount than that, people can  
 22 contribute to this storm water fund in the City,  
 23 get a pass, if you will, in not having to buy  
 24 and install that sort of thing, but they  
 25 generate money that then goes up into the

Page 3232

1 watershed and supports the farmers installing  
 2 conservation practices that reduce sediment load  
 3 in the river. And the load -- the bang you get  
 4 is about two to one for your buck; you can  
 5 reduce two tons of sediment out in the watershed  
 6 over doing one ton in the city. So that's one  
 7 of the things that I helped work on there as  
 8 well.  
 9 Q. Well, I think that we've got a pretty good  
 10 idea of --  
 11 A. I'm sorry.  
 12 Q. -- the vast amount of your experience.  
 13 A. You took the lid off, I apologize.  
 14 Q. That's okay. I'm going to have you now switch  
 15 to tab number 1 in the same binder, and if you  
 16 flip to the third page of -- under tab 1?  
 17 A. You say the first page?  
 18 Q. The third?  
 19 A. Third. All right.  
 20 Q. Still under the first tab, though. Just stick  
 21 with tab 1 and you'll see the first page is a  
 22 map.  
 23 A. Yes.  
 24 Q. All right. Now flip back a couple pages to  
 25 you'll see a map with your name on it.

Page 3233

1 A. So the Intervenor's wells in the ASR basin, is  
 2 that the map?  
 3 Q. Correct.  
 4 A. Okay.  
 5 Q. Can you tell us, you mentioned that you have  
 6 multiple water permits but tell us a little bit  
 7 more about how you rely on the Equus Beds.  
 8 A. Well, rely on the Equus Beds for water, I have  
 9 my entire life. Currently, I have four water  
 10 permits that encompass three wells and operate  
 11 five pivots. My first water right, I think was  
 12 in 1977. And a couple more were added about  
 13 1980 or so. So those are definitely reliable.  
 14 I have a -- my domestic well at my house, I have  
 15 a domestic well in my shop, I have two livestock  
 16 wells, one for the barn lots and one for holding  
 17 pens up at the edge of the pasture. So they are  
 18 critical.  
 19 As a young person, before we started doing  
 20 groundwater pits in the pasture because of the  
 21 water table would let us do it for watering  
 22 cattle, we kept eight windmills going with sand  
 23 points and probably had seven or eight -- we had  
 24 some tenant houses that we rented, plus my  
 25 folks' house, my house, and my grandparents'

Page 3234

1 house and several others that were all on sand  
 2 points. Some were on pitcher pumps and some  
 3 were not. So every year was major maintenance  
 4 on windmills throughout. So I understand water.  
 5 One of the things that we'll talk about  
 6 later is salt intrusion, but my history is that  
 7 in dealing with windmills, the ones close to the  
 8 river always had saltier water, you could taste  
 9 it, as the ones further away, and as time has  
 10 passed, the ones further away have gotten salty  
 11 as well, which tells me the -- the river  
 12 influence of the salt front keeps moving towards  
 13 the well field.  
 14 Q. So if we look at the map on the page -- okay.  
 15 So looking at this map, does this reflect  
 16 generally the location of your wells?  
 17 A. Yes, you can see down in there --  
 18 (Reporter requests clarification  
 19 of the witness.)  
 20 A. Okay? So it's on when it says mute.  
 21 Yes, as you can see, those are my water  
 22 permit numbers there in the lower left-hand  
 23 corner with the arrows pointing to the location  
 24 of where those wells are actually located.  
 25 BY MS. WENDLING:

1 Q. And is this the Arkansas River that we see in  
2 the lower --  
3 **A. Yes, the small blue squiggly line is the Big**  
4 **Arkansas River.**

5 Q. So from an approximate distance, how close are  
6 you to the river?

7 (Reporter requests clarification  
8 of the witness.)

9 **A. Now can you hear me? Okay.**

10 **My water wells are -- three of them are --**  
11 **one is maybe two-thirds of a mile, one is**  
12 **three-fourths of a mile, my house is about**  
13 **three-fourths of a mile, and the one up in**  
14 **square number 32 is probably a mile and a half**  
15 **from the river.**

16 **BY MS. WENDLING:**

17 Q. So in addition to your permit, you also have a  
18 domestic well?

19 **A. I have a domestic well at my house, it's**  
20 **205 feet deep. My folks' house, I've -- I moved**  
21 **a house in in 1968 when I was getting married,**  
22 **bought a house from a neighbor and moved it half**  
23 **a mile and have lived there ever since, which is**  
24 **one-eighth of a mile from my folks' house where**  
25 **I grew up.**

1 **So I've always been on the -- the corner of**  
2 **that quarter section, and, of course, we had a**  
3 **sand point well at my folks' house for a**  
4 **domestic well, I put one down in 1968. About**  
5 **1980, we decided the water quality was so bad we**  
6 **needed to do something better, so we -- we**  
7 **winched it and then drilled a 33-foot, I think**  
8 **it is, well in the back yard. Water was better**  
9 **but still wasn't great, and so in 19 -- I**  
10 **believe it's 1989, we drilled a 205-foot well in**  
11 **the front yard because experience by then had**  
12 **shown on irrigation wells that the deeper you**  
13 **went, the better the odds were for getting**  
14 **better water quality. Even though that seems**  
15 **counterintuitive and -- and from Mr. Austin's**  
16 **testimony and others that the deeper water tends**  
17 **to be saltier, in our case next to the river,**  
18 **the shallow wells tend to be higher in salt**  
19 **content than the deeper ones for -- I'm not**  
20 **enough of a scientist to tell you why, whether**  
21 **it's clay layers and perched water tables or**  
22 **what's going on, but that's a fact.**

23 **So we ended up, you know, paying a fair**  
24 **amount of money deepening and changing water**  
25 **wells domestically. So I have -- still have a**

1 **happen.**

2 **I think with a shovel, I could still find**  
3 **that collar in the front yard if I dug but --**  
4 **and that was an interesting process 'cause as a**  
5 **12 year old, I had a construction company in my**  
6 **front yard every morning during the summer, and**  
7 **being pre-OSHA went out and road on the**  
8 **Caterpillars with the guys and I could ride my**  
9 **24-inch bike through the pipe sections upright**  
10 **without bumping my head. And probably know more**  
11 **about the actual installation and construction**  
12 **of the pipeline and the surge tank west of**  
13 **Bentley than anybody working for the water**  
14 **department in the last 30 years 'cause I was**  
15 **there when it happened. Anyway ...**

16 Q. Do you recall the process of obtaining your  
17 water permits?

18 **A. Okay. Yes. For three of the permits, I filed**  
19 **with -- whatever was the applicable documents in**  
20 **1977 and 1980, which I presume that I had to**  
21 **show a deed to show I had ownership of the land,**  
22 **and then whatever the documents were that were**  
23 **required through Groundwater Management**  
24 **District 2 and/or Division of Water Resources.**  
25 **The third permit I inherited from my father and**

Page 3239

1 was already established.  
 2 Q. Do you know how the quantity of water was  
 3 determined?  
 4 A. Yes, I think they -- they vary with the permits.  
 5 If you'll give me a second, I may be able to  
 6 release the data on that. All right. Okay. On  
 7 30556, the well's 160 feet deep, and I believe  
 8 it's 136 acre-feet of quality water. 26935 and  
 9 28771 are basically two water rights that apply  
 10 to the same well, and that's 130 acre-feet  
 11 authorized. And the other one is authorized to  
 12 cover 170 acres instead of 135 because there are  
 13 two smaller adjunct pivots tied to it and so it  
 14 has a 240 acre-foot authorized amount.  
 15 Q. So the quantity, the authorized quantity is  
 16 based on the acreage, or is it also based on  
 17 something else?  
 18 A. It's based on the acreage, and as I recall, DWR  
 19 allows you, I could be wrong, but I think it  
 20 was, like, 1 1/2 acre-foot per actual land acre  
 21 of appropriated rights.  
 22 Q. Okay. And does the appropriation depend on the  
 23 use, your use of the water?  
 24 A. Yes. You know, your -- yes, your -- you have to  
 25 put down a point of withdrawal and a place of

Page 3240

1 use on all water permits, and the amount that is  
 2 quantified through DWR is based on what the  
 3 purpose and use of the water is being  
 4 appropriated for, what beneficial use. If  
 5 you're doing a well for livestock, it's going to  
 6 be calculated entirely differently than if  
 7 you're doing it to irrigate ground that may be  
 8 growing corn.  
 9 Q. And do you know the process if you wanted to  
 10 change the use, say you wanted to go from  
 11 irrigation to livestock?  
 12 A. I know there is a process. I would apply to DWR  
 13 to start with to find out what the local  
 14 regulations and controls might be, but  
 15 ultimately, I think it falls to DWR to  
 16 determine. And I know some of the transitions,  
 17 I think, if you go from agriculture to, like,  
 18 municipal or industrial that you lose part of  
 19 that appropriated water right. You can't  
 20 transfer it acre-foot for acre-foot to a totally  
 21 different use in some cases without a penalty.  
 22 Q. And is your authorized quantity a quantity that  
 23 would be adequate during an eight-year drought?  
 24 A. We hope so. That's one of those questions that  
 25 we haven't really been irrigating in an

Page 3241

1 eight-year drought out here in the Equus Beds,  
 2 an eight or ten year. We've had two or three  
 3 pretty bad years in a row, but we haven't had  
 4 that extended experience to know.  
 5 And they're implications there that  
 6 presuming it's an eight-year drought that  
 7 everybody, every water user, irrigator,  
 8 municipality, including Wichita, industrial  
 9 people, would be utilizing their full water  
 10 rights, which would, you know, diminish the  
 11 ability of water in the Equus Beds to be there  
 12 for everybody.  
 13 It could impact water quality because of  
 14 the drawdown, and your efficiency may not be  
 15 great. For instance, in 1980, I believe it was,  
 16 we had a record heat wave in the summer; we had  
 17 over 30 days when it was over 100 degrees. When  
 18 you watched the news at night, it would still be  
 19 over 100 degrees at 10:00 o'clock when the news  
 20 came on. I only had one pivot at the time, and  
 21 it was not one of the new efficient ones, it was  
 22 an original water drive, and so I ended up  
 23 trying to keep up with 130 acres of corn running  
 24 at 7/24 for, I think it was almost 60 days  
 25 without shutting it off, unless it broke down or

Page 3242

1 something. Didn't even change oil in it, I just  
 2 added oil to the motor and kept running.  
 3 At the end of the season, I had 5- to  
 4 6-foot-tall green corn, but it was analyzed by  
 5 the USDA people for disaster, and they  
 6 calculated that it would yield 19 bushels to the  
 7 acre for irrigated corn. I got real lucky in  
 8 that I found a feedlot about eight miles away  
 9 who purchased the entire circle from me and  
 10 chopped it for feed, for ensilage.  
 11 Between the small disaster payment I got  
 12 and the money I got back from selling it to  
 13 ensilage for forage, it was equal to as if I had  
 14 had a 75 bushel acre corn crop in an irrigated  
 15 yield, which is about half of what you would  
 16 hope for at that point in time. So those  
 17 experiences stick with you that, you know, yeah,  
 18 we'd have been a lot better off if we'd had  
 19 wheat growing at that point in time.  
 20 I -- I do remember 1956 being dry, I don't  
 21 recall specifically the river being bone dry. I  
 22 know I have a neighbor who is 97 years old who  
 23 is still sharp as a tack, and he's told me that  
 24 he saw the Big Arkansas River at the Bentley  
 25 Bridge dry three times in his life, in 1936, in

1 1956, and in 2012. And I have no reason to  
2 doubt him.

3 What I do remember about 1956, and it  
4 was -- it was hot and dry, was that really began  
5 the end of anybody in our area growing dryland  
6 corn. It had been a common crop up to that  
7 point, and the yields got so bad in that record  
8 drought of the mid '50s that people went away  
9 from growing corn, and at the same time K-State  
10 was releasing the first varieties of milo, which  
11 was being touted as a more drought-tolerant  
12 alternative crop.

13 And so we really didn't see much corn grown  
14 other than on a few irrigated, you know,  
15 flood-irrigated acres in this area until pivots  
16 arrived in the late '60s, early '70s, and  
17 irrigation really began to take off in the Equus  
18 Beds, and then irrigated corn suddenly showed up  
19 because people had just given up on dryland  
20 corn. So it was a -- a cultural practice change  
21 driven by a drought.

22 Q. Do you recall whether any changes were made  
23 during or following the 2011 and '12 drought?

24 A. Not particularly. I had my land rented, I don't  
25 actively climb on a tractor and farm it myself

1 anymore, but my farm tenant does a good job of  
2 managing, and I think if we are looking -- I  
3 mean, it's hard to forecast; you don't know the  
4 second year of a drought if that's the last year  
5 of the drought or is that two years out of date.  
6 But I'm sure we would have had extensive  
7 conversations if the indications were it was  
8 going to be extended as to what we could do to  
9 help preserve the wells and the water and have  
10 crops that were meaningful, go back to -- get  
11 away from the corn, go back to milo, go back to  
12 wheat, put in, you know, alternative cropping  
13 practices, do more of the no-till cover crop  
14 kinds of operations where you preserve topsoil  
15 moisture and those kind of things. So there are  
16 options out there. No, we didn't do anything  
17 particularly in 2011 and '12, we did not take  
18 advantage of the flex accounts, we didn't feel  
19 like that was -- at that point that that was a  
20 viable alternative.

21 Q. Have you -- do you typically pump your fully  
22 authorized amount, and if you don't pump the  
23 full amount, what happens?

24 A. We typically pump what's reasonable, and that is  
25 not always the fully authorized amount. If we

1 have a dry season and it's irrigated corn, we  
2 may well pump the full amount; but if it's milo  
3 or double crop wheat or soybeans that use less  
4 water, we might not pump at all. If we have a  
5 wet season, as in April, May of 2019 when we had  
6 floods along the river and immense rain events,  
7 we may have pumped a third of our water right  
8 because it was unnecessary.

9 The best irrigation has always been a nice  
10 rain, and anytime you can shut off a diesel  
11 engine, a propane engine, or an electric line  
12 that's running a pivot, save that fuel cost,  
13 save wear and tear on an expensive pump on the  
14 well screen, on the pivot system, you know,  
15 it's -- it's not efficient to water when you  
16 don't need it, it makes no sense, there's a cost  
17 to it; you've got a big investment in it and you  
18 want it to last as long as you can. And you  
19 can't -- you can over-water crops. Corn doesn't  
20 like wet feet; too wet a soil prunes the roots,  
21 and the crop suffers.

22 Q. Do you get a future credit for the water you  
23 leave in the aquifer?

24 A. No, unfortunately, we get no credit at all for  
25 any water left in the aquifer. Farmers and

1 ranchers have been -- well, I don't know whether  
2 you characterize it as actively or passively  
3 recharging the Equus Beds since they first put  
4 plows into the sod in 1870 out here.  
5 Percolation, precipitation has always gone back  
6 into the Equus Beds, still does. If you shut a  
7 pivot down because it's raining, some of that  
8 rainwater will wind its way back into the Equus  
9 Beds even during an irrigation season.

10 Q. What investments have you made in your property  
11 based on the water rights you possess?

12 A. Spent a fair amount of money making holes in the  
13 ground. My leasing situation with my farm  
14 tenant is it's, frankly, a cash rent deal; he  
15 pays for the pump, the motor, and the pivot, and  
16 I pay for the well. I had to replace a well  
17 eight years ago, could have been nine, I had a  
18 well that cavitated and the wellhead subsided  
19 because it had been pumping fine sand 'cause the  
20 screening was not correctly done originally.

21 As I recall, between hiring a hydrologist  
22 engineer to figure out exactly the screening  
23 size and exactly the gravel pack size that was  
24 needed to keep it from further pumping of fine  
25 material and drilling of a whole new well and

Page 3247

1 getting a permit moved and the old well plugged,  
 2 I think I spent \$25,000. And as I say, that's  
 3 been nine years ago, or whenever, I'm sure the  
 4 price is higher now. So with three wells, I  
 5 figure I'm sitting on a \$75,000 investment in  
 6 effect at the moment. And my house well at  
 7 205 feet was, you know -- it's 50 to \$100 a foot  
 8 to drill a 5-inch well, so it's expensive.  
 9 Q. Now, you've talked about being familiar with the  
 10 Wichita ASR project, are you familiar with the  
 11 basin storage area?  
 12 A. Yes, I understand the concept.  
 13 Q. Where is the basin storage area?  
 14 A. Well, by definition, it has to be in the  
 15 unsaturated portion of the aquifer because  
 16 there's no place else to put water for basin  
 17 storage.  
 18 Q. And where is that in relation to the land where  
 19 you live and farm?  
 20 A. Well, it would have to be whatever the depth  
 21 from basically ground surface is to the static  
 22 water table located around each well.  
 23 Q. Do you have any concerns if the basin storage  
 24 area is expanded?  
 25 A. By expanded, do you mean horizontally or

Page 3248

1 vertically?  
 2 Q. Either one but we'll talk vertically?  
 3 A. Okay. Am I good?  
 4 THE REPORTER: Uh-huh.  
 5 A. To expand it horizontally is probably not an  
 6 issue. To artificially expand it vertically  
 7 gets into the main reason that I'm involved as  
 8 an intervenor, and that is I am highly concerned  
 9 about the saltwater intrusion coming from the  
 10 Big Arkansas River into the Equus Beds and under  
 11 my land and affecting the quality of the water  
 12 that's available to me both irrigation and  
 13 domestically. As I indicated earlier,  
 14 experience with windmills for decades was that  
 15 the ones closest to the river were the saltiest  
 16 and the ones further away were less so.  
 17 My pivot that was running in 1980, what we  
 18 found out in 1985 was suddenly the soybeans  
 19 didn't look healthy. And I had ServiTech crop  
 20 advisers, and I asked them what was going on, we  
 21 were -- I was suspicious of herbicide  
 22 carry-over, I was suspicious of some fungal  
 23 soybean disease or some such, and they looked at  
 24 it and analyzed and said, you got salt burn from  
 25 the irrigation water from the overhead

Page 3249

1 sprinklers. So the water in that pivot had gone  
 2 from being usable for soybeans to unusable for  
 3 soybeans without crop damage over a period of  
 4 five or six years, which told me the salt front  
 5 had moved, in effect.  
 6 We then went back for a period of years to  
 7 not putting soybeans in the rotation, corn,  
 8 milo, and wheat which were more tolerant, and  
 9 then eventually put in a new well. That was a  
 10 shallow well, was 35 deep, I think; we went to  
 11 175 feet, or whatever it is currently, and the  
 12 water quality is much better.  
 13 BY MS. WENDLING:  
 14 Q. So one of the components of the City's proposal  
 15 is lowering those minimum index levels, which  
 16 could be as you talked about an expansion of the  
 17 basin storage area. Are there additional  
 18 concerns that have not been addressed by  
 19 testimony so far that you have regarding the  
 20 lowering of the index wells? Or the potential  
 21 to draw down water to lower index levels?  
 22 A. Yeah, I have a concern. I mean, I've got one  
 23 domestic well out in the shop that's only  
 24 probably 15 feet with a sand point, which means  
 25 that well might have to be replaced and

Page 3250

1 deepened, or whatever. But for the irrigation  
 2 well, and given my location that close to the  
 3 river, I'm on the front line of the movement of  
 4 the salt front. And -- and my understanding of  
 5 geohydrology is when you have a cone of  
 6 depression, if you will, around the Wichita well  
 7 field of some 15 miles in diameter and they  
 8 increase the pumpage out of that, it's going to  
 9 increase that hydraulic gradient and speed up  
 10 the movement of that salt front towards the well  
 11 field, which I understand could impact the well  
 12 owners there, but it brings the salt under me  
 13 first, I'm on the front line to have to deal  
 14 with it.  
 15 And -- and, ultimately, the worry would be  
 16 that we get over that 300, 350 parts of salinity  
 17 that makes the water really almost unusable for  
 18 irrigation, or very much irrigation depending on  
 19 the crop that you're dealing with. And there's  
 20 places in California where they have continued  
 21 to irrigate with much higher salinity levels and  
 22 have basically ruined their land. The salt is  
 23 visible on it, and they've basically lost the  
 24 ability to do any farming.  
 25 If the water becomes uneconomically usable

1 because of a high salt content, then you  
2 basically go back to a dryland value for your  
3 property, and that could mean a third to a half  
4 loss of property value for what you own, plus  
5 your water right would become of extremely  
6 limited value. Unless there was some way to  
7 transfer it far enough away to somebody but --  
8 so that would -- that would have a serious  
9 impact on the economic viability of our  
10 operation and -- and those around us up and down  
11 the river.

12 The information I have seen indicates that  
13 the Big Arkansas River stream reach between  
14 Yoder and Maize Road is a losing reach, meaning  
15 the river at Maize has less cubic feet per  
16 second than the river does at -- at the Haven  
17 bridge or Yoder, meaning it's being absorbed  
18 into the bank and into the Equus Beds Aquifer  
19 that goes by. And anything you do to increase  
20 the gradient into a well field, whether it's  
21 Wichita or irrigation, is going to make that  
22 even worse.

23 That stretch of river has a HUC number and  
24 it's on the Kansas -- Kansas Department of  
25 Health and Environment, what's called the 303(d)

1 of the subterranean rock and stuff.  
2 So my concern is not actually running out  
3 of water, I'm not going to be impacted in that  
4 near as much as the folks near to the well field  
5 where a lot of withdrawal might be taking place.  
6 My concern is that if there's a lot of  
7 withdrawal taking place, it's going to  
8 exacerbate that salt front moving in, and as I  
9 used to tell folks when I worked for KDHE, the  
10 only thing worse than bad water quality is no  
11 water at all.

12 Q. I'd like to have you find District Exhibit  
13 Number 68, which is Dave Romero's expert report,  
14 so we might need to -- I think the District's  
15 binders have the numbers on the front.

16 A. Thank you.

17 Q. Uh-huh. So if you flip to the very last page of  
18 Mr. Romero's report, there is a map.

19 A. The very last page of the whole booklet?

20 Q. No, of -- of Exhibit 68, which is  
21 Mr. Romero's --

22 A. Okay.

23 Q. -- expert report. So you're -- you're on his --  
24 you were on it. Maybe I had the wrong number  
25 but that's his expert report and the last page

1 list, which is under the Clean Water Act, which  
2 sets out states have to survey all the streams  
3 in their state every few years and quantify the  
4 water quality, is it over or below acceptable  
5 average, and that reach is being called out for  
6 being over-polluted with phosphorous, selenium,  
7 and, of course, salinity through its entire  
8 reach.

9 Q. In the City's proposal where they show the  
10 proposed minimum -- minimum index levels, adding  
11 in the 10-foot contingency, in some of those  
12 figures, they show -- they have a map showing  
13 the remaining saturated thickness. So based on  
14 your water quality concerns that you've  
15 expressed, does the remaining saturated  
16 thickness give you any confidence that the  
17 proposed modifications will not cause you harm?

18 A. My worry really is not that I will run out of  
19 water. My wells are -- in particular, like my  
20 house domestic well of 205 feet sits at the very  
21 bottom of the deepest end of the Equus Beds  
22 bathtub. If I get down to where I've only got  
23 25 feet of saturated thickness left in my house  
24 well, the entire upper half of the Equus Beds is  
25 going to be dry in reality because of the slope

1 should be a map.

2 A. This the map you're talking about, that's on 69?

3 Q. It is figure 8 of his report, looks like --

4 A. Figure 27.

5 Q. No, it's -- the bottom of it, you were there, it  
6 says adapted USGS figure 27, Klager and others,  
7 figure 8.

8 A. Is that the USGS figure 27, Klager and others  
9 2014?

10 Q. Yes.

11 A. Okay.

12 Q. So this -- during Mr. Romero's testimony, he  
13 describes this map, and you can see from the key  
14 on the lower right the colored lines represent  
15 various pumping scenarios. Can you tell based  
16 on this which color lines would impact the area  
17 where your wells are? Note that the IW numbers  
18 correlate to the index cells, so your wells are  
19 in index cells 32 and 35, if that helps you find  
20 where you are on this map.

21 A. Yes, I can see, and mine, in particular, would  
22 be in 35 where it shows the direct impact.

23 Q. And so the colored lines representing potential  
24 chloride movement, which colors would  
25 potentially come into 35? Assuming the colors

Page 3255

1 are coming from the river --  
 2 **A. Well, if -- I mean, they -- they are all really**  
 3 **beyond my wells, so the chloride is already**  
 4 **there underneath me. That -- to me, this map**  
 5 **just represents how far north into the well**  
 6 **field or into the Equus Beds the salt front**  
 7 **would be moving under those various scenarios,**  
 8 **and they're already past me. Regardless of the**  
 9 **pumping scenario, I'm impacted.**  
 10 **Q. Has the testimony you've heard so far during**  
 11 **these hearings informed you of how you might be**  
 12 **impacted should the City withdraw their 100 --**  
 13 **up to 120,000 acre-feet in maintenance credits?**  
 14 **A. Not really. In my view, this -- these hearings**  
 15 **have not demonstrated from the City or from DWR**  
 16 **much study regarding the salt front intrusions**  
 17 **in either Burrton or along the Big Arkansas**  
 18 **River, which I find fault with the -- with the**  
 19 **proposal and actually surprised that DWR would**  
 20 **sort of give it its approval, if you will,**  
 21 **without having that sort of information**  
 22 **involved.**  
 23 **I am -- if I may, if I can find it. One of**  
 24 **the things that bothered me was -- was in our**  
 25 **looking through various exhibits as we were**

Page 3256

1 **preparing for this Intervenor and the City of**  
 2 **Wichita's response to the Intervenor's first set**  
 3 **of interrogatories is, I think is number 24,**  
 4 **Exhibit 18, I just have a part of that in front**  
 5 **of me, but it says, quote, neither such a**  
 6 **withdrawal nor the impact on chloride migration**  
 7 **was modeled as a part of the City's proposal**  
 8 **because such an event is not contemplated by the**  
 9 **City's proposal.**  
 10 **So how could you be doing this proposal and**  
 11 **not contemplate the impact of the salt intrusion**  
 12 **that you know is there and would have impact,**  
 13 **you know, on -- on the Equus Beds? I mean, not**  
 14 **to be facetious, but it almost sounds a little**  
 15 **bit like the marine engineers talking to the**  
 16 **White Star Line folks in 1911 saying, you don't**  
 17 **need more than 16 lifeboats on the Titanic**  
 18 **because we don't contemplate that you'll ever**  
 19 **need them.**  
 20 **You know, it's just -- it's a failure to**  
 21 **have a complete proposal, in my view, because**  
 22 **it's a -- it's an impact both on the upper end**  
 23 **near Burrton and -- and from the bottom end**  
 24 **along the Big Arkansas River. I mean, the --**  
 25 **the City may be able to ignore, if you will, the**

Page 3257

1 **intrusion of the salt fronts because they can**  
 2 **pump semi-salty water, salty water to Wichita,**  
 3 **blend it with Cheney water, and still come out**  
 4 **with a potable, usable water. They do it with**  
 5 **the Bentley well field water now, and there's**  
 6 **other waters that are questionable that they can**  
 7 **use and blend, but we have no alternative. I**  
 8 **don't have another water source; if my water**  
 9 **under my land gets so salty I can't use it, I'm**  
 10 **lost.**  
 11 **And, you know, it could -- you know, if**  
 12 **that scenario happened, my land values drop by a**  
 13 **third or a half, my water right almost becomes**  
 14 **worthless, and then, you know, the City has got**  
 15 **less competition for the water in the Equus Beds**  
 16 **because a bunch of irrigators are going to be**  
 17 **shut down.**  
 18 **PRESIDING OFFICER:** Excuse me, I  
 19 have a question, what were you just reading  
 20 from?  
 21 **A. I'm sorry, I couldn't hear?**  
 22 **PRESIDING OFFICER:** You were just  
 23 reading from an excerpt.  
 24 **A. I was reading from a note that I had that quoted**  
 25 **that exhibit.**

Page 3258

1 **PRESIDING OFFICER:** Which exhibit  
 2 was that?  
 3 **MS. WENDLING:** It is Exhibit 18,  
 4 it's the interrogatory responses. We can  
 5 flip to that. It's District Exhibit 18.  
 6 **PRESIDING OFFICER:** Thank you.  
 7 **BY MS. WENDLING:**  
 8 **Q. So, Mr. Basore, you've talked quite a bit about**  
 9 **your decision to intervene and some of the**  
 10 **reasons for deciding to intervene in this**  
 11 **matter. Are there any further reasons that you**  
 12 **have not yet disclosed that you would like to**  
 13 **share with us?**  
 14 **A. One of the things that I keep hearing is that**  
 15 **some of the city people, and -- and perhaps even**  
 16 **some of the folks in -- in, you know, some of**  
 17 **the agencies were discounting our concern as**  
 18 **residents of the Equus Beds is being that we**  
 19 **just don't like Wichita. And I want to use**  
 20 **myself as an example to say, no, that's really**  
 21 **not -- not a true case. I made my living in**  
 22 **downtown Wichita in two different careers for**  
 23 **25 years, my wife worked in downtown Wichita for**  
 24 **20 some years. We spent a lot of money in**  
 25 **downtown Wichita.**

1 What has developed, I think, out here over  
2 decades has been a fair amount of distrust of  
3 the City when they come out with a proposal or  
4 some action. I tend to -- I tend to  
5 characterize it a little bit as the arrogance of  
6 entitlement sort of attitude. I go back to 1957  
7 when they were constructing the 66-inch pipeline  
8 and they were building the 3 million gallon  
9 surge storage tank a mile west of Bentley. And  
10 my father was chairman of the drainage district  
11 at the time, and a neighbor showed up and said,  
12 you need to get up there, the City has just  
13 shoved a big hole threw the east bank of one of  
14 the major diversion laterals coming off the main  
15 ditch headed for the river.

16 And we went up there, and I went with him,  
17 and they had had a D4 Cat and they had shoved a  
18 6-foot-wide notch through the east berm of the  
19 diversion and were installing an 18- or 20-inch  
20 overflow pipe from the tank and also a bottom  
21 drain with a valve on it. And they had never  
22 had any contact with the drainage district,  
23 there was no MOU, there was no understanding,  
24 there was no notice of any kind, they just did  
25 it, put it in, installed it, and buried it. And

1 if you're really interested, my dad actually  
2 took pictures and I found them awhile back and  
3 they're dated 1957.

4 About, well, 1977 or so, the Bureau of  
5 Reclamation held a hearing here in Halstead, a  
6 public hearing because Wichita was applying for  
7 additional water rights out of both, I think,  
8 Cheney and the Equus Beds. I attended that  
9 hearing, it motivated me, I ended up deciding  
10 the old adage if you want to fight city hall,  
11 you better join them, so I went to Wichita and  
12 started attending the Wichita Chamber of  
13 Commerce water resource committee hearings -- or  
14 not committee hearings but committee meetings.

15 And had lots of presentations from the  
16 City, understood that they were looking for  
17 future water supply. They looked at building a  
18 reservoir at Corbin down on the Chikaskia, they  
19 looked at building one in Douglass down on the  
20 Walnut, they looked at building one down in --  
21 in Cowley County. And then I also understood  
22 how the City utilized their water.

23 And in that process, I got curious and got  
24 ahold of a -- fast-forward, I don't even  
25 remember where I got it, but a copy of the

1 City's water appropriation permit for the Equus  
2 Beds. And when I read through, it gave the  
3 place of use as the City of Wichita, period.  
4 Not being a lawyer but that sort of told me that  
5 that meant the corporate city limits of Wichita.

6 Well, I knew at the time they were selling  
7 water to one or two surrounding towns and a  
8 rural water district. Clearly not reflected in  
9 their place of use. I called DWR to question  
10 and say, hey, wait a minute, this doesn't appear  
11 to be right, and I don't remember -- I mean,  
12 this is 40 years ago, I don't remember who I  
13 talked to in DWR, somebody in water  
14 appropriations, and they pulled it up and looked  
15 at it and said, well, it looks like you're  
16 right, we'll ask Wichita to -- it's just an  
17 oversight, we'll ask them to correct it, which  
18 struck me as, wait a minute, if Wichita or  
19 somebody else had called DWR to complain that I  
20 was selling part of my irrigated water rights to  
21 a neighbor, DWR would probably have come down on  
22 me with civil penalties and I probably would  
23 have lost whatever amount of my water right I  
24 was selling. But in this case, it was a  
25 spanking of the hands.

1 The City in looking for additional water  
2 sources decided that first to try and put  
3 together a pipeline consortium to get water out  
4 of Kanopolis. Because of some, I don't know,  
5 water wasn't available, the navigation use,  
6 whatever it was, that didn't look like it would  
7 work, so they switched it over to Milford. In  
8 about 1983, they found out that there was no  
9 vehicle under state regulation or statute to  
10 allow for an inter-basin transfer of water in  
11 Kansas.

12 And to understand inter-basin transfer, if  
13 you take the State of Kansas and draw a belt  
14 line horizontally across the middle of it, all  
15 the precipitation in the north half of the state  
16 goes to the Missouri River system, all the  
17 precipitation in the south half of the state  
18 goes to the Arkansas River system. Those are  
19 two separate major basins, and what they were  
20 asking for was water from Milford in the Kansas  
21 and the Missouri River basin to be transferred  
22 into the Arkansas River basin.

23 And so they asked their legislators from  
24 the Wichita area to sponsor a bill, they did, it  
25 came up for senate natural resource committee

Page 3263

1 hearings, and being on the water committee for  
 2 the chamber and having had pres -- set these  
 3 presentations, I knew their water billing  
 4 structure was such that everybody got a certain  
 5 amount of water for their usability at a certain  
 6 price, but if you used more than that, it was  
 7 discounted. And there were two or three steps  
 8 in there that the more water you used, the  
 9 cheaper it got.

10 And it was one of the selling points of the  
 11 chamber of commerce and the city business  
 12 development people that, you know, expand your  
 13 business in Wichita, bring your business to  
 14 Wichita, we have plenty of water, we're planning  
 15 for the future, and the more you use, the  
 16 cheaper it gets. They didn't have anything in  
 17 the way of a conservation plan.

18 I had been serving for a number of years on  
 19 the county conservation board and knew that we  
 20 were helping farmers with some cost share to do  
 21 conservation practices for soil and water, and  
 22 anytime you drove through Wichita and it was  
 23 raining, you were probably going to be treated  
 24 to sprinklers running on the golf courses and  
 25 front yards and the corporate green spaces.

Page 3264

1 So I went -- I took it on myself, I went to  
 2 Topeka, I testified as an individual saying that  
 3 they were not good stewards of water and that  
 4 they shouldn't be rewarded with more water to  
 5 waste when they weren't taking care, good care  
 6 of the water they already had. The committee  
 7 heard from other witnesses, I think I was the  
 8 only farmer, decided in effect to send it back  
 9 to a picked subcommittee to study it further and  
 10 basically tabled it, which ended up basically  
 11 killing the bill for that session.

12 As I walked out of that hearing, I didn't  
 13 even get -- and it was in the old supreme court  
 14 chambers, I didn't even get to the rotunda when  
 15 I could hear rapid footsteps behind me and  
 16 somebody hollering my name, and I turned around  
 17 and here was Senator Paul Feleciano from  
 18 Wichita, who was on the committee. And he was  
 19 livid, he was not happy, came right up in my  
 20 face and shook his finger at me and, quote,  
 21 said, you kicked the hell out of us in there  
 22 today, end quote.

23 And so we had a little discussion and I  
 24 kept my cool and I reiterated that my concerns  
 25 were that they were poor stewards of the water

Page 3265

1 and that they needed not to be rewarded with  
 2 more water and this was a, you know,  
 3 inappropriate way to go about it. Well, we  
 4 parted, I drove home, went back to farming.  
 5 About two weeks later, maybe three, I got a call  
 6 from Joe Botinelli (sp), who was the City of  
 7 Wichita water department employee, probably  
 8 similar to Joe Pajor's position more recently,  
 9 and I knew him, he served -- he was also on the  
 10 chamber water resource committee that I was on,  
 11 I knew him, we got along fine. We had a brief,  
 12 pleasant conversation. At the end of it, he  
 13 said, well, the reason I called is I've been  
 14 tasked to put together a citizen advisory  
 15 committee to help the City write a water  
 16 conservation plan, would you serve on it. And  
 17 it took me about five seconds to say, sure, I'd  
 18 be happy to.

19 And so we took a look at it, and we had  
 20 presentations from Joe or other city employees  
 21 and people in the water department as to how  
 22 things worked. Our recommendations were to turn  
 23 the water rate structure on its head, that  
 24 everybody got a certain amount of water at a  
 25 modest rate, and then there were two or three

Page 3266

1 tiers above that for the more water you used,  
 2 the more expensive it got. So that it became an  
 3 incentive to conserve.

4 We told them they needed to look at their  
 5 plumbing codes, municipal codes to first allow  
 6 the use of low-water flow fixtures and  
 7 appliances and, second, to encourage it and,  
 8 third, maybe at some point mandate it. We said  
 9 they should take advantage of their monthly  
 10 bills going out to every water customer in town  
 11 to insert water conservation information, what  
 12 people could do in their own house about leaky  
 13 toilets, dripping faucets, and all that sort of  
 14 thing, what to do with the irrigation of lawns  
 15 and green spaces and how to schedule and do  
 16 things there that would conserve water.

17 So we promoted a lot of that, and to their  
 18 credit, the City began in -- doing that,  
 19 creating a water conservation plan. They went  
 20 so far as to, and I think they still do, they  
 21 offer an incentive to people who are replacing  
 22 old fixtures with new low water flow, low water  
 23 use appliances and fixtures, there's a subsidy  
 24 available from the City. At one point, they had  
 25 a house located south of Douglas on the west

1 side of the riverbank that was a demonstration  
2 house full of everything you could do to  
3 conserve water, including put a rain barrel out  
4 back on the -- on the roof gutter in order to  
5 get water to water your plants so you don't have  
6 to use municipal water for doing that.

7 So Wichita has a history of not always  
8 being up front or accurate with what they're  
9 proposing, and so people out here are skeptical  
10 when the City comes out with a proposal such as  
11 this one. You know, has the homework been done  
12 right, has -- has DWR actually sat down and  
13 duplicated on their own the data that's been  
14 suggested by the City, have they double-checked  
15 it for accuracy, or have they just assumed it to  
16 be accurate?

17 This -- this proposition, this changes to  
18 the ASR has very large and very long-term  
19 implications if not done right. It's a little  
20 hard to, from a logic point of view, understand  
21 how you can get credit for putting water in an  
22 aquifer that you didn't put in there to be able  
23 to take it out later. Everybody benefits from a  
24 full aquifer, that is not a question, it's good  
25 for everybody, the city, irrigators, other

1 municipalities, everybody.

2 I had a couple of conversations with Joe  
3 Pajor as this whole proposition came up, and  
4 he -- his basic attitude was, well, if we don't  
5 get this amended ASR thing, we will pump our  
6 40,000 acre-feet down every year regardless.  
7 And it was sort of an implied threat that sort  
8 of told me that, well, gee, does that mean  
9 Cheney is running over the dam and spillway  
10 because it's so full, you're still going to pump  
11 your 40,000 acre-feet when water's being wasted  
12 down the Ninnescah, you know, as if they were  
13 going to pump a 40,000 acre-foot hole just to  
14 spite us.

15 So there -- there are reasons we are  
16 questioning this. We're not obstructionists.  
17 Everybody in town deserves a good clean drink of  
18 water, I understand that, I don't have a problem  
19 with that. The drought plan allows them to  
20 still fill their fountains and swimming pools  
21 when, in effect, we may have to curtail some of  
22 our irrigation or be doing irrigation with lower  
23 quality water.

24 Part of -- I'm one -- I'm probably the only  
25 person involved in this whole hearing process

1 who actually carried petitions around to their  
2 neighbors to get them to sign it to promote the  
3 creation of GMD2 back in the day. And people  
4 were beginning to irrigate with, you know, the  
5 invention of center pivots, and the Groundwater  
6 District Act was then created, and people were,  
7 I don't know struggling but they were frustrated  
8 in dealing -- trying to get water rights through  
9 DWR. I mean, DWR was buried with people trying  
10 to all get irrigation rights at the same time.

11 And they didn't really want to hear that  
12 what we need is another level of government for  
13 you to have to go through to be able to  
14 irrigate. But once you kind of explain to them  
15 that, no, the setup for the GMD2, and all GMDs,  
16 is that it's a local governing body that will  
17 have the ability to have rules and regulations  
18 and be able to deal with local government, which  
19 is always the more local government you can deal  
20 with is more effective than on upstream, and  
21 that everybody who's a water right holder will  
22 be held to the same sort of standard. Whether  
23 you're an irrigator or whether you're the City  
24 of Wichita or whether you're an industry,  
25 they're all going to have to deal with GMD2 on

1 the same basis, and it will level the playing  
2 field somewhat.

3 And at that point, people would say, all  
4 right, I'll sign because they felt they could  
5 see an advantage in having the GMD in place.  
6 And I still feel that way. I think it's  
7 protective for everybody, including the City of  
8 Wichita. City of Wichita doesn't want  
9 irrigators abusing the water rights out here and  
10 vice versa is also true.

11 **MS. WENDLING:** All right. I don't  
12 have any further questions.

13 **PRESIDING OFFICER:** Okay. Thank  
14 you, sir, we'll now see if others have  
15 questions for you. Mr. McLeod, do you have  
16 questions?

17  
18 **CROSS-EXAMINATION**  
19 **BY MR. MCLEOD:**

20 Q. Yes, if we could look at that interrogatory  
21 again that Mr. Basore was reading the City's  
22 answer to about not modeling a particular set of  
23 events. I think that was maybe Exhibit 18.  
24 Mr. Basore, do you remember what interrogatory  
25 that was?

Page 3271

1 **A. Not directly, no, it's been -- been more than a**  
 2 **year, I'm sorry.**  
 3 Q. You must be muted, I'm getting no audio.  
 4 **A. I think I've -- I think I have found it.**  
 5 Q. Okay. And what interrogatory number was that in  
 6 the set?  
 7 **A. Oh, it was 18.**  
 8 **MS. WENDLING:** I believe we're on  
 9 24.  
 10 **A. Yeah, it was, like, 18 on -- first set of --**  
 11 **first set of interrogatories, number 24,**  
 12 **Exhibit 18.**  
 13 **BY MR. MCLEOD:**  
 14 Q. Okay. And so the question that the City was  
 15 asked was what steps did the City take to  
 16 assess, evaluate, and/or measure the potential  
 17 impact of pumping or otherwise withdrawing the  
 18 120,000 acre-feet in AMCs would have on the  
 19 migration of the Burrton chloride plume and/or  
 20 chloride intrusion from the Arkansas River.  
 21 And -- and you had referred to the answer and  
 22 objection, but I want to ask you, sir, do you  
 23 understand that under the proposal, this  
 24 withdrawal of 120,000 acre-feet in AMCs is not  
 25 something that would happen all at once because

Page 3272

1 there's an 18,000 acre-foot annual limitation on  
 2 the credits the City could draw that?  
 3 **A. Yes.**  
 4 Q. Did you understand that that limit was in place?  
 5 **A. Yes, I understand they've got a limitation**  
 6 **plugged in there of, what, 19,000 acre-feet a**  
 7 **year, but my -- my point is in reality we have**  
 8 **never been in a situation in an eight- or a**  
 9 **ten-year drought where one of the water users is**  
 10 **pulling an additional 19,000 acre-feet a year**  
 11 **out of it for a total of up to 120,000**  
 12 **acre-feet. We have no historical data to base**  
 13 **an outcome on with any certainty.**  
 14 **It's all -- it's a computer model and**  
 15 **it's a -- it may be well designed, it may not be**  
 16 **well designed, I'm not a computer modeler, I**  
 17 **can't answer that, but it gives me pause to say,**  
 18 **wait a minute. And if in point of fact even an**  
 19 **additional -- if we're in an eight-year drought,**  
 20 **everybody, including the City, I'm presuming, is**  
 21 **going to be pulling their full water right out,**  
 22 **including 40,000 acre-feet for the City and now**  
 23 **an additional 19,000, along with the irrigators'**  
 24 **water rights, the other municipalities, and the**  
 25 **other industrial users.**

Page 3273

1 **So the aquifer is going to have a full load**  
 2 **coming out of it every year for eight years or**  
 3 **ten years, whatever the drought scenario is, and**  
 4 **I'm saying the cumulative effect of that, we**  
 5 **don't have absolute proof as to what it is. And**  
 6 **I feel like I'm setting out there almost**  
 7 **staring -- staring down the barrel of a gun not**  
 8 **knowing what it means for me and my property and**  
 9 **my water rights and my ability to use water.**  
 10 Q. So I need to ask you this question as well: Do  
 11 you understand that the 120,000 acre-foot limit  
 12 itself is a cap? It's not a gift to the City of  
 13 120,000 acre-feet of credits, it's a limit on  
 14 the number of credits the City could accumulate,  
 15 which limit does not exist under the current  
 16 permit?  
 17 **A. No, I understand it's not a gift, it's**  
 18 **supposedly an earned amount, but it's -- and**  
 19 **it's one thing if the City had actually injected**  
 20 **that much water into the system and wanted to**  
 21 **pull it back out, that's a legitimate taking**  
 22 **because they have added the water to the system**  
 23 **and, therefore, would have first call to remove**  
 24 **it. But in this case, the implication is that**  
 25 **if the aquifer is full and they don't have the**

Page 3274

1 **ability to inject that much water that down the**  
 2 **road they would still have the ability to**  
 3 **withdraw that much water.**  
 4 Q. So in terms of the existing rules, you're fine  
 5 with the way things are under the current  
 6 permit, you wouldn't be concerned of the City  
 7 withdrawing 120,000 acre-feet, 19,000 acre-feet  
 8 a year at a time if the City had actually  
 9 injected all that water in the aquifer?  
 10 **A. Yeah, I think that's -- I think that is**  
 11 **reasonable. I mean, if the City can inject**  
 12 **19,000 acre-feet of water a year, then I can**  
 13 **understand where they should have first call on**  
 14 **pulling it back out, barring some natural**  
 15 **disaster that overtakes all of the rules and**  
 16 **regulations that we've all established and lived**  
 17 **by.**  
 18 Q. Mr. Basore, you testified that you don't really  
 19 have an understanding of why water quality is  
 20 better in the -- in the lower quality wells on  
 21 your property. Not having the background to  
 22 know that, do you feel you're qualified to  
 23 determine what, if any, impact the ASR proposal  
 24 will have on your well in terms of chloride  
 25 infiltration?

1 **A. I'm on? Okay. I am presuming that the impact**  
2 **of river water moving into the aquifer is at all**  
3 **levels. The hydrogeologists tell us that the**  
4 **saltier water tends to settle to the bottom, but**  
5 **I also know that there are a lot of clay lenses**  
6 **that stratify the aquifer in various places. So**  
7 **it's hard to predict exactly where it will move**  
8 **or where it won't move, but the general thrust**  
9 **of the water moving from the river into the**  
10 **Equus Beds is to the north and east towards the**  
11 **well field cone of influence. And what level**  
12 **that may be, mine may be, because I am close**  
13 **enough to the river that the initial inflow from**  
14 **the river into the Equus Beds, the saltier water**  
15 **is on top because the river is shallow, and the**  
16 **further north it gets pulled into the well**  
17 **field, this heavier saline water then has a**  
18 **chance to matriculate to the bottom of the**  
19 **aquifer. I don't know. That's an answer that**  
20 **geohydrologists might be able to answer, but**  
21 **regardless, at some point my surface water or**  
22 **deep water both might become untenable for use,**  
23 **and that is my concern.**

24 Q. Do you know what impact the drawdown of your own  
25 wells could have on chloride migration?

1 **A. I'm sorry, I didn't quite understand? Didn't**  
2 **quite understand.**  
3 Q. Do you know what impact the drawdown of your own  
4 wells could have on chloride migration if the  
5 premise is that the drawdown of a well moves  
6 chlorides towards the pumping source, could your  
7 wells not be contributing to that effect as  
8 well?  
9 **A. They will contribute some small amount toward**  
10 **that, but I am mindful of the fact that for each**  
11 **city water well, as I recall, they get, like, a**  
12 **750 acre-foot allocation, where my irrigation**  
13 **wells are going to be generally 130, yeah, of**  
14 **feet, acre-feet or less. I've got one that's**  
15 **240, but it's -- it's irrigating a much larger**  
16 **parcel of ground. So it takes a concentration**  
17 **of irrigation wells to have the same effect on**  
18 **the aquifer that one City of Wichita well has.**

19 Q. You mentioned having gone through the -- the  
20 permitting process for several of your rights.  
21 When you filed for your water rights, did you  
22 have to do any groundwater modeling for the  
23 chief engineer to approve your permits?

24 **A. No.**

25 Q. When you filed your water rights paperwork, did

1 you have to do any groundwater modeling to prove  
2 that your water rights will not impact minimum  
3 desirable streamflow?

4 **A. No. My water rights lying close to the Big**  
5 **Arkansas River and since it's a losing reach of**  
6 **the stream would probably by definition not have**  
7 **any impact on the base flow because the river**  
8 **generally is feeding water into the aquifer, not**  
9 **the other way around.**

10 Q. So wouldn't -- wouldn't that be the very  
11 situation in which you would expect your wells  
12 to cause more water to leave that losing reach  
13 of the stream and infiltrate the aquifer?

14 **A. Every well outside the river will have an impact**  
15 **in pulling water out and influencing the river**  
16 **to move further north, but if you -- if you**  
17 **look, for example, at Stremel's report on the**  
18 **geohydrology, if you will, in the Equus Beds in**  
19 **1955, his map shows that at that point in time**  
20 **there were 35 City of Wichita wells in what has**  
21 **become the Equus Beds groundwater district and**  
22 **there were only nine irrigation wells existing**  
23 **in 1955, and the City had already been pumping**  
24 **for 15 years.**

25 Q. When you filed for your water rights, did you

1 have to do any groundwater modeling to prove  
2 that your rights wouldn't have any impact on the  
3 Arkansas River or Burrton chloride plume?  
4 **A. No, I am ten miles or more from the Burrton**  
5 **chloride plume. And water tends to move south**  
6 **and east in the Equus Beds underground, about**  
7 **the same sort of direction that the Big Arkansas**  
8 **River moves, which means the -- the plume would**  
9 **probably end up north of me if it continued on**  
10 **its current course anyway.**

11 Q. When you redrilled your irrigation wells deeper,  
12 did you have to perform any modeling to make  
13 sure that you wouldn't impair other water rights  
14 by making that change?  
15 **A. All of my wells were drilled after GMD2 came**  
16 **into existence and they had the policy of trying**  
17 **to balance withdrawals from the 20 percent**  
18 **annual recharge figure and so they were using**  
19 **safe yield calculations; and my water rights**  
20 **were early enough -- or my applications were**  
21 **early enough that there was still water**  
22 **available where I was wanting to drill my wells.**

23 Q. Mr. Basore, on the -- on the farmland that you  
24 have listed out, you indicated that -- that you  
25 pay for the well construction and your tenant

23 Q. Mr. Basore, on the -- on the farmland that you  
24 have listed out, you indicated that -- that you  
25 pay for the well construction and your tenant

Page 3279

1 pays for the pump. In terms of the operating  
 2 decision of how much water to use, do you or the  
 3 tenant make that decision, or did the two of you  
 4 consult on how much of the actual water right to  
 5 use in a given year?  
 6 **A. We consult a lot on the operation of the farm,**  
 7 **including, you know, what crops he's raising in**  
 8 **anticipation and understanding what impact that**  
 9 **might have on -- on water use.**  
 10 Q. Who is the person who's the tenant on that site?  
 11 **MS. WENDLING:** I'll object on  
 12 relevance.  
 13 **PRESIDING OFFICER:** I'm sorry, I  
 14 didn't -- I didn't even understand the  
 15 question, sorry.  
 16 **MR. MCLEOD:** The question is who is  
 17 the person who's tenant on that lease farm  
 18 site who's consulting on the water rights  
 19 use decisions?  
 20 **PRESIDING OFFICER:** Forgive me but  
 21 I'm still not -- I can't hear you well  
 22 enough to understand, forgive me, try --  
 23 try again.  
 24 **MR. MCLEOD:** It sounds like we're  
 25 having some feedback issues again. The

Page 3280

1 question is the tenant who leases  
 2 Mr. Basore's farm property and who consults  
 3 with him on the use of the water right on  
 4 that property, I have asked who that person  
 5 is?  
 6 **PRESIDING OFFICER:** Are you asking  
 7 for this person's name?  
 8 **MR. MCLEOD:** Yes.  
 9 **PRESIDING OFFICER:** Okay. I have --  
 10 I have an objection to the question and  
 11 I'm -- I'm inclined to sustain it, I  
 12 don't -- are you asking for the ten -- the  
 13 name of the tenant?  
 14 **MR. MCLEOD:** Yes. And the reason  
 15 for asking is, I mean, obviously  
 16 Mr. Basore, the owner of the property and  
 17 technical owner of the right, is involved  
 18 in this case with -- with concerns; I'd  
 19 like to know if the tenant is as well since  
 20 that's the person who's -- who's actually  
 21 operating the property, making the  
 22 effective use of the right as tenant.  
 23 **PRESIDING OFFICER:** Can you explain  
 24 the -- the relevance of your question, I  
 25 don't -- I don't understand? You seem to

Page 3281

1 be implying that that goes to the relevance  
 2 of Mr. Basore's testimony?  
 3 **MR. MCLEOD:** Well, I -- I mean there  
 4 are two people sharing a right. One of  
 5 them, Mr. Basore, has these concerns, and  
 6 I'd like to know if the tenant also is  
 7 involved in the case for some party or has  
 8 similar concerns or if the tenant is not  
 9 concerned by the City's proposal?  
 10 **PRESIDING OFFICER:** Ms. Wendling?  
 11 **MS. WENDLING:** Water rights are  
 12 property rights, and Mr. Basore owns that  
 13 right. He has the right to lease that  
 14 property right out to someone else, but  
 15 that does not bring that tenant into this,  
 16 no more than this case -- this hearing  
 17 brings in all of the City of Wichita's  
 18 customers. This is -- it's Mr. Basore's  
 19 water right, he's testifying, Mr. Basore is  
 20 the intervenor, the tenant is not the  
 21 intervenor.  
 22 **PRESIDING OFFICER:** Well, that was  
 23 where my thinking was going, that  
 24 Mr. Basore is the owner of the water right,  
 25 and I'm not sure that whoever he leases to

Page 3282

1 that their identity is relevant to this.  
 2 He's already stated that he has not  
 3 delegated the authority to operate that  
 4 solely to the tenant, so I'm going to  
 5 sustain the objection. Next question.  
 6 **MR. MCLEOD:** Well, I don't have  
 7 further questions for the witness.  
 8 **PRESIDING OFFICER:** Are there any  
 9 questions from the Groundwater Man -- or,  
 10 I'm sorry, from DWR?  
 11 **MS. MURRAY:** I don't have any  
 12 questions.  
 13 **PRESIDING OFFICER:** Are there any  
 14 questions from the GMD?  
 15 **MR. STUCKY:** Yes, just a few  
 16 questions from the GMD.  
 17  
 18 **CROSS-EXAMINATION**  
 19 **BY MR. STUCKY:**  
 20 Q. All right. Mr. Basore, just a moment ago, you  
 21 were asked a question about whether or not when  
 22 you applied for your permits you did any sort of  
 23 modeling or anything of that nature. Do you  
 24 recall that line of questioning?  
 25 **A. Yes.**

1 Q. Do you understand that in the case of the City  
2 of Wichita's proposal, the Groundwater  
3 Management District No. 2 is against or -- or is  
4 recommending the City's proposal for denial, do  
5 you understand that that's our -- the District's  
6 position?

7 **A. Yes.**

8 Q. And, in fact, if you had applied for a water  
9 permit and -- in the District, would your  
10 application not go before the GMD2 first, if you  
11 were applying for a new water permit?

12 **A. That's the first stop for shopping if you're  
13 looking for a water right is to go to GMD2 and  
14 look for a determination as to is there actual  
15 available water rights for a place that you're  
16 looking at to consider irrigation.**

17 Q. And at the point that you applied for a permit  
18 with GMD2 and if the GMD2 denied the application  
19 for a permit and at that point if you felt that  
20 the denial was in error, at that point, isn't  
21 that when you would do your own modeling or your  
22 own research to see if it was worth appealing  
23 the District's decision?

24 **A. Sure, we would try to develop whatever  
25 information we could, see if there are**

1 **precedents out there that would lend for the  
2 approval of the, you know, a similar type of  
3 situation and that sort of stuff to gather what  
4 evidence we could to move forward and -- and  
5 achieve a permit.**

6 Q. So in that sense, it would be analogous to the  
7 situation here, the GMD2 oppose -- opposes the  
8 City of Wichita's proposal, and as a result, the  
9 City of Wichita did additional modeling and  
10 work, that's essentially what you would do in  
11 this permitting process as well; is that  
12 correct?

13 **A. Sure, wherever the logic trail led to that what  
14 would we need to do to, you know, prove the  
15 worthiness of our case, yeah.**

16 Q. When you were talking about your CV and your  
17 resume, you talked about some extensive  
18 experience that you had with KDHE and I, in  
19 fact, heard you say that if there was a  
20 unique -- a unique question about water quality  
21 or things of that nature, a lot of times they  
22 would ask you to comment on or provide the  
23 answer to the question; is that right?

24 **A. Yes.**

25 Q. And as I understood you to say, you testified as

1 to a number of different elements of water  
2 quality that you addressed during your time in  
3 KDHE?

4 **A. Yes. Was involved in multiple situations and  
5 they crossed the line into various aspects of  
6 other divisions of KDHE because just that they  
7 were more complicated than the straightforward.**

8 Q. Okay. And as I look at your resume, it  
9 indicates to me that you were in that role  
10 analyzing pollution for something like 15 years;  
11 is that correct?

12 **A. Yes, I retired, well, three years ago, what,  
13 2017, in July when I retired. Yes, I -- I  
14 performed that basic same function from when I  
15 began, but some of it expanded as I gained more  
16 experience and exposure and acceptance as a  
17 troubleshooter maybe.**

18 Q. And you were in the room when Mr. Austin was  
19 testifying not long ago; is that true?

20 **A. Yes.**

21 Q. And you heard Mr. Austin testify that if there  
22 are water quality issues, depending on the area  
23 affected, he would be handling those in DWR, so  
24 when he was in his role with dams and  
25 obstructions, he would handle it there, and then

1 he also addressed it in other roles, but do you  
2 recall that testimony?

1 he also addressed it in other roles, but do you  
2 recall that testimony?

3 **A. Yes, I do.**

4 Q. And do you also recall his testimony that the  
5 vast majority of the time, though, the Division  
6 of Water Resources wasn't the expert, if you  
7 will, on water quality issues. Do you recall  
8 him saying that, that a lot of times it was  
9 addressed by KDHE?

10 **A. Yes, that's the, kind of the three-legged stool  
11 in Kansas when it comes to water is that KDHE  
12 handles water quality, Division of Water  
13 Resources handles water volume and use, and --  
14 and the Water Authority handles reservoirs  
15 and -- and, you know, dedicated waters from  
16 those.**

17 Q. And so if, to the extent, the KDHE is the expert  
18 in water quality matters in Kansas and you were  
19 one of the head investigators of those water  
20 quality issues, in essence, had you been so  
21 designated, would you have been essentially an  
22 expert on water quality then?

23 **A. No, I never would consider myself to be an  
24 expert. I knew enough to find people who were  
25 experts or work with people who were that, but I**

Page 3287

1 **have been told over, you know, a period of years**  
 2 **that I had developed a fairly workmanlike**  
 3 **understanding of a lot of water issues, both**  
 4 **groundwater and surface water and how they**  
 5 **sometimes interplayed with each other, and had**  
 6 **some ability to go find the answers.**  
 7 Q. Okay. Now, I understand that for today's  
 8 purposes in testifying you're being humble  
 9 and -- and you feel that you wouldn't be -- be  
 10 an expert just by virtue of your education or  
 11 whatever it may be, I'm not sure why you're  
 12 being humble, but based on 15 years of  
 13 experience of handle -- handling water quality  
 14 issues, if -- if expertise was based on  
 15 experience, you would have that expertise,  
 16 correct?  
 17 **MR. MCLEOD:** I'm going to --  
 18 (Reporter requests clarification  
 19 of Mr. McLeod and the witness.)  
 20 **MR. MCLEOD:** Madam Hearing Officer,  
 21 I -- I think the line of questioning has  
 22 gone too far already given that it was  
 23 stipulated by Intervenor's counsel before  
 24 the hearing began that the CV was not being  
 25 proffered to offer Mr. Basore as an expert,

Page 3288

1 and it's just clear to me that the  
 2 District's counsel is now attempting to do  
 3 that, bootstrapping in an undisclosed  
 4 expert.  
 5 **MR. STUCKY:** Madam Hearing Officer,  
 6 if I may --  
 7 **PRESIDING OFFICER:** Mr. Stucky.  
 8 **MR. STUCKY:** Yeah, if I may, I think  
 9 I'm actually entitled to some latitude here  
 10 and for the reason that Mr. McLeod opened  
 11 the door to this testimony. If you may  
 12 recall, Mr. McLeod in his cross-examination  
 13 asked questions about how water quality  
 14 would be impacted by Mr. Basore pumping  
 15 down his well or by the City pumping down  
 16 the City's rights, and so that door was  
 17 opened. There were specific questions  
 18 asked about Mr. Basore's knowledge of water  
 19 quality impacts based on the number of  
 20 different scenarios that Mr. McLeod asked  
 21 about. And certainly since he asked those  
 22 questions, the door is opened at this  
 23 point, and I think I'm free to voir dire  
 24 and get a better sense or understanding of  
 25 Mr. Basore's expertise in that arena.

Page 3289

1 **MR. MCLEOD:** Well, I think that that  
 2 is a spurious argument and that what we're  
 3 seeing here is probably a  
 4 coordinated-from-the-beginning effort to  
 5 bring somebody who was never listed as an  
 6 expert, never provided any expert  
 7 disclosure or detail on the intended expert  
 8 testimony and converting that person into  
 9 an expert witness after counsel sponsoring  
 10 the witness stipulated that they're not  
 11 being so offered.  
 12 **MR. STUCKY:** There -- there is no  
 13 concerted effort, we got the CV at the same  
 14 time as -- as everybody else, and I was  
 15 just following up on some questions asked  
 16 by the City. And so certainly not a  
 17 nefarious or spurious effort here, I'm just  
 18 asking a few questions about his resume and  
 19 to try and understand voir dire based on  
 20 the questions already asked by the City.  
 21 **PRESIDING OFFICER:** Okay. I think I  
 22 can resolve this. Mr. McLeod did ask the  
 23 witness do you feel you're qualified to  
 24 answer, and then he postulated a number of  
 25 things. I think Mr. Stucky is responding

Page 3290

1 to that of are you qualified to answer  
 2 these questions. Neither one of those  
 3 rises to the level of qualifying Mr. Basore  
 4 as an expert, and because I allowed the --  
 5 the resume and the discussion of the resume  
 6 based on Ms. Wendling's assurances that  
 7 there would not be an attempt to qualify  
 8 Mr. Basore as an expert, then I'm not going  
 9 to allow this to head in that direction at  
 10 this point.  
 11 I'm not -- I don't want to entertain a  
 12 request that he be qualified as an expert,  
 13 but I think it is a fair response to point  
 14 out some of his experience to -- in  
 15 response to the question that Mr. McLeod  
 16 asked about do you feel you're qualified to  
 17 talk about the impact. So without using  
 18 the term expert, I think we've probably  
 19 covered or, Mr. Stucky, if you want to  
 20 bring up additional points about his  
 21 background, I don't think we need to keep  
 22 drilling in to whether he feels he's an  
 23 expert; I think we do have before us  
 24 material relevant to does he feel qualified  
 25 to answer the questions.

1 So to that extent, I'm going to sustain  
2 the objection, but I don't think since  
3 we're not going to go in the direction of  
4 discussing whether or not he can be  
5 qualified as an expert, we don't need to  
6 worry about striking that testimony because  
7 that's not where we're going to go. So you  
8 may proceed.  
9 **MR. STUCKY:** Thank you.  
10 **BY MR. STUCKY:**  
11 Q. So just a moment ago, you had mentioned that you  
12 have 15 years of experience in assessing water  
13 quality issues, and we had a series of questions  
14 regarding that, correct, Mr. Basore?  
15 **A. Yes.**  
16 Q. And can you also explain just -- just so it's  
17 clear to me, you indicate that during that  
18 15 years you taught classes on -- on some of  
19 those topics and from your experiences in KDHE,  
20 but you also indicate that you worked with the  
21 Environmental Protection Agency, the Division of  
22 Water Resource -- Resources, conservation  
23 districts, a variety of different -- the Water  
24 Office, a variety of other agencies in your work  
25 with water quality. Can you just explain for me

1 the interplay between those agencies and how you  
2 worked with them?  
3 **A. Sure. Am I on? Okay. In working with DWR, and**  
4 **you referenced a little bit ago Mr. Austin's**  
5 **experience with structures regarding dams and**  
6 **other structures, did some work with DWR**  
7 **regarding those. Concerns might -- when people**  
8 **had questions, concerns, or complaints, they**  
9 **would look in the phone book and see who they**  
10 **could come up with first, which -- which means**  
11 **that we often at KDHE were the first ones to get**  
12 **a phone call.**  
13 **Are you not hearing me? Oh, okay.**  
14 **So we, you know, gained enough information**  
15 **to understand what their -- where their question**  
16 **was sort of grounded, and then we would reach**  
17 **out to whoever might also be a player and -- and**  
18 **if it was not us, we would hand it off; and if**  
19 **it was something we could help them with, we**  
20 **would work with them.**  
21 **So worked with DWR, again the Stafford**  
22 **district office on dredge and fill permits, on**  
23 **structures, on drainage, and that sort of thing**  
24 **quite a bit, did shared inspections with them.**  
25 **Did shared inspections -- well, like the Plum**

1 **Thicket Landfill down in Harper County, was on**  
2 **that site with EPA people and U.S. Fish &**  
3 **Wildlife people. Did inspections on concerns**  
4 **that were raised by water quality, possible**  
5 **impacts on wildlife and streams through the**  
6 **water quality and did inspections and worked**  
7 **with Department of Wildlife & Parks at the state**  
8 **level, you know, the association of conservation**  
9 **districts, individual conservation districts**  
10 **because they have the power to access cost-share**  
11 **monies to go to farmers, ranchers, and**  
12 **landowners to help do streambank stabilization,**  
13 **buffer strips. Moved to no-till farming and**  
14 **things that reduce the sediment load going into**  
15 **streams and the adjunctive sediment going into**  
16 **streams that phosphorous tends to normally be**  
17 **tied to soil particles, so if you're getting**  
18 **soil erosion, you're probably generating**  
19 **phosphorous going into stream; and if you can**  
20 **prevent the one, you automatically prevent the**  
21 **other.**  
22 **Worked with the folks at KDHE who were in**  
23 **charge of feedlots, CAFO, confined animal**  
24 **feeding operations, that there are situations**  
25 **out there where farmers and ranchers may have**

1 **winter feeding areas for cattle or livestock**  
2 **that have an impact. They may be located**  
3 **downwind of a windbreak and against the**  
4 **streambank; well, in effect, they are a**  
5 **concentration during the winter months of**  
6 **livestock manure that's going to impact that**  
7 **stream the first big rains you get the next**  
8 **spring, so you want to work with them. They**  
9 **don't need a permit, they don't have enough**  
10 **animals and they don't concentrate feed year**  
11 **around so they don't qualify as a CAFO, but you**  
12 **got to work with them with K-State extension**  
13 **specialists to say, okay, here's what you can**  
14 **do, let's move the watering site up over here,**  
15 **let's put in a fence and keep them out of the**  
16 **stream, let's move your feeding area over here,**  
17 **and do things that are non-requirements,**  
18 **non-regimental, if you will, to improve the**  
19 **water quality by working with everybody.**  
20 **And at the end of the day, our approach**  
21 **was, how can we make this a win-win, how can we**  
22 **end up at the end of the day not putting anybody**  
23 **out of business but protecting the health and**  
24 **safety of the environment and the people that**  
25 **are using it and so that everybody survives and**

Page 3295

1 goes on another day, and -- and our little  
 2 corner of the world called Kansas is better off  
 3 for it.  
 4 Q. So would you have actually helped the Division  
 5 of Water Resources or been consulted by the  
 6 Division of Water Resources for impairment  
 7 investigations if there -- if -- to the extent  
 8 those impairment investigations would have  
 9 involved water quality issues?  
 10 A. Sometimes I might. It tended to be more in  
 11 dealing with county code people and private  
 12 wells and helping assess those; that they've got  
 13 a well that didn't pass the safety test for  
 14 E. coli or nitrates, and you go out and look at  
 15 it and say, okay, it's an old farmstead, it's  
 16 not a farm anymore but where was the livestock  
 17 pens when it was a farm, are they upgradient to  
 18 where the water well is, where's the septic tank  
 19 in relation to where the water well is, what  
 20 else historically has gone on on this location  
 21 that, oh, by the way, there used to be a dry  
 22 cleaner a mile away that's now upgradient. So  
 23 we would run into those kind of situations  
 24 and -- and, again, call in experts and  
 25 organizations and businesses that were in the

Page 3296

1 business of remediation, or whatever, to  
 2 determine what was going on and what was the  
 3 best way to cure it.  
 4 You know, you need to get the well out of  
 5 your basement and keep the rats from making a  
 6 nest on it and put in a new well and keep --  
 7 move it away from where you're filling your  
 8 spray tank with farm chemicals. You know, we  
 9 did -- we did a lot of water quality work with  
 10 individuals out there who needed education and  
 11 opportunities, but we also did the same thing  
 12 with city municipalities. Some of them would  
 13 have nitrates and you get to looking and, well,  
 14 there are irrigators nearby that are pouring on  
 15 a lot of fertilizer or in some cases there was  
 16 natural phosphorous in the soil that was being  
 17 eroded down into the lakes. Lake Afton comes to  
 18 mind as one of those.  
 19 Q. So both Ms. Wendling and Mr. McLeod asked you  
 20 questions about the extent to which you were  
 21 concerned about water quality issues if there  
 22 were drawdowns in the aquifer, and I think they  
 23 asked it specific to chlorides, and I believe  
 24 your answer was that if there's significant  
 25 drawdowns by the withdrawal of these aquifer

Page 3297

1 maintenance credits or lowering the minimum  
 2 index level, from your experience you had  
 3 concerns about water quality as it relates to  
 4 the chlorides; is that correct?  
 5 A. Yes, absolutely.  
 6 Q. And I guess just because I asked Mr. Austin, I'm  
 7 going to ask you as well, when you were with  
 8 KDHE, you also would have analyzed other  
 9 indicators of water quality beyond chlorides,  
 10 correct, such as arsenic or things of that  
 11 nature?  
 12 A. I am not a lab technician, I would not have  
 13 analyzed them, but we might have indicated that  
 14 somebody should get a sample analyzed in a  
 15 certified laboratory. That was one of the  
 16 things we would do is we had a list of  
 17 acceptable and recommendable certified labs in  
 18 the State of Kansas where you can send water  
 19 samples.  
 20 Many of the county health departments will  
 21 help you analyze your private drinking water  
 22 well mainly for nitrates and bacteria because  
 23 they are simple tests. The nitrate, of course,  
 24 is an issue over ten parts per million, you end  
 25 up with the blue baby syndrome, which can be

Page 3298

1 very harmful to infants or the elderly or people  
 2 with compromised immune systems. And the  
 3 E. coli is a simple test and an indicator, and  
 4 the general consensus is if you're finding  
 5 E. coli in the water supply, you probably are  
 6 also having other much more lethal pathogens in  
 7 that water supply, or you may; but they're more  
 8 difficult and expensive and time consuming to  
 9 test for so they rely on E. coli as an indicator  
 10 that says, whoops, you've got an issue here that  
 11 you need to look at and probably solve whatever  
 12 source it's coming from. And maybe that means  
 13 you need a new well or you need to take, you  
 14 know, other protective measures.  
 15 Q. Okay. And so I understand that you might have  
 16 not been the one that actually, you know, was --  
 17 was essentially using the microscope to analyze  
 18 the samples, but you would have seen the  
 19 results. And -- and if I'm talking about  
 20 analyzing from that sense, in other words, you  
 21 would have seen the results as water quality was  
 22 impacted, you -- you would have at least been  
 23 privy to those results or looked at the results  
 24 to understand how a variety of different  
 25 contaminants would have been impacted in your

1 analysis, correct?  
2 **A. Yes. And in -- and in dealing with the various**  
3 **WRAPS projects, depending on what the**  
4 **contaminant issue was they were looking for,**  
5 **again whether it was E. coli, nitrates,**  
6 **phosphorous, or in the case of the Little Ark**  
7 **WRAPS the atrazine, those were sampled through**  
8 **K-State lab results, they were published, and**  
9 **you could track, and I'm sure that part of**  
10 **Little Ark WRAPS process is they report at least**  
11 **annually to the City of Wichita as to the water**  
12 **quality that's occurring and that also the**  
13 **amount of acres, if you will, of installed**  
14 **conservation practices that have been put in**  
15 **place to ameliorate such pollution threats to**  
16 **the Little River that then impacts the water**  
17 **quality for the ASR to show Wichita that the**  
18 **substantive money they are providing for the**  
19 **WRAPS for farmers to do these kinds of**  
20 **enhancements are worth their investment in doing**  
21 **so.**  
22 Q. So to build off of what both Ms. Wendling and  
23 Mr. McLeod asked previously, aside from chloride  
24 contamination based on your 15 years of  
25 experience working for KDHE, is your concern

1 **into Kansas from John Redmond was very poor**  
2 **quality.**  
3 Q. I'm going to move on to a different line of  
4 questioning. And I just want to also first  
5 clarify my understanding of your permits. First  
6 of all, I think you said that your oldest  
7 permit, and I'm not sure if you said a water  
8 right number, but is it -- is it 26935, does  
9 that sound like your -- one of your permits?  
10 **A. It's going to be the lowest number, yeah.**  
11 Q. And I think you said that's a 1976 permit; is  
12 that right?  
13 **A. '76, '77, I don't remember exactly; it was right**  
14 **after the creation of the GMD, as I recall.**  
15 Q. And just -- just for a clear record here, so all  
16 your permits that we're talking about that you  
17 testified to, they would have predated --  
18 **A. Sorry, please repeat.**  
19 Q. I'll try again. All of your permits would have  
20 predated the City of Wichita's AMC proposal, is  
21 that right, just for a clear record?  
22 **A. Yeah. Yes.**  
23 Q. And when you applied for one of your permits --  
24 when you applied for one of your permits, did  
25 you have to have a safe yield analysis conducted

1 with -- if there's a drawdown of the aquifer  
2 below the minimum index levels, is your concern  
3 limited to just chloride, or are you also  
4 concerned about the possible impact with other  
5 contaminants as well?  
6 **A. I -- I would be concerned given the fact that**  
7 **the 303(d) list from Yoder on down lists the**  
8 **selenium and phosphorous, that if we really**  
9 **start seeing a massive inflow from the river**  
10 **into the Equus Beds from, you know, the**  
11 **drawdown, whereas the phosphorous might be**  
12 **considered a nutrient if it's pumped out and**  
13 **applied to the crop, the selenium certainly**  
14 **wouldn't be, it would be a micronutrient, if it**  
15 **was necessary at all, so -- until it reached**  
16 **some sort of a threat level. But it would be**  
17 **advisable, I think, to try and keep an eye on**  
18 **those kind of situations as to what else might**  
19 **be occurring.**  
20 I know western Kansas has some -- some of  
21 those kind of issues with water coming out of  
22 the John Redmond Reservoir that not only is it  
23 volume issues, but the water that they seem to  
24 receive, and I think Mr. Austin testified to  
25 that this morning, that out there water coming

1 when you applied?  
2 **A. As I recall, I think we had to have safe yield**  
3 **analysis on all of them because that was one --**  
4 **that was one of the first tenets of the creation**  
5 **of the GMD2 was to create safe yield policies to**  
6 **try to protect from further over-appropriation**  
7 **of the groundwater aquifer.**  
8 Q. And did you serve on the GMD board? Is that  
9 correct?  
10 **A. No, I have not ever served on the GMD board.**  
11 Q. Okay. And -- but from your experience, is that  
12 one of your concerns here, that the City of  
13 Wichita should have had safe yield analysis  
14 conducted on their permits, is that one of your  
15 concerns as well?  
16 **A. I think anytime that somebody is applying for a**  
17 **water permit in the Equus Beds, given the**  
18 **fragility of our system, and we are blessed that**  
19 **we have enough rainfall normally in this area to**  
20 **get 5, 6 inches, whatever, of recharge per year**  
21 **as opposed to western Kansas where they have**  
22 **consistently for a long time been mining water,**  
23 **we at least have a fighting chance here to keep**  
24 **in balance and maintain this aquifer for a long**  
25 **time, and I think it's in everybody's best**

Page 3303

1 **interest to do what we can to protect that**  
 2 **balance. And if that means, you know,**  
 3 **utilizing, you know, the two-mile circle and**  
 4 **trying to control over-usage or over-pumpage of**  
 5 **it, then I think that's a good thing.**  
 6 Q. I want to circle back briefly to what you said  
 7 before about being involved, you know, in some  
 8 sense in an impairment investigation by the  
 9 Division of Water Resources and sometimes  
 10 occasionally being consulted on water quality  
 11 issues. And also your testimony about the  
 12 interplay between the Division of Water  
 13 Resources and the EPA, KDHE, a number of  
 14 different agencies. Let me ask you this:  
 15 When -- are you familiar with the impairment  
 16 investigation process, in other words, someone  
 17 complains their water right is impaired, they  
 18 complain to DWR, there's an impairment, DWR does  
 19 an investigation? When I say that, do you know  
 20 what I'm talking about?  
 21 **A. Yes, usually they look at the water rights and**  
 22 **what's being done and ask for some sort of**  
 23 **demonstration of the impairment that's**  
 24 **occurring, and then I presume they do the**  
 25 **investigation to determine whether or not the --**

Page 3304

1 **the impairment actually exists and then take**  
 2 **appropriate action regard to it.**  
 3 Q. So from your experience and involvement in  
 4 impairment investigation --  
 5 **MS. MURRAY:** I'm sorry, I have -- I  
 6 don't know if it's an objection, per se,  
 7 but I just wanted to clarify, I guess, to  
 8 the extent that Mr. Stucky's questioning is  
 9 getting at the witness' knowledge of DWR's  
 10 impairment procedures, I guess if we can  
 11 all stipulate that he maybe doesn't have a  
 12 perfect knowledge of what that is and  
 13 you're asking only as to his experience, I  
 14 guess I'm okay with it, but I just want  
 15 to -- want to get that on the record.  
 16 **MR. STUCKY:** I'll also stipulate I'm  
 17 just asking about his experience with that  
 18 process. And in a very general sense.  
 19 **MS. MURRAY:** Okay.  
 20 **PRESIDING OFFICER:** Yes, thank you,  
 21 I'm -- I'm not taking Mr. Basore's  
 22 testimony as -- for the purpose of  
 23 describing the impairment process but his  
 24 experience and his understanding of it.  
 25 **BY MR. STUCKY:**

Page 3305

1 Q. So, Mr. Basore, my question is this, just to  
 2 boil down where I'm headed with these questions  
 3 as we talk about the interplay with these  
 4 different agencies on an impairment  
 5 investigation, my question is this, from your  
 6 experience and involvement with KDHE, and also  
 7 perhaps your own experience as a water right  
 8 owner, as you experience others that may have  
 9 been involved in impairment investigations, is  
 10 that generally a long process, in other words,  
 11 it takes a long time to make that final  
 12 determination?  
 13 **A. Probably most of the impairment situations that**  
 14 **I've been around at all had more to do with**  
 15 **water quality than water quantity. Again,**  
 16 **that's because of the sort of division of labor**  
 17 **that KDHE looks after the water quality and DWR**  
 18 **looks after the water quantity. I would imagine**  
 19 **those would be on an individual case basis,**  
 20 **depends on what the impairment is proposed or**  
 21 **accused of being.**  
 22 **If it's a complicated water quality**  
 23 **pollution thing and there's underground plumes**  
 24 **and there's other things that would have to be**  
 25 **investigated, it could be a much more lengthy**

Page 3306

1 **process involving testing lab results, analysis,**  
 2 **you know, qualification, quantification, those**  
 3 **sorts of things, as opposed to an impairment**  
 4 **that somebody's blocking streamflow upstream**  
 5 **from me and my water right's been impaired and**  
 6 **it's a pretty simple, you know, probably**  
 7 **question to figure out is it being blocked or is**  
 8 **it not.**  
 9 Q. Mr. Basore, you've been in the room a lot of the  
 10 time during the testimony, and I think you were  
 11 in the room at least during the bulk of the  
 12 testimony involving the City of Wichita. Do you  
 13 recall some testimony from various witnesses  
 14 from the City of Wichita where they stated that  
 15 in the event it was determined that there may be  
 16 issues with, I guess, the saturated thickness in  
 17 the aquifer or water quality or things of that  
 18 nature, there was a remedy in the sense that  
 19 impairment investigations could be done in the  
 20 future? Do you recall some of that testimony  
 21 and some of that discussion?  
 22 **A. Yes, as I recall, and it sort of indicated that**  
 23 **the City would maybe only respond after the**  
 24 **fact; that if somebody complained that they were**  
 25 **suffering an impairment because of the ACMs, or**

1 **whatever it was, that the City would sort of**  
2 **investigate after the fact, and if they were**  
3 **within, I want to say 660 feet of a city well**  
4 **and could demonstrate that they were being**  
5 **impaired that the City would deepen their well,**  
6 **provide a new well, provide them with some other**  
7 **alternative water source or something to remedy**  
8 **that particular situation. But that seemed to**  
9 **be a very limited ability to remedy, and it was**  
10 **only after the fact. There wasn't much in --**  
11 **offered in the way of pre-preparation or -- or**  
12 **protection ahead of time.**

13 Q. On the context of what you just said, given the  
14 fact that the impairment investigation can take  
15 awhile and you said that you rely on your water  
16 for your very way of life, for your livelihood,  
17 would an impairment investigation that takes a  
18 long time, does that feel very satisfying as a  
19 landowner versus analyzing these issues up  
20 front?

21 A. No, certainly not. When we -- when I suffered  
22 that well collapse, if you will, and we had to  
23 drill a new one, had to go through the  
24 permitting process of, one, to move the point of  
25 diversion 50 feet, whatever it was we did, plug

1 just drill a well deeper in the future, but I  
2 think you said something from your own  
3 experience with the well collapse and some  
4 things of that nature that that doesn't sound  
5 like that's a very satisfying response for you  
6 either and it's not something that would always  
7 be viable for -- for you as a water right holder  
8 and irrigator?

9 A. In my case --

10 Q. Is that true? I think you're on mute.

11 A. In my case, my irrigation wells and my domestic  
12 wells are to such a depth that there's -- you  
13 can't drill deeper and get water because there's  
14 no deeper to go to, I'm pretty much at the  
15 bottom of the aquifer. I understand if somebody  
16 has a shallow or domestic well or even  
17 irrigation well in the well field where the  
18 drawdown might be much more substantial than  
19 10 feet where, indeed, they might end up with a  
20 dry hole, if it were, where drilling a new well  
21 to a deeper depth might be able to provide them  
22 with a water supply, that may be entirely  
23 possible.

24 In 19 -- in the 1940s when Wichita first  
25 came out here and started drilling wells in the

1 the old well, drill a new one, I had to hire a  
2 certified geologist, hydrogeologist who was well  
3 known in the municipal field for doing municipal  
4 wells, which are drilled and cased and built to  
5 a higher standard than an irrigation well is,  
6 and I had to pay him several thousand dollars to  
7 figure out exactly what sort of screening size  
8 and what sort of gravel size we needed in it and  
9 got it all done, and I will say I think GMD  
10 tried to help us get through that process as  
11 rapidly as we could.

12 It was during a growing season when it  
13 happened, it was not in the middle of a drought  
14 but it was in a growing season, so we were  
15 without the ability to irrigate for ten days,  
16 two weeks, whatever. I can't tell you exactly  
17 what negative impacts it might have had on the  
18 crop, it's been too many years back, but we --  
19 we felt fortunate to get out of it without  
20 having a more serious situation than what we  
21 did.

22 Q. So you were already perhaps asked this question,  
23 but I may have missed the answer somehow, you  
24 know, the City also said another potential  
25 remedy when you were in the room was to simply

1 Equus Beds, there were numerous individuals who  
2 had shallow sand point wells in the well field  
3 area that suddenly didn't have water and the  
4 City was persuaded to come out and provide them  
5 with a deeper well; and I don't know if they  
6 drilled those or if they drove sand points or  
7 what -- what they did to remedy, but my  
8 understanding was they did provide deeper wells  
9 to replace the shallow ones that no longer were  
10 working.

11 Q. Okay. You were maybe asked some questions about  
12 whether or not you had been asked to sell water  
13 or -- or water rights before. Were you asked  
14 some questions about that, I'm sorry, just also  
15 to clarify?

16 A. I don't think I've been asked under my  
17 testimony. It's one of the things I did discuss  
18 with counsel as to whether or not I had been  
19 offered. No, the City has never approached me  
20 about buying any water rights. I know there is  
21 a square mile of section that is two miles east  
22 of me that -- and happens to be a landowner who  
23 lived in Wichita basically sold the water rights  
24 to the City some decades ago. But my  
25 understanding is that the farm tenant operator

Page 3311

1 still gets to utilize those rights for  
 2 irrigation, and the City has not put down wells  
 3 to access that water to this point.  
 4 So I know water rights did become a  
 5 property right, which was a step in the right  
 6 direction. I think people were surprised,  
 7 disappointed, whatever the words were, in 1940  
 8 when the State changed from a riparian water law  
 9 to an appropriated water right law, and a lot of  
 10 people in the Equus Beds assumed they owned  
 11 everything under their feet, the land, the sand,  
 12 the gravel, the oil, the gas, the water, the  
 13 gold, whatever might be there, and then suddenly  
 14 there was a change at the state in the water  
 15 law, and Wichita was out here accessing and  
 16 removing water under their land and they were  
 17 not getting paid for it because it was not a  
 18 property right. They didn't have a water right  
 19 that was -- you know, that they could stand on.  
 20 So --  
 21 Q. So -- so just to clarify here, I -- to clarify  
 22 for me, based on being approached to purchase or  
 23 your -- your experience as a water owner, have  
 24 you gained a sense for what the water is worth,  
 25 or is that something that you don't have

Page 3312

1 experience on?  
 2 **A. I can't tell you what -- I can't speculate on**  
 3 **what a water right might be worth to somebody.**  
 4 **The direct effect of what we would see is a**  
 5 **diminution of the land value that has a water**  
 6 **right under it and associated with it. I think**  
 7 **it's kind of similar to other mineral rights,**  
 8 **oil and gas, that you can sell the surface and**  
 9 **reserve the minerals or sell them separately and**  
 10 **reserve the land; I think the water right, my**  
 11 **understanding, is would work pretty similar in**  
 12 **the same fashion, but to be able to say, yeah,**  
 13 **your water right is worth so many dollars an**  
 14 **acre-foot, I have no clue as to how you would**  
 15 **arrive at that. Like I say, the only way to**  
 16 **really put a value to it is what's the value of**  
 17 **that irrigated land versus what would it sell**  
 18 **for if it was dry land without a water right,**  
 19 **and the difference between the two would be the**  
 20 **value of the water right.**  
 21 Q. And so in that -- in that general sense, you  
 22 have an understanding of what irrigated land  
 23 usually sells for versus dry land in your area;  
 24 is that correct? That's something you  
 25 traditionally have followed as a landowner; is

Page 3313

1 that right?  
 2 **A. I try to, there has not been a lot of recent**  
 3 **land sales right around in my area. Land tends**  
 4 **to be held pretty closely, and -- and we have --**  
 5 **again, you know, I'm sitting on a century farm.**  
 6 **My, you know, great uncle ended up in ownership**  
 7 **of the land I sit on in 1910, and they had**  
 8 **leased it at -- for years ahead of that, and**  
 9 **there are other multiple generation landowners**  
 10 **around, that land is held fairly tightly.**  
 11 **My understanding is land values are still**  
 12 **pretty high, and there are people in the current**  
 13 **COVID deal who have got out of the stockmarket**  
 14 **and are looking around and they think land is a**  
 15 **great value to invest in. So I couldn't quote**  
 16 **you accurately a price today for what my land is**  
 17 **worth. You'd have to get ahold of a Realtor**  
 18 **who's in the market on a frequent basis to be**  
 19 **able to -- to give you that kind of information.**  
 20 **I have kind of a sense for it but --**  
 21 Q. Yeah, and I'm asking for your general sense  
 22 based on, you know, the last few years; I'm not  
 23 talking about the sense from, you know, a week  
 24 ago what it's worth. In a general sense, what  
 25 's the difference in value between an irrigated

Page 3314

1 parcel of land and a nonirrigated parcel of  
 2 land? Mr. Basore?  
 3 **A. Based on several years ago, I would say it would**  
 4 **certainly be a third less for the dry land. I**  
 5 **mean, there is intrinsic value in owning land,**  
 6 **there is a bit of a premium on owning land close**  
 7 **to Wichita, which makes it very accessible to an**  
 8 **absentee landowner, so people are willing to pay**  
 9 **more for dry land out here than they are further**  
 10 **west. And crop productivity is higher here**  
 11 **because the rainfall amount is higher. But I**  
 12 **would certainly say it would be a third less**  
 13 **probably, dry land as opposed to irrigation.**  
 14 **Other people may tell me that's way high or way**  
 15 **low and I would have a hard time arguing.**  
 16 Q. Yeah, so in other words and applying that to  
 17 your own land, if -- if you lost your water  
 18 right, would you believe that your land value  
 19 would decrease by a third or a half or something  
 20 of that nature?  
 21 **A. Yes, I would expect that to be true.**  
 22 Q. And so in other words, if the City of Wichita's  
 23 proposal causes drastic enough impacts to your  
 24 water right that you essentially lose your  
 25 ability to use it, that would cause you

1 significant economic harm; is that true?  
 2 **A. Certainly, I think it would be inadvertent**  
 3 **taking, however you want to characterize it, the**  
 4 **same for -- if the water becomes polluted to**  
 5 **where I can't use the water, the water right**  
 6 **itself would lose value, let alone the -- and it**  
 7 **would be a twofold impact on the land that, one,**  
 8 **it would lose value as -- as just an asset with**  
 9 **value, but it would also lose productivity,**  
 10 **which means future income off of that land is**  
 11 **going to be greatly reduced by a third, by a**  
 12 **half, going back to dryland crops as opposed to**  
 13 **irrigated corn or soybeans. There would be a**  
 14 **direct impact from an income point of view and**  
 15 **from an asset value point of view.**  
 16 Q. And I don't ask you to speak conclusively for  
 17 the rest of the Intervenors but let me ask you  
 18 this: If there was a demonstration or a proof  
 19 that the City lowering the minimum index level  
 20 and withdrawing aquifer maintenance credit  
 21 resulted in -- in taking away of water from you  
 22 and other Intervenors, would that economically  
 23 impact other Intervenors beyond yourself?  
 24 **A. Oh, certainly, everybody who would be impacted**  
 25 **by the area of -- of reduced level in the**

1 **aquifer, whether that's 10 feet or whether it's**  
 2 **40 feet, would be impacted, and those who lost**  
 3 **the ability to irrigate would be impacted even**  
 4 **worse, or those who had to pump from a greater**  
 5 **depth would have to pay a lot more for the power**  
 6 **supply to do that with.**  
 7 **We, in the last, oh, it's been five years**  
 8 **ago or so, the Halstead-Mount Hope Co-Op**  
 9 **Association built a new grain elevator just west**  
 10 **of Bentley, and it's in the heart of an**  
 11 **irrigated area on north of the Big Arkansas**  
 12 **River in the Equus Beds, and they do a**  
 13 **land-office business in taking grain from all**  
 14 **the farms around. And certainly if we went back**  
 15 **to dryland farming where the crop yields were**  
 16 **reduced by a third, by a half, whatever it might**  
 17 **be, that elevator, that co-op association would**  
 18 **also suffer a loss of income, one, from the**  
 19 **volume of crops they would no longer handle, but**  
 20 **also there would be less demand for their**  
 21 **fertilizers, seeds, herbicides, and those sorts**  
 22 **of inputs and fuel. A lot of diesel fuel is**  
 23 **used to power irrigation wells, and propane.**  
 24 **And Everygy and the REA might feel it 'cause**  
 25 **there are any number of pivots that are run off**

1 **of three-phase electricity directly without a**  
 2 **ground power unit.**  
 3 Q. Okay. You mentioned that your land has been in  
 4 your family for years and years, so in other  
 5 words, if you were to lose that water right,  
 6 that would interfere with the investment you've  
 7 made in that land and your expect -- expectation  
 8 that you could have that future value or -- or  
 9 investment in your land in the future; is that  
 10 true? Mr. Basore, is that true that if you  
 11 lost --  
 12 **A. Yes, absolutely it would -- it would impact**  
 13 **future value of it, and it would at the same**  
 14 **time impact probably the ability of my kids and**  
 15 **grandkids to continue on to farm it within the**  
 16 **family as it has been farmed for over 100 years.**  
 17 **MR. STUCKY:** All right. No further  
 18 questions. Thank you, Mr. Basore.  
 19 **PRESIDING OFFICER:** Ms. Wendling?  
 20 **MS. WENDLING:** I believe we were  
 21 suppose to quit at 4:30, but I don't have  
 22 any further questions.  
 23 **PRESIDING OFFICER:** Okay. It is  
 24 4:30, we were supposed to yield the room at  
 25 4:30. Real quickly, I'll ask if there are

1 other questions, and if there are, we'll  
 2 take them up in the morning. And if not,  
 3 then I can dismiss our witness. But does  
 4 anyone anticipate more questions for  
 5 Mr. Basore tomorrow morning? Hearing --  
 6 hearing none, then this is a good time to  
 7 take a break for the day. Mr. Basore,  
 8 you're excused, thank you.  
 9 And we will go off the record and recess  
 10 until tomorrow morning at 8:30. Thank you,  
 11 everyone.  
 12 (Whereupon, the proceedings were  
 13 adjourned at 4:31 p.m.)

1 **PRESIDING OFFICER:** We're now on the  
2 record. This is February 3rd, 2021, this  
3 is the -- I'm sorry, I'm back -- I'm  
4 reading my notes from yesterday. It's  
5 February 4th, 2021, this is the  
6 continuation of the administrative hearing  
7 for the City of Wichita's request to modify  
8 their aquifer storage and recovery project,  
9 Phase II. And we are in the process of the  
10 Intervenors presenting their case, so  
11 without further ado, I will turn this over  
12 to Tessa.  
13 **MS. WENDLING:** We will start by  
14 calling Josh Carmichael.  
15  
16 JOSH CARMICHAEL,  
17 having been first duly sworn, was  
18 examined and testified as follows:  
19  
20 **DIRECT EXAMINATION**  
21 **BY MS. WENDLING:**  
22 Q. All right. Will you please state your name for  
23 the record.  
24 **A. My name is Josh Carmichael.**  
25 Q. And do we want to check the echo?

1 Can you state where in the basin storage  
2 area you live?  
3 **A. According to the map that I have seen, I am**  
4 **right on the southern edge of index cell 32.**  
5 Q. Do you want to just state your address?  
6 **A. 13508 West 101st Street North.**  
7 Q. And is that in the Bentley area?  
8 **A. That is in the Bentley area.**  
9 Q. And how long have you lived in that area?  
10 **A. As of February 17th of this year, I will have**  
11 **lived within 500 feet of that area of the Equus**  
12 **Beds for 38 years.**  
13 Q. Referring to Intervenors' Exhibit Number --  
14 what's been marked for identification as 1, or  
15 tab number 1, I guess, do you see a map with  
16 your name on it?  
17 **A. I do.**  
18 Q. And does the triangle with your name roughly  
19 reflect the area of your domestic well?  
20 **A. It does.**  
21 Q. Why do you have a domestic well?  
22 **A. It is my only source of water in that area.**  
23 Q. And do you have a secondary or alternative  
24 source?  
25 **A. I have none at this time.**

1 the assurance you need regarding the  
2 sustainability of your well?  
3 **A. I'm not sure that a guarantee that I will always**  
4 **have water would make me feel that my well would**  
5 **always be sustainable. If it was to ever become**  
6 **impacted by chlorides or go dry, even if I do**  
7 **have another source of water, my well would not**  
8 **be sustainable.**  
9 Q. Are you at all concerned about the length of  
10 time it would take during a drought to remedy  
11 any issues you experience with your domestic  
12 well?  
13 **A. Of course I am. Nothing happens overnight and I**  
14 **get that, but when it comes to water, it has to**  
15 **happen overnight. It's in my opinion that water**  
16 **is the lifeblood of all of us. Without it, a**  
17 **few hours becomes a big deal.**  
18 Q. Can you tell us what your occupation is?  
19 **A. I currently run a center pivot irrigation**  
20 **business.**  
21 Q. And how long have you been doing that?  
22 **A. I think I started in 2011, 2012, somewhere in**  
23 **that time frame.**  
24 Q. Was there anything specific that drew you into  
25 the irrigation business?

1 Q. And to your knowledge, is your well within  
2 660 feet of any City of Wichita well?  
3 **A. It is not.**  
4 Q. How would you and your family be impacted if  
5 your domestic well is no longer able to access  
6 quality water?  
7 **A. It would be life altering.**  
8 Q. Would you care to expand on that?  
9 **A. Pretty -- pretty broad question. So if we run**  
10 **out of water, obviously either we have to get**  
11 **water hauled in, we have to have rural water, or**  
12 **we have to up and leave.**  
13 Q. Have you heard any discussion throughout these  
14 hearings or elsewhere of a potential remedy the  
15 City of Wichita would provide to those domestic  
16 wells impacted by the ASR project?  
17 **A. I have not, and that was one of the initial**  
18 **things that I found alarming. In the Equus Beds**  
19 **well field, there is gobs and gobs and gobs of**  
20 **domestic wells that would not be protected but**  
21 **are in the basin storage area. They're just**  
22 **simply not within 660 feet of a City of Wichita**  
23 **well.**  
24 Q. And if the City offers to remedy those impacted  
25 regardless of the distance, does that give you

1 **A. I seen what can actually be done with a drop of**  
2 **water and how we could become more efficient**  
3 **with it and the technologies that are coming**  
4 **down the pipeline to help us be more efficient**  
5 **with it, and it swooped me in.**  
6 Q. What type of work do you do for your customers?  
7 **A. We -- we do not drill wells, but we do work on**  
8 **the pumps, the column, the motors up top, the**  
9 **center pivots, and the technology that goes**  
10 **throughout the whole system.**  
11 Q. What are some of the things that you've  
12 implemented to help your customers conserve  
13 water?  
14 **A. Oh, there's many facets that we have done. In**  
15 **my opinion, the biggest one is sprinkler**  
16 **efficiencies. We went from high-pressure**  
17 **systems down to low-pressure systems, we've**  
18 **increased our efficiency out of those sprinklers**  
19 **dramatically, trying to make every drop count.**  
20 **And on top of that, we have added technologies,**  
21 **whether it is variable rate irrigation, soil**  
22 **moisture probes, or monitoring water meters to**  
23 **know how much water we're pumping, when we're**  
24 **pumping it, and the totalizer for us.**  
25 Q. Who pays for all of these technology efforts?

Page 3328

1 **A. My customers would be the ones that would pay**  
 2 **for all of these.**  
 3 Q. And what would motivate them to spend money on  
 4 conservation?  
 5 **A. Well, contrary to the popular belief, it costs a**  
 6 **lot of money to irrigate. You have your pumping**  
 7 **cost and you have your maintenance cost, and**  
 8 **also if you're -- if you're over-watering,**  
 9 **you're losing yield, so there -- there's a huge**  
 10 **cost that seems to always go duly unnoted.**  
 11 Q. You mentioned that you don't personally dig  
 12 wells, but do you have quite a bit of experience  
 13 working with wells in general?  
 14 **A. I do.**  
 15 Q. Would you say -- have you experienced  
 16 differences between wells throughout the basin  
 17 storage area?  
 18 **A. That would be correct.**  
 19 Q. And can you elaborate on any of those  
 20 differences?  
 21 **A. I would say the -- of course, the closer you get**  
 22 **to the river, you get into the salts. The**  
 23 **closer you get to Halstead, you get into iron**  
 24 **bacteria. The closer you get to Burrton, you**  
 25 **get into salts and manganese. That would be the**

Page 3329

1 **differences that I see between the wells. Every**  
 2 **well is different, every well that's in the same**  
 3 **field is different. That's -- so, yeah, there's**  
 4 **a lot of differences.**  
 5 Q. Do you happen to know what the approximate cost  
 6 is of putting in a well?  
 7 **A. Last I knew was upwards of \$100 a foot just to**  
 8 **drill the well; that does not include any of**  
 9 **your pumping equipment.**  
 10 Q. And do you know approximately how long it takes  
 11 to drill a well?  
 12 **A. Somewhat of a loaded question, the time frame of**  
 13 **when the rig actually gets to the field and has**  
 14 **completed the hole, cased it, and ready to go, I**  
 15 **would say two to three days. The issue that we**  
 16 **have right now is the backlog of wells that need**  
 17 **drilled. Most drilling companies in our area**  
 18 **are three to four months out right now.**  
 19 Q. If we're three to four months out during a  
 20 normal period, would you estimate that that  
 21 would increase during a period of a drought?  
 22 **A. Of course it will increase drastically during a**  
 23 **drought, as we seen in 2011, 2012.**  
 24 Q. Irrigation systems, I understand there are  
 25 different types of systems, can you tell us

Page 3330

1 anything about the cost of putting in an  
 2 irrigation system?  
 3 **A. To start a complete new project, you're probably**  
 4 **looking at upwards of around 80 to \$100,000**  
 5 **based on how the system is set up, no well**  
 6 **included and no piping or electricity included.**  
 7 Q. And if that system loses access to water, does  
 8 it retain that value?  
 9 **A. Somewhat. The depreciation schedule on it is**  
 10 **quite drastic the first couple of years, so it**  
 11 **wouldn't be anything like buying it to set it**  
 12 **there for 20 years.**  
 13 Q. Have you observed in any of the systems you've  
 14 worked on an impact to the system from chloride?  
 15 **A. Yeah, most definitely. We've -- we've had to**  
 16 **make the switch to a different kind of piping so**  
 17 **we can try to get more years out of the systems.**  
 18 **Most of the ones that you see are galvanized**  
 19 **pipe, but we're going with lined pipe or we are**  
 20 **putting PVC pipe underneath the galvanized pipe**  
 21 **strictly due to the chloride issue.**  
 22 Q. To your knowledge, if an irrigator invests in  
 23 conservation efforts, what happens to the  
 24 reduction, the water not used?  
 25 **A. To my knowledge, it's on a year-by-year base,**

Page 3331

1 **it's kind of a use-it-or-lose-it annual**  
 2 **accounting method.**  
 3 Q. You mentioned that you were just getting started  
 4 in the 2011-ish period. During that, well, I  
 5 guess drought period of 2011 and '12, did you  
 6 notice any impact to your -- to irrigation  
 7 systems?  
 8 **A. Yeah, there was quite a few in the area that put**  
 9 **excessive hours on trying to keep their crops**  
 10 **alive; a lot of those even let half of the pivot**  
 11 **go or maybe even all of the pivot and just try**  
 12 **to keep up with what they could and use the**  
 13 **water as efficiently as they could. Kind of**  
 14 **like Rich said yesterday, if there was a corn**  
 15 **rotation, a lot of that got chopped for silage**  
 16 **for cattle. Really -- really eye-opening**  
 17 **experience to see somebody trying to save that**  
 18 **type of an investment.**  
 19 Q. When you say trying to save that type of  
 20 investment, can you elaborate on what you mean  
 21 by that?  
 22 **A. They were willing to give up half of their**  
 23 **initial investment to try to make a crop out of**  
 24 **the other half of it.**  
 25 Q. So for you personally having a domestic well but

1 not your own crops, are you making investments  
2 in your property and land based on having access  
3 to water?  
4 **A. Can you ask that question another way?**  
5 Q. Have you made investments in your home based on  
6 having access to water that you would not have  
7 made if you did not have access to water?  
8 **A. Yeah, we have indoor plumbing. We -- when I**  
9 **bought that house in 2006, maybe earlier, the**  
10 **house was built in the '70s, we went all through**  
11 **it, put in updated appliances, fixtures,**  
12 **toilets. That was not something that we got any**  
13 **money for or a pat on the back that says we did**  
14 **good; we did it because we thought it was right.**  
15 Q. And do you know the value of your house if you  
16 no longer have water?  
17 **A. I'm not sure that I would know the value of it,**  
18 **but I would say that it would be very, very**  
19 **minimal.**  
20 Q. Are you familiar with the -- Wichita's ASR  
21 project in general?  
22 **A. I am.**  
23 Q. And what is your knowledge of the basin storage  
24 area?  
25 **A. My knowledge of the basin storage area is a**

1 **little bit limited due to the fact that I'm not**  
2 **sure exactly where it's at.**  
3 Q. Where it's at in the aquifer or where it's at in  
4 general?  
5 **A. Where it is at in the aquifer.**  
6 Q. And what is your understanding of the function  
7 of the basin storage area?  
8 **A. My understanding is that the basin storage area**  
9 **is supposed to be an unsaturated thickness,**  
10 **whether that's from the ground down or maybe**  
11 **possibly even above the ground, I'm not sure,**  
12 **but that's my opinion on what it is.**  
13 Q. And if you understand lowering -- that the  
14 minimum index level is the bottom of the basin  
15 storage area, do you have concerns with lowering  
16 that minimum index level?  
17 **A. Most definitely, yeah, I have concerns with**  
18 **that. Back in 1993 when GMD2 and the City came**  
19 **together, and I -- I do believe DWR was involved**  
20 **in this process as well, they established this**  
21 **level for a reason. I don't -- I don't really**  
22 **have any of the facts about why it was**  
23 **established in front of me, but from what I**  
24 **recall, that was one of the lowest rates that**  
25 **the aquifer reached due to pumping. In 1993,**

1 **the City agreed to this, I think they might even**  
2 **have built some management plans off of it.**  
3 **That's one of the alarming concerns for me is if**  
4 **it was so detrimental in 1993, what has changed**  
5 **to make it okay today?**  
6 Q. And in reviewing the proposal and attending  
7 these hearings, have you heard anything that  
8 alleviates that concern?  
9 **A. I have not.**  
10 Q. Would you like additional information to show  
11 that going below the '93 levels is sustainable  
12 for the aquifer?  
13 **A. Most definitely. I try -- I'm basing my**  
14 **opinions off of past work that was done by the**  
15 **City and Burns & Mac, they told us that ASR II**  
16 **was going to put so many acre-feet back in the**  
17 **ground. I think they might have achieved 25**  
18 **percent of that, so they were 75 percent wrong.**  
19 **If this model is 75 percent wrong, I think it's**  
20 **extremely harmful for the aquifer.**  
21 Q. In the City's proposal when they discuss the  
22 lowered minimum index levels, they also show the  
23 remaining saturated thickness in the area. What  
24 comfort level does knowing the remaining  
25 saturated thickness give you regarding this

1 proposal?  
2 **A. I haven't seen what their saturated thickness**  
3 **would be in my index cell, but I can't say that**  
4 **I would be comfortable with it even if I had the**  
5 **figure in front of me.**  
6 Q. Yesterday Mr. Basore talked about having  
7 available water, yet being contaminated by  
8 chloride due to his proximity to the Arkansas  
9 River. Is that a concern you similarly face?  
10 **A. Most definitely. I think Mr. Basore had stated**  
11 **and you had shown him on a map that the salt**  
12 **plume from the Big River was moving to the north**  
13 **and to the east, and index level 32 would be**  
14 **north and east of Mr. Basore's location.**  
15 Q. That was in District's Exhibit Number 68, I  
16 believe.  
17 **A. This one?**  
18 Q. Yes. Okay. It is towards the back, figure  
19 number 8 of Mr. Romero's expert report. It  
20 should be the last figure in his.  
21 **A. Figure 8.**  
22 Q. Do you believe that's the image we spoke -- I  
23 spoke about with Mr. Basore yesterday?  
24 **A. Yes.**  
25 Q. And in looking at those lines and finding index

Page 3336

1 well 32, which would be close to you in index  
 2 cell 32, what do you notice about the color of  
 3 lines?  
 4 **A. The colors of the lines seem to be right on top**  
 5 **of me.**  
 6 Q. And does that increase your concern regarding  
 7 chloride movement?  
 8 **A. Most definitely.**  
 9 Q. Do you -- or have you looked at what chloride  
 10 might do to your domestic well?  
 11 **A. I haven't looked at the exact things, I guess,**  
 12 **that it could do to my household. Through my**  
 13 **work in irrigation, I guess it's kind of common**  
 14 **knowledge for me to what it could do, rusty**  
 15 **pipes, rusty valves, would be really hard to**  
 16 **get dishes without water spots, have an adverse**  
 17 **effect on your health, yeah.**  
 18 Q. The City's proposal also included the component  
 19 of the aquifer maintenance credit. Do you have  
 20 an understanding of how the AMCs would operate?  
 21 **A. Not necessarily. I know we have black water and**  
 22 **we got blue water, and then it -- I'm not sure**  
 23 **where it goes from there. That's the part**  
 24 **that's a little frustrating to me to see how**  
 25 **this water gets mixed together and then we have**

Page 3337

1 **a new color.**  
 2 Q. Do you understand whether the City would be  
 3 injecting water into the aquifer to accumulate  
 4 these credits?  
 5 **A. I do.**  
 6 Q. What is your understanding?  
 7 **A. My understanding is that they're going to be**  
 8 **pulling water from the river, sending it to**  
 9 **town, and getting a future credit in the well**  
 10 **field for that gallon that they sent to town.**  
 11 Q. Do you know if any other users of the aquifer  
 12 are similarly able to accumulate such credits?  
 13 **A. It's my understanding that all water right**  
 14 **holders in the State of Kansas follow the same**  
 15 **guidelines where it's a use it or lose it on an**  
 16 **annual basis.**  
 17 Q. And does the AMC concept appear consistent with  
 18 that?  
 19 **A. It does not, it would -- it would allow for**  
 20 **banking of future credits that we're not sure**  
 21 **are even in the aquifer.**  
 22 Q. From the proposal and the testimony for this  
 23 water, have you -- do you understand what might  
 24 potentially happen to you or the health of the  
 25 aquifer if the 120,000 acre-feet were withdrawn

Page 3338

1 from the aquifer?  
 2 **A. There's been evidence that's been supplied**  
 3 **that's supposed to assure me that the water will**  
 4 **be there. Unfortunately, I go back to the**  
 5 **ASR II program where they're going to inject all**  
 6 **this water, they have achieved 25 percent of**  
 7 **that, so I'm not sure that I can rely on this**  
 8 **model.**  
 9 Q. Yesterday, Mr. Basore talked about a lack of  
 10 trust, would you agree with those sentiments?  
 11 **A. I would. And my previous thoughts here, in**  
 12 **1993, we set these levels, the City agreed to**  
 13 **it, DWR agreed to it, City set the management**  
 14 **programs based off of it, showed they're in**  
 15 **favor of it. Now they're not. Is that going to**  
 16 **happen again in five years if this gets**  
 17 **approved, are they going to come back for**  
 18 **another 120,000 acre-feet? I'm not sure.**  
 19 Q. Why did you decide to intervene in this matter?  
 20 **A. I decided to intervene because I felt there was**  
 21 **a lot of unanswered questions, and after --**  
 22 **after listening to all the testimony, I feel**  
 23 **that I have more unanswered questions now. I**  
 24 **don't feel that the City has showed their -- or**  
 25 **bearred their burden of proof to tell us that**

Page 3339

1 **this really is going to work. I'm worried about**  
 2 **the storing of the AMCs, are -- are they storing**  
 3 **that under my personal property, is that going**  
 4 **to affect me if I were to dig a pool in my back**  
 5 **yard and there's water at 1 foot? Do I get**  
 6 **compensated for water being stored under my**  
 7 **land, like they do with natural gases and stuff**  
 8 **like that?**  
 9 **Being around the well field quite a bit and**  
 10 **the river, I have noticed sinkholes that appear**  
 11 **due to underflow, and I feel that when we are**  
 12 **recharging this at a rate they're trying to do,**  
 13 **they're going to be creating underflow to try to**  
 14 **fill a cone of depression.**  
 15 **Other adverse effects that has not --**  
 16 **nobody's came up with any solutions for, I'm**  
 17 **not -- I'm not sure that I will be covered at my**  
 18 **domestic well since I'm not within 660 feet of**  
 19 **one of their wells. I'm alarmed that they're**  
 20 **trying to switch to all Equus Beds water to**  
 21 **create a hole so they can recharge and not use**  
 22 **Cheney; to me, that's not being a good steward**  
 23 **of the water. Those are some of the key points**  
 24 **of why I chose to intervene.**  
 25 Q. As the one outside of 660 feet, or even for

1 those within the 660 feet, what type of programs  
2 would you like to see in place for those -- for  
3 anyone in Equus Beds impacted by ASR pumping, or  
4 the ASR program?  
5 **A. With -- with a project of this magnitude and the**  
6 **square area that they're wanting to call a basin**  
7 **storage area, I feel that everybody that's in**  
8 **that basin storage area should fall under the**  
9 **660-foot clause, whether it be due to a high**  
10 **water table or to the chloride migration or lack**  
11 **of water.**  
12 Q. And should the burden of proof be on the  
13 individual to prove that they have been  
14 negatively impacted?  
15 **A. No, it should not. To my opinion, that is why**  
16 **we have the Division of Water Resources, they**  
17 **are to work for the people.**  
18 Q. Do you fear there could be a lengthy period of  
19 trying to prove damage and then also  
20 implementing a remedy if something were to  
21 happen?  
22 **A. Most definitely. How long has this hearing been**  
23 **going on?**  
24 Q. Do you think it would be worthwhile to model and  
25 study the maximum possible withdrawal the City

1 **standards.**  
2 Q. Do you believe your customers would want to bank  
3 their water rights if they had the opportunity?  
4 **A. Absolutely, 100 percent, no question about it.**  
5 **MS. WENDLING:** Thank you, I have no  
6 further questions.  
7 **PRESIDING OFFICER:** Okay. Thank  
8 you, sir. Mr. McLeod.  
9 **MR. MCLEOD:** Thank you.  
10  
11 **CROSS-EXAMINATION**  
12 **BY MR. MCLEOD:**  
13 Q. Mr. Carmichael, you indicated that -- that you  
14 don't dig wells. Do you have any licenses as a  
15 well driller?  
16 **A. I do not.**  
17 Q. You indicated in your main testimony that if  
18 your well were impacted by chlorides, it would  
19 not be sustainable. Are you familiar with  
20 reverse osmosis treatment systems that treat  
21 water for salinity?  
22 **A. Very vaguely.**  
23 Q. Have -- have you looked at the possibility of  
24 installing such a system in a domestic well?  
25 **A. I have not.**

1 is seeking from the Equus Beds?  
2 **A. Absolutely, by three different companies.**  
3 Q. I know you've mentioned that you have several  
4 concerns regarding this, are there any concerns  
5 that you have not yet mentioned regarding the  
6 proposal that you'd like to share?  
7 **A. I am a little bit worried about the -- if**  
8 **there's any permit conditions stating that the**  
9 **native rights are used before the ASR credits**  
10 **are used. I tried to look that up last night,**  
11 **and I can't really find anything where there was**  
12 **any permit conditions that are going to be tied**  
13 **to this. In my opinion, a project like this**  
14 **should have quite a few permit conditions.**  
15 Q. And do you have a reason for why you think those  
16 native rights should be used first?  
17 **A. I guess I would base that back on a native water**  
18 **right, you have so many acre-feet per year to**  
19 **use at your discretion on an annual basis, I --**  
20 **the ASRs are going to go into an accounting**  
21 **system of some sort where they can bank those up**  
22 **for all at one time. I just feel that it's --**  
23 **we don't have access to the bank accounting**  
24 **method so we have to use our water right. I**  
25 **feel the City should be held to the same**

1 Q. Do you have any reason to think that you  
2 wouldn't be able to install a reverse osmosis  
3 system in your domestic well if it developed a  
4 chloride problem?  
5 **A. I'm not sure what is required of the system, any**  
6 **infrastructure that is needed, so I -- I really**  
7 **can't answer that question.**  
8 Q. So isn't it really true, Mr. Carmichael, that  
9 you actually don't know if your domestic well  
10 would be sustainable in the event of chloride  
11 impacts because you haven't looked at whether a  
12 reverse osmosis system would solve that issue?  
13 **A. I guess that would be correct, yeah.**  
14 Q. Mr. Carmichael, did you read the City's proposal  
15 that was submitted at the start of this whole  
16 matter?  
17 **A. Bits and pieces and attended the hearing.**  
18 Q. And you've mentioned that -- that in connection  
19 with ASR II there was a forward-looking  
20 projection and the City has only achieved  
21 20 percent of the recharge that it initially  
22 thought it would be able to achieve with the  
23 ASR II project. Do you know why that is?  
24 **A. I'm not sure.**  
25 Q. Do you know what the state of the aquifer is

Page 3344

1 today, Mr. Carmichael, in terms of -- of how it  
 2 compares to predevelopment levels and whether  
 3 there's actually any space in the aquifer  
 4 currently that the City could put recharge in?  
 5 **A. I'm not for sure of the state of the aquifer at**  
 6 **the City's injection wells, but I am familiar**  
 7 **with the aquifer near my domestic property.**  
 8 Q. Okay. And you haven't examined or investigated  
 9 at all why the recharge goal initially projected  
 10 has been 75 percent underachieved, have you?  
 11 **A. I have tried but have come up with no answer.**  
 12 Q. So you haven't seen any information indicating  
 13 that it's -- it's tied to the aquifer simply  
 14 being too full for that level of recharge that  
 15 was originally projected because the City has  
 16 cut back the use of its native rights since  
 17 1993?  
 18 **A. Can you state that question a different way?**  
 19 Q. Yeah, I'm -- I'm not sure how much of the  
 20 testimony you've seen in this case or how often  
 21 you were in attendance, I'm asking did you not  
 22 see any of the testimony or exhibits that showed  
 23 that the problem with the recharge and the  
 24 reason for the underachievement is the City  
 25 cutting back the use of its rights from and

Page 3345

1 after 1993 so that there's not space left in the  
 2 aquifer to recharge?  
 3 **A. I attended the hearings where I think that the**  
 4 **City talked about that.**  
 5 Q. And did -- did you understand the information as  
 6 it was presented?  
 7 **A. I would say for the most part I did.**  
 8 Q. And -- and what -- for what reason do you  
 9 continue to think that that's not the  
 10 explanation for the City having underachieved  
 11 the original recharge projection?  
 12 **A. I stated in my question would be where did we**  
 13 **get the projection that -- we're basing this**  
 14 **decision off a model, is it the -- is it the**  
 15 **same projection that ASR II came off of?**  
 16 Q. So if the projection, Mr. Carmichael, didn't  
 17 account for the cutbacks that the City made  
 18 after 1993, wouldn't you expect the projection  
 19 to not be right when you got a decade or so out?  
 20 **A. I would expect it not to be right, that's**  
 21 **correct.**  
 22 Q. But -- but really as I understand your testimony  
 23 today, you're -- you're basically assuming an  
 24 attitude that since the City's projections for  
 25 ASR II was incorrect, you're not really willing

Page 3346

1 to look at any of the information that the City  
 2 provides, or if you looked at it, you refuse to  
 3 believe it because the City's projection for  
 4 ASR II turned out not to be right. Is that what  
 5 you're saying?  
 6 **A. I would not agree with that statement at all;**  
 7 **I'm more than willing to look at any information**  
 8 **provided to me to change my opinion on it.**  
 9 Q. Well, I think you indicated during direct,  
 10 Mr. Carmichael, and you can correct this if I  
 11 misunderstood, but I thought you said that you  
 12 hadn't looked at the Burns & McDonnell  
 13 information on the saturated thickness projected  
 14 for your index cell after pumping down to the  
 15 1993 levels, and that if you looked at it, you  
 16 wouldn't be comfortable with it?  
 17 **A. That statement is based off of my opinion on the**  
 18 **projections.**  
 19 Q. And so what it does basically come down to is  
 20 you haven't looked, and if you did look, you  
 21 wouldn't believe it because the City was wrong  
 22 in a prior projection?  
 23 **A. Do you know if that information is available to**  
 24 **me today?**  
 25 Q. That was part of -- part of the reason for my

Page 3347

1 question whether you had read the proposal  
 2 because that information was all in the exhibits  
 3 to the proposal, it's been on the DWR website in  
 4 the publicly available posted exhibits for the  
 5 proposal for probably over a year now. And  
 6 there is a graphic by which Burns & McDonnell  
 7 displayed the saturated thickness by index cell,  
 8 so it's fairly easy to find if you go through  
 9 the exhibits and look for that, and it actually  
 10 has been made an exhibit of record in the case  
 11 as well.  
 12 Also, Mr. Carmichael, in terms of the --  
 13 **MR. STUCKY:** Excuse me, I just had a  
 14 quick question, what -- what figure are we  
 15 talking about in the proposal that we're  
 16 referencing? We're trying to look for that  
 17 one.  
 18 **MR. MCLEOD:** Yeah, I'm not sure  
 19 sitting here today without breaking out of  
 20 the session to go online and look at the  
 21 electronic version of the proposal, but I  
 22 do know that it was one of the exhibits and  
 23 included the graphic that depicted  
 24 saturated thickness as well.  
 25 **MR. STUCKY:** Okay. I'll -- I'll

1 withdraw the question, if we can move on  
2 then; if Mr. McLeod doesn't know which  
3 exhibit he's referring to, then I'm  
4 guessing the witness doesn't know either.  
5 So thank you.  
6 **PRESIDING OFFICER:** Okay.  
7 Mr. McLeod, please proceed.  
8 **MR. MCLEOD:** Yes, I -- I remember it  
9 being the subject of quite a lot of  
10 questioning of witnesses presented early in  
11 the hearing, so the information is out  
12 there.  
13 **BY MR. MCLEOD:**  
14 Q. But let me turn also to the subject of chloride.  
15 Mr. Carmichael, have you looked at any of the  
16 studies on chloride movement?  
17 **A. I have.**  
18 Q. Have you looked specifically at the study on  
19 chloride movement from 2014 from which the map  
20 that Ms. Wendling was using had been drawn?  
21 **A. I have limited knowledge of the -- the wording**  
22 **of it.**  
23 Q. What -- what's your understanding of what the  
24 2014 study looked at and what its conclusions  
25 were?

1 **A. I think -- I think this map that I'm looking at**  
2 **here is showing how the chlorides have moved**  
3 **over a period of time or into the future period**  
4 **of time.**  
5 Q. Do you see on the map exhibit references to  
6 different scenarios such as double pumping and  
7 different colors of lines that represent those  
8 scenarios?  
9 **A. Can you repeat that question, I only got a**  
10 **little bit of it?**  
11 Q. When -- when you look down at the -- at the key  
12 or legend of the map that shows what the  
13 different colored lines mean, do you see  
14 references to different scenarios such as a  
15 double pumping scenario and an explanation of  
16 which colors of lines are illustrating each  
17 scenario?  
18 **A. I do.**  
19 Q. And do you recall what the chloride movement  
20 projections were for each of the modeled  
21 scenarios in terms of how fast the chloride  
22 movement might be accelerated at different  
23 levels in each of the modeled scenarios?  
24 **A. Can you help me confirm, is this -- is this map**  
25 **part of the model?**

1 Q. If we're looking at the same map,  
2 Mr. Carmichael, I believe the exhibit was drawn  
3 out of the USGS document that illustrated the  
4 study results.  
5 **A. Okay. Can you repeat your question too, please.**  
6 **Sorry.**  
7 **MR. MCLEOD:** Can we just have the  
8 reporter read back the question?  
9 (At this time, the reporter read  
10 the designated portion.)  
11 **A. I would say, yes, I recall that, I do believe**  
12 **that's what this figure 8 is about.**  
13 **BY MR. MCLEOD:**  
14 Q. So were there any of the modeled scenarios in  
15 particular that -- that gave you concerns for  
16 your property in terms of how much faster the  
17 chlorides might move in the event that that  
18 modeled scenario were implemented?  
19 **A. Yeah, that would be either -- is the -- is the**  
20 **top one purple or black? It would be number --**  
21 **number 1 and number 3.**  
22 Q. And do you recall what the acceleration of the  
23 chloride movement was in each of those  
24 scenarios?  
25 **A. Looks rather small but still an acceleration.**

1 Q. And, again, in your direct testimony,  
2 Mr. Carmichael, you indicated that some  
3 information had been presented in the hearing to  
4 give you assurances of what would happen if  
5 120,000 acre-feet were withdrawn, but, again,  
6 you were not satisfied with that information  
7 because of the 25 percent achievement of the  
8 projection the City had made for ASR II. Aren't  
9 you presenting --  
10 **A. That is correct.**  
11 Q. Aren't you presenting the City and its  
12 consultants with an unsatisfiable objection in  
13 that the City and its consultant can develop and  
14 present information, but your attitude is that  
15 you're not comfortable with it because the City  
16 has been wrong in a prior instance with a prior  
17 projection? How can the City ever develop --  
18 **A. I would say that that is not correct. I don't**  
19 **feel that the City has beared the burden of**  
20 **proof yet. I've messed up in my lifetime**  
21 **before, I've overcome it, I feel that the City**  
22 **could do the same. I just don't feel that**  
23 **they've put enough time into this study. I feel**  
24 **that -- I feel that a lot more things need to be**  
25 **done.**

Page 3352

1 Q. And what the -- the specific reason that you've  
 2 given more than once in your testimony for  
 3 rejecting the information presented by the City  
 4 is simply that the City has only achieved  
 5 25 percent of the recharge that was projected  
 6 for ASR II; isn't that correct?  
 7 **A. That is correct.**  
 8 Q. Now, Mr. Carmichael, you indicated that among  
 9 your concerns you have a concern that maybe  
 10 landowners should get paid for the storage of  
 11 water under their property. You know that  
 12 that's not a feature of the existing ASR, don't  
 13 you?  
 14 **A. I do.**  
 15 Q. And what facet of the requested permit  
 16 modifications do you think should make that a  
 17 feature of the permit modifications given that  
 18 it was not a feature of the existing ASR permit?  
 19 **A. I guess where I'm going with that statement is**  
 20 **that I'm worried about what happens underneath**  
 21 **my property. If -- if the City is to fill the**  
 22 **aquifer up to full status and I want to dig a**  
 23 **pool in my back yard and I can't because the**  
 24 **water table is too high, I don't feel that**  
 25 **that's my problem because I didn't put that**

Page 3353

1 **water in there to fill the aquifer up.**  
 2 Q. So, again, Mr. Carmichael -- let me ask first,  
 3 do you understand what the limitation is in the  
 4 existing permits as to how full the City can  
 5 fill the aquifer?  
 6 **A. I do.**  
 7 Q. And what is that limitation?  
 8 **A. I -- I believe it is 10 feet below the ground**  
 9 **level.**  
 10 Q. And, again, sir, that was established in the  
 11 existing ASR permits, correct?  
 12 **A. As far as I know.**  
 13 Q. And what -- what facet of the requested permit  
 14 modification should cause that to be revisited?  
 15 **A. It's in my opinion that if you're injecting**  
 16 **water into the ground, all facets of the project**  
 17 **need to be looked at.**  
 18 Q. Well, Mr. Carmichael, isn't the current  
 19 proposal -- let me rephrase it. What facet of  
 20 the current proposal do you think involves  
 21 increased injection into the aquifer?  
 22 **A. By drawdown in the basin storage area. I -- I**  
 23 **don't know if this map is the ASR basin storage**  
 24 **area; it's just in my opinion that the aquifer**  
 25 **could potentially be too full at times.**

Page 3354

1 Q. Doesn't it strike you, Mr. Carmichael, that that  
 2 would be a reason in favor of the City's  
 3 proposal because the proposal allows the City to  
 4 take water to town and leave the aquifer  
 5 unaffected and still accumulate AMCs for that  
 6 combination of actions without trying to inject  
 7 additional water into a full aquifer?  
 8 **A. I think there are multiple ways that the City,**  
 9 **State, GMD could go about lowering an aquifer.**  
 10 Q. Is it your view that the aquifer should be  
 11 lowered?  
 12 **A. No.**  
 13 Q. Do you understand why the 10-foot limit on  
 14 filling the aquifer was arrived at in the  
 15 earlier stages of the ASR permit approval?  
 16 **A. I believe so.**  
 17 Q. Do you know if it was tied to the predevelopment  
 18 levels of the aquifer, that is the -- the levels  
 19 of water in the aquifer before people came to  
 20 the area and started pumping water out?  
 21 **A. I'm not sure that I am able to answer that**  
 22 **question because I don't know the answer.**  
 23 Q. Mr. Carmichael, you indicated also that one of  
 24 your concerns with the proposal is that you have  
 25 noted sinkholes in some sites along the river

Page 3355

1 and you're concerned that drawdown and recharge  
 2 of the aquifer will create underflow and  
 3 sinkholes. Did I understand that correctly?  
 4 **A. That is correct.**  
 5 Q. And, again, Mr. Carmichael, to the extent that  
 6 the entire point of the City's proposal is to  
 7 not have to draw down and then recharge the  
 8 aquifer to create credits, wouldn't the concern  
 9 about underflow and sinkholes actually be a  
 10 point in favor of the City's proposal?  
 11 **A. Can you ask me that question in a different way?**  
 12 Q. I'm not sure that I can, Mr. Carmichael, but  
 13 I'll try. Let me back up. You understand that  
 14 the current ASR permits allow the City to draw  
 15 down the aquifer and to recharge it, don't you?  
 16 **A. That's correct.**  
 17 Q. And so under the existing permits, the City  
 18 already can do that conduct that you're worried  
 19 about creating underflows and sinkholes,  
 20 correct?  
 21 **A. That is correct.**  
 22 Q. Okay. Now, under the City's proposal where the  
 23 point of the proposal is that rather than having  
 24 to draw down the aquifer to create space to  
 25 recharge and then recharging it, the City's

1 proposing to take the water to town and skip the  
2 step of drawing down the aquifer and then  
3 refilling it so that underflow wouldn't be  
4 created and resulting sinkholes couldn't result.  
5 And I'm asking you, Mr. Carmichael, to the  
6 extent you've got that concern with underflow  
7 and sinkholes, wouldn't that actually seem to  
8 you logically to be a point in favor of the  
9 City's proposal?  
10 **A. I do not think that it should be, I don't -- I**  
11 **don't think that the City is -- I don't think**  
12 **the City has proved the -- the burden to me that**  
13 **it won't happen; and if you have AMCs, you have**  
14 **an extra 19,000 acre-feet of water that you can**  
15 **draw on top of your natural water right, I feel**  
16 **that that cone of depression could create a heck**  
17 **of a sinkhole. And if you go to start injecting**  
18 **water into that cone of depression, it's my**  
19 **opinion that you have to have some sort of**  
20 **ground movement there.**  
21 Q. Mr. Carmichael, do you understand that under the  
22 current permits as they stand, the City can  
23 attain that 19,000 acre-feet of credits by  
24 pumping the aquifer down with its native rights  
25 and then recharging the aquifer to accumulate

1 that there's going to be some delay in the  
2 investigation?  
3 **A. That is correct.**  
4 Q. Do you think that because of that the State  
5 should just cancel all existing water rights  
6 because it takes too long to adjudicate and --  
7 and come to remedies for an impairment?  
8 **A. I do not, but I do feel that DWR does a very**  
9 **good job issuing groundwater rights in our area**  
10 **and making sure that these impairments do not**  
11 **happen. I don't think that that has been done**  
12 **in this scenario.**  
13 Q. You understand that -- that the DWR does at  
14 times approve junior water rights, don't you,  
15 Mr. Carmichael?  
16 **A. I do.**  
17 Q. And that the premise of a junior water right is  
18 that there may not be enough water there to  
19 satisfy the junior right and senior rights,  
20 isn't that the case?  
21 **A. It is.**  
22 Q. And when the junior rights are approved by the  
23 State anyway, doesn't that come with the premise  
24 that if an impairment results, that junior right  
25 is going to have to be administered?

1 those credits?  
2 **A. I do.**  
3 Q. So how does the credits being an AMC versus  
4 physical recharge credit form change that --  
5 that analysis at all?  
6 **A. Well, it's my opinion that with your**  
7 **40,000 acre-feet of natural native water rights,**  
8 **your 19,000 acres of recharge credits, this --**  
9 **this type of pumping could go on for multiple**  
10 **years consecutively during a drought, and that**  
11 **is where -- that's where I'm worried about**  
12 **the -- the ground moving.**  
13 Q. And wouldn't that be the same, though, whether  
14 the credits are physical recharge credits that  
15 exist in -- in the permits now or whether  
16 they're AMCs that are in the proposal?  
17 **A. I would say it wouldn't matter which credit it**  
18 **is.**  
19 Q. Also in -- in your direct testimony,  
20 Ms. Wendling elicited from you a range of fears  
21 relating to the delays in DWR impairment  
22 investigations and implementation of remedy.  
23 And my -- my question for you there,  
24 Mr. Carmichael, isn't that the case in any  
25 impairment investigation with any water right,

1 **A. It is.**  
2 Q. And so it's -- it's a regular occurrence in the  
3 state process that -- that permits are approved  
4 with knowledge that there may be a future need  
5 to administer the junior right, correct?  
6 **A. I would say so, but I think that it's duly noted**  
7 **every time that -- that it's a possibility.**  
8 Q. You don't think that the State should refuse to  
9 approve all new water right applications because  
10 of the delay that there could be an impairment  
11 investigation, do you?  
12 **A. I don't.**  
13 Q. Mr. Carmichael, you -- you also noted that you  
14 would support permit conditions that would  
15 require the City's native rights to be used  
16 before credits, and I'm going to ask you as to  
17 that did you read the City's proposal to see if  
18 that was part of the proposal?  
19 **A. I'm fairly certain that my statement there was I**  
20 **had not seen any permit conditions stating that**  
21 **you had to use your native rights first or your**  
22 **credits first.**  
23 Q. Do you know whether the City proposed that it  
24 would use its native rights first?  
25 **A. I have -- I do not know.**

Page 3360

1 Q. Mr. Carmichael, in terms of use or lose an  
 2 annual accounting, do any of your customers use  
 3 the flex plan mechanisms that are available  
 4 under the Kansas Water Rights Act?  
 5 **A. I'm not sure.**  
 6 Q. Do you know what flex plans are?  
 7 **A. I am vaguely aware of them.**  
 8 Q. Can you -- can you explain to us your  
 9 understanding of what they are and how they  
 10 work?  
 11 **A. I think it's either a three- or a five-year time**  
 12 **frame, and you can -- you can move some water**  
 13 **around to make -- to make it work, but at the**  
 14 **same time you lose a certain part of your water**  
 15 **right when you do that.**  
 16 **MR. MCLEOD:** I don't have further  
 17 questions for the witness.  
 18 **PRESIDING OFFICER:** Okay.  
 19 Ms. Murray, does DWR have any questions?  
 20 **MS. MURRAY:** I do not, no.  
 21 **PRESIDING OFFICER:** Okay.  
 22 Mr. Stucky, how about GMD?  
 23 **MR. STUCKY:** Thank you. Just --  
 24 just a few questions.  
 25 //

Page 3361

1 **CROSS-EXAMINATION**  
 2 **BY MR. STUCKY:**  
 3 Q. Mr. Carmichael, can you hear me?  
 4 **A. Yes, sir.**  
 5 Q. All right. I just had a few follow-up questions  
 6 to clarify my understanding of -- regarding some  
 7 questions you were just asked. So a moment ago  
 8 you were asked some questions both by Mr. McLeod  
 9 and Ms. Wendling regarding irrigation systems  
 10 and the cost of various irrigation systems and  
 11 things of that nature. Do you recall those  
 12 questions?  
 13 **A. I do.**  
 14 Q. And one question that was asked is, you know,  
 15 what adaptations you've made to the systems  
 16 based on salinity in the water, and I think one  
 17 thing you said was -- was there was PVC pipe  
 18 lining that was now put in the systems and some  
 19 enhancements, I believe, to the motors, things  
 20 of that nature. Is that what you said in your  
 21 testimony?  
 22 **A. It was.**  
 23 Q. And let me just ask you this, I'm not sure this  
 24 was answered, but what is the additional cost of  
 25 adding this equipment to the irrigation systems?

Page 3362

1 And I know that every irrigation system is  
 2 different, but -- but in general, what's the  
 3 added cost of trying to add these protections to  
 4 guard against salinity?  
 5 **A. I would say a range of 30 to 60,000 based on**  
 6 **length of the machine.**  
 7 Q. And let me also ask you this: So you testified  
 8 about certain areas of the aquifer where there's  
 9 salinity and certain areas of the aquifer where  
 10 there's not as much salinity just based on your  
 11 general awareness; is that correct?  
 12 **A. It is.**  
 13 Q. Let me clarify, if there was an area in the  
 14 aquifer where there was not as much salinity  
 15 and, in fact, the risk was very low that there  
 16 would be salinity in the water, if the added  
 17 cost to guard against this chloride is 30 to  
 18 \$60,000, would you be able, then, to sell a  
 19 cheaper irrigation system in an area where  
 20 there's less salinity?  
 21 **A. Yes.**  
 22 Q. So in other words, if you're in a part of the  
 23 aquifer where the chloride movement has not  
 24 affected yet, the cost could be 30 to \$60,000  
 25 less for the irrigator in that area?

Page 3363

1 **A. That is correct.**  
 2 Q. So, alternatively, if we're in a area of the  
 3 aquifer where the salinity is much greater, it's  
 4 costing on average for each irrigation system,  
 5 it's costing the irrigator 30 to \$60,000 more to  
 6 guard against that?  
 7 **A. That is correct.**  
 8 Q. I want you to go back to Exhibit 68, the very  
 9 last page and the map that you were asked about  
 10 by both Ms. Wendling and Mr. McLeod.  
 11 **A. I'm there.**  
 12 Q. As you can see on -- on this map, there's --  
 13 there's some different wells that are noted,  
 14 there's IW36C to the south on this map toward  
 15 the very bottom. IW360, do you see that well?  
 16 **A. Yes, sir.**  
 17 Q. I'm sorry, it's C, 36C, my -- it's so small,  
 18 my -- my eyesight was not as good there.  
 19 Changing it to 36C, you still see that at the  
 20 very bottom?  
 21 **A. I do.**  
 22 Q. Okay. And then just above that, it appears, is  
 23 IW32C, if I'm reading that correctly. Do you  
 24 see that one just north?  
 25 **A. I do.**

1 Q. And on this map, it looks like if we were to  
2 analyze the legend at the bottom, it appears to  
3 me that those two wells are about two miles  
4 apart; is that right?  
5 **A. I would agree with that.**  
6 Q. And just so I understood your testimony, is your  
7 well pretty much smack dab in between, your  
8 domestic well, is it pretty much smack dab in  
9 between those two wells I just identified?  
10 **A. Yes.**  
11 Q. So in other words, just so in a general sense  
12 the testimony is clear, right now, you're just  
13 on the cusp of being affected by the chloride  
14 movement; is that right?  
15 **A. Unfortunately you are correct.**  
16 Q. But to further clarify, unlike Mr. Basore, who  
17 had wells that were already being impacted by  
18 the chloride movement, you aren't quite affected  
19 at this juncture, correct?  
20 **A. I am not.**  
21 Q. However, what we see, and I'm not going to ask  
22 you in any kind of technical sense, these  
23 questions were all asked and answered by experts  
24 previously, but as you can see from this  
25 particular map, it -- it indicates in the

1 other water users; is that right?  
2 **A. That is correct.**  
3 Q. So let me clarify this, you indicated that your  
4 domestic well adds value to your property; is  
5 that right?  
6 **A. Yes.**  
7 Q. And, in fact, your domestic -- your domestic  
8 well supplies water to your house and things of  
9 that nature you testified to, right?  
10 **A. That's correct.**  
11 Q. Do you have any knowledge of the impact losing  
12 that domestic well and that water to your house,  
13 do you have any knowledge of the impact that  
14 would cause to the value of your property?  
15 **A. I do but I'm not going to state that I know**  
16 **fully.**  
17 Q. Well, Mr. Carmichael, I'm not asking you to  
18 state fully, I'm asking you to state in a  
19 general sense if you have knowledge as to a  
20 general -- generally, how that would decrease  
21 your property value?  
22 **A. I do.**  
23 Q. Please testify in that nature.  
24 **A. I think that if my domestic well were to become**  
25 **unusable, with no rural water, my house would**

1 explanation at the bottom a number of different  
2 pumping scenarios; is that right?  
3 **A. That is correct.**  
4 Q. And if I were just to proffer to you that one of  
5 the pumping scenarios as shown by the blue line  
6 is double Wichita municipal pumping and no  
7 irrigation pumping, would you agree that that is  
8 what the map appears to explain?  
9 **A. I would agree.**  
10 Q. And would you also agree that if we look at  
11 where that light blue line then would be, where  
12 the chloride movement would be based on that  
13 pumping scenario, would you then agree that you  
14 would be impacted by the chloride movement at  
15 that point?  
16 **A. I would agree with that.**  
17 Q. And, in fact, you know, we see a lot of dots on  
18 this map, would you agree that other wells would  
19 also then be impacted by that pumping scenario?  
20 **A. I would agree.**  
21 Q. And so in other words, even though the chloride  
22 movement may not be impacting you now, if one of  
23 these alternative pumping scenarios occurred  
24 that was modeled in this map, if that occurred,  
25 it could impact you, and it could impact some

1 **only be worth the value of the land that it sits**  
2 **on.**  
3 Q. And what -- do you have any idea of what that  
4 financial difference would be for you?  
5 **A. For me personally, it would be substantial.**  
6 Q. Okay. And substantial as in thousands of  
7 dollars, tens of thousands of dollars, what --  
8 what are we talking, what do you mean by  
9 substantial?  
10 **A. Hundreds of thousands of dollars.**  
11 Q. Okay. And have you -- there's a bunch of  
12 questions asked about essentially taking water  
13 from underneath your land and the impacts  
14 that -- that could have, if that's what the City  
15 proposal indeed did. Do you recall some of  
16 those questions?  
17 **A. I do.**  
18 Q. Just to clarify the record, have you given the  
19 City of Wichita permission to withdraw aquifer  
20 maintenance credits from underneath your land?  
21 **A. I have not.**  
22 Q. Are you so giving the City of Wichita permission  
23 to do so?  
24 **A. Not at this time.**  
25 Q. And so I think this question is already clear,

Page 3368

1 as far as your expectation to the value of your  
 2 land and the fact that it has this water right,  
 3 you have that expectation, don't you?  
 4 **A. I do.**  
 5 Q. Just a moment ago you were asked some questions  
 6 about whether there was any difference between  
 7 the ASR physical recharge approach and the  
 8 aquifer maintenance credit recharge approach.  
 9 Do you recall those questions?  
 10 **A. I do.**  
 11 Q. And you were asked if -- if there were any  
 12 distinct differences between the two. Do you  
 13 recall some of those questions?  
 14 **A. That's correct.**  
 15 Q. And I believe that you sat in this hearing and  
 16 testified that you've been in this hearing a  
 17 good chunk of the time, correct?  
 18 **A. That's correct.**  
 19 Q. And you also testified that you've at least read  
 20 portions of the City's proposal and have a  
 21 general knowledge of the City's proposal; is  
 22 that correct?  
 23 **A. It is correct.**  
 24 Q. So as you were asked to try and differentiate  
 25 between the two, let me ask you this: With

Page 3369

1 respect to the physical recharge credits, is  
 2 there water injected into the aquifer?  
 3 **A. There is.**  
 4 Q. Let me ask you this: With respect to aquifer  
 5 maintenance credits and under the City's new  
 6 proposal, are they actually injecting water into  
 7 the aquifer?  
 8 **A. They are not.**  
 9 Q. And are you aware of the extent to which the  
 10 city has been able to successfully accumulate  
 11 physical recharge credits in the past?  
 12 **A. I am.**  
 13 Q. Tell me what your knowledge is in that regard.  
 14 **A. Based off of their initial projection, they have**  
 15 **only been able to do approximately 25 percent of**  
 16 **that projection.**  
 17 Q. Do you have a fear, based on the testimony you  
 18 listened to, that if the City were to be able to  
 19 accumulate aquifer maintenance credits, where  
 20 they accumulate this credit to take water back  
 21 out of the ground by just pumping straight to  
 22 the City of Wichita, do you have the fear that  
 23 if they're able to do that, they'll be able to  
 24 accumulate far more credits than they are  
 25 currently accumulating?

Page 3370

1 **A. I do.**  
 2 Q. And if they're able to accumulate far more  
 3 credits by just merely pumping water straight to  
 4 the City of Wichita and then later have this  
 5 right to take water out of the aquifer, would  
 6 that be detrimental to you?  
 7 **A. Not only me but my neighbors and the Equus Beds.**  
 8 Q. So in other words, as we -- and there's a lot of  
 9 other distinctions I could make, but just in a  
 10 general sense, as we try and distinguish between  
 11 the physical recharge credits and the aquifer  
 12 maintenance credit proposal, is it your belief  
 13 that the aquifer maintenance credit proposal  
 14 will be more detrimental to you and neighboring  
 15 water right holders?  
 16 **A. I believe so.**  
 17 Q. You were asked some questions about a reverse  
 18 osmosis system and whether or not it's possible  
 19 or theoretical to put that system in the pumping  
 20 equipment that you sell or that you service. Do  
 21 you recall some of those questions?  
 22 **A. I think Mr. McLeod was wanting me to install**  
 23 **that in my house.**  
 24 Q. Okay. Well, let me back up, you also sell  
 25 irrigation equipment and you talked about motors

Page 3371

1 and irrigation equipment and things of that  
 2 nature; is that right?  
 3 **A. That's correct.**  
 4 Q. So if the question was only asked with respect  
 5 to your house, do you have knowledge about that  
 6 with respect to the irrigation equipment that  
 7 you -- you sell?  
 8 **A. I do.**  
 9 Q. Tell me your knowledge in that regard.  
 10 **A. We've been trying to come up with a solution to**  
 11 **be able to pump saltwater. There's -- there is**  
 12 **some things on the market, they're terribly**  
 13 **expensive. There's no proof that they work yet.**  
 14 **Like I said, they're brand new. I'm not**  
 15 **familiar with reverse osmosis. I'm guessing**  
 16 **that it would work really good on a**  
 17 **20-gallon-a-minute well; I'm guessing it**  
 18 **probably wouldn't work so good on**  
 19 **1,000-gallon-a-minute well.**  
 20 Q. Do you have any general sense of -- of whether  
 21 or not there would be a significant added cost  
 22 if we were to include this reverse osmosis  
 23 system?  
 24 **A. My guess would be that cost would be very**  
 25 **significant.**

1 Q. And what does very significant mean to you, is  
2 that thousands of dollars, what are we -- what  
3 are we talking here?  
4 **A. I would say tens of thousands.**  
5 Q. So you testified that the impact on irrigators  
6 of the salinity already based on current  
7 protections is 30 to 60,000, so we're talking in  
8 addition to that current expense if we were to  
9 add this reverse osmosis, that would be an  
10 additional tens of thousands of dollars added-on  
11 cost for these irrigators?  
12 **A. That is correct.**  
13 Q. Now, you were asked a number of questions about  
14 reverse osmosis, and I understand that you  
15 actually have boots on the ground in the sense  
16 that you work on these motors and you sell these  
17 irrigation systems as part of your job, and so  
18 in that sense, you're extremely knowledgeable  
19 about that, but let me ask you this: As you sat  
20 in this hearing, listened to the City of  
21 Wichita's experts testify and also read the City  
22 of Wichita's proposal, did you hear any  
23 testimony or see anything in the proposal about  
24 these reverse osmosis systems and using that as  
25 a protection for irrigators?

1 **A. I did not.**  
2 Q. So, in fact, the City of Wichita, although they  
3 asked you questions about this, they didn't  
4 testify as to the viability of these reverse  
5 osmosis systems, did they?  
6 **A. They did not.**  
7 Q. And, in fact, it's not listed in their proposal,  
8 is it?  
9 **A. Not to my knowledge.**  
10 Q. Would that be additional assurances or testimony  
11 that you would like to hear from the City of  
12 Wichita in the future?  
13 **A. Yes.**  
14 Q. And, indeed, do you believe that to the extent  
15 the City of Wichita's AMC credit proposal adds  
16 additional cost to irrigators in the form of a  
17 reverse osmosis system and in the form of lining  
18 the pipes and enhancing the motors, do you  
19 believe that's a cost that the City of Wichita  
20 should bear?  
21 **A. I do.**  
22 **MR. STUCKY:** I don't have further  
23 questions.  
24 **PRESIDING OFFICER:** Thank you.  
25 Ms. Wendling.

1 **REDIRECT EXAMINATION**  
2 **BY MS. WENDLING:**  
3 Q. Mr. McLeod asked you some questions about junior  
4 water rights being approved subject to possible  
5 future -- I can't think of the word right now.  
6 **A. Permits?**  
7 Q. Adjudication essentially. Do you recall that  
8 testimony?  
9 **A. I do.**  
10 Q. Are you also familiar with permits in the basin  
11 storage area being denied?  
12 **A. I am.**  
13 Q. And do you recall the reasons for those denials?  
14 **A. I would say a rather large percentage of them**  
15 **were denied due to applying in an**  
16 **over-appropriated area.**  
17 Q. And do you recall whether safe yield was a  
18 factor in whether those permits would be denied?  
19 **A. It was.**  
20 Q. And do you know whether or not the AMC or  
21 physical recharge credit withdrawal was then  
22 subject to a safe yield analysis?  
23 **A. I do not think that it has.**  
24 Q. Mr. McLeod also asked you if you knew whether  
25 the City would be required to use their native

1 water rights first or something along those  
2 lines. Do you recall that questioning?  
3 **A. I do.**  
4 Q. Can I have you turn to City's Exhibit 1, which  
5 is the proposal, located in that black binder,  
6 it should be at the front? And I'll have you  
7 start at page 3-5.  
8 **A. What -- what tab was it?**  
9 Q. It should be tab number 1. It's this. I think  
10 there's a cover letter in there that's not in  
11 mine but ...  
12 **A. Page 3-5.**  
13 Q. And do you see a heading 3.4?  
14 **A. I do.**  
15 Q. And what is that heading?  
16 **A. Proposed -- Proposed AMC Permit Conditions.**  
17 Q. Now, if you'll take a minute to review the seven  
18 permit conditions listed on page 3-6. Let me  
19 know if you see a permit condition requiring  
20 native credits to be used first?  
21 **A. I do not.**  
22 Q. Mr. McLeod also addressed your concerns  
23 regarding sinkholes by discussing that AMCs  
24 would not require injecting water into the  
25 aquifer. Can you, on page 3-5, read the

Page 3376

1 second-to-last sentence for me?  
 2 **A. The City will continue to maintain an ASR**  
 3 **operational priority focused on development of**  
 4 **physical recharge credits when and where**  
 5 **groundwater levels are at elevations that**  
 6 **facilitate physical recharge capacity.**  
 7 Q. So the -- does the continued physical recharge  
 8 in conjunction with the additional AMC option  
 9 give you concerns about potential sinkholes?  
 10 **A. Most definitely.**  
 11 **MS. WENDLING:** No further questions.  
 12 **PRESIDING OFFICER:** Mr. McLeod?  
 13 Mr. McLeod, do you have any further  
 14 questions for this witness?  
 15 **MR. MCLEOD:** I don't.  
 16 **PRESIDING OFFICER:** Thank you. Any  
 17 questions from DWR? Any questions from  
 18 DWR?  
 19 **MS. MURRAY:** I don't have any more  
 20 questions, no.  
 21 **PRESIDING OFFICER:** Thank you. Any  
 22 more questions from the GMD, Mr. Stucky?  
 23 **MR. STUCKY:** No, Your Honor.  
 24 **PRESIDING OFFICER:** Okay. That  
 25 being the case, thank you, Mr. Carmichael,

Page 3377

1 you're excused.  
 2 **A. Thank you.**  
 3 **PRESIDING OFFICER:** And this may be  
 4 a good time for a short break since we're  
 5 between witnesses so let's take about ten  
 6 minutes. We're going off the record right  
 7 now.  
 8 (Thereupon, a recess was taken;  
 9 whereupon, the following was had.)  
 10 **PRESIDING OFFICER:** We are back on  
 11 the record. We are ready for the next  
 12 witness on behalf of the Intervenor.  
 13 Ms. Wendling.  
 14 **MS. WENDLING:** We have Bill Carp.  
 15  
 16 BILL CARP,  
 17 having been first duly sworn, was  
 18 examined and testified as follows:  
 19  
 20 **DIRECT EXAMINATION**  
 21 **BY MS. WENDLING:**  
 22 Q. All right. Mr. Carp, will you state your name  
 23 for the record, please.  
 24 **A. Bill Carp.**  
 25 Q. And can you tell us your occupation?

Page 3378

1 **A. Crop producer, corn, soybeans, wheat, irrigated,**  
 2 **probably half of what we do.**  
 3 Q. And how long have you been doing that?  
 4 **A. I'm getting old, 40 years.**  
 5 Q. All right. Can you tell us a little bit about  
 6 your experience with water rights?  
 7 **A. My experience with water rights is whatever I**  
 8 **need to know in order to be in compliance with**  
 9 **the wells that I have permits on or my**  
 10 **landlord's wells that I report on and be sure**  
 11 **that we're always in compliance. I have**  
 12 **developed a couple of wells, which I needed to**  
 13 **know that process in order to obtain a temporary**  
 14 **permit or your appropriation and then to, you**  
 15 **know, to get a full water right.**  
 16 Q. And in what way do you rely on the Equus Beds?  
 17 **A. I have one, two, three -- I have four permitted**  
 18 **wells that I'm an owner on the property, and I**  
 19 **have one leased well that I rely on for**  
 20 **irrigation. And I have one rental property that**  
 21 **has a home and has a domestic well for that**  
 22 **purpose.**  
 23 Q. And of those, are they all in the basin storage  
 24 area or --  
 25 **A. No. One -- I believe only one is in the basin**

Page 3379

1 **storage area; the others are just, like, one or**  
 2 **two miles south of the area.**  
 3 Q. Will you refer to the first tab in the  
 4 Intervenor's binder and find the map dated  
 5 page 2 that has your name on it?  
 6 **A. Yes.**  
 7 Q. Does this appear to be an accurate reflection of  
 8 your water permit in the basin storage area?  
 9 **A. Yes.**  
 10 Q. And which index cell do you believe that's  
 11 located?  
 12 **A. 31.**  
 13 **MS. WENDLING:** I would like to  
 14 move -- I would like to admit Intervenor's  
 15 Exhibit 1, which is the map of the three  
 16 witnesses' water permits.  
 17 **PRESIDING OFFICER:** Any objection?  
 18 Okay. Hearing none, Intervenor's Exhibit 1  
 19 will be admitted.  
 20 **BY MS. WENDLING:**  
 21 Q. For your -- the well -- the permit in the basin  
 22 storage area, do you have a backup plan if the  
 23 Equus Beds becomes contaminated or unavailable?  
 24 **A. No, I wouldn't say that I have a backup plan.**  
 25 Q. Have you studied irrigation conservation or

1 water rights?  
2 **A. Not what you call study. You say or water**  
3 **rights, did you ask that at the end? I -- I try**  
4 **to be knowledgeable enough that I can perform**  
5 **what I need to do inside of my business and**  
6 **dealing with the different agencies to be in**  
7 **compliance and what water -- you know, how much**  
8 **water we can use and when and where. I mean,**  
9 **even stuff such as water meters, there's 8-inch**  
10 **pipe, there's 8 -- 8-and-1/8th-inch pipe,**  
11 **there's 10, 10 and 5/16ths. I mean, I've**  
12 **learned that you can't just grab one 8-inch**  
13 **water meter and throw in another pipe 'cause it**  
14 **may be 1/8th inch off, and we have a different**  
15 **gage pipe. And so do I study it? I don't sit**  
16 **down and read the book, but we seem to come**  
17 **across a lot of stuff every day that it seems**  
18 **like we're studying it all the time.**  
19 **You asked about, what was your -- the other**  
20 **things that you asked about besides the water**  
21 **rights?**  
22 **Q. Irrigation or water conservation.**  
23 **A. Yeah, the conservation, to the extent that, you**  
24 **know, what can I do that's the most, what do you**  
25 **call it, return on my investment. I look at a**

1 lot of it from my capital income, expense  
2 standpoint. Do I look at it from the standpoint  
3 of a -- you know, just how much water can I  
4 absolutely save the world, I'm probably not that  
5 person.  
6 **Q. Have you made efforts to conserve water or**  
7 **contribute to a fuller aquifer?**  
8 **A. I have. Probably the biggest expense we did is**  
9 **we had an extra -- oh, just under 80 acres that**  
10 **was flood irrigated when I leased it from my**  
11 **landlord, and at my own expense -- well, I did**  
12 **explore using some of what they call WHIP money**  
13 **or some supplemental subsidies from the**  
14 **government. And, I don't know, it looked a**  
15 **little slow and, you know, lots of bookkeeping**  
16 **and finally was just like, you know, this isn't**  
17 **ever going to happen. So I bought -- I bought a**  
18 **pivot and turned 80 acres of flood irrigation**  
19 **into sprinkler. And that -- that's big**  
20 **conservation and it's big money so we -- and we**  
21 **did that.**  
22 **And then I would say all but one -- most of**  
23 **our systems have the latest -- I say the latest,**  
24 **we use the long drops to get down away from the**  
25 **evaporation and the newer type nozzles and**

1 **stuff. I mean, we've got one system, the system**  
2 **that's in index 31, of course, it's a salt --**  
3 **that's an area that already has some salt, that**  
4 **has a lined pivot that Mr. Carmichael was**  
5 **talking about, and the drops on that pivot,**  
6 **they're clean down to my knee and just kind of**  
7 **have a -- I don't know what Josh would call**  
8 **them, but they're a spray nozzle that's -- you**  
9 **know, you go out there and look at it, you're**  
10 **like, is that watering that, but it does. And**  
11 **that's expensive 'cause it's twice as many**  
12 **drops, if not three times as many. Yeah, we**  
13 **spend money for conservation.**  
14 **Q. And is there a future credit for the water that**  
15 **you're saving with your conservation efforts?**  
16 **A. No.**  
17 **Q. Can you tell us about the -- I think you call it**  
18 **developing a water right, but what was the**  
19 **process you went through to obtain a water**  
20 **right?**  
21 **A. Well, first thing I did is I went to District 2,**  
22 **and I asked them in my -- I think they do a**  
23 **two-mile circle, but here's my point where I**  
24 **would like my well. And I believe they do a**  
25 **two-mile circle of safe yield, meaning they go**

1 **to look and see if -- if there's already so many**  
2 **wells in that area that it's appropriated fully**  
3 **or not fully appropriated, okay, there's --**  
4 **there's 80 acre-feet left or there's**  
5 **500 acre-feet left, how much do you want?**  
6 **Well, I'm doing -- I guess under a regular**  
7 **quarter mile circle, there'd be 130 acres, and**  
8 **what do they give us, 1. -- or what's available,**  
9 **like 1.3 for that purpose. So, what,**  
10 **180 acre-feet, 100 -- whatever it comes out to,**  
11 **170 acre-feet under a standard quarter mile**  
12 **system, I would request that, and District 2**  
13 **would say, okay, well, we're going to -- if**  
14 **we -- if we're going to move forward with this,**  
15 **I pay a -- I pay a -- not a fine but, you know,**  
16 **you pay -- you pay to move it forward.**  
17 **And then they, District 2, as I understood**  
18 **it, the water district, they help me fill out**  
19 **all the paperwork and -- or, you know, assist**  
20 **you, and you fill out your paperwork and where**  
21 **it's at; and then it goes to DWR, and DWR looks**  
22 **it over. And everyone decides safe yield, do we**  
23 **have safe yield or not, is the area**  
24 **over-appropriated, is my understanding. If it's**  
25 **not -- and I think they even send out a notice**

Page 3384

1 to wells that are close in the area of  
 2 landowners, irrigation wells or domestic wells,  
 3 I guess. Domestic wells get an opportunity to  
 4 say, no, this is going to affect me or not, and  
 5 then you have the opportunity to go to them and  
 6 say, I don't think it will or, you know,  
 7 whatever.  
 8 If you go through that whole process, then  
 9 you are issued a -- what is it, I can't remember  
 10 what the first one is when it's not a true water  
 11 right. But a right to appropriate, I guess,  
 12 something like that. And then you begin your --  
 13 you get your system up, you drill your well, you  
 14 can't -- let's see, there's -- there's some  
 15 order in there.  
 16 And you only have a certain amount of time  
 17 to drill that well, I mean, you've got to do it  
 18 within a certain period and pump that well  
 19 within a certain period. You can't just go get  
 20 this water appropriation and then walk off and  
 21 leave it.  
 22 So then you got to get the water -- you  
 23 have to get the water going and get it  
 24 happening, get a system on it, and from that  
 25 point, then, you have to report all your usage,

Page 3385

1 and you have a five-year period to perfect that.  
 2 And you can perfect it -- you -- if you use,  
 3 say -- let's say it's 170 acre-foot, if you use  
 4 up to that 170 acre-feet at some point in that  
 5 first five years, then you have fully perfected  
 6 it and you go for the full water permit. There  
 7 is a five-year extended permit if, say, it  
 8 doesn't -- it rains quite a bit through the  
 9 first five years or you don't grow crops that  
 10 need that water and you don't reach your -- your  
 11 fullest perfection, you have another five years  
 12 to pull the -- the greatest pumping year you  
 13 have, not in excess of your appropriation, that  
 14 becomes your water right.  
 15 Q. You mentioned that there's a standard of a 1.3  
 16 when you're determining the quantity?  
 17 A. I think irrigation in Sedgwick County, it's  
 18 1.3 acre-feet of water per acre to be watered.  
 19 Q. So you don't get to decide this is the amount of  
 20 water I want, it's a formula laid out for you?  
 21 A. That would be the maximum.  
 22 Q. And if you thought you needed more water than  
 23 that, you don't have an option to --  
 24 A. No, not as irrigation.  
 25 Q. And do you know if that 1.3 irrigation number is

Page 3386

1 based on average precipitation or water needed  
 2 during a drought?  
 3 A. I -- I think it's -- it's not during a drought.  
 4 I think it's aggregate water. I believe --  
 5 well, I don't know who came up with that,  
 6 whether it's K-State or what. I mean, I think  
 7 it's average water expected to need to grow a  
 8 crop in south central Kansas on most years.  
 9 It -- it's not a drought -- it's not a drought  
 10 number.  
 11 Q. And say you wanted to change your use to put a  
 12 fountain in your field, do you know if you'd be  
 13 able to do that?  
 14 A. I don't know. You might but -- I -- I think  
 15 you -- I don't know. I -- I assume you can do  
 16 some changes of use; I don't know to what  
 17 extent. I do know there's -- you know, I -- I'm  
 18 in an area where there's a lot of sandpits,  
 19 dredged sandpits and they have to have  
 20 evaporative water rights. I be -- I'm assuming  
 21 that if I wanted to do a sandpit I could, you  
 22 know, take my water right and ask for a change  
 23 of -- change of use on that same area. I  
 24 believe -- I believe that could be done.  
 25 Q. Do you have -- what happens to your annual

Page 3387

1 appropriation if you don't use it?  
 2 A. It's -- it's -- it's a per annum deal. You  
 3 know, if I've got 170 acre-foot water right and  
 4 I've used 110 feet of it, there's 80 acre-feet  
 5 I -- that's never -- that's not my water  
 6 anymore, it's gone.  
 7 Q. Would you be able to store that water?  
 8 A. No.  
 9 Q. And you mentioned some annual reporting, I  
 10 believe. What --  
 11 A. Yes.  
 12 Q. -- is necessary to maintain your water right?  
 13 A. Well, everything's metered and we report at the  
 14 end of -- it is -- it's a January 1 to a  
 15 January 1 deal. Of course, we have a season; we  
 16 don't tend to water in the middle of the winter  
 17 here in Kansas, thankfully. Or I say Kansas,  
 18 south central Kansas. I think out west they do.  
 19 But in this part of the world, you know, we  
 20 don't generally have to start a pivot up in  
 21 January, but it's -- you're per annum, you read  
 22 your meter every year, you report what your  
 23 meter reading is. And -- and on that report  
 24 you're expected to do the addition and  
 25 subtraction and -- and bring down. You know,

1 I -- I report my meter reading, but then I'm  
2 supposed to do the calculations and report this  
3 is the minimum acre-feet per gallons that I --  
4 that I pump from this permit. And what more --  
5 what was the question completely again?  
6 Q. What is needed to maintain your water right?  
7 A. Okay. So you've got to report that. You can't  
8 go over your -- your level. There's a penalty  
9 deal -- oh, I wished I'd of had that in my head,  
10 I should have looked that up this morning.  
11 It's -- it's substantial, it seemed to me like  
12 if -- I had it figured out one time if you made  
13 even, like, one -- one extra circle, one extra  
14 pass, which I think in most cases is -- we  
15 figure that's, what, like, 11 acre-feet on a  
16 quarter section of a three-quarter-inch pass, I  
17 think that's like a \$10,000 fine. It -- it --  
18 it's like 5, 6, 7, \$800 a day. It's more than  
19 that, it gets more than that. I forgot what it  
20 is, but it's substantial. In my world, it's  
21 substantial. It -- it runs into thousands of  
22 dollars if you run over three or four or five  
23 days. And so there's an incentive.  
24 And -- and then the first year it's that,  
25 and the second year, it's that plus you lose a

1 percentage of your water right, I believe. And  
2 if you do it a third year, you lose your water  
3 right for a number of years. I -- I don't  
4 remember the exacts of it, but it's -- it's in  
5 that form. So it's expensive, and eventually  
6 you would lose your water right if you are  
7 overpumping consistently. Or I say  
8 consistently, I think three years, it could be  
9 this year and 20 years from now, as far as I  
10 know, if you're into the third year, you're  
11 pulled.  
12 Also there's abandonment, that if you don't  
13 use your water, there's abandonment rules and  
14 you can lose it -- lose off of that too. I  
15 don't under -- I don't know what all the  
16 technicals are of it, but I do know it exists.  
17 Q. And have you attempted to get additional water  
18 rights?  
19 A. When you say additional, like a new permit or  
20 adding to an old permit?  
21 Q. Either one?  
22 A. I've gotten new permits or extension for new  
23 permits. I've asked -- and I did -- I think I  
24 believe I asked one time for extra acres on a  
25 well I knew that would supply some extra acres

1 with a longer pivot and I had the room to do it,  
2 and I asked about getting increased -- I don't  
3 even think I asked for increased acre-foot, I  
4 think I just asked for the permission to water  
5 on extra acres. I wasn't talking about any more  
6 water, I was just asking for the permission to  
7 water more acres because we had conserved and we  
8 had done things that gave us extra water out of  
9 our water permit, and I was not -- I was told  
10 that would not be allowed either.  
11 Q. And do you recall who told you that?  
12 A. Pardon?  
13 Q. Do you recall who said that it would not be  
14 allowed?  
15 A. It would have been District 2.  
16 Q. And have you been told additional water is not  
17 available in the basin storage area?  
18 A. Yes.  
19 Q. On what grounds?  
20 A. On what grounds?  
21 Q. (Nods head.)  
22 A. Over-appropriated.  
23 Q. Do you understand that to be a common issue  
24 faced by many within the basin storage area?  
25 A. Well, it just kind of become common knowledge to

1 some extent. I did ask for that one, it would  
2 have been on a piece of land just south of  
3 Bentley, the town of Bentley, I was requesting,  
4 I say, for my landlady, and I was told that that  
5 area was over-appropriated. Going into it, I  
6 kind of knew that, I mean, but -- but I thought,  
7 hey, you don't ask, you don't know, and I ...  
8 Oh, and, yes, the -- the well that I have  
9 listed as the one in index 31, I do own the  
10 quarter section to the south of that, and when  
11 we purchased that property or we were looking at  
12 purchasing that property, I asked if it was  
13 possible there was water available to the south  
14 so that I could water the south quarter section  
15 of this half section; and that was prior to my  
16 ownership, that was a quick question to  
17 District 2. And their quick answer was, I can  
18 tell you that -- I can tell you verbally --  
19 verbally because somebody has already asked  
20 about it due to the fact that that property was  
21 for sale.  
22 So I believe Mr. Boese said to me, he says,  
23 well, if you want to spend the money, I can do  
24 an official, but I can tell you the answer is  
25 it's not there 'cause I already looked at it for

Page 3392

1 someone else. And I took the verbal as my  
 2 answer; I didn't think, well, I needed to go  
 3 hire Burns & Mac to find out if there's enough  
 4 water there that I could really do this, that  
 5 they had done it wrong so ...  
 6 Q. So the conservation efforts that you've invested  
 7 in resulting in water savings, to be told that  
 8 you cannot use that on additional acreage, were  
 9 you given a reason?  
 10 A. I guess I -- I guess I assumed that's just kind  
 11 of how water authority is written.  
 12 Q. But did the water right --  
 13 A. I was not give a reason.  
 14 Q. -- it's not a new appropriation?  
 15 A. No, I don't know that I was given a reason, and  
 16 I don't recall whether I asked or not. I mean,  
 17 it's been --  
 18 Q. Do you --  
 19 A. -- it's been awhile, and I don't remember  
 20 exactly the whole details of it other than, no,  
 21 that probably wouldn't be -- you probably  
 22 wouldn't be allowed to that.  
 23 Q. Does that de-incentivize --  
 24 A. Pardon?  
 25 Q. Does that make you less likely to invest in

Page 3393

1 further --  
 2 A. Conservation?  
 3 Q. Uh-huh.  
 4 A. Well, like I said, any conservation we do, we do  
 5 it based on return on investment. If I can  
 6 spend \$1,000 on conservation and I can gain my  
 7 \$1,000 back over time, I mean, quick enough  
 8 time, you know, whatever you want, 15 or  
 9 20 percent return on your money or 10 or 5, or  
 10 for a farmer, we try to get 1 percent, but I  
 11 base my conservation decisions basically on  
 12 that. But I do have at least one, especially my  
 13 leased water right, that, you know, it was flood  
 14 irrigated at one time and so now there's corners  
 15 that don't get watered anymore, and then just  
 16 the less water we use, I mean, I could probably  
 17 go water another 80 or 100 acres somewhere.  
 18 And -- and you can go and ask for -- you  
 19 can do some -- I know you can do some requests  
 20 for -- for move, but out of that -- out of that  
 21 one well, if I remember right, what it was, it  
 22 was kind of odd, you can -- you can request to  
 23 move it -- well, they got 300 feet, half mile,  
 24 two mile, I think it was something like you can  
 25 request to move it two mile down the road and

Page 3394

1 put in a second well, but I could not do it out  
 2 of the existing well. I couldn't -- yeah, I --  
 3 I think that's right. I -- I don't mean to be  
 4 vague, but it's been awhile since I did it so --  
 5 but I remember thinking, well, that's kind of  
 6 funny, I can't do it out of the existing well  
 7 but I can go dig another well two miles away and  
 8 do it. So there is some -- you can do some  
 9 moving around, I don't know the exact details;  
 10 I've never gotten one that I pushed it far  
 11 enough to find out so ...  
 12 Q. Well, with the limits that have been placed on  
 13 water users due to the over-appropriated nature  
 14 of the east basin storage area, how do you  
 15 understand that -- a right to withdraw up to  
 16 120,000 acre-feet in maintenance credits would  
 17 now be allowed?  
 18 A. Back up, Tessa. State that again, I was not  
 19 evidently listening for the first five words  
 20 so ...  
 21 Q. Okay. So understanding the limitations you've  
 22 experienced and others with the  
 23 over-appropriated aquifer in the past, how do  
 24 you understand there would now be  
 25 120,000 acre-feet to grant in AMCs if the

Page 3395

1 aquifer is truly over-appropriated?  
 2 A. Well, how do I understand it? I guess I  
 3 understand it to the point that at least  
 4 District 2 has established, and I believe  
 5 40 years plus ago, that in that storage basin  
 6 area, that it was over-appropriated and that  
 7 there is no more available water in that area,  
 8 no more additional usable water in that area  
 9 without causing problems, low wells and such.  
 10 From the AMCs, which the City is promoting,  
 11 I guess I see it as that they decided that  
 12 District 2 doesn't know what they're talking  
 13 about and that there's extra water there to be  
 14 used, all you got to do is go get an engineer to  
 15 prove that District 2 was wrong and that there's  
 16 all kinds of available water. I mean, 120,000  
 17 acre-feet, that's a lot of pivots, that's a lot  
 18 of landowners that have missed out on wealth.  
 19 If that's not -- if that's there, there's been a  
 20 lot of landowners that have been told no that  
 21 they should have been told yes. If it's there.  
 22 So I guess -- I guess the thing is if  
 23 you've got the money to hire an engineer and  
 24 prove there's water there, you can have water.  
 25 If you're the average fella and you don't have

1 any extra money to do -- or, you know, most of  
2 us are trying to get 120 acre-feet, it's pretty  
3 hard to justify paying the price of an engineer  
4 to -- to go and get 120 acre-foot water right.  
5 If I was going to put up 1,000 pivots, maybe I  
6 could afford it.  
7 So at best, if -- if the water is there and  
8 we've been wrong, then for 40 years people have  
9 been told no have been told no wrong and they  
10 were first at the table. Or the water's not  
11 there and we've decided that if we say it's  
12 there, it's there. That I don't know, I mean,  
13 I'm skeptical on both sides of it here. It's  
14 like either the water was there and we were lied  
15 to, or the water isn't there, take your pick.  
16 Q. And if the water is there, is there an economic  
17 impact to leaving it in storage rather than  
18 making a beneficial use?  
19 A. I guess he won't mind, he gave me the permit,  
20 Floyd Holle, I said -- we were at dinner one  
21 evening, I said, man, I wish I could find  
22 somebody who had take -- oh, I'm off, sorry.  
23 I hope he doesn't mind me using his name  
24 there, he gave me the permit, I think it's even  
25 in the exhibit here somewhere. He has a permit

1 that he requested a water right 40 -- I believe  
2 it's 40 years ago now. He was told that it's  
3 over -- that area is over-appropriated.  
4 So that -- let's assume, I don't know  
5 whether it was a quarter section or not, I  
6 didn't think to look at what he requested in  
7 acre-feet, but let's assume it's a quarter  
8 section, that's 130 acres, I'm going to say he's  
9 missed out on at least 100 bushel a year for  
10 40 years on each acre. Anybody got their  
11 calculator running, let's do it on an acre, I  
12 guess. I'm 100 bushels short of corn for  
13 40 years, is that 40,000 bushel? Am I fast  
14 enough? Let's say it's 40,000 bushel, an  
15 average price of \$4,000 -- of \$4 a bushel for  
16 my -- it's probably 2.70 but for my ease of --  
17 so four fours, each acre, Mr. Holle, I believe,  
18 missed out on \$16,000 on 130 acres over  
19 40 years. How many million is that?  
20 That's one person. If we could have done  
21 that 120 times -- well, that's not 120 times,  
22 he's talking about 130 acres, they're talking  
23 120,000. They're talk -- so I guess they'd be  
24 talking about 1,000 times. So if we did that  
25 over the community 1,000 times, how many

1 millions of dollars is that into the community  
2 that we've missed out on?  
3 Q. And when you say into the community, can you  
4 elaborate on what you mean by that?  
5 A. I'd say the -- the Bentley, Halstead, the  
6 aquifer area, that aquifer area, where --  
7 wherever it's been said it's over-appropriated  
8 and you can't get a permit. If I can -- I mean,  
9 I've got new permits just south of the basin  
10 area, I can't -- I couldn't claim that there, I  
11 got what I -- I got when I asked. But I'm  
12 talking about anything that is in the area that  
13 is said to be over-appropriated and it's been  
14 for years and years, that's wealth that the --  
15 that's wealth that could have been created in  
16 the area.  
17 Q. And is that limited to the landowners and  
18 farmers, or does it have a broader --  
19 A. I think everybody else gets it but the  
20 landowner. He -- he will have gotten the  
21 millions of dollars that -- the landowners would  
22 have gotten the million dollars, but they would  
23 have spread them to the co-op, they would have  
24 spread them to Mr. Carmichael's pipe business,  
25 they spread them to the car dealers, to the

1 machinery dealers. I mean, you know, farmers  
2 are notable that we're -- we don't -- we don't  
3 have great big high returns on investment, we go  
4 spend it. So it's huge amounts of money that  
5 has not been brought into the neighborhood over  
6 40 years.  
7 Q. Now, the Mr. Holle you mentioned, is he the same  
8 Mr. Holle who gave public comments regarding  
9 this denial?  
10 A. He is.  
11 Q. The City modeled a drought based off of the  
12 2011, 2012 period, repeating for a total of an  
13 eight-year drought. Going back to your  
14 experience in 2011 and 2012, how were you  
15 impacted by that drought scenario?  
16 A. In Sedgwick County, I had one well -- I've  
17 obtained most of my wells since then, but my one  
18 leased well, it started surging when we would  
19 pump flood irrigation; we had it connected to a  
20 pivot and then we were doing that 80 acres that  
21 had not yet been changed to a pivot, it started  
22 surging a little bit. We never got to the point  
23 we couldn't water, but it was kind of like, ooh,  
24 this is not good. That would probably be the  
25 effect I had there.

Page 3400

1 I do also have several pivots and water  
 2 permits in Pratt County. We were affected there  
 3 in that evidently it rained even less there and  
 4 we came to the end of our -- our water  
 5 appropriations out there. We were down to the  
 6 one circle section, that was, I guess -- you  
 7 know, somebody might shoot me, but that was back  
 8 in the day when kind of like, well, I've -- I've  
 9 spent all this money, we've used all this water,  
 10 if I quit watering now, I will have wasted the  
 11 water and I've wasted the money. So we took our  
 12 chances on whether we're going to jail or not,  
 13 and we went ahead and pumped a couple of times.  
 14 And we still came up with a short crop. Just  
 15 due to the heat and such.  
 16 And then the next year, we paid a fine --  
 17 then we paid a fine, and the next year we had to  
 18 not use our -- whatever over-usage, overpumping  
 19 we did, we had to pull it off of 2012. And so  
 20 we were short that year too on water. We  
 21 started that way, we planted as such, we -- you  
 22 know, we planned on it. When we ended '11, we  
 23 didn't know we were planning on it.  
 24 And then there was offers of doing some  
 25 flex stuff showed up about that time too. But

Page 3401

1 in -- in Sedgwick County, in this aquifer here,  
 2 surging was the worst I came up with, and I  
 3 don't remember if that was '11, '12, or both. I  
 4 know it kind of did it for two years, but that  
 5 would have been the -- that would have been the  
 6 most of it there.  
 7 Q. The -- did you pursue a multi-year flex account?  
 8 A. I have -- I had one at one time. I had one flex  
 9 account, it was not in Sedgwick -- it was in  
 10 Pratt County. I have not done any more due to  
 11 the fact that I think it's 10 percent you give  
 12 up -- it's based on the usage of that particular  
 13 well or that permit. If -- if it's a well where  
 14 you use -- let's just say it's 180 acre-foot  
 15 permit, if it's a well that you're pumping right  
 16 up against that 180 foot most years, there's  
 17 no -- then -- then that's where you need a flex.  
 18 If -- if you've got a well where, you know, you  
 19 only pump 120 acre-feet annually and you've got  
 20 a 180 acre permit, there's really no reason to  
 21 give up 10 percent of your water right in order  
 22 to make sure you can make it the next  
 23 year 'cause generally you have that -- you've  
 24 got some cushion there, I guess I should say.  
 25 So really the only wells that makes sense

Page 3402

1 on is a well that you're right up against your  
 2 pumping every year. They do not -- I've never  
 3 understood how that is, but you don't give up --  
 4 you don't give up any of your water right for  
 5 that one that's pumped up next to the permit  
 6 every year, there's no loss there. So that  
 7 makes it a positive.  
 8 If you're going to start one, though, you  
 9 don't generally just want to pull one that  
 10 you've pumped clear up against your deal and --  
 11 and pull a flex permit because now you're  
 12 starting with nothing in the bank if -- per se,  
 13 I guess I should say. So if I had a well that  
 14 is pumped up hard against the permit every year  
 15 but then all of a sudden we get a really wet  
 16 year and I didn't pump up against it that year,  
 17 you can -- if you apply early enough in the  
 18 fall -- well, I think I'm right on this, if you  
 19 apply early enough in the fall, then you can  
 20 take that water that you didn't use that year  
 21 and apply it to your five-year flex now and  
 22 you're starting with water in the bank.  
 23 So that makes it -- that's the one scenario  
 24 where it works is a well that gets pumped hard  
 25 most years -- or I say hard, up against it's

Page 3403

1 maximum, and then you get a year like, oh, good  
 2 deal, I didn't use anywhere near enough and now  
 3 I've got -- I've got some in the bank and I can  
 4 use that and spread that, flex that over my next  
 5 five years.  
 6 But, you know, if you start one -- if you  
 7 start one dry, it's pretty hard to -- you  
 8 know, 'cause your -- your one year to flex  
 9 might -- and your one year to flex might be last  
 10 year and it -- it worked great that year, but --  
 11 but you're going to be scared the whole five --  
 12 four years. I say scared, you're going to look  
 13 at it as, well, I got nothing, I got nothing, I  
 14 got nothing, and you could end up with it the  
 15 fifth year but -- so it's -- and then they're --  
 16 you know, you got to watch them really close, I  
 17 mean, they're -- of course, you're watching that  
 18 well close anyway so I guess that doesn't make  
 19 any difference.  
 20 But, anyway, don't tend to use them because  
 21 if you got a well where you conserve anyway over  
 22 what we've done, you know, you give up your  
 23 10 percent, that doesn't make any sense. And I  
 24 think it's 10 percent, I'm using that number,  
 25 somebody can probably correct me before the

1 day's over, I'm sure, but I think that's what  
2 you lose.  
3 Q. What investments have you made in your property  
4 based on having a water right?  
5 A. What improvements have I made on my property  
6 based on -- well, on properties that don't have  
7 a water right, I've put up a irrigation system  
8 and we grow bigger crop. I guess that would  
9 be --  
10 Q. Can you clarify that, you said on properties  
11 that don't have a water --  
12 A. Well, on property that did not -- the way you  
13 asked the question -- say -- ask your question  
14 again.  
15 Q. Okay.  
16 A. Ask your question again, please.  
17 Q. On property that you have a water right, what  
18 investments have you made based on having that  
19 access to water?  
20 A. It would be irrigation equipment. I don't know  
21 what else I would have.  
22 Q. And if you lose the water, does that irrigation  
23 equipment maintain its same value?  
24 A. No, it would -- it would lose all the value of  
25 what it cost to put it up, it would lose the

1 they're all at. I have a general idea that  
2 they're north and west of Bentley and to the  
3 west and maybe south of Halstead for the bulk of  
4 them. I don't know where they're all at  
5 exactly, but I do know that area is the heaviest  
6 area.  
7 I guess there's some basin deals where they  
8 put the water in on top of the ground, let it  
9 soak in, I don't -- I don't know where those are  
10 at. I know there's one they intended to do  
11 there next to Bentley, but I've never -- I don't  
12 know if they use it or not. Somebody said they  
13 didn't. I don't know about that. But that's  
14 what I understand it to be is in the bulk of  
15 where they pull their water is in the bulk of  
16 where they put their recharge systems.  
17 Q. And so where that water is stored, do you know  
18 where that is in relation to your property?  
19 A. They would be to the north.  
20 Q. Where the water is physically stored, not  
21 necessarily injected but where the water is  
22 actually stored?  
23 A. I believe the storage of it can become on beyond  
24 the aquifer -- the storage area, their -- their  
25 pumping area. If you raise the aquifer here,

1 value of what it cost to take it down,  
2 depreciation. I mean, when I say depreciation,  
3 that pivot's worth more to me on my property  
4 than it is on the neighbor's property 'cause  
5 Josh is going to take his cut out of the middle  
6 there when they move it down the road. And so,  
7 you know, it's worth -- it's not -- and you have  
8 depreciation, which is real, I mean, there's  
9 use, you know, and if you're in a salty area,  
10 then someone doesn't want it anyway. But I can  
11 get -- I can get more out of a used piece of  
12 equipment than my neighbor can, how's that?  
13 Q. Are you familiar in general with the ASR  
14 project's multiple phases, including this  
15 current modification?  
16 A. Oh, I -- I'm -- I have a general sense of it.  
17 I -- I pay attention, I ask questions, I listen.  
18 Q. Do you understand that the program allows the  
19 storage of water in the Equus Beds?  
20 A. I do.  
21 Q. Where do you understand that water is being  
22 stored?  
23 A. I understand that there's a basin area where  
24 they put -- well, I know there's an area where  
25 they have recharge wells, I don't know where

1 it's going to go over there. I mean, if I --  
2 you know, if you got a water hole over -- water  
3 here and there's lower ground here and you get a  
4 bit of a ditch it's going to go down. So in  
5 my -- this is -- this is my knowledge that water  
6 runs downhill and fills voids. I -- I assume  
7 that the same thing happens underground, if you  
8 raise an area, it's going to flow out, and if  
9 you lower an area, it's going to flow in. The  
10 larger the quantity of the water, the bigger the  
11 area that gets raised and lowered.  
12 Q. So is the area where the City's storing water  
13 underneath the land that you farm?  
14 A. Ask it again, Tessa, I'm not sure I heard the  
15 last little bit.  
16 Q. Is the storage area underneath the land that you  
17 farm?  
18 A. I would say what they call their -- well, it  
19 could be -- it could become under my land if  
20 they store enough, yes.  
21 Q. So with a full aquifer and attempting to store  
22 even more water, do you think that would be  
23 under your land?  
24 A. Possible.  
25 Q. Do you know the value of your water right?

Page 3408

1 **A. Well, the value to me is the extra return on**  
 2 **investment for growing an irrigated crop versus**  
 3 **a dryland crop, that's my value. I don't know,**  
 4 **there's probably -- there's probably a**  
 5 **accountant's term for that, or accounting term**  
 6 **for that.**  
 7 **And then there's also what value would it**  
 8 **have if I were to sell it on the market. And I**  
 9 **suppose that would have to do with who needs the**  
 10 **water right, how badly they need it, and what**  
 11 **they need to use it for. You know, I mean,**  
 12 **it's -- it's demand, it's whatever the demand**  
 13 **is.**  
 14 **So, no, I don't know because generally in**  
 15 **our area here, water rights are not auctioned**  
 16 **off, they're not sold. Probably part of it is**  
 17 **due to your inability to use it on another piece**  
 18 **of ground or another -- you know, there's always**  
 19 **permitting -- there's other uses that it can be**  
 20 **used for, but it's not simple, and unless it's**  
 21 **just readily there, there's not a market for it.**  
 22 **And you got to have somebody who doesn't already**  
 23 **have enough water to supply their needs and they**  
 24 **need the water -- they need that water for their**  
 25 **needs.**

Page 3409

1 **You know, what is it that -- you know,**  
 2 **there's always those deals when they have a**  
 3 **hurricane, everybody's talking about, well,**  
 4 **there's people selling water for \$20 a little**  
 5 **bottle. Well, there's a big need for it. When**  
 6 **there's all kinds of water around and there's**  
 7 **not a hurricane or where there's not a disaster,**  
 8 **that bottle of water is worth whatever QT can**  
 9 **get out of it, I guess. So timing is part of**  
 10 **it, I mean, in the middle of a drought and**  
 11 **everybody's running short, that water could be**  
 12 **worth who knows how many more times more than it**  
 13 **is when we have plenty of water. I mean, timing**  
 14 **is -- is everything.**  
 15 **Q. So of the modifications proposed by the City**  
 16 **that we're considering throughout these**  
 17 **hearings, one of those is lowering the minimum**  
 18 **index levels. Those lowered levels vary**  
 19 **throughout the basin storage area, but I think**  
 20 **the minimum is 10 feet. What concerns do you**  
 21 **have about lowering those levels below the 1993**  
 22 **levels?**  
 23 **A. Well, I -- on this subject, I'm going to say I**  
 24 **was just beginning to farm up in this area and**  
 25 **to have a water right to worry about. I do not**

Page 3410

1 **remember '93 myself, so any information I have**  
 2 **about '93 is what has come out of the discussion**  
 3 **of all of this.**  
 4 **And I do know that I have neighbors and**  
 5 **stuff that said it was -- it was getting dicey,**  
 6 **people were starting to have wells that burped**  
 7 **and pumped a little air; it was like, oh, shoot,**  
 8 **this is -- this is not -- this is kind of the**  
 9 **limit. And I also have -- to me, I guess the**  
 10 **fact that the City of Wichita agreed that this**  
 11 **should be the safety level that should be**  
 12 **interjected in their operating agreement with**  
 13 **District 2 and DWR, I'm taking it that everybody**  
 14 **thought that was probably a level that we should**  
 15 **try to attain or keep there in that everybody**  
 16 **knew that started to cause problems, people got**  
 17 **spooked.**  
 18 **So I guess that's my -- my take on the '93**  
 19 **levels is those that were there and experienced**  
 20 **it, including the City of Wichita, thought this**  
 21 **is as low as we should go. So the idea that we**  
 22 **should be pulling that down seems like at least**  
 23 **one party has decided, well, we don't care, we**  
 24 **can -- we can live with it. It doesn't sound**  
 25 **like everybody else can necessarily live with**

Page 3411

1 **it.**  
 2 **That would be my -- and -- and my other**  
 3 **thing about it is, you know, if you're not going**  
 4 **to -- how do I put this? I guess there's a part**  
 5 **of me that just says, we've always got this**  
 6 **level, we shouldn't go there but maybe I should**  
 7 **go -- it's kind of like kids, you know, you tell**  
 8 **them you shouldn't go over there, that water's**  
 9 **deep. Well, can I just go another foot, can I**  
 10 **just go another foot? And the one time -- and**  
 11 **now they're -- now they're drowning. I mean,**  
 12 **it's like give me, give me, give me, and pretty**  
 13 **soon then you're a mess. And I -- so I -- I**  
 14 **guess I look at it as a -- it's a safety valve**  
 15 **on all the other things that we want to do.**  
 16 **Q. And throughout this process over the past few**  
 17 **years, have you seen, read, or heard anything**  
 18 **that makes you believe going below the '93**  
 19 **levels is safe for the aquifer?**  
 20 **A. I'm going to repeat to be sure, you say have I**  
 21 **seen, read, or heard anything that would make me**  
 22 **think it would be safe to go below the '93**  
 23 **levels? Wichita's testimony is that no problem,**  
 24 **let's go. I guess that's what I've had.**  
 25 **Q. Do you know if the City modeled drawings down to**

1 the proposed minimum index levels, including the  
2 10-foot contingency?

3 **A. I -- I guess I am aware that they modeled that  
4 we can use 120,000 acre-feet spread over a  
5 20,000 -- over an eight year -- they modeled it  
6 for full -- what my understanding of their model  
7 is that if we're -- aquifer is full and we run  
8 into 100 -- what, a 1 percent drought, which  
9 would be, what, eight years of -- you know, that  
10 the aquifer can recover from that. What they  
11 did with the '93 level, I do not know  
12 specifically, no.**

13 **Q. You do think it's important to model whether the  
14 aquifer can recover from any of the proposed  
15 pumping scenarios?**

16 **A. I would say that would be paramount. I mean, we  
17 can set here and say we can pull whatever, but  
18 if we can't -- you know, I mean, I guess here's  
19 my thought. Let's use '93 as a -- as a -- let's  
20 just use '93 as an example, we're starting to  
21 pump air. Well, that's all great, it rained the  
22 next year, or it began raining or, you know, we  
23 recovered. If you stretch that out for years  
24 and we go to a depth that nobody's ever been to,  
25 how many years does that take us to get back**

1 just to function?

2 I mean, we -- we're -- we're going into --  
3 we're going into a situation, to me, when we  
4 start dropping below these levels, it's all what  
5 somebody thinks is going to happen. We know  
6 what happened from '93 levels up, we're  
7 experienced. We are not experienced below that  
8 level, Wichita's not experienced below that  
9 level. I know they have smart people that set  
10 around and make numbers on their computer and  
11 they tell us, oh, it'll -- okay, it'll be fine,  
12 but I don't know that they've said if they were  
13 to pull their full 120,000 acre-feet of credit,  
14 along with their 40,000 and everybody else  
15 pumping at their full amount, is it in this --  
16 is it in their modeling that we can recover this  
17 and how many years does it take, does it take  
18 two years, does it take one year, is it  
19 20 years, I mean, is that in this? You know, I  
20 haven't read it well enough to know that.

21 **Q. A second component to the proposal is the  
22 120,000 acre-feet in AMCs, which you briefly  
23 touched on. Do you have concerns specific to  
24 the accumulation of future use of those  
25 maintenance credits?**

1 **A. It's my understanding that is an accumulation of  
2 ASRs that they have recharged and AMCs, correct,  
3 that -- that number is all together, correct?**

4 **Q. That is my understanding.**

5 **A. I just want these -- that's my understanding, I  
6 thought I would ask before I -- the problem with  
7 an AMC is that -- where did we come up with  
8 this? This is -- this is not water that the  
9 City's provided the whole system. It's -- it's  
10 a fake deal, I mean, it's double dipping. I  
11 mean, if I went to the bank and said, hey, I've  
12 got \$1,000 here but I'm going to go deposit it  
13 in the bank next-door, but when I come back over  
14 here, I want you to give me \$2,000 out of my  
15 account. I know I have \$1,000 in my account,  
16 but I'm going to go put this money over in this  
17 bank and I'm going to put 1,000 over there, but  
18 when it -- when I have a dire need and, you  
19 know, the kids have wrecked the car and all this  
20 and I need more money, I want to come back and  
21 you're going to give me \$2,000 'cause I  
22 deposited 1,000 over here in this bank. Where  
23 does this come from?**

24 **Now, I know there 's water -- there's extra  
25 money in that bank, I guess, of course, they can**

1 print it, but, you know, I know there's water in  
2 the aquifer that's there that's below that '93  
3 level, so I don't understand how it is that  
4 we're going to take a gallon of water out of the  
5 Arkansas, Little Arkansas River, we're going to  
6 send it to Wichita, which I think that's a bit  
7 of a privilege right there. That did -- that  
8 was not in the original MOU, I don't believe. I  
9 think that was a change that the City come and  
10 said, hey, I know we have an agreement, we need  
11 to negotiate some more. I mean, it kind of  
12 seems to be a theme. So we need to send this  
13 water to Wichita, we're not getting it used, we  
14 can't get it in the aquifer, can we send it to  
15 Wichita, and they were granted that privilege.

16 **So I don't know, I think there's, what,  
17 nearly 40,000 acre-feet that they've got out of  
18 the Little River, acre-feet, that's pretty  
19 substantial. So they get the opportunity to  
20 send that to Wichita, and I don't get that, hey,  
21 that's not good enough, we need more water  
22 rights. Well, how in the world are we going to  
23 get more water rights? Well, hey, we can --  
24 there's more water in the -- there's more water  
25 in the aquifer, an engineer told us there is, so**

Page 3416

1 let's go ask for a credit for that and we can  
 2 pull that water out later when it's the most  
 3 valuable.  
 4 Like in the middle of the hurricane or in  
 5 the middle of the drought, we're going to go  
 6 pull that water when it's most valuable. We're  
 7 going to store it under these people's land  
 8 while it has minimal value, and then when we  
 9 need it the worst and it's the most valuable to  
 10 the irrigator and it's the most valuable to the  
 11 homeowner, we're going to go make this thing  
 12 dangerous, possibly, and we're going to sell the  
 13 water while it's the most valuable, or we're  
 14 going to have the water when it's most valuable.  
 15 This AMC deal is outside of water  
 16 authority. There -- the only way they have that  
 17 water is that they're using something that they  
 18 claim they left in the aquifer. I cannot claim  
 19 anything -- use anything that I claim that I  
 20 left in the aquifer.  
 21 Q. If these AMCs are approved, assuming that  
 22 happened, how would you want to handle the  
 23 priority date, should those be junior or senior,  
 24 and understanding that something stored in the  
 25 aquifer for 100 years migrates out and it's

Page 3417

1 constantly being recycled, how do you attach a  
 2 junior or senior date to a fluctuating credit?  
 3 A. Well, I'm first going to qualify my answer with  
 4 I don't think anything ought to happen with  
 5 AMCs. They -- they don't -- they should not  
 6 exist. I don't know who come up with the term  
 7 or who -- who thinks this is an idea but -- so  
 8 I'm qualifying my answer because I'm answering  
 9 it saying I don't think these should even exist.  
 10 So I guess I'd put my answer back to even  
 11 the ASR credits that if you -- if they -- if  
 12 they got a credit on December 2020, they put it  
 13 in there on 2020, that that is the priority date  
 14 of that credit, and that any other well that has  
 15 a priority date ahead of that is ahead of that.  
 16 As far as I'm concerned, they should be junior  
 17 if they're junior, and if they're senior  
 18 they're senior. That would be my -- that would  
 19 be my answer to your question.  
 20 Q. Why did you choose to intervene in this matter?  
 21 A. Excuse me a moment. The AMCs. I -- I -- if  
 22 this is allowed, it's not just the Equus Beds  
 23 Aquifer that this affects. This sets precedent  
 24 for the whole state that if you -- what do I  
 25 want to say, how do I want to put it? If you're

Page 3418

1 big enough, if you're powerful enough, and you  
 2 can get enough people to agree, you don't need  
 3 to follow the law, you just set regulations and  
 4 do what you want.  
 5 Our whole -- every -- as has been mentioned  
 6 many times, the whole water appropriations of  
 7 the State of Kansas is based on a per annum  
 8 basis, and it's not based on water that I could  
 9 have put in the aquifer but I didn't. And they  
 10 also claim -- I mean, in order to get this AMC  
 11 thing, you have to be so arrogant as to think  
 12 that you're the only one that causes the aquifer  
 13 to stay full or at a good level. Farmers all  
 14 conserve, God sends rain, rivers push it in.  
 15 Wichita is the big -- the big boy, that's  
 16 no doubt, but they're not the only ones there.  
 17 And the idea that they are is ludicrous. And  
 18 the idea that, well, we have an ASR so we  
 19 deserve it, I don't get that at all. I don't  
 20 know what else to say to it outside of I just  
 21 keep talking just for the sake of hearing  
 22 myself, so I guess that's my answer.  
 23 Q. Yesterday, Mr. Basore talked about a lack of  
 24 trust. Would you agree --  
 25 A. A lack of what, I'm sorry?

Page 3419

1 Q. Trust when it comes to negotiating with the City  
 2 or reaching an agreement with the City. Do  
 3 you --  
 4 A. Oh, oh, okay. I follow you. Well, I would say  
 5 the ASR from the beginning to the end creates an  
 6 element of lack of trust. I remember the very  
 7 first meetings I went to was about the ASR, and  
 8 I don't remember the man's name now, but he  
 9 stood up there on the podium and he said, this  
 10 is great for everybody, it's a win-win-win,  
 11 we're going to put water in the aquifer and  
 12 store it for as -- for a rain - a rainy day - a  
 13 dry day and we're going to push the salt back in  
 14 the Burrton salt plume. That was the big -- I  
 15 mean, that was the big selling point.  
 16 And I was kind of like, well -- I guess I  
 17 was neutral. I mean, I live in Wichita, I  
 18 had -- I had dealings -- you know, when you live  
 19 there, you live close, you have some interaction  
 20 with Wichita; I have to say my level of trust  
 21 even from that was a little slim. But as far as  
 22 it goes with this and the ASR, I was kind of  
 23 neutral.  
 24 I know there were people that say -- you  
 25 know, they were afraid that they wouldn't get

1 the water cleaned before they got it in and this  
2 and that. I -- I -- I don't reject their --  
3 their worries, it -- something can always go  
4 wrong when you start doing this kind of thing,  
5 but my deal was kind of like, yeah, right, if  
6 they can. I -- I -- I guess I was doubtful, but  
7 it wasn't -- that wasn't a trust issue, I was  
8 just kind of doubtful.

9 But they now claim that they have -- and I  
10 believe this is -- it's in -- I think it's in  
11 there somewhere, but I -- I remember setting  
12 when we were at the hearings over at the church,  
13 Daniel was testifying to the quantity of water,  
14 that if they used all their recharge wells, how  
15 many million gallons they can do a day. I  
16 thought it was in the low 30 millions, that's  
17 about 100 acre-feet a day. I don't know what  
18 they've recharged to this date because the  
19 latest numbers I could find was 2016, that they  
20 put approximately -- I think they got \$6,000 -  
21 \$6,000 - they got about 6,000 acre-feet of  
22 credit. I don't know what their bulk injection  
23 was 'cause I know their credits get some  
24 discounts for, you know, different wells, where  
25 they're at and all that; so I don't know what

1 go back and -- we could do the science, we could  
2 probably go back and look and see. I don't have  
3 that number in front of me, I don't keep all the  
4 records, but I'm just pretty sure the aquifer  
5 hasn't been full for all 3500 days -- well, be  
6 3400 because they pumped 100 days. So I -- I  
7 don't trust that that's worked.

8 The other thing that actually, I guess,  
9 probably came before that that I -- I was kind  
10 of like, you got to be kidding me, is these bank  
11 storage wells. I guess Phase I, maybe there's  
12 some that work, I don't know, but Phase II, I  
13 remember when I was told that they were going to  
14 put wells along the bank of the Little Arkansas  
15 and put them to bedrock, but that was river  
16 water. That was my first day of this ASR is a  
17 problem to me because I thought, that's nuts,  
18 you can't do that. Oh, yeah, yeah, we can pull  
19 water from bank storage next to the alluvium,  
20 next to the river and it won't be pulling out of  
21 the -- the aquifer.

22 I'm sitting here thinking, this is a City  
23 of Wichita thing, they're going to turn that  
24 water in circles and get credits for it. And I  
25 guess, fortunately, they were able to have to

1 their total quantity is, but they've accumulated  
2 6,000 acre-feet out of, what, ten years.

3 And they can pump -- they tell us that they  
4 got the ability to inject 100 acre-feet a day  
5 and all they can come up with is 6,000  
6 acre-feet. 30 days is 30,000, so they've --  
7 they've pumped, what, 100 days, 10 -- 100  
8 acre-feet a day, ten days is 1,000, 100 days is  
9 10,000. So in 100 days, they could do -- or  
10 less, they could do what they've done and they  
11 tell us that it works. I doubt it, I seriously  
12 doubt it.

13 I -- I submit, my opinion, that if the ASR  
14 worked, we wouldn't be here today. That's why  
15 we're here is because ASR doesn't work, yet they  
16 tell us it does and they're still telling us it  
17 does. And I -- I don't think they've proven it.  
18 And they're going to say, well, the aquifer is  
19 full. The aquifer was not full ten years ago  
20 when they tried it, when they started it.

21 They had 100 days. There's 300 days in a  
22 year, my calculation, so we've had ten years,  
23 they've had 3,000 days, 3500 days, whatever,  
24 surely there's been more than 100 days that the  
25 aquifer was not full. I think we could probably

1 put in test wells and show that it didn't pull  
2 it out of the aquifer. So somewhere along the  
3 line here, somebody may correct me later in the  
4 day, but it's my understanding that that -- it  
5 was pulling water out of the aquifer and they  
6 had to go to surface only.

7 They told us that would work, they spent  
8 millions of dollars to have somebody tell them  
9 that it worked and then go experiment with it,  
10 and it didn't work. They told us they can get  
11 it in the ground, and I submit it doesn't work.  
12 They're going to argue with me and tell me that,  
13 oh, yeah, yeah, it works, it's just full. Well,  
14 reality doesn't say that it's worked.

15 So that's what I have to look at is  
16 reality. You can blow smoke at me all day long,  
17 but I'm looking at reality. You can't pull the  
18 water out of the aquifer next to the river and  
19 call it river water, they proved that, and I  
20 think we've proved that it -- they can't get the  
21 water in the ground.

22 I think it's sad that none of it works, but  
23 it doesn't seem to work, and we've been told  
24 twice that this works. So far what it has cost  
25 the community is a bunch of this, which takes up

Page 3424

1 a lot of our time, but past that, it's been  
 2 mostly expense for Wichita. It's not been our  
 3 problem, other than they do a lot of digging up  
 4 and tearing up people's fields, and you got  
 5 that. But the cost has been minimal, let's say.  
 6 Well, let's say that this 120,000 acre-feet  
 7 deal and allowing it to go to '93 levels, and,  
 8 you know, they're asking for the '93 -- they're  
 9 liable to come back and ask for another 10 feet,  
 10 you know, I mean, renegotiate, renegotiate.  
 11 That's a sideline, I guess I shouldn't have gone  
 12 there.  
 13 But if this goes wrong, then it's serious  
 14 for everybody because if the irrigation wells  
 15 quit pumping and everybody's homes quit pumping,  
 16 or let's say it's minimal and we don't get a lot  
 17 of less pumping but we get the salt pulling in  
 18 from the northwest and we get the salt coming  
 19 from the south and it starts damaging all of  
 20 that, those systems that we paid for, that we  
 21 buy from Josh, if they're not lined, they're  
 22 13 years and they fall down, I've got to buy  
 23 another system. The saltier it gets, the  
 24 worse -- and then it gets to the point where you  
 25 can't grow certain crops, and then you're into

Page 3425

1 Richard's testimony that ...  
 2 So if they're wrong on this one, it's  
 3 expensive to everybody. It's not Wichita's  
 4 bill, it's everybody's bill. This is why I'm  
 5 here today. If Wichita wants to blow their  
 6 money off and make mistakes, everybody's got --  
 7 they've got their right to do that, I don't  
 8 care. But if it's going to cost everybody in  
 9 the neighborhood, I think it should not be  
 10 allowed.  
 11 And the AMCs, I've only -- I don't even  
 12 think we should be talking about whether or not  
 13 we're going to use the 120,000 acre-feet 'cause  
 14 I don't think the AMCs should ever be -- we  
 15 should never have got past that point. It  
 16 should have been shut off before -- when that  
 17 word come up, somebody should have said, no,  
 18 that's illegal.  
 19 Q. Has the City or anyone contacted you about  
 20 purchasing your water rights for use, or  
 21 renting, for use during a drought?  
 22 A. No.  
 23 Q. Has -- I think you've probably been here when  
 24 the City at one point or another has said if  
 25 this proposal is not granted that they will have

Page 3426

1 to make space in the aquifer. Does that sound  
 2 familiar?  
 3 A. It does.  
 4 Q. And what are your reactions to the idea of  
 5 making space in the aquifer?  
 6 A. I have the concern of making space in the  
 7 aquifer in that I don't think they have the  
 8 ability to recharge it. But let's say for the  
 9 sake of the discussion here that they can  
 10 recharge it, it's their 40,000 acre-feet, they  
 11 can do with it what they want. I think it's  
 12 poor judgment, I don't know, I guess you could  
 13 maybe say unethical, I don't know. I guess  
 14 that's not for me to judge. But they act as  
 15 though they have no other source of water. They  
 16 have Cheney, which is an excellent source of  
 17 water. They've learned to use it, they've  
 18 learned to use it to the point that they backed  
 19 off of their usage and it contributed to helping  
 20 the aquifer move up.  
 21 So the idea, I mean, I heard it -- I mean,  
 22 I heard Mr. Pajor stand up on the stage, I  
 23 believe that's where I heard it, be careful of  
 24 that, but I -- I kind of felt that's where I  
 25 first heard it that if you don't allow us to do

Page 3427

1 this, we'll just pump a hole in the aquifer  
 2 'cause we have to because we have to have water  
 3 rights. Well, I don't know anywhere in the law  
 4 of Kansas that it says if I have to have a water  
 5 right, I should have -- I should get one.  
 6 You should get them the way everybody else  
 7 gets them, you go to an area where it's  
 8 unappropriated -- where the appropriation --  
 9 where it's not over-appropriated and you go  
 10 through the whole system that I said of getting  
 11 a permit. And if there -- you do the safe  
 12 yield, and if the safe yield is good and you  
 13 can, you know, rent, buy, borrow, whatever that  
 14 person's land and you get along with them and  
 15 you can stick a well in the ground, have at it.  
 16 But the idea that you're going to pump  
 17 water to Wichita out of the Little Arkansas  
 18 River and then get a credit for that, a second  
 19 using of other water because you took this water  
 20 to town, you're getting 2 acre-feet of water for  
 21 every acre-feet that you actually have, and  
 22 you're using water that evidently everybody else  
 23 could be using.  
 24 I'm going to have to have you tell me your  
 25 question again because I got sidelined on what I

1 just really wanted to say. So if you could give  
2 your question again, maybe I'll do a better job  
3 of finishing up.

4 Q. I think you've answered adequately, but I asked  
5 your reaction to the City's plans that they need  
6 to make space in the aquifer.

7 A. Oh, yeah, sorry, I got me off there. Yeah, I --  
8 I think they -- if that's what they feel they --  
9 they got to do, then I -- I have no objection  
10 other than I think it's not a good idea. But  
11 from a legal standpoint, it's their water, they  
12 can do it.

13 And if they can recharge it, go after it.  
14 I guess my biggest concern is I don't think they  
15 can recharge it, I've stated that, I think  
16 they've proven they can't recharge it. Do they  
17 have a plan that after they pump a hole and they  
18 can't get it in the ground, what are they going  
19 to do about that, what's the plan? Is there a  
20 plan? I mean, they've said we have to do this  
21 to do this, but you've never proven that you can  
22 do this. I don't -- I don't buy it.

23 And -- and they're going to say, well,  
24 we -- you know, and they may say, well, the  
25 river's not flowing right and dah, dah, dah,

1 dah, dah. They may give me ten reasons why they  
2 couldn't recharge, and they're going to say I'm  
3 not being fair. I'm going to say, those ten  
4 reasons could be here in the next ten years too  
5 and you still can't recharge. You act like you  
6 couldn't do it the first ten years but we can do  
7 it in the next ten years.

8 Well, what's the proof? I mean, just  
9 because an engineering firm tells you that you  
10 can do it, I don't know, they may have all kinds  
11 of different problems the next ten years, the --  
12 the water treatment plant wasn't working that  
13 day and it rained that day and I got my boots  
14 stuck in the mud this day, whatever, you know.  
15 The proof is they can't do it, so my concern  
16 from that standpoint is they want to pump a  
17 hole, they can't fill it. If they can fill it,  
18 it's -- they -- they have ASR rights, they have  
19 their native rights. They don't need, you know,  
20 anything else.

21 The AMCs are not there so they have more  
22 water. They're there so they have more water  
23 rights. The water is not theirs. The water is  
24 in the ground. It is not a permit they went and  
25 got by any other means, it's not an ASR water,

1 it's just water that's in the aquifer, and they  
2 want to -- they want a right to it without going  
3 through the regular channels.

4 MS. WENDLING: Thank you, I have no  
5 further questions.

6 PRESIDING OFFICER: Mr. McLeod?

7 MR. MCLEOD: Thank you.

8  
9 CROSS-EXAMINATION

10 BY MR. MCLEOD:

11 Q. Mr. Carp, did -- did I understand you to say in  
12 your testimony that you believe that the  
13 modeling done for the City's proposal was  
14 modeling from a full aquifer to show the  
15 withdrawal of 120,000 acre-feet of credits over  
16 eight years of drought?

17 A. I believe I did. I believe I did.

18 Q. Did you read the City's proposal?

19 A. Only pieces. No, I did not for the most part.

20 Q. As between your water rights and the City's  
21 40,000 acre-feet base water rights, do you know  
22 who's senior and who's junior?

23 A. You know, the one I got there, I'm going to  
24 assume it's junior, but I don't know for sure.

25 The particular one that I put there, I -- I

1 would -- I would assume it's junior, but I don't  
2 know that for a fact. Mine.

3 Q. If -- if you're correct and your right is  
4 junior, should the City be worried that you're  
5 pumping your junior water rights in an  
6 over-appropriated area?

7 A. Only if I -- only if I impair them. Excuse me,  
8 give me just a second. Only if I impair them.

9 Q. Do you think that higher water levels are a good  
10 thing for your well?

11 A. I think they're a pain in the butt.

12 Q. So you believe that the aquifer should be drawn  
13 down to a lower level, then?

14 A. I do.

15 Q. And do you have an idea of what that lower level  
16 should be?

17 A. Oh, you know, 5, 6 feet less than we've been  
18 doing the last year or two.

19 Q. So were you present when -- when Mr. Romero of  
20 Balleau Groundwater, Inc. discussed the modeling  
21 that he had done for the Groundwater Management  
22 District?

23 A. I was there for some of it, but if you get into  
24 the specifics, I -- I may or may not have been.

25 Q. Do you remember Mr. Romero modeling pumpage down

Page 3432

1 to the nine -- to the new index levels proposed  
 2 below the 1993 level?  
 3 **A. I don't remember anything specific about it.**  
 4 Q. If we could, let's have the -- the witness refer  
 5 to GMD Exhibit Number 68.  
 6 **A. I'll probably need help here, guys.**  
 7 **MS. WENDLING:** It's right in front  
 8 of you.  
 9 **A. Oh, this one here?**  
 10 **MS. WENDLING:** Yes.  
 11 **A. This whole book 68, or am I on the right page**  
 12 **here? Or has he not got us that far yet?**  
 13 **MS. WENDLING:** He hasn't told you  
 14 yet.  
 15 **A. I'm somewhat closer here. I'm somewhat closer**  
 16 **at the moment.**  
 17 **PRESIDING OFFICER:** Mr. McLeod, I  
 18 think he's ready for your question.  
 19 **BY MR. MCLEOD:**  
 20 Q. Okay. Around third-from-the-last page in that  
 21 exhibit, please refer to figure 6 and within  
 22 that figure scenario C.  
 23 **A. Okay. I don't know if I'm anywhere close to**  
 24 **where I need to be here.**  
 25 Q. You should -- you should see a page with about

Page 3433

1 six graphic depictions on it with contour lines.  
 2 **A. I might be getting close here, yeah, maybe.**  
 3 **Looks like it's -- no, it doesn't have a page**  
 4 **number but ...**  
 5 Q. Near the bottom of the page, it should say water  
 6 level drawdown from scenarios A, B, and C,  
 7 figure 6.  
 8 **A. Yep, that's where I'm at.**  
 9 Q. Okay. And -- and can you tell looking at the  
 10 scenario C graphic, which shows contour lines,  
 11 on what according to Mr. Romero's modeling the  
 12 reduction in water level would be under that  
 13 pumping scenario in the location of your well,  
 14 your -- your well within the basin storage area?  
 15 **A. Well, under C, what -- what's your question**  
 16 **again about that C scenario?**  
 17 Q. Okay. Looking -- looking at the graphic lines,  
 18 the contour lines, can you tell what contour  
 19 line would be closest to your well that's within  
 20 the basin storage area?  
 21 **A. Well, I see one, two, five written here. Let's**  
 22 **see, proposed elevation limits. Wichita's EBWF,**  
 23 **what's the EBWF means?**  
 24 Q. Well, I'm thinking that would be the Equus Beds  
 25 well field.

Page 3434

1 **A. Okay. So you're asking me a specific question**  
 2 **from this page, I don't think the answer is**  
 3 **there. Maybe I'm just not clear.**  
 4 Q. So I'm -- I'm asking if you can tell which of  
 5 those contour zones your -- your well would be  
 6 in?  
 7 **A. I'm going to -- I'm going to say one or two.**  
 8 **Probably -- probably one.**  
 9 Q. Okay. And do you know what those -- what those  
 10 numbers represent?  
 11 **A. No, that's kind of what I was questioning there**  
 12 **about was what do they mean.**  
 13 Q. Okay. Well, I won't go further with that  
 14 question then.  
 15 **A. Please do. I want to know.**  
 16 Q. Well, let -- let me just ask this, Mr. Carp: If  
 17 the result of Mr. Romero's modeling was that you  
 18 could expect a -- a 1- or 2-foot-level decrease  
 19 in the aquifer at your location there in the  
 20 event of the -- of the drought scenario that he  
 21 modeled if the City used its native rights and  
 22 credits over a period of eight years, would you  
 23 think that that 1- or 2-foot reduction in water  
 24 levels was unreasonable?  
 25 **A. Do I think it's unreasonable, is that what you**

Page 3435

1 **asked?**  
 2 Q. Yes.  
 3 **A. I -- I do not know.**  
 4 Q. Do you think there's any chance that a 1- or  
 5 2-foot reduction in the water levels would  
 6 dewater your existing well?  
 7 **A. I think I know what you asked but ask it again.**  
 8 Q. Do you think that there's any chance that a 1-  
 9 or 2-foot reduction in water levels there in the  
 10 aquifer would dewater your existing well?  
 11 **A. No.**  
 12 Q. Mr. Carp, does -- does your water right allow  
 13 you to pump when water levels in the aquifer are  
 14 below the 1993 level?  
 15 **A. It would.**  
 16 Q. And do you think that you should have to stop  
 17 pumping at your well if the water levels went  
 18 below the 1993 level?  
 19 **A. No, I did not -- I did not sign an agreement**  
 20 **saying that I wouldn't.**  
 21 Q. So given your testimony today that you think it  
 22 would be dangerous to pump at levels people have  
 23 never pumped at before, would you stop pumping  
 24 just out of caution because of that concern?  
 25 **A. As I said, I did not sign an agreement that I**

1 **would do that in order to obtain a permit that I**  
2 **was struggling to get so I offered this in order**  
3 **that I could get my permit, I did not do that,**  
4 **City of Wichita did.**  
5 Q. Do you think that the City of Wichita should  
6 request that all pumping junior to its water  
7 rights should be shut off if the 1993 levels are  
8 reached?  
9 **A. Why would they request that?**  
10 Q. If -- if the City determined that we were being  
11 impaired by those junior rights, do you think we  
12 should request that they be shut off because now  
13 we're looking at the very dangerous 1993 levels  
14 that we've never been below before?  
15 **A. That would be their right to take that to DWR, I**  
16 **believe, but once again, I did not sign an MOU**  
17 **agreement that I would never do that.**  
18 **Hey, just a second. When I punch this, it**  
19 **does not mute and just de-mute? Don't know what**  
20 **has happened. Maybe it's going ahead and**  
21 **working but ...**  
22 Q. We can still hear you out here.  
23 **A. It seems to be working all the sudden so -- but**  
24 **I can't mute it and de-mute it.**  
25 Q. Mr. Carp, do you understand how the existing

1 Q. Do you think that there's any cap on the number  
2 of credits or the amount of credits in acre-feet  
3 that the City can accumulate in physical  
4 recharge credits under the existing permit?  
5 **A. Do I think there's any what?**  
6 Q. Any cap?  
7 **A. Cap, is that what you --**  
8 Q. Yes.  
9 **A. Now I'm going to have to have you say the**  
10 **whole -- I'm sorry, I can't get this to go. I'm**  
11 **sorry, Mr. McLeod, you're going to have to**  
12 **state -- now that I asked the middle question,**  
13 **you're going to have to state the whole question**  
14 **again, my memory's short.**  
15 Q. Okay. Let -- let me try to put it in context.  
16 You know that in the proposal there would be a  
17 120,000 acre-foot cap on all -- all credits of  
18 all types combined, right?  
19 **A. I understand that.**  
20 Q. Do you think that there is any cap currently in  
21 the existing permits on the physical recharge  
22 credits?  
23 **A. I don't know.**  
24 Q. And, Mr. Carp, you -- you seemed critical of the  
25 notion that the City would be able to put

1 physical recharge credits allowed under the  
2 existing ASR permits work?  
3 **A. Just out of my being sure, ask again.**  
4 Q. Mr. Carp, do you understand how the existing  
5 physical recharge credits that are allowed under  
6 the current ASR permits work?  
7 **A. To some extent. I do still have a question as**  
8 **to whether they're -- have been deemed junior or**  
9 **senior. I believe that that was maybe answered**  
10 **that they're senior, but I don't know for sure.**  
11 **Outside of that, I understand that they work,**  
12 **they put an acre-foot or a gallon or whatever**  
13 **into the aquifer, they put them into different**  
14 **cells, each cell has a different quantity of**  
15 **water from what they put in there. I do note --**  
16 **you know, I mean, I understand that they don't**  
17 **get 100 percent of everything that they put in**  
18 **the aquifer; I understand that if it's close to**  
19 **the river and there may be some discharge out of**  
20 **the aquifer into the river that they don't get**  
21 **as big a credit for that one as they do, say,**  
22 **one that's clear back in the middle of the**  
23 **aquifer and it's not going to flow out**  
24 **somewhere. So if that's what you mean, yes, I**  
25 **do.**

1 credits in storage and then -- then use the  
2 water, as you said, at a time when it's more  
3 valuable, as in the event of a drought. Does --  
4 do you understand that the current permits and  
5 the current physical recharge credits would  
6 allow exactly that?  
7 **A. I do, that's -- that's water that they actually**  
8 **put in there. I'm talking about the water that**  
9 **they did not put in there.**  
10 Q. And you also understand, don't you, Mr. Carp,  
11 that the aquifer never gets fuller than full?  
12 **A. That's kind of a dumb question but I guess, yes.**  
13 Q. So even though the City is putting in water for  
14 physical recharge credits -- I'll just -- I  
15 won't ask that question.  
16 **A. No, go ahead, I'd like to answer that one.**  
17 Q. What I will ask --  
18 **A. I would like to answer that one, go ahead.**  
19 Q. I'll ask you a different question instead,  
20 Mr. --  
21 **A. I like that question.**  
22 Q. And you had suggested in your direct testimony  
23 that the City's physical re -- recharge credits  
24 should only have a priority date from the date  
25 that the credit is put into the aquifer.

Page 3440

1 **A. Yes.**  
 2 Q. Are you suggesting that from the moment the City  
 3 puts -- puts -- goes through everything required  
 4 in the ASR process to treat and place a gallon  
 5 of water in the aquifer that every other  
 6 existing user in the aquifer should have a prior  
 7 right to use that water the day the City puts it  
 8 in, is that what you're suggesting?  
 9 **A. Absolutely.**  
 10 Q. And, Mr. Carp, why would the City ever put a  
 11 gallon of water in the aquifer under those  
 12 terms?  
 13 **A. I don't understand myself why we ever went down**  
 14 **this road. And --**  
 15 **MR. MCLEOD:** I have no further  
 16 questions for --  
 17 **A. -- it should not have been allowed.**  
 18 **MR. MCLEOD:** I don't have further  
 19 questions for the witness.  
 20 **PRESIDING OFFICER:** Are there any  
 21 questions from DWR?  
 22 **MS. MURRAY:** Nope, there are not.  
 23 **PRESIDING OFFICER:** Any questions  
 24 from the Groundwater Management District?  
 25 **MR. STUCKY:** Yes.

Page 3441

1 (Discussion held off the record.)  
 2  
 3 **CROSS-EXAMINATION**  
 4 **BY MR. STUCKY:**  
 5 Q. Mr. Carp, can you hear me?  
 6 **A. I can hear you fine.**  
 7 Q. Okay. Mr. Carp, I just want to ask a few  
 8 follow-up questions based on what you were asked  
 9 just a moment ago and also by Ms. Wendling. You  
 10 were asked some questions just a second ago  
 11 about safe yield and whether or not you should  
 12 be pumping your water right in an appropriated  
 13 area. Do you recall that question you were just  
 14 asked by Mr. McLeod, do you recall a question of  
 15 that nature?  
 16 **PRESIDING OFFICER:** We're working on  
 17 some audio issues, just a moment.  
 18 **MR. STUCKY:** Okay, I'll sit tight.  
 19 **A. Okay. Ask the question again because I didn't**  
 20 **remember being asked that specific question so**  
 21 **try again.**  
 22 **BY MR. STUCKY:**  
 23 Q. And -- and maybe I didn't hear correctly, but I  
 24 thought Mr. McLeod asked you a question about  
 25 whether or not you should be operating your

Page 3442

1 water right in an over-appropriated area of the  
 2 aquifer. I thought he asked a question to that  
 3 effect. That -- that isn't ringing a bell?  
 4 **A. No, I don't think it was -- he asked me should I**  
 5 **be operating it below the '93 levels. I don't**  
 6 **remember the question of should I operate it in**  
 7 **an over-appropriated area.**  
 8 Q. Either way, when you first applied for your  
 9 water right, it would have met safe yield at the  
 10 time; is that correct?  
 11 **A. I'm assuming. The well that I have listed in**  
 12 **their deal here, I purchased that land with the**  
 13 **water right already on it.**  
 14 Q. I -- I think your -- your microphone went mute  
 15 on the second part of that answer.  
 16 **A. I would not be able to answer that -- try again.**  
 17 **I would assume that. The particular well that**  
 18 **is in the exhibit here, I purchased that land**  
 19 **with the water right already on it, so I would**  
 20 **not have been privy to the beginning.**  
 21 Q. And just for my knowledge, the water right in  
 22 question, what year was the date of priority for  
 23 that water right?  
 24 **A. Yeah, you know, you think a guy setting in this**  
 25 **chair would have that, I don't. Unless it's in**

Page 3443

1 **our --**  
 2 Q. I'd ask that you turn to Exhibit 26 in the  
 3 Intervenors' notebook. Let me know when you're  
 4 there.  
 5 **A. Okay. I'm there but I'm not seeing -- or I say**  
 6 **I'm not seeing what you're looking for, I'm ...**  
 7 **MS. WENDLING:** The numbers might  
 8 have changed. So I think after  
 9 I renumbered the well records, it's 36,  
 10 Dave, if that's what you're looking for.  
 11 **MR. STUCKY:** Yes, I am looking for  
 12 the well records. In -- in the notebook I  
 13 have, the original Intervenor notebook,  
 14 it's listed as 26, so if it changed to 36,  
 15 that's -- that's my apologies.  
 16 **A. Yeah, that's it. I believe I've got in front of**  
 17 **me what you want.**  
 18 **BY MR. STUCKY:**  
 19 Q. If you were to thumb through these exhibits,  
 20 would that refresh your memory as to the  
 21 priority date of your water right?  
 22 **A. Yeah, May -- well, May 9th was the --**  
 23 Q. Just -- just to speed this up, if I were to tell  
 24 you --  
 25 **A. I believe it would be May 9th, 1988.**

1 Q. I'm sorry, that -- that's actually the date of  
2 when the appropriation was issued, but if you  
3 flip just a little further. If I were to tell  
4 you your priority date is 1979, would you have  
5 reason to disagree with that?

6 **A. Not according to this.**

7 Q. And, in fact, if I were to proffer to you that  
8 that's what that exhibit indicates, would you  
9 agree with me in that regard?

10 **A. I would.**

11 **PRESIDING OFFICER:** Pardon me,  
12 Mr. Stucky, can you give me the file number  
13 for that particular permit?

14 **A. 32678.**

15 **MR. STUCKY:** Yeah, I think Mr. Carp  
16 said it.

17 **PRESIDING OFFICER:** Thank you.

18 **BY MR. STUCKY:**

19 Q. So let me just ask you this and you can tell me  
20 this is a stupid question if you want to, but  
21 your water right predated the City's AMC  
22 proposal, correct?

23 **A. Yes. Yes.**

24 Q. And so in the sense that -- heard some feedback  
25 there. To -- to the extent that the City is

1 **A. Well, I would say some of your more sandier**  
2 **soils, poor -- let's say somewhat poorer ground,**  
3 **the value gets further apart, it's probably --**  
4 **dry land is a third or less. Third's probably a**  
5 **decent number. If you get into some better**  
6 **dryland soils, it would probably be more closer**  
7 **to half. I guess that would be my answer.**

8 Q. Okay. So if we apply that principle to your  
9 land, the land that you have your water right on  
10 and the water right being 32678, we're talking  
11 about the land that water right's on, if you  
12 were to use -- if you were to lose the use of  
13 that water right on your land, what do you think  
14 the decrease in value of your land would be?

15 **A. I believe it would be the half, it might be a**  
16 **little more, but it would probably be closer to**  
17 **the half than the third.**

18 Q. And in approximate dollars, tell me what we're  
19 talking about. You don't have to give an exact  
20 figure to the penny, to the -- to the exact  
21 dollar, but in the general sense, what kind of  
22 loss in value are we talking about here?

23 **A. It'd be 3,000, \$3500 an acre at least. Could**  
24 **be -- could be 4,000. So four -- four one**  
25 **sixty-three twenty six hundred and forty. Half**

1 taking water out of the aquifer that it didn't  
2 actually inject, that attempt would be junior to  
3 your water rights; is that true?

4 **A. Well, junior at best; water they inject is**  
5 **junior, the water credit is theft.**

6 Q. And I understand how you feel about the matter,  
7 but certainly that attempt would be a later  
8 attempt and in that sense a junior attempt,  
9 correct?

10 **A. Correct.**

11 Q. You indicated just a moment ago that the water  
12 right that you have has value. Do you recall  
13 some of that testimony?

14 **A. I do. I do.**

15 Q. And you indicated that certainly there's a  
16 difference between irrigated water rights and  
17 nonirrigated or dry land, correct?

18 **A. Correct.**

19 Q. Do you have just a general knowledge of the  
20 difference between irrigated land and  
21 nonirrigated land in your area?

22 **A. Are you speaking of value?**

23 Q. I'm speaking of value, if you can give me kind  
24 of a difference in price in what they usually  
25 sell for?

1 **a million, in excess of -- maybe a little even**  
2 **in excess of half a million.**

3 Q. So if you were to lose the water right on your  
4 land, you're -- you're testifying here today  
5 that it's possible that you could lose up to  
6 half a million dollars in -- in assets, if you  
7 will?

8 **A. Salable asset, yes. Could be more than that if**  
9 **I decided to keep it and I just couldn't**  
10 **retrieve my annual benefit from it.**

11 Q. Let me ask you this: Have you ever been  
12 approached or asked about selling any water  
13 or -- or selling any water rights?

14 **A. I have not.**

15 Q. And so your knowledge of the loss of value of  
16 your land is based on your experience with the  
17 difference between irrigated land and  
18 nonirrigated acreage, correct?

19 **A. Correct.**

20 Q. To the extent that the City's AMC proposal  
21 encroaches upon your use of water on your land,  
22 have you given the City of Wichita permission to  
23 so encroach?

24 **A. I have not.**

25 Q. And if the City of Wichita's new proposal

Page 3448

1 results in essentially taking water from the  
 2 aquifer that it did not put into the aquifer, do  
 3 you believe that that's taking your water?  
 4 **A. That is a taking of the water.**  
 5 Q. And, again, are you giving the City of Wichita  
 6 permission to take your water?  
 7 **A. I am not.**  
 8 Q. And I think you already answered this for me,  
 9 but with regard to the water right on your land,  
 10 you said that you purchased that land from  
 11 someone else, correct?  
 12 **A. Correct.**  
 13 Q. And when you bought that land, I assume that you  
 14 had an expectation that you would continue to be  
 15 able to have that water right and that  
 16 investment-based expectation?  
 17 **A. Had I not, I would have bid less.**  
 18 Q. So is the answer to that yes?  
 19 **A. Sorry, yes.**  
 20 Q. And so if you are to lose that water right on  
 21 your land, you're telling me that it would  
 22 drastically impact you from an economic  
 23 standpoint; is that right?  
 24 **A. Half a million dollars is a lot to me, I don't**  
 25 **know about you.**

Page 3449

1 Q. But not just that, not just the diminution in  
 2 the value of your land, but you would also lose  
 3 your ability to effectively irrigate your crops,  
 4 correct?  
 5 **A. Correct.**  
 6 Q. And so the loss to you would be really twofold,  
 7 number one, you would lose the value of your  
 8 land, number one, and then, number two, you  
 9 would lose your livelihood on your land, or that  
 10 would be greatly undermined. Is that a true  
 11 statement?  
 12 **A. Yes.**  
 13 Q. Just a moment ago, you mentioned multi-year flex  
 14 accounts. Do you recall some of that  
 15 discussion?  
 16 **A. I do.**  
 17 Q. And you had an explanation for how multi-year  
 18 flex accounts work, and what we talked about was  
 19 it was a five-year approach and you could, in  
 20 some sense, bank water for -- for use in a  
 21 future year. And that's overly simplifying the  
 22 discussion, but do you -- do you recall that?  
 23 **A. I do.**  
 24 Q. Let me ask you this: The irrigators in the  
 25 area, to the extent there was a drought and to

Page 3450

1 the extent they needed to bank water, was a  
 2 multi-year flex account, was that the primary  
 3 tool or option that was offered?  
 4 **A. Sorry, I must not have listened to the first**  
 5 **part of the question, if you could go through**  
 6 **the whole thing, I apologize.**  
 7 Q. During the -- during the drought years, was the  
 8 multi-year flex account the main option or  
 9 scenario that was offered to irrigators to  
 10 effectively bank water?  
 11 **A. Somebody could tell me I'm wrong, to my**  
 12 **understanding, it kind of started then, and it**  
 13 **was available from then on. I had never really**  
 14 **known about it, give it any thought before that.**  
 15 **Perhaps it existed, but I am not aware.**  
 16 Q. Yeah, I guess my question is this: Are you  
 17 aware of another -- to the extent there's water  
 18 shortages and irrigators want to bank water over  
 19 a period of time, are you aware of an option  
 20 other than a multi-year flex account?  
 21 **A. No.**  
 22 Q. So in other words, if an irrigator wants to take  
 23 advantage of a methodology of banking water for  
 24 future years, the multi-year flex account is  
 25 probably the best option. Is that a true

Page 3451

1 statement?  
 2 **A. Yes, the only option.**  
 3 Q. So let me ask you this: If the City of Wichita  
 4 is concerned about protected future water use  
 5 and how they would handle the situation during  
 6 the drought, do you believe that a multi-year  
 7 flex account is a approach the City of Wichita  
 8 should also have to explore?  
 9 **A. Are you telling me they haven't?**  
 10 Q. Well, I'm asking you to the extent they haven't,  
 11 is that something the City of Wichita should  
 12 also consider?  
 13 **A. I guess I'm surprised they haven't.**  
 14 Q. And just to answer my question, do you --  
 15 **A. Yes, yes, sorry.**  
 16 Q. And so to the extent that they haven't examined  
 17 the multi-year flex account and instead they're  
 18 trying to pump directly to the City of Wichita  
 19 and then accumulate these credits, do you feel  
 20 that the City of Wichita is thus trying to  
 21 operate under a different set of rules than the  
 22 irrigators are operating under?  
 23 **A. Yes, absolutely.**  
 24 Q. Let me ask you about some questions that were  
 25 asked -- asked regarding the mechanics of an

1 aquifer maintenance credit. And you were asked  
2 some questions about diverting water directly to  
3 town and the City getting credit for -- for that  
4 concept. Do you recall some of those questions?  
5 **A. Yes, I do.**  
6 Q. You've lived -- you mentioned that you have at  
7 least lived in the area of the aquifer for  
8 sometime now; is that right?  
9 **A. I do not live in the area, I -- we do our**  
10 **production in that area. I live close to**  
11 **Wichita.**  
12 Q. And when I say area, I mean you're within  
13 30 miles of where your wells are; is that  
14 correct?  
15 **A. Oh, more like 15.**  
16 Q. Within 15 miles of where your well is, okay. So  
17 in -- in that sense, you would know other  
18 irrigators and -- and you would know people that  
19 operate within the Equus Beds, right?  
20 **A. I do.**  
21 Q. Let me ask you this: Are you aware of any other  
22 irrigators that pump water directly out of a  
23 river to -- to irrigate? And you don't have to  
24 say names, I'm just saying in a general sense,  
25 people do that sometimes, don't they?

1 Wichita's aquifer maintenance credit proposal  
2 where they're pumping water directly to the City  
3 of Wichita and then asking -- asking for  
4 permission to then divert water out of the  
5 aquifer, how is that different?  
6 **A. Well, I'm trying to picture that you're**  
7 **saying -- your scenario was that they could get**  
8 **a credit in their secondary well because they**  
9 **were pumping water out of the river onto a**  
10 **separate property, I would say that's very**  
11 **similar.**  
12 Q. So I'm going to pause you here. Based on the  
13 similarities in those analogies, do you think  
14 the City of Wichita should get credit to pull  
15 water out of the aquifer based on diverting  
16 water directly to the City of Wichita?  
17 **A. No, their water credit there is the one that**  
18 **they have for the surface water out of the**  
19 **river. They've got their credit. Anything out**  
20 **of the aquifer is a second credit. And so --**  
21 Q. So to the extent that --  
22 **A. Sorry.**  
23 Q. My apologies. To the extent that your water  
24 right has a priority date of 1979 and is senior  
25 to the City of Wichita's attempts to divert

1 **A. Right, I'm think -- I was trying to think if I**  
2 **know anybody specifically that's doing it.**  
3 **It's -- I know there's some of them down the**  
4 **river, but it's very limited.**  
5 Q. Okay. And do you know, for example, these  
6 irrigators that pump water directly out of the  
7 river to irrigate their crops, let's -- just  
8 assume with me for a second here a hypothetical,  
9 let's say we have an irrigator and this  
10 irrigator is able to pump water directly out of  
11 the river to irrigate their crops, do you follow  
12 me so far in my scenario?  
13 **A. Yeah.**  
14 Q. And let's assume the same irrigator has another  
15 water right where they can pump groundwater.  
16 You still follow me?  
17 **A. I'm with you.**  
18 Q. To the extent that the irrigator pumps water out  
19 of the river, are they getting -- should they  
20 get a credit to pump more water out of the  
21 aquifer?  
22 **A. No.**  
23 Q. Is that something allowed under current --  
24 **A. No.**  
25 Q. So tell me the difference between the City of

1 aquifer maintenance credits, in that sense, do  
2 you feel that they would be diverting your water  
3 if they pull water out of the aquifer under this  
4 new proposal?  
5 **A. Lost you, it went -- it went quiet. I lost -- I**  
6 **lost half of that question, it went quiet.**  
7 **MR. STUCKY:** I guess I would ask if  
8 that question can be reread, was it lost to  
9 the record as well?  
10 (At this time, the reporter read  
11 the designated portion.)  
12 **BY MR. STUCKY:**  
13 Q. Would you like me to read --  
14 **A. I'm thinking. I'm thinking. I'm going to say**  
15 **in that specific question, not necessarily. I**  
16 **think they're pumping water that anyone in the**  
17 **aquifer -- how am I going to state that? I**  
18 **think they're pumping water that no one else in**  
19 **the aquifer has the right to.**  
20 Q. Let me -- let me clarify my -- my question here.  
21 I'm not sure if you thought I was talking about  
22 ASR physical recharge credits or the aquifer  
23 maintenance credits.  
24 **A. I --**  
25 Q. So let me clarify my scenario. With respect to

Page 3456

1 an aquifer maintenance credit, if they divert  
 2 water directly to the City of Wichita, the City  
 3 is asking for a -- to be able to then have a  
 4 credit to take water out of the aquifer in the  
 5 future, correct?  
 6 **A. Correct. Correct.**  
 7 Q. And they didn't actually inject any water into  
 8 the aquifer; is that true?  
 9 **A. Correct.**  
 10 Q. So in that sense, under strictly --  
 11 **A. I can't -- I can't get it to go, I mean, it just**  
 12 **won't go. It kind of has a mind of its own**  
 13 **here.**  
 14 Q. So to -- so to the extent that they didn't put  
 15 water in the aquifer and then they're trying to  
 16 take water out in the future that's dedicated to  
 17 all the other users in the aquifer, to that  
 18 extent, wouldn't they be appropriating water of  
 19 other users, including yourself?  
 20 **A. I'm sorry, I'm thinking about it and I'm not**  
 21 **sure I'm getting your question.**  
 22 Q. If the City didn't put any water in the aquifer  
 23 but then they want to receive a credit to later  
 24 take water back out of the aquifer, isn't that  
 25 water that would be already dedicated to other

Page 3457

1 users of the aquifer, including yourself?  
 2 **A. I -- I could go with yes on that.**  
 3 Q. And so if that's true, then, if it's already  
 4 dedicated to other water users, including  
 5 yourself, if they were to take that water out  
 6 and appropriate that water, could one argue that  
 7 it's already appropriated to you and other users  
 8 of the aquifer?  
 9 **A. In an over-appropriated situation, yes.**  
 10 Q. When you were testifying, and I just think I  
 11 missed the answer here, there was a question  
 12 that Mr. McLeod was attempting to ask you, and  
 13 you said you liked the question but then I think  
 14 he moved on and you weren't able to answer the  
 15 question. Can you repeat what that question was  
 16 and go ahead and furnish an answer for the  
 17 record?  
 18 **A. Well, he started out -- I believe he started to**  
 19 **ask me if I felt that way, then how come I**  
 20 **didn't feel that way about the ASR water, and I**  
 21 **was going to say I do. But I kind of -- I kind**  
 22 **of forgot what his question was for sure, but I**  
 23 **do remember thinking he was going to attribute**  
 24 **the same kind of question to just the ASR**  
 25 **credits, and I was going to say, well, I don't**

Page 3458

1 **think District 2 should have allowed that**  
 2 **either, was my answer. But, you know, I -- I**  
 3 **kind of jumped ahead of what I thought his**  
 4 **question was, I think that's what it was, but I**  
 5 **don't know for sure because I didn't -- he**  
 6 **didn't finish.**  
 7 Q. And just a brief follow-up on something else I  
 8 asked, and I know that Mr. Basore was asked this  
 9 question, I'm not sure you were asked it  
 10 explicitly, the question was asked of Mr. Basore  
 11 if he were to leave water in the aquifer, would  
 12 he get a credit for -- for leaving water in the  
 13 aquifer, and he answered, no, that he wouldn't  
 14 receive such a credit. Do you believe that you  
 15 would receive such a credit if you decided not  
 16 to fully pump your water right?  
 17 **A. No.**  
 18 Q. And -- definitely didn't speak over you that  
 19 time, we got some feedback.  
 20 So in that sense, do you believe that if  
 21 the City of Wichita gets a credit for not  
 22 pumping out of the aquifer that you should also  
 23 then get a credit if you choose not to fully  
 24 irrigate your water right in any given year,  
 25 should you get a credit for future years as

Page 3459

1 well?  
 2 **A. Well, theoretically, yes, but then the whole**  
 3 **system is blown up.**  
 4 Q. The whole system is blown up. And what do you  
 5 mean by that that the whole system is blown up,  
 6 why would that not be good for the aquifer?  
 7 **A. Well, it's a free-for-all for everybody, let's**  
 8 **go, poke holes wherever.**  
 9 Q. And so that --  
 10 **A. And that -- that would set the precedent --**  
 11 **precedent to do that statewide.**  
 12 Q. So that circles right back to the vehicle or the  
 13 methodology that was developed by the Division  
 14 of Water Resources and the legislature to -- to  
 15 envision that scenario, which was the multi-year  
 16 flex account, correct?  
 17 **A. Correct.**  
 18 Q. And the multi-year flex account allows a  
 19 accounting approach where it's banked over a  
 20 period of five years, and so you can account  
 21 and -- and to the exact gallon of water ensure  
 22 that over that five-year period essentially the  
 23 same amount of water would be used regardless;  
 24 is that right?  
 25 **A. Yes, the -- the accumulation of that five**

1 **year -- that permit over five years would never**  
 2 **be pumped past its total summation of a**  
 3 **five-year accumulation.**  
 4 Q. So let me ask you this: Let's say just  
 5 hypothetically for a moment that every irrigator  
 6 in the aquifer, to the extent they decided not  
 7 to pump their water rights, let's say every  
 8 irrigator in the aquifer was allowed to build up  
 9 a credit of 120,000 acre-feet that they could  
 10 then use in the future. You follow me?  
 11 **A. I'm with you.**  
 12 Q. What would happen to the aquifer if a whole  
 13 number of irrigators, and not just irrigators,  
 14 industrial users, other users of the water -- of  
 15 the aquifer, if they were all able to bank up  
 16 120,000 acre-feet of water and then all use them  
 17 at once during a drought, what would happen to  
 18 the aquifer?  
 19 **A. I'm thinking.**  
 20 Q. If -- if all these -- if all these, if you will,  
 21 credits --  
 22 **A. Well, here's my deal is that I -- if you do it**  
 23 **under the basis of the credits -- I -- I'm kind**  
 24 **of wanting you to re-ask your question, because**  
 25 **if you do it under the basis of the credits, the**

1 doesn't inject into the aquifer, why is the City  
 2 allowed to do that?  
 3 **A. Let's hope they're not.**  
 4 Q. In other words, do you think that would be  
 5 detrimental to the health of the aquifer; is  
 6 that true?  
 7 **A. Absolutely.**  
 8 **MR. STUCKY:** Okay. I don't have  
 9 further questions. Thank you, Mr. Carp.  
 10 **PRESIDING OFFICER:** Ms. Wendling?  
 11 **MS. WENDLING:** I don't have any  
 12 further questions.  
 13 **PRESIDING OFFICER:** Okay. Sorry, I  
 14 thought I heard some feedback there. So  
 15 your questioning is through, Mr. Carp, and  
 16 you are excused.  
 17 **A. Thanks.**  
 18 **PRESIDING OFFICER:** Ms. Wendling, do  
 19 you have further witnesses?  
 20 **MS. WENDLING:** We have no further  
 21 witnesses.  
 22 **PRESIDING OFFICER:** Okay. Then that  
 23 will conclude the presentation of the  
 24 fourth and last party's testimony, and that  
 25 will also conclude the hearing --

1 **banking system, due to the fact that people gave**  
 2 **up 10 percent of their rights and -- but they**  
 3 **can still only go --**  
 4 Q. Let me rephrase, I think -- I think I confused  
 5 you. I think I confused you.  
 6 **A. Well, yeah. Yeah, yeah, 'cause it's not --**  
 7 Q. And I apologize. I'm not talking about a  
 8 multi-year flex account right now. I'm  
 9 analogizing to the City's proposal, and in the  
 10 event that just like the City, if an irrigator  
 11 or an industrial user chose not to fully use  
 12 their water right and they were able to then  
 13 bank over a period of time, to the extent they  
 14 didn't use their water right, if they were able  
 15 to bank credits up to 120,000 acre-feet and then  
 16 an extreme drought hit and all these -- these  
 17 users of water in the aquifer then suddenly  
 18 tried to withdraw all these banked-up credits  
 19 all at once, wouldn't that be detrimental to the  
 20 health of the aquifer?  
 21 **A. I believe so.**  
 22 Q. And so then bringing us back home, why isn't the  
 23 City of -- why is the City of Wichita allowed to  
 24 accumulate all of these credits up to  
 25 120,000 acre-feet for water that it actually

1 **MR. MCLEOD:** We're not getting any  
 2 audio of the hearing officer.  
 3 (Discussion held off the record.)  
 4 **PRESIDING OFFICER:** Okay. We are  
 5 trying this from a different laptop, can  
 6 everyone hear me now? Nod if you can hear  
 7 me.  
 8 Okay. We've just concluded the  
 9 presentation of the fourth and last party's  
 10 case in these proceedings. Before I close  
 11 the hearing for today, I would like to  
 12 request the attorneys only to be a part of  
 13 a Zoom meeting to discuss further logistics  
 14 in approximately ten minutes.  
 15 Stephanie, would you please ask Ronda at  
 16 DWR to set that up and send a link.  
 17 **MS. MURRAY:** Yep.  
 18 **PRESIDING OFFICER:** The record is  
 19 not officially closed at this time,  
 20 however. We are still taking public  
 21 comments through 5:00 p.m. on February 26,  
 22 and those would be in written form, either  
 23 email or by mail to the address at DWR to  
 24 Ronda Hutton on the DWR's website for the  
 25 Wichita ASR page.

1 Before I close out these proceedings for  
 2 today, do counsel have anything to add?  
 3 Okay. Hearing none, thank you all so much  
 4 with your patience with our technology  
 5 issues, and that will end this proceeding  
 6 for today. Thank you.  
 7 (Whereupon, the proceedings were  
 8 adjourned at 12:17 p.m.)

1 **PRESIDING OFFICER:** All right. We  
 2 are now on the record. My name is  
 3 Constance C. Owens, and I am the presiding  
 4 officer in this case. This is a  
 5 continuation of proceedings to resolve the  
 6 City of Wichita's request to modify their  
 7 aquifer storage and recovery project Phase  
 8 II permits.  
 9 Today's date is February 5th, 2021. And  
 10 I will mention that we are completely  
 11 remote. The two proceedings the two days  
 12 before today, there was an in-person  
 13 component, that is not the case today, so  
 14 everyone is appearing remotely. And we  
 15 also have a YouTube link that should be  
 16 operational so the public can listen in and  
 17 watch the proceedings as they happen. As I  
 18 mentioned, we do have our intrepid court  
 19 reporter, so there will be a transcript of  
 20 today's proceedings.  
 21 I will remind everyone there are public  
 22 comment opportunities. Written public  
 23 comments will be accepted in this matter  
 24 until 5:00 p.m. on February 26th, and those  
 25 can be submitted either by email or regular

1 mail to Ronda Hutton at the Division of  
2 Water Resources, and her contact  
3 information, her address and email address  
4 can be found on the Division of Water  
5 Resources' website. There is a special  
6 page dedicated to the Wichita ASR, and  
7 that's where that information can be found.

8 We are reconvening today so that the  
9 City of Wichita may present a rebuttal  
10 witness in this case. Before we get  
11 started, let's have appearances, please,  
12 for the City.

13 **MR. MCLEOD:** Brian McLeod, deputy  
14 city attorney for the City of Wichita,  
15 Kansas.

16 **PRESIDING OFFICER:** And for the  
17 Division of Water Resources?

18 **MS. MURRAY:** Stephanie Murray for  
19 DWR.

20 **PRESIDING OFFICER:** And for the  
21 Intervenors?

22 **MS. WENDLING:** Tessa Wendling for  
23 the Intervenors.

24 **PRESIDING OFFICER:** And for the  
25 Groundwater Management District No. 2?

1 in confining us to the contents of our  
2 expert reports, which he's had, of course,  
3 for months, if not years, and so we -- he's  
4 going to have to show you where there was  
5 surprise given to him in the testimony  
6 before he's entitled to introduce rebuttal  
7 testimony.

8 Again, it is not an absolute right; it  
9 is a right earned by -- by the showing of  
10 some surprise. And so hence we would  
11 object to his testimony, offering testimony  
12 as to our expert testimony -- as to our  
13 expert witnesses. The -- the only  
14 testimony that was -- expert testimony that  
15 was introduced in the last several days was  
16 from George Austin, and, again, I assumed  
17 that Mr. McLeod was continuing in his  
18 resolute effort to keep us -- keep that  
19 testimony, rather, confined -- confined to  
20 what was in the expert report. And so,  
21 again, he has no surprise, he -- there --  
22 there was nothing introduced there that  
23 would necessitate rebuttal testimony.  
24 The -- he indicated some consideration  
25 yesterday of dealing with the testimony

1 **MR. ADRIAN:** Tom Adrian and Dave  
2 Stucky.

3 **PRESIDING OFFICER:** Okay, thank you.  
4 And without further ado, Mr. McLeod.

5 **MR. ADRIAN:** Madam Hearing Officer,  
6 I have a preliminary matter to raise with  
7 regard to what apparently is Mr. McLeod's  
8 intention to call rebuttal testimony. And  
9 so I would object to that based upon the  
10 following. In fact, I'm old enough to  
11 remember that our current code of civil  
12 procedure, when I started practicing law,  
13 was known as the new code because it had  
14 been adopted many years before in 1964, and  
15 the whole premise of the new code was  
16 fairness and avoidance of surprise and  
17 ability to know going into a hearing or a  
18 trial what the evidence was.

19 And in this case, Mr. McLeod will have  
20 to show to you the surprise that was  
21 brought about by the testimony apparently  
22 by our expert so that he can introduce  
23 testimony to address that surprise. The --  
24 and he has been quite resolute when we were  
25 offering direct testimony from our experts

1 from the landowners, the water right  
2 holders, and therein may lie some surprise  
3 if that's what he wants to address. But I  
4 would request that he be confined to that.  
5 **PRESIDING OFFICER:** Mr. McLeod.  
6 **MR. MCLEOD:** Did we finish taking  
7 appearances before Mr. Adrian threw that  
8 out on the floor, or do we still have  
9 people who need to indicate their  
10 appearances?  
11 **PRESIDING OFFICER:** No, I had  
12 everyone.  
13 **MR. MCLEOD:** Okay. In response to  
14 that, I will just say that I -- I recall  
15 back when we were fussing over the experts'  
16 reports, the District objected to the  
17 addition of rebuttal sections to the Burns  
18 & McDonnell report, and at that time, I  
19 believe your ruling was that those  
20 additions to their reports were  
21 appropriate. As you know, I have not put  
22 their reports in the record as exhibits  
23 simply because it is cumulative if the  
24 witness is going to testify to the  
25 materials to have both, although the other

Page 3474

1 parties have put in both -- both expert  
 2 reports and the testimony of the witnesses  
 3 cumulatively on basically all of their  
 4 expert testimony.  
 5 So given that this was fussed over and  
 6 you approved of the addition of the  
 7 rebuttal information in our expert reports  
 8 at the time, if we aren't allowed to  
 9 introduce the testimony, the rebuttal  
 10 testimony of our experts, we should be  
 11 allowed to put in their full reports as  
 12 exhibits so that their response to the  
 13 opposing experts is included in the record.  
 14 And the other thing that -- really the  
 15 only thing that we would propose to address  
 16 this morning that was not covered in those  
 17 rebuttal reports would be the -- the  
 18 minimum desirable streamflow information  
 19 that Mr. Austin testified to extensively  
 20 yesterday that I believe he acknowledged in  
 21 his testimony he had never actually used  
 22 the words minimum desirable streamflow or  
 23 put that analysis of impact on minimum  
 24 desirable streamflow in his report. So, in  
 25 fact, all of that was testimony that came

Page 3475

1 in over the City's objection that hadn't  
 2 been in his expert report of disclosure.  
 3 So I would differ with Mr. Adrian's  
 4 contention that there was no surprise to  
 5 the City by any aspect of the experts of  
 6 the District or Intervenors going outside  
 7 the scope of their disclosure. However  
 8 resolute I may have been in attempting to  
 9 prevent that, I was not successful in the  
 10 end, and material did come in that was  
 11 outside the disclosure in Mr. Austin's  
 12 report.  
 13 **PRESIDING OFFICER:** I'm convinced by  
 14 Mr. McLeod's response, I think that if what  
 15 he intends to cover today with his rebuttal  
 16 witness addresses the minimum desirable  
 17 streamflow of Mr. Austin, which although in  
 18 concept was addressed in Mr. Austin's  
 19 expert report was not specifically labeled  
 20 and identified as such, and the fact that  
 21 the expert reports for the City are not a  
 22 matter of record, I think it's appropriate  
 23 to allow testimony to go forward today. So  
 24 I will overrule that objection. I'm sorry,  
 25 yes, overrule the objection and,

Page 3476

1 Mr. McLeod, you may proceed.  
 2 **MR. ADRIAN:** Excuse me, I have two  
 3 other matters to raise, if I may.  
 4 **PRESIDING OFFICER:** Okay.  
 5 **MR. ADRIAN:** I would like to -- at  
 6 the close of the City's evidence back what  
 7 now seems like a thousand years ago, we  
 8 issued a -- or we filed a verbal motion for  
 9 what was characterized as a directed  
 10 verdict, what, if it were in a trial, would  
 11 be a directed verdict, and so I would  
 12 renew -- renew that motion at this time. I  
 13 would also renew our motion to dismiss,  
 14 which has been on file and had been taken  
 15 under advisement by you, at this time.  
 16 **PRESIDING OFFICER:** Mr. McLeod.  
 17 **MR. MCLEOD:** City continues to  
 18 oppose both of the motions.  
 19 **PRESIDING OFFICER:** I am going to  
 20 deny the first motion for what would be the  
 21 equivalent of directed verdict. My goal in  
 22 this case has always been to have as  
 23 complete a record as possible, and we've  
 24 come this far and I think we need to  
 25 complete that process.

Page 3477

1 As for the motion to dismiss, the motion  
 2 to dismiss remains under advisement. So  
 3 there really is no need to renew it.  
 4 **MR. ADRIAN:** I have one  
 5 clarification. Getting back to our  
 6 conversation about the rebuttal testimony,  
 7 I understand that Mr. McLeod is confined in  
 8 his rebuttal testimony to only that of  
 9 George Austin. Is that -- is that -- is my  
 10 understanding correct on that?  
 11 **PRESIDING OFFICER:** Mr. McLeod?  
 12 **MR. MCLEOD:** Well, my understanding  
 13 from Your Honor's comments was different, I  
 14 thought you had indicated that we also  
 15 could put in the material that was covered  
 16 in the rebuttal sections of our expert  
 17 reports given that they were not of record  
 18 and there really can't be any surprise  
 19 since the District has had the rebuttal  
 20 sections provided by our experts for a  
 21 period of many, many months.  
 22 **MR. ADRIAN:** I -- I guess I'm  
 23 curious as to why you didn't deal with  
 24 that, then, during direct testimony?  
 25 **MR. STUCKY:** I -- I think if we were

1 to look at the transcript and the direct  
2 testimony both -- well, Mr. McCormick  
3 indeed did critique Mr. Romero and  
4 Mr. Austin, so our point is that these  
5 rebuttal expert reports were filed far in  
6 advance of the hearing. And per K.S.A.  
7 60-226 you can file a rebuttal expert  
8 report in response -- in response to an  
9 initial expert report, in fact you have  
10 30 days, as I recall having read the  
11 statute, and so as a consequence of that,  
12 since those rebuttal expert reports were  
13 already filed, that was fodder for the  
14 direct testimony and should have been so  
15 raised in direct testimony. And I think  
16 that's our first position here is that, if  
17 anything, it's also cumulative in the sense  
18 this has already been raised on direct.  
19 Now, alternatively, so there's two  
20 different motions we're raising, that's --  
21 that's one, is to the extent we're just  
22 talking -- talking about the initial  
23 rebuttal experts' opinions, that was fodder  
24 for direct because it was filed something  
25 like over a year ago. Alternatively, to

1 speak to some aspect of Mr. Romero's  
2 report, I believe it is incorrect to  
3 suggest that he spoke to any aspect of  
4 Mr. Austin's report. I -- I don't recall  
5 that having occurred, and if counsel can  
6 point out in the record where it occurred,  
7 I will stand corrected, but I don't think  
8 that it did occur.  
9 I think that we, in fact, at the time of  
10 closing the City's case on direct said that  
11 the City intended to reserve rebuttal as to  
12 Mr. Romero and Mr. Austin after they had  
13 testified, and that is the reason why we  
14 didn't do it in our case in direct. And at  
15 the time, the District's counsel said  
16 absolutely nothing about the City reserving  
17 the right to call rebuttal witnesses for  
18 that purpose later in rebuttal, nor did the  
19 hearing officer make any ruling saying, no,  
20 that would be precluded. In fact, I think  
21 the indication on the record was that the  
22 City's reservation of rebuttal witnesses  
23 was recognized at the time as appropriate  
24 and as something that we would be allowed  
25 an opportunity to do.

1 the extent we're talking about new opinions  
2 that are completely outside the scope of  
3 any of the original expert reports, then we  
4 have a separate motion in limine that we're  
5 going to file, that we'd like to file of  
6 record, but we don't know if that's even  
7 going to occur so we'll have to wait to see  
8 what testimony occurs. But we've had no  
9 element of preparation to know if there is  
10 even going to be new opinions that will be  
11 raised. So if there's new opinions raised,  
12 then we have a second motion that we'll be  
13 filing the moment that occurs.  
14 But our prelim -- our preliminary motion  
15 in limine is just as Tom stated that this  
16 should have been raised on direct if it's  
17 just merely talking about what was in the  
18 initial rebuttal expert report that was  
19 filed well over a year ago.  
20 **MR. MCLEOD:** I would differ with  
21 counsel and their argument in the sense  
22 that normally rebuttal occurs after the  
23 witness who's being rebutted has testified.  
24 And while I think it is correct that  
25 Mr. McCormick in his direct testimony did

1 **PRESIDING OFFICER:** It has been my  
2 understanding and my intention throughout  
3 that rebuttal testimony would be  
4 appropriate and would be allowed to the  
5 extent that it is purely rebuttal  
6 testimony. It is not intended to be  
7 another opportunity to restate what has  
8 already been testified to, it is not an  
9 opportunity to get in the last word, so to  
10 speak. It is to respond to something that  
11 a witness testified to.  
12 I understand the concept of surprise.  
13 Again, we're not tied strictly by the rules  
14 of evidence. If there is something that  
15 was testified to that rebuttal is  
16 appropriate for that was not addressed  
17 already, then I think it's -- it's fine to  
18 go forward.  
19 The objections are noted, but, again, I  
20 would point out that rebuttal needs to be  
21 limited to responding to new testimony  
22 that -- that is not simply a repeat of  
23 prior testimony by the rebuttal witness.  
24 So to that extent, I'm going to allow the  
25 testimony to continue, but if it appears

1 that we are straying back into testimony  
 2 that is not peer rebuttal, then I would  
 3 entertain objections at that point.  
 4 So, Mr. McLeod, please go ahead.  
 5 **MR. MCLEOD:** Thank you. The City  
 6 would call Mr. Paul McCormick to the stand.  
 7  
 8 PAUL ANDREW MCCORMICK,  
 9 having been first duly sworn, was  
 10 examined and testified as follows:  
 11  
 12 **DIRECT EXAMINATION**  
 13 **BY MR. MCLEOD:**  
 14 Q. Mr. McCormick, were you watching the hearing  
 15 yesterday as Mr. Austin testified?  
 16 **A. I was.**  
 17 Q. And so you -- you were present virtually for his  
 18 discussion on minimum desirable streamflow?  
 19 **A. Yeah, I was watching the YouTube feed.**  
 20 Q. Will you please refer with us to what I believe  
 21 is GMD2 Exhibit Number 68, which was  
 22 Mr. Romero's expert report and which Mr. Austin  
 23 also referred to, I believe, in his testimony  
 24 yesterday, and look at figure 4 of that report.  
 25 **A. Okay, I've got it.**

1 **Little Ark. And you can see on his figure 5,**  
 2 **the black line, it represents the streamflow,**  
 3 **the actual streamflow from the Valley Center**  
 4 **gage in the years 2011 and 2012, and then the**  
 5 **blue line is the observed flow duration curve,**  
 6 **which shows how often flow was over a given**  
 7 **value. And then the orange line, you can see**  
 8 **Mr. Romero assumed 5 cfs -- a 5 cfs reduction**  
 9 **from that -- that flow based on his numbers,**  
 10 **which is a little misleading in this case**  
 11 **because it kind of implies that every day there**  
 12 **will be 5 cfs less flow in the river caused by**  
 13 **the pumping, and that is not really accurate**  
 14 **based on these results.**  
 15 Q. How would infiltration from the river occur?  
 16 **A. Well, the -- losing and gaining from the stream**  
 17 **and infiltration is -- is driven by the river**  
 18 **stage, how high the -- the stage of the river**  
 19 **is. You know, I think somebody said yesterday,**  
 20 **made the -- the comment that water flows**  
 21 **downhill. Well, the steeper the hill and the**  
 22 **higher the hill, the faster it flows down.**  
 23 **As you can see on this figure 5, there's**  
 24 **low flow times when the graph is down low, and**  
 25 **then there's big spikes where we had a**

1 Q. Will you describe for us what that figure shows?  
 2 **A. This figure is describing the difference in the**  
 3 **model results based on the difference between**  
 4 **the proposed -- pumping to the proposed index**  
 5 **levels and pumping to the 1993 existing index**  
 6 **levels. The -- the orange or purple area there**  
 7 **is -- is the additional pumping, the blue is the**  
 8 **river depletion, and the gray is the aquifer**  
 9 **storage depletion, and there's a fine green line**  
 10 **in there, that is the evapotranspiration**  
 11 **component.**  
 12 Q. Does the figure indicate that there will be  
 13 10 cfs less flow in the Little Ark at these  
 14 pumping conditions with the proposed levels?  
 15 **A. No, it does not. It indicates that there will**  
 16 **be at approximately 10 cfs from the Ark and the**  
 17 **Little Ark. It does not differentiate between**  
 18 **how much depletion there will be from each**  
 19 **individual river.**  
 20 Q. So can we conclude from this that the river will  
 21 have 5 cfs less flow in it every day that  
 22 pumping is occurring during a drought?  
 23 **A. No, not -- not on a daily basis. If you look at**  
 24 **figure 5 of Mr. Romero's report, he assumed that**  
 25 **approximately 5 of that would be coming from the**

1 **precipitation event or a much larger flow in the**  
 2 **stream. And when -- when you have those high**  
 3 **spikes, your head driving the water into the**  
 4 **aquifer is much higher, and you're infiltrating**  
 5 **at a -- at a greater rate, much more water.**  
 6 **When it's low, you're infiltrating at a low**  
 7 **rate. So it's -- it's not that every day you'd**  
 8 **be losing 5 cfs from the river; it's on average**  
 9 **throughout the year you would lose 5 cfs. And,**  
 10 **again, that 5 cfs number is -- is an assumption;**  
 11 **we don't have a calculation of the exact value**  
 12 **of what that infiltration, additional**  
 13 **infiltration would be.**  
 14 **So MDS is -- is something that's applied on**  
 15 **a daily basis by the regulatory authorities.**  
 16 **We're talking about an average infiltration**  
 17 **across the entire period of a year. So saying**  
 18 **you're losing 5 cfs or there's an additional**  
 19 **5 cfs taken from MDS, or -- or something like**  
 20 **that, is not -- not an accurate representation**  
 21 **of how it's actually going to occur.**  
 22 Q. And recognizing that Mr. Austin attempted to  
 23 draw conclusions on impacts to minimum desirable  
 24 streamflow based on this report, in your  
 25 opinion, what conclusion can you actually reach

Page 3486

1 about the impact of the pumping of  
2 alternative -- excuse me, the aquifer  
3 maintenance credits on minimum desirable  
4 streamflow in the Little Arkansas River based on  
5 Mr. Romero's report?  
6 **A. I don't believe that you can make an assumption**  
7 **regarding MDS on it. You can make the**  
8 **assumption that Mr. Romero made that -- that**  
9 **there will be an additional 5 cfs of inflow on**  
10 **average through the year, but directly --**  
11 **MR. STUCKY:** Your Honor, Your Honor,  
12 I hate to interrupt, I'm going to object  
13 and renew the motion in limine. Yesterday  
14 at the hearing when we asked what the  
15 testimony would be about today, we were  
16 told that it would be based on the rebuttal  
17 expert report that was filed by  
18 Mr. McCormick, and I don't think any of  
19 this testimony that he's raising now is in  
20 that rebuttal expert report.  
21 And, indeed, when Mr. Boese attempted to  
22 testify as to issues that were somewhat  
23 outside the scope of his expert report, the  
24 City, and I quote, said it was shameless  
25 conduct by the District, end quote, and

Page 3487

1 Mr. Oleen at the time said we were trying  
2 to hide things, is what he said on the  
3 record, and you sustained that objection.  
4 And so our alternative position here is,  
5 and we've just filed a written motion  
6 in limine to this effect, is that the City  
7 has had over a year -- or not over a year,  
8 just under a year actually to supplement  
9 its expert reports, that if we're talking  
10 about testimony that was raised by  
11 Mr. Romero at the time of the initial  
12 hearing, the City of Wichita could have  
13 supplemented its expert reports and revised  
14 them. And K.S.A. 60-226 allows for that,  
15 and there's a separate section that allows  
16 for the supplementing of expert reports.  
17 And so if you look at our motion,  
18 that's -- our argument here again is that  
19 this was raised at the prior hearing that  
20 when Mr. Boese tried to deviate a little  
21 bit from his expert report, the argument of  
22 undue surprise and unfairness was raised,  
23 and so that is our alternative motion  
24 in limine that we're now raising at this  
25 point, we've just filed a written motion in

Page 3488

1 limine to that effect. We were not aware  
2 that we'd be deviating from this filed  
3 rebuttal expert report as what was  
4 proffered yesterday on the record, and so  
5 now we've filed a written motion in limine  
6 to that effect that should be filed of  
7 record.  
8 **PRESIDING OFFICER:** Mr. McLeod?  
9 **MR. MCLEOD:** Yes, to respond to  
10 that, first of all, we were all present  
11 yesterday in the hearing, and to -- to  
12 correct counsel and his -- his inadvertent  
13 misstatement of the record, I believe I was  
14 very clear yesterday in saying that the  
15 rebuttal testimony today would cover  
16 matters that were in the rebuttal expert  
17 reports, and also I believe I very  
18 specifically said, and -- and counsel can  
19 go back and have the reporter read it back  
20 if he needs to to give him confidence  
21 that -- that this was said, but I do  
22 believe that I also said that Mr. McCormick  
23 would be reviewing the testimony that  
24 Mr. Romero gave on the stand and the  
25 testimony of Mr. Austin, which he was also

Page 3489

1 virtually present for, and -- and look for  
2 any additional points that might not have  
3 been in the rebuttal section of his expert  
4 rebuttal report that were filed, indeed,  
5 sometime ago but have not been admitted in  
6 evidence at this point.  
7 So I think that intention was very  
8 clearly stated on the record, and I think  
9 that all of the questions we have just gone  
10 through, in fact, are less directed at  
11 Mr. Romero's work as such than Mr. Austin's  
12 attempt to misuse Mr. Romero's work  
13 yesterday in his testimony, for Mr. Austin  
14 was mistaken about the conclusions that he  
15 could draw from the information in  
16 Mr. Romero's report, and Mr. McCormick's  
17 answers so far this morning have been  
18 directed to that mistaken-ness and that  
19 misuse by Mr. Austin of Mr. Romero's report  
20 which didn't occur until yesterday when, as  
21 I said, all of Mr. Austin's testimony about  
22 minimum desirable streamflow came in over  
23 the City's objection even though it had not  
24 been included as a topic of discussion  
25 anywhere in Mr. Austin's own expert report.

Page 3490

1 So I think this is, again, a case of --  
 2 of the District applying grossly double  
 3 standards, doing one thing in its own case  
 4 and then, you know, complaining and making  
 5 objections and filing motions in an effort  
 6 to suppress evidence that may be needed to  
 7 be correct misuse, which was indeed misuse  
 8 sprung on the City yesterday by surprise.  
 9 I think the motion is -- is poorly  
 10 founded, it's founded on a misstatement of  
 11 what counsel for the City said yesterday,  
 12 which can be corrected by reference to the  
 13 record, and baseless in that sense, and I  
 14 believe that the motion is baseless in its  
 15 entirety and should be overruled.  
 16 **MR. STUCKY:** And -- and I'll clarify  
 17 the record, to the extent that Mr. McLeod  
 18 is responding to what Mr. Austin said  
 19 yesterday and especially to the extent that  
 20 Mr. Austin's comments deviated to a degree  
 21 from his expert report, we would agree that  
 22 rebuttal testimony is proper to respond to  
 23 that, that the City could not have properly  
 24 prepared the District to -- to let us know  
 25 what that rebuttal would look like.

Page 3491

1 But our position is that if it's a  
 2 response to Mr. Romero's testimony and the  
 3 City has had 11 months to prepare its  
 4 response to that rebuttal -- or to that  
 5 testimony of Mr. Romero, they've had  
 6 11 months to prepare that rebuttal, then  
 7 they have essentially 11 months to decide  
 8 exactly what it is they're going to say,  
 9 and without having supplemented their  
 10 expert report, which would have been  
 11 appropriate, then alternatively we have a  
 12 few minutes, maybe a few hours, maybe a  
 13 couple weeks to respond and determine  
 14 how -- how we're going to respond to what  
 15 the City is saying to Mr. Romero's report.  
 16 And so instead of 11 months, we get a very  
 17 short amount of time to then try and confer  
 18 and plan our response.  
 19 And so that's why the expert rules  
 20 require you to supplement or amend your  
 21 expert report within a certain time frame  
 22 if you're able to, and we're saying that  
 23 because Romero testified a long time ago,  
 24 the City was able to do so. But if we're  
 25 responding to what Mr. Austin said, we

Page 3492

1 completely acknowledge that's a different  
 2 matter, and what Mr. McLeod said is -- is a  
 3 true statement, that if it's a response to  
 4 Mr. Austin, I think the scope of our  
 5 objections is certainly lessened.  
 6 **PRESIDING OFFICER:** So, Mr. McLeod,  
 7 with the questions that you are asking, are  
 8 you questioning Mr. Austin's use of  
 9 Mr. Romero's report, or are you questioning  
 10 in addition to that the validity of  
 11 Mr. Romero's report or testimony?  
 12 **MR. MCLEOD:** In all of the questions  
 13 that were just asked and answered, all of  
 14 those questions and the answers were  
 15 directed at Mr. Austin's use of the  
 16 information in Mr. Romero's report. That's  
 17 what they were and I'm surprised that  
 18 counsel didn't notice that before preparing  
 19 and filing his written motion.  
 20 I would also -- I would also add if  
 21 we're going to continue to have this back  
 22 and forth over rebuttal testimony this  
 23 morning, the City would be satisfied at  
 24 this point to just mark and place into  
 25 evidence the August 21st, 2019 review and

Page 3493

1 rebuttal report that Mr. McCormick prepared  
 2 that was circulated to all counsel, you  
 3 know, more than a year ago. If we can just  
 4 put that in evidence, then -- then we can  
 5 do that and we can -- we can be done for  
 6 the morning.  
 7 **MR. STUCKY:** Can -- can we confer  
 8 just very briefly, Your Honor, on that  
 9 suggestion? I think it sounds like a  
 10 promising, good suggestion, but  
 11 unfortunately because of Zoom, I'm -- I'm  
 12 not in the same location as my co-counsel  
 13 and I'd really like to confer before we  
 14 agree to that.  
 15 **PRESIDING OFFICER:** That's fair. We  
 16 will go off the record briefly. And,  
 17 Mr. Stucky, I assume you can come back on  
 18 live or use the chat feature to let us know  
 19 when you're ready to reconvene.  
 20 **MR. STUCKY:** Yes, it'll -- it'll be  
 21 no more than five minutes at most so ...  
 22 **PRESIDING OFFICER:** Okay. A quick  
 23 five-minute break, thank you.  
 24 (Thereupon, a recess was taken;  
 25 whereupon, the following was had.)

1 **PRESIDING OFFICER:** Okay. Let's go  
2 back on the record. Mr. Stucky.  
3 **MR. ADRIAN:** All right. I -- I  
4 will -- this is Tom Adrian, I --  
5 **PRESIDING OFFICER:** Or, Tom.  
6 **MR. ADRIAN:** -- I'll comment on  
7 that. We've -- we've reviewed  
8 Mr. McCormick's rebuttal or evaluation  
9 dated August 21st, 2019, and we will agree  
10 with Mr. McLeod's suggestion that it be  
11 used in lieu of Mr. McCormick's testimony  
12 as to Mr. Austin, and that would be  
13 confined to the first three pages of that,  
14 I think it's a seven-page report.  
15 And we would also, in conjunction with  
16 that agreement, we would strike the  
17 testimony that Mr. McCormick has given this  
18 morning and use this -- the introduction of  
19 those three pages in lieu of any rebuttal  
20 testimony. And should -- should he want to  
21 keep that testimony that Mr. McCormick has  
22 given this morning, then we would want the  
23 right to cross-examine him as to the  
24 testimony that he's given thus far.  
25 **PRESIDING OFFICER:** Mr. McLeod?

1 But since the City's -- the City's view is  
2 that we should be able to put on anything  
3 that's recovered -- that's actually been  
4 covered in these rebuttal expert reports  
5 since August of last -- of two years ago  
6 actually, plus the line of questioning that  
7 we just covered with Mr. McCormick, we  
8 believe was -- was completely and totally  
9 permissible and, in fact, it's in the  
10 record and should remain in the record; and  
11 if -- if they want to cross Mr. McCormick  
12 about it, that's their right.  
13 But, you know, I believe the City, as to  
14 the content of these rebuttal reports, we  
15 either should be able to put our reports in  
16 in whole like everybody else has done, and  
17 they've had them for over two years, right,  
18 so there's -- there's no possible surprise,  
19 or we should be able to have Mr. McCormick  
20 testify to the content of these rebuttal  
21 reports, which our intent to have him do  
22 that is the only reason that we didn't  
23 offer his rebuttal report full text as an  
24 exhibit for admission in evidence in the  
25 case already.

1 **MR. MCLEOD:** As a counter, that --  
2 that just fails in any form of adequacy, so  
3 please go ahead and rule on their motion  
4 and we'll struggle through this -- this  
5 gamut of harassment however we have to for  
6 the remaining hours of today's hearing.  
7 **MR. ADRIAN:** I'm sorry the rules are  
8 harassing you, but they are the rules.  
9 **PRESIDING OFFICER:** And so,  
10 Mr. McLeod, I'm sorry, it was just a little  
11 hard to hear you, so you -- you do not wish  
12 to reach the agreement that Mr. Adrian  
13 suggested?  
14 **MR. MCLEOD:** We don't.  
15 **PRESIDING OFFICER:** So I believe  
16 where things stand, Mr. McLeod, is for  
17 Mr. McCormick's continued testimony to --  
18 for today to be limited to responding to  
19 Mr. Austin or perhaps to other witnesses  
20 that we heard yesterday. Is that your  
21 understanding?  
22 **MR. MCLEOD:** I -- I actually haven't  
23 seen the written motion in limine that's  
24 been referred to, so I -- I -- I couldn't  
25 actually tell you what the motion is for.

1 **MR. STUCKY:** And I guess maybe a  
2 point of clarification is helpful. If we  
3 agree just to admit this rebuttal expert  
4 report, does -- does that end the matter,  
5 does that preclude our right to  
6 cross-examination, I guess that wasn't  
7 clarified maybe for us as far as what that  
8 means? So I guess a clarification on that  
9 would -- would be helpful as well, and then  
10 maybe -- maybe, I can't speak for our group  
11 but maybe we could just agree to admit the  
12 entire report if it doesn't preclude  
13 cross-examination or at least brief  
14 cross-examination on those limited points.  
15 **MR. MCLEOD:** The City's intent would  
16 be fully to allow that cross-examination to  
17 occur. Just as if we asked the witness all  
18 these questions and he answered them all as  
19 they are in the report, you would be able  
20 to cross him -- you would be able to cross  
21 him to that same extent.  
22 **PRESIDING OFFICER:** So do I  
23 understand that the two of you are in  
24 agreement, and tell me if I'm wrong -- and  
25 I should note I have also not seen the

Page 3498

1 written motion in limine so I -- I am  
 2 unable to address that specifically. But  
 3 do I understand that -- that you are in  
 4 agreement that we admit the report dated  
 5 August 21, 2019 and allow subsequent  
 6 cross-examination of Mr. McCormick, then  
 7 that would substitute for his testimony  
 8 today?  
 9 **MR. MCLEOD:** That would substitute  
 10 for further testimony today, but we would  
 11 keep and it would also be subject to cross  
 12 the six or so questions that were asked and  
 13 answered of him today.  
 14 **MR. STUCKY:** Yeah, I -- I don't mean  
 15 to confer with my counsel on the record,  
 16 but I think that if -- if Mr. McLeod wants  
 17 to introduce this supplemental expert  
 18 report in lieu of further testimony by  
 19 Mr. McCormick and we're allowed to have at  
 20 least a very limited cross as to the points  
 21 strictly raised in the supplemental expert  
 22 report, I think that's -- we would allow  
 23 the report in its entirety, but I -- I  
 24 would have to -- I guess Mr. Adrian can  
 25 confirm that for the record since we didn't

Page 3499

1 have a chance to confer on that point.  
 2 But, yes, if we're allowed to cross-examine  
 3 based on the limited points in this -- in  
 4 this report, then I think we're fine with  
 5 the report being admitted in its entirety.  
 6 **MR. ADRIAN:** I -- I would agree with  
 7 that, and, Tessa, would you agree or  
 8 disagree with that?  
 9 **MS. WENDLING:** I would agree with  
 10 that. My understanding is that we're  
 11 admitting the supplemental expert report in  
 12 lieu of further direct testimony today,  
 13 just making sure I understand correctly?  
 14 **MR. MCLEOD:** That would be my  
 15 understanding as well. And all of it, both  
 16 the testimony that Mr. McCormick has given  
 17 thus far today and what is in the content  
 18 of his rebuttal report of 21 August 2019  
 19 will be open and subject for cross.  
 20 **PRESIDING OFFICER:** And, Mr. Stucky,  
 21 are you in agreement that the testimony  
 22 already given today remains on the record  
 23 and is subject to cross-examination?  
 24 **MR. STUCKY:** Yes, it's subject to  
 25 both cross-examination, and Mr. Romero, who

Page 3500

1 I believe is on this Zoom link, it's also  
 2 subject to his rebuttal testimony as well  
 3 since it's now part of the record.  
 4 **PRESIDING OFFICER:** Okay. I -- I  
 5 assume that counsel for the Intervenor and  
 6 counsel for DWR do not object to this  
 7 agreement? Would either one of -- would  
 8 you like to let me know where you stand on  
 9 that?  
 10 **MS. MURRAY:** I -- I do not object.  
 11 Sorry.  
 12 **PRESIDING OFFICER:** And,  
 13 Ms. Wendling, I did not hear from you?  
 14 **MS. WENDLING:** I have no objection.  
 15 **PRESIDING OFFICER:** It sounds like  
 16 that agreement is reasonable, and,  
 17 Mr. Stucky, does that render your written  
 18 motion in limine, which I have not seen,  
 19 does it render that moot?  
 20 **MR. STUCKY:** We'll -- we'll withdraw  
 21 our objection as to merely admitting the  
 22 supplemental expert report. Again, our  
 23 argument was it still should have been  
 24 raised on -- on direct since it was filed  
 25 in -- in response to our initial expert

Page 3501

1 reports, but we'll withdraw it as part of  
 2 this agreement.  
 3 **PRESIDING OFFICER:** Okay, thank you.  
 4 So that is what we will agree to going  
 5 forward. I'm going to reiterate it for the  
 6 record, please, Counsel, correct me if I am  
 7 mistaken, but in lieu of further testimony  
 8 from Mr. McCormick, I will admit in its  
 9 entirety his report dated August 21, 2019,  
 10 and that will be open to cross-examination  
 11 in the future. The testimony Mr. McCormick  
 12 has already given today will remain on the  
 13 record, and it will also be open to future  
 14 cross-examination. Have I left anything  
 15 out?  
 16 **MR. MCLEOD:** That sounds almost  
 17 entirely correct, Your Honor, and let's  
 18 just -- let's give it whatever City exhibit  
 19 designation we're ready for in the line of  
 20 numbering.  
 21 **PRESIDING OFFICER:** Okay. What  
 22 would be the next City exhibit number?  
 23 **MR. MCLEOD:** I'm thinking maybe 29.  
 24 The reporter may know better than I do at  
 25 this point.

1 **PRESIDING OFFICER:** Nancy, can you  
2 run that down for us?  
3 **THE REPORTER:** I can. Do you want  
4 me to do that now, or do you want me to  
5 just put the next number on it?  
6 **PRESIDING OFFICER:** Well, just -- we  
7 just need to have it designated what the  
8 next number is, we're not sure what that  
9 number is.  
10 **THE REPORTER:** Okay. You need to  
11 give me a minute then.  
12 **PRESIDING OFFICER:** Thank you.  
13 **THE REPORTER:** I believe Brian is  
14 correct, it is Exhibit 29.  
15 **PRESIDING OFFICER:** Okay. So  
16 Exhibit 29 is admitted pursuant to  
17 agreement among counsel.  
18 **MR. MCLEOD:** And Mr. McCormick is  
19 open for cross.  
20 **PRESIDING OFFICER:** Mr. Stucky, are  
21 you prepared to proceed with that?  
22 **MR. STUCKY:** Yes, we're prepared to  
23 proceed with our cross-examination, but I  
24 think Ms. Murray was going to go next.  
25 **PRESIDING OFFICER:** Okay.

1 sorry to interrupt, but I would like to  
2 locate where Mr. McCormick's report is in  
3 the exhibit notebooks, can someone point me  
4 to that?  
5 **MR. MCLEOD:** I think it may actually  
6 need to be downloaded from the ASR website  
7 that DWR maintains. It was -- it was  
8 posted, I believe, on the website but has  
9 not been in the exhibit book.  
10 **PRESIDING OFFICER:** Okay. Thank  
11 you. You may go ahead.  
12 **MR. STUCKY:** So I am -- I'm fine, we  
13 can -- we can scan it and we can email it  
14 to all the parties very quickly if that  
15 would be beneficial to -- to everyone here  
16 so we know what we're talking about. I  
17 have a copy in front of me that I printed  
18 off in preparation for today, actually  
19 printed it off last night and prepared last  
20 night, but if everyone would like us to  
21 email it so it's -- so we all have the same  
22 thing in front of us, we can quickly do  
23 that, it would just take a three -- a  
24 three-minute recess if that would be  
25 helpful to Madam Hearing Officer.

1 Ms. Murray, are you prepared to proceed  
2 with that?  
3 **MS. MURRAY:** I don't have any  
4 questions for Mr. McCormick.  
5 **PRESIDING OFFICER:** Okay.  
6 Mr. Stucky.  
7 **MR. STUCKY:** Thank you, Your Honor.  
8  
9 **CROSS-EXAMINATION**  
10 **BY MR. STUCKY:**  
11 Q. Good morning, Mr. McCormick.  
12 **A. Good morning, Mr. Stucky.**  
13 Q. It's been awhile since we -- we visited about  
14 this matter. I just have a few follow-up  
15 questions, and I promise it won't be near as  
16 long as the last time we visited about this  
17 matter. There's just a few points in your  
18 supplemental expert report that I'd ask for your  
19 clarification on, so I'll try and run through  
20 them in order and be fair -- fairly specific and  
21 confined in my testimony -- or in my questions,  
22 so you can also be confined in your testimony as  
23 well in that regard and speed this process up.  
24 But at any rate --  
25 **PRESIDING OFFICER:** Mr. Stucky, I'm

1 **PRESIDING OFFICER:** At the risk of  
2 yet another three-minute delay, that would  
3 be very helpful to me, so I would  
4 appreciate that, thank you.  
5 **MR. STUCKY:** Okay. We'll -- we'll  
6 have it e-mailed, scanned and e-mailed out  
7 to the group within three or four minutes.  
8 **PRESIDING OFFICER:** Okay. So we  
9 will go off the record for a few minutes  
10 while that's being done.  
11 (Thereupon, a recess was taken;  
12 whereupon, the following was had.)  
13 **MR. STUCKY:** We're already back on  
14 the record, and I'm sorry it's been so --  
15 or I'm sorry if we're still off the record,  
16 I just want to clarify our position here,  
17 it's been so long since I've looked at some  
18 of this stuff. I used to know it inside  
19 out, but in Volume V, Exhibit 70, we have  
20 the City's rebuttal expert reports in our  
21 notebooks that we prepared. I don't think  
22 it's in the City's notebooks, but it's  
23 actually in the District's notebooks,  
24 Volume IV (sic), Exhibit 70.  
25 **MR. MCLEOD:** I would have to say

Page 3506

1 that got past me as well.  
 2 **PRESIDING OFFICER:** Okay. I was  
 3 able to locate that. Does anyone else need  
 4 a little time to receive that from  
 5 Mr. Stucky? Okay. Hearing none,  
 6 Mr. Stucky, please go ahead.  
 7 **MR. STUCKY:** Thank you, Your Honor.  
 8 **BY MR. STUCKY:**  
 9 Q. Mr. McCormick, I'd ask that you turn to the  
 10 first page of your report, and I'll just ask you  
 11 a few questions about some of the conclusions  
 12 that you've raised in this report. In the very  
 13 first one, you're responding to a comment that  
 14 was apparently made by Mr. Austin on page 4 of  
 15 his expert report in his conclusions, and  
 16 Mr. Austin apparently had talked about issues  
 17 with the MODFLOW model and the fact that it  
 18 could not look at individual impacts of wells  
 19 with any certainty. You responded to that in --  
 20 with several sentences. I'd ask that you read  
 21 in -- in the last full paragraph on that first  
 22 page of your supplemental expert report, I'd ask  
 23 that you read that last sentence where it starts  
 24 with the model accurately reproduces, if you  
 25 could read that for the record?

Page 3507

1 **A. Just a moment, I'm trying to find the right**  
 2 **page, Mr. Stucky. My internet connection is a**  
 3 **little slow, I'm looking at it from the DWR web**  
 4 **page to make sure I have the latest copy of the**  
 5 **exhibit.**  
 6 Q. Yeah, and to -- and to clarify the record, what  
 7 I'm looking at, Mr. McCormick, is your  
 8 supplemental expert report. At the top of the  
 9 exhibit I'm looking at, it says Burns &  
 10 McDonnell, it's dated August 21st, 2019, and  
 11 it's a letter to Brian McLeod, and I'm looking  
 12 at that page, at the bottom of that page.  
 13 **A. All right. I'm at the August 21st, 2019 to**  
 14 **Brian McLeod, and the bottom of that page, you**  
 15 **asked me to read the last sentence, the model**  
 16 **accurately reproduces annual water levels**  
 17 **measured in the basin storage area and,**  
 18 **therefore, can be relied upon to predict water**  
 19 **level impacts at specific locations. Is that**  
 20 **correctly what you wanted read, sir?**  
 21 Q. That is, thank you. Can you clarify to me  
 22 exactly how the model accounts for water levels  
 23 measured in specific locations?  
 24 **A. The model can be used to accurately measure**  
 25 **water levels in specific locations within that**

Page 3508

1 **4-by-400-foot grid, and there are numerous tools**  
 2 **that can be used with the MODFLOW model to**  
 3 **interpolate specific location water levels.**  
 4 Q. And just to clarify, although there's additional  
 5 tools that could be used, Burns & McDonnell did  
 6 not look at individual well locations, per se,  
 7 other than this 400-by-400-foot-square grid,  
 8 just to clarify I think what you told us earlier  
 9 on the record, correct?  
 10 **A. We looked at the individual -- the actual**  
 11 **locations and pumping values for wells in their**  
 12 **actual geographic location. We did not attempt**  
 13 **to evaluate individual drawdown impacts on**  
 14 **surrounding wells within the model. There were**  
 15 **a number of unknowns in that, and, no, we did**  
 16 **not go to that resolution of -- of detail.**  
 17 Q. Thank you, Mr. McCormick. And to move this  
 18 along, if you could move to the second page of  
 19 this supplemental expert report, again, it  
 20 appears that Mr. Austin talks about how during  
 21 the years from 1935 to 1979 the model was  
 22 looking at one-mile-by-one-mile grids, but then  
 23 after 1980, the model was able to take into  
 24 account 400-foot-by-400-foot boxes, if you will.  
 25 Is that an accurate statement of -- of part of

Page 3509

1 what Mr. Austin is saying starting on the bottom  
 2 of that first page and moving on into that  
 3 second page, is that just in a nutshell part of  
 4 what he's saying?  
 5 **A. I think it's a misinterpretation of exactly what**  
 6 **was done. The model used a 400-by-400 grid, but**  
 7 **the pumping from 1935 to 1979 was aggregated for**  
 8 **one-mile areas. So it's not that the grid or**  
 9 **anything of the model in the earlier years**  
 10 **was -- was larger; it's simply that the pumping**  
 11 **was not taken as a refined level during those**  
 12 **earlier years.**  
 13 Q. Okay. That -- that clarifies. And, in fact,  
 14 if I were to quote you in the second line of  
 15 your response, you said that the  
 16 one-mile-by-one-mile-square area was, quote, a  
 17 standard methodology, end quote, at that time  
 18 period; is that correct?  
 19 **A. Yes, it is a standard methodology that's used**  
 20 **even today. We were just looking at a model for**  
 21 **GMD3 that currently aggregates -- using -- using**  
 22 **modern data, they're still aggregating the data**  
 23 **to one-mile-by-one-mile squares.**  
 24 Q. If you would, to focus us in on something I  
 25 think you mentioned just a moment ago, could you

1 read the second-to-last sentence of that first  
2 full paragraph on that second page? It's a  
3 sentence that starts if greater than 400 foot,  
4 could you --  
5 **A. Sure.**  
6 Q. -- read that for the record?  
7 **A. Yes, if greater than 400-foot resolution is**  
8 **desired, there are numerous post-processing**  
9 **tools available for use with MODFLOW that allow**  
10 **accurate water level interpo -- excuse me,**  
11 **interpolation within each individual grid cell.**  
12 Q. So in other words, if one desired to have more  
13 specificity and look at a more narrow area, if  
14 you will, again, I -- I understand that my  
15 terminology is not as precise or scientific as  
16 what you'd use, but in -- in my simple mind if  
17 we were to look at a more narrow area than  
18 400 foot by 400 foot, you're saying that there  
19 are post-processing tools available that could  
20 accomplish that if -- if one chose; is that  
21 right?  
22 **A. Yes, there are.**  
23 Q. And I think that by extension, and you've  
24 already answered this, is that those  
25 post-processing tools weren't engaged or

1 **irrigator could change it next week and then all**  
2 **of that data would have to be reevaluated. So I**  
3 **think there would be a very limited value to**  
4 **evaluating on a well-by-well basis throughout**  
5 **the entire well field.**  
6 Q. Okay. That actually leads me to another thought  
7 or another question. Just to refresh my memory  
8 and -- and remind everyone on the record as far  
9 as things we talked about sometime ago, isn't it  
10 true that when we're considering this data,  
11 we're looking at this data on an annual basis?  
12 And so in other words, it still wouldn't show  
13 what would occur during peak pumping periods and  
14 the impacts to individual wells during those  
15 peak pumping times; is that correct? As far as  
16 what --  
17 **A. That's correct. That is correct, the -- the**  
18 **model is on annual time steps, and the index**  
19 **levels are applied annually, so the resolution**  
20 **and the data that is provided within the model**  
21 **is adequate and sufficient for evaluating the**  
22 **index levels.**  
23 Q. Okay. Let's go ahead and move along to the next  
24 page of your report, page 3.  
25 **A. All right.**

1 considered by Burns & McDonnell, at least when  
2 doing the modeling in -- in this particular  
3 case; is that right?  
4 **A. We did not do that because the -- we didn't have**  
5 **all of the data that would apply to it, all of**  
6 **the depths of the domestic wells and the**  
7 **screened intervals of them and even of the**  
8 **irrigation wells. And, you know, what their**  
9 **pump settings are, those are things that change**  
10 **and -- well, excuse me, the pump settings can**  
11 **change, you don't usually move a well once it's**  
12 **drilled, but we -- we didn't have that**  
13 **information and didn't go to that level of**  
14 **detail for our evaluation.**  
15 Q. If the District were to help furnish that  
16 additional data to Burns & McDonnell, do you  
17 think that those -- that additional  
18 post-processing analysis would be helpful as --  
19 as further research or further work on this --  
20 on this matter?  
21 **A. I would not say that it would add significant**  
22 **value because, again, there are so many unknowns**  
23 **and conditions that change throughout the year,**  
24 **you know, that GMD could provide me a pump**  
25 **setting today for a well and for some reason an**

1 Q. And just -- and while you're looking for that,  
2 just so I'm clear, because pump settings can  
3 change, can one do the analysis based on well  
4 depth which does not change, could you do that  
5 further analysis that you just mentioned?  
6 **A. We could.**  
7 Q. So, anyway, moving on, then, to page 3 of -- of  
8 your supplemental expert report, if -- if you  
9 look at your conclusions at the bottom, there's  
10 a statement that's made about water quality  
11 apparently by Mr. Austin, it looks like was made  
12 in his expert report, and then there's a  
13 response that you -- you give at that last full  
14 paragraph on the bottom of page 3. Do you  
15 follow me where -- where I am reading?  
16 **A. Yes, sir.**  
17 Q. And apparently Mr. Austin, and I think he said  
18 something obviously about it on the record  
19 yesterday about water quality, and I assume that  
20 you were able to listen to that testimony  
21 yesterday as well. But, anyway, there's --  
22 there's a statement that he -- he made about the  
23 movement of the chloride plume, and you provide  
24 a response, and it looks like your response was  
25 that Mr. Austin should have examined this

Page 3514

1 particular study by Klager, Kelly, and Ziegler  
 2 about chloride movement. In essence, I believe  
 3 that was the first part of your response; is  
 4 that right?  
 5 **A. Yes, reading my response, that mentions that**  
 6 **report, which I believe has been introduced into**  
 7 **the record and has been referred to numerous**  
 8 **times during testimony.**  
 9 Q. And do you know off the top of your head,  
 10 just -- just to refresh my memory, what the date  
 11 of that report was?  
 12 **A. I believe that the date of that report is -- or**  
 13 **the number of the -- that report is 2016-5165; I**  
 14 **may be inaccurate there.**  
 15 Q. Well, let me just ask --  
 16 **A. But that would indicate that that report was**  
 17 **published in 2016.**  
 18 Q. Okay. Then I'll just ask a simple question  
 19 without having to be precise on the date. That  
 20 report was indeed published prior to the City's  
 21 proposal with respect to aquifer maintenance  
 22 credits, correct?  
 23 **A. Yes.**  
 24 Q. And, in fact, that report was filed prior to the  
 25 City proposing to lower the minimum index level,

Page 3515

1 correct?  
 2 **A. Yes.**  
 3 Q. And, in fact, that report appears to look at  
 4 movement of chloride between 1990 through 2008;  
 5 is that also correct?  
 6 **A. That's what the title says, yes.**  
 7 Q. I would ask that you read that next sentence,  
 8 which is a conclusion in the report starting  
 9 with additionally, if you could read that for  
 10 the record?  
 11 **A. Sure. Additionally, the results of modeling**  
 12 **these scenarios indicate that eastward movement**  
 13 **of the Burrton plume could be slowed by the**  
 14 **additional artificial recharge at the Phase I**  
 15 **sites and that decreasing pumping along the**  
 16 **Arkansas River or increasing water levels could**  
 17 **retard the movement of chloride and may prevent**  
 18 **further encroachment into the southern part of**  
 19 **the well field area.**  
 20 Q. So just to break this down a little bit, it  
 21 refers to the fact that this study or this  
 22 report is about Phase I sites, is that right,  
 23 that's what it says verbatim, correct, from what  
 24 you quoted?  
 25 **A. It -- it talks about Phase I sites, but it's not**

Page 3516

1 **referring only to Phase I sites, no.**  
 2 Q. But just to clarify today's record, what we're  
 3 talking about with aquifer maintenance credits  
 4 and the City's current proposal, that has to do  
 5 with an extension of Phase II, we're not talking  
 6 about Phase I credits, at least with the issues  
 7 before the hearing officer today; is that right?  
 8 **A. I believe that the proposal states that Phase I**  
 9 **wells are excluded, so it would only deal with**  
 10 **Phase II.**  
 11 Q. Okay, thank you, that -- that's helpful. But I  
 12 think without beating a dead horse, I think the  
 13 point is clear that this report that talks about  
 14 the movement of chloride and the potential  
 15 harmful impacts of that movement doesn't  
 16 consider what would occur in the event the  
 17 minimum index level was lowered and the City  
 18 were to utilize this aquifer maintenance credit  
 19 approach, correct?  
 20 **A. I would agree that it does not deal with the**  
 21 **aquifer maintenance credits, and I would have to**  
 22 **review the report to remember exactly what**  
 23 **scenarios they modeled, but I -- I know they did**  
 24 **model levels with lower water levels in the well**  
 25 **field area. So they did consider lowered water**

Page 3517

1 **levels.**  
 2 Q. Okay. And we -- we may wish to clarify that  
 3 point later, but for now I'll just move along.  
 4 Let's go ahead and move on to the next page of  
 5 your supplemental expert report, page 4.  
 6 **A. Okay, I'm there.**  
 7 Q. Toward the bottom of -- of the supplemental  
 8 expert report you have what's called point 3; is  
 9 that right?  
 10 **A. Yes.**  
 11 Q. And I'm going to quote the last sentence of -- I  
 12 think these would be Mr. Romero's conclusions,  
 13 I'm going to quote the last sentence of  
 14 Mr. Romero's conclusions because I think that's  
 15 what's helpful for the record, Mr. Romero says,  
 16 however, Burns & McDonnell does not present an  
 17 analysis quantifying hydrologic effects from  
 18 pumping that could cause drawdown to that  
 19 proposed minimum index level. And then could  
 20 you read also your response for the record, it's  
 21 just one sentence?  
 22 **A. The proposed minimum index levels were developed**  
 23 **by taking the modeled lowest groundwater levels**  
 24 **and adding a contingency, as described in**  
 25 **section 2 of the proposal.**

1 Q. So in other words, Mr. Romero's last statement  
2 that this -- this analysis was not presented,  
3 essentially you're acknowledging that that  
4 analysis was not specifically done but instead a  
5 contingency was added; is that correct?

6 **A. No, that's not correct. I was merely explaining**  
7 **in my response how the groundwater levels were**  
8 **done -- or, excuse me, were developed. And I**  
9 **believe based on that comment, Mr. Romero is**  
10 **providing a critique that he could -- that he**  
11 **recommends a -- a different way of quantifying**  
12 **the hydrologic effects.**

13 Q. Did you personally quantify or study the  
14 hydrologic effect of lowering to the new minimum  
15 index level, did you personally help with that  
16 work?

17 **A. Yes, I did.**

18 Q. And -- and where in your proposal does it  
19 demonstrate that that modeling occurred to the  
20 new proposed minimum index level?

21 **A. Well, I think it comes down to there's --**  
22 **there's multiple ways to skin a cat. We**  
23 **developed those levels through -- through the**  
24 **method that we used; Mr. Romero is simply saying**  
25 **that he would look at it in a different way.**

1 **saying he approached it from a different angle.**  
2 **If you have a specific question -- or a quick**  
3 **question about one of his analyses, I can say**  
4 **whether I agree or disagree with that, but I'm**  
5 **not prepared to make a blanket statement that I**  
6 **agree with everything that Mr. Romero said.**

7 Q. I think we're -- we're essentially saying the  
8 same thing, and so I'll move onto the next page.

9 Moving onto the next page of -- of the  
10 report, and it's point 4, I guess it starts on  
11 the fourth page and it continues into the fifth  
12 page of Mr. Romero's report, Mr. Romero talks  
13 about point 4, and he says, the assessment  
14 provides insight to hydrologic effects in the  
15 context of the new pumping that could occur if  
16 the minimum index levels are lowered, and he  
17 talks about some of his analysis in that regard,  
18 and you then have a response. I would ask that  
19 you read for the record the second sentence of  
20 your response.

21 **A. All right. As such, is that the one you're**  
22 **talking about that starts as such?**

23 Q. I'm sorry, I'm on the top of page 5 of your  
24 expert report, I'm talking about point --  
25 point 4, which started on the bottom of page 4

1 Q. And -- and just to clarify the record, in your  
2 proposal, you just -- you showed some drought  
3 pumping, but you didn't do the same modeling or  
4 quantifying of hydrologic effects that  
5 Mr. Romero did in his study. Is that a true  
6 statement?

7 **A. Yes, he -- he did a different type of**  
8 **quantification than we did and went about it in**  
9 **a different way, and I believe he reached pretty**  
10 **much very similar conclusions that we did.**

11 Q. And so in other words, you didn't have reason to  
12 disagree with Mr. Romero's conclusions in that  
13 regard; is that correct?

14 **A. I'm not saying I didn't disagree with any**  
15 **particular point of Mr. Romero's; I'm simply**  
16 **saying Mr. Romero went with a different method**  
17 **of quantifying, which is likely also valid.**

18 Q. Right. And that's -- and that's what I was  
19 speaking to, that specific level of calculations  
20 that Mr. Romero did, those specific calculations  
21 that we're discussing right now, you didn't have  
22 reason to disagree with, you -- you saw it as  
23 valid, correct?

24 **A. I'm not saying that anything that Mr. Romero did**  
25 **is not valid in this statement. I'm simply**

1 but then it continues onto the top of page 5 and  
2 so I'm looking at the first full paragraph on  
3 page 5, the second sentence of -- yeah, the  
4 second and third sentence, if you could read  
5 both those sentences actually, that would be  
6 awesome.

7 **A. Okay. As such, the City can pump 40,000**  
8 **acre-feet per year regardless of where water**  
9 **levels are with respect to the minimum index**  
10 **levels. It should be clarified that changing to**  
11 **the proposed minimum index levels only**  
12 **facilitates diversion of recharge credits, which**  
13 **is groundwater that would otherwise not exist in**  
14 **aquifer storage without ASR operations.**

15 Q. So in other words, what you're talking about  
16 here is the concept of artificial recharge, is  
17 that right, because you're talking about water  
18 that would otherwise not exist in the aquifer?  
19 Is that -- is that right?

20 **A. I think what I'm talking about is that the index**  
21 **levels, whether 1993 or proposed, only apply to**  
22 **pumping recharge credits, they don't apply to**  
23 **pumping the City's native right.**

24 Q. I'm referring to the second part of that  
25 sentence where it says, which is groundwater

Page 3522

1 that would otherwise not exist in aquifer  
 2 storage without ASR operations, and when you're  
 3 referring to ASR operations, at least as it's  
 4 used in that sentence, are you talking about  
 5 physical recharge as found in ASR Phase II?  
 6 **A. The index levels, based on the proposals, would**  
 7 **apply to AMCs or physical recharge.**  
 8 Q. And, again, I am not sure I want to revisit this  
 9 entire consideration or debate we had, but  
 10 how -- how does water that would otherwise not  
 11 exist in the aquifer, how does it get placed in  
 12 the aquifer based on an aquifer maintenance  
 13 credit?  
 14 **A. Based on an aquifer maintenance credit, the**  
 15 **water is diverted from the Little Ark River,**  
 16 **treated through a treatment system. If it is a**  
 17 **physical recharge credit, it is put into the**  
 18 **ground and left there for some period of time**  
 19 **and then pumped back out and sent somewhere for**  
 20 **use. If it is an AMC, we are credited with**  
 21 **leaving the water in the ground and it is sent**  
 22 **directly for use.**  
 23 Q. And just to clarify, though, let's say that we  
 24 have an aquifer that contains 100 gallons and --  
 25 but there's capacity for 200 gallons in this

Page 3523

1 aquifer. Do you follow me so far?  
 2 **A. Yes.**  
 3 Q. And let's say that in the event of physical  
 4 recharge we inject 50 gallons of water into that  
 5 aquifer, now we have 150 gallons in that  
 6 aquifer, you follow me?  
 7 **A. Yes.**  
 8 Q. And in that sense, the 50 gallons that we  
 9 injected otherwise did not previously exist in  
 10 the aquifer, using your language; is that right?  
 11 **A. Yes.**  
 12 Q. But just to clarify, and, again, I think we're  
 13 saying the same thing, but just so we have a  
 14 clear record, with an aquifer maintenance  
 15 credit, when -- if we had 100 gallons, in this  
 16 hypothetical, in the aquifer, in the process of  
 17 accumulating an aquifer maintenance credit when  
 18 we ship this water off to town, we're not  
 19 actually putting 50 gallons of water into this  
 20 aquifer in my hypothetical, right?  
 21 **A. In your hypothetical, yes, but an AMC is**  
 22 **functionally equivalent in that we're not**  
 23 **pumping those 50 gallons of water either.**  
 24 Q. Right. And I'll take away the --  
 25 **A. In place of pumping that water, we're pulling it**

Page 3524

1 **from the river and treating it and sending it**  
 2 **direct, so it's a functional equivalent of**  
 3 **putting it into the ground.**  
 4 Q. Okay. You answered my -- my question,  
 5 Mr. McCormick, and I'll take away the mystery,  
 6 I'm not going to revisit the functional  
 7 equivalent concept, so we'll go ahead and move  
 8 on for today's purposes. So let's move on to  
 9 point number 6.  
 10 **A. I'm sorry, sir, you cut out, what point did you**  
 11 **want to move on to?**  
 12 Q. Point number 6, please.  
 13 **A. Okay.**  
 14 Q. Point -- just because it's -- it's been a few  
 15 hours since I read this late last night, can you  
 16 capture for us on the record what it was that  
 17 Mr. Romero was saying in point number 6? I  
 18 think his point -- actually, I just read it and  
 19 refreshed my memory, it appears to me that his  
 20 point was that based on the modeling that  
 21 occurred and the way the USGS model was  
 22 calibrated, it would have a tendency or  
 23 potential for overestimating stream depletion,  
 24 which he said would translate to an  
 25 underestimation of aquifer storage depletion.

Page 3525

1 Is that, in essence, what his position was in  
 2 point number 6?  
 3 **A. Yeah, I believe so, based on just reading it**  
 4 **through quickly here.**  
 5 Q. And then if we turn to your response, as -- as I  
 6 read through your response, and, again, I'm -- I  
 7 am not an expert, obviously, this is -- this is  
 8 the kind of thing you've done for a long time,  
 9 so if I oversimplify this, I apologize, in your  
 10 response, you indicate that the model, the USGS  
 11 model that was used by the City engaged a river  
 12 package to look at the Little Arkansas and  
 13 Arkansas Rivers; is that correct?  
 14 **A. That is correct.**  
 15 Q. And I think what you -- you mentioned in your  
 16 response is that there's a different type of  
 17 package that the City could have used but chose  
 18 not to, which is the streamflow routing package;  
 19 is that right?  
 20 **A. That is not correct. Your -- your explanation**  
 21 **that there is a different streamflow routing**  
 22 **package is correct, but it's actually the USGS,**  
 23 **when they put the model together, chose to use**  
 24 **the river package; and their model uses the**  
 25 **river package, and that is the model that we**

1 **used with the City. So it's not that the City**  
2 **made a choice to use the river over the stream,**  
3 **it's the developer to the model.**

4 Q. That -- that clarifies for me a lot. So in  
5 other words, you used the USGS model, and in --  
6 in another part of your expert report, actually  
7 flipping back to page 4 of your expert report  
8 just very quickly to clarify that point, you  
9 indicate under point 2, and I'm quoting, all the  
10 files used by Burns & McDonnell for the City's  
11 accounting model and drought model use the  
12 original USGS concept. So you clarify that  
13 exact point in -- in this supplemental expert  
14 report, that you just built off the exact USGS  
15 model; is that -- is that right?

16 **A. That's correct. There was some sort of a glitch**  
17 **which was addressed by Mr. Romero in his**  
18 **testimony that he thought that possibly we had**  
19 **some difficulty in our files, but we checked our**  
20 **files and I believe Mr. Romero checked his**  
21 **files, and we were all using the original USGS**  
22 **model.**

23 Q. Okay. That's -- that's helpful, so now moving  
24 back to page 5 of your expert report where we're  
25 talking about the differences of the river

1 quote. You just mentioned that that's something  
2 that couldn't be done in a day. As far as the  
3 work that would go into doing that, how long --  
4 and, again, no one's going to hold you to this  
5 because I -- I understand how it is in law,  
6 sometimes you don't know how long it will take  
7 to research something until you start  
8 researching it, and I'm sure the same is true in  
9 your world that it's impossible to really know  
10 how long that process would take with any  
11 certainty until you're -- you're in the middle  
12 of it, but do you have any idea in answer to my  
13 question?

14 **A. My off-the-cuff response is to -- to -- to**  
15 **change to the streamflow routing package,**  
16 **recalibrate, and have it peer reviewed to the**  
17 **level of the current USGS model, I would suspect**  
18 **would take in excess of a year, certainly to get**  
19 **it fully recalibrated, reviewed, and -- and**  
20 **agreed upon.**

21 Q. Okay. And just also to have a clear record,  
22 though, and you -- you answer this in -- in your  
23 response already, this is -- this is answered,  
24 but you say that the river package, which was  
25 utilized by the City, the USGS river package,

1 package and the streamflow routing package, and  
2 I apologize if I wasn't precise in my question,  
3 the City used the USGS model, which is the river  
4 package, but what you're saying here is it's  
5 possible to also utilize the streamflow routing  
6 package to accomplish some of this modeling, is  
7 that right, if one chose to?

8 **A. Yes, one could choose to use the streamflow**  
9 **routing package instead of the river package.**

10 Q. And just --

11 **A. That would -- now, let me explain what that**  
12 **would involve. That's basically redeveloping**  
13 **the model, you would have to change all of the**  
14 **river cells within the model to streamflow cells**  
15 **and then recalibrate the model from -- from the**  
16 **start because it's a significant change in the**  
17 **framework of the model.**

18 Q. Right, and that's --

19 **A. It isn't anything you could do in a day or so.**

20 Q. Okay. And I think that's what I understand you  
21 to be saying at the bottom of your response, I'm  
22 quoting you, you say, quote, converting the  
23 model from the river package to the streamflow  
24 routing package and recalibrating would require  
25 a substantial amount of time and expense, end

1 does not account for the river going dry;  
2 whereas, the streamflow package, which was not  
3 used, can account for the river going dry. Is  
4 that right?

5 **A. They both operate in different ways. The -- and**  
6 **I think what Mr. Romero was stating with his**  
7 **comment is that it would potentially show a**  
8 **better framework for going dry. So --**

9 Q. Yeah, and I think that was -- okay. Yeah, just  
10 to have a clear record here, 'cause you say it  
11 and I can quote -- have you quote your exact  
12 language in your response here, but in essence,  
13 what you say is the river package does not  
14 specifically account for the stream -- for the  
15 river going dry; whereas, the streamflow  
16 package, and I'm going to quote, quote, as the  
17 streamflow routing package will account for the  
18 river going dry and stop all infiltration to the  
19 aquifer, end quote. And so you're drawing a  
20 distinction between the two, correct?

21 **A. Yes, that would be a correct statement.**

22 Q. And so let me just ask you this in -- in  
23 follow-up to your -- your point. You said that  
24 it would -- it would take a lot of effort and a  
25 lot of time to do this analysis where you are --

Page 3530

1 you convert to the streamflow routing package.  
 2 Let me just ask this: Could you learn something  
 3 from a basic sensitivity analysis rather than a  
 4 full calibration, basically a sensitivity  
 5 analysis with a stream conversion, and is it  
 6 true that that would actually take a lot less  
 7 effort and that could be something more easily  
 8 done, just a sensitivity analysis?  
 9 **A. Just doing a sensitivity analysis would be**  
 10 **easier to do than what I described previously**  
 11 **just a minute ago, but a sensitivity analysis**  
 12 **has been done on this previously. The USGS did**  
 13 **that and documents it in their report.**  
 14 Q. But did the sensitivity analysis that USGS  
 15 performed, it didn't account specifically for  
 16 the river going dry; is that right?  
 17 **A. I can't speak to exactly what it accounts for at**  
 18 **this time.**  
 19 Q. Did you do any kind of --  
 20 **A. But a sensitivity analysis -- a sensitivity**  
 21 **analysis wouldn't really do that anyway; it**  
 22 **would -- a sensitivity analysis would determine**  
 23 **how sensitive water levels and flows in the**  
 24 **model are to the conductance and inputs from the**  
 25 **ivers. It -- it's kind of apples and oranges,**

Page 3531

1 **it -- it's not actually -- a sensitivity**  
 2 **analysis wouldn't pick out just if the river is**  
 3 **dry, what does that do to the model; it -- it**  
 4 **has more to do with the interaction between the**  
 5 **ivers and the groundwater. So I -- I don't**  
 6 **believe that the -- to answer -- try and answer**  
 7 **your question, I don't believe that a**  
 8 **sensitivity analysis would provide the results**  
 9 **of what --**  
 10 Q. Mr. McCormick, I think you froze for just a  
 11 moment. Did he freeze for anybody else?  
 12 **A. I seem to have -- everybody froze there for a**  
 13 **minute, I apologize.**  
 14 Q. Yeah, we just want to make sure your -- your  
 15 statement was accurately captured in the record.  
 16 It was about the last ten seconds of your last  
 17 statement you froze --  
 18 **A. Okay.**  
 19 Q. -- just for a second.  
 20 **A. Okay. A sensitivity analysis would not**  
 21 **specifically deal with the river going dry; it**  
 22 **would deal with the interaction between the**  
 23 **groundwater and the -- the stream and how**  
 24 **sensitive the model was to inputs from that. So**  
 25 **a sensitivity analysis would not evaluate**

Page 3532

1 **specifically on the -- the river going dry.**  
 2 Q. And just to clarify, though, you can define the  
 3 sensitivity to address the conversion of the  
 4 river going dry? Just to clarify, that is  
 5 something that could be done, right?  
 6 **A. As I said, I believe the sensitivity analysis**  
 7 **has been done, which includes an evaluation --**  
 8 Q. I guess I'll -- I'll ask that question, did you  
 9 specifically in the sensitivity analysis you  
 10 performed or Burns & McDonnell performed, did  
 11 you do a sensitivity analysis that accounted for  
 12 the river going dry?  
 13 **A. To clarify, Burns & McDonnell did not do a**  
 14 **sensitivity analysis; the USGS did when they**  
 15 **developed the model, and as I said, the**  
 16 **sensitivity is a full gamut of flow. It's not**  
 17 **specific to a dry condition in the river.**  
 18 Q. Are you able to quickly point us to how or where  
 19 the USGS accounted for the river going dry in  
 20 any kind of sensitivity analysis with its river  
 21 flow model?  
 22 **A. I -- again, a sensitivity analysis is not**  
 23 **specific to one condition of the river. I**  
 24 **believe that in the USGS report, which I believe**  
 25 **is at the front of this -- I'm not sure what's**

Page 3533

1 **included in the expert witness, I shouldn't say**  
 2 **that. In the -- I can't remember the name of**  
 3 **the report right now, or the number, but the**  
 4 **model report that the USGS put together in 2013,**  
 5 **there is a section titled Sensitivity Analysis,**  
 6 **or some similar term, that specifically refers**  
 7 **to what they did with their sensitivity and what**  
 8 **they determined was -- the model was sensitive**  
 9 **to.**  
 10 Q. Okay. For today's purposes, I'll -- I'll just  
 11 go ahead and move along to point number 8, start  
 12 of the next page.  
 13 **A. Okay. I'm at point number 8.**  
 14 Q. Point number 8, there's a point raised by  
 15 Mr. McCormick (sic), and then you have a  
 16 response, and in that response, I'm going to --  
 17 you -- you capture that the goal of an AMC is to  
 18 keep the aquifer as full as possible, but then  
 19 in your third sentence of your response, you --  
 20 starting with pumping that would reduce the  
 21 water levels, could you read that for the  
 22 record?  
 23 **A. Pumping that would reduce the water levels to**  
 24 **the proposed minimum index levels would only**  
 25 **occur in the event of a significant drought.**

1 **The net result would be higher water levels the**  
2 **majority of the time and lower water levels**  
3 **during drought periods when the flows in the**  
4 **Arkansas River, or Arkansas River, that result**  
5 **in infiltration of chlorides would also be**  
6 **lower.**

7 Q. Okay. I'm going to start with the first  
8 sentence you -- you read for the record, you  
9 said that pumping to the reduced -- to the new  
10 minimum index levels would occur only in the  
11 event of a significant drought, end quote,  
12 that's essentially what you say there, correct?

13 **A. Yes.**

14 Q. But just to clarify the record here, the  
15 proposal doesn't specify -- there -- there's no  
16 limitation in the sense that it's a condition of  
17 granting the City's proposal that you can only  
18 pump to the new minimum index levels during the  
19 time of an extreme drought, right, that's not a  
20 condition that's asked for in your proposal,  
21 correct?

22 **A. I believe you are correct, yes.**

23 Q. Okay. And to also further clarify, you indicate  
24 that it's better to keep the aquifer full the  
25 majority of the time, and certainly we've had

1 withdraw enough aquifer maintenance credits out  
2 to pump down to the new minimum index level, did  
3 you -- did you model that and -- and indicate  
4 the hydrologic impacts of -- of such changes?

5 **A. I -- I think we discussed this just a few**  
6 **minutes ago where we said we did a different**  
7 **approach to it, and Mr. Romero did a similar**  
8 **approach to, I believe, what you're describing.**

9 Q. Right, I'll move on. That last sentence, you  
10 say, the net result would be higher water levels  
11 the majority of the time, and, again, we -- we  
12 don't need to revisit that, we talked about that  
13 a lot, but then the second phrase you -- you  
14 indicate is that the water levels during drought  
15 periods when the flow in the Arkansas River that  
16 result in infiltration of chlorides would also  
17 be lower. Can you show me where specifically  
18 Burns & McDonnell in its proposal modeled or  
19 addressed the infiltration of chlorides in -- in  
20 Burns & McDonnell's modeling or in its -- in its  
21 proposal itself? I'm not interested in  
22 additional modeling that -- that's occurred that  
23 we're not privy to that's happened in the last  
24 11 months; I'm interested in what we have before  
25 us in the initial hearing and in the initial

1 this -- this academic debate for a long time,  
2 and I understand that concept, but then you go  
3 on to say that, indeed, during the time of an  
4 extreme drought, the City would indeed most  
5 likely withdraw its aquifer maintenance credits  
6 and at that point is when the City would pump  
7 down to the new minimum index level. In that  
8 sense, is that -- is that what you're capturing  
9 in your statement?

10 **A. Could -- could you state that again, please.**

11 Q. I think what you're saying in your statement is  
12 it leaves what the City is planning or -- or  
13 considerations they have made is -- is although  
14 the City would hope to keep the aquifer full the  
15 majority of the time, I think is what you're  
16 saying in this paragraph, during the time of an  
17 extreme drought, it -- it's theoretical or  
18 possible that the City would withdraw its  
19 aquifer maintenance credits and pump down to the  
20 new minimum index level. Is that, in essence,  
21 what you're saying?

22 **A. Yes, I believe that's a correct statement of it.**

23 Q. And so my question is is that -- did you model  
24 what would happen in the event of an extreme  
25 drought and what would occur if the City is to

1 proposal, can you tell us where Burns &  
2 McDonnell would have modeled chloride movement  
3 as it would be impacted by lowering to the new  
4 minimum index level and withdrawing aquifer  
5 maintenance credits during the time of an  
6 extreme drought?

7 **A. We did not model chloride migration in that**  
8 **context that you just stated.**

9 Q. Thank you. If we can move on, then, to the next  
10 point that's found here, which is point number  
11 9, there's -- there's an academic debate here  
12 about whether or not to utilize simplified  
13 accounting, and I completely get your response,  
14 and your response is, you know, wait a minute,  
15 we had this discussion with GMD2 and others, and  
16 other -- and everyone was -- was saying that we  
17 should do a more simplified accounting approach,  
18 that the accounting approach we've used in the  
19 past was quite complicated, let's do a more  
20 simplified accounting approach. Am I  
21 characterizing what you're saying in your  
22 response, just in a nutshell at least?

23 **A. I -- I believe so, yes. I believe that's a good**  
24 **characterization.**

25 Q. Okay. And so I think what Mr. Romero then said,

Page 3538

1 and I'm going to quote him, last sentence of  
 2 point 9, he says, if a simplified approach is  
 3 necessary, end quote, so first of all, he's  
 4 talking about -- he's assuming in this last  
 5 statement that -- that we would be employing a  
 6 simplified approach; is that right? He says if  
 7 it's necessary, and that's the prefatory clause  
 8 of that sentence, so he's assuming that we're,  
 9 for the remainder of that sentence, we're  
 10 talking about a simplified approach; is that  
 11 right?  
 12 **A. Yes, I believe so.**  
 13 Q. Okay. So then he goes on to say, we recommend  
 14 development of a response function that accounts  
 15 for both low and high water levels in attempt to  
 16 improve the simplified accounting method over  
 17 varying aquifer conditions. So in other words,  
 18 he's saying that we should account for a -- we  
 19 should have just basically two consider --  
 20 additional considerations, account for low water  
 21 levels and -- and high water levels in the  
 22 simplified accounting approach. Is that what  
 23 Romero -- Mr. Romero appears to be trying to say  
 24 here?  
 25 **A. I believe that this statement is confusing the**

Page 3539

1 **physical recharge accounting and the AMC**  
 2 **accounting. AMCs would only be able to be**  
 3 **accumulated at low water levels -- or, pardon**  
 4 **me, at high water levels. Because the City's**  
 5 **proposal clearly states that the City must do**  
 6 **physical recharge when it has the capacity to do**  
 7 **physical recharge. So I -- I believe that that**  
 8 **is -- is part of the confusion in this**  
 9 **statement, but it -- I believe what he's saying**  
 10 **is that if a simplified approach is being taken**  
 11 **for both, then physical recharge should account**  
 12 **for changes in water level.**  
 13 Q. Okay. And -- and maybe my memory is incorrect,  
 14 I thought with respect to your aquifer  
 15 maintenance credits, you were using -- you were  
 16 using an accounting based on the lower water  
 17 level, I thought that's what was captured in  
 18 your proposal?  
 19 **A. The proposal states that we have -- or the City**  
 20 **has to prioritize physical recharge, so if the**  
 21 **water levels are low, then physical recharge is**  
 22 **occurring. If the water levels are high and**  
 23 **they can't physically recharge due to capacity**  
 24 **in the aquifer, that is when --**  
 25 **MR. STUCKY: Am I the only one that**

Page 3540

1 lost Mr. --  
 2 **THE REPORTER: I lost him too.**  
 3 **A. I'm -- I can still hear you. My internet**  
 4 **connection is having problems. Jen, I need you**  
 5 **off the computer, please. Am I back?**  
 6 **BY MR. STUCKY:**  
 7 Q. Yeah, Mr. McCormick --  
 8 **A. I apologize, I have kids doing homeschooling and**  
 9 **things, and I think we're over -- overtaxing my**  
 10 **internet connection. Let me try and -- and**  
 11 **rephrase that or start over.**  
 12 Q. No, I -- let me just say for the record here,  
 13 Mr. McCormick, it makes me smile and it makes me  
 14 feel so much more normal because if I had a  
 15 dollar for every time that's happened to me  
 16 during a Zoom call, I would actually be a rich  
 17 person. So, yeah, just the kids overtax the  
 18 internet with a video game or a video they're  
 19 watching or whatever it may be or their  
 20 homework, so I completely identify so no big  
 21 deal.  
 22 **A. Okay. I -- I apologize again anyway but thank**  
 23 **you, Mr. Stucky. Did you lose my whole**  
 24 **response, or should I -- should I just start**  
 25 **over, or what's going to work best?**

Page 3541

1 Q. Maybe -- you know, my question was maybe a  
 2 little lengthy, maybe I'll just ask a more  
 3 specific question and -- and refocus us, and if  
 4 you feel the need to raise additional points, by  
 5 all means, I'm not going to preclude you. But  
 6 just to be -- to be clear here, in the  
 7 accounting approach for AMCs, the approach did  
 8 not take into account both a low and high water  
 9 condition or -- or -- and the simplified  
 10 accounting methodology that you're proposing in  
 11 general doesn't take into account low and high  
 12 water conditions and allow for that, right?  
 13 **A. It -- it -- it does. It's not within the math**  
 14 **because the City's required to do physical**  
 15 **recharge when they can, which is at low water**  
 16 **levels. The only time they can collect AMCs is**  
 17 **at high water levels. So it is accounting for**  
 18 **water levels because the accounting is only done**  
 19 **at high water levels for AMCs.**  
 20 Q. You know, I -- I think that if we choose to have  
 21 Mr. Romero clarify what he meant in his  
 22 statement here, we certainly can, but just for  
 23 our purposes today, I'm going to go ahead and  
 24 move on.  
 25 So I -- I believe the second two points --

1 or, I'm sorry, not the second two, that's --  
2 strike that from the record. The last two  
3 points that you raised in your expert report  
4 where we see the expert report, scenario B,  
5 page 6 mentioned and expert report, scenario C,  
6 page 6 mentioned, in essence the response you  
7 give is that the groundwater modeling files  
8 utilized for the development of the conclusions  
9 were not made available. And certainly I can  
10 produce it for the record if we need to, but  
11 Mr. McLeod sent an email that said that those  
12 concerns were resolved. In other words, you  
13 were able to look at the model files and address  
14 those model files with Mr. Romero. Is that a  
15 true statement?  
16 **A. Yes, we -- after I had submitted this report, we**  
17 **were able to set up a meeting with Mr. Romero**  
18 **and have a discussion about these, and he**  
19 **provided us with spreadsheets and information to**  
20 **clarify these points.**  
21 **MR. STUCKY:** You know, I don't --  
22 that's really helpful, Mr. McCormick, thank  
23 you so much for your time, I don't have any  
24 further questions.  
25 **PRESIDING OFFICER:** Any questions

1 Q. Okay. Do you have a copy of the exhibit  
2 available to you, or the report available to  
3 you?  
4 **A. Of the 2013-5042 report?**  
5 Q. Correct.  
6 **A. Or Mr. Austin's comments?**  
7 Q. I was pulling it directly from the USGS report,  
8 and it's probably also in his comments. On the  
9 first page of the text of Mr. Austin's report  
10 under review of report, the last paragraph, he  
11 also quotes the same language. You can take it  
12 from either location. As this is a statement  
13 from the USGS report, my question is do you  
14 disagree with the USGS?  
15 **A. I'm sorry, I'm still trying to track down the**  
16 **exact sentence. You cut out in the middle of**  
17 **it, and I -- I was unable to hear your question**  
18 **fully.**  
19 Q. I'll wait until you find model limitation  
20 number 2 on page 72 of the USGS report.  
21 **A. What exact page number is that in the USGS**  
22 **report, Ms. Wendling?**  
23 Q. It is on page 72 in the section model  
24 limitations, and the limitations are numbered  
25 and so it's number 2.

1 from Ms. Wendling?  
2  
3 **CROSS-EXAMINATION**  
4 **BY MS. WENDLING:**  
5 Q. I have just a few, Mr. McCormick. I'm not sure  
6 if you have the exhibits or the proposal in  
7 front of you, but in the City's exhibit, the  
8 proposal, they have attached USGS 2013-5042,  
9 which I believe is the USGS report regarding  
10 this model that you are probably familiar with?  
11 **A. That's -- that sounds correct to me, yes.**  
12 Q. And in Mr. Austin's report, he cites to the  
13 model limitations found on page 72 of that  
14 report, which says, the groundwater flow model  
15 was discretized using a grid with cells  
16 measuring 400 feet by 400 feet. Model results  
17 were evaluated on a relatively large scale and  
18 cannot be used for detailed analyses such as  
19 simulating water level drawdown near a single  
20 well. A grid with smaller cells would be needed  
21 for such a detailed analysis. Do you disagree  
22 with the USGS report?  
23 **A. I'm sorry, Ms. Wendling, you -- you cut in and**  
24 **out there a number of times and I believe I**  
25 **missed part of your question.**

1 **A. I'm getting there, I apologize for taking so**  
2 **long.**  
3 Q. That's okay.  
4 **A. All right. I'm there, model limitations.**  
5 Q. So my question for you is do you disagree with  
6 model limitation number 2?  
7 **A. As I said, I think that there are numerous tools**  
8 **that can be used with this for further**  
9 **evaluation at a more refined level. So to that**  
10 **extent, I would disagree that there -- there are**  
11 **ways to refine this down without refining the --**  
12 **the grid to smaller cells.**  
13 Q. You can add on to the model to get that further  
14 definition?  
15 **A. It's using a different tool to evaluate the**  
16 **model output than -- than just the model**  
17 **results.**  
18 Q. And did you use any such tool when you were  
19 preparing the proposal?  
20 **A. No, I did not.**  
21 **MS. WENDLING:** I have no further  
22 questions.  
23 **PRESIDING OFFICER:** Mr. McLeod?  
24 **MR. MCLEOD:** I don't think I have  
25 any further questions for the witness.

Page 3546

1 **PRESIDING OFFICER:** Okay.  
 2 Mr. Stucky? I guess it would be,  
 3 Ms. Murray?  
 4 **MS. MURRAY:** I don't have any  
 5 questions.  
 6 **PRESIDING OFFICER:** Mr. Stucky?  
 7 **MR. STUCKY:** I don't -- I don't  
 8 think we have any further questions for  
 9 this witness so ...  
 10 **PRESIDING OFFICER:** Okay. Then,  
 11 Mr. McCormick, thank you for your  
 12 participation today, and you are dismissed.  
 13 **A. Thank you.**  
 14 **PRESIDING OFFICER:** So my  
 15 understanding, Mr. McLeod, was that that  
 16 was the extent of rebuttal testimony that  
 17 we were going to have today. Was that your  
 18 understanding?  
 19 **MR. MCLEOD:** Yes. I'm glad we  
 20 accomplished something today, that was it.  
 21 **PRESIDING OFFICER:** And, again, I  
 22 apologize for the delay, for my -- my  
 23 continued learning curve on new technology  
 24 and how to make sure everybody is covered.  
 25 That will conclude the proceedings for

Page 3547

1 today and for this week.  
 2 **MR. STUCKY:** Before you conclude,  
 3 can I -- can I just raise one point on the  
 4 record?  
 5 **PRESIDING OFFICER:** Okay.  
 6 **MR. STUCKY:** I -- I guess this is  
 7 the question, I think it's consistent with  
 8 what we put in our -- our written motion to  
 9 exclude, and, again, the reason we didn't  
 10 file our -- our written motion to exclude  
 11 expert witness testimony that was outside  
 12 of the original expert testimony, the  
 13 reason we didn't file that motion earlier  
 14 was because we had no reason to know if the  
 15 City was even going to attempt such an  
 16 action.  
 17 So if you look at the -- what we're  
 18 asking for by way of relief in that motion,  
 19 you know, our first round of relief we  
 20 asked for was to have any such additional  
 21 opinions be stricken, but alternatively we  
 22 said that in the event there are going to  
 23 be new opinions that the City has had  
 24 11 months to prepare and create and we're  
 25 going to have now, I guess, a week and a

Page 3548

1 half, perhaps, to respond to, I guess all I  
 2 would ask is our alternative request is  
 3 that the City give us some indication of  
 4 what those new opinions are going to be or  
 5 any additional witnesses the City is going  
 6 to raise and so we can have a short time to  
 7 prepare since the City has now had  
 8 11 months to decide how it's -- how it's  
 9 going to respond to at least our case in  
 10 chief.  
 11 So that -- that's my request, that we  
 12 get as much notice as we can in the short  
 13 amount of time if -- if such new testimony  
 14 isn't stricken and -- and, indeed, to not  
 15 mince words, that's what we're asking for  
 16 in our motion.  
 17 **PRESIDING OFFICER:** Mr. McLeod?  
 18 **MR. MCLEOD:** Well, still having not  
 19 seen the motion, it's -- it's difficult to  
 20 address what's in it or not, but I think  
 21 that you have adequately addressed the  
 22 so-called first round of relief with  
 23 respect to striking because I think there  
 24 were no new opinions in the live testimony  
 25 that Mr. McCormick presented in the six or

Page 3549

1 so questions we managed to ask today before  
 2 the effort to -- to suppress his testimony  
 3 began. Nor were there really any new  
 4 opinions when we shifted from that to  
 5 simply going to the content of his 21  
 6 August 2019 report, which has been in the  
 7 hands of everybody, lo these many months  
 8 and indeed years.  
 9 And as I said yesterday and I thought we  
 10 had touched upon again today, any further  
 11 rebuttal evidence that the City might need  
 12 to offer would be directed at the testimony  
 13 of Intervenors that we all heard yesterday  
 14 for the first time. There was a tremendous  
 15 amount of material offered, and as of -- as  
 16 of this moment, I can't really tell anybody  
 17 what of that I think we might need to rebut  
 18 because it all happened only yesterday, and  
 19 is not a matter of all these months and  
 20 months and months that counsel is  
 21 asserting, it happened yesterday.  
 22 I was here yesterday virtually, I think  
 23 everybody was, and kind of saw how -- how  
 24 all of that went, and much of it, I think,  
 25 was testimony that nobody but perhaps

1 Intervenor's counsel might have  
 2 anticipated. So that's -- that's what  
 3 we're looking at further is reviewing that,  
 4 seeing whether there is some rebuttal  
 5 called for as to some part of that. I  
 6 don't have a sense yet whether the City  
 7 will or won't feel they need to offer  
 8 rebuttal, but if we do, that will be the  
 9 substance, the body of substance we're  
 10 looking at in terms of identifying any  
 11 rebuttal.  
 12 I would also like to add while we're on  
 13 the record that in trials and hearings, it  
 14 is a protocol, some would consider it part  
 15 of formal hearing decorum, almost  
 16 universally followed by trial lawyers that  
 17 remarks are directed to the hearing officer  
 18 and never by counsel between themselves  
 19 while the hearing is live and on the  
 20 record, and I would urge that we try to  
 21 follow that protocol when we come back for  
 22 further stages of this hearing because I  
 23 think it's a good protocol and it advances  
 24 civility in practice.  
 25 **MR. STUCKY:** I guess in response to

1 rebuttal from the City. So all we're  
 2 asking for is within this next week and a  
 3 half when -- when the City has a sense of  
 4 how they wish to respond to the Intervenor's  
 5 that they notify us and let us know so we  
 6 can also have some level of preparation.  
 7 **PRESIDING OFFICER:** Okay.  
 8 Mr. Stucky, and everyone, I think we can  
 9 address those logistics, they're -- they're  
 10 a fair subject for discussion, we will do  
 11 that after we have closed the record on the  
 12 proceedings today. We need to reconvene  
 13 just with counsel and with me to discuss  
 14 those things. So we will take those up.  
 15 And other than those matters, in other  
 16 words the logistics going forward, is there  
 17 anything else anyone needs to mention  
 18 before we close for today? Okay. Hearing  
 19 none, I thank everyone for their  
 20 participation. This will conclude these  
 21 proceedings for today, and we will resume  
 22 at a future date. The record is now  
 23 closed, thank you.  
 24 (Whereupon, the proceedings were  
 25 adjourned at 11:11 a.m.)

1 that, I'm not sure who or what that was  
 2 directed toward. We totally agree that any  
 3 objections or motions in that regard should  
 4 be provided to the hearing officer and  
 5 directed toward the hearing officer, and we  
 6 couldn't agree with that more.  
 7 And actually the second part of what  
 8 Mr. McLeod said, we also agree with, that  
 9 to the extent the City is responding to new  
 10 testimony that was brought by the  
 11 Intervenor's in the last few days, we do  
 12 think it makes sense and it's appropriate  
 13 for the City, depending on what the scope  
 14 of that response is, that it is appropriate  
 15 for the City to -- to so respond depending  
 16 on how that scope is defined.  
 17 But all we're asking is that the City  
 18 will have a week and a half to try and  
 19 determine how it's going to respond to the  
 20 Intervenor's testimony; whereas, if we find  
 21 out for the first time at the hearing how  
 22 the City plans to respond, the rest of us  
 23 will get a matter of minutes or -- or maybe  
 24 a matter of hours to try and determine what  
 25 additional rebuttal we want to that

1 comments may still be submitted in writing  
2 regarding this case no later than 5:00 p.m.  
3 on February 26, 2021, and those would be  
4 submitted either by regular mail or by  
5 email to Ronda Hutton at the Division of  
6 Water Resources. And the Division of Water  
7 Resources has a website and they have a  
8 page dedicated to the Wichita ASR case, and  
9 on that page you'll find instructions for  
10 how to submit public comments in writing.  
11 Following today's hearing, there will be  
12 a briefing scheduled for the parties, and  
13 then after the briefing is all concluded,  
14 then an order -- a recommended order will  
15 be issued to the chief engineer and to the  
16 parties simultaneously. Details of that  
17 briefing schedule will be set forth in an  
18 order to be issued in the next few days.  
19 As a housekeeping item, the Groundwater  
20 Management District on February 5th had  
21 filed a motion in limine to exclude  
22 rebuttal expert testimony of the City, and  
23 through an agreement reached between the  
24 parties on the record during the hearing on  
25 February 5th, that motion has been resolved

1 Groundwater Management District No. 2  
2 appears by Dave Stucky and Tom Adrian.  
3 **MS. WENDLING:** Tessa Wendling for  
4 the Intervenors.  
5 **PRESIDING OFFICER:** Okay, thank you  
6 very much. Mr. McLeod, you're up.  
7 **MR. MCLEOD:** Thank you. I do want  
8 to reserve 20 minutes for rebuttal, and I  
9 will try to keep my focus on large points.  
10 Given the scope of the record, I'm -- I'm  
11 really not sure what we'll accomplish with  
12 argument today, but we'll try to stay out  
13 of the weeds.  
14 Initially, I want to reiterate the point  
15 that the City's proposal has two  
16 independent elements, one is establishing  
17 the modified accounting procedure to  
18 recognize aquifer maintenance credits, and  
19 the other is revising the existing lower  
20 index levels from those interpolated in  
21 1993 to levels that would allow expanded  
22 access to credits at ASR II facilities to  
23 alleviate stranding of credits in a  
24 prolonged drought. These proposed  
25 modifications are not dependent on one

1 and no ruling is necessary.  
2 For today's closing arguments, each  
3 party is allowed one hour total. Each  
4 party may, at its discretion, reserve part  
5 of that hour to present a rebuttal argument  
6 after all the other parties have  
7 presented -- have had an opportunity to  
8 present their closing arguments. The order  
9 in which we will take presentations is the  
10 City, followed by the Division of Water  
11 Resources, followed by the Groundwater  
12 Management District, and then the  
13 Intervenors.  
14 Are there any other matters that we  
15 should attend to before we take appearances  
16 and begin?  
17 Okay. So in the order that I just  
18 mentioned, may we please have appearances  
19 today.  
20 **MR. MCLEOD:** Brian McLeod, deputy  
21 city attorney for the City of Wichita,  
22 Kansas.  
23 **MS. MURRAY:** Stephanie Murray for  
24 DWR.  
25 **MR. ADRIAN:** The Equus Beds

1 another, each would be useful separately,  
2 each could be approved without the other.  
3 Also for clarity, I think there is a  
4 need to emphasize that some of the topics  
5 discussed in the proposal for purposes of  
6 background and transparency are not  
7 requested permit modifications but are  
8 background decisions that have already been  
9 made by the City of Wichita. These include  
10 the Wichita City Council's decision to plan  
11 for drought mitigation using the 1 percent  
12 drought modeled by High Country Hydrology.  
13 This is a policy decision made by the  
14 City's governing body.  
15 The same is true of the features of the  
16 City's existing water conservation program  
17 and the triggers and planned responsive  
18 measures in the City's existing drought  
19 response plan. Likewise, as to City's  
20 determinations, based on city council  
21 policy direction and subsequent analysis,  
22 to first pursue drought remediation  
23 planning, in part, through ASR recharge  
24 credits and, second, to pursue a goal of  
25 accumulating at least 60,000 acre-feet of

Page 3562

1 credits for just drought mitigation  
 2 purpose.  
 3 The District and Intervenors may not  
 4 like the City of Wichita's decision to plan  
 5 the use of ASR recharge credits for drought  
 6 mitigation or to accumulate at least  
 7 60,000 acre-feet of credits for that  
 8 purpose, but those decisions have been  
 9 made, and they're not among the issues to  
 10 be decided in this hearing. The  
 11 consideration relevant to the proposal is  
 12 whether the credits will be accumulated  
 13 under existing ASR permit conditions or  
 14 with the modifications proposed by the  
 15 City.  
 16 In their arguments opposing the  
 17 proposal, the District and Intervenors have  
 18 focused today on comparing possible impacts  
 19 of the proposal with a scenario where the  
 20 City makes no changes from its management  
 21 of water resources under the City's 1993  
 22 Integrated Local Water Supply Plan. That  
 23 is, their analyses compare the possible  
 24 impacts of the proposal with their  
 25 wished-for scenario in which, first, the

Page 3564

1 as its main source of supply to using  
 2 Cheney Reservoir as its main source of  
 3 supply instead.  
 4 As a result of that shift, surface water  
 5 became 60 percent rather than 40 percent of  
 6 the City's overall water source. And as  
 7 shown by figure 13 in the proposal, which  
 8 was on page 3-4, by 2016, water levels in  
 9 the aquifer increased by more than 30 feet  
 10 in some places as a result. The figure 12  
 11 in the proposal to which I have previously  
 12 alluded also shows that irrigator use  
 13 continued to trend above 1993 in all years.  
 14 So we know, indeed, that the recovery of  
 15 the aquifer was due to the City of  
 16 Wichita's stewardship and change in  
 17 practices and not to new conservation  
 18 measures on the part of irrigators.  
 19 As a result of the City's change in  
 20 water resource management and, to a lesser  
 21 extent the ASR I and ASR II recharge  
 22 activities that commenced in 2007 and 2013,  
 23 respectively, the aquifer has been restored  
 24 to near-predevelopment levels, which  
 25 unfortunately limits the potential for

Page 3563

1 City would only use ASR intermittently to  
 2 help keep the aquifer full rather than to  
 3 accumulate recharge credits for drought  
 4 mitigation; and, second, that the City  
 5 would continue to substantially underuse  
 6 its 40,000 acre-feet of senior water rights  
 7 every year so that that water is available  
 8 to irrigators. That is a flawed approach  
 9 because instead the relevant comparison for  
 10 purposes of evaluating the proposal would  
 11 be comparison of the possible impacts of  
 12 the proposal with the impacts that would  
 13 occur under the current ASR accounting  
 14 method with the existing lower index  
 15 levels.  
 16 So turning specifically to discussion of  
 17 physical recharge accounting versus the  
 18 accounting with alternative -- excuse me,  
 19 aquifer maintenance credits, I will try to  
 20 do that with respect to the AMCs. I've  
 21 shown in figure 12 of the proposal, which  
 22 was on page 3-3 of the proposal and  
 23 discussed by Mr. Pajor during his  
 24 testimony, between 1993 and 1998, the City  
 25 shifted from using Equus Beds groundwater

Page 3565

1 additional physical recharge. As a  
 2 consequence and as mentioned in 2.4.2 of  
 3 the proposal on page 2-11, to create  
 4 potential for efficient physical recharge  
 5 at the ASR plant capacity rate of 30  
 6 million gallons per day under existing  
 7 permit conditions, the City would need to  
 8 reduce the water levels in the aquifer to  
 9 1998 water levels.  
 10 There is a road to this result. Under  
 11 existing permit conditions, the City can  
 12 accomplish this by reversing its 1993  
 13 resource management practices and using as  
 14 much of its annual 40,000 acre-feet senior  
 15 rights in the aquifer as system needs and  
 16 treatment plant capacity will allow. After  
 17 reduction of aquifer levels to the 1998  
 18 levels, the City would accrue credits by  
 19 physical recharge to the extent allowed by  
 20 plant permit conditions and plant capacity  
 21 but would also continue to use its  
 22 40,000 acre-feet senior rights to maintain  
 23 aquifer levels at the 1998 levels until at  
 24 least 60,000 acre-feet in recharge credits  
 25 were accumulated.

Page 3566

1 We have reason to think based on accrual  
2 of credits over -- over history that we  
3 would be talking about a significant span  
4 of years during which the aquifer levels  
5 would have to be maintained at 1998 levels  
6 to facilitate that physical recharge. And  
7 the City in that scenario would be  
8 basically taking water out and putting  
9 water in to get the recharge credits, so  
10 the level of the aquifer would not change  
11 as a result of that conduct but over time  
12 progressively more of the water in the  
13 aquifer would be City physical recharge  
14 credits. Indeed, under existing permit  
15 conditions, the City could actually do this  
16 indefinitely as under current permit  
17 conditions there is no existing cap on  
18 credits, and credit retention at the 1998  
19 water levels, as was mentioned on page 4-2  
20 of the proposal, would be at 95 percent.  
21 So the aquifer by this management would be  
22 kept at 1998 levels, but progressively more  
23 of the water, potentially the entire basin  
24 storage area, would become City physical  
25 recharge credits over time.

Page 3567

1 If the modeled eight-year drought were  
2 to occur with the aquifer at 1998 levels,  
3 and recall this is how it has been modeled  
4 by both Burns & Mac and Balleau  
5 Groundwater, the modeling shows that - and  
6 let me just refer here to Balleau's  
7 groundwater modeling - shows that the full  
8 use of the City's 40,000 acre-feet of  
9 senior rights during the drought would  
10 potentially impact supply of 29 wells,  
11 which appear from Balleau's figure 7 in  
12 their report to be 27 domestic wells and  
13 two irrigation wells.  
14 The additional potential impact that  
15 they have assigned to the modifications in  
16 the proposal, modeling on the assumption  
17 that the City would pump credits to reach  
18 the proposed new lower index levels, was  
19 six additional wells, all of which were  
20 domestic wells. That is, the majority of  
21 wells impacted by City pumping in the  
22 Balleau modeling will be impacted by the  
23 City's existing 40,000 acre-feet rights if  
24 the aquifer enters the drought at 1998  
25 levels due to the need to facilitate

Page 3568

1 physical recharge under the existing permit  
2 conditions.  
3 Looking also at chloride impacts,  
4 comparison of the well site maps introduced  
5 by Intervenor with the contour maps in  
6 figure 6 of the Balleau report reflects  
7 that the Intervenor who testified will  
8 likely not lose access to water at their  
9 wells in the modeled drought even if the  
10 ASR permit modifications are approved. And  
11 I think at least one of the Intervenor  
12 acknowledged in his testimony that his well  
13 is not in danger of being dewatered.  
14 To the extent that the testifying  
15 Intervenor are worried about chlorides,  
16 which did seem to be all of their main  
17 concerns, they are likely to have greater  
18 chloride problems under existing permit  
19 conditions than with the proposed  
20 modifications. The Klager graphic, which  
21 is figure 8 in the Balleau report, projects  
22 chloride impacts from the 2014 USGS study  
23 which modeled several scenarios. The  
24 import of the scenarios modeled in 2014 and  
25 also George Austin's testimony on the

Page 3569

1 earlier chloride transportation study  
2 referenced in his report is that the wells  
3 in the chloride threatened areas will be  
4 impacted by the City's increased use of its  
5 40,000 acre-feet senior rights to reduce  
6 aquifer levels to 1998 levels and also will  
7 be impacted by the maintenance of the 1998  
8 levels to facilitate physical recharge for  
9 a long period of years.  
10 And I think Mr. Austin acknowledged in  
11 his testimony that the impact of low water  
12 levels for a long period of years could  
13 potentially be much greater for chloride  
14 migration concerns than a transitory impact  
15 caused by pumping with the modifications  
16 proposed by the City in an occasional  
17 severe but transitory drought.  
18 Further, if we look at figure 6 of the  
19 Balleau report, it reflects the impact on  
20 water levels in this part of the aquifer -  
21 that is, the part of the aquifer where the  
22 Intervenor's wells were mapped - in the  
23 modeled eight-year drought will be closely  
24 similar whether or not the proposed permit  
25 modifications are approved. I think it was

<p style="text-align: right;">Page 3570</p> <p>1 a cumulative difference of a foot or two.                  2 And this suggests that the chloride impact                  3 from the drought, to the extent directly                  4 related to changes in water gradient, would                  5 also be closely similar whether or not the                  6 proposed modifications are approved.                  7 Now, if we look at the mitigating                  8 effects of the proposed accounting changes                  9 to allow aquifer maintenance credits, the                  10 first large one is the City would not need                  11 to draw aquifer levels down to 1998 levels                  12 to accumulate credits. Indeed, the                  13 accounting method would provide an                  14 incentive not to do that because to the                  15 extent the City could use the AMC                  16 accounting method and leave the aquifer                  17 full, a lesser leakage rate is imputed than                  18 what the -- the leakage rate from actual                  19 physical recharge of a very full aquifer                  20 would be.                  21 As a result, the immediate impacts to                  22 water levels and chloride migration posed                  23 by use of the City's 40,000 acre-feet                  24 senior rights to lower the aquifer to 1998                  25 levels would not occur in the AMC scenario.</p>	<p style="text-align: right;">Page 3572</p> <p>1 As demonstrated at length in                  2 hypotheticals during the testimony of                  3 several witnesses, the net quantitative                  4 effect on the aquifer of taking out water                  5 and putting it back for a physical credit                  6 is the same as treating water from the                  7 river instead of taking that water from the                  8 aquifer and getting a credit for that.                  9 Former Chief Engineer Barfield was correct                  10 in reasoning that the AMCs are a functional                  11 equivalent of physical credits accrued by                  12 taking water out and then recharging it.                  13 Additionally, the aquifer maintenance                  14 credit has the cost advantage of skipping                  15 that withdrawal/recharge step, and in so                  16 doing, it also avoids churning of the                  17 aquifer, withdrawing water, then injecting                  18 new water, which is a benefit to water                  19 quality, and that we're not stirring the                  20 water up all the time under the AMC                  21 scenario, and which also reduces the                  22 potential underflow and sinkhole issues                  23 that so concerned Mr. Carmichael in his                  24 testimony.                  25 Overall, the modeling presented by the</p>
<p style="text-align: right;">Page 3571</p> <p>1 As a further result, the impacts to water                  2 levels and chloride migration from                  3 maintaining the aquifer at 1998 levels for                  4 a long period of years to facilitate                  5 physical recharge also would not occur.                  6 Consequently, for most periods, with the                  7 exception of major droughts similar to the                  8 modeled eight-year, 1 percent drought,                  9 the aquifer would be maintained at                  10 near-predevelopment levels and the City                  11 would resume the practice of drawing most                  12 of its supply from Cheney Reservoir,                  13 leaving most of its 40,000 acre-foot annual                  14 rights in the aquifer unexercised, which                  15 would benefit other users.                  16 Even in the period of a major drought,                  17 under the AMC proposal, drought impacts                  18 would be lessened by going into the drought                  19 with the aquifer full rather than at 1998                  20 levels. And if the six domestic wells                  21 identified in the Balleau study were still                  22 affected at all, it would be for the                  23 transitory period impacted by the drought,                  24 so something that -- that would be an issue                  25 potentially in 8 out of 100 years possibly.</p>	<p style="text-align: right;">Page 3573</p> <p>1 parties in this case reflects that the AMC                  2 accounting mechanism provides substantial                  3 benefit to all users of the aquifer in all                  4 periods, with potential offsetting,                  5 transitory detriment to a small number of                  6 domestic wells that might need to be                  7 extended in the event of a modeled                  8 eight-year drought.                  9 Turning to the revised index levels, the                  10 problem with the existing index levels is                  11 that they place the onus on the City to                  12 make a resource management decision to take                  13 credits early in any drought, before the                  14 City can really evaluate whether that                  15 drought will be of a severity and nature to                  16 necessitate that use of credits. That                  17 decision to take early -- early use of                  18 credits in the early years of a possible                  19 extended drought would reduce the water                  20 levels in the aquifer unnecessarily in                  21 those early years of the drought,                  22 unfavorably impacting all users of the                  23 aquifer, and once gone, the water taken                  24 early to preserve credits will likely be                  25 gone for the duration of the drought.</p>

1 Further, under the current accounting  
2 method, the only existing credits are  
3 physical recharge credits, and I think it  
4 was Mr. Pope who testified that a large  
5 part of the theoretical basis for the  
6 physical recharge credits is that the City  
7 has reduced that water to its dominion and  
8 control, treated it, and put it in storage  
9 and that for practical purposes, unlike  
10 most usufruct in water rights, it should be  
11 regarded as the City's water. But when  
12 credits become stranded in a major drought  
13 due to the 1993 index levels, the effect of  
14 that stranding is that other parties are  
15 unfairly allowed to take the water that the  
16 City injected in the aquifer while the  
17 City, no matter how badly it may need that  
18 water by that point in a protracted  
19 drought, cannot take the water, although  
20 the City is the party responsible for the  
21 existence of that water in the aquifer.  
22 I would point out the Balleau report  
23 does also confirm the conclusions of the  
24 Burns & McDonnell modeling that some  
25 credits would be stranded in the modeled

1 that correct?  
2 **MR. MCLEOD:** Yes, thank you.  
3 **PRESIDING OFFICER:** Okay. The  
4 Division of Water Resources, please.  
5 **MS. MURRAY:** Thank you. I would  
6 like to also reserve 20 minutes for  
7 rebuttal.  
8 **PRESIDING OFFICER:** Thank you, go  
9 ahead.  
10 **MS. MURRAY:** I'm going to also keep  
11 my closing argument remarks brief for a  
12 couple of reasons, the first is that, as  
13 Mr. McLeod mentioned, I really feel that  
14 the effectiveness of any oral advocacy is  
15 going to be limited here given the length  
16 of these proceedings and the size of the  
17 record in this matter; and the second is  
18 that DWR is in a bit of a unique position  
19 here as we are neither the party that is  
20 necessarily advocating for the approval of  
21 the City's proposal or the party that's  
22 opposing it. So that being said, I'll save  
23 the majority of DWR's comments for our  
24 post-hearing brief after the agency's had  
25 more time to thoroughly review the record

1 drought and also shows that only a handful  
2 of additional domestic wells have been  
3 identified as impacted if the City were  
4 allowed to take accumulated credits between  
5 the existing and proposed new index levels.  
6 All in all, the City's stewardship of  
7 the aquifer since 1993 has been exemplary,  
8 if not, indeed, extremely generous to other  
9 users of the aquifer overall. The proposed  
10 modifications to the existing permit  
11 conditions are really offered to enable the  
12 City to continue to follow its 1993  
13 resource management practices while also  
14 using ASR infrastructure to advance its  
15 drought mitigation concerns. Essentially  
16 the modifications would be a mitigation of  
17 impacts that will occur to other aquifer  
18 users if the City has to proceed under  
19 existing permit conditions.  
20 And with that, I will -- I will wrap up  
21 my remarks and save further for rebuttal.  
22 Thank you.  
23 **PRESIDING OFFICER:** Okay. Thank  
24 you, Mr. McLeod. And as I understand it,  
25 you've reserved 20 minutes for rebuttal; is

1 and all of the testimony that's been  
2 presented.  
3 I do, however, have just a few, largely  
4 bigger picture points that I would like to  
5 make in closing. To frame my comments, I  
6 want to first address the contention that  
7 we've heard several times, that the  
8 proposal would allow the City to use water  
9 that is already earmarked for another user  
10 or essentially water that already belongs  
11 to someone else. I feel the need to  
12 address this because I really feel that  
13 this contention and the implication that it  
14 carries mischaracterizes a fundamental  
15 aspect of Kansas water law.  
16 The District alleges an unconstitutional  
17 taking in its motion to dismiss, and  
18 Mr. Stucky elicited a lot of testimony the  
19 last time we were together that I believe  
20 was probably aimed at bolstering that  
21 argument. He asked several witnesses, for  
22 example, whether they had ever given the  
23 City of Wichita permission to pump water  
24 from under their land, as well as asking  
25 them to estimate the investment-backed

Page 3578

1 expectation that they had in their  
 2 property.  
 3 Now, I bring this up because the answers  
 4 to questions of that nature, frankly, are  
 5 just not relevant. The implication that  
 6 permission from an overlying landowner is  
 7 required to pump groundwater is contrary to  
 8 the fundamental principles of western water  
 9 law that a water right is a usufruct right;  
 10 that is, it is a right to put water to  
 11 beneficial use within the quantity and rate  
 12 limitations of your own water right, but it  
 13 is not a right to own or to otherwise  
 14 control water in a river or water in state  
 15 in an aquifer.  
 16 Water in state in an aquifer, in fact,  
 17 does not belong to anyone, and the mere  
 18 fact that another user would have also had  
 19 the lawful right to that water had they  
 20 removed it from the ground first does not  
 21 mean that the first user has taken water  
 22 that belonged to the second. This  
 23 principle is well established and fosters  
 24 the development of water for economic gain,  
 25 a major tenet of the doctrine of prior

Page 3579

1 appropriation.  
 2 So with that general principle in mind,  
 3 I next want to touch on this issue of  
 4 distrust between the City of Wichita and  
 5 surrounding smaller municipalities,  
 6 irrigators, and domestic users that both  
 7 the District and the Intervenor have  
 8 brought up on several occasions. I want to  
 9 say that DWR recognizes that this distrust  
 10 exists and that it is very real for those  
 11 water users who have lived in close  
 12 quarters with the City, some of them for  
 13 decades as you heard testimony about.  
 14 However, I want to emphasize that while  
 15 we do recognize that a significant level of  
 16 distrust does exist, it would just simply  
 17 be inappropriate to allow that distrust and  
 18 events that happened 40, 50, or 60 years  
 19 ago to color our judgment regarding the  
 20 proposal that's in front of us today.  
 21 Further, I want to emphasize and I really  
 22 hope provide some reassurance that DWR has  
 23 always been and remains committed to  
 24 holding the City accountable the same as we  
 25 would any other water user, whether this

Page 3580

1 proposal is approved or not. Excuse me.  
 2 On a related note, I think that this  
 3 distrust has probably informed the District  
 4 and the Intervenor's characterization of  
 5 the ASR project in several pleadings, and  
 6 the general theme advanced by those parties  
 7 throughout the proceedings that to grant  
 8 the City what it's asking for here would  
 9 unfairly reward it for poor water  
 10 management. You know, DWR just doesn't see  
 11 it that way. We actually feel that the  
 12 City has been a good steward of the aquifer  
 13 and that its good management is a very  
 14 significant reason for the rebound in water  
 15 levels since 1993 and the high water table  
 16 seen in the Equus Beds today.  
 17 Actually, as Mr. McLeod kind of alluded  
 18 to, the City's own good management is part  
 19 of the reason it has need for this  
 20 proposal. The aquifer is so full now that  
 21 there is no space to inject water for the  
 22 accumulation of physical recharge credits  
 23 as the City originally intended to do.  
 24 Now, it is true you heard some testimony  
 25 from the Intervenor saying that ASR

Page 3581

1 doesn't work. It's true that the ASR  
 2 project hasn't always run perfectly, but  
 3 the fact that there were some bumps in the  
 4 road as things got rolling doesn't mean  
 5 that the project has failed. Likewise, the  
 6 fact that the City's view of how the ASR  
 7 project fits into its overall water  
 8 management strategy and how -- the fact  
 9 that that view has evolved over time  
 10 doesn't mean that the ASR project has  
 11 failed or doesn't work as some testimony  
 12 has suggested. In any case, it's DWR's  
 13 view that it's simply not accurate to  
 14 suggest that granting the City's proposal  
 15 would reward it for poor water management.  
 16 Along those lines, I do want to  
 17 acknowledge, though, that DWR does feel  
 18 that probably from the very inception of  
 19 the ASR project the City has not always  
 20 marketed the project as well as it maybe  
 21 could have. We do believe that more or  
 22 better-focused public outreach along the  
 23 way likely could have headed off some of  
 24 these concerns that you have heard brought  
 25 forth throughout these proceedings, long

1 before we got to this point. However,  
2 similar to this issue of distrust that I  
3 spoke about a moment ago, it would likewise  
4 be inappropriate to disregard the key facts  
5 that support the reasonableness of this  
6 proposal simply because the City may not  
7 have conveyed those facts to the public in  
8 the manner that it perhaps could have.  
9 So turning to those few key facts that  
10 support the reasonableness of the proposal,  
11 it is DWR's view that the bulk of the  
12 testimony elicited by both the District and  
13 the Intervenor has really keyed on things  
14 that are not truly relevant and have simply  
15 obscured and unnecessarily complicated  
16 those key facts.  
17 First, it's DWR's opinion that the  
18 effects of the proposal from a  
19 hydrogeological standpoint are almost  
20 universally good ones. In times of normal  
21 rainfall, the proposal would allow the  
22 aquifer to be managed at a fuller level.  
23 This has numerous benefits: A stable  
24 hydraulic gradient that will slow the  
25 encroachment of the Burrton salt plume,

1 that the aquifer could actually be somewhat  
2 lower than what the City's model shows  
3 after times of high pumping. So those  
4 possibilities and a potential for that  
5 degree of error in modeling would be  
6 concerning to DWR if we were talking about  
7 a proposal that was projected to leave the  
8 aquifer 10, 20, 30 percent full. But the  
9 fact is that even a proposal that only  
10 leaves the aquifer 70 percent full versus  
11 80 percent full is still very much a  
12 reasonable proposal in our view.  
13 DWR does not hold any groundwater  
14 modeling that it reviews to a standard that  
15 it be perfect or that it exhaustively  
16 account for every potential that you could  
17 ever think of, and the City's modeling here  
18 shouldn't be held to that standard either.  
19 DWR has seen nothing really to suggest that  
20 the City's modeling work was not perfectly  
21 sufficient for its intended purpose. It's  
22 also important to keep in mind on this  
23 point that the Equus Beds see excellent  
24 natural recharge compared to most of the  
25 rest of the High Plains Aquifer so would

1 lower pumping costs to all irrigators in  
2 the area, and of course better drought  
3 preparedness. Additionally, during times  
4 of normal rainfall, maintaining the aquifer  
5 at a fuller level will cause the Little Ark  
6 to gain water from the aquifer, mitigating  
7 the need for any administration of water  
8 rights to protect minimum desirable  
9 streamflow on the river, which I will touch  
10 on again a bit later.  
11 Overall, much of the expert testimony  
12 presented by the District and the  
13 Intervenor has simply ignored the benefits  
14 that the proposal will provide during all  
15 of the times that the area is not  
16 experiencing a 1 percent drought, while  
17 also ignoring the fact that the City's  
18 model shows that even in the last year of a  
19 1 percent drought in which the City has  
20 pumped all of the water that the proposal  
21 would allow it to, the Equus Beds will  
22 remain 80 percent full on average.  
23 Now, the District's experts have picked  
24 that model apart, arguing that its  
25 projections may not be exactly right and

1 likely rebound well once a drought ended,  
2 as we saw and as they did following 1993.  
3 So I mentioned water levels in the  
4 aquifer under the proposal a moment ago,  
5 and that brings me to my next point which  
6 concerns the District and the Intervenor's  
7 contention that the City should have been  
8 required to meet the standards set out in  
9 the provisions of the Kansas Water  
10 Appropriation Act that govern applications  
11 for new appropriations and change  
12 applications.  
13 Prominent among those requirements is a  
14 showing that the new appropriation or  
15 change will not cause impairment to other  
16 water users, which we have heard a lot of  
17 testimony about. So first and very  
18 importantly, I want to emphasize that the  
19 City's proposal does not constitute either  
20 an application for a new appropriation or a  
21 change application, and the standards set  
22 out in those statutory provisions thus do  
23 not actually apply.  
24 Second, and perhaps even more important,  
25 I want to stress that DWR does not ever

Page 3586

1 deny any kind of application or any kind of  
 2 proposal because of a speculative potential  
 3 that the water right at issue might cause  
 4 an impairment to some unknown user at some  
 5 unknown point in the future. Our  
 6 impairment statutes simply don't function  
 7 that way and they were not intended to.  
 8 Those statutes exist to allow us to  
 9 administer water rights after an impairment  
 10 has been shown, and those protections exist  
 11 today right now and they will remain in  
 12 place to protect any irrigator or domestic  
 13 user who is, in fact, impaired by the  
 14 City's water use under the proposal or at  
 15 any time. So it's the same with the MDS  
 16 argument that we heard a lot about more  
 17 recently. DWR will administer water rights  
 18 as necessary if and when MDS is impacted,  
 19 but we never preemptively deny water use  
 20 just because MDS might be impacted at some  
 21 point in the future.  
 22 I also want to point out that, in fact,  
 23 GMD2's governing regulations don't mention  
 24 MDS anywhere. And further taking --  
 25 further, and importantly, taking the

Page 3587

1 approach that the District and the  
 2 Intervenor have seemed to advocate for in  
 3 this regard would actually discourage  
 4 development and the application of water to  
 5 beneficial use by all people of the state,  
 6 which again is contrary to the general  
 7 principles of Kansas water law. Of course,  
 8 I also do want to note that the City has  
 9 expressed throughout its willingness to  
 10 agree to MOU terms that would protect  
 11 nearby users as well.  
 12 So I also have a few points I want to  
 13 make on the topic of aquifer maintenance  
 14 credits specifically. First, as to the  
 15 proposed 120,000 acre-foot cap on recharge  
 16 credits, I want to point out, as I think  
 17 Mr. McLeod also did, that currently no cap  
 18 exists at all on the recharge credits that  
 19 the City is allowed to accumulate.  
 20 Also the City has projected a maximum  
 21 demand of 20,000 credits in the worst year  
 22 of a 1 percent drought, which is only a  
 23 small portion of the proposed overall cap  
 24 accumulation quantity of 120,000 acre-feet.  
 25 As I think Mr. McLeod also said, it's

Page 3588

1 additionally important to remember that  
 2 once these credits are used -- are used,  
 3 they are gone. They don't renew every  
 4 year, so there is not a scenario in which  
 5 the City would take 120,000 acre-feet of  
 6 credits out of the aquifer in back-to-back  
 7 years. It's going to take a significant  
 8 amount of time to rebuild those credits.  
 9 So, again, the 120,000 acre-foot number  
 10 is a proposed overall cap for all credit  
 11 accumulation, not a representation of what  
 12 the City has proposed to or would ever need  
 13 to take out of the aquifer at any one time  
 14 or in any one given year. So DWR really  
 15 doesn't even necessarily feel that this  
 16 120,000 acre-foot number is all that  
 17 critical as each ASR well will still  
 18 continue to be governed by its annual  
 19 authorized quantity.  
 20 So I also want to emphasize that when  
 21 the City is pumping ASR credits, it is not  
 22 pumping native Equus Beds water. It is  
 23 pumping water that either originated as  
 24 surface water and came to be in the aquifer  
 25 through physical recharge, or if the

Page 3589

1 proposal is approved, water that could have  
 2 originated as surface water and is treated  
 3 as surface water through the proposed  
 4 accounting adjustment.  
 5 So turning now to the issue of passive  
 6 recharge, I want to emphasize that it  
 7 remains DWR's position that passive  
 8 recharge is not and should not be allowed.  
 9 It is simply our view that what the City  
 10 has proposed here does not constitute  
 11 passive recharge and does fit within the  
 12 existing regulatory framework that governs  
 13 the ASR project. Water for which the City  
 14 accumulates AMCs under the proposal will  
 15 pass through Wichita's ASR diversion and  
 16 treatment infrastructure and will be  
 17 subject to the existing quantity and rate  
 18 limitations of those permits. So it is  
 19 therefore, in our opinion, not passive  
 20 recharge as it moves through that  
 21 infrastructure and it is permissible under  
 22 existing law.  
 23 Finally, I want to address the argument  
 24 that the District has made so much of that  
 25 this proposal will basically allow the City

1 to get two beneficial uses of water for  
2 one. On this point, I just want to  
3 emphasize that the City could right now,  
4 today, if it had the high surface water  
5 flows on the Little Ark necessary to do it,  
6 pump a hole in the aquifer, take that water  
7 to town, inject treated Little Ark surface  
8 water into the aquifer and then turn right  
9 around and pump that same water back out of  
10 the aquifer and also take it to town. All  
11 that the proposal really does as it  
12 pertains to AMCs is essentially just cut  
13 out the intermediate step of pumping the  
14 hole in the aquifer, which for the same  
15 reasons I discussed at the beginning of my  
16 remarks is beneficial for the health of the  
17 aquifer and for all water uses in the area.  
18 So now that I've kind of circled back to  
19 where I began, I'll conclude by saying that  
20 DWR has so far not seen anything that  
21 changes the agency's initial conclusion  
22 that the City's proposal is both reasonable  
23 and legal. With that being said, though,  
24 we are committed to conducting a thorough  
25 review of the voluminous record in this

1 water was referred to metaphorically  
2 through a bottle of water. Likewise,  
3 throughout this hearing, we heard that the  
4 Equus Beds Aquifer is that metaphorical  
5 box. So as a consequence, I have that  
6 gallon of water and I have a box  
7 representing the Equus Beds Aquifer.  
8 With physical recharge credits, the  
9 important piece is that a gallon of water  
10 is taken from the river and it's injected  
11 directly into the aquifer. And as you can  
12 see, that gallon of water which was  
13 injected into the aquifer is then available  
14 to take out at a later time. And so at  
15 that future point, the City can then take  
16 that gallon of water out and use it in town  
17 for municipal purposes.  
18 Now, let's fast-forward for a moment and  
19 talk about the aquifer maintenance credit  
20 approach. This same gallon of water will  
21 be taken directly from the Little Arkansas  
22 River and shipped off to the City of  
23 Wichita. As you can see, as we look in the  
24 aquifer, in this box, there's no gallon of  
25 water that's been put into the aquifer.

1 matter, and I will certainly expand on each  
2 of the points I've raised today in our  
3 post-hearing brief once we have had time to  
4 conduct such a review. Thank you.  
5 **PRESIDING OFFICER:** Thank you,  
6 Ms. Murray. Next, we have the Groundwater  
7 Management District, Dave or Tom, you're  
8 up.  
9 **MR. STUCKY:** Thank you, Your Honor.  
10 Obviously, this has been a long hearing and  
11 there's been a lot of testimony and a lot  
12 of evidence, and so I certainly agree with  
13 Mr. McLeod and Ms. Murray in that regard,  
14 and it's difficult to try and summarize  
15 positions in some brief closing arguments.  
16 However, I'll do my absolute best.  
17 Now, indeed, the District has a very  
18 different take than the -- what was just  
19 stated by the City or the Division of Water  
20 Resources. But before I delve into our  
21 many arguments in this case, I would like  
22 to start with a demonstration that I think  
23 is illustrative of the very heart of the  
24 District's position.  
25 Throughout this hearing, a gallon of

1 It's been shipped directly to the City of  
2 Wichita, yet somehow through some magical  
3 accounting, the City of Wichita will divert  
4 another gallon of water out of the aquifer  
5 at a later time. Somehow the City has  
6 created a two-for-one benefit through this  
7 accounting that they're able to do.  
8 So through this hocus-pocus, the City  
9 has doubled its quantity. Through its  
10 aquifer maintenance credit proposal, the  
11 City is attempting to perform a magic act  
12 by conjuring up new water and new water  
13 rights. So the City is asking you as the  
14 hearing officer to perform a metaphorical  
15 swish of your wand and allow for the  
16 prohibited concept of doubling a  
17 consumptive use and to bless a new concept  
18 prohibited by statutes and regulations. So  
19 this illustrates our overarching concern  
20 with the City's proposal.  
21 But, indeed, our concerns run much  
22 deeper than that. But before we get into  
23 all those concerns, I'd like to touch on a  
24 brief summary of our understanding of the  
25 City's proposed modification. First of

Page 3594

1 all, with respect to aquifer maintenance  
 2 credits, the City is asking for a credit  
 3 for water left in storage that was not  
 4 placed there by the City in the first place  
 5 and is already dedicated to other water  
 6 users. Second of all, with respect to  
 7 lowering the minimum index level, the City  
 8 is proposing to do that anywhere from 9 to  
 9 23 feet depending on where in the aquifer  
 10 it's located. But, finally, and this  
 11 responds to some comments made by  
 12 Ms. Murray just a moment ago, it's  
 13 important to stress the City's proposed  
 14 modifications apply not only to existing  
 15 ASR Phase II permits but also could apply  
 16 to any future ASR permits obtained by the  
 17 City. Therefore, the City can accelerate  
 18 their withdrawal in the future.  
 19 But I'd also like to touch on another  
 20 comment that was raised by Ms. Murray just  
 21 a moment ago as far as what the City must  
 22 prove and what their burden of proof is.  
 23 And what's quite important in this case is  
 24 the fact that there's three orders that  
 25 govern this hearing. There were two that

Page 3595

1 were signed by Mr. Barfield and there was  
 2 one that was signed by you as the hearing  
 3 officer. And in those orders it's quite  
 4 clear what is specified. It states in  
 5 those orders to meet its burden, the City  
 6 must establish that it, quote, can meet the  
 7 requirements set forth for aquifer storage  
 8 and recovery project in K.A.R. 5-12-1 and  
 9 the requirements set forth in K.S.A.  
 10 82a-708(b), including that the proposed  
 11 changes are reasonable and will not cause  
 12 impairment and that the proposed changes  
 13 relate to the same local source of supply.  
 14 Whether or not a change is reasonable  
 15 should consider the effect upon the public  
 16 interest, end quote.  
 17 In addressing impairment and the public  
 18 interest, these statutes that are  
 19 referenced in the orders further specify  
 20 the City's duty to show that its proposal  
 21 will not unreasonably interfere with  
 22 minimum desirable streamflow, undermine  
 23 safe yield, cause an unreasonable lowering  
 24 of the water table, and adversely impact  
 25 water quality. So the very orders that

Page 3596

1 have been adopted in this case to govern  
 2 this hearing require the City to show those  
 3 elements. So to meet its burden of proof  
 4 by a preponderance of the evidence in this  
 5 case, the City must demonstrate that it can  
 6 meet all of those elements as outlined in  
 7 the specific orders adopted in this  
 8 hearing, contrary what the Division of  
 9 Water Resources argued just a moment ago.  
 10 So with this framework in mind that the  
 11 City must meet, we now move to a threshold  
 12 argument, and that threshold argument is  
 13 that there is no statutory or regulatory  
 14 mechanism for these proposed modifications.  
 15 As we indicated through our testimony,  
 16 there was no change application filed, and  
 17 there has been no new application filed in  
 18 this case, yet the City wants to change the  
 19 two most fundamental aspects of their  
 20 existing ASR permits.  
 21 First of all, the City wants to change  
 22 how recharge credits are accumulated and  
 23 retained, and, second of all, the City  
 24 wants to change how those credits can be  
 25 withdrawn at a later time. Those are the

Page 3597

1 two most fundamental aspects of their  
 2 permits. The City is asking now to  
 3 retroactively change those aspects of their  
 4 permits, yet they have not filed a change  
 5 application or a new application.  
 6 Now, the Kansas Water Appropriation Act  
 7 does allow for some changes to water  
 8 permits, such as the place of use, the  
 9 point of diversion, the use made of water,  
 10 and some other minor changes, but these  
 11 changes by the City are outside the scope  
 12 of what can be changed. An analogy of this  
 13 would be in a zoning context. You can't go  
 14 to district court and pursue a zoning  
 15 change if no application is filed before  
 16 the governing body. Likewise, because the  
 17 City has not filed a change application or  
 18 a new application, their proposal is  
 19 facially invalid at the threshold.  
 20 But if we were to get beyond these  
 21 procedural hurdles, the next major concern  
 22 identified by the District has to do with  
 23 the City's modeling, starting with the  
 24 MODSIM modeling and the limitations with  
 25 drought modeling. We indicated that,

Page 3598

1 number one, there's limitations to the  
2 Palmer Drought Severity Index; second of  
3 all, we indicated through testimony that  
4 there was a lack of historical local  
5 regional data to outline this drought  
6 modeling. But, finally, another concern  
7 identified was that there is no set  
8 1 percent drought scenario. It doesn't  
9 have to be eight years, for example, as the  
10 City modeled.  
11 But the concerns with the MODSIM  
12 modeling just really scratch the surface  
13 when it came to the concerns that the  
14 District identified with the MODFLOW  
15 modeling. First of all, the District  
16 identified errors in the tables that were  
17 proposed by the City. We showed that there  
18 were errors in tables such as 2-5, 2-10,  
19 and other errors that we identified in the  
20 modeling and throughout the proposal.  
21 Also, it was testified that there were  
22 potential errors in the input files that  
23 were utilized by the City.  
24 But, finally, the City's modeling fails  
25 to take into account crucial variables.

Page 3599

1 For example, number one, the river flow  
2 drying up. Mr. McCormick admitted that the  
3 City's modeling didn't take into account  
4 the possibility that the Little Arkansas  
5 River or the Arkansas River could dry up,  
6 and as Kansans, we know that that's a  
7 distinct possibility. Mr. McCormick  
8 indicated that this modeling could have  
9 been performed but it would have been  
10 timely and expensive. Mr. Romero, on the  
11 other hand, said that this modeling could  
12 have been done with minimal additional  
13 effort and was a critical analysis that  
14 should have been performed by the City.  
15 But the second major concern or variable  
16 that wasn't taken into account was the fact  
17 that the City started with 1998 levels and  
18 was unable to demonstrate the defensibility  
19 of starting with this metric. So we are  
20 asking you as the hearing officer to ensure  
21 that shortcuts are not taken at the expense  
22 of the other water users of the aquifer.  
23 But with that in mind, there's one  
24 concept we agree with the City and the  
25 Division of Water Resources on, and that is

Page 3600

1 that there should be a cap on the  
2 accumulation and withdrawal of physical  
3 recharge credits. Now, a moment ago,  
4 Ms. Murray also said that the cap of  
5 120,000, it doesn't really matter because  
6 it's limited based on how much you can  
7 withdraw per year. Now, although there is  
8 a limit on how much it can be withdrawn per  
9 year, we think the cap of 120,000 acre-feet  
10 does matter.  
11 Through the City's own testimony, they  
12 indicated that in an extreme drought  
13 scenario, the most they would need in  
14 addition to their native water rights is  
15 only approximately about 50,000 acre-feet,  
16 and so as a consequence, we're proposing to  
17 you that it makes sense to place the cap at  
18 50,000 acre-feet for the accumulation of  
19 physical recharge credit.  
20 But once we move beyond this concept of  
21 a cap, we come to the aquifer maintenance  
22 credit accounting methodology. What you  
23 heard in the testimony of our experts is  
24 that there's vast discrepancy between low  
25 and high water levels. The City's proposal

Page 3601

1 used low, 1998 aquifer water levels, which  
2 minimized recharge credit loss and  
3 optimized AMC retention. In fact,  
4 Mr. McCormick, in his testimony when  
5 cross-examined by Ms. Wendling, indicated  
6 that this was the case.  
7 There was also, second of all, errors in  
8 calculating initial and gradational losses  
9 by the City. In the real world, the City  
10 is actually only retaining approximately  
11 64 percent of physical recharge credits  
12 from 2006 to 2016. And this was due to  
13 Mr. McCormick's testimony, not some sort of  
14 80 percent number which was identified just  
15 moments ago. In fact, in the testimony --  
16 testimony, Mr. McCormick brought out his  
17 calculator and calculated those exact  
18 figures and testified that 64 percent was  
19 the retention rate.  
20 But, furthermore, and so it's clear  
21 here, that actual physical recharge credit  
22 retention has been much lower than the AMC  
23 accounting proposal would like you to  
24 believe. But also the City's proposal is  
25 based on an annual accounting using January

Page 3602

1 groundwater levels, which fail to take into  
 2 account peak pumping periods and water  
 3 table fluctuations throughout the year.  
 4 But these are some of our initial  
 5 threshold concerns with the City's  
 6 proposal. Now we delve into the heart of  
 7 our concerns, starting with the new minimum  
 8 index level. The first major argument that  
 9 we've identified has to do with the  
 10 legality of the City's approach of lowering  
 11 the minimum index level. It is the  
 12 District's position that the City has a  
 13 contractual commitment not to drop below  
 14 the 1993 levels. This contractual  
 15 obligation is shown through a memorandum of  
 16 understanding, permit conditions, and  
 17 promises made to domestic owners through  
 18 letters that induce the domestic owners to  
 19 concede to the spacing and consent waivers.  
 20 So, indeed, it's our position that the City  
 21 is contractually obligated not to lower to  
 22 a new bottom.  
 23 But moving beyond that, we come to an  
 24 argument we raised in our motion to dismiss  
 25 from the Clawson case. The Clawson case is

Page 3603

1 black letter law in Kansas, and it says  
 2 that one can't retroactively change permit  
 3 conditions. So in other words, neither the  
 4 City, the Division of Water Resources, or  
 5 the District has the power to bless these  
 6 retroactive changes to permits.  
 7 I think it's important, to try and focus  
 8 us in on what matters here, to quote the  
 9 words of the Clawson case. The Clawson  
 10 case states directly, quote, in sum, KWAA  
 11 does not authorize the chief engineer to  
 12 reevaluate and reconsider an approval once  
 13 a permit has been issued. So in other  
 14 words, if the City hasn't filed a change  
 15 application or a new application, they  
 16 can't just retroactively change to a new  
 17 bottom or modify permit conditions.  
 18 But moving beyond that, we come to the  
 19 takings clause argument, and certainly the  
 20 Division of Water Resources spent a lot of  
 21 time attacking this takings clause argument  
 22 approach and talks about how water is  
 23 dedicated to all users and things of that  
 24 nature, which, of course, as the District,  
 25 we understand, we understand that well,

Page 3604

1 because that's different from what our  
 2 position is in this case.  
 3 Our position is that water rights are  
 4 real property rights, and if those are  
 5 infringed upon, it can constitute a taking.  
 6 Likewise, if you have an expectation to the  
 7 value of your land and that value is  
 8 undermined, that likewise interferes with a  
 9 property interest, and that's what we heard  
 10 here. We heard the testimony of landowners  
 11 that identified significant value of their  
 12 land and their water rights. They  
 13 indicated their investment expectation to  
 14 that future use. The City's proposal  
 15 threatens to undermine that viability  
 16 through extreme water withdrawals that will  
 17 drop the water table to a new harmful level  
 18 and interfere with water quality. The  
 19 taking of water is based on water the City  
 20 doesn't own and, we agree with DWR, was not  
 21 placed there by the City in the first place  
 22 and is dedicated to other water users.  
 23 This is a textbook takings clause  
 24 violation.  
 25 But moving beyond the takings clause,

Page 3605

1 the next concern we have with lowering the  
 2 minimum index level has to do with spacing  
 3 waivers. These permits, in short, don't  
 4 meet spacing. The old ASR physical  
 5 recharge credit permits were granted based  
 6 on knowledge that water would be added to  
 7 the aquifer and the water levels wouldn't  
 8 be dropped below the 1993 levels.  
 9 The City's October 10, 2008 letter to  
 10 the Groundwater Management District board  
 11 requested the spacing waivers for Phase II  
 12 applications specifically be conditioned on  
 13 the fact that water would not be withdrawn  
 14 below the 1993 levels. These conditions  
 15 aren't present with aquifer maintenance  
 16 credits or the revised minimum index  
 17 levels. As a consequence, any of these  
 18 spacing waivers that were granted in the  
 19 past are now irrelevant and the City's new  
 20 approach does not meet spacing. Yet  
 21 another easy threshold reason why this  
 22 proposal must be denied.  
 23 But moving beyond spacing, we've come to  
 24 safe yield, a very, very important concept,  
 25 again, based on the three orders adopted in

Page 3606

1 this case, an issue that must be resolved  
2 by you as the hearing officer. Indeed, it  
3 is our position that the City's idea of  
4 lowering to a new minimum index level  
5 simply does not meet safe yield. K.A.R.  
6 5-3-9(b) states that unless otherwise  
7 provided by regulation, it shall be  
8 considered to be in the public interest  
9 that only the safe yield of any sources of  
10 water supply shall be appropriated.  
11 Existing ASR permits are exempt from  
12 safe yield regulation; however, it is our  
13 position that the proposed AMCs, in  
14 conjunction with lowering the minimum index  
15 levels, are not exempt. You may recall  
16 that Mr. Boese calculated the safe yields  
17 of all 30 of the City's existing permits  
18 and the City's dismissed permits, none of  
19 them met safe yield. As you heard, some of  
20 them were over-appropriated up to four  
21 times over. Moreover, no new permits,  
22 except for the City's ASR permits and  
23 perhaps some temporary or small use  
24 permits, have been approved in the Wichita  
25 well field area for over four decades

Page 3607

1 because it is so heavily appropriated.  
2 Lowering to a new minimum index level  
3 infringes upon the very concept of safe  
4 yield.  
5 But moving beyond some of these initial  
6 concerns, which are plenty of grounds to  
7 deny the City's proposal, we come to the  
8 practical effect of lowering to a new  
9 minimum index level. First of all, the  
10 effect to minimum desirable streamflow. We  
11 produced extensive modeling and testimony  
12 from Dave Romero and others indicating the  
13 drastic effects of withdrawing accumulated  
14 credits below the 1993 levels. On the  
15 other hand, the City didn't do any modeling  
16 in that regard, even though the City was  
17 obligated to pursuant to the governing  
18 statutes and regulations. So, indeed, you  
19 have the District's testimony here showing  
20 that dropping to a new minimum index level  
21 has the certain effect of interfering with  
22 minimum desirable streamflow.  
23 But the next major concern has to do  
24 with water quality. The District and the  
25 Intervenor presented evidence that

Page 3608

1 lowering the minimum index level could  
2 result in the harmful spread of chloride,  
3 arsenic, and other harmful contaminants.  
4 Once again, the City failed to model this  
5 at all, even though it is a legal  
6 requirement of K.S.A. 82a-711, which is  
7 incorporated through those orders I cited  
8 earlier.  
9 In addition to the previous  
10 considerations, there are major public  
11 interest concerns with dropping to a new  
12 bottom. You heard that there are two types  
13 of impairment, there's direct well-to-well  
14 impairment and there's also the impairment  
15 to the overall health of the aquifer.  
16 Mr. Romero in his testimony indicated that  
17 both types of impairment will occur if you  
18 adopt the City's proposal. He indicated  
19 that individual wells will be impacted by  
20 dropping to a new minimum index level, and  
21 he also talked about how it would interfere  
22 with the overall health of the aquifer.  
23 But you may also recall that there was a  
24 lot of discussion about saturated thickness  
25 versus practical saturated thickness. You

Page 3609

1 heard the testimony on practical saturated  
2 thickness, and the reality was that when  
3 you look at the well logs and the actual  
4 data, there's simply just not as much water  
5 in the aquifer as the City would like you  
6 to believe. In fact, Mr. Letourneau and  
7 Mr. Boese both testified as to this concern  
8 when they looked at the actual well logs.  
9 Mr. Boese presented hydrographs of the  
10 drastic effects that would occur if we  
11 dropped to a new minimum index level on the  
12 practical saturated thickness.  
13 So in sum on minimum index levels, the  
14 City's cursory modeling shows general  
15 impacts during a -- during a 1 percent  
16 drought to water levels by index cell but  
17 is not specific to well locations and  
18 doesn't take into account the practical  
19 saturated thickness. Mr. Letourneau  
20 recommended that in the future this actual  
21 well data and practical saturated thickness  
22 should be taken into account. Indeed, this  
23 should be done before the City's proposal  
24 is approved. So for all these reasons, the  
25 minimum index level should not be lowered.

Page 3610

1 But moving beyond the minimum index  
 2 level concerns, we come to the concept of  
 3 aquifer maintenance credits. Aquifer  
 4 maintenance credits, a term that is not  
 5 defined by statute or regulation. In fact,  
 6 aquifer maintenance credits are  
 7 specifically prohibited by statutes and  
 8 regulations.  
 9 There was a detailed statutory analysis  
 10 provided by Mr. Boese and Mr. Pope. As  
 11 they indicated, all definitions refer to  
 12 physical artificial recharge of the aquifer  
 13 to accumulate credits. The very definition  
 14 of, quote, aquifer storage and recovery  
 15 system found in regulation specifies that  
 16 artificial recharge must occur and that  
 17 source water is stored for subsequent  
 18 recovery.  
 19 Artificial recharge is defined as the  
 20 use of source water to artificially  
 21 replenish the water supply of the aquifer.  
 22 Source water is defined, in part, as the  
 23 above base flow stage in the river.  
 24 Accounting is defined, in part, as -- as  
 25 taking into account the water entering and

Page 3611

1 leaving the aquifer. The water is to be  
 2 used for subsequent appropriation and  
 3 refers to water being put in the  
 4 unsaturated portion of the aquifer. The  
 5 City, on the other hand, wants to divert  
 6 water directly to the City when the aquifer  
 7 is already fully saturated, contrary to  
 8 these very definitions.  
 9 Consequently, AMCs cannot be part of an  
 10 aquifer storage and recovery system because  
 11 the main component of artificial recharge  
 12 is missing. The source water is not placed  
 13 in the aquifer to artificially replenish  
 14 the aquifer, and no source water is stored  
 15 in the aquifer for subsequent recovery.  
 16 Mr. Boese and Mr. Pope, who have dedicated  
 17 their careers to analyzing these statutes  
 18 and regulations, both indicated that AMCs  
 19 are prohibited.  
 20 But a moment ago we also heard mention  
 21 of the concept of functional equivalent.  
 22 Once again, functional equivalent, a  
 23 definition not found in statute or  
 24 regulation, a definition or a concept as  
 25 applied to aquifer maintenance credits that

Page 3612

1 is a mere figment of the City's  
 2 imagination, again, not blessed by Kansas  
 3 water law.  
 4 But we move beyond that to the concept  
 5 of passive recharge credits. David Pope  
 6 defined passive recharge credits as water  
 7 the City could have pumped but didn't.  
 8 David Pope provided a detailed analysis of  
 9 what storage meant as he arrived at his  
 10 conclusion. Passive recharge credits were  
 11 prohibited based on representations made by  
 12 the City and the prior orders of the chief  
 13 engineer. Indeed, the Division of Water  
 14 Resources just indicated a moment ago that  
 15 their position is still against passive  
 16 recharge credits.  
 17 Specifically, passive recharge credits  
 18 were also prohibited in both ASR Phase I  
 19 and Phase II approval orders of the chief  
 20 engineer. David Pope emphasized that the  
 21 City's aquifer maintenance credit concept  
 22 is nothing more but rank passive recharge  
 23 credits. Even Mr. Pajor, in  
 24 cross-examination, finally agreed that  
 25 nobody should get credit for water not

Page 3613

1 pumped.  
 2 But moving beyond the concept of passive  
 3 recharge credits, we come to the Kansas  
 4 Water Appropriation Act and the very heart  
 5 of this act, which is the concept of first  
 6 in time, first in right. The City's  
 7 aquifer maintenance credit proposal, to  
 8 make no mistake, will violate this very  
 9 core principle of this statute that we --  
 10 that we all hold so dear.  
 11 This was proven by various testimony of  
 12 landowners and the District's experts that  
 13 demonstrated that the City's attempts to  
 14 withdrawal water it didn't place in the  
 15 aquifer in the first place is junior to the  
 16 rights of other water users in a very  
 17 over-appropriated portion of the aquifer.  
 18 Aquifer maintenance credits allow the City  
 19 to withdraw that water out of the aquifer  
 20 at a later time based on water that was  
 21 never injected there in the first place and  
 22 so that water taken out has to be  
 23 infringing upon more senior water users in  
 24 the aquifer, violates the very heart of the  
 25 Kansas Water Appropriation Act.

1 But moving beyond these threshold  
2 concerns, we come to the practical effects,  
3 once again, of the AMC approach. Again,  
4 similar to minimum -- to lowering to a new  
5 minimum index level, we have the impacts on  
6 minimum desirable streamflow. You heard  
7 testimony that additional withdrawals of up  
8 to 120,000 acre-feet of water over a  
9 designated period of time could have dire  
10 impacts. There was lots of graphs and  
11 statistics and modeling from our experts,  
12 including Mr. Romero, that indicated that  
13 this is a dire concern if these are  
14 withdrawn over a period of time.  
15 Although the annual withdrawal is,  
16 indeed, capped as was identified a moment  
17 ago, these -- the City could seek more  
18 permits in the future and only accelerate  
19 that withdrawal as time goes on, and that  
20 was also testified to. Various experts,  
21 indeed, from the District side testified to  
22 the drastic consequences to minimum  
23 desirable streamflow when these credits are  
24 withdrawn. The City, on the other hand,  
25 failed to model this at all, despite its

1 exempt from safe yield; however, the  
2 proposed AMCs do not place any water into  
3 the aquifer for storage nor add to the  
4 water supply, therefore, AMCs would not  
5 qualify for safe yield exemption, and they  
6 violate this very principle.  
7 But, again, we come to the concept of  
8 saturated thickness, and you may recall  
9 that there were hydrographs presented both  
10 to the impacts to minimum -- I'm sorry, to  
11 lowering to a new minimum index level but  
12 also the impacts to AMCs and withdrawing  
13 AMCs. Saturated thickness will also be  
14 interfered when we withdraw these aquifer  
15 maintenance credits. Again, the actual  
16 data and the actual well logs paint a dire  
17 picture. There is not as much water in the  
18 aquifer in these areas as the City would  
19 like you to believe through its modeling.  
20 Again, a major concern with aquifer  
21 maintenance credits.  
22 But the next major concern has to do  
23 with the impact to the public interest.  
24 Again, you heard that there were multiple  
25 forms of impairment that were identified by

1 statutory obligation to do so.  
2 But moving beyond the impacts to minimum  
3 desirable streamflow, we come to the  
4 concept of water quality. Various experts  
5 from the District indicated that  
6 withdrawing a massive amount of accumulated  
7 credits could be drastically adverse --  
8 have drastically adverse impacts to water  
9 quality. Once again, and we have a common  
10 theme here, the City failed to model this  
11 at all and did not present any testimony as  
12 to the impacts to water quality of  
13 withdrawing these accumulated credits.  
14 But moving beyond water quality and  
15 concerns with water quality and the sole  
16 evidence provided by the Intervenors and  
17 the District on these elements, we come  
18 again to the concept of safe yield. Again,  
19 this is a horribly over-appropriated area  
20 of the aquifer that we're talking about.  
21 Withdrawing credits takes water out of the  
22 aquifer that was never placed there by the  
23 City in the first place and thus violates  
24 safe yield. As indicated, an aquifer  
25 storage and recovery permit application is

1 Mr. Romero. First of all, he said that  
2 withdrawing AMCs would cause impairment to  
3 individual wells, and he said that was a  
4 near -- nearly a certainty, and he also  
5 said that it would interfere with the  
6 overall health of the aquifer. Again,  
7 Mr. Romero, through detailed analysis, a  
8 very, very credentialed expert, indicated  
9 that it's not just a remote possibility but  
10 a near certainty that well-to-well  
11 impairment and overall health of the  
12 aquifer will be adversely impacted.  
13 In fact, the City actually acknowledged  
14 that this may be a possibility, and through  
15 the testimony of Mr. Clement indicated  
16 that, you know, if we interfere with  
17 individual wells, we could simply drill  
18 some deeper wells in the future. However,  
19 you also heard some testimony of those very  
20 familiar with drilling wells who indicated  
21 that it could take weeks, months, or much  
22 longer for these wells to be drilled, a  
23 dissatisfying remedy at best.  
24 But moving beyond those concerns, we  
25 come, again, to the concept of a double

Page 3618

1 benefit. I demonstrated just a moment ago  
 2 how it creates a two-for-one on gallon  
 3 while tapping into a completely undefined  
 4 source of water. You know, if this was a  
 5 tort case, which it's not, and we  
 6 understand that, we would argue concepts  
 7 such as equitable estoppel, conversion,  
 8 unjust enrichment, among many other  
 9 concepts to defeat the City's proposal.  
 10 But, indeed, here the point is still clear,  
 11 the City is doubling their consumptive use.  
 12 We also argued through testimony that this  
 13 is a new type of consumptive use and also a  
 14 new, undefined source of water. So for all  
 15 of those reasons, I think it is painfully  
 16 obvious that aquifer maintenance credits  
 17 cannot be allowed.  
 18 Although the City may argue and has  
 19 argued that they desperately need this  
 20 proposal for future water planning,  
 21 alternatives for drought planning do exist  
 22 for the City, such as multi-year flex  
 23 accounts. The City could simply operate  
 24 under the same rules and the same playing  
 25 field as everybody else. Again, there's no

Page 3619

1 hate towards the City, as was identified  
 2 previously; we're just simply asking that  
 3 the City operate under the same multi-year  
 4 flex accounts that are utilized by the  
 5 other water users in the aquifer.  
 6 So undeniably for all of these reasons,  
 7 we don't think the City's proposal should  
 8 be granted, as it is facially illegal and  
 9 invalid, relies on voodoo science, and will  
 10 have drastic impacts to the aquifer and the  
 11 other users that rely on this vital  
 12 resource.  
 13 However, in the event that this was  
 14 somehow entertained for approval, which it  
 15 clearly should not be, there would need to  
 16 be extensive, additional modeling performed  
 17 by the City and detailed, carefully crafted  
 18 permit conditions as testified to by the  
 19 Division of Water Resources, the City, and  
 20 the District, and, indeed, those detailed  
 21 permit conditions were outlined in great  
 22 detail in the hearing and will be further  
 23 briefed. It would also require a statutory  
 24 and regulatory change before the City's  
 25 proposal could be approved. Thus it merits

Page 3620

1 mentioning once again that the City has no  
 2 standing to pursue its proposal at this  
 3 point in time.  
 4 So as I conclude my remarks, we circle  
 5 back to the magic act being sought by the  
 6 City. In the words of David Pope, aquifer  
 7 maintenance credits are, quote, fictitious  
 8 credits. These credits are a mere figment  
 9 of an abstract imagination by the City.  
 10 The City should not be allowed to pursue  
 11 these phantom credits through a crafty and  
 12 elaborate bait and switch mockery of  
 13 current law. Mark Twain once prophetically  
 14 quipped, whiskey is for drinking and water  
 15 is for fighting for.  
 16 Among many concerns, lowering the  
 17 minimum index levels and allowing the City  
 18 to accumulate and withdraw aquifer  
 19 maintenance credits creates the ominous and  
 20 overwhelming probability of adversely  
 21 impacting other groundwater users, water  
 22 quality, and minimum desirable streamflow.  
 23 The City has not met its burden of proof on  
 24 any of these categories.  
 25 So, indeed, as the District, we feel the

Page 3621

1 overarching responsibility to battle for,  
 2 defend, and protect the critical resource  
 3 known as the Equus Beds Aquifer.  
 4 Consequently, we are vigorously opposed to  
 5 the illusionary trick represented by the  
 6 City's proposal.  
 7 I would also like to reserve 20 minutes  
 8 for rebuttal.  
 9 **PRESIDING OFFICER:** Okay, thank you.  
 10 Ms. Wendling.  
 11 **MS. WENDLING:** Thank you. I will do  
 12 my best as well as everyone else to keep my  
 13 comments brief and reserve details for the  
 14 future brief.  
 15 We believe the City has failed to meet  
 16 its burden of proof in that these proposed  
 17 changes are reasonable, will not cause  
 18 impairment, and are in the public interest.  
 19 The City's proposal includes a simulated  
 20 drought with carefully selected inputs as  
 21 justification for wanting additional water  
 22 rights. The simulation analyzes only the  
 23 impact of the carefully curated model  
 24 stress period. The requested index levels  
 25 and the 120,000 acre-feet in AMCs are not

1 inputs considered in the model. Far more  
2 study and analysis is needed to counter the  
3 decades of being told the aquifer is  
4 over-appropriated and it's not safe to go  
5 below the 1993 levels.  
6 For example, what if we don't enter the  
7 drought at the 1998 starting levels  
8 selected by the City for their model? Per  
9 the City, the '98 levels were selected  
10 because they were the best match for  
11 representing groundwater levels required to  
12 maintain the 30 million gallons daily of  
13 physical ASR recharge capacity. The City  
14 does not claim the '98 levels represent an  
15 average aquifer level or any reason  
16 whatsoever that the '98 levels should be  
17 the starting point, other than if it had --  
18 if the aquifer had remained at '98 levels,  
19 the ASR project would have performed as  
20 expected. The absence of any scenarios  
21 other than the single scenario supporting  
22 the City's request is troubling for those  
23 of us who rely exclusively on the Equus  
24 Beds for water.  
25 The City's analysis did provide

1 Equus Beds is a shared resource in a very  
2 heavily concentrated area of water users.  
3 The City's proposing an excessive drain on  
4 this limited resource at a time when the  
5 resource is at its most valuable. This is  
6 a very real world concern impacting Equus  
7 Beds water users not only during a  
8 potential drought but for an unspecified  
9 period of time following the drought.  
10 No data has been provided on the length  
11 of time it will take the Equus Beds to  
12 recover from the proposed pumping of AMCs  
13 during the 1 percent drought or going down  
14 to below the 1993 levels. These harms and  
15 risks are not merely speculative. Knowing  
16 that these additional uses of water will  
17 occur during a drought makes it even more  
18 likely that these harms would occur. The  
19 City's proposal does not limit the use of  
20 this additional water to times of drought,  
21 and they are seeking permission to take  
22 these additional credits to lower levels  
23 whenever they would like to.  
24 As Mr. Stucky has said, the AMCs are not  
25 provided for under Kansas water law. And

1 simulated groundwater levels and average  
2 saturated thickness for index cells during  
3 year eight of the simulated drought.  
4 Unfortunately, as Mr. Stucky just  
5 described, it does not provide information  
6 on the accessibility and availability of  
7 quality water for human use at actual well  
8 locations. These simulated groundwater  
9 levels provide no indication regarding  
10 quality of water or the impacts on known  
11 potential contaminants.  
12 There is a large gap between the credit  
13 usage modeled in the simulated drought and  
14 what the City is seeking with the proposal.  
15 For example, the City is seeking credits  
16 that would cover them during two  
17 back-to-back, 1 percent droughts, yet has  
18 only modeled a single drought. Further  
19 analysis is clearly needed to show the  
20 impacts of the City's proposal.  
21 The expert testimony has shown the very  
22 real possibility that the modifications  
23 requested by the City would unreasonably  
24 lower the water level, negatively impact  
25 streamflow, and harm water quality. The

1 although the City's proposal presents  
2 this as a modification to ASR permit, the  
3 AMCs in actuality have nothing to do with  
4 ASR. Just as water currently diverted from  
5 the Little Arkansas River, treated and used  
6 directly by the City is currently performed  
7 under the existing permit, it does not make  
8 that activity ASR activity. Nor is the  
9 recharge -- nor is the recharge credit a  
10 functional equivalent of a recharge credit,  
11 and it should not be allowed.  
12 Ultimately, the City's request for AMCs  
13 is a request to appropriate groundwater  
14 from an over-appropriated region of the  
15 aquifer. The City's proposal is a request  
16 for a new appropriation and should be  
17 treated as a new appropriation, following  
18 the procedures and safeguards established  
19 for such new applications, including safe  
20 yield analysis. If it has been determined  
21 that the aquifer is not fully  
22 over-appropriated and it is in the public  
23 interest to grant new appropriations, due  
24 process requires that all previously denied  
25 applications be reconsidered prior to this

Page 3626

1 request from the City.  
 2 The AMCs being requested are to meet a  
 3 speculative future need. If storage and  
 4 drought mitigation are to be added as  
 5 beneficial uses, those new uses should  
 6 similarly be made available to all water  
 7 users. As Mr. Carp testified, the missed  
 8 economic opportunities of denying the  
 9 applications for decades due to an  
 10 over-appropriated aquifer to the entire  
 11 community cannot be ignored in now  
 12 determining that almost 120,000 acre-feet  
 13 of water is available to appropriate to the  
 14 City in this new form of credits. Unlike  
 15 local users of the Equus Beds with return  
 16 flows recharging the aquifer, the City  
 17 wants the new appropriation to export water  
 18 out of the Equus Beds in a fully  
 19 consumptive use with no benefit to the  
 20 Equus Beds.  
 21 The creation of AMCs for leaving water  
 22 in the aquifer is a very dangerous  
 23 precedent. Water users across the state  
 24 regularly leave water in the aquifer and  
 25 invest their own funds to conserve water

Page 3628

1 now suddenly available for appropriations.  
 2 The aquifer drawdown caused by the use  
 3 of AMCs and lowered index levels is likely  
 4 to accelerate chloride contamination from  
 5 both the Burrton chloride plume and the  
 6 Arkansas River. This chloride  
 7 contamination could cause significant  
 8 economic harm, destroying the value of  
 9 productive cropland and homes of those  
 10 currently relying on the Equus Beds.  
 11 My clients and many others, including  
 12 local communities, have invested in the  
 13 land, their homes, businesses, irrigation  
 14 systems, conservation efforts, soil  
 15 improvement, livestock, farm equipment,  
 16 local co-ops, grain elevators, other  
 17 ag-supported businesses, and many other  
 18 items which depend on the availability of  
 19 quality water under existing and  
 20 long-standing water appropriation rights.  
 21 A new appropriation in the form of AMCs or  
 22 the removal of protective measures such as  
 23 the minimum index levels must not be  
 24 allowed to impair, harm, or interfere with  
 25 those rights. The burden of proving this

Page 3627

1 and leave increasingly more water in the  
 2 Equus Beds.  
 3 The 1993 minimum index levels were  
 4 agreed on as a protective measure and the  
 5 result of extensive negotiations. The City  
 6 is now seeking to lower these protective  
 7 levels without evaluating the impact of  
 8 such a change on water users and the  
 9 sustainable health of the aquifer and  
 10 cannot be allowed.  
 11 As mentioned, the Equus Beds is fully  
 12 appropriated, and those property rights  
 13 belong to multiple individuals, including  
 14 my clients, the City of Wichita, and many  
 15 others. By skipping the recharge process,  
 16 the City seeks to convert the fully  
 17 appropriated native water in the aquifer to  
 18 recharge water dedicated exclusively to the  
 19 City of Wichita. This is simply a  
 20 physically -- physical taking of water that  
 21 has been appropriated to others. Decades  
 22 of denied permit applicants show that water  
 23 in the Equus Beds has been fully  
 24 appropriated. Those previously denied  
 25 applications cannot be ignored if water is

Page 3629

1 potential impairment should not fall on  
 2 local residents, and the potential for  
 3 impairment should be considered before  
 4 making a decision to grant such a large  
 5 appropriation of water.  
 6 The City has claimed that the proposal  
 7 is only about the accumulation of credits  
 8 and not the use of those credits. However,  
 9 to consider the public interest, we have to  
 10 contemplate the withdrawal of these credits  
 11 from the aquifer. When it comes to such a  
 12 large appropriation, mistakes and  
 13 miscalculations can be disastrous.  
 14 The City attributes the full state of  
 15 the aquifer to implementation of the  
 16 Integrated Local Water Supply Plan in 1993.  
 17 This was ten years prior to the City  
 18 applying for Phase I of the ASR project in  
 19 2003 and 20 years before Phase II was  
 20 implemented in 2013. Why after 20 years  
 21 wasn't the City aware of the issues of a  
 22 full aquifer?  
 23 The limitations of the ASR project are  
 24 not new and the dilemma facing the City  
 25 today could have been ascertained by the

1 City long before this proposal and before  
2 investing over \$200 million in ASR. A  
3 reasonable person considering the public  
4 interest has to question whether we can  
5 rely on the City and their same experts who  
6 either invested such a large sum while  
7 failing to consider their own impact on the  
8 aquifer that they control or knowingly  
9 invested the money in the project with full  
10 knowledge of this limitation.  
11 My clients rely exclusively on the Equus  
12 Beds and do not have duplicate sources of  
13 water as the City of Wichita has. They are  
14 very concerned about the actual impact  
15 these modifications will have on the Equus  
16 Beds and them personally when the City  
17 withdraws the AMCs or draws down the  
18 aquifer to the new lowered level. A  
19 thorough analysis of multiple possible  
20 scenarios with an independent review is  
21 necessary to prevent irreversible damage.  
22 What are the impacts of allowing AMCs  
23 without performing recharge? Water  
24 right -- water right holders throughout the  
25 state leave water in storage when they do

1 way from pumping a hole that they have  
2 threatened to pump over the past several  
3 years.  
4 These past few days of extreme weather  
5 have demonstrated that even the best laid  
6 plans can go awry. Planning for extreme  
7 events such as drought are necessary, and  
8 the public can benefit from such planning.  
9 Access to essential water during a severe  
10 drought is important for everyone. But  
11 awkwardly modifying an ASR permit to create  
12 a fictitious credit and allow the recovery  
13 of water without performing recharge is not  
14 the right solution.  
15 I hope that we can find a solution that  
16 fits within the constraints of Kansas water  
17 law to address drought planning for the  
18 people of the State of Kansas. However, at  
19 this time, we believe the City's proposed  
20 modifications should be denied. Thank you.  
21 **PRESIDING OFFICER:** Thank you. I  
22 think at this time, it might be appropriate  
23 to take a ten-minute break, and then we'll  
24 return for rebuttal arguments. So for now,  
25 we will be off the record.

1 not pump their full appropriation, invest  
2 in water conservation, and other efforts to  
3 conserve water. Can these water right  
4 users also get a future credit for water  
5 left in storage, and if that is allowed  
6 what is the long-term impact? The  
7 questions still need to be answered before  
8 a decision can properly be made regarding  
9 this proposal. As Mr. Stucky said,  
10 extensive further analysis is necessary.  
11 Now, the City has presented the very  
12 really -- very real risks identified in  
13 this process of the City pumping their  
14 native groundwater rights. This is a very  
15 real risk and something that has been  
16 avoided due to the City's luxury of having  
17 multiple water resources and their  
18 management of the Equus Beds.  
19 Understanding that past appropriation  
20 decisions have already created a serious  
21 problem is not a reason to grant additional  
22 water rights that would exacerbate the  
23 problem. The City's proposal does not  
24 include a limit to prevent pumping of  
25 native water rights or prevent them in any

1 (Thereupon, a recess was taken;  
2 whereupon, the following was had.)  
3 **PRESIDING OFFICER:** After a short  
4 break, we are now back on the record. And  
5 we have had closing arguments from all  
6 counsel and now we move to the time that  
7 they have each reserved for rebuttal.  
8 They've each reserved 20 minutes, and we  
9 will start with Brian McLeod for the City.  
10 **MR. MCLEOD:** Thank you. Of the  
11 many, many points stated by counsel for the  
12 District and for Intervenors, there were a  
13 lot of them that seemed legally or  
14 factually mistaken, but we won't respond to  
15 all of them this morning in the time  
16 permitted, having to be selective.  
17 On the point that there could be later  
18 ASR Phase II wells and that the City could  
19 accelerate -- accelerate withdrawals in the  
20 future via additional wells, obviously, you  
21 know, any such additional wells would have  
22 to be permitted and would go through the  
23 process, hearing process for permitting,  
24 and any issues with problems arising from  
25 any impacts of those wells would be studied

Page 3634

1 in that process. That's not really a  
 2 concern.  
 3 As far as what the City is required to  
 4 show by the hearing orders, I rather concur  
 5 with counsel for DWR's remarks that the  
 6 City has met those burdens, showing really  
 7 benefit in all relevant periods and  
 8 slight -- slight detriment only in the  
 9 occurrence of the modeled eight-year  
 10 drought, which is still offset by benefits  
 11 even in that period.  
 12 I don't agree with counsel's contention  
 13 that there is any unreasonable lowering of  
 14 the water table. I think counsel's casting  
 15 of the Balleau modeling as showing dire  
 16 consequences for minimum desirable  
 17 streamflow and the water table and the  
 18 impacts on wells is just not an accurate  
 19 characterization of the Balleau modeling.  
 20 And really if you look at the Balleau  
 21 modeling, it confirms that the impact of  
 22 the new index levels are slight; the  
 23 effects on individual wells, slight; the  
 24 effects on the water table, slight. So  
 25 just no factual foundation for all of those

Page 3635

1 statements that have been -- that have been  
 2 allegedly based on that modeling.  
 3 It's also curious that the -- that we're  
 4 raising this notion of minimum desirable  
 5 streamflow in a time of drought. You know,  
 6 I think when Mr. Austin was testifying, he  
 7 recognized that even in realtime, even in  
 8 the context of administration, DWR will --  
 9 will let MDS issues go sometimes for a  
 10 period of several years to see if there is,  
 11 you know, really a persisting problem  
 12 versus some transitory condition. And,  
 13 particularly, you would expect that in time  
 14 of drought when you're not going to meet  
 15 minimum desirable streamflow no matter  
 16 what. It's -- it's not a rational  
 17 argument, it's just not, and it doesn't  
 18 comport with water rights practice or DWR's  
 19 historic treatment of minimum desirable  
 20 streamflow issues.  
 21 I think that there have been, if I'm not  
 22 mistaken, past changes actually to the ASR  
 23 permit, to the minimum index levels, some  
 24 corrections, and there have been other  
 25 minor changes, and I disagree with

Page 3636

1 counsel's characterization that these  
 2 changes are just so great that they don't  
 3 fit within a scope of permissible changes  
 4 that can be made without a new application  
 5 or a change application.  
 6 The AMCs are not a major change. They  
 7 are, as former Chief Engineer Barfield  
 8 said, the functional equivalent of the  
 9 existing physical recharge credit.  
 10 Likewise, and for all the same reasons the  
 11 physical recharge credits don't affect fair  
 12 yield modeling, the AMCS will not affect  
 13 fair yield modeling, they will not have any  
 14 impact on fair yield, and that argument  
 15 is -- is not a well-founded argument.  
 16 Also the index levels, that is a slight  
 17 change, and I believe that the Balleau  
 18 modeling itself shows that the impacts are  
 19 also very slight, with perhaps six domestic  
 20 wells affected. And as to terming that as  
 21 some kind of dire impairment, it -- it  
 22 isn't. A momentary impact on wells, it can  
 23 be extended, it's not an impairment, it  
 24 hasn't been treated as an impairment in  
 25 Kansas water rights practice. And -- and

Page 3637

1 there may be some momentary inconvenience,  
 2 that is -- that is possible, and it's  
 3 something the City would, of course,  
 4 attempt to cooperate to avoid, if possible,  
 5 but that is still not an impairment.  
 6 And the -- the results, the modeling  
 7 results from Mr. Romero's study are simply  
 8 not being accurately represented by  
 9 counsel, they don't show what they're being  
 10 claimed to show at all. And actually it  
 11 was good that Balleau did that modeling  
 12 because it helps to support the City's  
 13 proposal and provide additional reasons,  
 14 showing a slight impact even in the drought  
 15 scenario, that favored granting the  
 16 proposed modifications.  
 17 With respect to the idea that the City  
 18 should be capped at 50,000 acre-feet  
 19 because that's what the City should need in  
 20 a single modeled eight-year drought, that  
 21 doesn't really make sense. If the City has  
 22 injected or accrued AMCs in a much larger  
 23 amount, the City should be allowed to do  
 24 that for back-to-back eight-year droughts  
 25 as a conservative safeguard if it chooses.

Page 3638

1 The 120,000 acre-foot cap, whether the  
2 District likes it or not, is more of a cap  
3 than there has ever been and was the City's  
4 suggestion to begin with, not something  
5 that was proposed by the District  
6 ab initio.  
7 As for the differences between --  
8 between Mr. Austin's work and  
9 Mr. McCormick's work being termed errors by  
10 counsel, they're not errors, and it's --  
11 it's clear from Mr. McCormick's testimony  
12 that the leakage variant, for example,  
13 between actual leakage and physical  
14 recharge and the leakage assumptions that  
15 are used for AMCs are very purposeful;  
16 there's a reason for using them, and  
17 Mr. McCormick explained those in his  
18 testimony, and they -- it's just not true  
19 to say that he made errors. He is  
20 employing different assumptions. As the  
21 same is true for his initial loss and the  
22 other variances, if you compare the two  
23 reports, you'll see that Mr. McCormick's  
24 numbers are different because he's not  
25 using the same methodology or approach as

Page 3639

1 Mr. Austin, but it's not because he's  
2 making a mistake.  
3 With respect to the contractual  
4 obligation argument about a guaranteed 1993  
5 floor, there has never been any agreement  
6 in any context to guarantee a 1993 floor.  
7 In fact, it's abundantly clear in every  
8 context that the City can go below that  
9 with its 40,000 acre-foot native rights at  
10 any time and, in fact, had the City not  
11 reversed its management policies in 1993,  
12 levels in the aquifer would have gone below  
13 the 1993 levels. The only reason they  
14 didn't was the City's change in practice.  
15 And that's why the 1993 levels are  
16 preserved today at the historic lows.  
17 With respect to the MOU, we feel that  
18 that document has been effectively  
19 abandoned by the District because there  
20 were requirements in the MOU for periodic  
21 evaluation and revision of the document and  
22 simply that process never occurred,  
23 reflecting that the District didn't follow  
24 up on the conditions to adjust that  
25 document and perpetuate it over the long

Page 3640

1 term.  
2 With respect to the spacing waivers  
3 argument, those waivers, I believe, were  
4 approved by DWR. There is no principle by  
5 which the waivers would suddenly vanish  
6 into thin air because one of the facets  
7 that was considered in the -- in the GMD2  
8 recommendation on the waivers has changed.  
9 All of the damage and taking argument,  
10 they're also not factually supported.  
11 They're not supported by Mr. Romero's work,  
12 they're not supported by consequences that  
13 are shown or likely as to the Intervenor  
14 who have testified with respect to the  
15 proposal. If you note what those folks  
16 testified to, many of them complained about  
17 conditions of the existing permits. They  
18 complained about chloride impacts. I  
19 believe Mr. Basore acknowledged that he  
20 already had them, and Mr. Carmichael  
21 acknowledged that he was on the threshold  
22 of the area that is expected to have them,  
23 and those -- those well owners are going to  
24 have those chloride impacts if the City has  
25 to do the physical recharge approach, they

Page 3641

1 will have worse chloride impacts than they  
2 will with the City's proposed  
3 modifications.  
4 And I think we can ascertain that by  
5 looking at the chloride studies. And  
6 Burns & Mac didn't do extensive modeling of  
7 chloride because so much chloride work has  
8 already been done in the aquifer. And the  
9 2014 study shows us with the double pumping  
10 scenario, you know, what might be the  
11 transitory impact that would be somewhat  
12 indicative of what happens in the drought  
13 period. But the much greater impact will  
14 be if the City has to bring those water  
15 levels down to 1998 levels and maintain  
16 them there for a long period of years,  
17 that's going to have a much greater impact  
18 on chloride migration and all of the well  
19 owners that are concerned about that.  
20 So, again, they've inadvertently  
21 compared the proposal's impact to their --  
22 to their dream scenario rather than  
23 comparing it to what will actually happen  
24 if the proposal is not approved and the  
25 City has to accumulate its credits by

Page 3642

1 drawing the aquifer down and pursuing  
 2 physical recharge to accrue physical  
 3 recharge credits.  
 4 With respect to the whole notion of  
 5 passive recharge credits, yes, indeed, one  
 6 former chief engineer believes that AMCs  
 7 infringe that concept of bad passive  
 8 recharge credit. Another former chief  
 9 engineer, Mr. Barfield, doesn't believe  
 10 that and believes that they can be  
 11 distinguished for the reasons that  
 12 Ms. Murray explained, how all of the  
 13 surface water comes in through the ASR  
 14 infrastructure and is subject to the permit  
 15 conditions and is basically the water that  
 16 could have been injected into the aquifer  
 17 had there been space for that physical  
 18 recharge.  
 19 Also functional equivalent is not a  
 20 figment of the City's imagination, but  
 21 clearly former Chief Engineer Barfield  
 22 recognized that concept as well, showed  
 23 that he understood it, agreed with it, and  
 24 believed that it was reasonable and it is  
 25 logical and rational. I think there's not

Page 3643

1 a way to rationally avoid the conclusion  
 2 that the AMCs are the functional equivalent  
 3 of physical recharge credits, you're just  
 4 skipping the intermediate step of pumping  
 5 the hole in the aquifer and then plugging  
 6 it with the new infusion of water.  
 7 Then there was one thing that I wanted  
 8 to address in Ms. Wendling's comments where  
 9 she -- she indicated an issue with the use  
 10 of the 1998 water levels in the modeling.  
 11 And I think this is -- this is perhaps a  
 12 failure to understand. Recall that the  
 13 elements of the City's proposal are  
 14 independent and it's possible that the  
 15 credits assumed in the modeling for the  
 16 index level analysis could be physical or  
 17 they could be AMC, we don't know.  
 18 Because the City might be restricted to  
 19 physical credits, it made sense to do that  
 20 modeling based on use of the water levels  
 21 that would be associated with the City  
 22 having had to go through the process for  
 23 physical recharge credits; in other words,  
 24 we've -- we've modeled the index level  
 25 issues with the assumption that the AMCs

Page 3644

1 have been denied and the City is doing  
 2 physical recharge credits. And that's the  
 3 reason the modeling is done with the 1998  
 4 levels because when the City goes down that  
 5 road to pull the aquifer down and do  
 6 physical recharge 1998 levels is where the  
 7 aquifer will be, and those are the levels  
 8 which in that scenario the aquifer will go  
 9 into the 1 percent drought if it occurs.  
 10 I -- I believe, if I'm not mistaken,  
 11 that Balleau also used those 1998 levels in  
 12 their modeling as well, so I think that's  
 13 the reason; it was intentional and it made  
 14 sense because we're modeling the index  
 15 level issue without knowledge of the source  
 16 of the credits.  
 17 And further responses, to the extent  
 18 they may be warranted, we will just save  
 19 for the written stage.  
 20 **PRESIDING OFFICER:** Okay. Thank  
 21 you, Mr. McLeod. Ms. Murray.  
 22 **MS. MURRAY:** Yes, thank you, I do  
 23 have just a few comments.  
 24 So as Mr. McLeod also kind of alluded  
 25 to, it is our view that essentially the

Page 3645

1 City's modeling does constitute a showing  
 2 of the things that Mr. Stucky referenced  
 3 that are required by the governing orders,  
 4 things like impairments and impacts to MDS,  
 5 and unreasonable raising or lowering of the  
 6 water table won't occur. I -- realizing,  
 7 you know, that there are differences in  
 8 opinion of the adequacy of that modeling,  
 9 as I spoke earlier, we do feel it was  
 10 adequate and we feel that that modeling did  
 11 con -- did constitute that showing.  
 12 Along the lines of whether impairment  
 13 will occur or is likely to occur,  
 14 Mr. McLeod also sort of alluded to this.  
 15 It is not necessarily, per se, impairment  
 16 just because a user or some users may have  
 17 to drill their wells deeper. Of course,  
 18 there's case law out there on that, and I  
 19 think that's really an issue to be further  
 20 fleshed out in the briefs, but I just  
 21 wanted to make that point.  
 22 As well as that the Clawson case that  
 23 Mr. Stucky referenced, I think the true  
 24 applicability of that case and whether it's  
 25 exactly on point to this situation is -- is

1 also really an issue for the briefs, I  
2 think that there's arguments to be made  
3 that -- that there are some nuances there  
4 that don't apply directly to this instance.  
5 Expanding a little bit also on what  
6 Mr. McLeod said about past definitions  
7 or -- or lack of definition of -- of  
8 passive recharge, if I'm not mistaken, I  
9 don't remember what document it was  
10 exactly, but I think that former Chief  
11 Engineer Pope, quote, unquote, defined  
12 passive recharge in -- in a parenthetical  
13 of some sort in a past order, and -- and I  
14 don't think that you can say that he  
15 created, with that sort of parenthetical  
16 statement, that he created a definition of  
17 passive recharge that we are all beholding  
18 to forever going forward. As Mr. McLeod  
19 pointed out, Mr. Barfield had a different  
20 interpretation, and I think that that was a  
21 valid one. I don't think that Mr. Pope  
22 created a definition that -- that  
23 Mr. Barfield or any future chief engineer  
24 would then necessarily be tied to.  
25 On the topic of ASR credits being junior

1 We recognize, obviously, that that is  
2 problematic for any type of water user, but  
3 for a municipality it carries real, you  
4 know, public health and safety  
5 implications. We -- we don't want to  
6 create a situation where we're even opening  
7 the door for, you know, hospitals, schools,  
8 et cetera to run out of water in the last  
9 years of a MYFA.  
10 I guess I do just want to address, it's  
11 been characterized a few times that the  
12 City has threatened that they will just  
13 pump the hole in the aquifer if they don't  
14 get this proposal approved, and I just want  
15 to, I guess, set the record straight a  
16 little bit because that's -- in my mind,  
17 that's not a threat, and I don't really  
18 like that characterization of it because  
19 it's -- it's simply just what the City  
20 could do and -- and may have to do if this  
21 proposal is not approved.  
22 So I think that's all the comments I  
23 want to make for now. As Mr. McLeod said,  
24 obviously a lot remains for the briefs, but  
25 I will call it good there for now. Thank

1 rights, I just want to point out that, you  
2 know, priority of a water right only really  
3 comes into play when there's not enough  
4 water to go around, i.e., when an  
5 impairment of some sort is occurring. As  
6 has been mentioned a lot, we don't feel  
7 that it will, but if it does, we will  
8 address it when it happens. That's the way  
9 that we treat any sort of an impairment  
10 type of situation. Again, maintaining the  
11 aquifer at a fuller level is better for  
12 water quality, and that'll be the case the  
13 majority of the time under this proposal.  
14 And then lastly, Mr. Stucky has -- has  
15 brought up a multi-year flex account  
16 several times as -- as what the District,  
17 you know, thinks would be a good option for  
18 the City rather than to go forward with  
19 this proposal. It's never been DWR's  
20 opinion that a MYFA is a good option for a  
21 municipality simply because it can sort  
22 of -- just by the way that a MYFA  
23 functions, you could use, you know, more  
24 water at the beginning of it and then run  
25 out of water at the end.

1 you.  
2 **PRESIDING OFFICER:** Thank you.  
3 Mr. Stucky.  
4 **MR. STUCKY:** Thank you, Your Honor.  
5 Before I proceed with my final comments, I  
6 just want to commend all counsel for their  
7 well thought out opposing arguments.  
8 Truly, it's apparent everybody put some  
9 real time and effort into thinking through  
10 their closings today, and although we may  
11 have spirited disagreements, I'm not going  
12 to have the opportunity to talk with any of  
13 you after this hearing, so I just want to  
14 say thanks for the spirited comments that  
15 were raised here.  
16 But with that in mind, obviously as the  
17 District, we have vast differences of  
18 opinion as far as what the City's proposal  
19 means, what the modeling means, and,  
20 indeed, we stand by all the statements that  
21 were made in my initial comments. Of  
22 course, I'm not going to go through all  
23 those points again, but I think the points  
24 are very strong and they're also very  
25 clear. But with that in mind, it was --

Page 3650

1 there's just a few comments that I heard  
 2 and additional statements from counsel that  
 3 I think are worth rebutting or worth  
 4 addressing, so I'm just going to go through  
 5 just a few of those points.  
 6 First of all, Mr. McLeod indicated that  
 7 the impacts on the aquifer from withdrawing  
 8 these credits or lowering to a new minimum  
 9 desirable -- or new minimum index level are  
 10 overstated. Again, I think this will be  
 11 briefed extensively, there's a lot of  
 12 testimony from Mr. Romero, he had graphs,  
 13 he had charts, all kinds of extensive  
 14 modeling that he did that showed these  
 15 impacts, both with respect to lowering to a  
 16 new minimum index level and with respect to  
 17 withdrawing the aquifer maintenance  
 18 credits, he showed that there were very,  
 19 very significant impacts, and we can brief  
 20 that in great detail. So that's simply  
 21 just a mischaracterization.  
 22 Second of all, with respect to minimum  
 23 desirable streamflow, I heard, I think,  
 24 Mr. McLeod say that this was a nonsensical  
 25 argument of sorts, that minimum desirable

Page 3651

1 streamflow would be interfered with.  
 2 Again, it's just groundwater 101 that  
 3 there's an interconnectedness between  
 4 surface water, river flow, and groundwater,  
 5 and so it makes perfectly logical sense  
 6 that if you're pulling water out of an  
 7 aquifer and, as you would do with aquifer  
 8 maintenance credits, and you reduce that  
 9 level to a new minimum index level, it's  
 10 going to cause withdrawals, it's going to  
 11 impact minimum desirable streamflow. It's  
 12 just a very simple, common sense argument  
 13 that we're making. But, again, you don't  
 14 have to rely on common sense, we'll brief  
 15 in -- in our briefs extensively how this  
 16 was modeled and predicted by our experts.  
 17 But it was also mentioned by Mr. McLeod  
 18 that the District has failed to follow the  
 19 memorandum of understanding. We deny that.  
 20 There is a condition in there that the  
 21 District and the City need to work together  
 22 to do some monitoring and analysis, and so  
 23 in the event the City is arguing that the  
 24 District failed to follow the memorandum of  
 25 understanding, since it's a joint

Page 3652

1 responsibility, the City is essentially  
 2 arguing that it itself has failed to follow  
 3 the memorandum of understanding. But it's  
 4 the District's position that we have.  
 5 Moving on to this concept of a  
 6 functional equivalent, whether this is a  
 7 species of the imagination of David  
 8 Barfield or this was a concept that was --  
 9 was developed by the City of Wichita,  
 10 again, it really doesn't matter, functional  
 11 equivalent is not defined in case law, it's  
 12 not defined in statute, regulation as it  
 13 applies to aquifer maintenance credits. So  
 14 the point is the same, simply no  
 15 applicability here. And I'm going to  
 16 circle back to that point at the end of my  
 17 remarks because I think it's quite  
 18 important.  
 19 But another major point that I think is  
 20 worth raising and worth addressing is some  
 21 of the assumptions that are made by the  
 22 Division of Water Resources and by the  
 23 District. The City and the Division of  
 24 Water Resources are arguing and contending  
 25 that this is a good proposal because the

Page 3653

1 aquifer is going to be kept full, that the  
 2 City will maintain this aquifer at this  
 3 nearly full condition, and as a  
 4 consequence, it's good for all water users.  
 5 Another assumption we've heard is that  
 6 the City is going to first take water from  
 7 Cheney Reservoir. But, again, I guess I  
 8 would submit to you as the hearing officer,  
 9 where in writing do we have that these  
 10 assumptions are -- are going to actually be  
 11 committed to by the City? Where do we have  
 12 in writing that the City is going to first  
 13 take from Cheney Reservoir? Where do we  
 14 have in writing that the City of Wichita is  
 15 going to ensure that the aquifer level is  
 16 kept full? Indeed, there are no permit  
 17 conditions as they exist that require the  
 18 City to do any of these things.  
 19 And in the past, and, again, I -- I  
 20 really hate to live in the past and  
 21 certainly there's no animosity toward the  
 22 City by the District and so I'm really  
 23 trying to hesitate to live in the past, but  
 24 I think it's worth mentioning that in the  
 25 past, the City has committed, and I -- I

1 indicated that contractual commitment in so  
2 many different ways, letters to the  
3 District, letters to landowners, permits,  
4 memorandums of understanding, the City  
5 committed in a whole bunch of different  
6 ways to keep at the current minimum index  
7 level, and now it's breaking that  
8 commitment.  
9 And so this notion of all these  
10 assumptions, the City is going to keep the  
11 aquifer full, pull water from Cheney  
12 Reservoir first, all these assumptions, we  
13 have no assurances that any of that will  
14 occur. And those are all just a bunch of  
15 assumptions that the City's analysis as far  
16 as the benefits are based on.  
17 But moving beyond that, I mentioned the  
18 animosity toward the City. You know, that  
19 is something that we're very sensitive to  
20 as the District. Historically, I think the  
21 District and the City have collaborated and  
22 worked together very well on a number of  
23 projects. The original ASR permitting  
24 approach and the physical recharge concept  
25 was a very revolutionary concept, and I

1 addressed in the future, and that's part of  
2 what you do with impairment. But, again,  
3 if you read the governing statute that is  
4 cited in the three orders, two signed by  
5 Mr. Barfield and one signed by you as the  
6 hearing officer, it indicates that  
7 impairment needs to be considered up front,  
8 it's not something that's just addressed at  
9 a later time, and we have clearly shown  
10 that impairment, two types of impairment  
11 will be caused both from lowering the  
12 minimum index level and from withdrawing  
13 these aquifer maintenance credits. And so  
14 this is far, far, far from a speculative  
15 danger. This is a real threat, a real  
16 danger that we've been able to show through  
17 our -- our modeling.  
18 I think I -- I did hear in the final  
19 comments from the Division of Water  
20 Resources that they're now conceding that  
21 safe yield, minimum desirable streamflow,  
22 all those elements need to be shown up  
23 front by the City, I think they revised  
24 their argument in that regard, so I think  
25 we all agree that that's something now that

1 think the District proved to be a very good  
2 partner in that. And Mr. Boese, all the  
3 way back to the early 1990s, the inception  
4 of it, I think, has always been a good  
5 partner, has always been very involved, he  
6 testified that he is -- he wants to be a  
7 good partner with the City, and so this has  
8 nothing to do with animosity toward the  
9 City, absolutely nothing to do with it.  
10 It's just, simply put, that the District  
11 believes that this is not a beneficial  
12 concept or a beneficial idea. The idea of  
13 lowering to a new minimum index level and  
14 to take out these fictitious or -- or  
15 illusionary aquifer maintenance credits and  
16 withdraw them, again, just not a good  
17 concept, and it's demonstrated by extensive  
18 modeling. Nothing to do with any kind of  
19 animosity toward the City.  
20 I also heard mention of the fact that  
21 this is just some sort of speculative  
22 danger, this impairment is speculative. I  
23 heard mention of that, but, again, you  
24 know -- and it was also, I think, mentioned  
25 that this is something that could be

1 the City must show.  
2 But this concept of passive recharge  
3 credits, again, we hear -- we're hearing  
4 talk about passive recharge credits, and  
5 I'm just going to circle back for a moment  
6 to the hearing. I -- Mr. McCormick and  
7 Mr. Pajor, a variety of different witnesses  
8 from the City, were on the stand and I was  
9 cross-examining them and I said, so let me  
10 get this straight, when you left water in  
11 Cheney Reservoir, that was considered a  
12 passive recharge credit, you shouldn't get  
13 any credit just for simply leaving water in  
14 Cheney Reservoir -- or, I'm sorry, for  
15 pumping from Cheney Reservoir first. That  
16 was asked and they said, yes, that's a  
17 passive recharge credit; if we're given  
18 credit for pumping Cheney Reservoir first,  
19 that's -- that's very much so a passive  
20 recharge credit.  
21 So then I asked, well, let's say  
22 hypothetically that you pump from El Dorado  
23 Reservoir or you take water out of the  
24 Arkansas River and -- and should you get a  
25 credit for that, and the implication was,

Page 3658

1 yeah, that could be a passive recharge  
2 credit as well. And so I don't see how  
3 it's any different here. If the City tries  
4 to get some sort of credit for pumping  
5 directly out of the Little Arkansas River,  
6 sending it straight to the City of Wichita,  
7 how that's any different than trying to get  
8 a credit from pumping out of Cheney  
9 Reservoir? Again, you know, logically  
10 consistent, it's the same thing. Again, if  
11 it's a duck -- quacks like a duck, it's  
12 certainly a duck, it's a passive recharge  
13 credit in this case as obvious as I'm  
14 sitting here today.  
15 But moving beyond to the concept of  
16 passive recharge credits and functional  
17 equivalent, again, I don't feel the need to  
18 circle back to all the arguments I raised  
19 before, we stand by them, this is going to  
20 cause harm to the aquifer in a whole  
21 variety of different ways if you adopt the  
22 City's proposal, it's going to interfere  
23 with all the other constituents of the --  
24 users of the aquifer, with water quality,  
25 impairments, minimum desirable streamflow,

Page 3660

1 And number six, it's then diverted to the  
2 City.  
3 Now, if we move to aquifer maintenance  
4 credits, what we can quickly do is just  
5 cross out three of the steps, we can just  
6 cross out the middle three steps because  
7 with aquifer maintenance credits, all that  
8 happens is water is taken out of the Little  
9 Arkansas River, diverted to the City of  
10 Wichita, it's treated, and then it's used  
11 by the City at a later time. So just --  
12 just the final three steps, we don't have  
13 any injection into the aquifer, we don't  
14 have any kind of recharge credit based on  
15 physical recharge, we don't have any kind  
16 of water that is stored in the aquifer or  
17 that can be placed there for some sort of  
18 subsequent use. The notion that this is a  
19 functional equivalent flies in the face of  
20 not only statutes and regulations but plain  
21 common sense.  
22 And so for all of these reasons, we are  
23 asking you to deny the City's proposal.  
24 **PRESIDING OFFICER:** Thank you,  
25 Mr. Stucky. Ms. Wendling.

Page 3659

1 a whole host of different harms that we've  
2 identified. And, indeed, it's -- it's  
3 frankly illegal, it's not defined by  
4 statute, all the same concerns still exist.  
5 But I'm not going to go through them again.  
6 But with that in mind, I just want to  
7 mention and circle back to this concept of  
8 aquifer maintenance credits and physical  
9 recharge credits being the same because  
10 it's been raised over and over again. And  
11 so with that in mind, I'd just like to hold  
12 up to my screen just for a moment, I've  
13 written six -- six concepts that have to do  
14 with aquifer maintenance credits and  
15 physical recharge.  
16 You can see here that the first one is  
17 water taken from the Little Arkansas River,  
18 and this is with respect to physical  
19 recharge credits, water is taken from the  
20 Little Arkansas River, it's treated, and  
21 then it's injected into the aquifer,  
22 number three. Number four is the recharge  
23 credit is created based on beneficial use  
24 obtained for physical recharge.  
25 Number five, it's stored in the aquifer.

Page 3661

1 **MS. WENDLING:** Just a few quick  
2 points. I think it was addressed that to  
3 be concerned with minimum desirable  
4 streamflow during a drought is a bit  
5 ironic, and I would just like to say that  
6 we're concerned about minimum desirable  
7 streamflow and the effects of this pumping  
8 on minimum desirable streamflow at all  
9 times.  
10 There is not a requirement in the  
11 proposal that the City keep the aquifer  
12 full and thereby protect minimum desirable  
13 streamflow. The City is not limited to  
14 using their credits only during times of  
15 drought, so that impact could happen at any  
16 point in time. And, similarly, the City is  
17 not limited to drawing down the -- to the  
18 new proposed minimum index levels only  
19 during a time of drought. The City's  
20 requesting these changes to apply at any  
21 point in time for the City to use how,  
22 when, and in any manner that they chose.  
23 And then going back to the  
24 reasonableness of the model for purposes of  
25 evaluating the proposal, it is hard for me

1 to see how a model that considers less than  
2 half of the withdrawal contemplated is --  
3 is fit for purpose. The City's model does  
4 not match the terms that they are  
5 requesting in their proposal. The City's  
6 model does not contemplate a withdrawal,  
7 even at 19,000 acre-feet per year, of the  
8 120,000 acre-feet of water, of AMCs. The  
9 City's model does not reflect what happens  
10 if the aquifer is drawn down during a time  
11 of drought to the newly proposed minimum  
12 index levels.  
13 These are the changes that are -- should  
14 be in the model and would have eliminated a  
15 significant amount of uncertainty  
16 throughout this entire process if those  
17 actual conditions that are being asked for  
18 had been modeled by the City, we could have  
19 saved ourselves a lot of trouble.  
20 And those are the two major things that  
21 I think need further consideration and  
22 analysis to appropriately make the decision  
23 regarding this proposal. Thank you.  
24 **PRESIDING OFFICER:** Okay, thank you.  
25 Okay. Having heard the closing arguments

1 this case after something like 13 days  
2 worth of testimony. As I mentioned  
3 earlier, public written comments will be  
4 accepted until 5:00 o'clock on February 26,  
5 and the instructions for doing that are on  
6 the Division of Water Resources' website,  
7 they have a dedicated Wichita ASR page, and  
8 that includes that information. At that  
9 time, the record will close on this case,  
10 so there will be no new evidence accepted  
11 after 5:00 p.m. on February 26.  
12 As I mentioned, following that, there  
13 will be briefing by the parties, and  
14 following that will be a recommended order  
15 that I will issue to the chief engineer and  
16 simultaneously to the parties.  
17 I do want to thank all counsel for their  
18 professional and enduring involvement in  
19 this case, especially in regards to  
20 responding to the disruptions of COVID-19.  
21 And I believe that also extends to your  
22 clients, as well as to the public at large.  
23 So we've all had quite a bit of disruption  
24 due to the pandemic, and this was no  
25 exception, so I appreciate everyone dealing

1 and rebuttal arguments from all counsel,  
2 believe it or not, that concludes --  
3 **MS. MURRAY:** Madam Hearing Officer,  
4 I'm sorry, could I --  
5 **PRESIDING OFFICER:** Do you have  
6 something to add?  
7 **MS. MURRAY:** Could I just --  
8 **PRESIDING OFFICER:** We're never  
9 going to conclude this, are we?  
10 **MS. MURRAY:** I just wanted to  
11 address -- Mr. Stucky referenced in his  
12 rebuttal comments that DWR had, in his  
13 thinking, revised some of our arguments,  
14 could I just address that just very, very  
15 quickly?  
16 **PRESIDING OFFICER:** I think you can  
17 put that in your brief if you would like.  
18 **MS. MURRAY:** Okay.  
19 **PRESIDING OFFICER:** I understand  
20 that might be efficient to let you do it  
21 now, but I think we better stick with our  
22 limitations on -- on the responses right  
23 now.  
24 So at long last, this concludes the  
25 testimony, the public hearing testimony of

1 with that with very good grace and -- and  
2 class.  
3 Before we close the record for today,  
4 does anyone have anything else to mention?  
5 Okay. I would ask counsel to stay on  
6 for a few minutes after the record is  
7 closed. It is now 10:57 a.m., and we are  
8 now off the record.  
9 (Whereupon, the proceedings were  
10 concluded at 10:59 a.m.)
