SESAME

Dual MAGNUM can be used in sesame for pre-emergence suppression or control of annual grass and small-seeded broadleaf weeds. Dual MAGNUM will not control emerged weeds. Control emerged weeds with an appropriate registered foliar herbicide or by mechanical or physical means.

Attention: Read following “Restrictions” statement before proceeding.

Restrictions:

1. Do not make more than one application of Dual MAGNUM per crop per year.
2. Do not apply more than 1.33 pts/A (1.27 lb ai/A) of Dual MAGNUM per crop per year. Do not apply more than 1.27 lb ai/A per year of S-metolachlor-containing products.
3. Harvest at normal maturity but no closer than 100 days following application.

Broadcast Application: Apply Dual MAGNUM as a broadcast, pre-emergence soil surface treatment at 0.67-1.33 pts/A (0.64 – 1.27 lb ai/A) after the crop has been planted but before the crop and weeds emerge. Use the lower end of the Dual MAGNUM rate range for soils that are relatively coarse textured (sandy soils) and the higher rates on fine textured soils (silt and clay soils).

Band Application: For sesame grown on beds or in rows, Dual MAGNUM may be applied as a pre-emergence (after planting but before crop and weed emergence) surface banded treatment over the row. For band applications, using row and band width measurements in inches, calculate the amount to be applied per acre as follows:

$$\frac{\text{Band width in inches}}{\text{Row width in inches}} \times \text{Dual MAGNUM Rate per acre for a broadcast treatment} = \text{Amount of Dual MAGNUM needed per acre for a banded treatment}$$

Precautions:

- 1) Dual MAGNUM will not control emerged weeds. Control emerged weeds with an appropriate registered foliar herbicide or by mechanical or physical means.
- 2) Do not irrigate after the Dual MAGNUM application and prior to sesame emergence or significant crop injury may occur.
- 3) If an activating rainfall (0.5") does not occur within 7-10 days following application, weed control may be reduced.
- 4) Do not incorporate Dual MAGNUM or severe sesame injury may occur.
- 5) Do not apply this product through any type of irrigation system
- 6) Excessive rainfall (> 1") following application will increase the risk for sesame injury.
- 7) Cool and wet weather will slow the growth of sesame and can increase the risk of crop injury.
