Section 404 of the Clean Water Act (CWA) requires that the Corps of Engineers issue a permit for the discharge of dredged or fill material into waters of the U.S., including wetlands (33 USC 1344). The Corps permit regulations are in 33 CFR 320-332.

K.S.A. (Kansas Statutes)
No. 82a-301 to 305a
K.S.A. No. 24-126

K.A.R (Kansas Administrative Regulations)
28-16-28b thru 28f(c)(1)
Sec. 401 of the CWA

K.S.A. No. 65-164 &
K.S.A. No. 65-165 &
K.A.R. No. 28-16-28 et seq.
(Other regulations may be applicable.)
Sec. 402 of the CWA

Federal Endangered Species Act of 1973 (ESA)
Reg: 50 CFR Part 17
Act: Title 16 USC, Sec. 1540

K.S.A.32-957 thru 32-963,
32-1009 thru 32-1012, and
32-1033. K.A.R. 115-15-1 and 115-13

May include but not limited to: Building or modifying a dam, creek, river, waterway, wetland, or pond during development, relocation, improvement or repair.

(Also requires a 401 water quality certification from KDHE.)

Constructing/changing a dam, levee or other water obstruction. Excavation of dredging within the bank lines of a regulated stream. Placement of fill within the floodplain of a regulated stream

Any projects that could discharge or cause runoff with pollutants to Kansas Waters

Stormwater runoff from construction activities

Projects in federally Designated area for Threatened/ Endangered species.

State of Kansas permit For or threatened/ endangered

What are Wetlands?

Wetlands are areas that are saturated, flooded or ponded for varying periods of time during the growing season. Wetland vegetation and soils may be different from that of surrounding non-wetlands. Wetlands are classified according to the amount of water, geographical location, type of vegetation, and other factors. Some of the wetland types in Kansas are known as marshes, sloughs, and fens.

Benefits of Wetlands

- Provide habitat for fish and wildlife
 - Provide flood protection
 - Buffer shorelines against erosion
 - Provide areas of recreation
- *Improve water quality and protect related water resources

Benefits of Streams and Their Vegetative Borders

- Supply drinking water
- Improve and protect surface water quality
- Provide habitat for fish and wildlife
- Provide recreation: fishing, boating and swimming

Why the Concern About Wetlands?

Wetlands are very important to all of us; however, they have disappeared at an alarming rate. A large percentage of wetlands have been drained and filled for agricultural production and urban development. It is estimated that about 48% of Kansas wetlands have been lost. Approximately 57% of threatened and endangered species are found in aquatic habitats. Once a wetland is destroyed, it is very difficult and sometimes impossible to replace. Even under ideal conditions, it may take years to reestablish the proper vegetation, soil and water conditions which existed in the original wetland.

Who is working with Water and Wetlands?

Several federal and state agencies are responsible for protecting water and wetlands in the United States. In Kansas these agencies include:

- U.S. Army Corps of Engineers(Corps)**
- US Dept. of Agriculture (USDA-NRCS)**
- KS Dept. of Health and Environment (KDHE)**
- Kansas Dept. of Wildlife and Parks (KDWP)**
- U.S. Fish and Wildlife Service (FWS)**
- Kansas Water Office (KWO)**
- Kansas Dept. of Agriculture (KDA):**
Div. of Water Resources (DWR)
and KDA Division of Conservation
- U.S. Environmental Protection Agency (EPA).**

Section 404 of the Clean Water Act (CWA), requires that anyone placing dredged or fill material into waters of the United States, including wetlands, must first obtain a permit from the U.S. Army Corps of Engineers (Corps). Permits and other aspects of the program are jointly administered by the Corps and the U.S.

Environmental Protection Agency in partnership with state and local governments. If you make any modification to a waterbody, or to an area that might be a wetland, you may need a permit or certification from one or more agencies, depending upon the intended activity and the type of the area involved. There may be laws other than the Clean Water Act or regulations which apply for individual situations. We recommend consulting with state, county and local agencies to determine if there are additional requirements.

Waters of the U.S. may include the following:
Lakes, Streams, Rivers, Wetlands & Sloughs
